Mr. WILEY. Mr. President, on Monday evening, May 15, it was my pleasure to share the platform at the annual congressional dinner of the Potomac Grange with one of our Nation's Capital's finest citizens, President Paul F. Douglass, of American University. I have in my hands a copy of the forthright address which President Douglass delivered on that memorable occasion. Not everyone will agree with all he said in that address. I, for one, do not fully agree, but no one will question the candid, hard-hitting and learned nature of that address.

I should like to say just a brief word about this honored American. I know of very few men who have combined excellence in so many diverse careers and so many types of public service as has my good friend, Dr. Paul Douglass. Not only has he been President of American University for the last decade, but he has been a prominent attorney, an author of many well-known books, an active member of both Houses of the Vermont State Legislature, an esteemed newspaper editor and correspondent, a member of Government study groups, an ordained clergyman and an active professor, in addition to demonstrating an amazing variety of other miscellaneous talents. There are few men indeed who can simultaneously (a) brilliantly teach a course in the history of philosophy and (b) handle a wide variety of the most practical types of up-to-the-minute community needs as he can.

Yes, here in the Capital of our Nation, he has been untiringly active in many types of service to the community. In fact, whenever the call comes for a well-known leader in community life to take the helm of some important new project, whether it be helping to collect funds to combat some disease or performing some other civic service, Paul Douglass is available to answer that call, in spite of a multitude of responsibilities.

He has simultaneously, however, brought his American University—both its graduate and its undergraduate divisions—particularly its school of social sciences and public affairs—to the forefront of American institutions of higher learning in the 48 States.

These few comments I submit as an indication of my own tremendously high admiration of him—an admiration shared by members of both political parties here on the Hill.

So, Mr. President, I ask unanimous consent that an abridged text of President Douglass' keenly analytic address, entitled "How Far Has America Moved Toward Socialism?" be printed in the Appendix of the CONGRESSIONAL RECORD. I wish that I might be able to print the entire text but unfortunately, space limitations do not permit and so, Dr. Douglass' review of 12 principal criticisms of the welfare state must be deleted.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

HOW FAR HAS AMERICA MOVED TOWARD SOCIALISM?

(Speech by Dr. Paul F. Douglass)

THE JOINDER OF ISSUE

The issue for America is joined.

Guy Gabrielson, chairman of the Republican National Committee, says:

"The Truman administration has entered into an unofficial compact with Socialist Great Britain to promote socialism in America. The one paramount issue," he added, "is the choice between our representative Republic and the Socialist master state. That," he concludes, "is clear enough for anyone to understand."

Harry S. Truman, President of the United States, says:

"The power of the Government exists for the people to use. The strength of the Government is being used now, and, so far as I am concerned, it will continue to be used to protect jobs and improve welfare."

THE ROLE AND ENDS OF GOVERNMENT

There you have a fundamental issue. It is this:

What shall be the goals of society and what shall be the role of government in the achievement of those ends?

GOVERNMENT AS A FEARFUL MASTER

Long ago Washington said: "Government is not reason, it is not eloquence, it is force. Like fire, it is a dangerous servant and a fearful master." He knew how easily a state can become a tyranny. As Americans we are concerned with the threat of a Socialist tyranny.

NATURE AND FORMS OF SOCIALISM

Frederick Engels described socialism as the "ascent of man from the kingdom of necessity to the kingdom of freedom." Socialism comes when the workingman seizes political power and turns the means of production into state property. Central planning substituting political judgment for market competition employs economic calculating to allocate resources rationally by a concentration of final economic power in government. This is a full-grown Socialist state.

The Chamber of Commerce of the United States defines the term "socialism" like this:

"Socialism is a system of political and economic organization under which the principal segments of the economy are owned and operated by the central government.

"Socialism may be accomplished in two ways: (1) by direct nationalization of industry, agriculture, distribution, medicine, and other segments of the economy; (2) indirectly through the creation of a climate under which the private segments of the economy cannot continue to operate effectively over a period of years, thus requiring the government to step in and take over ownership."

Under any definition socialism ultimately means the appropriation of the means of production by political society and its direction by a political bureaucracy for the achievement of politically defined goals.

WASHINGTON AND TRUMAN

To Guy George Gabrielson, Washington is a wicked place peopled with officials of a police state mentality. It holds out a set of brass knuckles instead of a cooperative hand to private enterprise. Government here holds its black jack over the steel industry. Washington governs by threat forcing private management to do its bidding.

"President Truman, who lives in the evil city of Washington," says Mr. Gabrielson, "promises everyone a gold mine in the sky." He tries to hoodwink the American people in an attempt to save the socialistic Fair Deal. Cocky and confident President Truman, he concludes, thinks that "promises extravagantly distributed and Government funds indiscriminately disbursed * * * will hoodwink the people indefinitely." "Dr. Goebbels in his heyday," he adds, "had nothing to approach the propaganda mill that the Federal Government maintains today."

AN EXAMINATION OF THE THOUGHT OF SOCIALISM'S CRITICS

I propose tonight to go behind the cliches to find out what the critics of socialism are worried about. I want to piece together the puzzle of their thought.

(Material omitted.)

THE PATTERN OF THOUGHT

* * * In Republicans' minds it (the welfare state) is synonymous with socialism. The critics of socialism oppose:

1. Taxation of those who have been most abundantly showered with the blessings of inflation.
2. Taxation on the basis of ability to pay.
3. Taxation adequate to balance the national budget.
4. Public provision for equal opportunity for persons of equal ability.
5. Social minima adequate to give the American people security against the misfortunes of accident and disease.
6. Government strong enough to deal with the problems which the American people face.
7. Performance of functions as an activity of the whole people which have not been well done or which cannot be done by private enterprise.
8. Activities of unions necessary to make collective bargaining work.
9. Adequate supports for agriculture to balance the national economy.
10. Cooperative marketing.
11. American history at the points where our past experience relates to the troubles we have faced.
12. Religion at the point where it becomes effective in social action.

I find the whole pattern—understand me, the whole pattern—of the current critics of socialism—dangerous and antidemocratic, but a degree of truth in almost every criticism.

I see no discussions in their literature about the issue of war—the great, imminent issue. I see no reference in their literature to the fact that the Federal Government in this year of 1950 will make outlays and draw checks to American business in the amount of $21,419,000,000. I see nothing in their literature about the attitudes of the American workingman in relation to socialism—but they have their polls and they know. They say nothing about the well-planned ambitions of some labor leaders to seize the means of production, to make a genuine state socialism.

The point that I am making is this: The leaders who move in the pattern which I have been analyzing are false leaders. In my opinion their arguments will only hasten the coming of socialism as a real political system.

How far are we on our way to socialism? These facts are indisputable:

1. That the Federal Government makes political decisions over larger and larger percentages of the individual's income.
2. That the brittle structure of the national economy, given its national debt structure, demands more and more central planning and political decision.
3. That the maintenance of high level economic activity and full employment demand

more and more central planning, political decision, and bureaucratic administration.

4. That our present statutory system penalizes ability and makes no provision for equal opportunity for equal ability.

5. That Government bureaucracy has increasing experience in central planning and the satisfactory administration of enterprise.

6. That spiritual values adequate to sustain a society of freemen are pretty generally absent at all levels of observation.

How far are we on our way to socialism?

We are structurally in a precarious world position which compels our Government to remain strong and grow to meet the issues that face us as a people.

We have a huge bureaucracy which has had enormous experience in central planning and administration.

We face immediate problems which the critics of the Government cannot avoid by shouting that they don't like both the Government and the issues.

We face imminent war which if lost will give us communism and if won will give us the most centralized government which America has ever experienced.

We have the trained Government personnel competent and ready to plan and operate any segments of the national economy that need attention.

We are in a situation in which the direct action of Government to maintain the economic machine in full operation must be forceful and in which the decisions of Government in the private segments of our economy must be more and more controlling.

American Government is prepared by 20 years of war and depression to administer the national economy as a socialized unit. The experience is adequate. The personnel is trained. The mood of many of our people is such as to welcome a clear transition. The climate of the world is favorable to it. America now is running against the tides of the thinking in the rest of the world.

America is much, much closer to socialism than we dream. Overwhelming majorities in the 1952 elections could in fact be decisive. We are on the borderline of state action. Men cannot remain free in a Socialist state. Complete planning implies authority to compel people to move within the framework of the plan. Coercion become an inevitable corollary of state socialism.

THE ALTERNATIVE

The one alternative to full-grown socialism lies in the positive action of citizens. Long ago Thomas Paine said that "those who expect to reap the blessings of freedom must undergo the fatigues of supporting it."

Participation

If all the people do not take an active interest in the outcome of the momentous issues which are before us, a few of the people will determine our futures for us. In 1948, when we were electing a President, a new House of Representatives, a third of the Senate, 49 percent of the eligible voters did not go to the polls. One sample analysis showed that among the list of delinquent citizens were 33 percent of all clergymen, 37 percent of the automobile dealers, 37 percent of the independent grocers, 20 percent of the doctors, 27 percent of the independent druggists, 25 percent of the members of the chamber of commerce.

Is it true that half the Americans don't care about the outcomes at all? There you have issue No. 1. Americans must get to the polls to determine outcomes.

War

It's pretty clear that we can't go on living our way of life in a garrison world. And yet I don't find among the critics of socialism very much discussion about this issue. But it is the issue. We can't solve any of our other problems until we solve this one.

A good index of our concern for the social consequences of what we do lies in this fact. From 1943 through 1951 the United States will spend $4,958,000,000 for the development of atomic energy. Of this $5,000,000,000, hardly $50,000 has been spent for research on the economic and social aspects of atomic power. Under the Atomic Energy Commission only one study on the economics of atomic power has been prepared. This is a four-volume work by Palmer Putnam on the Future of Land-Based Nuclear Power. The volume has little bearing on the title. It deals chiefly with world population growth through A. D. 2050. Research funds for the social sciences are not included in the National Science Foundation bill.

Where, I ask you, in our political structure is there a place for the objective study leading toward the elimination of war? We have Joint Committees on the Reduction of Nonessential Federal Expenditures, on the Economic Report, on Atomic Energy, on Foreign Economic Cooperation, on the Disposition of Executive Papers, on the Renovation of the Executive Mansion. Why do we not have a joint commission for the study of ways to abolish war? We have spent tens of billions on methods and instruments of war. Is it not time to devote the scientific mind to a real problem? To the problem of how man can live, how civilization can continue? Unless we do this, we cannot say that we have even tried to save our American way.

COLLISION OF RAW POWER

The meeting of human beings both inside and outside the United States is now characterized by the open collision of raw power. Elton Mayo said that while material efficiency has been increasing for 200 years, the human capacity for working together has in the same period continually diminished. The alarming break in the structure of civilization expresses itself in the disintegration of international and national community into an infinity of mutually hostile groups. We have lost the spirit of teamwork. From a sociological point of view, the only instrumentality for eliminating the collision of raw powers is a supreme coercion—the naked power of government. The conflict in belief systems will either be eliminated by this emergence of a naked political dictatorship and tyranny or by the redeeming quality of a higher loyalty.

Toynbee deals with the schism in the soul. He finds the schism in the body social merely the outward and visible sign of an inward and spiritual rift.

We cannot recover that higher loyalty by the worship either of money or of power. The worship of either must end in tyranny.

Adam Smith dealt with the problem in his Theory of Moral Sentiments. He suggested that each of us change places in fancy with the sufferer. Our own moral judgments, he said, with respect to our own conduct are only applications to ourselves of decisions which we have already passed on the conduct of our neighbors. If we change situations with others, we acquire a new sense of duty in our own action.

In America we can yet worship a God who makes the understanding heart divine and the reverence for the person a Godlike quality. Here is a higher loyalty available to us.

THE USE OF GOVERNMENT

Whether we like it or not, we are going to have to use government, to work it and through it as a tool. This fact means a higher quality of craftsmanship in citizenship. Albert Goss, master of the National Grange, is the kind of citizen I am talking about. It means that we are going to deal objectively with our problems and experimentally with solutions—always with the concern that what we do is done with a sacred reverence for the individual and a sacred allegiance to the kind of freedom which reserves always the right of choice to the individual.

MEN WHO KNOW THEIR DUTIES

The only way to have less government is to govern ourselves more. The only way to have more freedom is to use wisely what we have. The only way to have better government is to become better citizens ourselves.

In 1816, Jefferson wrote to Taylor:

"What constitutes a State?
Not high-raised battlements, no labor'd mount,
Thick wall, or moated gate;
Not cities proud, with spires and turrets crown'd;
No; men, high-minded men;
Men, who their duties know;
But know their rights; and knowing, dare maintain.
These constitute a State."

The League of Frightened Men

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 31, 1950

Mr. BIEMILLER. Mr. Speaker, with permission to extend my remarks in the RECORD, I attach the following speech of Oscar Ewing, Federal Security Administrator.

This address, delivered before the twenty-seventh convention of the International Ladies' Garment Workers in Atlantic City, May 24, is an acute examination of what Mr. Ewing very properly calls the League of Frightened Men, men who fear social progress.

LEAGUE OF FRIGHTENED MEN

It is an honor to be here. Your golden jubilee is more than a family party. It is an observance in which every American can take pride. And I count it a privilege to bring my greetings and congratulations in person to you, David Dubinsky, to all my friends in the ILGWU.

In your 50 years of pioneering for the advancement of your own membership, you have a proud and honorable history—in many ways, a unique history. Foresight and dogged determination won the epoch-making strike of 1910 with a protocol of peace and the creation of a great health program. That foresight and determination have never flagged. They have gained in stature and in vision through the years.

Nor has this vision been self-centered. You have always known that you could not be good union members without being good citizens. You have fought for the general welfare, not just for the garment workers' welfare. Some people have accused you of not minding your own business. They are wrong. It is your business—and everybody's business—to be concerned about the general welfare. About decent wages and conditions of employment. About good housing, and enough of it. About schools for all our children, and the chance for every youngster to go as far as his own brains and determination will take him. About health, and enough money to pay the doctor's bills. About insurance for the times when a man can't get a job or when he is too sick to work—and for his family if he should die. About self-respecting security in old age. About the inalienable civil rights which are

every American's heritage. About peace that does not truckle to the totalitarians.,

That is what you mean by the general welfare, and it certainly is your business. That is what I mean, too, and it certainly is my business. And we intend to go right along making it our business.

TOO MANY REACTIONARIES

We shall continue to do so in spite of the peculiar opposition we face. There are too many reactionaries in America—too many men who say that you can make progress by going backward, that you can promote the general welfare by destroying the general welfare. The American reactionary may be a fine gentleman, complete with country estate. He may love his mother dearly. He may be kind to his underlings. But if he is a reactionary, his ideas add up to the fact that he is against health. Against social security. Against education. Against a living wage. Against everything that means anything to ordinary people. And, in the end, against our very liberty, our opportunity, our hopes for the future. He is against all of these things for everybody except himself.

Why are the reactionaries against these things? Is it because they are wicked people? I don't think so. I think it is because they are fearful people. We are confronted in America by a League of Frightened Men.

LEAGUE BYLAWS

The bylaws of the League of Frightened Men provide that you cannot be a member in good standing unless you distrust the people of the United States. You cannot be a member unless you shiver at the idea of scientific progress, unless you quake at the thought of the complexity of our modern civilization, unless you tremble in the face of reality. During the initiation ceremonies, when you join the League of Frightened Men, you must be able to prove that you turn pale when someone mentions the words "labor union." Then your face must promptly flush when you hear the dread name of Franklin D. Roosevelt, or when President Truman's Fair Deal is referred to. You must get a prompt case of the shakes at the suggestion that Government has a responsibility to the people to help them help themselves to security, employment, health, and education, and that sometimes people are willing to pay real money for this purpose. Finally, you must be able to raise your voice and shout "socialism" at the top of your lungs whenever you hear of an idea that was born since 1890.

If you can meet this test, you are likely to be accepted into the League of Frightened Men, and you are likely to enjoy the company of your fellow-reactionaries.

I am not sorry to say that I cannot pass this test—any more than you can. I am not afraid of 1950—any more than you are. I am not afraid of labor organizations, or of mass industry, or of jet-propelled speed, or even of atomic energy. I am not afraid of the American people. I am not afraid of their common sense, their drive, their restless desire to improve the condition of the world in which they live. I think that our restlessness, our ambition, our energy, are the most wonderful things in the world.

The league of Frightened Men would like to expand its membership. It would like to spread fear throughout the land, and make this a nation of frightened men. Well, we are not frightened. We leave fear to the reactionaries, who see ghosts, and to the unhappy peoples behind the iron curtain, who have a right to be afraid of their masters.

PLENTY OF PROBLEMS

Do not misunderstand me. I am no Pollyanna. I do not counsel sticky and stupid optimism. We have plenty of problems, plenty of troubles. But the difference between the reactionaries, on the one hand, and people like you and me, on the other, is that they can do nothing more than yearn for the past, while we are prepared to tackle these problems and lick these troubles. Their weapons are fear and inertia. Our weapons are courage and common sense.

In my job as Federal Security Administrator, I have plenty of opportunity to see the battle between reactionary fear and liberal courage.

In education, for example. The courageous, liberal, and I believe typically American idea, is that education is a good thing. We believe that any boy or girl ought to have a chance to learn as much as he can, so that when he goes out into the world he will be able to fulfill whatever talent, whatever skill, he may be best equipped for. We also believe that in a democracy we must have people who understand what the world is all about, who will make decisions on the basis of facts, of thinking, and of wisdom, who will not be stampeded by a demagogue.

The fearful people a hundred years ago—and we had them then, too, people who in the 1840's thought things were in a dangerous state and yearned for the good old days of the 1820's—these people trembled at the idea of universal public education. They said a little knowledge would be a dangerous thing. They became hysterical at the suggestion that education should be universal, and free, and paid for out of public funds. They predicted the downfall of the Republic. Inevitably the League of Frightened Men lost the battle. The American people won out.

Today nobody questions the traditional American principle of universal free education. But the frightened men have merely retreated; they have not stopped fighting.

SCHOOL PROBLEMS

Today we have a sudden increase of 30 percent in the number of children of school age. We do not have the schoolhouses or the teachers to take care of them. Too often the salaries of teachers are sadly out of line with present-day living costs. We have thousands of youngsters going to school in fire traps, in abandoned stores and garages. We have thousands who do not go to school at all because there isn't any school for them to go to. We have half our young people of college caliber unable to afford to go to college. We have, in short, a crisis in education.

Now, part of the reason for this crisis is that our system of local support and control of education—a system in which I firmly believe—has not been able to cope with the inequalities as between the States. Some States are rich, and others are very poor. An American child in a rich State is 10 times more likely to get a proper education than an American child in a poor State. So the problem is one of working out a system to help the poorer areas do a better job, without in any way disturbing the system of local control of education.

The only solution I know is Federal aid to education. That will help the primary and secondary schools. For higher education, the answer is Federal grants for college scholarships, fellowships, and student loans.

The League of Frightened Men opposes this solution. It is afraid of doing something to meet the crying need for more and better education in our country. It screams hysterically about socialism, about Federal control of education, about dictatorship. Well, we can't afford to wait for the League of Frightened Men to get over its crying jag. We don't want socialism, or dictatorship, or Federal control of education. What we do want is more and better education for every American child, whatever his race or his color or his religion, whatever State or county he may live in. And we are not going to let the League of Frightened Men scare us away from this objective.

CONGRESS TO ACT—WHEN?

I believe that Congress will ultimately pass progressive legislation in the field of education. I would be naive if I tried to tell you the exact date when it will do so, or the exact terms of the legislation that will finally emerge. But I believe we will wind up with a worth-while program of Federal aid to education, because the American people know what they want, and this is one of the things they want very much.

Not so long ago, the frightened men were in control in Washington. All through the 1920's, under their rule, the country built up to a terrific bust. When the bust came, the frightened men sat about fearfully and wrung their hands—doing nothing, as usual. The American people put in a man who was not scared, a man who warned us that the only thing we had to fear was fear itself. And, along with President Roosevelt, we were not afraid.

SOCIAL SECURITY NEEDS

In the early years of the New Deal, we established a system of social security, over the opposition of the League of Frightened Men. For the first time, on a broad scale, we recognized that in our society it is imperative that all people who work for a living should cooperate, through social insurance, so that they may have a little money for themselves when they become older, or for their dependents when they die. That was one of the proudest achievements of the New Deal. Today, in 1950, the Fair Deal is proud of the fact that this Eighty-first Congress is obviously going to pass new and broadening amendments to the original Social Security Act. I don't know what the exact terms of these amendments will be, because they are still before Congress. But I do know that Congress will make sure that social security covers millions more people than it covers now, and that the benefits will be a good deal larger—in some cases, they might even be as much as 150 percent larger. The frightened men were afraid of this, too, but the people of this country have not permitted their fantastic fears of the frightened men to prevent us from doing the intelligent thing.

Originally, we had hoped that the amendments would include social insurance for total and permanent disability. It may still wind up in the final legislation, but that will only happen if enough people insist on it. But the very fact that total and permanent disability insurance has been in and out of the amendments is a bitter commentary on how fear confuses reason. As matters stand right now, we won't do a thing by way of insurance to protect a worker against accident or illness, but we are ready to pay his family benefits as a matter of course if he just goes ahead and dies. Only the League of Frightened Men can seriously sell us the idea that it is better for your family that you should die than that you should stay alive.

LEAGUE'S AMA CHAPTER

If you think I am exaggerating, let me tell you about some of the things I have learned in the fight on another front—national health insurance. Here we have to do with the American Medical Association Chapter of the League of Frightened Men. It is a very active chapter, and extremely well heeled. Its members, however outstanding they may be as physicians, are not only fat cats but fraidy cats.

And what are they afraid of? Of all things, they are afraid of improving the health of the American people.

They are afraid of our having enough doctors to take care of the American people. In the face of a serious shortage of people in the medical and allied professions, they are afraid of anything that would make it possible for our medical schools to teach larger numbers of students so that the ratio of doctors to patients would be more in keeping with the needs of our time.

Above all, they are afraid of any system that would make it possible for people to pay for the medical and hospital care they

may need throughout their lives. Is insurance such a revolutionary idea? Does life insurance, or fire insurance, or automobile insurance, smack of Karl Marx? Has social security destroyed the Republic? To you or me, the answer is so obvious that we need not discuss it any further. But to the American Medical Association Chapter of the League of Frightened Men, the answer is, "I'm scared."

Scared of what? Scared of a system whereby people would help build up a fund out of which would be paid the bills for the care they need when they are sick. Scared of a program that would take the financial calamity out of serious or chronic illness. Scared of a plan that would simply change the method of payment for medical and hospital care, without in any way interfering with the relationship between doctor and patient.

Twenty years ago they were afraid of voluntary health insurance. They said it was communistic. Now they see that it is not communistic at all, and—because we are proposing a national health insurance program to do what voluntary plans are unable to do—now they say they're not scared of the voluntary plans any more but that they are really scared of this sinister conspiracy to destroy the fabric of our free land.

STATE OF TERROR

Why, I have seen them go so far in their terror as to say things like this, and I quote from a recent issue of the New York State Journal of Medicine: "We readily admit that under it [meaning the present haphazard system of medical care] a certain number of cases of early tuberculosis and cancer, for example, may go undetected. Is it not better that a few such should perish rather than that the majority of the population should be encouraged on every occasion to run sniveling to the doctor?"

Try that one on for size. Is it not better for you, or your wife, or your child, to perish than for you to be covered by national health insurance? That is the question that the frightened men are asking you.

Now, I am prepared to argue that the doctor who wrote those words in the New York State Journal of Medicine was suffering from a serious attack of terror. I am prepared to say, in defense of the medical profession, that most doctors would not prefer to see a human being die rather than have him "run sniveling" into the office. But these men have been so terrified by their own medical association that they have lost all sense of balance. Like the frightened animal that claws anything in reach, including its best friends, the medical profession has permitted its organizational leadership to betray its responsibility to the American people.

Let the doctors remember this: That the patient is always more important than the doctor, and that a single human being who dies because he did not have the money to pay for the medical care that might have saved him is a horrifying reflection on the Nation, the profession, and the person who is too fearful to have wanted to save him.

The American Medical Association tells us it is afraid we would wreck the personal relationship between doctor and patient. I tell them, in all sincerity, that a single article such as the one I have quoted does more to wreck this relationship than any social-insurance scheme on earth.

The American Medical Association tells us it is afraid that the Government would somehow dominate the doctors if national health insurance came to pass. I tell them, in all sincerity, that no responsible person in Washington wants to dominate the medical profession, but that we will not shirk our duty to put forward a sensible solution to the financial barriers that prevent millions of Americans from getting the care they need.

The American Medical Association tells us it is afraid that national health insurance will lead us straight to communism. I tell them, in all sincerity, that communism never succeeds in a land where human needs are met wisely and skillfully, but only in lands where fear and worry and distraction stalk the countryside.

FIGHT FEAR WITH COURAGE

I realize that you cannot fight fear with reason. It it could be done, the league of frightened men would long since have disappeared from America. You can only fight fear with an even more powerful emotion—courage. Courage to face the facts, courage to do what is right, courage to go forward.

The history of your own union, in this very field of health, is proof enough of this. Out of the sweatshops of the past, out of the tuberculosis and chronic diseases that used to beset the garment workers of another generation, you have built a magnificent health program, with your great Union Health Center in New York and your health centers in other cities. You established the first direct-service, union-sponsored medical-care plan in the United States. Your board of sanitary control, back in 1912, inspired the Public Health Service to study the health of garment workers as the very first official act of the fledgling Office of Industrial Hygiene and Sanitation. You fought against tuberculosis with the same energy that you fought against the sweatshops. Today your medical director is a member of our Public Health Service Advisory Council on Industrial Health. Not only as the son of your first medical director but in his own right, he is a leader in this field, and you can be proud of him.

In health, as in the protection of working people in the garment industry, as in political action, you have moved forward with courage and statesmanship. You have shown that you are not afraid. The League of Frightened Men will never conquer America because there are too many Americans like Dave Dubinsky and the rest of you, strong and self-confident and sensible, ready to work to make our country stronger, safer, and happier than ever before. I am proud to count myself your fellow worker in this never-ending battle.

State and Federal Management of Timber Holdings on the Olympic Peninsula in the Pacific Northwest

EXTENSION OF REMARKS

OF

HON. HENRY M. JACKSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 31, 1950

Mr. JACKSON of Washington. Mr. Speaker, Mr. Charles N. Webster, publisher of the Port Angeles Evening News, Port Angeles, Wash., recently wrote a series of four articles on the management of State and United States timber resources on the Olympic Peninsula. In my opinion, Mr. Webster has rendered an outstanding public service in explaining the present situation regarding our all-important timber holdings in this section of the Pacific Northwest. The articles appeared in the Port Angeles Evening News on April 24, 25, 27, and 29, 1950. I commend to my colleagues in the Congress a careful reading of these thoughtful articles:

[From the Port Angeles (Wash.) Evening News of April 24, 1950]

GOODYEAR FORECASTS 90,000,000 FEET ANNUAL YIELD FROM STATE SUSTAINED YIELD FOREST

(By C. N. Webster)

I

State sustained-yield forest No. 1 in western Jefferson County should produce at least 90,000,000 board feet of logs annually without exceeding annual growth.

This was a guess ventured by Supervisor T. S. Goodyear in a brief talk to the Olympic Logging Conference in Victoria Thursday afternoon.

"This guess is based on a 60-year rotation, which should be ample for production of pulp and an intermediate amount of saw timber," Goodyear explained. "This estimate may, of necessity, be adjusted as more growth figures are available.

"Most of the State-owned timber consists of an even-age, overripe stand, composed of hemlock, cedar, spruce, Douglas fir, and white or silver fir.

"Probably 70 percent of the entire timber stand is more suitable for pulp than saw timber."

In his prepared talk, Goodyear did not directly venture a guess as to the present volume of standing timber in sustained-yield forest No. 1. His estimate of a minimum 90,000,000 feet annual cut, on a 60-year rotation, suggests (by multiplication) a stand of approximately five and a half billion feet.

Most of the area never has been cruised. A cruise is now proceeding under Goodyear's direction which will give the first reasonably accurate inventory of State timber in the 185,235-acre State-sustained yield forest.

Wartime cut 123,000,000

Goodyear also disclosed Thursday that logs taken from State sustained-yield forest No. 1 during the last war totaled approximately 123,394,960 board feet. This was mostly Sitka spruce and Douglas fir, for airplane construction. The spruce was all selectively cut. However, about three-quarters of a section of Douglas fir was clear cut.

Goodyear compiled this first total of actual wartime sales since he became supervisor of the forest on July 21, 1949. His source was the log scale reports to the State land office.

This wartime emergency sale, all in the Hoh Valley, represents the only cutting ever done in State-sustained yield forest No. 1.

The 1933 law establishing the forest prevents any cutting until maps and logging plans are completed for a sustained yield operation. Not until 1949 did the State appropriate funds ($100,000) to do this preliminary work.

Log scale

This 1933 law also authorizes uses of log scale for sale of timber from sustained yield forest No. 1. It is one exception to the general law requiring State timber sales on a cruise made before logging.

In a Friday talk to the Olympic Logging Conference, State Land Commissioner Jack Taylor called sales on the cruise "a horse and buggy way of doing business." He said national forest and private owners sell timber on log scale and advocated legislation permitting the State to do likewise. Such a bill passed the house last year, but not the senate.

The land commissioner also advocates appropriation for State land classification and inventory of all State-owned timber, similar to the inventory now being made on sustained yield forest No. 1.

"Your Olympic peninsula forest got the first such appropriation since statehood," Taylor said. "Last year the State land office sales totalled $15,000,000, but the legislature

refused an appropriation of only $250,000 to start an inventory. It passed the house but not the senate."

As with other State timber sales, all timber sales from State-sustained yield forest No. 1 will be handled by the land commissioner, at public auction. But payment will be on log scale, instead of lump-sum on a cruise.

Taylor said State sales on log scale also may give a better chance to the small logging operator, who now must pay cash in advance of logging and take his chance on the cruise volume.

BUYERS OF NATIONAL FOREST TIMBER FAIL TO CUT TIMBER AS FAST AS IT WILL GROW

(By C. N. Webster)

II

Timber cutting on the Olympic National Forest never yet has reached the sustained yield limit desired by the United States Forest Service.

The Forest Service wants loggers to cut 182,000,000 board-feet per year. It has been selling timber fast enough to reach that limit, or thought it had, but timber buyers have failed to cut it that fast. For the past 5 years the actual cut has totaled from 135,000,000 to 155,000,000 feet per year.

Consequently the Forest Service has now decided to oversell—sell beyond its 182,000,000 feet limit—in an effort to get loggers to cut the desired limit.

That is the gist of what Supervisor Carl B. Neal told the fifth annual Olympic Logging Conference in Victoria Friday. He was the last of 12 scheduled speakers on the 2-day program. His topic was Timber Cutting Program for Olympic National Forest, 1950–51 (meaning the United States fiscal year ending June 30, 1951).

"We have tried to make, and we thought we had made, the timber sales needed to bring the actual cut up to the allowable cut," Neal told the assembled loggers.

"But the purchasers for one reason and another have not made the cut anticipated. Only on Hood Canal has the cut come up to the allowable.

"We now have 330,000,000 feet under contract and uncut. In addition to this we have 400,000,000 feet ready to advertise for sale. Of this backlog, about 300,000,000 feet is being advertised this spring.

"We have found we have to oversell in order to get our cut up to the allowable. How much we have to oversell we have not determined because we never have reached the allowable.

"But if we sell this 300,000,000 feet this spring and then allow 2 years for road and bridge building, I have hopes we will then reach the allowable," the supervisor said.

"We should reach and maintain our allowable cut. That is essential for good timberland management."

Region the same

Under-cutting the sustained yield capacity of national forest land is not limited to the Olympic peninsula. It applies generally to the whole Pacific northwest region.

Regional Forester H. J. Andrews, who attended the Victoria conference but did not address it, told the Evening News that actual cut on national forests of Washington and Oregon is totaling 1,300,000,000 to 1,500,000,000 feet per year.

But the allowable cut is at least 2,250,000,000 feet, Andrews said.

"That is a conservative calculation. I feel the allowable cut may readily be 2,500,000,000 to 2,750,000,000 feet. It depends upon the economic availability of our remote timber.

"For example, the upper Clackamas timber right back of Portland would require a 100-mile truck haul to market—an excessive trucking distance now. But suppose you build a mill near the timber and convert the logs to finished products before making your long truck haul. Finished products can be trucked economically much farther than logs," Andrews observed.

The same problem confronts Supervisor T. S. Goodyear, of State-sustained yield forest No. 1 in western Jefferson County. The truck haul is too long to existing railheads. Only the top grade timber will pay its way out, and Goodyear recognizes that such "high grading" is inexcusably wasteful.

Goodyear proposes a twofold solution. A common carrier railroad connecting existing lines to south and north of the State forest. A pulp mill in western Jefferson County—preferably a kraft mill for maximum utilization of low-grade wood.

Either of these alone might solve the State's problem of marketing its 90,000,000 feet of available logs per year.

Goodyear hopes to get both railroad and local mill.

Until he gets something, the State school system, which needs funds so badly for expanding population, will earn nothing from its idle timberland in western Jefferson County. And the growing capacity of this 185,000-acre State forest will continue lost to productive industry.

PUBLIC FORESTERS, FINDING SELECTIVE LOGGING IMPRACTICAL, NOW FAVOR CLEAR CUTTING IN SMALL PATCHES; MAXIMUM 80 ACRES

(By C. N. Webster)

III

Clear cutting is generally speaking the only practical method of harvesting the public's dense Olympic Forests, although such cutting should be closely limited to patches not over 80 acres each.

On that point, supervisors of both National- and State-owned Olympic forests agreed in their talks to the Olympic logging conference in Victoria last week end.

Speaking of logging plans for State sustained yield forest No. 1 in western Jefferson County, Supervisor T. S. Goodyear told the assembled loggers:

"From the timber type maps completed to date, it appears the only practical way of logging is to clear cut the mature timber in patches not to exceed 80 acres, and reserve from any kind of logging the areas stocked with regrowth under 30 years of age."

And the United States Forest Service, which has pioneered the small-patch system, now goes even further. It favors limiting these clear-cut patches to from 40 to 60 acres each.

Both parties oppose any broadcast clear cutting in the traditional wholesale methods so familiar on private lands which contained the Olympic peninsula's best virgin timber.

Selective logging is out

At the same time the United States Forest Service has abandoned its prewar theory that selective logging is practical west of the Cascades.

This change has occurred rather quietly, considering the way Government foresters were boosting tree selection logging a decade ago. But it is nonetheless definite, as shown by a brief remark in Supervisor Carl B. Neal's Victoria address on national forest timber sales. He told the assembled loggers:

"At the present time we are not practicing partial cut or tree selection logging in the forests west of the Cascades, except in potential recreation areas and scenic strips. We have found that such a practice merely reduces our inventory and does not increase growth."

Shortly after Neal became Olympic National Forest supervisor, the Forest Service initiated in 1942 its first conspicuous selective logging experiments on the north peninsula.

Three tree selection sales near Lakes Beaver, Sutherland, and Cushman totalled approximately 60,000,000 board feet. These operations were extensively covered by word and picture in the Port Angeles Evening News at that time.

The officially approved theory was that if you remove about one-third of your old growth trees during each cut, you stimulate growth in the remainder, while also keeping the land covered with forest. The Service advocated this system as practical forestry, except on slopes too steep for tractors.

Now the official USFS doctrine is that to get continuous production, you must clear cut and start a new crop. (This does not apply east of the Cascade summit, where rain is scarce and pines grow sparsely. Selective logging is regularly practiced there.)

Staggered settings

After thus disposing of selective logging in two sentences, Supervisor Neal summarized in his Victoria address the clear-cutting system now favored on national forests:

"Most of our sales are, as you know, laid out for staggered settings. We anticipated that it will ordinarily take three cutting cycles to cut over the entire area. Possibly 40 percent will be removed on the first cut.

"The purpose of staggered settings is to decrease the fire hazard and to increase the probability of adequate reproduction on the cut-over area.

"Normally on a 100-year rotation, cutting cycles will come in 33-year intervals. To accomplish the purpose of staggered settings we figure that these intervals should not be less than the period required for the reproduction to grow to such size as to result in a closed canopy. On this basis we figure the minimum period between cutting cycles to be about 20 years. If we don't get natural reproduction promptly, we plan to plant. We want to keep the land productive."

United States timber management

While Neal's address did not mention the acreage limits on their staggered settings, this and other policy details appeared in a mimeographed statement issued last fall, labeled Access Roads to Government Timber, Senate Joint Resolution No. 24.

Although this 3-page statement bore no identification as to source, and was undated, the Forest Service used it in support of its recommendation that Congress appropriate money annually to build permanent timber access roads. It says, in part:

"Before discussing the advantages of this resolution to the Forest Service, it probably would be desirable to explain certain features of timber management as applied to the national forests.

"The Forest Service recognizes two types of cutting in the Douglas-fir region west of the Cascades: (1) Partial cutting, formerly called tree selection; and (2) area selection.

"(1) The former (that is, tree selection), (a) merely reduces the forest inventory, (b) does not stimulate growth, (c) does not tend to convert stagnant forest into a growing forest.

"It has a certain economic advantage when certain species cannot be marketed. Otherwise, its application is limited to such special areas as scenic strips and recreational areas.

"(2) In area selection, the watershed is broken down into cutting areas of from 40 to 60 acres each.

"The forest rotation, usually 100 years, is broken down into three cutting cycles. Theoretically, cutting cycles would be 33⅓ years apart. Actually, they should, as a minimum, be separated by the length of time necessary to get a stand of reproduction with a closed

crown canopy. This normally would be about 20 years.

"The forest is now on its first cutting cycle, removing alternate cutting areas of about 60 acres each."

Market price

A good example of the certain economic advantage when certain species cannot be marketed occurred on the south side of the Olympic National Forest before selective logging was tried on the north side.

This was a big long-term sale to Schafer Bros. Logging Co. of Grays Harbor. They cut the fir and left the hemlock standing for later cutting at higher prices.

The old clear cutting practice on private or State land was to leave hemlock on the ground when it wouldn't pay its way to market. Even though not cut, all trees got knocked down during the clear-cut operation.

But the Forest Service didn't believe in that practice. They wanted the public-owned hemlock used, not left to rot on the ground. Hence the remedy of leaving hemlock on the stump until marketable, instead of knocking it down as a normal part of a clear-cutting operation.

[From the Port Angeles (Wash.) Evening News of April 29, 1950]

NATIONAL FORESTERS ADVOCATE ADVANCE CONSTRUCTION OF TIMBER ACCESS ROADS

(By C. N. Webster)

IV

How best to finance new timber access roads is a problem now bothering the managers of public-owned forests on the Olympic Peninsula. They discussed it briefly at the fifth annual Olympic Logging Conference in Victoria.

Foresters who supervise our national forests now advocate Government-financed permanent access roads in advance of timber sales.

Loggers who buy the Federal timber would continue to build their temporary branch roads from the main road into each individual timber sale. But they would not build the expensive main access roads, as they now must do where none already exist.

When once built the Forest Service itself maintains all main access roads as public thoroughfares.

The Forest Service view is not shared by the supervisor of our largest State-owned forest. But his Victoria speech showed he is recognizing the same problem. Supervisor T. S. Goodyear of State sustained-yield forest No. 1 told the assembled loggers that:

"In the northern part of the sustained-yield forest, State lands are scattered and fairly accessible to existing roads. Timber on these lands should be reserved to small independent logging operators, while the solid blocks of State-owned timber, situated back in the high country where expensive road construction will be necessary, can undoubtedly only be handled by large, financially sound companies or corporations."

This State-owned forest includes most of the public-owned timber available for cutting in western Jefferson County. The Olympic Highway, U. S. 101, skirts the forest. Public roads extend up the Hoh, Clearwater, and Queets Rivers in the forest.

High-cost roads

But costly access roads into the main blocks of State timber present a formidable financing problem. Goodyear sees large capital operators as the only solution.

In order that such roads may pay out in one cutting cycle, he must sell such a large amount of timber that small operators could not bid on it anyway. And the plan to confine logging to 80-acre patches means more miles of road for a given quantity of timber in the first cut.

If the State built the main access roads in advance, maintaining them permanently for successive cutting cycles, the State might have more bidders and smaller operators would have a chance to compete. That is what Federal foresters advocate for national forest timber sales.

Supervisor Carl B. Neal, of Olympic National Forest, briefed the plan as follows at the Victoria conference:

"Our policy is to connect all timber sale areas to a public road by a road over a right-of-way either owned or controlled by the Government. We do not want competition limited by privately owned rights-of-way.

"We believe it would be in the Government's interest for Congress to appropriate sufficient funds so that we could build the roads in advance of making the timber sale.

"We prefer Government built roads because they permit better timber management, smaller sales, salvage sales, increased fire protection, and better breakdown between summer and winter logging.

"They would cost the Government no more in the long run because we would get higher stumpage prices when the Government builds the roads. As it is now, the timber buyer has to build the roads.

"About 40 percent of the volume is harvested on the first cut. This first cut has to liquidate the cost of the main road system for the entire area.

"This compels a high allowance for the first cut appraisal value. The appraisal must allow for road costs.

"If the road costs $100,000 and the sale volume is 25,000,000 board feet, $4 per thousand feet will be allowed for road construction cost. Roads so built by loggers remain Government property, the same as Government built roads."

Seven million dollars annually

The logger must build main roads to forest service specifications. Since the road is designed for permanent logging use, it has to be heavily surfaced and usually costs from $12,000 to $20,000 per mile west of the Cascades.

Regional Forester H. J. Andrews told the Evening News that national forests in Oregon and Washington now are adding 300 to 400 miles of main logging roads costing around $7,000,000 each year. He would like to see Congress appropriate this amount annually so the Government could finance the roads instead of deducting it as a logging cost on timber sales.

Current annual appropriations to the Oregon-Washington region for national forest road and trail development are around $3,000,000 (out of a $10,000,000 national total), Andrews said. This will barely maintain the existing road and trail system. The region's total is about 16,000 miles of roads and 20,000 miles of trails.

Andrews observed that advance construction of timber access roads would be especially useful in higher altitudes where the logging season is short. And it would permit prompt salvage of timber blown down or killed by fire or insects.

Public travel

Timber access roads also increase the forest mileage open to public travel. That is in national forests, not Washington State forests.

National forest policy is to keep all roads open, except specified extra hazardous areas during fire season.

State policy on the other hand is to keep its forest development roads closed. You see the locked keep-out gates everywhere that a State forest road branches off a main highway.

T. S. Goodyear emphasizes that most fires start from careless travelers. He suggests our forests would be better protected without any roads to facilitate such fires.

For many years before becoming supervisor of State Sustained Yield Forest No. 1, Goodyear was head of the State division of forestry with responsibility for protection of State and private forest lands.

Emergency stockpiles

Regional Forester Andrews suggested another potent reason for advance construction of timber access roads.

National defense officials want to stock pile critical materials. At the start of the last war, wood was not rated a critical material. It soon became one—but not until the best road-building men and equipment had been shipped off to military posts, Andrews recalled.

He explained that although 65 to 70 percent of our remaining timber is public-owned, its relative inaccessibility caused it to supply only 15 to 20 percent of the timber cut during the last war. Balance came mainly from the traditionally overcut private land.

Prior to 1941 only half a billion feet of timber per year was coming off the national forests of Oregon and Washington. War's demand trebled the cut to 1,500,000,000 feet, the current rate. But this is still far less than their sustained-yield capacity of around 2,500,000,000 feet annually.

Now defense officials want to stock pile wood. Replying to a committee's inquiry on this point, Andrews said it is impractical to stock pile wood in the huge quantities needed for wartime use. Instead he has recommended the Government stock pile timber access roads, ready to cut remote timber instantly in emergency.

If this idea should take hold with resulting forest-road money available from our huge defense appropriations, it would be something for State sustained-yield forest No. 1 to look into. That forest already benefited from Federal road money during the last war. The Government wanted spruce from State land in the Hoh Valley. Federal funds heavily graveled the Hoh road, and built a branch into Snahapish Pass.

That is a bare beginning to what the State will need to log its 185,000-acre sustained-yield forest in western Jefferson County.

Houses for Permanent Military Installations

EXTENSION OF REMARKS

OF

HON. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 31, 1950

Mr. JOHNSON. Mr. Speaker, houses for permanent military installations can be obtained on the installment plan by using rent money to pay installments. H. R. 8645 provides for this. Here is a general explanation of the plan provided by this bill:

The total estimated amount which will be spent for fiscal year 1950 for rent of military personnel is the staggering sum of $321,292,000. The estimated amount to be required for fiscal 1951 is $312,998,000.

The reason for this staggering sum of money, for which we have nothing to show at the end of the year except rent receipts, is that our Armed Forces are much larger than we anticipated they would be following the war. We anticipated a sharp decline in the size of our Armed Forces. However, the cold war

and the unsettled conditions of the world has made it imperative that we retain a large Army, Navy, and Air Force.

Many stations scattered in all parts of the United States, in Alaska, and in foreign countries have only enough houses to meet a very small fraction of the number of personnel on the post.

The basic compensation which a member of the Armed Forces gets is the pay of his rank and appropriate quarters. If no quarters are available then the United Sates Government furnishes him money with which to rent appropriate quarters. In the pay scale we fix the quarters allowance for the various grades of enlisted men and officers. The total number of houses required to take care of our service personnel on permanent stations has not been accurately estimated. However, the amount of money required to build adequate quarters for the personnel, not only for today, but for the next 10 years so far as can be estimated, would be such a staggering sum that we cannot begin to build anything but a small fraction thereof if we are to pay for the entire house or houses in full at the time of construction.

Consequently, the problem is how can we build houses where only a very small fraction of the cost of each unit is paid upon the completion of the contract of construction and the balance be paid thereafter on the installment plan? The key to this is found in the fact that if we do not have adequate quarters we allow personnel rent money. As mentioned above, the amount which will be spent this year is over $300,000,000. The amount which will be spent next year for rent is over $300,000,000. At the rate we are going in 10 years we would have put out over $3,000,000,000 for rent and have nothing to show, except rent receipts, for this fabulous sum. We would have no tangible equity from the $3,000,000,000 which we would have spent.

Consequently, I have felt, and I have been studying the problem for several years, that it was possible to convert this rent money into installment payments, which would pay interest and principal of the contract price of the houses. These installment payments would give us at the end of 15 years or less, the house fully paid for and thus terminate rent allowances for the occupants. These, then, could be utilized as quarters for appropriate personnel and there would be only the cost of maintenance. That is the situation that the Armed Forces have always contemplated; that is, that there would be appropriate quarters for its personnel on duty at permanent stations.

How can this be done? Here is the plan which I offer. It is the simple building and loan principle, that millions of Americans have used with which to acquire a home, where they did not have the capital necessary to pay for the entire structure at the time that it was acquired or built for them.

We will invite bids for contracts on certain permanent military stations.

We will provide in our notice for bids and in our plans and specifications that 5 percent of the total amount of the awarded contracts will be paid in cash upon the completion of the contract, and the balance in instalments as provided by this law. It is provided by this law to have each set of quarters—each living unit—will be occupied by an officer or enlisted man. We provide in the law for the payment of a minimum of $75 per month per unit of quarters—payable semiannually—until the contract cost of the entire number of quarters under the specific contract is completely liquidated. At the time of each payment interest is to be paid on the unpaid part of the contract, at a rate not to exceed 4 percent per anum. We also provide that any quarters which are occupied by military personnel, which have not been fully paid for by the Government, shall be occupied by military personnel and those persons may be allowed rent money which shall be fully applied to the unpaid purchase price of the quarters and interest on unpaid part of contract.

The minimum which we guarantee for each set of quarters—whether occupied or not—is the sum of $75 per month. Then we provide in the law that in the event someone should occupy the premises whose rent allowance was less than $75 per month, we will make up the difference to make the payment $75. We also provide that in the event that persons occupying the quarters who receive a larger rent allowance than $75 per month, and every officer except the second lieutenant receives a larger allowance, that we may apply the allowance which the person occupying the quarters is entitled to as the monthly payment for the particular quarters. If it is a captain, we will pay the amount of the captain's rent allowance, if it is a major, we will pay the allowance he is allowed. The rent money which these occupants get, as provided by the law, shall be paid directly to the contractor or his assignee to liquidate the contract.

This bill provides for not over 4 percent interest on the unpaid amount of the contract. We propose to pay this semiannually—let us take a specific case to show you how it works. Assume that a certain unit of quarters cost $10,000. The initial payment which we would make would be $500, namely 5 percent of the cost of this one house or unit in a multiple-unit building. Then we would promptly designate an occupant for the quarters. If it were occupied by a second lieutenant the rent money to which that second lieutenant would be entitled would be $75 per month. This law would apply to all units of quarters not fully paid for. Consequently, as the payments are made semiannually, at the end of 6 months we would pay the contractor for each unit of quarters, $450. This sum would be divided as follows: On the unpaid balance of $9,500, there would be $190 due as interest for the 6 months preceding the payment on the unpaid balance. This would be paid to the contractor as interest and the balance, namely $260, would be applied to the principal. Subtracting $260 from $9,500 leaves a net amount due of $9,240. Then at the end of the next 6 months we would repeat this process and pay 2 percent on the $9,240. This would equal $184.80. This in turn would be subtracted from the $450, leaving a balance of $265.20 to be applied to the principal of the unpaid debt. Subtracting this from the principal $9,240 still due leaves $8,975.80 still due.

This would be repeated every 6 months until the interest was all paid and the principal likewise all paid. It will be noted as the successive payments are made the principal becomes smaller and the ratio of the installment paid on each unit goes more largely to reduce the principal than for interest. In other words, the amount of the interest keeps getting smaller, and, consequently, the amount of the installment which goes to the principal gets correspondingly larger. You can imagine that if we had the place occupied in part by a first lieutenant at times—sometimes by a captain, or even a major—this would appreciably accelerate the time which it would take to pay out the contract and remove the obligation under it, and likewise obliterate the rent allowance.

How do we guard against an oversupply of houses? This is done in the following manner: The station commander must make an estimate and determine what houses will be needed for the next 10-year period. On this basis, no contract will be allowed to be entered into that provides more than 60 percent of the estimated requirement for houses. The secretary of each service will provide for the letting of these contracts.

All of the contractors finance themselves. This law provides a guarantee by the United States Government that the money for the initial down payment of 5 percent of the contract price will be paid to the contractor after its successful completion, and also that payment in installments, as provided by the law, with interest at the rate of 4 percent on the unpaid amount, will be paid as required by this law, that is, a minimum monthly payment for each unit of $75.

It is a guarantee by Uncle Sam, and undoubtedly any bank, financial company, or life-insurance company would be happy to take such a contract off the contractor's hands, and in that way find a place for the investment of large blocks of money at the rate of 4 percent per annum, with Uncle Sam's guarantee of payment thereof until the contract price and interest on unpaid amounts was fully paid.

In this way we can have a way to provide adequate housing for most of our military personnel by the application of rent money to the payment of contracts for houses. We will cut down the terrible rent load which we are paying now and which goes down a drain, with no tangible benefit to the Government or anyone else except the landlords who rent these houses. We will gradually obtain appropriate quarters for the people whose duty it is to provide security for the United States of America. This is bound to raise the morale of these men and their families. I have seen some shameful conditions in the various parts of the United States due to the lack of housing, and in some places even a lack of available space which may be rented for the money which we allow as rent

money. Just to mention two key installations where we need houses badly, I point out Muroc Lake, Calif., and Limestone, Maine. Many other strategic and key stations are almost as badly off for adequate housing as these stations.

It is hoped that this bill will start on its road a plan that will not only give us adequate houses, but take a great financial load off the backs of the United States taxpayers.

[H. R. 8645, 81st Cong., 2d sess.]

A bill to authorize and expedite the construction of family quarters needed at permanent military installations by authorizing the Secretaries of the military departments to contract for the construction of family quarters and to apply the occupants' basic allowances for quarters to the payment of the cost of construction, provided that no monthly payment for any unit shall be less than $75, and for other purposes.

Be it enacted, etc., That it has been the policy of the Government since its inception to provide quarters for those in the armed services who are stationed on military installations or in lieu thereof to provide monetary allowances with which to rent quarters. The present unusually large peacetime components of our Armed Forces is due to the continuing international tension which developed immediately following the cessation of hostilities. Undoubtedly, this situation will continue for an indefinite period into the future and the need for relatively large military forces will continue to be required. To promptly build and pay in full for the housing required for military personnel on duty at permanent stations would require such a vast sum of money it would be utterly impossible considering the present demands upon the National Treasury. The amounts spent each year for rental money to our married personnel, who have been provided with quarters, is over $300,000,000 per year. It is hereby declared that the purpose of this act is to provide for the construction of housing on military installations under such procedure as will permit basic allowances for quarters to be applied as installment payments upon such houses, to the end that within 15 years said houses will be fully paid for, the contractor will have made a reasonable profit and be paid a reasonable interest rate, not to exceed 4 percent per annum, payable semiannually, on the unpaid portions of said contract, and the Government will thereupon be the owner of the houses and the expenditure for basic allowances for quarters will be greatly reduced. In recognition of the intention of Congress to reduce the size of our Military Establishment as soon as possible, consistent with maintaining our national security, the number of family quarters that may be constructed under this act at any installation is limited to 60 percent of the additional family quarters which the Secretary of the military department concerned anticipates will be required at such installation during the next 10 years.

SEC. 2. When the Secretary of a military department finds that there is a shortage of family quarters at an installation in the continental United States (excluding Alaska) under his jurisdiction and considered to be a permanent part of the Military Establishment, he may contract for the construction of not more than 60 percent of the number of additional family quarters he estimates will be required at such installation during the 10-year period following the close of the fiscal year in which he makes such estimate.

SEC. 3. Each contract made under this act shall provide for (1) a down payment of not less than 5 percent of the principal obligation under the contract, (2) complete amortization of the remainder of the principal obligation by semiannual payments within such period of time (not to exceed 15 years) as may be prescribed in the contract, and (3) interest at not to exceed 4 percent per annum on the amount of the principal obligation outstanding at any time.

SEC. 4. (a) The sum of the monthly principal and interest payments shall be an amount equal to the basic allowance for quarters to which the member of the uniformed services assigned to such quarters is entitled under section 302 of the Career Compensation Act of 1949, except that in no case (whether or not the quarters are so assigned) shall the sum of the monthly principal and interest payments be less than $75.

(b) Annual appropriations for rent for quarters shall be made for uniformed services personnel who occupy the quarters herein provided for, the contract price of which has not been fully paid. Said rent allowance money shall be paid directly by the appropriate officer to the contractor who built such quarters, or his assignee, and such payments shall be made until the quarters have been entirely paid for, as prescribed in this act.

(2) No member of the uniformed services assigned to family quarters constructed under this act shall be required to assign his basic allowance for quarters to the United States if, by reason of orders of competent authority, his dependents are prevented from occupying such quarters.

(c) For the purposes of this section, the terms "member" and "uniformed services" have the same meaning as when used in section 302 of the Career Compensation Act of 1949.

SEC. 5. Section 3733 of the Revised Statutes (41 U. S. C., sec. 12), and section 1136 of the Revised Statutes, as amended (10 U. S. C., sec. 1339), shall not apply with respect to the construction of family quarters under this act, but no contract shall be entered into under this act unless (1) money has been appropriated from which the down payment required by the contract may be made.

SEC. 6. The Secretaries of the respective military services are authorized to make and promulgate appropriate rules and regulations to carry out the provisions of this act. The Secretary of Defense shall approve all such rules and regulations to the end that they may be as uniform and simple as the situation permits.

Jim Farley Speaks for International Trade

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 31, 1950

Mr. BIEMILLER. Mr. Speaker, with permission to extend my remarks in the RECORD, I include a distinguished speech on world trade made by the Honorable James A. Farley, chairman of the board of the Coca-Cola Export Corp., at the world trade dinner of the Milwaukee Association of Commerce in Milwaukee, May 25.

It is an eloquent expression of the faith that free world trade can help the cause of world peace, that trade barriers are barriers to international understanding and good will.

WORLD TRADE

As most of you know, the company and product with which I am associated have recently received a severe, and I think all of you here will recognize, an undeserved, blow at the hands of the French Chamber of Deputies.

It is true that this blow would probably never have been dealt us without the special agitation of the Communists in France. I don't have to go into their motives—which are to attack everything and anything that suggests that something good might come out of America. But it is also true that the Communists in France could never have succeeded in putting over this particular piece of legislation by their own efforts alone. They were aided by others, and for this one time a great measure of their support came from a group that is normally and traditionally opposed to Communist doctrine. I mean the agricultural element, and specifically the wine growers.

Now, I don't bring this up to be critical of the French wine growers. What I want to be critical of, however, is an attitude of mind. And not because it exists in France, though I regret its existence anywhere, but primarily because it also exists among certain groups of people in this country, and most unfortunately among some who have a powerful influence in shaping public opinion in America.

INSTINCT VERSUS LOGIC

I suppose the desire to shut out competition, real or fancied, is instinctive with certain people who have goods to sell or services to offer. We find this instinct deep-rooted even among banks and corporations, among corner grocers and haberdasheries, among peanut vendors and shoe-shine boys, and even among young ladies in search of a husband. But instinct and logic are well recognized to be two separate things that do not always agree. Personally, I happen to believe that the French wine growers would have put the pressure on their legislators, not to pass this legislation but to stop it, if they had investigated thoroughly and fully evaluated all the factors in the case. I could go into considerable length on this specific point, but that is not my purpose here.

What I should like to do is examine the factors that affect our own position, right here in America, in respect to imports from abroad. What are these factors?

If you are a globe-trotter like me, you cannot fail but be impressed by the way American goods have been broadcast throughout the globe, since the war as well as during it. In France you see a railroad car, and it looks French. It is small, and has those peculiar looking European bumpers instead of couplings as we have here. But if you go up and look at at it closely you see that it says on it "Made in U. S. A." You see a bulldozer in India and it is an American product. You see a huge highway truck on the China roads and it comes from America. You are surprised to see a tractor on a small farm in Italy, but your surprise ends with the discovery that it was made in America.

IMPORTANCE OF EXPORTS

You are constantly amazed at the degree to which our substance—our iron, our steel, our coal, our copper, our wheat, our food, and our clothes—dots the landscapes of the world. And you realize, as you think about it, what an enormous hole it would leave in our economy if our export business were ever to be withdrawn.

Admittedly, a large proportion of the American goods you see abroad today has been paid for with money that came from America in the first place—first through lend-lease, then through the Marshall plan, or ERP, as it is now known. I am a strong advocate of the Marshall plan. I shall go on hoping and working for its continuance as long as it is necessary. Yet it is obvious that ERP cannot go on forever, and nobody,

including myself, would wish it to. Only, when it does end there will have to be something to replace it—for our own sake as well as for the sake of those nations who are now receiving its direct benefits. For if we are to have prosperity at home, we must continue to sell goods abroad, to people who have enough of their own money to buy them, out of the fruits of their own labors and the profits of their own trade, within their own borders, with one another, and with us. That is the real purpose of the Marshall plan, or ERP—to help rehabilitate the nations so that they can again become fully self-supporting participants in the economy of the world.

There are those who argue that by rebuilding foreign industry we are only putting competitors for overseas markets back into business and thus would tend to reduce instead of increasing the volume of our exports. That argument is not valid. Against it is the whole history of world trade, which shows that the best customers, as between nations, are those who are able to sell abroad, generally in competition with one another. Even less valid, if possible, is the philosophy that in order to attain prosperity a country should export as much as possible while holding imports down to as near to nothing as it can. Surely nothing could be more unrealistic than for any concern or any nation to hope to increase its own business by keeping its customers poor.

MUST SPREAD IDEAS

I am aware, of course, that this is a world-trade dinner at which I am speaking, sponsored by groups who are especially interested in advancing world trade, and that therefore I have thus far been preaching largely to the converted. But it is not enough to settle the pros and cons of foreign trade among ourselves and for our own intellectual satisfaction. There is need for all of us who are sold on world trade to take an active part in combating the prejudice that exists in many quarters and among many groups in this country against so-called foreign competition—a prejudice that frequently sounds as bitter as that which was so successfully stirred up in France recently against Coca-Cola—a prejudice based upon misunderstanding of the very nature of trade itself, and which can be overcome only by a process of widespread education. And the need to overcome this prejudice is urgent. It is urgent because intimately involved with the question of world trade is also the question of world peace.

We hear much about the cost of the Marshall plan, and I do not deny that it is expensive. But the cost of ERP is relatively small change compared to the cost of being prepared for war. Moreover, we can foresee the end of the Marshall plan, but who at this point in history can confidently predict a day when we shall not have to pour ever-increasing amounts of money into perhaps a still larger Army, a still larger Navy, a still larger Air Force, and more and more expensive equipment? The end product of the Marshall plan is greater wealth and a better life for all the peoples of the world. The end product of military expenditures, if ever what is being purchased by those expenditures are put into use, can only be destruction and death.

Yet our military expenditures on their present tremendous scale continue to be necessary because of the kind of world we live in. I think you will agree with me that the most important single economic, political, and moral fact in that world today is Russian communism.

FIGHT RUSSIAN IDEAS

What Russian communism really is is difficult for an American even to visualize. It is so far from our own purposes that even after we see it we refuse to believe it. Its objective in regard to other nations is to produce chaos and weakness on a world-wide basis, so that the communistic idea may inherit and control. And, significantly, it is part of this policy, as it has been throughout history for every tribe or every nation who ever sought self-aggrandizement at the expense of others to shut out foreign trade.

Fortunately, we are not engaged in an armed struggle with communism. Whatever conflict exists is still in the stage of the cold war, and I am much encouraged to believe that it will never go beyond that stage. But even in a cold war no one nation can stand alone in opposition to the rest of the world. Not even Russia. Not even the United States. We need friends and allies. So does Russia. Russia is trying to win hers by promoting violence and revolution within her neighbors' borders. We can win ours only by demonstrating to the people of other nations the benefits to them of our way of life. This we can do only by opening our doors and windows and letting them look in, by showing them what that way of life has made available to us in terms of the highest standard of living the world has ever known, and therefore what it can in turn also make available to them.

Thus the more people we expose to American products the better they will understand the kind of people we are. The more who experience our merchandise, the better off both they and we will be, and the greater the mutual understanding and friendship between us.

It is well known that people understand things much better than they understand ideas. When we speak to the outsider of democracy the idea may be beyond his depth. Moreover, in the international battlefield of propaganda, the word "democracy" has been abused and distorted in every conceivable way. In fact, it is an important part of the Communist propaganda technique to appropriate the word, to give it an entirely new definition, and to claim that its own special concept of democracy, which turns out to be miles and miles away from yours and mine, is the only true democracy there is.

So when you say democracy to a European or an Asiatic, you cannot be sure exactly what that makes him think of, or whether it evokes in him any thought at all. But when you invite a man from a slum in Naples for a ride in your jeep, or offer him a cigarette or a bar of chocolate, that is something he can taste and feel. Show his wife a washing machine, and you show her a picture of a better life for herself that is more eloquent, more effective, and more convincing than any word or combination of words from all the dictionaries of all the languages in the world. To the foreigner, the most impressive thing about American democracy is that it is a system capable of producing low-priced merchandise of standard quality for universal distribution; that it is a system capable of producing for ordinary folks everywhere the kind of American merchandise, from trucks to shoelaces, that they saw and appreciated during the war.

There is no doubt in my mind that one of the most effective pieces of propaganda for the American way that could be conceived would be a Montgomery Ward or a Sears, Roebuck catalog in the hands of every inhabitant of the globe. And that includes the Russians.

FOREIGN TRADE VITAL

So, then, foreign trade is indeed vital to us, as I tried to point out at the beginning, for the maintenance of our own prosperity. But it has an even higher purpose, the advancement of world understanding and therefore of world peace. There is therefore, as I have tried to indicate, a moral obligation upon us who understand this to take an active part in spreading this doctrine among our fellow-citizens. Above all, what needs to be more generally realized is that foreign trade can never be a one-way street, as all too many unthinking people would like it to be. I do not mean that we should go out and urge people to prefer foreign-made products in preference to American-made ones, especially if it happens that the American-made product is the better value. And I do not deny that in a certain few very special instances some restrictions on the unlimited importance of a given product or a given type of product may be desirable. But I am opposed, and I think we all should be, to every artificial barrier that is not dictated by exceptional necessity. I think it is an obligation for us all to oppose any sentiment we see expressed, as we too often do, in favor of general discrimination against foreign-made products just because they are foreign-made. I believe it is our duty to be vigilant against all attempts to establish excessive duties on imports wherever there is indication that they are being proposed to merely shelter a monopoly or would-be monopoly or to protect a cherished, but perhaps not entirely justifiable, price structure for the corresponding domestic product—and to make our protests known.

COMPETITIVE STIMULUS

I think it is to the advantage of everyone for us to maintain and to insist on every possible occasion that the only really satisfactory way to meet the competition of foreign products admitted to this country is exactly the way American manufacturers have always been accustomed to meeting their own domestic competition. For there has always been competition in business, and businesses have always survived, with the public getting the benefits of greater values at a lower price as a result. It is through this process largely that America has become great and our living standards unsurpassed. And I am at a loss to see why it should make any difference to the manufacturer in Wisconsin whether the stimulus of the competition that makes him do a better job comes from Nebraska or Norway, Indiana or Italy, Austria or Alaska, New York or New Zealand.

The plain fact is that the more our domestic markets are divided among the producers of the world, the more our world market is extended and multiplied. And since, taken all together, the other peoples on this earth outnumber us so manyfold, this can only mean a gain for this country's industry, the world's most highly developed industry with the world's greatest capacity and potential for production and hence with the most goods to sell.

But there is an even greater gain to be had than that. That gain will come when, thanks to foreign trade, the peoples of this earth will become so mutually dependent that they cannot get along without each other. Then we shall have peace—permanent peace, at last.

Surely, the cause of world trade is a good cause, worth all our energies to promote. For it is the cause of peace.

Letter Carriers Are Human, Too

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 31, 1950

Mr. O'HARA of Illinois. Mr. Speaker, I have a letter from an esteemed constituent which I think will be of interest to my colleagues in their consideration of H. R. 547. This constituent is

Martin F. Kalbow, of 4300 South Ellis Avenue, Chicago, who holds the responsible position of secretary of Charles D. Duffy Branch, No. 11, of the National Association of Letter Carriers. I bespeak for his presentment of the viewpoint of the letter carriers the thoughtful attention of the Members of this body. Certainly there is no body of public servants which has more fully earned by hard and faithful service the good will and cooperative friendship of the American people than that of the mail carriers. I am sure that Mr. Kalbow's letter will be read with sympathetic eyes. The letter follows:

CHICAGO, *May 29, 1950.*

Hon. BARRATT O'HARA,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: The 4,400 letter carriers of Charles D. Duffy Branch No. 11, Chicago, Ill., are very much concerned with the curtailment order of Postmaster General Donaldson of April 18, 1950, and are rising as one protesting against this drastic order which seems so unnecessary at this time, and with a cold war on our first line of communication is now threatened.

Under the curtailment program and a one-delivery-a-day system, half of the day's mail will be carried over to the late afternoon. If a letter carrier cannot cover his route due to heavy mail, it means some mail will not be delivered until the following day, and in the afternoon of the following day, causing complaints from the patron.

The carriers will be handicapped in eating their lunch on the route, and especially in wet weather, how can he eat his lunch on a curbstone when it rains? He will also be forced to wear wet clothing instead of changing into dry clothing at noon when it rains, causing him to be ill, or maybe die, on account of the drastic order of the Postmaster General of April 18.

Our letter carriers in Chicago, Ill., are conscientious and sincere in performing their duties, but this drastic curtailment order will certainly tear down the morale of these carriers.

The American people have a right to expect and request normal mail service here in the United States. Germany and England have three deliveries a day, but here in the greatest country of all, we should have only one according to the Postmaster General.

We want you to support the House Resolution 547 rescinding the order of Postmaster General Donaldson of April 18, 1950.

We know how busy you are, and we will thank you for considering this letter.

Hoping for an early reply, and with best wishes, I am

Sincerely yours,

MARTIN F. KALBOW,
Secretary, Charles D. Duffy Branch, No. 11.

Nazism and Communism

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 31, 1950

Mr. MULTER. Mr. Speaker, if anyone is still in doubt about the kinship in ideas and methods as practiced by the Nazis and Communists, the stories carried in the press in the last few days attest to the fact that basically there is no difference between them. Former Nazis in Austria and in east Germany, which is under Russian domination, seem to have no difficulty in integrating themselves into Communist ideology and in following the dictates of Moscow. Dictatorship, whether black or red, is all the same to them. Yesterday's Nazis had no love or understanding of democracy, and they have still less appreciation of it as they emerge in the role of today's Communists. We would do well to remember this fact in dealing with the Nazis and "former" Nazis of western Germany.

The following editorial, which appeared in the Brooklyn Daily Eagle, May 27, 1950, deserves more than passing attention:

NOTORIOUS NAZIS BECOME COMMIES IN AUSTRIA—KINSHIP OF TWO SHOWN

The kinship between Nazi and Communist has been made strikingly apparent by the history of the peacetime years. Although theoretically far apart, actually they have pursued identical objectives through similar means. Under Hitler and under Stalin the ends have been the same—the destruction of all freedoms, including that of worship, the enslavement of the masses, the conquest of other lands, the establishment of a world domination.

Old Nazis, deeply indoctrinated with the teachings of Hitler, have no difficulty in adjusting themselves to the ideology of Moscow. Little is involved except a change in name. Thinking and methods and purposes are all the same. There is never any great variation in the ways of dictators as they hew their way toward their objectives.

Reports from Vienna that Soviet Russia is sponsoring in Austria a pro-Soviet group recruited almost exclusively from among former Nazis of an especially evil type are accordingly easy to accept as authentic. Its leader is Adolf Slavik, a former member of the Nazi Elite Guard and one of the more notorious of the former followers of Hitler.

Austria has been one of the Kremlin's more difficult problems. Resistance to communism has been determined and effective, as was revealed impressively in the recent elections, which gave only a meager scattering of votes to Moscow's puppets. In order to make even a semblance of a showing of progress, it has been necessary for Soviet agents to seek among discredited and disreputable elements for leaders and recruits.

They are being found, although only in limited numbers, among former Nazis, some of whom have served time in prison and are willing to form any sort of an attachment that may lead to an easier way of living or a little authority. Generally, the National League, as the new Soviet organization is known, is made up of the "irredeemable type of Nazi."

In explaining his shift from nazism to communism, Slavik is reported as having said that in the event of a new war Russia would occupy all of Europe and that it was accordingly expedient to be on the winning side. Similar reasoning probably influenced his alliance with Hitler a decade or more ago, with disillusioning results.

Formation of the National League in Austria and the methods through which recruits are being found has a heartening significance. They suggest that the Kremlin is finding barren soil in Austria and that its agents are hard-pressed to make a showing.

Oregon Poll on Alaska and Hawaii Statehood

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 31, 1950

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a poll published in the Portland Oregonian of May 18, 1950, which shows a progressive and overwhelming sentiment for Alaska and Hawaii statehood among the residents of that great western State:

ALASKA AND HAWAII RECEIVE STRONG BACKING IN OREGON

THE FRONT DOOR BALLOT BOX

(By Dan E. Clark II)

Where Oregonians are concerned, Alaska and Hawaii can add their statehood stars to the 48 already shining from the blue field of Old Glory.

The matter of whether to add these two Territories to the Union is now before Congress and votes may be taken before the end of this session on whether or not to admit them as full-fledged States.

Front door ballot box interviewers asked a scientifically designed cross-section of Oregonians to vote on these questions and this is how they felt when asked: "Would you favor or oppose granting statehood to Alaska? Hawaii?"

	Alaskan statehood	Hawaiian statehood
	Percent	*Percent*
Favor	88	78
Oppose	5	12
Undecided	7	10
	100	100

"Alaska is closer to us than New York," exclaimed one person, "why should we wait any longer to take it in as a State?" "Alaskans' interests are the same as ours, so why shouldn't we give them the same statehood rights we enjoy?" declared another.

Although Hawaiian statehood was slightly less popular than Alaskan, it was still favored by a large majority. The main objection here was on the racial issue, and some expressed fear of Communists in the islands.

Gives breakdown

One of the interesting features of this question was the unanimity of feeling among all segments of the population. Alaskan statehood is universally favored by Republicans and Democrats, men and women, the various educational levels, and the different age groups alike.

The Hawaiian issue shows some difference existing, but most of them are matters of indecision. These figures show the pattern of opinion:

	Favor Hawaiian statehood	Oppose Hawaiian statehood	Undecided
	Percent	*Percent*	*Percent*
Democrats	79	10	11
Republicans	77	15	8
College educated	82	12	6
High school	80	13	7
Grade school	72	11	17

"What are we going to do with the two extra stars if they become States?" queried one anxious Oregonian.

GM Shows the Way

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 31, 1950

Mr. BIEMILLER. Mr. Speaker, with permission to extend my remarks in the RECORD, I attach the following editorial, GM Shows the Way, by Father Benjamin Masse, from the June 3 issue of America:

GM SHOWS THE WAY
(By Benjamin L. Masse)

Last week America ended its editorial comment on the negotiations at General Motors with these words:

"UAW wants a wage increase of 9 cents an hour, a union shop, welfare benefits, and minimum monthly pensions of $125, including Federal social-security benefits. That package would cost about 31 cents an hour. Don't be too surprised if Mr. Reuther receives a substantial part of it, though he certainly won't come away with the union shop."

In the light of the thrilling news from Detroit on May 23, that prediction turns out to be conservative. Walter Reuther not only obtained a substantial part of his economic demands, including the most generous pension plan in the industry; he also left the bargaining table with something suspiciously like a union shop.

Even that doesn't tell the whole story. Breaking the news of the agreement to the press, Charles E. Wilson, president of General Motors, called the contract unprecedented in labor-management relations. His words were echoed by Walter Reuther, UAW president, who referred to it "as the most significant development in labor relations since the mass-productions industries were organized in 1936–37." Though these reactions might be suspect as emanating from interested sources, they were immediately confirmed from outside the industry. "After a period of apparent incredulity," reported the New York Times on May 24, Government officials hailed the agreement, and Secretary of Labor Maurice J. Tobin called it great news. Cyrus S. Ching, Director of the Federal Mediation and Conciliation Service, was more specific. He said that it "marks a milestone in the progress of collective bargaining." In Pittsburgh, Philip Murray, president of the CIO, gave his blessing to "an amazing and very wholesome development." Finally Wall Street rendered its dollars-and-cents verdict by shooting GM stock to its highest price since 1929.

What is there about the UAW-GM contract that caused all this excitement?

First of all there is the provision, probably not matched in any other labor-management contract, that the agreement will run for 5 years, with no reopening of any kind. For the workers that means security, and for the corporation freedom from strikes. It means more. It is a vote of confidence by the biggest nonfinancial company in the world in the continued health and prosperity of the American economic system. It is also a recognition by big business that its decisions can and ought to have, in the words of Mr. Wilson, "a stabilizing influence not only on our business but on the economy of the whole country." That brings the thinking of GM and Walter Reuther much closer together than anyone thought possible in the dismal days of 1945–46.

In the second place, there is a whole host of economic benefits which enable the workers to share fairly in the increasing productivity of our most profitable corporation. Here are the main ones:

1. Four cents an hour, representing the estimated annual gain in productivity, will be added each year to the basic wage. Since the average wage now is $1.65 an hour, that means a rise to $1.85 in 1955. The basic rate for apprentices is raised an additional 5½ cents an hour, and the rate for 30,000 skilled tool-and-die workers, 5 cents an hour. The cost-of-living formula, first adopted in the 1947 contract, is retained. Under this formula wages will rise or fall 1 cent an hour, depending on every rise or fall of 1.14 points in the consumer price index of the Bureau of Labor Statistics. Though there is no ceiling on the amount wages can go up under the formula, the agreement specifies that wages may not fall below the basic rate.

2. Workers with 25 years of service can retire at 65 with a pension, including Federal social-security benefits, of $100. In the event that the Government increases benefits, however, the gain will be passed along to the workers up to a maximum of $117 a month. That feature liberalizes the present pension pattern. The contract also provides that any employee with 15 years of service who becomes totally and permanently disabled after the age of 50 becomes eligible for a disability pension ranging from $50 to $90 a month. When such a disabled worker reaches 65, he comes under the regular retirement plan.

3. Medical and insurance benefits are liberalized. All company employees and their families, with the corporation paying half the premium, will now enjoy complete Blue Cross and Blue Shield coverage. Life-insurance policies are upped a flat $500 and will range from $2,500 to $5,000. The union also won an increase of $14 a week in sickness and accident benefits. These will run from $28 to $45.50, for up to 26 weeks.

4. Also liberalized was vacation pay, which employees ordinarily take instead of days off. Workers with 1 year's service will receive a week's pay, and the amount grows thereafter proportionately with length of service. The top is 3 weeks' pay for employees with 15 years to their credit.

The union estimates that the economic features of the new contract will cost GM 19 cents an hour—Mr. Reuther had originally demanded 31 cents—or $144,000,000 the first year. Over the life of the contract the total gain of the workers will exceed $1,000,000,000. The union also estimates that in the fifth year alone the average GM worker and his family will have an income $700 above what they have today. Since the corporation's profits after all taxes were $656,000,000 in 1949, and are running at an even higher rate so far this year, these economic concessions will not unduly strain its ability to pay. They represent a laudable willingness on the part of GM to share its unparalleled prosperity with its employees.

Great as these economic benefits are, they are not so startling as the noneconomic concessions granted by the company. The union won more than 30 desirable changes in the contract, the most important of which is a modified union shop. Under the terms of the union-security clause, all new employees must join UAW and remain members in good standing for a year. At the end of this period they have the option of resigning. Present employees who are not members of the union are under no obligation to join. In view of the historic open-shop policy of GM, which was maintained as a matter of "principle," that bow to the social obligations of its employees ranks with the historic decision of Ford a decade or so ago to grant the union shop. It means that GM now concedes that its employees can belong to UAW without in any way being disloyal to the company. It means that the union is given a new status in the plant community, which approximates the status of partnership. It means, finally, that the company sees in Walter Reuther not the dangerous character portrayed in certain management circles, but a loyal American intent on using his power for the good of his industry and his country, as well as for the narrower interests of his followers.

It is much too early to estimate the full impact of this precedent-shattering contract. It seems clear, however, that it will have a generally pacifying effect on industrial relations, especially in basic industry. It will likewise strengthen the trend toward longer and more stable agreements between labor and management. It also marks as successful the 1947 experiment in tying wages both to increasing productivity and to the cost of living. Thus it may point the way to a new objective criterion for wage determination.

From the standpoint of union politics, the GM agreement bolsters the position of Walter Reuther in UAW. During a visit to Detroit last March, the writer had the impression that the Chrysler strike had weakened Reuther and given the tenacious, irrepressible Communist opposition a new lease on life. The GM settlement should regain for the young UAW leader any ground he may have lost.

Since the writer has had in the past some small differences with GM management, it gives him all the greater pleasure now to hail the corporation for breaking new ground in industrial relations. Its obvious willingness to live and work with the union is in sharp contrast with the negative, again'-the-union policy of the Chrysler Corp. Congratulations all around.

How Prisoners Become Clients Through the Cooperation of Federal Prison and State Agency

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 31, 1950

Mr. DAVIS of Georgia. Mr. Speaker, in the current issue of the Journal of Rehabilitation, which is the official organ of the National Rehabilitation Association, there appears an article on the joint program of vocational rehabilitation of the United States Penitentiary in Atlanta, Ga.

This is a most interesting and informative article regarding the fine work being done. I have been greatly interested to learn of the fine results being accomplished through this joint program of vocational rehabilitation. I believe that readers of the CONGRESSIONAL RECORD will likewise be interested in this work, and under leave granted, I insert the article herewith as a part of my remarks:

HOW PRISONERS BECOME CLIENTS THROUGH THE COOPERATION OF FEDERAL PRISON AND STATE AGENCY

(By Bruce Hall, Supervisor of Research and Information, Vocational Rehabilitation Division of Georgia)

In a feature article published nearly a decade ago, the erudite Christian Science Monitor gave Atlanta's United States Penitentiary its motto: "Atlanta Sets the Standard." It was not an undeserved compliment to this institution, which has the custody of more than 2,000 men, mostly recidivists and offenders in older age groups. Few young first offenders are sent to Atlanta.

It takes more than modern facilities and accepted administrative policies to set stand-

ards worthy of emulation by other institutions. It takes vision, imagination, and a pioneering spirit. On that score, Atlanta seems to have been fortunate over a span of years in the individuals who have been assigned there as wardens.

REBUILDING MEN

The institution's method of dealing with prisoners was summed up rather neatly by an inmate. In an article which appeared recently in the prison's well-edited, attractive magazine, the Atlantian, he said:

"Almost from the moment the thinking inmate enters Atlanta he is impressed with the fact that his ultimate rehabilitation is the aim and goal of the prison's program. From the time he enters the quarantine building until he is discharged at the end of his sentence, his actions and thinking are channeled toward the end goal of incarceration—return to society—by placing him not under the watchful eyes of prison guards, but under the direction of instructors."

The word rehabilitation, in this connection, may be used in its broadest sense, for the prison program looks not only toward the social, moral, and spiritual rehabilitation of inmates, but to their physical and vocational rehabilitation as well.

On the 27 acres within massive walls are well-equipped shops for vocational training, a modern hospital, athletic field, and recreation areas, in addition to industrial plants, administration buildings, and other facilities. Incidentally, the prison industries during World War II furnished millions of dollars' worth of materials to the armed services.

PROBLEMS—AND ANSWERS

The distinctive program for the physically handicapped has been developed in recent years through the cooperation of the vocational rehabilitation division of Georgia's Department of Education. It grew out of a problem which confronted prison officials in 1943. A Negro who had a marked facial disfigurement, due to scrofula, was to be released to his legal residence in North Carolina. He was in dire need of plastic surgery to eliminate fissures through which his teeth were exposed. There was no provision in the budget for surgery services by an outside specialist.

The officials of the Atlanta Penitentiary sought the advice of Paul S. Barrett, Georgia's director of vocational rehabilitation. Mr. Barrett recommended requesting the assistance of North Carolina's vocational rehabilitation division. This course was followed, and North Carolina accepted the case, but the man violated his conditional release before the service could be rendered.

A failure? Maybe, in this specific case, but the experience had uncovered the approach to the problem of physical restoration of handicapped inmates who needed types of medical and surgical care not available in the prison hospital.

Other cases arose and were handled on an individual basis.

One was a white man, 52, who was 70 percent deaf and wore an artificial limb. Records showed that he lost his leg in 1915 and went to prison the following year; he had served eight sentences for various offenses, including post office robbery. He told prison officials he had turned to crime because he could not make a living. He never had begged, he said, and never would; he preferred being a prisoner. While in prison he was trained to operate a lathe.

Efforts were made to place him. Shipyards were calling for manpower, but because of his defective hearing they would not accept him. The assistance of the Georgia Division was sought. A hearing aid was provided, and when the man was released, in 1944, he was promptly placed—in a Georgia shipyard.

Two years later shipyard personnel officers told a prison placement officer that the man had never been late to work and had been absent only 5 days when ill with influenza.

If there had been a Federal-State vocational rehabilitation program back in 1915, this man might have been rehabilitated before going to prison.

A PLAN THAT WORKED

In 1947, Warden Jos. W. Sanford, since retired, conceived the idea that a program could be worked out to serve all handicapped inmates. The upshot of this was an agreement between the prison and the vocational rehabilitation division setting forth individual and joint responsibilities. It's just a simple statement, without a lot of legal phrases and technicalities.

A special vocational rehabilitation committee was organized. It comprised the prison's director of training and placement, the supervisor of employment placement, the parole officer, the supervisor of vocational training, the vocational rehabilitation counselor, and a secretary.

All inmates having vocational handicaps were called before the committee. Questions relating to physical restoration, training appliances, and future placement were discussed. Feasible cases were accepted and all forms, including the medical report from the hospital, were filled out. The Atlanta counselor then referred the case to the appropriate State or Georgia local office.

After the backlog of cases had been cleared out, the committee's work was delegated to the placement officer, Jerry Head, and the Atlanta counselor. Now the procedure is routine: if the medical examination shows a vocational handicap, the case automatically is referred to the rehabilitation counselor.

While follow-up reports are not available on all cases served, prison officials have ample information on which to base an appraisal of the program.

In discussing the cooperative program Warden W. H. Hiatt said: "It has been so successful and so helpful to us in problems dealing with handicapped inmates that we are of the opinion other institutions would benefit from a similar arrangement.

"It has accomplished a great deal for men who realize they couldn't secure employment without corrective measures. We believe that incapacitation is a big factor in getting them into difficulties. Removal of the cause is a step toward rehabilitation."

Dr. George Hess, chief medical officer, expressed himself even more emphatically: "The Vocational Rehabilitation Division has given us 100-percent cooperation. We feel there is as much to physical restoration as to anything else in rehabilitating inmates. Everyone who comes here with hernia, for instance, gets the necessary surgery. We are doing surgery in extreme case of varicose veins. And we're doing more plastic surgery. I think we're on the right road."

In connection with the physical restoration program, it should be emphasized that Vocational Rehabilitation Divisions never are called upon for surgical fees unless the operation requires the services of an outside specialist. And, of course, there are no hospitalization costs on any cases accepted by the divisions. The prison hospital is approved by the American College of Surgeons.

RESULTS ON RECORD

In his report for 1948, the rehabilitation counselor, J. J. Segars, had this to say:

"I have visited the penitentiary once or twice a week. Cooperation of all officials has been excellent and I feel the program has been much more successful than anyone anticipated.

"Since no program of this sort had been undertaken previously, I felt it was important to select carefully the cases to be accepted and proceed on a sound basis with a reasonable number rather than to attempt a large number. Every inmate referred by the institution has been interviewed, and a study made of the case history.

"The interest and cooperation of the individuals has been very good. Few have shown no interest at all. We have followed a policy of rejecting all applicants who were habitual drug addicts and those who had long criminal records.

"A good variety of services has been provided, most of which have been secured through the cooperation of the institution and without cost to State rehabilitation agencies.

"During the year we asked for and received the cooperation of eight States. Every plan calling for financial assistance from a State agency has been approved, except in one case when a counselor said he did not have funds available at the time.

"A total of $1,258.95 has been provided. These services would have cost a great deal more if the State agencies had provided them after the client left prison, since all hospitalization, dentures, artificial eyes, and training are provided by the Bureau of Prisons."

In planning training courses, consideration is given to the inmate's term. The schedule is worked out so that the trainee may complete the course before the date of his release. Courses cover a wide range, from general education to technical subjects such as television. The outside detail of trusties working on the prison farm, may get training in truck farming, tractor driving, motor repairs, and other subjects that fit in with farming.

Of course, there have been some disappointments. One was a 30-year-old amputee who had been provided with an artificial limb and placed as a tractor driver in Mississippi. He had worked only a short time when he obtained permission from his probation officer to go to another State for a better job. There he stole an automobile and is now back in the penitentiary. But an occasional failure does not discourage those who see the whole picture.

Recently we had an opportunity to interview a former inmate who had surgery and training under the cooperative program. This white man had congenital club feet. Before he was 30, he became involved in an extortion scheme. During incarceration he received corrective surgery, orthopedic shoes, and braces. He was trained as a radio repair man and, upon release, placed in employment. Soon thereafter he had an opportunity to go in business for himself. Vocational Rehabilitation assisted in the purchase of equipment. A room in his home was converted into a shop. He answers calls for radio-repair service from any part of the county and takes jobs in his shop. His earnings for the first year, he said, have averaged better than $250 a month. He has a wife and two children.

When asked about the prison program, he replied with enthusiasm, "It's fine." Then he explained that it had made it possible for him to realize a lifelong ambition in getting corrective surgery and learning a trade in which he finds real satisfaction.

National Spelling Bee

EXTENSION OF REMARKS

OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 31, 1950

Mr. DAVIS of Georgia. Mr. Speaker, Washington constantly has the opportunity to see extraordinary people and witness unusual events. We hear and

see so much that is unusual here, that we can, without becoming excited, extend a welcome to visiting dignitaries from other nations, watch the newest and speediest jet planes perform at almost miraculous speed, and participate in governmental activities which have the most far-reaching effects.

These are all the actings and doings of adults, educated, trained, and experienced. But I want to call attention today to an outstanding event which occurred in Washington last week, which is worthy of notice and high praise. I refer to the 1950 national spelling bee, which was held Friday, in which there were 50 contenders, ambitious, intelligent, wholesome boys and girls from every section of the country ranging in age from 11 to 14 years.

These 50 boys and girls were the champions of their respective States. They had defeated opponents in contests in their schools, their counties, districts, and States. The 50 who won the trip to Washington were the finest spelling talent of the schools of America.

These bright boys and girls faced the keenest possible competition in this contest. For many of them it was their first visit to the Nation's Capital. They were in strange territory and their competitors were strangers to them, facts which in themselves contributed to the difficulties of the situation.

The 1950 national spelling bee was the twenty-third annual contest of this group, and while all of them have been outstanding this was an extraordinary contest in several respects.

It was the first time, regular spelling-bee goers said, that the first list of words was exhausted; the first time that a speller had been eliminated, and later reinstated because the judges found the word could be correctly spelled two ways. This happened three times in this spelling bee. It was the first time the judges completely ran out of words, and the first time that the contest ended with two spellers, neither able to spell down the other, tied for first place. So this year's spelling bee created two national champions instead of one.

These two distinguished and able spellers who emerged victorious from this grueling 7½-hour contest were Diana Reynard, of Cleveland, Ohio, and Colquitt Dean, of College Park, Ga. Colquitt Dean lives in the Fifth Congressional District of Georgia, and I do not need to tell you that I am very proud of his remarkable achievement in winning, first the State championship, and then with the able young lady from Cleveland becoming joint national champion. We of the Georgia delegation are proud of Georgia's newest champion.

I take this opportunity to commend the sponsors of the National Spelling Bee for the fine service they are rendering in affording to the boys and girls of America the opportunity to participate in this wholesome, educational competition, which trains the contestants in self-reliance, self-improvement, and the principles of good sportsmanship.

This event strengthens my confidence in the future of America.

The boys and girls who took part in this contest in all its stages, will soon be men and women, and they will be the good Americans who believe in individual effort, free enterprise, and the American way, who can be depended upon to exert the necessary effort to preserve these things.

Congratulations to them upon their achievements and best wishes for their success in future undertakings.

Lawson Veterans' Hospital

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 31, 1950

Mr. DAVIS of Georgia. Mr. Speaker, at a meeting of Gate City Council, No. 5, Junior Order United American Mechanics, in Atlanta, Ga., on May 17, 1950, Dr. M. D. Collins, national councilor of the order, introduced a resolution urging that Lawson Veterans' Hospital in Atlanta be not closed, but that it be continued for the use of sick and disabled veterans in that area. This resolution was seconded by Mr. Vester N. Owenby, and was unanimously adopted by the membership of Gate City Council.

The original of this resolution has been forwarded to the President of the United States.

I feel that Members of Congress should know of the interest of this fine civic and fraternal group in the preservation of this veterans' hospital, and I am inserting the resolution herewith as a part of my remarks:

Whereas the announced decision of the President of the United States to bring about the immediate closing and abandonment of the admirable United States Veterans' Administration hospital facility at Chamblee, Ga., and known as Lawson Veterans Hospital, in the vicinity of Atlanta, has brought deep anxiety to the veterans and families of veterans in this community who will thereby be subjected to great neglect and serious inconvenience; and

Whereas such a step will result in many veterans otherwise entitled to full hospital and clinical treatment, being deprived of this merciful consideration at the hands of the Government which they so gallantly served in time of war; and

Whereas the decision aforesaid would also result in the wasteful abandonment of Government facilities which cannot be replaced elsewhere except at huge expense; and

Whereas the decision in question does not appear to be based upon any sound determination of the actual facts regarding the overcrowded hospital situation in this community; and

Whereas the abandonment of Lawson Hospital would likewise deprive the veteran population of this community from the advantage of its proximity to the Emory University Medical College and staff composed of renowned specialists and technicians in every branch of medicine and surgery, whose skilled services have long been available to the patients of this institution.

Whereas the ideal location of Atlanta as the center of transportation and communication for the vast area immediately within the environs of Lawson Hospital has afforded to it an advantage unsurpassed elsewhere for the treatment and diagnosis of those disabilities which are a peculiar incident of war service, both from the standpoint of physical disabilities and mental infirmities; and

Whereas the decision in question apparently gives no proper weight to the foremost principle of a sound hospital program which has been held to include the idea that no existing hospital accommodations should be abandoned until adequate and corresponding facilities have been provided on an equal basis of bed-for-bed, ward-for-ward, and staff-for-staff, which may amply, properly and promptly administer to those who are in need of treatment and hospital care, and who would otherwise be displaced or transferred to distant points away from their families, and where recovery and recuperation may be seriously handicapped and retarded; and

Whereas we deplore this decision and earnestly hope that it will be revoked or modified in such a way as will prevent undue hardship and suffering from being inflicted on helpless patients, or where the existing long waiting list for admissions to hospitals shall not be further lengthened and aggravated: Therefore be it

Resolved, That in accordance with the constitutional right of all American citizens to petition for the redress of grievances, Gate City Council, No. 5, Junior Order of United American Mechanics, at a regular session thereof at Atlanta, Ga., on May 17, 1950, do hereby respectfully and earnestly petition the President of the United States to alter and rescind his previous order for the abandonment and dismantling of Lawson Veterans Hospital, and that he immediately suspend the execution thereof until such time as a more detailed and factual analysis and survey can be made of the hospital needs both present and future, of the veteran population of this vicinity; be it further

Resolved, That a copy of this resolution be sent to Georgia's two United States Senators and to Congressman JAMES C. DAVIS, as the Representative of this district, in support of their efforts to prevent the consummation of the order of the President to which the above references are respectfully made.

Address by the Vice President at National Triennial Convention of B'nai B'rith

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, June 1 (legislative day of Wednesday, March 29), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by the distinguished Vice President of the United States on the occasion of the National Triennial Convention of B'nai B'rith held in Washington, D. C., on March 21, 1950. Vice President BARKLEY shared the program with Secretary General Trygve Lie, of the United Nations. The dais was graced with such dignitaries as Eddie Jacobson, of Kansas City, former business associate of President Truman, who was a guest of honor; Mrs. Alben W. Barkley; Israeli Ambassador Eliahu Elath; Supreme Court Justice Tom C. Clark; Attorney General J. Howard McGrath; Secretary of the Interior Oscar Chapman; Secretary of Agriculture Charles F. Brannan; Senator James

P. Kem; Senator Herbert H. Lehman; John Sherman Cooper, Delegate of the United States to the United Nations Assembly; Secretary of the Navy Francis P. Matthews; Assistant Secretary of State Willard L. Thorp; Assistant Secretary of State John D. Hickerson; Benjamin Cohen, Assistant Secretary General of the United Nations; Ben V. Cohen, United States Delegate to the International Court of Justice, The Hague; A. H. Feller, Counsel to Trygve Lie, Secretary General of the United Nations; Eugene Meyer, publisher of the Washington Post and former President of the World Bank; Watson Miller, United States Commissioner of Immigration; Representative Emanuel Celler; Representative Edith Nourse Rogers; Representative J. D. Dingell; Representative Joseph Bates; Representative Louis C. Rabaut; Representative Cecil P. King; Representative Arthur G. Klein; Representative Jacob K. Javits; Representative Abraham J. Multer; Representative Richard Bolling; Representative Earl Chudoff; Representative Isidore Dollinger; Representative Louis B. Heller; Representative Edna F. Kelly; Representative Franklin D. Roosevelt, Jr.; Representative Sidney R. Yates; and Representative William H. Bates. It was also my privilege to attend.

Frank Goldman, president of B'nai B'rith, in presenting Vice President BARKLEY, said:

There are few persons in the United States who are held in greater affection and regard by all people than Vice President ALBEN W. BARKLEY. His great and long record of public service entitles him to an important place in the history of our time.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President, Mr. Secretary General, distinguished guests, ladies and gentlemen, I am sure we have all been delighted and inspired by the beautiful program to which we have listened this evening. So much so that I am afraid that what I shall have to say, my part on the program, might be an anticlimax.

But I am greatly honored by the invitation which enables me to participate in this triennial convention of B'nai B'rith.

There are many things that I should like to say which have been inspired by the magnificent address of Mr. Trygve Lie. I shall not do so because I desire to make my remarks brief.

First, I wish to say that it is very fitting and appropriate always to honor men for their outstanding work while they are yet alive and may enjoy the encomiums which they hear heaped upon them by their fellow men for good work well done.

It seems to me, therefore, peculiarly fitting tonight that this great organization should give to Mr. Eddie Jacobson the citation of which he is to be the recipient.

All of his life he has devoted himself to good works and to worthy causes. He has long been active in B'nai B'rith, traveling all over this country and wherever any duty might call him, giving of his time and of his substance and his energy in the great cause of brotherhood represented by this great organization.

He has also been active in the American Legion. He has also been active and effective in the great United Jewish Appeal campaign for funds to aid displaced persons and refugees all over the world, and particularly in the new State of Israel. And in order that he might bring home to his own people and to all people of America within the range of his voice and his influence the real need of these hundreds of thousands of unfortunate people, he visited Israel itself in order that he might see first hand the great need and the distress of these unfortunates, who have found a home in the new State of Israel, and who must be supported and encouraged in their effort to build a new state—not merely a Jewish State but a state in which all the inhabitants may enjoy that degree of liberty, freedom and dignity which we claim for ourselves in these United States of America.

He has been a lifelong friend of President Truman. He fought by his side in Europe in the First World War and was associated in business with him for a time after the termination of the war.

It was therefore most appropriate and fitting that the President, when he signed the announcement of the de jure recognition of the new State of Israel, should ask his friend and comrade-in-arms to be present, together with the president and secretary of B'nai B'rith, to witness that historic act of his.

And so, I join with all of his friends here and all over the country in congratulating him upon the receipt shortly of this citation.

And it was extremely appropriate also that the President should have the president and secretary of B'nai B'rith with him at the time he signed this announcement of the recognition of the State of Israel.

We do not ordinarily bank too much on ancestry in this country where we believe in the equality of men without regard to race, religion, or color, or national origin. And, yet, we do place some store by the long and outstanding record of groups of men as well as individual men.

A boy one day asked his father, "What is an ancestor?" And the father said, "Well now, son, I am an ancestor."

The boy said, "I understand that, but why do people brag about it?"

We do brag about our ancestors, and properly so, because just as in horses and in other forms of animal life, blood undoubtedly tells among human beings.

We are especially proud—and I am happy to acknowledge it, though not eligible for membership in this great organization—we are justly proud of its ancestry, of its origin, and of its great record, that B'nai B'rith has for 107 years in the United States of America, and wherever else its influence might be felt, sought to break down the barriers of bigotry and intolerance and hatred and to teach the brotherhood of men, to inculcate in your own children through your high schools and your colleges and in your daily associations among yourselves and with all others the belief in the doctrine and the truth that God made us all in His own image, and being therefore children of the same Creator, we are brothers, without regard to our ancestry, our condition, our geography or our economic or religious or racial differences.

B'nai B'rith's great work has not been limited by geographical or racial boundaries. It has served in helping to hospitalize the veterans of our wars. It has gone wherever it heard the voice of need in order that it might administer to that need, to calm that voice by its presence, by its benefactions, by its influence, and by its courage.

B'nai B'rith I should say, being the oldest and most representative and probably the largest of all the Jewish organizations, has had an influence far beyond its own boundaries, far beyond its own lodge rooms or headquarters, because it has taught all people, particularly in the United States, that men of different origin, of different ancestry and different background, of different religious beliefs, different political affiliations, different economic status, may live together as neighbors and as friends and as Americans.

So, I am happy to be on this program, even briefly, to pay tribute to one of the oldest organizations in America, one of the most liberal of those, which harbors less of bigotry and antagonism and hatred than probably any other organization of its kind in the United States.

What we need, not only in this country, but in the world, is a breaking down of the barriers of misunderstanding, the barriers of inherited antagonism, the barriers of hatred, whose roots are deep in the soil of humanity.

Most of the wars that have cursed the earth, that have drenched the soil of all nations with the blood of their people, have grown out of inherited hatreds, misunderstandings, and unwillingness to believe that there may be another side to controversies, an unwillingness to resort to the arbitration, negotiation, and understanding that international tribunals are set up to bring about.

I know, as you know, that if it were left to the peoples of the world there would be peace.

Those who draw the water and hew the wood, those who bear the burden of taxation, the burden of the battlefield, those who hold their children and their babies in their arms, nestling at a mother's bosom to obtain the sustenance and substance of life—if they had their way, if they could speak as one voice, they would tell us and all governments that without regard to inherited hatreds, without regard to international or social-economic antagonisms, without regard to the ambitions of selfish men, they believe and want the nations of the world to sit down around the counsel table, now represented by the United Nations, to settle their disputes without resort to the sword, without the devastations that mean the ruin of the treasured accumulations of the centuries and the ages which have been brought about by the art and science and work of man.

So I am happy tonight to have heard the Secretary General give us this note of hope, of courage, with regard to the United Nations.

If the United Nations fails as the League of Nations failed, it is difficult to predict the fate of man. It is difficult to predict that another international world-wide organization might ever again rise above the ruins and the graves of millions upon millions of people.

So I have been encouraged tonight, and I am thankful to have been here to have heard this constructive and yet fair, level-headed, calm recital and appraisal by the Secretary General of the work of the United Nations.

I have faith in it. When we think of it and grow discouraged about it, we might well consider the early history of our own country.

After the Revolutionary War had been won in 1783, for the next 4 years our Thirteen Colonies, which had been united during the war, came to the brink of perpetual, permanent separation. Local jealousies inspired local politicians, and appeals to the selfish and provincial interests of communities well-nigh obliterated the desire for the creation of a nation.

Finally, 4 years after the victory, a group of men met in Philadelphia to write the Constitution—not to write it; they did not meet there for that purpose. Not a delegate who went to Philadelphia had any commission from his State to write a new Constitution, but only to amend and strengthen the Articles of Confederation under which the Colonies had limped along for 4 years.

They were men of courage and vision. They went beyond their authority. They went beyond the commissions which they bore, and they wrote a Constitution of the United States and submitted it to the Thirteen Colonies. And when it was submitted to the State of Virginia, Patrick Henry made

one of his greatest speeches in opposition to the ratification of the Constitution.

Patrick Henry—who had inspired every Revolutionary soldier. Patrick Henry—whose immortal oration in St. John's Church in Richmond has been memorized by every schoolboy—"Give me liberty or give me death"—made the speech of his life, almost, against the ratification of the Constitution by the State of Virginia, on the ground, as he said, that if it were adopted and a new nation created under it the people would lose all the liberties for which they had fought for 8 years.

Due to the influence of George Washington and of John Marshall and of others, Virginia ratified by a majority of 9 votes, and when she ratified her influence was so extensive that enough of the States ratified to create a new nation here, 13 States, not at first but ultimately, with a little population of 3,000,000, fringing the Atlantic seaboard.

And that Constitution was adopted, and this fledgling Nation took on its existence among the nations of the world.

It had its difficulties. It had its controversies. It had its misunderstandings. It had to fight a great internal war on social and economic problems three-quarters of a century after it was established. But it was united again, and is now united, and, in spite of all the discouragements, in spite of all the pessimistic views that are entertained sometimes by people in our own country, we enjoy today greater liberty and greater influence and greater friendship than we have ever enjoyed among the nations of the world.

We still enjoy the freedom which so many peoples have lost—freedom of worship, freedom of speech, freedom of the press, freedom of assembly, and two other freedoms have been added recently in recent years, which are a part of our goal, not only for ourselves but for all mankind, freedom from want and freedom from fear.

I congratulate the B'nai B'rith, not only on its antiquity of origin, not only upon the 350,000 members which honor its roster, not only for the great charitable and eleemosynary activities in which it has been engaged, not only on its success in unifying and uniting Jews of different politics, of different interpretations of their own religion, of differing economic conditions.

But I congratulate it and honor it because through its influence it has helped to break down the barriers of misunderstanding, of intolerance, of bigotry, and hatred, and, therefore I am sincere when I say that I hope that in the years to come it may not only grow in numbers, but that it may grow in influence and power among all the peoples, not only of Jewish distinction, but among all the people in this great country and all the people of the world.

We are all traveling the same road. We are traveling toward the same goal. May that goal be happiness and peace and understanding and the joy of making contributions to the elevation of the standard of life in this country and throughout the world, and the happiness that comes from individual men through their part in this great work of reformation and of realization.

Again, let me thank you, Mr. President, and Mr. Trygve Lie, and all of you who have by your presence here and by your great program made us all feel stronger and prouder that we are not only citizens of the United States but that in our way, different as it may be in every individual case, we are trying to contribute to the peace and happiness and prosperity of all mankind throughout the world.

Frank Goldman, in thanking the Vice President, said: "Mr. Vice President, when I say that everything about you breathes the true American democratic spirit, I do not mean it in any partisan sense. I feel sure that in you and Mrs. Barkley, we are graced with America's greatest ambassadors of good will. You give people throughout the world a vivid picture of the good our country seeks to accomplish. May it, under God, never hesitate to continue to fulfill this humane ideal.

"We thank you for your delightful speech and are very, very grateful for the sentiments expressed by you here tonight about the B'nai B'rith we love."

Commencement Address by Hon. Harley M. Kilgore, of West Virginia, at Davis and Elkins College

EXTENSION OF REMARKS

OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, June 1 (legislative day of Wednesday, March 29), 1950

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech I delivered at the commencement exercises of Davis and Elkins College, in Elkins, W. Va., on May 30, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR HARLEY M. KILGORE, AT THE COMMENCEMENT EXERCISES, DAVIS AND ELKINS COLLEGE, ELKINS, W. VA., MAY 30, 1950

"The only limit to our realization of tomorrow will be our doubts of today."—FRANKLIN DELANO ROOSEVELT.

Dr. Purdum, distinguished guests, and members of the class of 1950 of Davis and Elkins College, I would be less than candid if I failed to say that I am honored to be here this morning. This is my second opportunity in 2 days to speak to large groups of young people who are entering new phases of their lives. Last night I spoke to the graduation class of my home town high school in Mannington. I do not know how many of those boys and girls will enter colleges this fall, but I hope the number is large, because there is a great need in the world today for well-trained, clear-thinking young men and women.

I do not know how many of you young men and women will continue your formal education after today, but I sincerely hope that all who have such an opportunity will take advantage of it. There probably are some here today who are tired of classrooms and studies. This is a normal reaction after 4 years of hard work. Do not let this reaction deter you in your quest for education. If you do, you will regret it in the years ahead.

Those of you who will not have an opportunity to take advanced work at another education institution should give serious thought to how you can best continue your education at home. There are many possibilities, and I am certain your college professors will be glad to advise you on how to take advantage of them.

I mention these things to emphasize the great need today for educated men and women, the need for people who can recognize truth when they see or hear it; people who have learned to love democratic rights, and stand willing to fight for them even if the cause be unpopular.

It is customary at commencement for the speaker to tell the members of the graduating class that they are embarking on a grand new experience—that the world is awaiting them with eagerness. Whether or not this is true today is a philosophical question I shall leave to other commencement speakers. What is true, and it is a fact that cannot be emphasized enough, is that this commencement and similar commencements throughout the Nation, are being held at a time when the world desperately needs a great transfusion of free, democratic ideals.

STRUGGLE OF IDEAS IS WORLD-WIDE

The world today is engaged in a great struggle over political and economic ideologies. This is a struggle to determine whether or not freemen can build and maintain and expand democratic societies. This is a struggle to determine whether people shall serve the state or the state shall serve the people. In a real sense it is a struggle to determine the political and economic fate of the world. This struggle is commonly called the cold war.

Frankly, I feel we should banish the term "cold war." In no sense does it depict the real meaning of the issues involved in this world-wide struggle for the minds of men. In addition, the term "cold war" leads many people to express the belief that this struggle can be settled only through armed conflict. This is a suicidal approach.

We have learned, or at least we hope the world has learned, through the suffering of two terrible wars in my generation, that armed conflict does not settle many real problems, least of all conflicting ideologies. And the greater the conflict, the less chance for anyone to emerge victorious. In an age of guided missiles and atomic weapons, the victor would suffer only a little less than the conquered.

If any real victory is to be achieved in this present world-wide struggle, it can come only without armed conflict. This does not mean that we should abandon our defenses. Far from it. We must at all times be ready, not only in a military way, but also politically and economically, to meet the challenges of the forces of totalitarianism.

The important point to remember is that this struggle is for the good will and support of human beings all over the world. If we are to achieve that goal, it can come only through our giving them the moral and material assistance they need in building democratic societies. It will come through the spread of ideas that men can accept freely, without thereby losing their freedom or the opportunity for freedom.

MORAL AND MATERIAL SUPPORT ESSENTIAL

No one can exaggerate the scope of our task. In the simplest terms, it means we must find a common ground of agreement with all democratic nations and strengthen the spirit of cooperation among them. We have come a long way since that June day in 1947 when Gen. George C. Marshall made his immortal speech at Harvard University, pledging our help to the needy peoples of the world. The Honorable Winston Churchill referred to the speech of our then Secretary of State as the most unsordid act in all human history. The Marshall plan has been a great success. We also feel optimistic over the possibilities of success for our newer efforts to bind together the nations of western Europe.

In fact, there is every reason to believe that these programs will be successful if they receive the wholehearted support of the Congress and the American people. This means moral support as well as the costly material support that is so essential in these programs.

There is another phase of our search for world peace that has achieved little attention and less success. I speak of the hope of many of us of finding an avenue of approach to the peoples of the so-called satellite nations. This group includes the nations of eastern Europe, China, and those

bordering countries that are dominated partially or completely by Russian-trained Communists.

Through a gradual process, we must wean the peoples of those nations away from Russian domination, if real peace is to be achieved in this or the next generation; we must penetrate the iron curtain and give our moral support to the subdued but still-existent democratic forces in those lands.

There are some people who say we should seal ourselves off from the satellite nations. By following such a course, we are admitting to the belief that we can achieve victory in this world struggle only through armed conflict. And no thinking person will subscribe to such a thought. It is only if we make an appeal for freedom everywhere—and offer our full moral support and material support, wherever possible, to the exponents of freedom—that we stand a chance to emerge as victors in this grave struggle.

SATELLITE NATIONS OFFER REAL CHALLENGE

Freedom has been stifled behind the iron curtain, but according to reliable reports from Europe, it is not dead in the satellite nations. There is unrest, both political and economic, in many of the satellite nations, but the democratic forces in those countries cannot be mobilized, or at least will not be mobilized, unless we of the free world offer them great moral encouragement.

I think it should be emphasized that we have done very little thus far toward reaching those people. To some extent this has been due to the difficulties encountered in binding together the free nations. It also has been due to our own fears and doubts and indecisions, largely manufactured by witch-hunters who have wrapped themselves in self-designed cloaks of superpatriotism. At this period in history, we should pause to recall the words of the late President Roosevelt: "The only limit to our realization of tomorrow will be our doubts of today."

As an amateur student of history, I believe I recognize the importance of studying the past for guidance in the formation of decisions on problems that are with us today. At the same time, it should be obvious that no sensible person would hold that the problems of today and tomorrow can be solved by living in the past, or by compounding confusion with indecision and fear.

DELIBERATELY FOMENTED CONFUSION

One of the most unfortunate factors today is that much of our present political atmosphere is charged with confusion. I speak not of the unintentional type of confusion that can be expected to arise in any difficult period, but of deliberately fomented confusion. The apostles of doom who are responsible for this tragic and deplorable situation are deadly enemies to our democratic society.

If you believe these are harsh words, I agree. Sometimes it takes harsh words to bring home the fact that the healthy functioning of a democratic form of government is primarily dependent on a unanimity of purpose and ideals. The founding of our democracy derived its main strength from a cohesiveness of democratic spirit. It has run all through our history. There have always been dissenters, there have always been doubters, there have always been prophets of doom—but the country progressed and prospered beyond the fondest dreams of its founding fathers, primarily because their ideals and their strong purpose so completely overshadowed the doubters, the dissenters, and the professionally unhappy.

Today this small group has taken on a significance far beyond any it previously had, because of the world-wide struggle of ideas—democratic versus totalitarian. The apostles of doom give comfort to our enemies by spreading fear here at home. It is important as it never was before that we recognize fully those in our midst who endanger our democracy. The confusion they sow can only be combated if we recognize these architects of devastation who put fanatical theories, personal neuroses, or political gain above the values of democracy.

To successfully combat the confusion they sow we must recognize them and then oppose them with every weapon that a free and democratic people possess. Bear in mind that if we must fight military strength and armed aggression our weapons and our methods are fairly obvious, but the fight against confusion presents a far more subtle problem, as well as a very deadly enemy. A totalitarian regime thrives on confusion, but a democratic society can endure and grow only through cooperation and trust among people.

LESSON OF "ENGLAND'S GRAVEST HOUR"

While I was driving here I recalled the words that were spoken by a great Englishman, Mr. Winston Churchill, just 10 years ago. It was June 1940. It was the gravest hour in England's history. It also proved to be England's finest hour. Mr. Churchill recognized better than anyone else that England could survive—and bear in mind that there were only a few people around the world who thought England could survive at that grave hour—only if the full resources of the nation were mobilized against the enemy. That was the atmosphere when Mr. Churchill told his countrymen: "If the past undertakes to sit in judgment on the present, then the future will be lost."

With those words Mr. Churchill mobilized a great nation for a desperate fight. It was not only the building of armaments and the training of people to use them, but also the conditioning of the people to the full realization of the struggle and what it meant in terms of human endeavor and human life.

There is a great lesson for us today in that incident of history. We are now engaged in a great struggle that will determine the fate of ourselves as well as other democratic peoples. We cannot win this fight by crawling into a shell. We can win only if we are willing and able to mobilize our full resources for the struggle for peace as we did for war.

APOSTLES OF DOOM COMPLICATE TASK

The task is complicated tremendously by the fact that we are faced with the apostles of doom on one side and a great totalitarian force on the other. We recognize the totalitarian force, but sometimes we fail to recognize the other enemies, and that is why they are so deadly. If these foes within our own house succeed in compounding confusion in their malicious campaign, then we may lose our cherished democratic rights.

This would prove the greatest possible victory for our enemies and it could mean the end of democratic government for generations to come. Protecting our own democratic rights while pursuing our search for peace will not be easy. It will be long and costly. But we must be prepared to pay that price if we hope to ignite the flame of democracy around the world.

In conclusion, I wish to say that whether our Nation succeeds or fails in this great search for peace will depend in great measure on how well you and your fellow college classmates throughout the Nation meet the challenges of this day.

I urge you to give serious thought to these words from the constitution of the United Nations Educational, Scientific, and Cultural Organization: "Since wars begin in the minds of men, it is in the minds of men that the defense of peace must be constructed."

May you go forth to join in the search for peace.

Dedicatory Address, Schools of Levittown

EXTENSION OF REMARKS
OF
HON. W. KINGSLAND MACY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1950

Mr. MACY. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include a dedicatory address made by me as the member of the New York State Board of Regents for the Tenth Judicial District, last Friday, at the opening of the new Division Avenue School, comprehending the three other school buildings erected in the past few years, on behalf of the Catholic War Veterans, the Jewish War Veterans, the American Legion, and the Veterans of Foreign Wars, at Levittown, Long Island, N. Y.—a village that was created out of Hempstead Plains within 4 years' time to accommodate a population of 40,000 people:

Mr. Chairman Gambling, reverend clergy, Supervisor Patterson, Congressman Hall, my esteemed colleague, members of the four great veterans' organizations represented here—the Catholic War Veterans, the Jewish War Veterans, the American Legion, and the Veterans of Foreign Wars—the many distinguished guests present, and fellow Americans:

My great pleasure in being with you tonight to participate in these impressive dedication ceremonies derives from several sources. As a member of the Board of Regents of the State of New York, which has jurisdiction over all phases of formal education in New York State—from the kindergarten through postgraduate work—I am delighted to have a part in the dedication of this great new school building, which in the years and decades to come will serve many thousands of your children. I represent the tenth judicial district on the board of regents and that is the district in which you of Levittown and Nassau County and I of Suffolk County live. So, I am close to your educational problems and it is my intention to continue to be an active ally in helping you solve them.

It happens, too, that I am your Representative in the Congress of the United States, representing as I do the First Congressional District of New York, in which most of you and I reside. My colleague, Congressman LEONARD HALL, represents most of Nassau County in the Congress. I feel particularly fortunate in representing what I believe to be the pioneer section of your great county. Here in this community of Levittown we see dynamic young America at its best. Here we see thousands of men of action and valor busying themselves in the pursuits of peace.

Here is a broad expanse of thousands of comfortable homes in an area that but a few years back was a collection of potato farms and truck gardens.

Most of those at these ceremonies have chosen to cast their lot with a brand-new community—a community whose fame is already world-wide.

While it is true that the men and women of Levittown had to cross no trackless plains or climb rugged mountain passes to get here, they are mid-twentieth-century pioneers because they have set up a new community and are determinedly and enthusiastically intent on making it the best community in the country in which to raise their children

and round out their adult lives. And what a magnificent beginning has been made.

In addition to my pleasure in being with you in the two capacities I have mentioned, I am deeply appreciative in being asked to deliver the main address at these ceremonies dedicating this great new institution of learning for the very young of this community, which is made up almost entirely of veterans and their families, to the memory of deceased war veterans whose last full measure of devotion to their beloved country made it possible for us to assemble here in peace and safety today and tonight.

The building of the Division Avenue School results from the cooperation of many men and women. If I attempted to enumerate now the names of all individuals and the official agencies, from the local level up to New York State officialdom, that played an active part in making this magnificent structure a glorious reality, the list would be so long I would have to take most of the time the committee in charge has set aside to me for these dedicatory remarks. Congratulations to every one of you on the accomplishment of such a splendid work on behalf of your children and the children of today and tomorrow.

Levittown is unquestionably unique among the housing developments of the country. That uniqueness does not consist solely in the remarkable, almost overnight growth of a large community—a growth that had it occurred in California or Florida would have been hailed as a boom, with the probable resultant immediate creation of artificial, inflated values. As important as growth is, I want to apply a different yardstick than mere growth in pointing up Levittown's uniqueness.

To me the most unique part of this extraordinary community is that Levittown and the Levitt Corp. set an example for the entire country and for every other major housing development that may be later instituted in reserving land for school buildings before the homes in which the students-to-be would live, were built.

It was said of fictional Topsy that "she just growed." If she "just growed" in pleasing mold it was a benign act on the part of the Great Creator. But Levittown didn't just grow. Levittown was wisely planned in all its details and a basic part of that long-visioned wisdom was in the provision that was made for the education of the young—your young. Had that foresight not been employed it is difficult to imagine just how those interested in the education of the young—those of you who have now or will have young to educate—would have coped education-wise with the enormous growth of this community and the immediate neighborhood. Wise initial planning came to full fruition through coordinated effort and enthusiastic co-operation between official agencies and interested individuals every step of the way.

The board of regents, having been fully informed in the school district's acute educational needs and the certain prospect of continuing developing needs, expressed its confidence in the stability of this remarkable community by approving two bond issues—one in the sum of $2,135,000 and the other in the sum of $1,650,000.

The first bond issue was for the purchase of four school sites, at a combined cost of $185,000 and the erection of two schools, the Center Lane School, costing $250,000, with accommodations for 250 children and the Division Avenue School we are now dedicating. The Division Avenue School will make immediate provision for 600 students and is wisely planned so as to permit the building of another wing large enough to take care of an additional 600 students.

The second bond issue, as most of you know, was for the erection of the Abbey Lane and Gardiner Avenue Schools, each of which is designed to care for 600 students.

I understand that preliminary plans are being considered for a fifth school, to be known as the North Side School, to be built at a cost of $896,000, with seats for 720 pupils.

So, it is quite obvious that in Levittown we are not dealing with the storied little red schoolhouse of affectionate American memory. Parenthetically, although nearly everywhere the little red schoolhouse is as extinct as the surrey with the fringe on top, it still exists in too many backward rural sections of our country. But, the little red schoolhouse, nostalgically written about by Mark Twain in his Tom Sawyer, in which children from the first to the tenth grades were all housed in the babble of one room, with sanitary facilities out back somewhere, has not existed in these parts for many years. We look back on it with affection but like the mustache cup it is not for this enlightened day.

No, here in this brand-new, thoroughly modern community of Levittown we are not dealing with 30 or 40 children walking or riding horseback to a little red schoolhouse from all points of the compass from miles around. We are preparing and furnishing shining new and completely practical facilities for thousands of children inhabiting a comparatively limited geographical area. It can truly be said we are dealing here with the finest kind of mass production of which our land is capable—its cherished children by the many hundreds, with thousands to follow.

The Board of Education of Union Free School District No. 5—and I like those words "Union" and "Free" tied in with the description of a school district—simultaneous with the beginning of this great housing project, were alert to the serious financial problems that would arise in connection with the building of schools adequate to keep pace with one of the greatest home-building operations in history. Your district superintendent, Harry W. Gross, your Nassau County officials and your Nassau County Planning Commission measured the extent of the problem at an early date and went forth to meet and grapple with it.

Members of the various divisions and bureaus of the State education department visited the school district repeatedly and discussed with the school board the formulation of plans, which included the instructional, the financial, and the construction of buildings. They were ably assisted by consultants employed by the school district. The Levitt Corp. was most cooperative with the district superintendent and the board of education in the selection and setting aside of desirable sites for school buildings.

The financial study that was made clearly indicated that the usual State-aid formula was not adapted to Levittown and to Union Free School District No. 5. Consultations with State Senator John Bennett and Assemblyman Frank Becker and in co-operation with your other capable legislators from Nassau County and your able county executive, Hon. J. Russel Sprague, resulted in the decision that legislation should be introduced that would give special State-aid consideration to Levittown. Senator Bennett and Assemblyman Becker were most diligent in seeing to it that the needed legislation was enacted in Albany—not always an easy task.

This legislation gives the commissioner of education power, with the approval of the director of the budget, to set up a special State-aid formula that would avoid undue hardship on the taxpayers of Levittown. Only as a result of this legislation has it been possible for union free district No. 5 to build up, within the past 2 years, a splendid school system without invoking a burdensome tax levy.

Under the usual State-aid formula, the State pays $200 for each elementary student and $250 for each high school student in average daily attendance over a 3-year period. Levittown, because of its shining newness, could present no such average daily attendance figure. Accordingly this requirement was waived and Levittown was granted the same amount of State aid on the basis of average daily attendance during the best 4 weeks of either December or January. It is very likely that this school district will need this special State-aid consideration for some time to come. The State education department will keep in constant touch with the situation and will continue its readiness to assist the school district in every way possible.

In dollars and cents, permit me to cite the figures showing what Levittown would have received in State aid under the usual formula and what it has actually received as a result of the special consideration given. Figures are usually dry and uninspiring but those I am about to recite are anything but that to residents and taxpayers of this school district. In the year 1948–49 the aid normally received from the State would have been $625. The aid actually given was $36,174.77. In the year 1949–50 the aid normally received would have been $37,398.80. The aid actually given this year, under the special formula, has been $102,373.77.

The series of facts I have just cited have been made available to me in my capacity as a member of the board of regents. I am glad to share them now with the good people of Levittown, whose interest in them is direct.

When we look back to 1940 and realize that the total enrollment of students in what was then an intensively developed farming section was 60 students and that the same area now has approximately 2,000 students, we get some idea of what the future has in store. Within the past 2 years you have provided actual accommodations for 2,300 boys and girls in four economically constructed, soundly planned buildings.

All concerned must continue to look ahead because the school population will continue to increase year by year for at least a decade or so. The further development of adequate educational facilities in this district and in this general section will continue to be a matter of primary interest to me in my capacity as a regent.

I won't attempt to describe the facilities within this beautiful building we are now dedicating. As it stands, the statement that it is as fine an elementary school as there is in the country cannot be challenged. It has everything—literally everything—to contribute to the mental and physical welfare of the children fortunate enough to attend it. In my opinion, there will be little or no "hooky" played from this school. It is too pleasant a place, having too many facilities, for a youngster to want to stay away from. Truly a new day is dawning in education when a young student's comforts and pleasures in his school can vie with those to be found in the home. And under the head of pleasures I am not including the fully equipped dental clinic. The old-time "hooky cop," familiar to many in this audience, who I now believe functions under the more impressive title of "attendance officer" may conceivably have to seek other employment in Levittown.

There could be no more fitting motive than the one surrounding this ceremony in which we are dedicating the Division Avenue School to the memory of the war veterans who laid down their lives for their country. I understand that the exact wording of the dedicatory plaque will be "The schools of this community are dedicated in memory of those who fell on the field of battle defending the American heritage

which we and our children are still privileged to enjoy." Simple, dignified words, those; not flowery, not poetical, not rhetorical, but direct and understandable by young and old. They add up to the deep sentiment we feel here at these exercises, a sentiment that will endure as long as young eyes can read, ponder and understand those words.

It is completely fitting that on this date, just 4 days before the Nation as a whole observes its most hallowed holiday—Memorial Day—that we precede and thereby add to, the general country-wide honor being paid our fallen heroes.

This new school—this pile of brick and mortar and glass and modern materials that fashioned it—and they are the materials of peace and not the matériel of war—which for many years and generations to come will echo and re-echo the happy voices of the carefree little Americans who will use it—is a part, and a large part, of what the men and women who died in World Wars I and II, and in fact all other wars our country has been forced to fight, laid down their lives for. This is what they would have liked to have lived to see in our free America. In their warriors' Valhalla I know they are sharing our deep satisfaction in the driving of still another strong rivet to strengthen our American system of free education.

They, the hallowed and honored dead, and those of you who also wore the uniform but who were permitted by God's infinite grace to return to your country, made possible this Division Avenue School, and all other schools to be built hereafter in this free land of ours. They, and you the living, have made certain that their children, your children, and the children of all devoted and loyal Americans in the district, can here receive the first lessons in good Americanism, can learn the early needful lessons of adjustment to their fellows, can be grounded in good living and clean thinking, and can get their first conscious glimpse of the great usefulness that is potentially inherent in the lives of all of us, no matter how humble.

Our valorous dead and our living former soldiers, sailors, and marines fought for many reasons. The United States of America cannot possibly mean identical things to two or more men because of the individuality of our own thought processes. We all share our love of country, while admitting that the ramifications of that deep, devoted feeling vary with each of us in our private thinking. Love of country defies exact definition. It has many facets but regardless of our private thoughts and feelings all of us as Americans have definite beliefs and determinations in common.

We are against tyranny, oppression, and totalitarianism in any and all forms. Orthodox Democrats and Republicans have that common meeting ground as Americans regardless of the techniques they advocate in their determination to keep this country free from these threats.

We believe that the state exists to serve the individual, not to control him, not to mold him in identical pattern, not to make him march in economic or political lock step. We, as Americans, believe that the state, or the Government—if the word "government" makes my meaning clearer—is not, never should be, and was never intended by the founding fathers to be the inflexible, impersonal master of its citizens. If that happens we cease to be citizens and become subjects.

All too often in the recent past and in this year of 1950 we find a tendency on the part of some of those in high places in Government and in its executive bureaus to forget that in the last analysis the rank and file of our people are the only controlling force and that officialdom by "directive"—an imported bureaucrat's smooth word with unpleasant implications—edict or command cannot make 150,000,000 citizens of varying racial and religious backgrounds dance like puppets to the planned economy pull of its strings.

Our honored war dead knew well the harsh and needful disciplines of military life. War, which by its very nature violates all rules of normal living and demands implicit and immediate obedience, must not be permitted to intrude its harsh exactions into our peaceful, permanent way of life. Our honored dead were free of military and Government dominance before they donned the uniform. They were glad to wear the uniform in order to get a distasteful and highly dangerous mission behind them. At the end of the war they expected to return to their homes, doff the uniform, and fit themselves, free of Government domination, back into the mold of a peaceful world—in a country everlastingly free of the blood, sweat, and tears of war. We must see that their ideals, their hopes, and their desires are not thwarted through any act of ours.

Those we honor at this dedication fought for the right to say "yes" or "no" on programs or policies affecting their welfare, their homes, and their children. They were prepared at all times to abide by the consequences of their decisions. They merely wished them to be free decisions, not reached by coercion or implied threat.

They wanted no dictators here or even the remote threat of dictation. They fought against the dictatorship idea and its resultant tyranny in the midst of carnage and indescribable horror. So must you who served the country continue in these days of peace to fight for that ideal. So must all of us who are the beneficiaries of the sacrifices of the dead and the living.

Alien ideologies have no place on American soil, no matter how palatably they may be presented by some of those temporarily in high places. The American way of life is still the finest way of life to be found in the world, granting us as it does complete individual freedom, within the law, under the Constitution of the United States. And you will agree that the Constitution remains the finest document ever written by man on behalf of man. We can and do amend it to meet changing conditions in a changing day but we retain its basic structure because the Constitution and the flag are the symbols of free men. The written word of the Constitution and the unfurled magnificence of Old Glory combine to exemplify the faith under which Americans have lived and died since our emergence as a free people.

It seems to me that our departed heroes would have little patience and give short shrift to those in the educational and political world who would re-tailor our mode of living to fit the statism mold. Under statism, or government dictatorship, this new school would not be a place designed solely as one in which to impart needful knowledge to the young; it would be a festering point, regardless of the beauty of its surroundings, for a supernationalism that demanded slavish obedience to the dictator ideal from all, even from lisping tots in the kindergarten and first grade.

At this Memorial Day season particularly, and every other day in the year, we must be on guard, to see to it that the sacrifices made for us are not taken for granted. What our war dead stood for and died for must forever be graven in our hearts and imbedded in our consciousness. For us to slip, even slowly and imperceptibly, down the road of state socialism into inevitable dictatorship and tyranny, would make a mockery of their sacrifice.

We must realize, as I believe we are all beginning to, that the problems of peace are equally as grim as those of war. And just as urgent. We are learning the hard way that we just can't ponder while others act.

If we do not remain alert to our responsibilities, the sacrificial heroism of others will become dangerous lethargy for us, the living. The proud sacrifice made by our heroic dead could evaporate into soft national indulgence. If we permitted that, our national pride would degenerate into national indolence. And then our war dead, whose mortal remains are scattered over many battlefields and at the bottom of the seas could justifiably accuse us of not keeping the faith, because in lethargy, soft indulgence and indolence we would be easy prey to those whose design is world conquest.

We continue to believe firmly, and believe it has been demonstrated throughout our national life, that human beings enjoying the blessings of equality and liberty, will not take the yoke of any oppressor, from without or within, on their shoulders. Americans look ahead. They work for, scheme for, plan for better things for enrichment of their national and personal lives. Ancient and medieval systems, devised for the enslavement of the individual, can find no fertile soil in which to sprout within our borders. We will continue to forge ahead, if we retain a proper awareness of our national destiny, with our eyes fixed on the ideal of freedom for ourselves and those properly within our orbit of influence.

Despite the traitorism of an occasional Alger Hiss, no group of subversionists, no slimy alien cells within our borders, nor any propagandists from without, can convince Americans that our time-tested institutions are outmoded. Ours is and will continue to be a government by consent—by ballot box consent—of the governed. We will resist to the death the taking root here of a godless, materialistic Communist concept. We who abhor war—you who have fought and are bone weary from its horrors and futility—will forever resist any attempt to force alien isms and "ologies," disruptive of our way of life, down our national throat.

Under our Constitution we bind ourselves to refrain from the oppression of minorities. And we do just that. Inequalities and discriminations are becoming rarer and rarer.

Our Bill of Rights gives us the right to worship God as each of us chooses in contrast to countries in which those who have religious ideals are among the first oppressed, silenced, jailed, or executed.

In free America we have the right to examine in detail the acts of our Government and officials and criticize them if we see fit. We can change our lawmaking and administrative officers when we deem a change to be necessary for the good of the country.

We have the right of petition and peaceful assembly. We have the right to speak our minds. The words I am saying now could not be uttered behind the iron curtain or in any other land in which the dictator dwells and despotically lashes his little voiceless people into the rut he decrees they must travel.

We have the right to seek employment. We have the right to quit our job if we don't like it or desire to better ourselves. We have the right to go into business; to train for and practice a profession. We even have the right to fail. We, as free men, accept no cradle-to-the-grave paternalism from a know-all, want-all government, and we grant our next-door neighbor, or the man down the block, the identical rights we reserve for ourselves.

It is these rights, after 171 years as a nation, that have made us great, the envied of the world, enjoying the most freedom and the highest standard of living found anywhere.

These are some of the rights our heroic dead fought for.

On behalf of their children and ours, we fervently hope that war will never again come to this globe; that it will never reach our shores, desolate our cities, and lay waste our peaceful countryside. None knows better than the soldier that war, instead of being a chivalrous adventure, carried on

under inspiring flapping banners to the accompaniment of stirring trumpets, is a cold, scientific method of bringing about mass destruction without discrimination between the combatant and noncombatant.

The next war between major powers, which would inevitably involve the rest of the world, would be no idealistic adventure, pitched on a high plane, sparked by high-sounding and heart-warming slogans. Military men and scientists tell us that the next world war would be global suicide. Hence, common sense tells us we must do what we honorably can to avoid war. To do so, it follows we must have public officials in high places in whom we have implicit trust—men who have no taint of acquiescence of fellow-travelerism about them.

It behooves us as a nation to continue to be strong and resolute; to strengthen and uphold the political, educational, and economic systems of which we are individual representatives and recipients.

The strong do not attack the strong. The history of wars, from the beginning of time, in that the predatory aggressor attacks out of a belief that the nation to be attacked, is weak, irresolute, has no stomach for even a defensive fight, and will bow cravenly and supinely to the threat of the sword. We know from the history of the last two world conflagrations just how lightly we were regarded by aggressors. Coldly, calculatingly they counted our ships, our planes, our troops, and gauged the extent of our matériel. They decided that although potentially strong in resources we were weak in the will to defend ourselves—that we were a nation of fat sheep ready for the shearing.

Twice in a quarter of a century our national character was misgauged. Twice our burning desire for peace misled the international spoilsmen and the dictators. Twice we were caught off guard. And twice the United States of America had its sweet dreams of peace and brotherhood forcibly intruded on, and we had to fight for our existence as a free nation and win wars costly in our greatest asset—our young men.

There is some evidence that another aggressor may be contemplating the same mistake made previously by aggressor nations. But twice burned, in our case, is thrice shy. We are determined that we shall be permitted to pursue our national life in peace. Thus we are determined to be strong, so strong that our very strength, our readiness, will be the balance of power—for peace.

Our will to remain free, to repel invasion of our country from without and treachery on the part of the weak, the misguided or revolutionary from within, to uphold our ideals and live as free men, will prevent world war III. By continuing to be strong, alert, and adamant in our belief that all men are created free and equal and should be permitted to live and prosper under that philosophy, we will guarantee that the sacrifices made by those heroes, to whom we are dedicating this institution of learning, were not made in vain. By our deeds henceforth, and not by our words on this or any similar occasion, we will memorialize them in the only way they would consent to be memorialized.

This school in union free district No. 5, in the county of Nassau, in the Empire State of the greatest Nation in the world, is a fitting symbol of the patriotic devotion of the American fighting men who have passed on. Although they cannot see their children in it, we are serving them and their ideals by building it, equipping it, dedicating it, and using it for the education of free boys and girls in a free Nation.

So, this occasion should—and I feel certain does—mean more to us than the mere dedication of a school building that is the last word in modern planning. To give it its full meaning it must be an occasion for the re-dedication of every one of us to the never-ending fight for freedom.

If we thus re-dedicate ourselves here and now, we truly honor those who have gone before and made possible the continuance of the God-given blessings we now enjoy.

It has been a deeply satisfying experience to share with you the accomplishments of this day.

Thank you.

Atlantic Union

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Thursday, June 1 (legislative day of Wednesday, March 29), 1950

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by the Senator from Iowa [Mr. GILLETTE] before the Atlantic Union Committee, at Washington, D. C., on June 1, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH BY SENATOR GUY M. GILLETTE (DEMOCRAT, IOWA) BEFORE ATLANTIC UNION COMMITTEE LUNCHEON, HOTEL SHOREHAM, WASHINGTON, D. C., THURSDAY, JUNE 1, 1950

Ladies and gentlemen, I wish to compliment you on your timely presence here this week for the 1950 Work Conference for Atlantic Union. To me, the Atlantic Union proposal is one of the few hopeful signs on an otherwise dark and dreary horizon, one of the few constructive ideas looking beyond the bleak fixation of the so-called cold war. I am both honored and pleased to have an opportunity this afternoon to speak briefly to you about it.

Rather than undertake the wholly unnecessary task of urging your support for a proposal to which I know you are already committed, I think it might interest you to know how one Senator, who was not always a strong advocate of Atlantic Union, came to his decision to support the resolution introduced last year by your chairman, my friend and colleague, Senator KEFAUVER, of Tennessee.

I can't help smiling when I recall that only 3 or 4 years ago I had the pleasure of debating on the radio against the Atlantic Union idea with its most outstanding exponent, the great jurist who is your committee's president, Justice Owen Roberts. Times and the world have changed since then, and, to a certain degree, I have changed with them.

During the discussion of the North Atlantic Treaty on the Senate floor last summer, I tried to sketch the long, painful road that the nations have traveled toward the goal of a world free from war and with substantial and dependable moral, spiritual, political, and economic securities. More progress has been made in this direction in the last 25 years than in all the centuries of the past. Our own country, during the recent world war, completely ended the policy of withdrawal from the world that had caused it to reject the League of Nations, and joined with its allies in taking five major steps away from isolationism and toward the creation of a world compact or coalition for peace. Those five steps, which I cited during the Atlantic Pact debate, were the following:

Step No. 1: The Atlantic Charter, which spelled out in terse and unmistakable language the principles for which we and our allies were waging war.

Step No. 2: The Connally resolution, which sought to commit our Nation, so far as the Senate could commit it, to cooperation with the rest of the world in building an organization for peace and security.

Step No. 3: The Moscow Declaration, which insisted that, prior to writing a peace treaty, the nations should draft a tentative document for cooperative peace efforts, to be ready for study, revision, and hoped-for acceptance before the end of the war.

Step No. 4: The United Nations Charter, the tentative draft of which was presented at the Dumbarton Oaks Conference, after protracted conferences between Secretary of State Hull and a bipartisan group of Senators to which I had the honor and privilege of belonging.

Step No. 5: Ratification of the United Nations Charter and establishment of the new world organization.

As one who participated in some of these great steps taken by our country toward a world without war, I believe I have quite intimate knowledge of the principles on which our actions were based and of the goals which we were then seeking to attain.

With the glorious record of these five great steps toward world peace, it was not surprising that when the Atlantic Pact was proposed there should have been widespread skepticism among our people as to this new military alliance. Did it constitute a sixth great step in the direction of world peace? Was it a retrogression, a reversal of direction? Or was it an evasion, if not negation, of the fundamental principles to which all had subscribed?

I for one was unable to reconcile the Atlantic Pact with the principles to which our country had subscribed, and in the implementation of which I had personally taken some part. I therefore opposed this pact as a step backward and as a military alliance which could not, by any twisting of meaning, be considered as a reinforcement of the United Nations. Nevertheless I voted to ratify the pact, since the situation had developed to a point from which there was no return. The United States had already been committed, and it would have gravely embarrassed our national leadership as well as jeopardized our position vis-à-vis the people of western Europe, had the Senate at that late date failed to ratify the treaty.

I can assure you, however, that I have rarely, if ever, cast a vote with greater reluctance, greater hesitation, or greater regret.

On the heels of the ratification of the pact came the military-assistance program, which I not only opposed but for which I felt absolutely no compulsion to vote. This program was committing our country to a backward course for years to come, and to a policy of militarism and force that could, and probably would, destroy completely the very values and equities which we sought most to preserve.

Even prior to the debate on that bill, however, I had reached the conclusion that, since the United States had ratified the Atlantic alliance, the one remaining hope was to transform that alliance, if at all possible, into something other than a purely militaristic pact.

Seeking some practical way to give human, as contrasted with military, content to the Atlantic Treaty, I found in the resolution offered by Senator KEFAUVER an instrument whereby the American people might succeed in implementing the pact by some means other than the then pending bill for a program to ship military weapons to foreign armies.

If the countries grouped together in military alliance could be intimately associated in a political, economic, and moral union of democracies, then the negative and retrogressive military emphasis might be equal-

ized or even overbalanced by the social, political, juridical, and spiritual emphasis of a union of peoples in a federal structure.

Until the pact was ratified, I had been supporting proposals for a world-wide coalition or organization of nations for peace. After the pact was ratified, I was obliged to retreat a step myself, without abandoning the hope of world-wide coalition. Ratification of the pact underlined and affirmed the division of the world into two hostile camps. For the American people, it was the turning point at which the United States Government declared that the world could not now be organized as an effective unity. The sixth great step toward world peace could not then and there be taken.

I therefore saw in the Atlantic Union the starting point from which might possibly develop, in time and in a different, more organic way, that great world coalition or union for peace, which all thinking men know, at the core of their minds, is the only way the world will ever eliminate international war while remaining, at the same time, free and democratic.

Considering the Atlantic military alliance a drastic move away from world unity, I believed that through a constitutional convention of at least the Atlantic democracies, the military alliance could be transformed into a nuclear union leading to a steadily growing and widening federation of democratic peoples. Such a transformation, I thought—and still think—would be a stupendous and ringing victory for reason over force, and for human dignity over brass-knuckle diplomacy.

Yet, I do not consider even the political and economic federation of the Atlantic democracies sufficient to our need. What is ultimately needed is a world-wide union, including as many nations as can be incorporated within it in the near future, and including, someday, all the nations of the earth. For the present, this is a hope deferred. A democratic federation must be composed only of democratic countries, and so long as antidemocratic, totalitarian regimes hold power in parts of the world no completely global union is possible. Attempts to achieve that world-wide union now might even turn a dream into a ghastly nightmare.

Let us therefore start with what is feasible and also desirable. The Atlantic Union is only a beginning, a regional application of the concept of union, but it is both feasible and desirable.

It has astonished me that those responsible for our foreign policy in the Atlantic region have not welcomed the Atlantic Union idea with open arms, for it is the only approach to the Atlantic area that offers real possibility of permanent solution for the manifold problems—financial, industrial, political, diplomatic, and military—besetting the peoples on both sides of the ocean.

It offers the only program seeking to draw together, into one single comprehensive and comprehensible whole, all the economic and political measures that have up to now been treated individually, separately, and with slight promise of ultimate success.

The Atlantic Union proposal goes far beyond any mere military alliance, and bypasses the weaknesses inherent in all alliances while at the same time reducing the emphasis on unadulterated militarism.

Not only that, it would provide for the people of the Atlantic community so much more than military security—an illusory and unattainable goal in any case in the modern atomic world. It points the way for a real union of peoples in an organization already familiar in structure to the American people in our Federal Union of the United States itself, with all that means in economic progress, political liberty, and spiritual values.

In a recent column in the New York Times, Mrs. Anne O'Hare McCormick wrote that she saw rising dimly out of the London Foreign Ministers' Conference, the outlines of a reborn continent, the ancient continent of Atlantis. We may hope that such a continent, with the Atlantic Ocean as its mare nostrum, may evolve from conversations among foreign ministers of great Atlantic powers. But if we depend on such limited means to achieve our purpose, we shall, I am afraid, wait for many, many years.

Secretary Acheson, in a noteworthy address not long ago in San Francisco, called for total diplomacy. To my mind, that meant participation of the whole American people in the formation and application of our world policy. What better way can the American people participate in total diplomacy than by joining themselves voluntarily in an association of other peoples, in a fusion and merger of the resources, the skills, the cultural values, the spiritual and moral attitudes, and the common humanity of peoples now living separately but as neighbors on the shores of the North Atlantic?

Finally, Atlantic Union is the only answer that I have been able to find for the most acute and critical single problem on the Continent of Europe; a problem that is becoming more aggravated and in more need of speedy and permanent solution than any other in that part of the world. I refer to the problem of Germany and its proper place among the other nations on earth.

Of all the many proposed solutions to the problem of Germany, the soundest, safest, and most practicable proposal seems to me to be the incorporation of the German people within a broad trans-Atlantic framework of democratic nations.

Germany is a three-way problem involving Europe, America, and Russia. Our problem is to find a way to prevent Germany from either uniting with the Soviet Union in a new Russo-German alliance, or uniting with a western European federation so as to dominate Europe and compel it finally to turn its back on the Atlantic and toward collaboration with Russia. Success in finding a way to accomplish this will call for far greater diplomatic ingenuity than we have so far demonstrated anywhere. In fact, it will call for efforts far greater than traditional diplomacy can even envisage.

The most feasible way to solve this problem is to evolve, out of the tentative efforts toward western European integration or federation, a union of Atlantic countries having such a preponderance of industrial production, manpower, markets, and, above all, democratic vitality—having, in a word, such an appeal to the German people and the people of western Europe—that none of the antidemocratic and anti-American elements in Europe or in Germany can succeed in seizing power or in divorcing either Germany alone, or Germany together with western Europe, from the Atlantic community.

Western European union will not provide a solution to the German problem, certainly not a solution in keeping with the interests of the United States or the rest of the Atlantic region. Although the Schuman proposal for a French-German coal-and-steel consortium has been widely and even enthusiastically acclaimed, a second look at its possible implications may lead many to revise their original opinion and see in it a proposal essentially divisive rather than cohesive in nature. Already there are faint indications that some realize that a Europe organized without America might become a Europe organized against America.

Leaving aside all the other easily imagined consequences of such an outcome, we can certainly see that it would mean splitting the Atlantic community in two and destroying all hopes for a democratic Atlantic federation.

A European federation would not have American or Canadian members, and it might well not have even the participation of Great Britain. What assurance is there, then, that with three of the principal democratic nations of the Atlantic region left out, the European union would or could remain democratic, or that it would remain friendly to us and not seek an arrangement with the Soviet bloc?

These dangers can be eliminated at one stroke: by the participation of the United States, along with Canada and Great Britain, in a trans-Atlantic union of all the free and democratic countries bordering on the North Atlantic Ocean and incorporating soon afterward all the democratic countries of western Europe, including Germany, of the Mediterranean region, of the South Atlantic area, of Africa, Asia, and the Pacific.

For the peoples of the countries lying around the ocean that now connects rather than separates the Old World and the New, a federal union is the loftiest and most logical proposal that has so far been offered them since the establishment of the United Nations. For the other democratic nations of the world, on whatever ocean or continent they may be, the concept of an Atlantic union as a nucleus for a broader and greater union will stand out as a beacon light in a darkening world, beckoning them to join with us in what we hope may one day become an all-inclusive union of the peoples of the entire globe.

Achievements of Freemasonry in the History of America

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Thursday, June 1 (legislative day of Wednesday, March 29), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the RECORD a copy of an address which I delivered at a meeting of the Reading Consistory, Scottish Rite Masons, at Reading, Pa., on Friday evening, May 26, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In the glorious history of American greatness freemasonry has recorded many chapters of brilliant achievement.

The list of outstanding patriots, statesmen, and leaders who have been prominent in the work of the Masonic fraternity is long and impressive.

Masons had places of leadership in the struggle for American independence. They helped build the foundation of these United States. They upheld the principles of social, political, and religious liberty. They have fought and sacrificed in every generation to preserve the American heritage of freedom of the individual and equal opportunity in the pursuit of happiness.

We have every reason to be proud of the part they played in religion, charity, moral, social, and cultural uplift, and in the cause of good government.

In every crisis Masonic brethren have served God and our country with courage and humility and with loyal devotion to the sacred ideals of the American Republic.

Today we are in another crisis. We are in a time of confusion and danger—a time

when evil men who deny God conspire behind an iron curtain to destroy freedom and to enslave mankind.

Their hope is to weaken America, to break down our moral and spiritual strength, to bring us to economic collapse and thus gain mastery over our country and the world.

The basic doctrine preached by the Communist enemies of freedom is that the United States can be forced to spend itself into destruction.

The people of the Soviet Union are told repeatedly that it will not take a shooting war to conquer America. It will not be necessary to drop bombs upon our cities.

Propaganda is constantly spread among them that our system is doomed because we are pursuing fiscal policies that must inevitably lead to national bankruptcy.

In our own midst Soviet agents give vigorous support to every proposal which means greater and more extravagant spending by the Government.

They are seeking to speed up the inevitable collapse of our financial structure under a crushing burden of debt and deficits.

They encourage the selfish demands of pressure groups. They advocate the adoption of every socialistic scheme which holds out the false promise of something for nothing.

In their work of undermining the foundation of American freedom they are aided by disloyal fellow travelers and fuzzy-minded pinks as well as thousands of misguided "do-gooders."

They find their greatest hope for success in a spendthrift administration at Washington and in the spendthrift attitude of many of our people.

The greatest danger confronting America is not atomic warfare that might be launched against us by a foreign foe.

I am convinced that a more serious and more imminent threat to American freedom is the bomb of national bankruptcy.

The real danger we face is the destructive, explosive power of excessive taxation, Government extravagance, debt, and inflation.

Against that danger we must build our defenses high and strong. If order and stability are to be restored—if we are to return to safe, sound, common sense management of our national affairs—it must done through the strength of the people of the United States.

Our order can play an important part in developing that strength because our members are a cross section of the best elements of Americanism.

As you well know, no man can be a Mason who does not believe in a Supreme Being. We must mobilize all the moral and spiritual forces at our command to keep America strong. If we falter or fail, human liberty will surely perish and individual freedom will vanish from the earth.

What has our plan of individual freedom done for us as a nation?

In less than 200 years we have made more progress than any other people since the world began.

From a little group of sparsely populated colonies along the Atlantic coast we have expanded our territory to the slopes of the Pacific.

We have built a diversified empire of industry, agriculture, and transportation without equal in all history. Our commerce extends to every corner of the world.

We have developed the rich, natural resources of our country for the benefit of all mankind.

We enjoy a cultural and spiritual level never attained by any people.

We have been able to build churches, schools, hospitals, research institutions, and centers of art and music for the benefit of all our people.

Listed among our assets are 250,000 churches of every denomination. They are in the great cities. They are in the mountain valleys. They are on the hill tops.

We give more for humanitarian purposes, to the Red Cross, to research foundations, to hospitals and for higher education than all other nations combined.

We sent our missionaries to preach the word of God to all the distant islands of the seas.

Our people own more homes, more life-insurance policies, and more savings accounts than those of any other nation on earth.

We are pouring out billions of dollars to restore stability to the free nations of the world and to help them resist the advance of godless and churchless communism.

Millions would starve without the productivity and the generosity of the United States.

With this wonderful list of achievements it would seem we have no dangers. But we have and it seems to me that this is a time to consider them.

As I said before, we have the great danger of national bankruptcy caused by excessive taxation, extravagant Government spending, debt, and inflation.

We are now spending for local, State, and Federal Government almost $65,000,000,000 per year.

We are collecting taxes of thirty-eight billion for the Federal Government, six billion in payroll taxes and about sixteen billion for State and local government.

That is a total of $60,000,000,000, or 28 percent of our national income. In other words, it takes more than one-fourth of our production to govern ourselves.

But unfortunately, this enormous amount is not enough to pay for all the costs of government. We will have a Federal deficit in this fiscal year of six or seven billion dollars and a similar deficit next year. There are also large deficits, through borrowed money, in many of the States and municipalities. State and local government debt have increased enormously since the close of the war.

By adding these new deficits to the present staggering burden of debt, we are placing a crushing mortgage on the future of our children.

If we are to avoid national unbalanced budgets we must either increase taxes or cut down the cost of Government.

Many of us believe that an increase in taxes will not bring additional revenue because taxes are now so high that they are reaching the point of diminishing returns. When that time comes it is a stern warning that the cost of government must be reduced.

The American people must, in some way, be aroused to this danger. Deficit spending can finally destroy us. We must have a balanced budget or this country cannot escape bankruptcy.

Another great danger in our country is inflation.

There seems to be a new wave of inflation in the air. What is causing it?

There are three main reasons:

1. Government is spending at the rate of six to seven billion dollars a year more than it receives in taxes. This puts more money in circulation which is highly inflationary.

2. The Government has put into effect a policy of easy money through grants and loans. This also puts an enormous amount of money in circulation and depreciates the value of the dollar.

3. Increased wages without a corresponding increase in production. Greater productivity aids in keeping down inflation.

Inflation comes so slowly that its dangers are not recognized until too late. It is like a thief in the night.

Inflation makes savings worth less. It makes money buy less.

Inflation reaches into the pockets of every working man and woman to steal some of the real value of the dollars they work for.

Inflation is a great danger to our way of life. It destroys the fruits of labor. It destroys the value of the pension to the disabled soldier and his dependents. It destroys the value of unemployment insurance. It destroys the value of the grants to those who are on relief. It destroys the work of the frugal.

Because of the Government's inflationary policies the $100 savings bond bought 10 years ago for $75 will buy only $60 worth of goods today.

Inflation robs young men of opportunity to get ahead because it takes twice as much capital to start a small business today as it did 10 years ago. The same condition makes it difficult for an existing business to expand.

Back in the 1930's the planners increased the money supply by taking us off the gold standard and by devaluating the dollar. We resorted to deficit financing. After World War II the planners sensed deflation and again they increased the amount of money in circulation.

We must never forget that a government that continues to go into debt must have inflation in order to catch up. It looks as if inflation would help balance the budget but in reality it does not, because with inflation comes devaluation of the dollar, thereby increasing the cost of government.

Let us consider what happens to a nation on the road to bankruptcy.

Taxes become more excessive and burdensome. Inflation destroys purchasing power. Wages decline in real value as prices climb higher and higher. The standard of living is lowered. Unemployment is increased. Venture capital is dried up. The expansion of industry and business creating new jobs is stopped.

With this comes rationing of food, clothing, and all the necessities of life.

Confusion and unrest spreads among the people.

Then the bomb of bankruptcy explodes with all the horror and suffering of atomic warfare. Not a single citizen escapes its destructive force.

Savings are wiped out. Life-insurance policies become worthless. Values established by generations of toil, thrift, and sacrifice disappear.

Out of the smashed and ruined economy a socialistic form of dictatorship rises to take control. Government becomes the all-powerful and absolute master of the citizens.

The people are controlled and regulated in their daily lives by the iron hand of a planned and regimented police state.

The free enterprise system is destroyed. All industry is taken over by the government and free labor unions are outlawed.

Human rights, human dignity, and freedom of the individual are lost.

As so well stated by that distinguished statesman, James F. Byrnes: "Every individual, whether farmer, worker, manufacturer, lawyer, or doctor, will be an economic slave, pulling an oar in the galley of the state."

So many say that government can never curtail individual liberty here in the United States.

Let us take one illustration.

A century ago individualism was deeply rooted in Great Britain. The British carried the flag of freedom.

But today they are controlled and regimented. They cannot repair their own homes without government consent. They are told where to work. They are told where

to plant and what crops they are to raise. Medicine is under political control with such tragic results. They have nationalized many of their great industries.

Here in the United States we have not yet gone in for public ownership of our industries, yet the Government competes with private enterprise in many lines of business.

During the last 20 years we have been putting ourselves into strait jackets through price supports and Government loans to both big and small business. State and local government have been going hat in hand to the Federal Government for aid in projects which could be better done by local and State government or by the people themselves.

Another danger lies in the fact that as individuals we have allowed our material progress to advance beyond our gains in spiritual strength.

We have allowed envy, greed, selfishness and lust for power to blind us to the eternal laws of God.

We have been indifferent toward law evasion, racketeering, chiseling and other corrupt results of the desire for an easy way of life.

Furthermore, too many of us have begun to feel that Government can plan better than God.

As Americans what course should we pursue for the good of our country?

We must all take an intelligent part in government. At the last primary election 400,000 Republicans did not vote in Philadelphia. That is an unfortunate situation.

In the past our greatness as a people rested on the spirtual strength and character of our people, their love of freedom and their willingness to work and sacrifice.

We want to keep America safe with freedom for the individual. We want to live in a period of reason and not of force.

To be in that position it seems to me we must observe the following:

1. We must willingly obey the laws of both God and man. Our obedience to law must be an inward expression and not under compulsion from an outward force. Let us continue to be a God-loving people. Let us fill the churches of every denomination. Let us preach righteousness, truth, tolerance, hard work, thrift and the love of God.

2. All should willingly and enthusiastically serve the Nation, both in time of peace and time of war. Peacetime service is so important. If we demand it strong enough our fiscal policies would be sound. We will have individual freedom and not Government paternalism. Centralization of government can destroy us. When Government directs when, how and where we are to work and what we are to plant, production is lost and our liberties are curtailed. That will not happen if we do our duty as peacetime soldiers fighting for the American form of government contemplated by the founding fathers.

3. Let us work for peace and good will but let us maintain our material, physical and spiritual strength. We must be materially strong. We must be strong in military preparation. We must be strong in our spiritual attainments.

4. Let us live in peace and righteousness with each other and with prayer, spread those ideals throughout the world.

5. Let us resolve that this Nation, founded to sustain the God-given liberty of the individual, shall live forever and become stronger as the generations pass.

In making this resolve we must remember that God remains unchanged.

We must move ahead with faith in God and faith in ourselves.

We can continue this country as the Nation of opportunity if we will to do so.

There are still frontiers to conquer.

They will not be conquered by a socialistic state.

America will never be a socialistic country if the people do their duty.

Appeal to Humanity

EXTENSION OF REMARKS
OF
HON. LOUIS B. HELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 31, 1950

Mr. HELLER. Mr. Speaker, within the Soviet sphere, a system of concentration camps exists, rivaling in extent and horror those of Nazi Germany. President Truman has stated, on the best authority available to him, that the Russians hold 16,000,000 hopeless human beings in these camps.

On the basis of thousands of documented reports from escapees from behind the iron curtain, the distinguished French journalist and writer, David Rousset, who was imprisoned from 1943 to 1945 in the Nazi horror camps of Buchenwald and Neuengamme, issued an appeal to humanity, reprinted in abridged form below, for an investigation into the Soviet concentration camp system. I wish to commend his appeal to humanity to the reading of my colleagues:

[From the New York Times of February 28, 1950]

AN APPEAL TO HUMANITY

(By David Rousset)

I address this appeal to the conscience of all free men.

During the last 5 years there have been increasing numbers of reports on the Soviet system of concentration camps. The war, which opened the Nazi camps to the world and then destroyed them, also broke the silence which concealed Russia's remote territories. Under the pressures of the war and its aftermath, non-Russian nationals, after being deported into Russia by the thousands, were then freed. As these victims escaped to the west, a horrible landscape of concentration camps was unveiled.

Sources of information in regard to the Russian concentration-camp system are widely varied. They come from every nationality—Poles of every political complexion, even Communist; from Germans, Jews, central Europeans, Spaniards; and from Russians, including MVD officials. Even the Soviet legal texts themselves attest to this horror. All this cannot be a conspiracy. The number of documented reports and their insistence do not permit us to reject them without a hearing.

Vishinsky tells us there are correction camps where men are rehabilitated through labor. Not so many years ago Gestapo Chief Himmler posted above the infamous Sachsenhausen camp the slogan "Joy through work."

The Soviet code of corrective labor was recently published abroad. I will quote only two parts. Section 129 recalls that in October, 1943, "institutions for corrective labor were transferred from the Ministries of Justice to the NKVD (now MVD) of the U. S. S. R." It is an ill omen when the highest police organization of a government takes charge of the reeducation of its citizens. Section 8 states: "Those persons are sent to correctional labor camps who have been condemned by (a) a sentence passed by a tribunal; (b) a decree of an administrative body." There is no possible misinterpretation: the law recognizes and approves deportation without trial.

The stone buildings of Buchenwald, built to last, gave that prison city the aura of eternity. The same feeling grips you when you examine the file on Russia. Even after the German experience, the immensity and stability of the Russian concentration camp system staggers us. Like the Germans, they have a transport system involving all the horrors which we know so well—the station platform with frozen bellies and feet, the stench in the ship's holds, the masses of men dying on heaps of their own excrement. But innovations have been added. The Russians also have special trains for prisoners, old passenger cars transformed by sealing the windows and replacing partitions with iron gates, so that the guards in the passage may watch their cargo. In order to transport 800 to 2,000 deportees over a period of several weeks, converted freight cars are used, with iron tubes through the flooring for toilets, tiers of wooden bunks, and sentry stations connected by telephone to the commandant's car. These small new details are alarming, for they indicate a special kind of calculation, necessary only in the case of permanent institutions.

The camps make the police an imposing social power within the state, a well-defended master of manpower. Their central administration, the Gulag, is one of the largest economic trusts of the U. S. S. R. Contracts are prepared on the basis of the prevailing wage rates, but since deportee labor costs far less, the difference is absorbed by the police corporation. Here again the inmate of the concentration camp supports his guardian. The Nazi SS reached this state only at the very last stages of its existence. In this sense the world of the concentration camp develops like a cancer within society, corrupting the executioner along with the victim.

Out of the cacophony of the thousands of documented reports, the "concentration camp man" emerges. He is nightmarishly typical. He is hungry, sick, and afraid. He lives in wooden barracks, or under a tent, or in earth caves. His fate is locked between barbed wire barricades, beneath observation towers. Under constant threat of dogs and rifles, he works far beyond the power of his muscles. Given neither the means nor time to wash, he wears foul rags. He is awakened before dawn; at night, having returned exhausted from work, he stands in an interminable line, near a hospital lacking medicaments. In the middle of the night, in every kind of weather, he is aroused by blows to unload freight cars. This is a faithful condensation of hundreds of reports—and thousands of such reports exist.

The world of the concentration camp keeps growing. Yesterday the Soviet Union had only political detention camps. The cruel war of the collectivization period started her on this enterprise of forced labor which plays its part in every economic sector, including scientific research. The present network of camps spreads across Siberia to the White Sea and the Baltic, from the very outskirts of Leningrad and Moscow to Baku.

During nearly their entire existence, the Nazi camps were but one apocalyptic aspect of a general pathological pattern. Only during the last years did they become an integral part of a society founded on a new type of human exploitation. In Russia this development is entirely completed. The class that organizes the camps is not threatened with extinction. It is in possession of all power and firmly resolved to carve out its future. These camps are thus an expression of normal relations, the natural development of a new type of society. And it is this unique quality of the Soviet system of concentration camps which fills us with such horror.

Imagine the mass graves of the old Buchenwald erupting with a resurrection of their dead, delegates of a protesting humanity united on the great square under the flares and in the snow, listening to the drumbeats and waiting to be counted. How would they

judge the safe, comfortable, intelligent citizens of the West who heard these new cries of terror and did nothing to answer? The strongest obscenities would be too weak. Millions of men today suffer horribly, with no hope.

I do not ask the world to state: "Concentration camps exist in Russia." Some might reply: "Our information is insufficient to pronounce such a serious verdict. I only ask you to say: "The file must be opened."

So that the file may be opened, I now propose the establishment of a commission of inquiry, consisting of former political deportees, inmates of the Nazi concentration camps, men who know the world of the concentration camp and cannot be duped. Once established, this commission would formally demand from the Soviet Government the right to conduct an investigation on the spot, within the Russian camps.

The Soviet Government solemnly denies the charge that its system of corrective labor camps constitute a crime against humanity. Our proposal, that men who have suffered as victims of the Nazis shall freely study the corrective labor camps, offers the Soviet Union the fairest way to justify its good faith before the world.

Rebuttal of Board of Trade Arguments Against Home Rule for the District of Columbia

---

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Thursday, June 1 (legislative day of Wednesday, March 29), 1950

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the RECORD answers to some arguments prepared by the board of trade against the so-called home rule bill for the District of Columbia. My reason for asking that these answers be printed in the RECORD is that some time ago the distinguished gentleman from Texas, Representative TEAGUE, placed in the RECORD the arguments of the Board of Trade of the District of Columbia, which for some strange reason is opposed to home rule for the very people whom the board of trade is supposed to be representing. So these answers have been prepared to the arguments of the board of trade.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

REBUTTAL OF THE BOARD OF TRADE ARGUMENTS AGAINST HOME RULE FOR WASHINGTON

On March 24 the gentleman from Texas [Mr. TEAGUE] inserted in the Appendix of the RECORD a leaflet prepared by the Washington Board of Trade entitled "Does the Kefauver Bill Really Provide for Home Rule?" This leaflet is full of misstatements and misconceptions calculated to confuse and deceive the ordinary citizen. In order to keep the record straight on this important issue, Mr. President, I have prepared a rebuttal of the arguments against home rule for Washington which are currently being made by spokesmen for the board of trade.

REBUTTAL

Argument: The Kefauver bill (S. 1527) would bring carpet-bag rule to Washington—meaning local government by outsiders.

Rebuttal: Section 302 of the bill provides that members of the District Council, which would be the governing body of the city, must reside and be domiciled in the District. The bill contains no provision which would prevent the appointment of local men to the positions of District Manager and department head. There is plenty of local talent in Washington for these top executive jobs and local citizens might well be chosen for these important posts. But if only District residents were eligible for appointment to these places, the new government would be unreasonably handicapped in obtaining the best talent for the task. City management has become a national profession during the past 40 years, and it is common practice for manager cities to hire the best administrators wherever they can be found. The problems of city management are essentially similar throughout the country. From the viewpoint of home rule, however, it does not matter where the District manager and the 12 department heads come from so long as they are subordinate to a locally elected legislature composed of local residents. Under the manager form of government, department heads are responsible to the city manager who appoints them, the manager in turn is responsible to the city council which appoints him and can remove him, and the council in turn is responsible to the voters who may change its composition on election day.

Under the present system, Washington in fact is now governed by outsiders. For Congress is now the governing body of the District of Columbia and all the Members of Congress come from other parts of the country. The chairmen of the District of Columbia Committees of the House and Senate are customarily spoken of as the "mayors" of Washington. Mayor MCMILLAN comes from South Carolina, and Mayor NEELY comes from West Virginia.

Moreover, even under the present form of District government, department heads are often appointed from the States. Eleven of the present forty-two department heads in the District government were not residents of Washington at the time of their original appointment. For example, Dr. Corning, the Superintendent of Schools, was then a resident of Nebraska; Dr. Seckinger, the District Health Officer, lived in Georgia; and Mr. Shea, the Director of the Board of Public Welfare, came from Massachusetts. One advantage of appointing outsiders is that they are independent of any local interest group affiliations.

Argument: No real home rule is possible under the Kefauver bill.

Rebuttal: The essence of home rule, as it is understood throughout the United States, is the making of local policies by locally elected officials. The Kefauver bill transfers the local law-making power of the Board of Commissioners of the District of Columbia to a locally elected District Council. Over the years Congress has delegated to the District Commissioners broad powers to make rules and regulations to protect the life, health, safety, and general welfare of all persons and property in the District of Columbia. (See 1, D. C. Code 226.) Their ordinance-making powers, which the Council would inherit under the Kefauver bill, cover 90 percent of all local matters and would not be subject to congressional or Presidential review. The other 10 percent—corresponding to legislation on the State level—will become effective in 45 days under the bill, in the absence of negative action by concurrent resolution of Congress or subsequent veto by the President. For all practical purposes, this will be home rule for Washington. For municipal legislation will be enacted by a council elected by the people of Washington instead of by a Board of Commissioners appointed by the President. Short of a complete delegation of legislative authority by Congress to the Council, this will be as much home rule as the Constitution permits. So much self-rule is surely better than none. Nine-tenths of a loaf is preferable to none at all. The insistence of the board of trade upon the whole loaf, knowing it to be unattainable, may conceal their secret desire for none at all.

Argument: Congress cannot surrender its exclusive authority over the seat of the National Government.

Rebuttal: This objection refers to article I, section 8, paragraph 17, of the Constitution of the United States, which reads:

"The Congress shall exercise exclusive legislation in all cases whatsoever, over such District (not exceeding 10 miles square) as may, by cession of particular States, and the acceptance of Congress, become the seat of the Government of the United States * * *."

It is well settled in our constitutional law that the word "exclusive" in the paragraph quoted above was meant by the founding fathers to exclude the authority of the States over the Federal District. But there is nothing in the Constitution to prevent Congress from delegating its legislative authority, as the legislature for the District of Columbia, to its own agent. In actual practice, Congress since 1879 has made broad grants of local legislative authority to the Board of District Commissioners who have wide powers to make rules and regulations covering purely local matters. Similarly, Congress could make a locally elected city council its agent for the enactment of municipal legislation in the District of Columbia. This is what the Kefauver bill provides for.

Argument: The only way to obtain genuine home rule for Washington is through national representation of the District of Columbia in Congress.

Rebuttal: This argument puts the cart before the horse. It overlooks the fact that successful local self-government has been a condition prerequisite to national suffrage and representation in Congress throughout our history. Before the various States have been admitted into the Union since its creation by the Original Thirteen States in 1789, they have had to prove their capacity to govern themselves competently in their local affairs.

Home rule consists in the right of a community to control its local affairs through its own locally elected representatives in a city council. That is what is meant by home rule throughout the United States. If the people of Washington could elect Representatives in Congress, these Representatives would have no more voice in running the local government of the city than Members of Congress from Chicago or Philadelphia or New York have in running the government of those cities. Members of Congress from the District of Columbia would not perform any of the local legislative or administrative functions which are the essence of home rule. They would serve as national legislators. Long repetition of the argument that national suffrage and national representation is the road to home rule for Washington may have led some unthinking people, parrot-like, to believe it. But this argument is, in reality, a smoke screen designed to conceal other grounds of objection to local suffrage for the District of Columbia.

Argument: The District council would be dominated by the two councilmen to be appointed by the President under the Kefauver bill.

Rebuttal: The Kefauver bill provides that the District council shall be composed of 11 members; nine elected by the qualified voters of the city, and 2 appointed by the President of the United States. Since each of the 11 councilmen would have one vote apiece, it is obviously absurd to argue that the 2 members appointed by the President could make their will prevail over the other

9. The provision for the appointment of two councilmen by the President is designed to protect the Federal interests in the National Capital. At present the District government is headed by a Board of Commissioners all three of whose members are appointed by the President. The board of trade has not objected to this arrangement. Are they sincere in objecting to the presidential appointment of 2 out of 11 councilmen? Another precedent for presidential appointment of local District officials is seen in the fact that during the territorial period (1871–74) the President appointed all the members of the upper house of the bicameral District legislature.

Argument: The 1-year residence requirement in the Kefauver bill for voting in District elections is not long enough.

Rebuttal: The typical residence requirement for voting in the United States is residence of 1 year or less in the State and 6 months or less in the county. Thirty-three States require 1 year residence in the State; 5 States require 2 years residence in the State, and 9 States require 6 months residence in the State. No State requires a longer residence than 1 year in the county.

The proposal for a longer residence requirement for voting in District elections is probably designed to exclude from the local electorate the so-called floating population of Federal employees to whom spokesmen for the Board of Trade frequently refer. Yet census figures show that the average tenure of office of Federal employees in the United States at large is more than 11 years, and the average of those who reside in Washington, D. C., is believed to be even longer. More than one-fifth of the population of Washington is composed of officials and employees of the Federal Government and many of them think of Washington as home.

Argument: The Kefauver bill provides that registered voters in other places may vote in the District if they have lived here 1 year.

Rebuttal: Section 1206 of the Kefauver bill provides that "a person who is otherwise qualified shall not be disqualified by being entitled to vote in another jurisdiction." The board of trade fears that this "dual voting" provision might give persons resident in Washington, but legally domiciled in the States, the balance of power in District elections. According to the board of trade's own estimates, Federal workers would comprise 20.7 percent of the total District electorate. Four-fifths of the local electorate would not be Federally employed and only one-ninth of the total population of the District maintain legal domiciles elsewhere.

The fundamental error in this objection is the attempt to distinguish between "transient" Federal employees and "permanent District citizens." This is a false dichotomy. Federal workers resident in Washington are "people of the District" as much as anyone else who lives here and has a stake in its government. To suppose that the "genuine" people of the District are a few native sons or the eight-thousand-odd members of the board of trade is a supercilious conceit which is contrary to fact.

The chief purpose of the so-called "dual voting provision" of the Kefauver bill is to increase the size and improve the composition of the District electorate by allowing some 100,000 Federal employees to vote in District elections who reside here, but maintain legal domiciles in the States whence they came. These people have a vital stake in this community because they own property and pay taxes here, send their children to local schools, and depend upon local municipal services. If persons who actually live here in Washington, but retain legal domiciles in the States, were denied the right to vote in District elections, two classes of citizenship would be created in the District of Columbia. In one class would be the residents of Washington who have seen fit to retain voting rights in another jurisdiction and who, if unable to vote in District elections, would look to Congress for the protection of their interests. In the other class would be the residents of Washington who do not have the right to vote elsewhere and who would look to the District Council for the protection of their interests. Between these two classes of citizens, as well as between Congress and the Council, conflicts would certainly arise which might jeopardize the successful conduct of the District government.

Argument: The Kefauver bill does not confer the right to vote in national elections upon Washington residents.

Rebuttal: It is true that the Kefauver bill does not confer this right. Congress cannot confer the right to vote in national elections upon the residents of the District of Columbia simply by passing a law. The Constitution of the United States grants the right to vote in national elections to the inhabitants of the States, and the District of Columbia is not a State. It will require a constitutional amendment to enable the residents of Washington to vote in national elections. Proposals to amend the Constitution to this end have been introduced in Congress for many decades, but none of them has ever been approved by Congress for submission to the State legislatures in accordance with the prescribed amending process. For 40 years the Washington Board of Trade has tried in vain to induce Congress to propose such an amendment. But for various reasons Congress has always been deeply opposed to national suffrage and national representation for the people of the District of Columbia. The chances are slim indeed that such a constitutional amendment will ever be adopted. To ask that home rule be suspended until the District has been granted national representation, as the general counsel of the board of trade has done, is to fly in the face of both history and common sense and to classify oneself as an obstructionist against any form of District suffrage.

Argument: The city-manager form of government, which the Kefauver bill proposes for Washington, is unworkable.

Rebuttal: The manager form of city government is modeled upon the internal structure of the modern American business corporation. Under the manager form of government, an elected council is the governing body of the city, and a manager, appointed by the council to serve at its pleasure, is the chief administrative officer of the local government, subject always to the control of the council. Thus, the city manager corresponds to the general manager of the private corporation, the city council corresponds to the board of directors of the private corporation, and the voters correspond to the stockholders.

Since the manager form of city government was first adopted by Staunton, Va., in 1908, more than 900 American cities and towns have adopted it, almost a third of them since the late war. The manager form of city government has long been recommended by the National Municipal League in its model city charter. So successful, indeed, has been the experience of American cities with this form of government that less than 3 percent of them have even abandoned it.

Argument: No city the size of Washington has ever had the manager form of government.

Rebuttal: Cleveland, Ohio, with a present estimated population of 900,000, has had the manager form of government. Cincinnati, with a present population estimated at 500,000, is the largest city in the United States now having this form of government. Among other large cities which now have the manager type of government are Rochester, Hartford, Richmond, Dallas, and Oakland. The basic principles of the manager form of government are applicable to cities of any size.

Argument: The District Manager proposed by the Kefauver bill would become the all-powerful boss of Washington.

Rebuttal: Section 502 of the Kefauver bill provides that "the District Manager shall be the chief executive officer of the District government. He shall be responsible to the District Council for the proper administration of the affairs of the District coming under his jurisdiction or control. * * *" To this end he is given powers of appointment, removal, and supervision commensurate with his responsibilities. But he is subordinate to the council which appoints him and which may remove him at any time. He must perform his duties in such a way as to meet with the approval of the council. Under the manager system, the line of responsibility runs straight up from the bureau chiefs to the department heads to the manager to the council to the electorate. Each has the power to dismiss those below it in case of corruption or incompetence, subject of course to the safeguards of the civil-service merit system. The general experience of the manager cities in the United States has been that the manager has not become the boss of the town.

Argument: Home rule would result in higher real estate and income taxes in the District of Columbia.

Rebuttal: Under the present system, increases in District tax rates must receive congressional approval. Under home rule, bills raising local tax rates would be subject to congressional veto. Taxation without representation is now the rule in the city of Washington. District residents have no voice in the determination of their tax rates or as to how their money shall be spent. Under the Kefauver bill they would have such a voice. Proposed changes in the tax rates would have to be initiated by the representatives of the people in the District Council and could be disapproved by Congress or vetoed by the President. Thus, whether District property and income taxes went up or down, they would change in response to the decisions of the elected representatives of the people in the District Council, subject to a congressional and Presidential veto. Washington would have taxation with representation for the first time in 75 years.

Argument: Transient residents would vote for bond issues which the permanent residents would have to pay for.

Rebuttal: This argument is based upon the false assumption that there are two kinds of people in Washington—the permanent residents and the transient, floating population. The population of Washington is as stable as that of any city in the country. To be sure, the individual composition of the federally employed population in the District of Columbia may change from time to time. But as long as Washington is the Capital of the country there will always be a hard core of Federal employees resident here—even if they are not the same people—to help pay the carrying charges on a local debt.

No State in the Union limits the right to vote on bond issues to its so-called permanent residents.

It has long been an accepted principle of public finance that governments should pay for their current operating expenses out of their current revenues, and that they may borrow for capital improvements such as schools, highways, plant and equipment, etc. In keeping with this principle, section 701 of the Kefauver bill authorizes the District government to borrow for capital improvements, but limits its maximum indebtedness to an amount not exceeding 5 percent of the

assessed value of the taxable real property in the District.

The Kefauver bill also provides a triple hurdle for bond issues. First, they must be approved by majority vote in the District Council. Second, bonds may be issued only after approval by majority vote in a popular referendum. And, third, the bond issue may be disapproved by Congress or the President. These three safeguards, together with the 5-percent debt limit, will prevent the new District government from rash debt ventures.

Argument: Passage of the Kefauver bill will mean the reduction or elimination of the annual Federal payment to the District.

Rebuttal: Title XX of the Kefauver bill provides for an annual Federal contribution toward the cost of the District government amounting to 20 percent of District local revenues during the preceding fiscal year. This formula, if it were now in effect, would produce a Federal contribution to the District of $20,000,000 in 1950. The actual Federal payment to the District this year is a lump sum amounting to $12,000,000. Thus the formula in the Kefauver bill would increase the Federal payment in 1950 by $8,000,000.

Argument: The passage of the Kefauver bill would not save much congressional time.

Rebuttal: One of the main arguments in favor of home rule for Washington has been that it would relieve Congress of the onerous task of functioning as a city council for the District of Columbia when it ought to be devoting its full attention to more important national and international problems. It has been carefully estimated that the House of Representatives alone devotes 3,000 man-hours each session to the consideration of District affairs. The House and Senate together probably devote at least 5,000 man-hours a year to District of Columbia business. The House of Representatives sets aside 2 days each month for the consideration of District business.

Most of this congressional time would be saved under home rule because the formulation of District legislation—most of the 28 stages in the enactment of an act of Congress—would be devolved upon the District Council and the time spent in its consideration would be spent at the local level instead of at the national level. Under the legislative veto procedure set forth in the Kefauver bill, for possible use in the 10 percent of District legislation subject to congressional review, all Congress need do under home rule is vote up or down a concurrent resolution of disapproval if one is introduced.

Argument: If Washington had home rule, the colored people would capture control of the District government.

Rebuttal: This objection is not openly raised by the board of trade, but it is whispered about and is one of the silent obstacles to passage of the Kefauver bill. The truth is that, under the method of voting provided for in the Kefauver bill, no minority group in the District could possibly win a majority of the nine elective seats on the District Council, or a majority of the seven elective seats on the Board of Education. Title XII of the bill provides for a system of city-wide voting in which the candidates who receive the largest number of votes in the general election shall be elected to these offices.

The Negro population of Washington has been remarkably stable through the years. Since 1880 it has varied between one-fourth and one-third of the total population of the District. At the present time, according to the latest census estimates, the Negroes account for about 30 percent of the city's population. This percentage would entitle them to three out of the nine elective seats on the District Council. In Richmond, Va., which has the manager form of government and where 32 percent of the population is colored, only one of the nine members of the city council is a Negro. The colored people have the right to participate in the political life of a community in proportion to their numbers and their qualifications. The experience of other cities in the United States where the colored people are allowed to vote shows that they do not vote en bloc, but scatter their votes as the white people do. In short, it is a myth that home rule for Washington would mean domination by the Negroes.

Investigation of Interstate Gambling and Racketeering

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, June 1 (legislative day of Wednesday, March 29), 1950

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the RECORD a statement I have prepared on the subject of interstate gambling and racketeering, a radio speech on the same subject, delivered by me on May 27, 1950, from Station WGN at Chicago, Ill., and several newspaper editorials relating to the same subject.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR WILEY

AN ALL-OUT FIGHT AGAINST CRIME

Today it was my pleasure to pay a visit, with my colleagues on the Senate Crime Committee, to President Truman to discuss executive-legislative cooperation for the purpose of coping with the problem of interstate gambling and racketeering. It has always been my opinion that only by the most complete cooperation on the part of both branches of the Government and the judiciary can we lay the basis for permanent legislation which will wipe out the shame of the cities—with so many major metropolitan centers now being under the thumb of organized crime—under a combination of gambling, racketeering, dope peddling, slot machines, policy rackets, etc.

My radio address on nonpartisan probe

Last Saturday night I delivered by means of transcription, an address over the great Station WGN, Chicago, on this issue. I tried to emphasize that there are promising signs that the committee investigation will be a nonpartisan probe. However, already there are some signs that some rotten political influences are at work in the Democratic organization to pervert, distort, and send off on a tangent the crime investigation. Of course, any such charges on my part will be denied publicly. I do not expect any member of the majority party to admit: "Yes, we are a little unhappy at some of the criminals who may be discovered because many of these hoodlums are heavy contributors to the Democratic Party organization and because in countless wards, precincts, counties, and even at the State level there is a close relationship between organized crime and shady politics."

No, no one will admit that publicly but I have substantial evidence or else I would not be making the statement that I have already made concerning shady political influences at work.

I repeat that I do not make these allegations for partisan purposes—in order to show up the Democratic Party. I make these allegations publicly because I am anxious to have the strongest, most effective possible probe. I want to put the crooked politicians on notice to beware because we are wise to their game.

I would not want this probe distorted into a Republican smear hunt. At the same time, what is far more important and far more dangerous, I do not want this probe distorted into a whitewash of filthy influences which work in many of our major cities, particularly crime-ridden Chicago.

I believe that my own Republican Party is deeply desirous of the finest, highest type of investigation, and I believe that responsible elements in the Democratic Party are similarly desirous. I have high confidence in the committee staff and personnel. However, as reflected in skeptical newspaper editorials and articles which I have in my hand, many Americans are deeply dubious whether the Democratic Party, whose hands are still stained by the blood of the Kansas City murders and by "pendergastism"—whether the Democratic Party will have the guts to allow a completely nontrammeled, nonpartisan investigation.

While all of this attention, however, is being devoted to the Federal effort to probe crime, I hope that there will not be the slightest lessening by States and localities of vigilance in cracking down on local rats. We have it on no less an authority than the notorious Frank Costello himself, as pointed out in a Wisconsin State Journal editorial, that gambling could not exist unless it had a green light from local officials.

Newspaper editors' counsel sound

I believe that the opinion of the alert newspaper editors throughout the Nation should be consulted because these men are well aware, based on long investigative experience, of the lawless element in our midst.

We of Wisconsin have always been proud that ours is a relatively crime-free State, but we know that we are challenged as is the rest of this Nation to further improve enforcement of the law.

The racetrack wire-service boys in Milwaukee, the numbers men, plying their trade undercover in my State, can be assured that we are going to look under the rocks to find these crawling insects there as well as elsewhere throughout the Nation.

RADIO INTERVIEW BETWEEN SENATOR WILEY AND HIS EXECUTIVE SECRETARY, SATURDAY, MAY 27, 1950, ON STATION WGN, CHICAGO, ILL.

CRACKING INTERSTATE CRIME

SENATOR. Does crime pay? You, my listeners, and I were brought up to believe that crime does not pay. That the wages of sin are death. That he who lives by a gun will die by a gun.

To a considerable extent, what we learned is still very true. Crime, generally speaking, does not pay. It does not pay, thanks to our great Federal Bureau of Investigation; thanks to honest law-enforcement officers in most of the country; thanks to the work of active crime commissions. Thanks to them and to you, the honest citizens of America, crime, generally speaking, does not pay.

But a new investigation by the United States Senate's special committee looking into inter-State gambling and racketeering is now getting under way, and it seems very apparent already that to a certain extent, materially speaking, crime does pay. It pays off and pays off well to the syndicate, to the strong-arm boys in its employ, to many crooked policemen on city beats, to many tin-horn gamblers, it pays to some rotten judges, to some serflike officials in many big centers of our country.

Government officials are by and large honest

Now, my friends, don't get me wrong. By and large your Government officials are honest, decent citizens. I say that contrary to the distorted picture which Red Russia tries to paint of us—a distorted picture of an allegedly corrupt, venal America. You know, the worst thing that could happen in the world would be for Mr. and Mrs. Average American to lose faith in his or her officials. However, a second thing would be to keep faith in those officials who are rotten, corrupt, and who ought to be in jail rather than in city halls.

Committee is going to operate silently

SECRETARY. Well, Senator WILEY, you are a member of that special Senate committee which is probing into crime. Can you tell us something about your work?

SENATOR. Glad to. But please understand, friends, it is not my plan now to present any so-called inside story of the confidential things we are going to do. Let the hoodlums worry about that. Let them keep guessing about our confidential plans. Let them grow increasingly uneasy, because this committee, generally speaking, is going to operate on them with an expert silent treatment. At the same time, however, members of the committee, like myself, feel that it is up to us to help inform the American public of certain essential background facts regarding our war against the underworld. That is why I am happy to speak to you now.

Competent committee and staff

SECRETARY. Well, Senator, how do you feel about this anti-crime committee itself?

SENATOR. Truly, I can answer that by saying I have tremendous confidence in the committee chairman, the Honorable ESTES KEFAUVER of Tennessee and in my colleagues on the committee—both Republican and Democrat. I know that they want to do an honest, conscientous job. I am glad that we have a very competent and experienced chief counsel in the person of Rudolph Halley—who gained invaluable experience with the old War Investigating Committee.

We must be nonpartisan

SECRETARY. Do you feel that this committee should operate on the basis of bipartisan policy?

SENATOR. No. We all definitely feel we must be nonpartisan, not bipartisan. Let's shove partisan considerations in the ashcan. It is up to the Senate committee to pull no punches whatsoever in its investigation. Let the chips fall where they may. If the spotlight falls on a crooked Republican organization, then I say let's get the facts and tell the truth about it. If the spotlight falls on a nest of democratic racketeers, then let's also tell that story. There must be no whitewash, no glossing over any sordid situation, no matter whose political toes are stepped on.

SECRETARY. Is this nonpartisan approach the way things have proceeded thus far?

Advice to the mob: hands off the committee

SENATOR. Well, frankly speaking, not completely. I know that certain outside influences tied up with crooked big city organizations have already attempted to put the heat on, have subtly attempted to apply pressure, to use influence to distort the purposes of this committee. Let me repeat that my friends—I am charging that certain outside—I emphasize—outside—influences, and frankly—they are connected with the Democratic political organization—are apparently already attempting to use pressure to pervert the committee's work.

The big shots have already tried certain high-up channels of approach. Undoubtedly they are going to try others. I say, however, publicly here and now: You had better lay off, boys. You had better not try any wise-guy stuff on this committee. You had better keep your filthy hands and filthy attempted influence away, because if you do try to use pressures, they are going to boomerang against you and you'll be doubly sorry.

Now, my fellow Americans, I would like to make this charge more explicit, but I do not want to reveal more facts than are necessary at the present time.

The new look in racketeering influence

Let me point out that these influences are not of course of the blackjack, pistol-packing, lead-poisoning type. They are subtle, silk-glove, apparently respectable influences, the sort of thing one would expect from billion-dollar racketeering influences—tied up with shady politics. This is the new look, so to speak, in United States rackets—a look of respectability.

SECRETARY. How about the old rough look? Has it disappeared completely?

SENATOR. No. It's still there. You can still see the old look too. Just look around you—in Chicago—or anywhere else in most big cities. You'll see them: The vicious dope peddlers, the crooked ward committeemen, the rotten precinct captains, the numbers kings, the slimy slot-machine boys, the hoods, the thugs, the trigger-crazy rats.

SECRETARY. That's certainly quite a list, Senator. I think, however, that we are particularly interested in what you say about the change—the new look—that has occurred in crime and criminal methods—the fact that the gangsters have gone respectable and now are wearing tuxedos and silk hats in place of exclusively the old garb of street hoodlums.

SENATOR. Yes. One of the most disgusting trends of recent years has been the movement of ill-gotten crooked money into decent, respectable American businesses. It is perfectly nauseating for me to read the records that I already have, showing how ex-bootleggers and other riff-raff have suddenly blossomed behind all sorts of fronts into tremendous ownership of stocks and bonds in some of our Nation's largest companies. These filthy rats cannot do anything but bring filth into these businesses and to distort them for their own nefarious purposes.

SECRETARY. I'm sure it isn't easy to get all of the facts involved, is it, Senator?

How crooks have infiltrated business

SENATOR. That's right; it is almost impossible to get a complete financial picture of the interlocking directorates by which the big-time racketeers have infiltrated into many upstanding American businesses. Like an octopus they have used their dirty finances to reach out their tentacles into the following types of business, among others: Hotels, transit companies, motion-picture theaters, laundries, gasoline stations, real estate, railroads, automobile franchises, etc.

There are all sorts of agents or go-betweens, sometimes 10 times removed, from the hidden "big shot" who really pulls the strings.

I know that my colleagues on the Crime Committee intend to expose this so-called respectability trend by facts.

Stockholders' battles between crooks and honest groups

Already, if you follow reports, you have noted that stockholders' battles are breaking out all over the country between decent elements and the go-betweens of the crooks. I think that we can expose the go-betweens and enable decent citizens to maintain control of American companies.

SECRETARY. I gather, Senator, then, that speed is essential to prevent the racketeers from becoming still further entrenched in respectable businesses.

SENATOR. Absolutely. I am hoping that decent stockholders and bondholders and company officials will "hold the fort," so to speak—will hold out and not sell out or give in further to these hoodlums in the various States.

SECRETARY. Well, Senator WILEY, time is running out, and perhaps we might run down on some of the matters covered in the broadcast thus far.

Summary

SENATOR. I can summarize as follows:

First. Crime has gone "big time." It is obviously a huge multi-billion-dollar affair, operating behind a thousand false fronts.

Second. The Senate Crime Committee, I trust, is going to do a nonpartisan job.

Third. The wise-guy racketeers and their big city political machines had better keep hands off and quit trying to use pressures on us, because if they don't they are going to regret it twice as much as they are going to regret having gone into racketeering in the first place.

Fourth. There is no need to exaggerate interstate crime. The simple facts speak for themselves. Most American businesses are decent and honest, just as most citizens are decent and honest. Let no one become cynical and begin to think that every business is crooked or that every public official is a crook. Such vicious rumor mongering and cynicism is as bad as, or worse than, being so innocent as to believe that there is almost no crime.

Fifth. Uncle Sam, your Federal Government, has a great responsibility. But it alone cannot do the job. The crime commissions in the various States, the honest municipal officials, the district attorneys, the sheriffs, and all other honest Government workers at State, county, and local levels must do the basic job.

I conclude, my friends, as I began. We—you and I—were taught that crime does not pay. We want our children to grow up in an America as crime-free as possible. But to make it so we have got to take the profits out of crime, out of gambling, out of racketeering, out of the tie-up with shady politics. We must make sure that crime does not pay.

[From the Milwaukee (Wis.) Journal of May 22, 1950]

HEADLINES DON'T CLEAN HOUSE

Senator WILEY said the other day that he expects no headline hunting in the investigation of Nation-wide crime by the five-man Kefauver committee of which he is a member.

There will be "silent sleuthing" instead of "cop and robber circuses," said Wisconsin's senior Senator. The investigation will be "full, fair, and with the attitude of let the chips fall where they may—whether they hit Democrats or Republicans. * * * I have no intention of making it a Kansas City smear."

* * * * *

The crime investigation is too important to let it be turned into headline hunting. What the Nation needs is facts—facts that will help honest officials clean up crime and force indifferent officials to do the same thing. It needs facts that will end whatever connection there is between public officials and gangsters wherever such connection is found.

The job, as Senator WILEY said, is to "clean house." * * *

[From the Green Bay (Wis.) Press of May 20, 1950]

THE PROBE OF CRIME AND SUBVERSIVES

It is a fair question to ask: Do the people expect an honest exposure of crime and subversives?

We are moved to present the question because if there is a full and sincere exposure of both crime and subversives across the country and the elimination of their effectiveness, the Democrats are almost certainly defeated in the next election and they know it.

Anyone who wants to go to an almanac or blue book and read the figures in the populous States which resulted in Mr. Truman's

election in 1948 will clearly understand what we mean. Judged by those figures Mr. Truman simply cannot carry such great States as California, Illinois, and Ohio without the aid of the underworld.

* * * * *

The electoral vote in great States like California, Illinois, Ohio, and Michigan can easily swing an election. Even one of those States has been known to be decisive.

The Democrats for the past 20 years have had the support of the gambling element and of subversives because they gave them something. Now, of course, the Democrats realize that they gave them too much. But in expecting such elements to be reasonable or restrained, the Democratic leaders showed that they have very little conception of either Communists or criminals. Both elements will grab everything in sight. If the Reds are given a few important places, they always contrive to take over. If criminals are given a little special protection, they immediately become bold and brazen. If they are permitted by threats and blackmail to force someone to sell them a lucrative business at a ridiculously low price, as actually happened at Kansas City, they insist upon and secure from the political boss immunity from even the ordinary license fees exacted of all business of their nature.

A few years ago a member of the Chicago Crime Commission estimated that the underworld was good for 200,000 votes in that city. He included the women and the members of their families. It was quite a revelation to observe the list of the thousands who were employed in the numbers rackets, or daily picking up bets on the ponies all over the county, or servicing, selling, or installing slot machines, or engaged in the small backroom dice and stud operations, and of course those occupied in the dining, dancing, and ornate gambling palaces.

If these committees on subversives and on crime actually and earnestly sought to give the country the entire and unembellished truth, they would perform a marvelous public function. To date they have indicated no purpose of doing any such thing. Between serving the country and trying to insure the maintenance of their own power, Democratic leaders have lost no time in making a decision.

[From the Wisconsin State Journal of May 10, 1950]

HAND ON THE GREEN LIGHT

Americans who manage to muster up a little interest in presidential elections, but seldom bother to vote otherwise, should take to heart the words of one Frank Costello.

Mr. Costello's social and economic activities lie in the fields of racketeering, gambling, and what have you. Speaking before a committee of Congressmen investigating race horse betting, "Frankie" came forth with a great truth:

"Gambling can't be operated by anyone," he said, "unless you can get a green light from somewhere, like local officials."

Mr. Costello should know, being an old hand at the game.

Wisconsin, during the past few years, has pretty well purged itself of the criminal fringe that fed itself principally from the millions in nickels and dimes dropped into the slot machines. A succession of good State administrations, plus both enlightened and outraged local thinking and action, has resulted in a Wisconsin markedly free from organized gambling.

We can keep it that way. We can, in fact, go even further in our clean-up campaign by paying attention to the local officials who—as Mr. Costello says—are the ones with authority to switch on "the green light."

[From the Fond du Lac (Wis.) Commonwealth Reporter of May 15, 1950]

NO MORE SLOTS

We compliment the Federal circuit court of appeals in Chicago for ruling that States have the right to bar slot machines. The issue arose in Wisconsin which has an anti-gambling statute. The test was provided when slot machines were seized on an Indian reservation, theoretically under the control of the Federal Government. The operators were arrested, but they appealed that State law does not apply to an Indian reservation.

There is always the argument that people are going to gamble anyway so why not legalize it and enable the States to collect some revenue from it.

We do not know whether there is such a thing as honest gambling, so perhaps we ought to take a peak into some of these slot machines. A great majority of them are manufactured in Chicago and the manufacturers claim they leave the plant set to pay out at least 75 cents on the dollar. But accompanying those machines are instructions explaining how they can be geared to pay out nothing or 10, 20, 40, or 60 percent of the cash poured into them.

Federal licenses were paid on slot machines in nearly seventy thousand places last year. Conservatively there probably were ten times that many machines.

It is impossible to estimate the gambling syndicate take on slot machines, but the California commission on organized crime said last year that the gross take by people who control slot machines probably is around two billion dollars annually.

Yes, the Chicago court acted wisely.

[From the La Crosse (Wis.) Tribune of May 25, 1950]

GAMBLING TAKE AND NATIONAL DEFENSE

A billion dollars a month—twelve billions a year.

That's the take of gambling in the United States—bookmaking, slot machines, and policy games. It is just the commercialized games of chance that are included in this estimate.

The figures come from a new survey on gambling compiled by the American Academy of Social Science. It is no Johnny-come-lately outfit, either, dating back to its organization in Philadelphia more than threescore years ago.

This organization has made a thorough study and published its results with these conclusions:

1. The ordinary gambler is a sucker who must lose in the long run.

2. Big-time gambling can't operate without political or police protection.

3. Gambling rackets are helped by legitimate communications channels, and elimination of sports wire services to bookmakers would reduce them from a major national racket to a petty local nuisance.

It breaks down the $12,000,000,000 taken by the promoters of chance as $8,000,000,000 to the bookies, $3,000,000,000 for the numbers racket, and a billion to the one-armed bandits.

One who thinks seriously cannot escape the thought that this $12,000,000,000 is getting close to our total bill for national defense—about 10 percent under the proposed budget for this coming year.

Yet there are many who believe we are spending too much on armaments—say it goes for nonproductive outlays.

What a comparison.

"I will say unto God my rock, Why hast Thou forgotten me? Why go I mourning because of the oppression of the enemy?" (Psalms 42: 9.)

Better Medical Care Without Compulsion

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1950

Mr. KEATING. Mr. Speaker, as the old saw goes, "Many a true word is spoken in jest." Certainly Bing Crosby summed up the situation with regard to socialized medicine in Great Britain when, upon losing in the British golf tournament last week, he quipped, "Well, I didn't come to Britain to win at golf anyway, I just needed another wig."

Consider the number of aging Hollywood actors who would need new wigs if we embarked upon socialized medicine in this country. Now, at least, they have to go to Britain to get them. The tourist trade is stimulated and the dollar shortage eased by our refusal to adopt this socialistic scheme. This remark emphasizes the evils and the dangers of allowing its advocates to get their foot in the door. The constructive alternative is, of course, to encourage the development of voluntary health insurance plans, for instance, through the device of permitting income-tax allowances for premiums paid to these voluntary plans.

My bill, H. R. 6819, sets forth a solution to the problem of providing better health for a greater segment of our population. There is no doubt that some answer to this urgent question is needed. The allowance of tax credits for contributions to voluntary health plans is in accord with the traditions of individual initiative and a free opportunity system, unfettered by governmental dictation or interference.

Compulsion is neither necessary nor desirable, since this easier and cheaper method of broadening the scope of medical care for our citizens is available, provided the real interest of our leaders is in providing better medical care for a larger segment of our people, rather than in creating a small army of additional Federal employees to administer a Government insurance company and ride herd on the doctors, dentists, and nurses of the country.

Truman's Chicago Circus

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 31, 1950

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks heretofore granted, I am inserting in the RECORD an editorial entitled "Truman's Chicago Circus," which appeared in the

Rural New Yorker, New York, N. Y., June 3, 1950:

TRUMAN'S CHICAGO CIRCUS

Though several tons of newsprint and hundreds of pounds of ink were devoted to various incidents in President Truman's latest "nonpolitical" tour through the West, only minor mention was made of the final event that was obviously planned to be the master stroke in public relations. After a week of whistle stops at which the President spun his dangerous political philosophy in a disarmingly folksy manner, he was welcomed to Chicago by members of his Cabinet who had held a meeting the previous day.

It was this meeting of our Government's Cabinet that merits comment and censure. It was an extraordinary event, conducted something along the lines of a circus. For the first time in this country's history, the Cabinet met in public before an audience and facing television cameras. Called to order by Vice President BARKLEY in the Chicago Opera House with seats available for 4,000 spectators, the meeting had no purpose other than to beat the drum prior to Mr. Truman's arrival. On one of the walls was a gigantic framed poster of the President, wreathed in heroic olive sprays, very reminiscent of Hitler and Mussolini displays, and quite similar to the monster posters of Stalin that now adorn every pedestal and market square in the iron-curtain countries.

According to all reports, this so-called pep rally in Chicago—that is what its sponsors called it—was a complete dud, with fewer than 25 percent of the seats occupied. The simple fact appears to be that the general public was not interested in spite of all the heavy advance barrage of publicity. Indeed, it was most fitting that the people did not respond to this shameful spectacle where the top Government officials acted out a farce in an open arena, going through the motions of being inspired by the grotesquely enlarged countenance of their leader, who gazed down on them wisely and beneficently from the wall above.

Hitler and Mussolini, the originators of the leader complex, are gone. They were toppled by the forces of American democracy. Stalin, the lone survivor of the original totalitarian trio, is supposed to stand for everything we are against, and opposed to all the principles that we hold dear. Yet, right in our own midst, our own Government sponsors a public demonstration, paid by all the taxpayers, that one would more naturally expect to see in the Kremlin at Moscow, or could have seen a few years back in der fuehrer's Berlin.

Mr. Truman may have thought he made some good political hay in his most recent barnstorming trip, and he probably did. But the Chicago episode proved to be a haymaker of quite another sort—a wild swing without the expected wallop. Let us hope it will never again be repeated, or even attempted, within the confines of this Republic.

Reorganization of the Government Departments

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, June 1 (legislative day of Wednesday, March 29), 1950

Mr. LEHMAN. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an editorial dealing with the reorganization of the Government departments, published in the New York Times of Thursday, May 25.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SIXTEEN OF TWENTY-ONE

With the dead line passed for a congressional veto, the scoreboard shows that 16 of the 21 plans for reorganization of the Government submitted to Congress last March by President Truman now go formally into effect. That the score is as high as this is due in large part to the efforts of the Citizens Committee for the Hoover Report, to some effective speeches on the floor by Senator BENTON, of Connecticut, and to a belated but welcome decision by a sizable group of Senate Republicans not to play politics with this issue. The score might have been even a bit higher if President Truman had stuck a little more closely to the original recommendations of the Hoover Commission—for example, in the case of remodeling the National Labor Relations Board.

The need for modernizing the vast, antiquated machinery of the Federal Government is so imperative, the possible gains both in better administration and in money saved are so substantial, that there is good reason for satisfaction in the results just achieved. At the same time it must be noted that only one of the 16 plans now put into effect—this one relating to the merchant marine—involves a major operation. The others are chiefly concerned with establishing a clear line of control from the Chief Executive to various department and agency heads—a wise and necessary reform, but one by no means earth-shaking in importance.

So far as major operations are concerned, the Hoover Commission originally recommended 18. Four of these have now been accomplished: that involving the merchant marine (just noted), and three others (effected at the previous session of Congress) involving unification of the Armed Forces, reorganization of the State Department and creation of the General Services Administration. On this larger and more important scoreboard, therefore, there remain 14 "major operations" still to be achieved. Since these 14 deal with such highly important matters as veterans' affairs, social security, and natural resources, it is evident that there is plenty of work still to be done—on the part of the President, of Congress, and of all those outside the Government who are interested in more efficient and economical administration.

Let Us Look at the Record

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1950

Mr. MURRAY of Wisconsin. Mr. Speaker, the farm program of our Government has been in existence for many years. The price-support angle was started in 1920 with the establishment of the Federal Farm Board. It was followed by the AAA of the 1930's and by the Steagall bill of the early forties. The Steagall bill which broadened the base of commodities support was killed by President Truman on December 31, 1946, by Executive Order 2714. The issue has been rather more political than agricultural since that day. The Hope bill was passed by the Eightieth Congress and is similar to the Steagall bill. To have any supports of any value the Hope bill was passed by the House and was in operation in 1948 and 1949. The Hope bill was really an improvement of the Steagall bill. Much criticism was directed to the Aiken bill that was to go into effect January 1, 1950, in the campaign of 1948. The Eighty-first Congress, when it passed the Anderson-Cooley bill in 1949, really passed a bill very, very similar to the Aiken bill. The Anderson-Cooley bill was a step backward legislatively. In the first place, it is special-privilege legislation, in that some commodities are given preferred legislative consideration, and in the second place it is antilivestock in its provisions. The feed price is supported at a higher percent of parity than is the livestock products obtained by feeding the grain. In fact, some livestock products do not have any mandatory support whatsoever. The support price of manufacturing milk was $3.21 per hundredweight under the Steagall and Hope bills and $2.72 per hundredweight under the Anderson-Cooley bill.

The Hope bill is a milestone for American agriculture. The approach was based and is based on three premises. One is that all major farm commodities are entitled to equal support legislation and second that labor performed in production of food is entitled to a minimum wage somewhere near comparable to the minimum wage provided other groups; and third it was legislation based on law and not based on the opinion of any one person.

All legislation is a question of trial and error. The Hope approach was in my opinion the most fair and the most acceptable approach we have obtained as yet. It is based on the philosophy that we should keep the best we have ever obtained and try to improve it. There is no reason why the next goal should be 100 percent of parity. We may have plenty of promises but you will note that in 1946 under the OPA and large subsidies that the farm income of each State was lower than the years under the free Steagall year of 1947 and Hope years of 1948–49. You will also note that in 1950 nearly every State is experiencing a smaller income in spite of the fact that the stock market is rising, big business activity is thriving, and that we are going in debt fifteen to twenty million dollars more every day. Farmers are paying more for many items they buy but sell for less. The 1949 farm prices were not supported in accordance to the law and it should also be remembered that we had a balanced budget under the Eightieth Congress instead of an economy based on ever-increasing debts.

So I repeat that the Hope bill originating from the Committee on Agriculture of the House under the leadership of our distinguished colleague from Kansas, the Honorable CLIFFORD HOPE,

has given us a pattern and a hope of better agricultural things to come—the Hope bill—the farmers of America owe a great debt of gratitude to our colleague from Kansas, the Honorable CLIFFORD HOPE. His constructive agricultural leadership will long be recognized. It is hoped that we can regain the losses that resulted from the passage of the Anderson-Cooley bill.

My conclusions are based on observation and a study of the official tables which I include in my remarks at this point, and any Member can check his own State:

Source: Bureau of Agricultural Economics.

In 1946, for the United States, the $771,680,000 in subsidies was only 3.01 percent of the $25,635,645,000 total income from farm sales and subsidies combined.

In 1947 the income from farm sales was $30,013,938,000, and the subsidies were $313,813,000, which was only 1.03 percent of the total farm income from sales and subsidies.

In 1948 the subsidy was 0.83 percent of the total farm-income sales and subsidies.

In 1949 the subsidy was 0.67 percent of the total farm-income sales and subsidies.

The price at the market place is the real problem. The subsidy is very, very small in comparison to the price in the market place.

In the meantime we should keep in mind that certain individuals and groups that pretend to show such deep love and affection for farmers in general and dairy farmers in particular are the same ones that promoted the onslaught on the dairy business by their support of the oleo bill. Their new-found interest is most evident but far from convincing.

A Senator's Vote: A Searching of the Soul

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, June 1 (legislative day of Wednesday, March 29), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an article which appeared in the magazine section of the New York Times of April 30, 1950.

There being no objection, the article was ordered to be printed as follows:

A SENATOR'S VOTE: A SEARCHING OF THE SOUL—PRINCIPLES AND PRACTICAL POLITICS COMBINE TO MAKE DECISIONS DIFFICULT YET CONSISTENT

(By PAUL H. DOUGLAS)

WASHINGTON.—There were 226 roll-call votes in the Senate last year. As the clerk called our names, those of us on the Senate floor had to answer either "aye" or "no." Many times we wished an issue had never arisen. Many times the issue itself was not clear. Many times we felt that the truest answer was neither "aye" nor "no" but "maybe." Still, we could not stall by repeating the truth that there was much to be said on both sides. In the Senate, when our names are called, the time for objectivity ends. We must answer with a categorical "aye" or "no."

What lies behind the words that are spoken? What leads one Senator to vote "aye" and another "no?" This question is not only of absorbing interest to a gallery that includes all of America. Men on the Senate floor also ask the same question. "How," we ask, "did we get that way and how did the fellow next to us or on the other side of the room reach the same or an opposite conclusion?"

The "realists," as always, have a simple answer. They explain that a Senator either votes according to the weight of his mail or by a rule-of-thumb estimate of how political forces are balanced in the home State. The more cynical among the realists add that a Senator votes the way some political boss, some utility or banking magnate, or some labor leader wants him to vote. In this view, a Senator is a moral puppet who responds more or less automatically to external pressures exerted on him by organized groups in the community at large.

Now, there may be Senators who cast votes in this manner. But if there are such, I do not know them. All Senators, of course, are sensitive to the climate of opinion. They must be. How else could representative government function? All Senators, too, read their mail. They are quick to spot and give special weight to unprompted, open-hearted letters, whether they are scratched on rough paper or written on embossed stationery. They all make tabulations on how the spontaneous mail runs when a controversial issue is approaching a vote.

But experience has taught them that the volume of mail is no true index to public opinion; that the most articulate are often those who have a concentrated special interest; that the great mass of the public, with its diffuse general interest, would, if pressed, frequently state views contrary to those voiced by the disciplined letter writers.

In itself, of course, there is nothing virtuous or evil about disciplined letter writing. Saints and sinners alike have used the device for ends both good and bad. Anyone has a right to use this device to influence public policy. Moreover, there is no difference be-

tween a thousand identical letters or postcards sent in by individual members of an organization, of a thousand signatures on a document sent in by the secretary of the organization. Both are aspects of the right of petition.

But the question here is how the best soundings of public opinion can be made by a Senator. In a great State every group interest divides itself into an infinite number of conflicting internal parts, so much so that the differences within groups are often greater than the differences between them. To whom, then, should a Senator listen? I believe his most accurate sounding of public opinion comes about in an almost subjective way.

The Senator, returning to his home State, throws himself open to a tidal wave of voices, of heavings and pullings this and that way. Gradually, and almost unobtrusively, the clamor of many voices somehow yields a consensus that is clearly identifiable to him. Whether he agrees with that consensus or whether he tries to change it is another matter. Bill Herndon used to explain this to Abraham Lincoln by saying that "he felt things in his bones." And Lincoln, in reply, would comically refer to this as "Herndon's bone philosophy." Yet Herndon was closer to the truth than Lincoln suspected.

Some Senators, overburdened with the routine of office work, are often unable, or forget, to return to their point of origin. Others who make these returns for political soundings expose themselves to the charge that they are neglecting their duties in Washington. But the quality of their decisions inevitably becomes better or worse according to the degree to which they can immerse themselves in the bath of genuine public opinion. Apart from these immersions, a Senator has certain selected points of contact which enter into the complex of forces that shape his vote.

There are people in America of experience, objectivity, a devotion to the common good, and a unique skill in making prudent decisions regarding public matters. No one elected them to their posts of opinion makers. They are that by the sheer force of their arguments. Most generally they are content to express their viewpoint to a Senator over the telephone or by a brief call at his office. But whether they do it this way, or invite the Nation to eavesdrop, they command enormous attention. These devoted servants of the common good may not make up a Senator's mind on how he should vote. But what these men and women say must be answered by a Senator before he casts his vote.

In this connection it is America's good fortune that there are several of these aristocratic Democrats who are Members of the present Senate. One, whom we all deeply respect, is the man whose name is called first at voting time. He is Senator GEORGE D. AIKEN, Republican of Vermont, who can neither be bought nor bluffed, fooled nor frightened. I openly confess that there have been times in the Senate when my mind has been in great doubt right up to the voting time.

And then Senator AIKEN's name would be called. And I, for one, have often been influenced by the character of his sturdy response to the Clerk. Like the rest of us, he may err on an issue of fact. But, like his Democratic counterpart, Senator FRANK P. GRAHAM, of North Carolina, he has never, to my knowledge, erred on a moral principle.

Is there any thread that runs through a series of separate votes cast by a Senator? At first glance the answer seems to be a negative one. Yet the appearance of pure pragmatism in Senate voting is highly deceptive. For all the wide range of matters on which they cast their votes, in one way or another, all Senators have repeatedly asked and answered the basic questions in politics.

What, for instance, should be the relationship between the one and the many? What should be the relationship between the leaders and the people? What should be left to the operation of custom and what should be made the subject of law? Which body of practices should be institutionalized and which ones should be left in a free-floating state? At what point must the system of rights be made to intersect with the system of duties? What is the area in which the right of dissent can operate without subverting the will of the majority? These are timeless questions, asked everywhere. In each vote on a particular measure the Senators also vote on a general principle. Indeed, it is the operation of the general principle on their thoughts which gives a discernible inner unity to most of their decisions.

At the same time, while the general principle can be stated and examined objectively, its application to a particular case is often undertaken in a mood of emotional stress. A politician, no less than a surgeon, is commonly reluctant to describe these inner stresses. It is not because his motives are base, or because an open statement of his own struggle would disturb the patient with whose life he is entrusted. It is due more to the reluctance of Americans in all walks of life to expose their inner thoughts and deepest values.

But it so happens that I have been a Quaker of sorts for many years and have painfully acquired the habit of open confession. If I reveal the factors which lay behind my own votes on several matters of current interest, perhaps I can speak for a number of my more reticent colleagues in the Senate.

The first difficult decision I faced was on the problem of Federal aid to education. I believed in the principle of Federal aid because the average income per school child in most of the Southern States is only about one-half the national average and only a third of that in the most prosperous States. The result is that though the South taxes itself for education at a level above the national average, the yield does not produce enough money for decent schooling, whether the children are white or Negro, since its taxable resources are low. Federal aid, representing a levy on the taxable resources of the Nation as a whole, is needed if the average southern child is to have a decent chance in life.

But I soon found that the real conflict was not so much on the program of Federal aid itself as on the relation of the private and parochial schools to it. Some people wanted to specify that Federal money could not be used in any way for private schools. Catholic groups, on the contrary, felt that such moneys should be provided to the private schools, not for religious instruction, but for collateral services such as health, transportation and nonreligious books, and that if State laws prohibited this, then the Federal Government should withhold the proportionate funds earmarked for such States and should, on its own, distribute money directly to the private schools.

These two views appeared irreconcilable, though the sincerity of their respective proponents could not be questioned. But if either view became public policy, the effect would be to engender a bitter and divisive religious controversy. I was deeply disturbed by such a prospect and hoped a way could be found which would heal an imminent breach. One avenue of approach suggested itself.

Whether children are in public or private schools, and whether they are Protestant, Catholic, or Jewish, children present a uniform health problem, and what is done to improve their health has a beneficial effect upon the community as a whole. In consequence, it appeared to me that a distinction could be drawn between health services on the one hand and transportation and books on the other; that Federal aid for these health services should be furnished to all children, whether they were in private or public schools. Under this view, the schoolhouse at certain hours in the term would have the status of a convenient neighborhood dispensary.

I helped, therefore, to prepare a bill appropriating $35,000,000 for health services to children in all schools, which, when enlarged by local funds, would make available a minimum yearly average of $2.40 for each child. I should note that the measure, although a supplement to the Federal aid bill then under discussion, was kept apart from it so that a vote for the supplemental bill could proceed on its merits alone.

Having gained the approval of the Senate Committee on Labor and Public Welfare for this measure, I thought with its members that the question of using Federal funds for transportation of private school students could best be left to the decision of the people in the various States and localities. By localizing decisions on the transportation features of the education bill, I hoped that the Nation as a whole could be spared a religious controversy.

The Thomas Federal aid to education bill, as reported out to the Senate, embraced this principle. It gained the overwhelming approval of the Senate which, by a roll-call vote of 63 to 3, defeated an amendment which would have confined all Federal funds to the public schools. At the other pole, the Senate, by a voice vote, defeated an amendment requiring that these funds must be furnished for auxiliary services to all private schools.

But, as is now known, the House rejected the formula proposed to it by the Senate. It sends the school-health bill to the Committee on Interstate Commerce, while the education bill was sent to the Committee on Labor, where it was referred to a Subcommittee on Education headed by Congressman BARDEN, of North Carolina. In due course, Congressman BARDEN offered a bill which explicitly denied Federal aid to any private school.

The ensuing bitter discussion has thus far prevented agreement over a formula which would permit this much-needed legislation to pass. I still feel confident, however, that the Senate has pointed the way to gain what is needed.

A similar problem came up in connection with the public housing and slum clearance bill. As matters developed on the Senate floor, those of us who were devoted both to the principle of low-cost housing and slum clearance and to the principle of civil rights, were jockeyed into a heart-rending position. My friends, Senators MAYBANK, of South Carolina, and SPARKMAN of Alabama, had introduced a measure providing $1,000,000,000 over 5 years to help clear slums. It also guaranteed the interest on local-housing bonds sufficient to construct 810,000 housing units, to the immeasurable benefit of at least 3,500,000 persons, or about one-quarter of our slum-dwelling population. I was privileged to work with these men in helping to draft the measure, and in the process I came to wish that more of my northern friends could appreciate the public spirit and devotion of these sons of the South.

Then came a body blow which was all the more telling because it was in the form of an amendment which dealt with a problem of elemental importance to all Americans. Senator BRICKER of Ohio proposed an amendment to the housing bill providing that all public-housing projects in every city must be thrown open to Negroes and whites. Every liberal-minded Senator wanted to vote for that amendment. But the problem of choice took on a different shape when the amendment was placed in its legislative setting.

To begin with, Senator BRICKER was the spokesman for some 25 Republican Senators who were openly opposed to public housing. Secondly, these same men had shown little interest in an earlier effort to liberalize Senate rules so that civil-rights legislation could be passed. On the contrary, most of them had joined the forces which made those rules all the more restrictive.

What then was the purpose of their civil-rights amendment? The answer was perfectly clear. It was to get northern and western Senators, like myself, who were for housing but against segregation, to join him in support of the Bricker amendment. But what would happen next? The passage of the amendment would then influence some 20 southern and border-State Senators who were for public housing to abandon that support because of the Bricker "civil-rights" amendment. Once the housing measure as a whole came up for a vote, they would vote against it, which is what this group had wanted all along. We would then wind up with no slum clearance and no low-income homes. No one on the Senate floor was really deceived by the move.

I chose housing, as did virtually every Senator who was also a vocal supporter of civil rights. We voted for housing and against the Bricker amendment, knowing all the while that we exposed ourselves to sharp attack from fellow supporters of civil rights elsewhere who were not familiar with the legislative picture. I felt it to be of the utmost importance that the character of the choice before the Senate should be explained to the country as a whole. Nearly all my political friends urged me not to do this, saying that the subject was so delicate and so highly charged with emotion that anything anyone said would be misunderstood and attacked.

Still, I felt confident that discussion would clear the air. I pointed out that on the basis of past experience Negroes would probably occupy one-third of the units built and that, therefore, about 270,000 families, or over a million and a quarter members of that race, would be provided with decent housing. I furthermore pointed out that most of the public housing projects in the North and West would explicitly bar segregation by local ordinance and that the civil rights principle would be extended rather than curbed.

If, on the contrary, the Bricker amendment was passed, we would have a vacuous assertion of civil rights but no homes in which they could be asserted. Virtually all Northern and Western liberals reechoed this same view and the housing bill was passed without the Bricker amendment. We all felt that we had the right to choose the ground on which we could fight for civil rights as a measure in itself.

I might mention one more inner struggle between my heart and my head, between my sympathies and my reason, which gave me a few bad days. The first appropriation bill to come up last year was that for the Department of Labor and Federal Security. I was more interested in these agencies than probably any others because I had campaigned for the causes they represented in their formative days over 2 decades ago. I had actively fought for old-age pensions and unemployment insurance and had played a modest part in getting them adopted into Federal and State laws. Moreover, as an early advocate of public employment offices, and as one who has constantly used price and wage statistics of the Bureau of Labor Statistics, I knew the importance of these two branches of Government work. I wanted all of these agencies to be adequately financed so that they could do effective work.

But I also knew most Government agencies were overstaffed, and from personal experience with the labor agencies I was quite certain that they were not immune from this occupational disease of officialdom. I felt the staffs of these agencies could be pruned with profit and that this was especially necessary in view of the big impending Government deficit.

The Republican leadership was proposing a 5-percent cut in the administrative expenses of these agencies. As the hour for voting approached, I was torn emotionally by a strong conflict. My inner conflict was made even more intense because I knew that many conservatives wanted to cut the welfare agencies to the bone while at the same time they would later defend wasteful subsidies granted those economic groups that didn't need them. "Why," I asked myself, "should I play into their hands?"

During the last hour of the debate, I left the Chamber and sought the quiet of the Senate reading room. As I sat there alone, it became clear that even though it meant disappointing my friends and my party, I must at all costs vote my convictions. If I were to urge prudence in the way the taxpayers' money was spent, I must apply economy even to those agencies and causes in which I was deeply concerned.

As I debated the issue with myself, I resolved it in the conviction that in time fair-minded people would see that economy was also a virtue and that to be a liberal one did not have to be wastrel. I thereafter went back into the Senate and voted for the cut. The incident was crucial. It forced me thereafter to relate a zeal for prudent expenditure with a desire for human welfare. Having tried to apply the pruning knife on causes which were close to my heart, I was free to seek economies elsewhere with good grace.

Yet all the foregoing does not really explain how and why a Senator casts his vote this way instead of that. When the committee hearings and the important books and articles on a proposal are read; when the mail has been apprised; when the briefs and arguments have been weighed; when the wise men, living and dead, have been consulted, the Senator still faces the task of moving his own lips to say yes or no. On the clerk's list, his name stands out in all its solitude. And that is the way he must vote.

It is also, I believe, the primary way in which he decides beforehand how he is going to vote. His hour of decision is not seen by the outer world. It can come in the dead of night, in periods of reverie in one's office after the day's work is done, over the breakfast or dinner table with one's family, or in a taxicab ride to or from the Capitol. It is at these times, I believe, that the final decisions which affect the life of the Nation are generally made. The tension of the roll call merely expresses the decisions which 96 widely differing men, with different background, have already made in the quiet of their individual consciences.

The Private-Enterprise System and the Church

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, June 1 (legislative day of Wednesday, March 29), 1950

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Reverend Daniel A. Poling, editor of the Christian Herald, and national president of the All-American Conference To Combat Communism. The address was delivered before the Conference of Business Public Relations Executives, in the Waldorf-Astoria Hotel, in New York City. I think the Members of the Senate will find the address exceedingly interesting because it points out the relationship between Christianity and the private-enterprise system.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE PRIVATE-ENTERPRISE SYSTEM AND THE CHURCH

(Address delivered by Daniel A. Poling before the conference of business public relations executives, Waldorf-Astoria Hotel, New York City)

In a letter received some time ago from a distinguished member of this conference appears the following paragraph: "Frankly it is my impression that industry, generally speaking, has done a poor job in developing satisfactory communication with the clergy. Perhaps it is more accurate to say that industry has practically neglected this duty. At any rate there is surely a dire need for a better understanding between the two."

Reverse the order and make the paragraph read: "The clergy, generally speaking, has done a poor job of developing satisfactory communication with industry," and you have an equally significant and, I believe, equally true statement. In each instance the paragraph, though properly modest and forthright, is, I think, perhaps an overstatement, but an overstatement that points up the "dire need for a better understanding."

First, then, let us agree, and certainly we do agree, that what we variously call free initiative, individualism, capitalism, the dignity of personality, or the American way of life is that which makes America tick. It is the reason for our continuing existence. And above all others it is the reason for our uniqueness and power. In it lies the world's best, and I think last hope of escape from regimentation and the final totalitarianism. The survival of this freedom, the survival of America stands not upon the past but upon the present, not upon the founding fathers, but upon you, upon you and upon me. Freedom is both an inheritance and an achievement. If it is to continue, if it is to defeat communism, it must be rewon in each succeeding generation. It must be rewon in this generation and it must be reborn in me.

You are public-relations directors, and I with my clerical associates have a place in the broad field of public relations. Gentlemen, right here is the first and supreme selling job of our time. With a certain diffidence in your presence, but with a deep conviction I submit to you that the American way of life must be sold by and to the individual and not by group pressure or mass propaganda.

I may be mixing my figures, but what began with a single-shot musket will not be perpetuated by broadsides from battlewagons. Individualism just can't be sold in bulk. It's against nature. Whatever the media used, and all media should be used, individualism must be made attractive to, it must be sold to, the individual.

At the beginning, before George Washington and progressively afterward the American way of life was a complete and natural liaison of the religious and economic concept of individual dignity and personal liberty with individual responsibility. The home, the church, the school, and industry were at one. Certainly they were never antagonistic.

Rather they were like four peas in the pod of freedom.

Is it not true that in the first half of the twentieth century and specifically since World War I the above concept has been forgotten if not denied? Consider the church. I believe that Christianity is and should be first personal and social always. I also believe that this order and emphasis are vital. Personal first. Reduced to its pure essence, Christianity is Christ, and Jesus preached to, dealt with, and saved individuals. To Him human personality was the principal thing—a little child was to the Nazarene more important than a city. He did not attack governments nor institutions as such. Rather He dealt with the man in authority, the man himself. Certainly, He influenced society and His teachings turned the world upside down. But His formula was, "Change the man, and the changed man will change the world."

Today, however, the Christian church releases social charters and promotes plans for world peace, delivers philippics against private property and has intimated that capitalism and communism are equally responsible for what is wrong with the social order. As churchmen we are eager to offer advice and final judgments in fields where we reveal ourselves as definitely less than mature specialists. I am not suggesting that these are matters beyond either the knowledge or responsibility of the clergyman. I do insist that they are not his first and principal task. As God's man and Christ's successor, these are not the unique reasons for the clergyman's high calling. Jesus said, "I am the good shepherd." Also He said, "I am come to seek and to save the lost" or "the confused," and "I am come that they might have life and they might have it abundantly." Humbly I affirm that my supreme business as a clergyman is just that.

We have all been captured by the fetish of intellectual, social, and spiritual as well as industrial mass production. Mass production which makes automobiles cheaper and refrigerators available to more people at a lower cost may also cheapen thought. Cheap thinking obscures basic principles, clouds the clear vision of the American way of life, obscures American unity and leads us into the darkness of misunderstanding between races, faiths, and economic groups.

How then can the original concept of American freedom, the rights and responsibilities of the individual whatever his creed, clan, or economic status be regained? By turning again to the way we came in. Not by going back, certainly not. But by resolutely going forward. The way is still here, and thank God the door is still wide open.

Men do not work for systems and for ideologies. They work for themselves or for and with other men, men like themselves. Companies that emphasize stock buying and holding by employees strengthen the American way. A partnership on whatever scale is within the divine principle of sharing.

On my very recent trip to Israel I found the amazing labor movement there encouraging its members to become capitalists. The union itself is literally a capitalistic organization. Starting from scratch as it did, it could become just this. Now it is also the principal agency and influence in developing industries with private capital.

Let me return to mass methods in selling individualism. No leaflet, no full-page advertisement will ever take the place of the "top" saying, "You did a swell job yesterday, Harry, how's the missus?"

J. C. Penney is known as "the man with a thousand partners." Twenty thousand is more nearly correct. There are many facets to the clear diamond of his success. But this shines brightest: His personal relations with personalities. This has been so intimately part of the man that always when one of his associates failed, Mr. Penney regarded the failure as his own and tried to do something about it.

Here again enters the church. Men are still won as individuals, even as in Christ's time, not in a "Bankers for Christ Week" or in a "Workers for Christ Month."

Understanding and good will cannot be standardized. Always it is a two-way street. The clergyman and the businessman have a common stake in American freedom. Indeed the individual citizen has with every other citizen this same stake. The first word in our national name is united. And when our unity is shattered or weakened by any one of us or by any group among us, the foundations of liberty are to some degree at least undermined.

Too frequently the preacher removes himself from the everyday interests and practical problems of the layman, and nearly as often the layman assumes that the preacher would not or could not be interested in the problems of the pew. Responsibility for misunderstanding or a lack of understanding may be just about equally distributed, but as a preacher I charge myself and those of my calling with dereliction because we have not moved in to remove the barrier and solve the problem.

Too often we have accepted the financial support of men whom personally we respect and admire but whom as a class we criticize without knowledge. We owe it to ourselves to become acquainted with their industrial activities and economic standards, and I venture the suggestion that industrialists owe it to themselves to make an open door for us to industry. Generally the preacher has at least a background of practical experience with hard work, a fair measure of fundamental intelligence, and a spirit that responds to a friendly invitation.

In my own thinking, in my own decisions, in my own attitudes I have been influenced chiefly not by full-page advertisements nor by articles released from upper Broadway and Wall Street offices, but by you. And right here I should stop to call part of the long roll: Charlie Wilson, K. T. Keller, Robert Peare, James Kraft, J. Warren Kinsman, Paul Garrett, Franklin Bell, Ward Wheelock, Jack Duff, Jim Jarvey, Marvin Pierce, Albert Diebold, and Harvey Firestone. These men and so many others are the real reasons why I believe in business. I believe in their principles, their wisdom, their patriotism. I have witnessed their unselfish sacrifice in the service of our country. I have been associated with them in the activities of the church, and upon their character American enterprise stands firmly.

The journal of which I am editor affirms this broad principle and practices it. Our life stories of great Americans continue to be one of the most popular features of our editorial content. Names I have mentioned are among those that have stood at the head of our columns. Also the great Christian labor leader, John Ramsey. And Mr. J. C. Penney's Lines of a Layman is one of our most popular regular features.

It is the intimate and personally acquired "know-how" that counts. Years ago in one of my earliest pastorates in Canton, Ohio, I had as president of my board of trustees the president of the Imperial Plow Co., Frank Neise. He just assumed that I would not be interested in Imperial plows until one day I told him that I had walked between the handles of an Imperial plow down a long Oregon furrow. I said that I would like to see how the old plow was made. Eventually I knew as much about the Imperial plow as the president of the company knew.

In those days Saturday was a full work day, and some of you may be old enough to remember the week hours. With the pastor of the First Baptist Church I organized a Saturday afternoon church baseball league. It was the second organization of its kind in the United States. When I went to the president of the Imperial Plow Co. to suggest a half-day holiday on Saturday, I had a running start on his attention and support. He threw around a lot of weight in Canton, Ohio. To make a long story short, Saturday afternoon became a holiday for Canton industry, and industrialists came with the other workers to see the games.

We are not finally impressed by academic thinking. We judge by results. We judge Christianity by the people who represent it, good or bad. We judge business by the men of business. I hope that you men will make a serious effort to personally interest your clergy in what you are doing and trying to do. Also what I say to you here I have said and I shall continue to say to my clerical associates. I do not believe that there will be a single occasion in which either you or I will be rebuffed. We need to know what manner of men we are, what our problems are, what our ideals are. We need to know each the other man's reason, his viewpoint, his ideals.

For years, or from the time I was 10, Will Rogers was my intimate friend. I met him under unusual circumstances when he was doing rope tricks with a dog and pony show and after I had distributed handbills announcing the show. Years later during the period of his appearance on Broadway when he took the place of his friend, Fred Stone, after Fred had cracked up in an airplane accident, we had time together. I was pastor of a Fifth Avenue church then and spent a good many matinee afternoons in Will's dressing room while he made up. One afternoon we discussed a mutual friend who was then in public life and under severe criticism. Will sat on the bench in front of the glass with a towel under his chin. Suddenly he got up, threw down the towel, stepped over behind me, placed his hands on my shoulders and looking over the top of my head to the spot where he had been sitting, said, "Dan, you can't tell what a man sees when you are looking at him. You have to get behind him to see what he is looking at." Right there Will made vocal my philosophy for public relations, my philosophy for relationships between the clergy and industry, my philosophy for my relations with you and indeed with all other Americans. I never see life whole until I see it through the eyes of the other fellow and certainly as a churchman and clergyman I never know American business and I never know you until I see your problems, your hopes, your failures, your triumphs, yes, and until I see America through your eyes as well as through my own.

Also I am still won as my heart is captured. The grip of a strong hand always holds me. Don't send your preacher a booklet. Go to see him. Hand him the booklet when you say good-bye. And I shall try to practice what I preach. I'll not send you a sermon.

Misunderstanding fills the vacuum created by a lack of understanding. Understanding in the area under discussion is equally my responsibility and yours, and misunderstanding comes as I live and work with you and as you live and work with me.

Just 10 years ago a young man having finished his divinity course at Yale became the pastor of a church in Schenectady, N. Y. Conditions were in such shape that there was only one direction in which that church could go. The young domine started at the bottom. The war came along and put him into a chaplain's uniform so that he had less than 3 years in which to complete his mission. But in these 3 years he demonstrated what I have been talking about. One evening he called a group of his men together. They

represented all levels of business activity—banking, the shop, and of course living in Schenectady, General Electric. He sold them the idea that they could and should sell the church. When they became panicky and suggested that this was definitely not their line, he grinned and answered, "But you sell, don't you? You belong to the church? Your wives and children belong to the church?" He made clear to them that all he wanted was their selling ability.

He had a plan. The men discussed it with him. He told them just about how many men there were in that city who were not in the church and whose families were not in any church. They spent a week end together in a hotel with an expert in the field of human relations. They organized an intensive and down-to-the-grass-roots, man-with-man "talk-it-over." Certainly they didn't carry Bibles and read passages. They did now for the church what they did for themselves and for their various enterprises. They added to these enterprises the church and included in their over-all personnel, the preacher. Before the domine went off to war the large, near-empty sanctuary and its Sunday school rooms were pretty well filled. And though he never lived to see what men see now, the thing he started, the understanding he helped achieve, the unity in common effort he made dynamic, today demonstrates in Schenectady everything I would say.

Finally, this unity demonstrates America's first imperative in a time when the world rocks. The command to American unity is the first command. And without unity—not uniformity—the unity of all faiths, colors, races, and economic groups, America can only become a lost cause.

My theme today is vastly more than relationships between the clergy and business. Inclusive of that it also comprehends the greater things. What we do here and now to achieve understanding, cooperation, and good will, helps make America strong.

Excerpts From Address by Hon. Hubert H. Humphrey, of Minnesota, at Annual Convention of International Ladies' Garment Workers Union

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Thursday, June 1 (legislative day of Wednesday, March 29), 1950

Mr. LEHMAN. Mr. President, our able and distinguished colleague the junior Senator from Minnesota [Mr. HUMPHREY], on May 25 was the featured speaker at one of the sessions of the annual convention of the International Ladies' Garment Workers Union, at Atlantic City, N. J. I ask unanimous consent of the Senate to have printed in the Appendix of the RECORD excerpts from this address.

There being no objection, the excerpts from the address were ordered to be printed in the RECORD, as follows:

We have a great responsibility this year. The future of our domestic economy hangs in the balance as we face increasing unemployment over all the United States. At the same time on the international scene millions of people all over the world wait to see whether international conflict can be avoided and whether they can feel free and secure to live their lives without war and without destruction.

To a large extent what you and I do as American citizens will determine the answers to these questions. To a very significant extent what you as members of the organized labor movement do will answer these questions for ourselves, for our children, and for the people of the world.

This is true because we live in a political democracy. We live in a country where the people have the responsibility to make the decisions. We live in a country, also, where increasingly the people are affected by political decisions.

There was a time not so long ago when it was possible for most Americans to live their lives and except for occasionally paying some taxes—and not too much of that—they had very little to do with the Government in Washington. Today, however, the situation is quite different.

I need not tell you that labor's rights are no longer secure merely through the process of collective bargaining with employers. Today the rules of collective bargaining and the rights and privileges of organized labor are the object of political determination.

Politics, effective political participation, must go hand in hand with the growth and the development and the maintenance of a strong labor movement in America.

We seldom ask one another any longer "Are you interested in politics?" The simple fact is that if we do not take an interest in politics we might as well make up our minds that our freedom and our very being becomes endangered.

The Taft-Hartley experience in one major respect has taught us a very important lesson. You and I know that the free labor movement can never achieve its objectives when the rules of collective bargaining are stacked against it and when the umpire and the referee operate one-sided rules and regulations.

The Taft-Hartley Act has destroyed the neutrality of Government in labor-management relationship. The Taft-Hartley Act says to every American worker that no matter how you may fight, no matter how just is your cause, the orders are stacked against you and you haven't got a chance to ultimately win.

There is a volume of evidence coming to Washington these days demonstrating that the Taft-Hartley Act is crippling the growth of the union movement, particularly in the South and in some of the other areas of this country where union membership is not as strong as it is in the industrial East and in the industrial centers of the Midwest and far West.

I say this without fear of any successful contradiction, there will not be any labor-management peace in this country until this grossly unfair antilabor legislation is removed from the statute books. There can be no labor-management peace until the economic relationships between labor and management are no longer settled by the general counsel of the National Labor Relations Board, but are settled around the conference table between employers and employees.

I want to say one more word about the problems of organized labor in the South. If democracy means anything, if freedom means anything, it means that working men and women have a right to organize and form unions of their own choosing. If our American heritage has any significance, it means that the right to bargain collectively must be protected and preserved.

Today many hundreds of thousands of American men and women—yes, many hundreds and thousands of garment workers—are denied this inherent right.

Organized labor in the South today faces problems very similar to those that the organized labor movement faced all over America in the late 1920's and the early 1930's. It faces threats of violence, coercion, flagrant brutality, and an atmosphere of fear and intimidation.

The economy of America, not just the economy of the South; in fact, our very democracy depends on bringing to the attention of the American people the true facts of industrial anarchy which exists in so many sections of the South.

That is the way we in America face our problems. That is the way we in America dealt with industrial anarchy in the 1930's. The LaFollette's civil liberties committee of that day brought to light the true facts of collective bargaining and the American people acted to correct these evils.

Again today the American people must be told the facts. Enlightened citizenry and an informed public opinion is our objective. I hope that the Senate Labor and Public Welfare Committee and its Subcommittee on Labor-Management Relations can help achieve that objective.

For the labor movement and for American working men and women to fulfill their responsibilities, however, they must be concerned with more than just the Taft-Hartley law or the minimum-wage law—important as these may be.

American democracy needs and welcomes an aggressive instructed political-action program on the part of organized labor.

At this point, however, we must understand ourselves. Political action does not mean top level strategy. Make it crystal clear in your own minds that elections are not won in Washington, D. C. They are frequently lost there, but they are not won there.

Elections are won by hard work and by active participation in every voting precinct in this country. The essentials of a successful political campaign—the essentials as I see them are the following: A program, and I put program first—a program that meets the needs of the people, and one that is worked out cooperatively with the rest of organized labor and the liberal movement. Secondly, candidates willing to fight for the people. We have got too many candidates where you have to fight for them. We need candidates who are willing to go out and fight for you, to fight for the American people.

Thirdly, there is a need of political organization that belongs to and is controlled by and managed by the rank and file of the people.

Finally, a clear-cut statement of the issues in language, in the simple language that is understandable by all of the people.

Now, my friends, if you have those ingredients, if you have a program that meets the needs of the people, candidates willing to fight for the people, if you have a political organization that belongs to the people and they are a part of it, and if you have a clear-cut statement of the issues in language that is understandable by the people, I submit to you no one can beat you, no one. There is the essence of success.

Today as we face the acid test for American democracy, the 1950 elections, there are disturbing signs. One of the most significant of these disturbing signs is the frantic efforts by the Republican Party. It is engaging in a smear political campaign rather than discussing the issues which face the American people. The Republican leaders are attempting to frighten the American people by repeating false charges and by waving the red flag. I know that the International Ladies'

Garment Workers Union is well aware of the Communist danger in America. I know that the International Ladies' Garment Workers Union was in the lead among the labor unions in America to remove the Communist menace from within its ranks. Those of us who really oppose communism, however, and who have had the opportunity to oppose them and fight them and to defeat them know that the cause of anticommunism suffers when it is made into a political football and when the charge is recklessly bandied about.

The liberal movement for democracy in America faces a dangerous coalition. Never in our history has there been a greater propaganda barrage against the American workmen and against the interest of the American people than there has been during the past year. Ever since the miracle of November 2 the soothsayers have been concocting some kind of a new witches' brew to pour out to the American people. While we were celebrating and while we were patting each other on the back the old rear guard was in there plotting and planning every day of the week, getting their machinery ready again for the onslaught.

There is a dangerous coalition, a coalition that distorts public opinion, a coalition that defies the truth, a coalition not interested in the presentation of the truth.

This Dixiecrat-GOP coalition, under the leadership of the TAFTS, the WHERRYS, and the BYRDS, has lost faith in America. They condemn our policy at home and abroad with the same wild irresponsible charges. At home it is the welfare state that they oppose and abroad it is our aid to Great Britain and western Europe.

I would not deny that there is some merit to the Republican claim that the Fair Deal program seeks the welfare state as an objective. The welfare state is a legitimate objective—one that is perfectly consistent with our traditions and with the current wishes of the American people. A state which is devoted to the welfare of its members, a state which looks upon man and his welfare as an end in itself, is one I support and urge you to support.

The United States began as a welfare state when its Constitution charged the Government with the responsibility of the "general welfare" of its people. In a sense, this was one of the great differences between this new country which was born and the tired nations of Europe in the eighteenth century.

From that day until this day the history of the American development has been a history of providing greater welfare for its people.

The political leadership exemplified by the TAFTS, the WHERRYS, and the BYRDS refuse to accept the fact that two World Wars and a major world-wide depression have changed our world.

We are not the America of 1800 nor of 1900. We are the America of 1950. We are the America which is the greatest financial power the world has ever known. We have to act with a sense of great social responsibility. We are the greatest industrial power in the world. We must learn to use that power maturely.

The American labor movement, which represents the essence of democracy in our economic life, must recognize it has a responsibility for international leadership. If democracy is to prevail in the world, we in the United States must help it prevail. If we fail, we fail with it.

The liberal and social democratic forces of the world are our friends in Europe. They look to us for friendship and for assistance. We must respond to them with our own friendship and with our own helping hand.

Investigation of Military Government in Germany

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 31, 1950

Mr. SABATH. Mr. Speaker, under unanimous consent, I insert in the RECORD a statement in support of House Resolution 425, which I introduced on January 12, 1950, and which provides for an investigation of the American military government in Germany and the civilian administration which succeeded it, and for other purposes. This statement should help us all to become more cognizant of the existing situation in Germany, and I hope will serve as a guide for the panacea of the now extant evils. The statement and attachment A follow:

STATEMENT IN SUPPORT OF HOUSE RESOLUTION 425

(Introduced by Mr. SABATH, January 12, 1950)

This resolution (H. Res. 425) calls for an investigation of the American military government in Germany and the civilian administration which succeeded it, to ascertain the facts which permitted or encouraged the reestablishment of cartels, the resumption of power by former Nazis, the resurgence of fascism, nazism, and the rebuilding of German military strength and war potential. This resolution would authorize and direct the Committee on Foreign Affairs to conduct this study and investigation, reporting to the House not later than June 1, 1950, or thereabouts.

UNITED STATES POLICY TOWARD GERMAN CARTELS AND DENAZIFICATION

The United States policy toward German cartels was laid down in JCS–1067 (Joint Chiefs of Staff) and the Potsdam agreement of 1945. Under these directives, the United States military authorities were directed, among other things, to break up the concentration of German cartels and economic power. The basic philosophy was patterned after our own Sherman Antitrust Act of 1890. Soon after the defeat of Germany the mandate to carry out the decartelization program of Germany was entrusted to the four occupying powers; however, these powers failed to arrive at a common understanding of the problem. After the setting up of the bizonal administration for Germany, military government law 56 came into being, and formed the basis for all of our decartelization policies. This law was promulgated February 24, 1947. At the same time ordnance 78 was introduced in the British zone. To all intents and purposes these laws are in effect today. The preamble of law 56 reads as follows:

"This law is enacted in accordance with paragraph 12 of the Potsdam agreement in order that (1) to prevent Germany from endangering the safety of her neighbors and again constituting a threat to international peace; (2) to destroy Germany's economic potential to wage war; (3) to insure the measures taken for Germany's reconstruction are consistent with peaceful and democratic purposes; (4) to lay the groundwork for building a healthy German economy."

Paragraph 2 of law 56 reads as follows:

"Cartels, combines, syndicates, trusts, associations, or any other form of understanding or concerted understanding between persons, which have the purpose or effect of restraining or of fostering monopolistic control of domestic or international trade or other economic activity, or of restricting access to domestic or international markets, are hereby declared to be excessive concentrations of economic power within the purview of this law."

Paragraph 3 of law 56 provides that "all economic enterprises having their headquarters in the United States zone and employing in Germany more than 10,000 persons shall be examined as prima facie constituting excessive concentrations of economic power."

As regards our denazification policy, under the directives from the United States Government and the Potsdam agreement (concerning the elimination from important posts in the German public and private life of active Nazis) the United States military government enacted law No. 8 in the early months of the German occupation.

FAILURE TO ENFORCE THE UNITED STATES POLICIES IN GERMANY

It is an historical fact that the German industrialists, financiers, and cartelists contributed mightily to the rise of the Hitler Nazi regime in 1933. After Hitler came into power these interests worked closely with the Hitler regime to help it unleash World War II. On the other hand, American financiers, industrialists, and bankers have worked closely before World War II with the German industrialists in order to enhance their own selfish interests. United States collaboration with German interests to the detriment of the United States continues to this day.

It would appear that the American-vested interests have not learned the lessons of the interwar period. As early as the spring of 1942, at a time when the United States was fighting for its survival, the geopolitical section of the United States War Department which comprised a group of industrialists with German tie-ups, recommended that a powerful Germany be rebuilt after the conclusion of World War II.

Thus, it was no surprise that soon after Germany surrendered, American and British representatives of corporations which had invested heavily in German industries prior to and during the Hitler regime, appeared on the scene, either in the Army or as high officials or as advisers and took charge of implementing our policy toward Germany. Among the Americans were: Col. Sosthenes Behn, Kenneth Stockton and Mark Sundstrom, of International Telephone & Telegraph; Charles H. Powell, of Westinghouse; Brandon Gove, former head of Socony Vacuum of Rumania; Robert E. McConnell, formerly of General Aniline & Film Co. (I. G. Farben); Peter Hoagland and Graime Howard, formerly of General Motors in Germany; Rufus J. Wysor, former president of Republic Steel, and many others.

The New York investment house of Dillon, Read & Co. must be singled out in this connection because it has played a prominent role during the twenties in building up the German cartels and heavy industries with American money. Three of its leading members have played a prominent role in American life for a number of years. These men were: the late Secretary of Defense, James E. Forrestal, former president of Dillon, Read & Co.; William H. Draper, Jr., vice president of Dillon, Read & Co.; and Paul Nitze, former vice president of Dillon, Read & Co., and presently chairman of the State Department policy planning board (see attached statement A). Mention must also be made of Draper's son-in-law, Philip Hawkins, who was instrumental in killing our German decartelization program.

Our policy is and was to destroy the German cartels. Thus far, we have failed

to carry out that policy and the people of America have not been told the truth about our failures. Witness the fact that over 2 years ago, on January 8, 1948, former Secretary of War Kenneth Royall publicly stated: "We have abolished the pernicious cartels." Not only have we not eliminated the German cartels, but the same Germans are again working with international cartels which they had helped to set up before World War II.

THE FERGUSON COMMITTEE AND TESTIMONY TAKEN IN CONNECTION THEREWITH—AN ANALYSIS

Some months after Secretary Royall's untrue statement to the effect that cartels were eliminated, pressure was brought to bear by some who knew the true facts about United States decartelization policy. Secretary of War Royall then appointed a committee to study the results of our decartelization and deconcentration policies in Germany. The committee was headed by a former member of the Federal Trade Commission, Garland S. Ferguson and comprised two other members, namely, S. S. Isseks, and A. T. Kearney.

The findings of the Ferguson committee were presented to Secretary Royall on April 15, 1949, after extensive testimony taken in Germany and Washington. The findings of the committee were that not one single cartel was eliminated in Germany since VE day.

It is worthy of mention that the results of the painstaking investigation made by Chairman FERGUSON and the able members of his committee, were given little or no publicity, and the report itself comprising over 130 pages was difficult to obtain, although it was public information. As a matter of fact, the verbatim testimony taken in connection with the Ferguson committee investigation has never been made public at all. It is kept under lock and key in the Pentagon Building. The chairman of the Committee on Rules succeeded, however, in obtaining the verbatim testimony to be used in connection with House Resolution 425 and this investigation.

The reason the Ferguson report was not publicized and why access to it was made difficult to the public, although contrary to the desire of the Ferguson committee, will be revealed by the photostatic copies of the verbatim testimony by such individuals as: General Clay, General Draper, Colonel Wilkenson, Mr. Bronson, Mr. Hawkins, Mr. Charles Collison, Mr. Coleman, Mr. Johnston Avery, Mr. Laurent, Brigadier Oxborrow, Gen. Arthur Wilson, Mr. A. Sacks, Mr. Martin, Mr. Bartels, Mr. Bennett, Mr. Spencer, and others.

The nature and essence of the secret verbatim testimony taken in connection with the Ferguson committee can best be summarized by a statement made on January 28, 1949, by Hon. Johnston Avery, former Chief of the Enforcement Section, Decartelization Branch, and presently an Assistant to the United States Attorney General (p. 102) when he stated:

"I think the facts will support the statement that such men as General Draper, Wilkenson, and Hawkins felt that the only way to bring about industrial revival in Germany was by rebuilding along the old industrial lines. We kept pressing Bronson, Hawkins, Wilkenson, for additional decisions on Henschel, Bosch, VKF and Shoe Machinery (the processing of which has been completed and same lacked only approval by top authorities). I became convinced that they (the top authorities) had no intention of allowing the dissolution of any combine or monopoly." (p. 105) "I was not guessing altogether as to their attitude. On November 7, 1946, Mr. Bronson while he was control officer of I. G. Farben, had told me perfectly plainly and in so many words that he was glad he was not in the Decartelization Branch because he did not believe in the antitrust approach. He said that all of his background had been with big business and his sympathies were there too. * * * And it was certainly no secret that Mr. Wilkenson (the economic advisor to General Clay) did not believe in the decartelization program. I believe he had been admirably frank in that respect. However, the decartelization program was under the direction of these men."

The verbatim testimony of all the witnesses who were subpenaed by the Ferguson committee bears out Mr. Avery's statement and is available to the members of the House Committee on Rules.

Special mention must be made of General Clay, the former American Military Governor of Germany, whose attitude on decartelization up to 1948 was above reproach. A typical instance is provided in his memo dated October 12, 1946 (ex. 25) to General Draper wherein he stated:

"I don't believe we can accomplish our purpose without striking out large corporations in Germany. I personally and fully am in sympathy with the decartelization based on size until we can destroy conditions which did exist in Germany."

However, something apparently happened to General Clay's attitude in this regard, for it is a fact that in the spring of 1948, General Clay completely took it upon himself to reverse our decartelization policy. (See Exhibit 11–A.) Exhibit 11–A unequivocally shows that General Clay must be blamed for the complete reversal of our decartelization policies and for the failure to enforce MG Law 56, afore-mentioned.

In a secret conference held by Clay with Bronson and Wilkenson, Clay stated: "That he realized that when his program was made public there would be a scream to the high heavens from the strong antitrust group, but that there had been similar screams before as exemplified by the sounding-off of Martin back in the States, but that the screams had come and gone and there would probably be little more major interest to create a serious scream."

FAILURE OF UNITED STATES DENAZIFICATION POLICY

Our denazification policy in Germany has been a dismal failure. An analysis made by John Herz in his study entitled "The Fiasco of Denazification in Germany" in the Political Science Quarterly, volume LXIII, December 1948, shows that 12,753,000 persons had been registered under the German law for denazification as members of the Nazi Party and its affiliates. Of these, 9,073,000, or nearly three-fourths, had been dismissed as nonchargeable. By April 1948, 2,373,000 of the remaining 3,209,000 had been amnestied. By June 30, 1948, the remaining 836,000 had been tried and 37 percent of their number exonerated. Of the 526,680 thus convicted, 50.8 percent were classified as followers, 10.7 percent as lesser offenders, 2.1 percent as offenders, and 0.1 percent only as major offenders. These findings were in the lower courts. The appeal tribunals as of March 31, 1948, confirmed sentences on only 27 percent of the above convictions and the trend was to lessen and shorten the sentences.

Of the 526,680 convicted Nazis, 430,890 received sentences composed exclusively of fines less than 1,000 reichsmarks (about $100 of the then current legal market and considerably less than one-half that used on the extensively used open market). By May 1948 only 1,677 Nazis remained in internment camps.

The latest trends of the rising tides of nazism and nationalism in Germany were discussed in the New York Times March 4, 1950, page 1—United States Fears Nationalist Rise in Germany Despite Curbs, by Drew Middleton. On March 9, 1950, New York Times, page 1, SS Men Get Homes of Hitler Victims, by M. James. On March 10, 1950, New York Times, page 12, German Officials Accused by Police—Wuertemberg-Baden Regime Said To Be Balking Inquiry on Nazi Court Frauds, by M. James. Then on March 13, 1950, New York Times, page 4, German Rightists Drawing Together, by Drew Middleton.

Witness an editorial appearing in the Christian Science Monitor of February 8, 1950, entitled "Mr. McCloy Calling the Germans": "We welcome his (McCloy's) statement of American policy on Germany, but not because it unearths any unsuspected facts or newly discovered ways of dealing with them. Rather we welcome it as indicating that American officials are catching up with actualities in Germany and beginning to understand why many Americans have been disquieted about the application of American policy to the German question. Unfortunately one speech won't bring democracy to Germany, or rid that nation of latent Nazis, or of the ultranationalism which is so easily exploited by aggressive forces in the country. Unfortunately, too, Mr. McCloy's address contained a fair quantity of material for self-congratulatory treatment of the German press."

"Main theme of McCloy's address: (1) German leaders have paid too much attention to issues with other countries like that with France concerning the Saar, and not enough attention to internal problems such as unemployment. (2) There has been too much thinking about a German Army and Air Force, too little about the processes of democratic government. (3) Too much reliance on United States material aid, not enough recognition that the United States has a right to insist that American aid will not again be misled and misused to strengthen Germany for military adventures."

Another excellent article appeared in the Washington Daily News under date of February 14, 1950, as follows:

"From the northern Rhine region backward to Bavaria in the South, the signs are multiplying that militant nationalism and Pan-Germanism are on the rise. In the press, government offices, industry, the universities, and even in the Bonn parliament, nationalists and Nazi elements have moved more brazenly in the open. * * * Dissident members of Chancelor Konrad Adenauer's own Christian Democratic Party informed Leon Dennen of the Washington Daily News that Adenauer is now little more than a puppet of the industrialist, the Catholic hierarchy and the former officers corps. * * * Two extreme rightists groups have merged to form the German Reich Party, controlling 600,000 West German votes.

"Thus today, as after World War I, the Germans are being told that they were not really beaten in battle, that they lost through the undermining efforts of plotters and saboteurs only. Before the theme was: 'The Jews are to blame for everything.' Now it is the stab in the back." Dr. Franz Richter, prominent member of the National Rightist Party, declares Germany must refuse to serve foreign imperialists. There can be no collaboration in a military way between West Germany and the western powers, he said, until Germany has regained her full sovereignty and the last occupation soldier left. Dr. Kurt Schumacher, leader of the Socialist Democrats and recognized as one of the chief supporters of real German democracy recently said that 6,000,000 Jews

killed in Nazi gas chambers and tortured in concentration camps stood between Germany and the civilized world. Wolfgang Helder, a Bonn parliament deputy and member of the strong rightist group disagreed. "It was a pity, yes, that the Jews were done away with in gas chambers, he said. Other means could have been found."

As a matter of fact, Mr. Howard Ambruster in the Daily Compass of March 7, 1950, carried an article on Germans Send Pro-Nazi Here as Consul. Mr. Ambruster says that "The newly appointed Consul General at New York of the West German Republic, Hans Schlange-Schoeningen, is roundly denounced as a violent anti-American and pro-Hitler anti-Semite in a petition now being sent to Secretary of State Acheson."

Recent newspaper accounts of one Nationalist Party meeting reported that the old Nazi national anthem was being sung again in Germany.

Yet our policy toward Germany, as established in 1945, pledged that "German militarism and nazism will be extirpated and the allies will take in agreement together now and in the future the other means necessary to assure that Germany will never again threaten her neighbors or the peace of the world."

In this connection, Mr. James Martin, former head of the Decartelization Branch, American Military Government, testifying before the Ferguson committee on January 27, 1949, at page 7 of his testimony, stated: "In my presence General Draper and other members of the economics division in a rapid succession of set speeches made statements emphasizing the need for German economic recovery and intimating that the removal of Nazis from the ranks of industrial management and the threats of a decartelization program were retarding and hampering German recovery."

Perhaps the most cogent reason for the necessity of conducting a thorough investigation of the failure of our occupation policies is evidenced by a statement made by Colonel Wilkinson, chief economic adviser to General Clay in answer to a question put forth by a member of the Ferguson committee as to his whole philosophy on United States policy (p. 9, Wilkinson Testimony, December 18, 1948): "When a group of 12 editors from the United States were being briefed in Berlin on the economic situation * * * I stated that in the execution of the military government policy in Germany we were often faced with a situation where we pulled on the hand of a man lying on the floor and wondered why he didn't get to his feet in spite of the fact that we had one foot on his neck. I explained that the policy of the United States Government as set forth in the Potsdam agreement and in the directives of the Joint Chiefs of Staff to Military Government called for important measures on demilitarization, reparations, restitution, denazification, and decartelization, which in their execution could not fail to have a most disruptive effect upon the other policies of military government which were directed toward the reconstruction of Germany."

CONCLUSION

President Truman stated his position on December 2, 1948, at the first press conference after his election when he stated that the German cartels would not be revived as long as he was in the White House (p. 19, Ferguson committee report).

Since then, although there has been a change in the American military governor, the succession of Mr. McCloy to General Clay, nothing has been accomplished in the field of denazification and decartelization, and indeed, we have recartelized and renazified and remilitarized Germany.

In view of the foregoing facts, it is imperative that a thorough and complete investigation be made so as to enlighten the Congress and the American people on the subject of our demilitarization, denazification, and decartelization policies in Germany, and further so that we may know who the high officials are in our Defense and State Departments who have been and are presently scuttling our basic German policy.

ATTACHMENT A

AMERICANS WHO HAVE CONTRIBUTED TO THE SCUTTLING OF OUR POLICY TOWARD GERMANY

PAUL NITZE

Paul Nitze was appointed recently as chairman of the Policy Planning Board of the Department of State. He succeeded Mr. George Kennan. Prior to this appointment Paul Nitze was Deputy to Assistant Secretary of State Dr. Willard Thorp, in charge of economic affairs.

Nitze has been in Government service since 1940. In 1942 he was connected with the Board of Economic Warfare (BEW)—his business being to purchase goods necessary to carry on war. While with the BEW he had extensive dealings with some of the prominent cartel representatives. One of his very intimate contacts was Maurice Hochschleid, the kingpin of the tin cartel in Bolivia. Hochschleid used to refer to Nitze and say that Nitze was one of the few men in Government who he could get along with famously.

Intercepted communications between Hochschleid and Nitze reveal that Nitze was the recipient of favors bestowed upon him by Hochschleid. Nitze's activities were brought to the attention of President Roosevelt, which resulted eventually in Nitze's quitting the Foreign Economic Administration in 1944. The FEA was the successor agency to the BEW.

When Nitze severed his connections with the FEA, he was appointed adviser to the War Department because of his connections with James Forrestal, the then Secretary of the Navy—and his superior officer in the banking firm of Dillon, Read & Co., New York.

In 1945, Nitze was appointed deputy director of the United States Strategic Bombing Survey (USSBS), the purpose of which was to make an analysis of the strategic bombing since Germany's downfall. Nitze went to Germany to study the effects of the bombing upon Germany's heavy industry. He, together with a group of experts from the USSBS visited the Ruhr industries and had extensive discussions with the leaders of the German heavy industry; the very same leaders who pushed Hitler to wage war (W. W. II). The United States investigations team in the Ruhr subsequently found a letter in the files of the largest steel cartel in Germany—Vereinigte Stahlwerke—to the effect that the USSBS people gave an assurance to the German heavy steel industry leaders that a bridge of friends of United States, Germany, and Britain, was formed to protect the German heavy steel interests. Incidentally, the Vereinigte Stahlwerke to whom this assurance was given in particular, was established in 1926 by the Dillon, Read & Co. investment house of New York with American money which was never repaid. It is strange, therefore, that one of the men who was vice president of Dillon, Read & Co., namely, Mr. Nitze, should have been appointed deputy director of the USSBS.

After his survey of Germany, Paul Nitze and his group went to make a similar investigation of the effects of bombing upon the Japanese industries. In this connection it must be pointed out that our entire policy toward Japan has also been completely emasculated.

Paul Nitze was appointed vice president of Dillon, Read & Co., at a very early age. It is reported that he was able to accomplish such a feat because of his marriage to a Miss Pratt, whose father is heavily interested in the Standard Oil Co. of New Jersey and General Motors Corp.

Nitze's uncle, Mr. Hilken, was the chief paymaster for the Kaiser sabotage team which blew up the Black Tom and Kingsland plants in 1917. The damage was $55,000,000 and it was the greatest sabotage act in the history of the United States.

Paul Nitze has been largely responsible for the scuttling of our postwar policy toward Germany while in the State Department, since his task was to frame our foreign economic policy.

Memorial Day Address by Hon. Herbert H. Lehman, of New York, Before the Hyde Park Home Club

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, June 1 (legislative day of Wednesday, March 29), 1950

Mr. LEHMAN. Mr. President, on Memorial Day, May 30, the Hyde Park Home Club, formed by neighbors of President Roosevelt in 1932, held its fourth annual Memorial Day service at Hyde Park. It was my privilege to deliver the Memorial Day address on that occasion. I ask unanimous consent of the Senate to have the address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Today the Nation is paying tribute to its heroic dead. We honor those who have fallen on many battlefields in our struggles for liberty and justice. We remember the sacrifices which those men, and others, have made. Today, we rededicate ourselves to the defense of the principles for which those men died and which again call for our complete devotion.

We are gathered in this quiet garden because this is the last resting place of one man who gave to this cause and to this country the last full measure of devotion.

The last full measure of devotion. These are not my words. They are the words of that other civilian soldier of an earlier war, Abraham Lincoln. And today these two men, Lincoln and Roosevelt, so dissimilar and yet so alike, are linked in the embrace of history, among the leaders of America's heroic dead.

It was only 5 years ago that Franklin D. Roosevelt died. Was it 5 years ago or was it 50 or was it yesterday? Time has as little meaning for a figure as towering as his, as inches have for the measure of a mountain.

In paying special homage to Franklin D. Roosevelt on this Memorial Day, we do not single him out as more worthy than the hundreds of thousands in America and the millions everywhere who have fallen in the fight for freedom. We merely recognize that he was and always will be a symbol of those lesser known men who yielded their lives, too, on the battleground of liberty.

Of course our tribute cannot add to the deeds that were done or enhance the sacrifices that were made. What we can do here

today is to enlarge our friendship with Franklin D. Roosevelt and reexamine the causes for which he and the others died, and perhaps leave here with some new insight into those forces which moved him to the services which he performed.

Even those of us who cherished the rich treasure of his friendship can enrich our knowledge of him. For he was many-sided, as the deep knowledge of both joy and suffering make people many-sided. And here in Hyde Park we can see, in some perspective, that which gave him joy in the midst of suffering and that which gave him calm in the midst of tumult.

I have read somewhere that it is the misfortune of the famous that they cannot know the lot of those who pass unnoticed from the cradle to the grave; that it is the misfortune of the rich that they cannot feel the constraining touch of nature and necessity; and that it is the misfortune of the always successful that they can never know the feel of battle against odds.

Franklin D. Roosevelt was famous and successful. Yet by his own peculiar experiences and his own personal sufferings, he came to appreciate the lot of the obscure and the unnoticed, to feel the constraining touch of nature and necessity and to know the meaning of battle against overwhelming odds.

This knowledge and this appreciation helped make him a compassionate man and an outstanding leader of men. This transformation was one of those accidents of which history is made. Happy accident, too, that there came to his side that great lady who, like her husband, is loved by mankind because she loves mankind. This pair belongs truly not to America but to the world.

Franklin D. Roosevelt was what might be called a marginal man. He was of the rich, and yet also of the poor. He was of the west, and yet also of the east. So real was his acquaintance with mankind that he expressed for them what they could not express—their dreams, their hopes, their trials and tribulations.

He had a creative way of profiting deeply from any occasion that brought him into contact with new people. He took away from a meeting with people not just a superficial impression, but the essence of a new experience.

So in 1932, when he became President of the United States, hungry people, desperate farmers, and bewildered businessmen were, to Franklin Roosevelt, something more than statistics. They were men and women. They needed what he had once needed, courage and direction. He gave them courage and direction.

He knew of suffering far more than most of us will ever know. He dealt with his personal problem of physical suffering with a dignity and strength that gave courage to all men who felt themselves handicapped in life. He lived silently and nobly with an affliction in a way which moved men to wonder who might otherwise have been moved to pity.

No one who ever watched President Roosevelt ascend the ramp at Madison Square Garden carrying the weight of his large frame on the strength of his arms and hands, then reaching the rostrum, raise his arms in salute to the people, could remain unmoved. For anyone who had seen this had seen and shared in courageous living.

Only once in all his long public life did he refer to his handicap. But when the time came, and he knew that he must sit and not stand as he addressed the Congress, he had no false pride. He said simply to the Congress, as he asked their indulgence that the weight of his braces required that this time, he remain seated.

So he lived greatly in a simple but powerful way. He made all of us feel that real problems could be solved; real barriers could come down; real sorrows could be borne silently and with dignity.

This is the legacy which he left us. It is a creative legacy. We share today not our sorrow that he has gone, but his urge to move ever forward toward the day when all the people shall have food and shelter, warmth of home and loved ones, justice within our country and peace throughout the world. This is a good legacy, left by a man who knew that as we push back the barriers of class, race, and creed we find the fullness of life itself.

These were the real and simple things which he taught us. But these lessons in living are only a part of what he left behind. And they account only in part for the great despair which filled hearts and minds the world over when he died, and for the pain which is not yet quite gone.

I sat at his right hand during the 4 years that he was Governor of this, my well-loved State and was also his. I helped him in every way it was possible for me to help him. Yet it was I who was helped—in grasp and understanding of the problems of that day, and of the problems that were to come later.

Governor and later President Roosevelt did not have a ready-made formula for all the problems of his day. In fact, he avoided formulas. His genius was in his ability to improvise solutions to problems as they arose—solutions which borrowed from the past and yet were very much geared to the present. His touchstone was, "Will it work? Will it meet the need?"

Hence it is difficult to say what he would have done, in any specific situation today. What we do know, however, is that, to meet the problems, his actions would have been sound. He was the enemy of inaction, unless that inaction, itself, were a form of action, President Roosevelt's fundamental faith was that no problem was insoluble; it was only a matter of persisting until the right solution was found.

How would President Roosevelt have felt about the growing threat of communism? And about the current attacks on the State Department and the Government Departments generally? What would he have done about the threat of subversion and espionage from Moscow-inspired sources? And about the atomic bomb and the cold war?

These questions occur to us often as the swiftly moving stream of events sweeps us down the rapids of these perilous times.

We cannot answer these questions. Perhaps we should not try. We must only know that Roosevelt would have tried, as his successor is trying, to solve these problems within the flexible framework of a basic devotion to democracy at home and a tolerant understanding of the world abroad. No fixed framework of preconceived notions would have found him. No rigid obstacles of whatever magnitude would have stayed him. No approach, however bold and unprecedented, would have frightened him.

Because I knew the man, and his patriotic devotion to his country as well as his boundless devotion to mankind, I am appalled at the endless repetition of the slander that President Roosevelt was naive or shortsighted or weak or even worse in his dealings with the Russians.

I say that those who make such charges speak with little knowledge and great prejudice. President Roosevelt was the grand architect of our victory over a savage and ruthless enemy. He was bold and courageous enough to take calculated risks in diplomacy, as all his generals and admirals did in military operations. That grand strategy brought the enemy to bay and led to his downfall.

That this strategy did not succeed in solving the basic problem of the relations of Soviet Russia with the world is not to President Roosevelt's discredit any more than it was to the discredit of Winston Churchill. That problem had been with Europe and the world since 1917. It had its origins in centuries of history. Its current manifestations are the result of all the forces which combined to produce the industrial revolution, and all the consequences which flowed out of that revolution. That problem, too, can and must be solved. But to attribute the present tragic state of world affairs to failure or error on the part of Franklin Roosevelt is a base injustice and a sad reflection of inability to understand the meaning of the present struggle.

Today, despite these slanders, the fame of Franklin Roosevelt grows steadily in this country, as it does throughout the world. In many lands there are majestic boulevards named in his honor. In many a village in far-off countries, squares and public buildings bear his name. But these are only the products of men's hands. A much more transcendental memorial is in the hearts of millions of men and women—yes, and children too—who know of President Roosevelt only as a remote and inspirational figure who fought in his land and in every land for justice for every man, and for the liberation of the oppressed and the enslaved.

In this world, convulsed by a conflict that is neither war nor peace, swaying on the very brink of disaster, the name of Franklin Roosevelt means to many millions of men and women, hope and peace. To these millions, Franklin Roosevelt lives on as a symbol of faith in brotherhood and understanding.

High on a hill overlooking Washington is that shrine called the Tomb of the Unknown Soldier. Here in Hyde Park we have the Tomb of the Known Civilian Soldier. Franklin D. Roosevelt is famed and honored for his deeds. Wherever in the world there are men called civilized, wherever the values of liberty and dignity and humanity are recognized, and wherever men dream of freedom and of progress, there the name of Franklin Roosevelt is known and honored. Among our enemies, as among our friends, this name symbolizes the everlasting struggle upward which is man's lot in this world.

Why can we not somehow make use of this faith which men and women in every land have in Franklin Roosevelt? Why cannot this faith become the bridge over which we may cross the seas of hate and suspicion which divide people from people? Why cannot the devotion which we in America have for Franklin Roosevelt become a language in which we can communicate with peoples who are otherwise cut off from us?

We must cherish no illusions about the present world situation. Ahead of us is darkness and peril. There is no simple formula for peace and justice in a world divided against itself, with one entire sector of mankind under the rigid control of a brutal and tyrannical regime.

But if, in opposing this tyranny with all our strength, as we must, we fail to exhaust every possibility for avoiding the catastrophe of a war which can spell the end of our civilization, we will have denied our obligation both to the dead and to the living. We will have betrayed the great trust which we bear. We will have failed completely in our obligation, not only to oppose the Communist terror, but to save mankind from final disaster. This is our responsibility. We cannot escape it.

On this Memorial Day, on this day of remembrance of all our heroic dead, here in this last resting place of Franklin D. Roosevelt, we must rededicate ourselves to this great task.

As the tired and thirsty traveler is refreshed at the roadside spring and continues on his journey with renewed vigor, so we

must take resolve and inspiration from this occasion and this ceremony, to redouble and again redouble our efforts.

In the shadow of Franklin Roosevelt's garden, in the shadow of his home, yes, in the shadow of his world, let us recall the words he wrote, shortly before his death, but which he never spoke:

"Today we are faced with the preeminent fact that, if civilization is to survive, we must cultivate the science of human relationships—the ability of all peoples, of all kinds, to live together and work together in the same world, at peace. Let me assure you that my hand is the steadier for the work that is to be done, that I move more firmly into the task, knowing that you—millions and millions of you—are joined with me in the resolve to make this work endure."

Though he was not spared to carry out this high purpose, we, who are here, must still be joined together, under the leadership of his spirit, to press on toward that goal.

Discriminatory Practices of Colleges

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 31, 1950

Mr. SABATH. Mr. Speaker, I read with great interest and alarm, a statement by Gov. Chester Bowles on the Inter-racial Commission's report on discriminatory practices of colleges with regard to applicants for admission. Governor Bowles is presently the chief executive of the State of Connecticut and was formerly the great and outstanding Administrator of the OPA.

Governor Bowles calls attention to the discriminatory practices with regard to college admissions that prevails in the private nondenominational institutions of higher learning in his State. The same situation exists throughout our country, and I sincerely regret same.

Certainly, Mr. Speaker, it would be in the best interests of our country and would strengthen the position we hold in the world if we could bring about better understanding among the various groups in the United States and thereby eliminate such discrimination. Such constructive action and understanding on our part would, I am confident, unify our Nation and our enemies would not be able to, from time to time, point out that we should first clean our own hands before we attempt to show them that democracy is the best and only intelligent form of government. There can be no discrimination in a real democracy. The article, appearing in the December 1949-January 1950 issue of American Unity, follows:

DELAY IS DANGEROUS

(By Chester Bowles,[1] Governor of Connecticut)

The special report of the Inter-racial Commission on the question of discrimination in Connecticut educational institutions will be greeted by most of our citizens with mixed feelings. One phase of the report dealing with our Connecticut public tax-supported colleges—the University of Connecticut and our four teachers colleges—will make us all feel proud. This study clearly establishes the fact that in these five public tax-supported colleges, Protestants, Catholics, Jews, and Negroes are accepted solely on the basis of their scholastic ability, aptitude, and character.

This, of course, is as it should be. Nevertheless, it is good to know that these colleges, in which all of us as taxpayers have such a special interest, have taken the leadership in eliminating all discrimination and prejudice based on race, creed, or color.

The junior colleges and secretarial schools also have succeeded in eliminating discrimination against Jews, Negroes, Protestants, and Catholics.

SHARP AND UGLY

But the record of our private nondenominational colleges in this field of discrimination seems to be a rather dismal one. Some of us may not be surprised to find that prejudice exists in these institutions. But the commission's report prevents us from closing our eyes any longer to how sharp and ugly that discrimination often is.

It is quite true that these colleges do not shut their doors to minority students. The record shows, however, that among the students who seek admission from high school, a clear preference is shown for Protestant boys and girls over Catholics, Jews, and Negroes. Protestants are accepted in 61 percent of the cases, Catholics in 49 percent, and Jews in 41 percent. Superior students of the discriminated-against groups have a better opportunity than those of moderate scholastic ability. But in every group the evidence is clear.

But this represents only half the story. Fifty-five percent of the students in our private nondenominational colleges in Connecticut come from private, nondenominational preparatory schools. And here the discrimination is even more blatant. For instance, only 10 out of 31 of these preparatory schools in Connecticut stated directly that they would admit Negroes. The degree of discrimination against Jewish boys and girls could not be accurately determined by the commission. But the fact that only 9 percent of all boys and girls in private preparatory schools are of Jewish parentage forces us to some obvious conclusions.

Another area of discrimination which could not be covered in the report involves the question of discrimination among the students at our private nondenominational institutions on the campus itself. The University of Connecticut by action of the faculty and the students called for an end to all discrimination on the basis of race, creed, or color in choosing members of fraternities or sororities. But the action of the University of Connecticut is the exception that serves to set off the ugly fact that practically every fraternity in the other nondenominational institutions is more concerned with a seventeenth century concept of social acceptability, which is one of the things we fought so vigorously to eliminate in the Second World War.

There are those who tell us that if we will only wait long enough that the conditions described in this report will eventually adjust themselves. In spite of the extremely bad record outlined in this report, there is no question but that progress has been made in the last generation, and particularly in the last 10 years. But today our democratic way of life is challenged by the totalitarian concept of the Communists. There is a grave question as to how long we can wait for the slow process of evolutionary change in a period in world history in which we are judged throughout the world not by our words, but by our deeds.

I am deeply hopeful that not only members of the legislature but every thoughtful citizen in Connecticut will study this report carefully and will speak out in clear and unequivocal terms in denouncing the conditions which it has brought to light.

I would also like to call, with all earnestness, on the heads of all our private nondenominational institutions and our private nondenominational preparatory schools to take action—forthright, vigorous action—to eliminate discrimination wherever it exists.

[1] The above is the text of a statement by Governor Bowles on the Inter-racial Commission's report on discriminatory practices of colleges with regard to applicants for admission.

Reeducating Germany With Nazi History

EXTENSION OF REMARKS
OF
HON. HARLEY M. KILGORE
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES

Thursday, June 1 (legislative day of Wednesday, March 29), 1950

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Reeducating Germany With Nazi History," by Telford Taylor, which appeared in the New York Times Magazine of May 28. Mr. Taylor, as a brigadier general, prosecuted war criminals at Nuremberg and later served as United States chief of counsel for war crimes from October 1946 to August 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REEDUCATING GERMANY WITH NAZI HISTORY—A PROSECUTOR AT NUREMBERG URGES THAT FACTS DISCLOSED THERE BE USED TO TEACH DEMOCRACY

(By Telford Taylor)

Everyone knows the old story about the German, the Englishman, and the Frenchman who wrote essays on the elephant. The German wrote a six-volume series entitled "An Introduction to the Study of the Elephant"; the Englishman, a pamphlet on "The Elephant and Empire"; the Frenchman, a sprightly and daringly illustrated volume called "L'Eléphant et Ses Amours."

The recent episode in Berlin when, upon the urging of Chancelor Konrad Adenauer, a large audience arose and sang "Deutschland Uber Alles" provided an actual and equally pat revelation of national characteristics. In attendance were the three Allied military commandants of the British, French, and American sectors of Berlin, who all remained ostentatiously seated during the singing. When the meeting broke up reporters asked the three gnerals for their comments.

The British general observed that the demonstration "was in shockingly bad taste." The Frenchman—one can almost hear his weary Gallic sigh—remarked that he had "heard that song before—all too often." The American commandant declined to comment, but one of his aides confided to the reporters that "the general hopes the whole affair will blow over."

Such hopefulness is typical of American attitudes toward the "democratization" of Germany. But the truth is that deeply rooted national feelings and issues do not "blow over," nor can they be changed or solved merely by appropriating funds for ECA and the Air Force.

It has been the basic purpose of the occupation not only to disarm Germany and reduce her economic war potential but to promote her "democratization" by means usually described as "reorientation" and "re-education." And yet it is in this very field that the occupation's accomplishments have been least impressive. In large part this disappointing showing has been due to lack of effort and emphasis—in short, to an absurdly tiny investment of money, talent, and prestige. Here was at once an emergency and an opportunity which should have been tackled as a major national undertaking. Instead, it has been a backwater in which a small group of able and sincere men have struggled valiantly to move the boulder with a toothpick.

To alter the German Weltanschauung is an ambitious undertaking which must be approached with a prayerful awareness not only that our powers are limited but also that we are at the mercy of the international elements. Since 1945 the Germans have seen much to support the conclusion that a nation's own military strength is still its best guaranty of security. The appeal of nationalism derives its greatest strength from the shortcomings and great failures of international political idealism.

The hard cynicism and revived jingoism thus evoked in Germany by world events are often aggravated by statements of non-German writers and public figures which seem to parallel the nationalist line. The following are good examples:

"The exterminative wars which were planned, plotted, and waged against the American Indians during the latter half of the nineteenth century equaled in atrocities anything the Nazis ever did and were extremely popular at the time.

"For 3 years after the unconditional surrender we kept the Germans on rations little or no larger than those in Nazi concentration camps. * * * There was no crime the Nazis had committed which we or our allies had not also committed.

"Crimes committed by American personnel representing the United States seem so horrible in retrospect that it is difficult to believe that Americans could have resorted to such beastial practices."

These are the public pronouncement respectively of the British military expert Maj. Gen. J. F. C. Fuller (in the magazine Ordnance for June 1948), the American writer Freda Utley (in her recent book, the High Cost of Vengeance), and Dr. George N. Shuster, president of Hunter College (speaking before the Academy of Political Science on April 7, 1949), who has recently been appointed Commissioner for Bavaria by High Commissioner John J. McCloy.

Of course, in any land of free speech and press, there will be wild words. But the Germans for 12 years were cut off from contact with the democratic Western World and subjected to a news and literary diet narrow and distorted beyond anything we can imagine. As a result, most Germans lack the ordinary informational background which helps us to evaluate the printed word and reject the obviously spurious or grossly exaggerated.

The primary task of reorientation should be to lay before the Germans the true facts about the recent past and thus help to fill the informational vacuum left by the Nazis. For this task certain lines of endeavor have so far been slighted, rejected, or overlooked—lines which, even at this late date, hold considerable promise. There is a vast accumulation of readily available and highly effective material which has not been exploited. I refer to the official German documents which fell into our hands at the end of the war, and which formed the evidentiary basis of the Nuremberg trials.

It is my strong conviction that these documents, if intelligently presented, would be invaluable for purposes of democratization. My opinion is based on a number of general observations of the postwar German mentality and the German reaction to the occupation and democratization during the 5 years since the end of the war.

First of all, I think that we have overestimated the reeducational potential of plugging democracy in the abstract and via the customary channels of propaganda, such as radio, press, and movies. We failed to take into account the fact that, throughout the Nazi era, the Germans were subjected to an incessant barrage of political indoctrination, the hollowness and untruth of which were driven deep into the German mind by the utter defeat and ruin of 1945. This taught the Germans a lesson, but it did not teach them democracy. Primarily, it induced a profound distrust of all opinion-forming official pronouncements and exhortations, and a bitter cynicism. Now, when the average German hears or reads statements about the advantages of democracy, American style, his impulse is not to weigh the truth of what is stated but to wonder what ulterior purpose lies behind it.

Second, although the young people of Germany share this suspicion and cynicism, they are immensely curious about the world. They are painfully aware that nazism cut Germany off from intellectual contact with the rest of the world, and are correspondingly hungry for information and new ideas about government and society. But democracy, as a political commodity, faces their cool and calculating appraisal rather than their eager acceptance.

Third, we have tended to rely overmuch on what lawyers call autoptic profference— that is, proving the nature of a physical object by displaying the thing itself in court. We have endeavored to show democracy to the Germans by holding up the American way of life for their inspection, admiration, and emulation. So far we have gotten lots of inspection, and the seamy side of our way of life has not escaped notice. Furthermore, we have, somewhat unimaginatively, stressed colorful and indigenous features of American political life—such as the New England town meeting—which are not universally essential elements of twentieth century democracy and which are of dubious export value.

In any event, democracy is not a thing that can be effectively displayed like merchandise in a shop window. Particularly when it is offered under the label "Made in America," it is likely to encounter a sales resistance stemming from national pride. There is no doubt that this pride, mixed with suspicion, has measurably diminished the beneficial effect of the American information centers—the "Amerika Hauser."

Finally, we have misgaged human nature in trying to make the Germans feel contrite by harping constantly on the death and destruction that the Third Reich visited on other nations. Warsaw, Belgrade, Coventry, and Kiev are distant cities to the average German; what his compatriots may or may not have done there he is far from sure of—and he is by no means eager to find out. What the French or the Russians or the English say about this may not, he suspects, be any more trustworthy than what Goebbels used to say.

The rubble to which almost every large German city was reduced is, on the other hand, part of everyday existence in Germany. Whatever may have been done to the Jews and the Poles, thinks the average German, it can't be any worse than what has happened to him. Indeed, the stories of havoc wrought by the Wehrmacht in foreign lands gives many Germans a very considerable satisfaction. At least they were once cock of the walk; at least the other fellow got a black eye.

It is only human nature that the Germans are more readily and lastingly impressed by the harm nazism did to Germany than by stories (terribly true though they are) of ravages wrought by the Third Reich in foreign lands. But the Germans could hardly help being lastingly impressed by the true facts about what nazism did to Germany and to German institutions. And for this purpose, the captured German official documents are peculiarly suitable. They are German, not foreign. They are contemporaneous proof of what actually transpired in Germany, not propaganda concocted to sell the Germans a democratic bill of goods. Their authenticity has been established beyond question by the Nuremberg testimony of the very men who wrote, received, or distributed them.

Indeed, it is by means of these documents—and, for the present, in this way only—that the lessons of the war crimes trials can be driven home in Germany. I think that the High Commissioner's office has not fully appreciated what is involved here. Last January, in reply to a letter from Bishop A. J. Muench of the Vatican Mission in Frankfurt, requesting an amnesty for convicted war criminals, Mr. McCloy wrote:

"I feel that it would be very unfortunate if any considerable body of responsible Germans should undertake to question the fundamental principles on which the war crimes prosecutions were based or the judicial soundness of the procedure which was followed and the judgments which were reached in those cases. I do not think that any German who sincerely believes in the future of Germany as a responsible and peaceful member of the community of nations can reasonably doubt the enormity of the crimes of which the war crimes prisoners have been convicted or the fundamental principles of international justice pursuant to which they were tried."

This, with all respect to Mr. McCloy, is cart-before-the-horse psychology. The legal principles of the Nuremberg trials are not above controversy in the United States. And there is no reason to attempt to discourage such discussion in Germany.

From the standpoint of "reorientation," emphasis should be placed on the facts disclosed in the documents rather than on principles of jurisprudence, or on convictions and sentences. If these facts are widely disseminated and become part of the common informational background of German opinion, there will be little need to worry about the German attitude toward the trials.

The Nuremburg and other captured documents tell an eloquent story of the course of German and European history during the very period which is still dark to most Germans. They are therefore ideal material for educational use, and their meaning would be eagerly absorbed by German students and young people generally. They contain a virtually inexhaustible supply of clear proof of damage and decay in nearly all phases of German life under nazism.

For example, I know of no more striking illustration of the corrupt effect of the Nazi tyranny than is afforded in the field of medicine, where Germany once ranked so high, by the documents revealed during the Nuremberg "doctors' trial." As early as April 1933, respected Social Democratic and Jewish doctors in Berlin were publicly degraded and maltreated. Soon the established medical societies were dissolved and the entire professional apparatus was brought under party control.

The prostitution of medical education was speedily accomplished; "political doctors" in S. A. and S. S. uniforms swarmed through the universities and were appointed to the

leading chairs. Students were required to spend an ever-increasing part of their time in Nazi and semimilitary exercises; scientific attainments commanded less and less respect.

By the time the war came, the entire profession was demoralized and its standards debased, to the grave detriment of the medical services of the Wehrmacht. From this low level, the path led straight to the unspeakable and often superstitious medical experiments on concentration camp inmates, amateurishly contrived and fruitless as well as fiendishly cruel. All this emerges starkly and dramatically from the documents.

The same lessons are equally manifest in other branches of science, in law, and in economic organization. In the broader field of politico-military history, the impact of the documents is no less compelling. No one who has read the memoranda of Hitler's conferences with his generals will remain long in doubt as to how the absorption of Austria and Czechoslovakia was planned and consummated, or who was responsible for starting the war and subsequently initiating such side aggressions as those against Norway, Greece, and Yugoslavia.

The texts of such key documents should be part of the basic material for school and university instruction in history and politics, and should be widely available in libraries and information centers throughout Germany.

Certainly these documents would also help to accomplish the final discrediting of the old gods of German nationalism—the leaders of the officers' corps. The absurd pretensions of this inept, archaic, and unprincipled clique are mercilessly exposed in their own reports.

Here, for example, we can see the German army reaping the harvest of its own stupid and brutal policies for the "pacification" of the Balkans by the indiscriminate slaughter of hostages in such numbers that the inhabitants, instead of finding security through good behavior, were driven into the ranks of the partisans. The warnings against such tactics from German occupation officials went unheeded. The German generals thought they were being cold and realistic, but in fact, they were giving an eloquent demonstration of the rigidity and lack of imagination characteristic of their caste.

Gen. Franz Halder (chief of the German general staff from 1938 to 1942) and his fellows are busy these days trying to retrieve the prestige of the generals by blaming their disaster exclusively on Hitler; this is to be the World War II substitute for the stab-in-the-back legend of World War I. Halder's little pamphlet, Hitler als Feldherr, has had a phenomenal sale throughout Germany, and it is highly important that this meretricious and dangerous teaching be counteracted by unassailable documentary proof, circulated just as widely.

Is it now too late for effective action on our part in support of the aim of democratization? It is easy to argue that the time for all this is past, that we have set up the Bonn government and must not now meddle in internal affairs, that the Germans must be allowed to work out their own destiny. The occupation statute did not reserve any authority to the High Commission in the field of education. Will not the Germans spurn any further reorientation as an annoying interference?

So far, Mr. McCloy has wisely rejected this defeatist attitude. The cold war, far from reducing the importance of promoting democracy in Germany, has made it a vital necessity, basic to the success of our foreign policy. Expansion and renewed emphasis—including more money and the participation of leading educators—are gravely needed.

But there is also much that can be more effectively accomplished by nongovernmental agencies. Every gathering of American liberals at which the German question is discussed ends in a demand for support of the liberal and democratic element among the German people. These inchoate pleas can only be implemented by establishing contact with such elements. A refreshing and constructive example is that of Roger N. Baldwin, who recently resigned his long-held directorship of the American Civil Liberties Union, and who is now helping to establish a German Civil Liberties Union. It is to be hoped that many other American institutions and individuals will similarly dedicate themselves to this stupendous task; there is ample opportunity and crying need here for intiative, imagination, and devotion.

NUREMBERG STORY

The basis for the Nuremberg verdicts was a 25,000-word indictment drawn up by legal experts of the four big powers in 1945. There were four counts:

1. Participation in a conspiracy to commit crimes against peace, war crimes, and crimes against humanity.
2. Commission of crimes against peace, in the planning, initiation or waging of a war of aggression.
3. Commission of war crimes through violation of the laws or customs of war.
4. Commission of crimes against humanity through the murder, enslavement of civilians before or during the war, or persecution on political, racial, or religious grounds.

Extension of Rent Control

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 31, 1950

Mr. SABATH. Mr. Speaker, the extension of rent control is of such vital concern to my home city of Chicago, I consider it highly important that certain facts be brought to the attention of the membership of this House. I now insert in the RECORD a letter received from Mr. Leo A. Lerner, chairman of the Citizens Committee for Rent Control, Chicago, Ill.; the resolution adopted by the Citizens Committee and other organizations in Chicago on rent control; a letter addressed to Hon. Martin H. Kennelly, of Chicago, by the Citizens Committee for Rent Control; the views of Mayor Kennelly and the City Council of the City of Chicago, together with the resolution adopted by the city council urging the extension of rent control to June 30, 1951:

CITIZENS COMMITTEE FOR RENT CONTROL,
Chicago, Ill., May 26, 1950.

DEAR CONGRESSMAN: The citizens committee for rent control is composed of labor, religious, and civic organizations who are gravely concerned with the crisis facing Chicago if rent controls are removed. The problem of housing in this city is well known to you. Chicago lags far behind other cities in the construction of both private and public dwellings. There is less than one-half of 1 percent vacancy in housing units renting under $100 a month. Chief Justice Edward Scheffler of the Chicago municipal court, which handles most eviction cases, warned that if controls are ended "there will be mass protests and perhaps some violence." In this great under-housed city with thousands of families doubled up, and other thousands existing in substandard housing, the abolition of controls would bring sky-rocketing rents to those very persons who can least afford to pay.

The democratic delegation from Chicago is to be congratulated on the excellent fight they are making. This committee would like to be of service to you. If there are any facts or figures needed from this area please call upon us.

Be assured that the great majority of persons in Chicago—the tenants—are behind you in this crisis. We enclose the resolution adopted by the affiliated organizations. We urge our representatives to take this expression to the floor of Congress as a statement from the leaders of this city as to the true need of Federal protection for Chicago citizens.

Sincerely,

LEO A. LERNER.

RESOLUTION FOR RENT CONTROL

We, the undersigned organizations, gravely concerned about our own welfare and that of our fellow citizens, urge the Congress of the United States to enact promptly an act to extend rent control under Federal authority.

We urge that the act include these provisions:

1. Effective controls over rents to be paid.
2. Effective controls over evictions.
3. Authority for the national Administrator of rents to control or recontrol areas.
4. Adequate provisions for administration and enforcement of all provisions.

We believe that Federal rent controls should be extended after June 30, 1950, since the facts that caused Congress to enact the 1949 act still prevail in most rent-controlled areas.

American Veterans' Committee; Chicago Industrial Union Council, CIO; Chicago Federation of Labor; Independent Association of Machinists; Independent Voters of Illinois; Japanese American Citizens League; Chicago Ethical Society; Jewish Labor Committee, NAACP; Illinois State Conference; Public Housing Association; Urban League; and Chicago Tenants' Federation.

CITIZENS COMMITTEE FOR RENT CONTROL,
Chicago, Ill., May 24, 1950.

Hon. MARTIN H. KENNELLY,
Mayor, City of Chicago,
Chicago, Ill.

DEAR MAYOR KENNELLY: Due to the seriousness of the crisis which the end of rent control would bring to Chicago, many citizens and labor groups have banded together to form a Citizens Committee for Rent Control. The purpose of the committee is to bring to the attention of the public and to our legislators in Washington the widespread support for controls in this area. Already the fight for continuation of Federal controls is being led by the Democratic delegation from Chicago in the House and by LUCAS and DOUGLAS in the Senate.

Governor Stevenson's appearance before the Senate Banking and Currency Committee and your wire to the House Committee highlight the fact that Illinois and Chicago are the Nation's number one "distressed areas". Most of the rural areas and small cities have been decontrolled. New York has its own State rent control law. Therefore the task of protecting its own citizens by Federal controls falls to the larger cities where controls are still desperately needed.

The committe believes that the official support of Chicago's leaders for rent control must be made clear and vigorous. Therefore we recommend that our city council

pass a resolution stating the real and continuing need for controls and endorsing the local option rent control bill. Furthermore, that such a resolution be introduced by you, the mayor, stressing the official concern about the urgency of the situation. Such a resolution would put a strong weapon in the hands of our Congressmen who are making such a splendid fight for their constituents.

We look for the introduction of such a resolution at the May 25 meeting of the council. We shall continue to support you in your endorsement of controls for the protection of Chicago citizens.

Cordially,

LEO LERNER.

CONTINUATION OF FEDERAL RENT CONTROL—VIEWS OF MAYOR AND CITY COUNCIL OF CITY OF CHICAGO, MAY 25, 1950

Whereas on May 9, 1950, Mayor Martin H. Kennelly addressed a telegram to the Honorable BRENT SPENCE, chairman of the House Committee on Banking and Currency, as follows:

"The Honorable BRENT SPENCE,
"Chairman, Committee on Banking and Currency,
"House Office Building,
Washington, D. C.:

"As mayor of Chicago I would like to present my views concerning the question of continuation of Federal rent control which is now being considered by your committee.

"In Chicago at present there is less than one-half of 1-percent vacancy in housing units except those renting for $100 a month or more. This affects more than 95 percent of Chicago's rental families.

"It is obvious and certainly should need little argument that removal of rent controls at this time and in such a market, would result in severe hardship to a large segment of this community.

"There have been practically no housing units built in the moderate rental classification during the past 10 years. So renting families will have no choice if controls are lifted. Of course not all owners are unscrupulous, but there are some who would take advantage of such a situation, and this would result in severe hardship to many of our citizens.

"It would be less than fair if I did not at the same time point out to you the financial difficulties under which many small property owners have been operating during the past few years. Statistics show that many thousands of small property owners have not been able to secure equitable adjustments in the rentals of their housing units. This should be corrected.

"Large property owners, through their accountants and lawyers have obtained the adjustments to which they were entitled by law. But of the small property owners in the two- and three-apartment-building class, many are still receiving the same rental which they received in 1942.

"So, in urging continuation of Federal rent control I would also like to urge that the legislation adopted and its administration as well should take into consideration the equities on both sides of the question.

"MARTIN H. KENNELLY,
Mayor."

And whereas the House Committee on Banking and Currency has approved a bill to continue rent controls to June 30, 1951, where such continuance is deemed necessary by the local authorities or the electorate: Now, therefore, be it

Resolved, That the City Council of the City of Chicago concurs in the views expressed by the mayor in the aforesaid telegram of May 9, 1950, to the chairman of the House Committee on Banking and Currency; and be it further

Resolved, That copies of this resolution be immediately forwarded by air mail to the President of the United States and Members of Congress from Illinois.

STATE OF ILLINOIS,
County of Cook, ss:

I, Ludwig D. Schreiber, city clerk of the city of Chicago, do hereby certify that the annexed and foregoing is a true and correct copy of the certain resolution adopted by the City Council of the City of Chicago at a regular meeting held Thursday, the 25th day of May A. D. 1950.

Witness my hand and the corporate seal of the said city of Chicago this 25th day of May A. D. 1950.

[SEAL] LUDWIG D. SCHREIBER,
City Clerk.

More Disappointment in Prospect for Taxpayers From Capitol Hill

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 1, 1950

Mr. KEATING. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Mobile (Ala.) Register. The editorial follows:

MORE DISAPPOINTMENT IN PROSPECT FOR TAXPAYERS FROM CAPITOL HILL

Pending in the Senate appropriations committee is the omnibus appropriations bill recently passed by the House, calling for about $29,000,000,000 to finance most Federal agencies for the fiscal year starting next July 1.

It is the feeling of Representative KENNETH B. KEATING, of New York State, and no doubt that of many taxpayers all over the country, that the Senate should go further than the House went in trimming the size of this so-called single-package money bill.

"As I think back over the passage [by the House] of the omnibus appropriation bill," says Mr. KEATING, "I cannot refrain from pondering how appropriate is the title 'omnibus.' The bill just passed reminds me of a nice, new, shiny bus.

"This omnibus, jet-propelled and steam-heated, started out with the brave legend, 'Economy or bust,' stenciled on the side. It limped back into the Senate garage covered with dust and amendments and all you could read was the bust.

"The weary taxpayers, who had been taken for this expensive ride, were astounded at the fare which the driver demanded. They had been told that this year they were going to get the economy size ride and had been promised that the fare would not be more than they had in their pocketbooks.

"At the very last minute the driver relented and scaled down his estimates of the gas necessary to visit all the Government departments and agencies. Somewhat relieved, the passengers settled back and counted the dollars they had saved.

"But they were still overburdened with subsidies, pet projects and other mementoes of their trip. * * * The trip had cost less than they had feared, but much more than they could afford. And they still ran the chance that after they thought they were safely home, they might get an added bill for repairs from the Senate garage.

"Every passenger ought to sit down and write to the repairman at the other end of the Capitol that they hope, when the bus is overhauled, it will be found that riders have a refund rather than a further charge coming to them."

If concerted, determined effort had been made in the House, the omnibus single-package bill surely could have been reduced more than the amount of economies claimed to have been written into it.

Taxpayers are aware that this huge bill, although designed to provide funds to operate most regular agencies of the Government for the next fiscal year, does not cover all the demands for Federal spending, by a good deal.

For instance, the bill makes no provision for foreign aid or interest on the Federal debt, two big items. These are among the spending demands to be handled separately.

It is not yet indicated just what the Senate will do about trimming down the size of the omnibus bill. In the meantime, however, the general prospect as to 1950–51 fiscal year spending by the Federal Government is that the taxpayers will witness a continuation of extravagance.

This Congress would do the Nation a real service if it would reverse the style of recent predecessors and choose the course of sound economy instead of extravagance in handing out money to spending agencies.

The chance of the present Congress doing that seems, however, to be growing more remote as the session progresses. In short, the present Congress shows prospects of becoming another keen disappointment to the taxpayers in its handling of the purse strings.

Why Rent Controls Should Be Extended

EXTENSION OF REMARKS
OF
HON. JOHN B. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 1, 1950

Mr. SULLIVAN. Mr. Speaker, with rent control due to expire June 30, and with proposed legislation providing for its extension to come before the House of Representatives sometime after June 12, I am including in my extension of remarks a discussion by me of why rent control should be continued, broadcast over KWK, St. Louis, Mo., on May 14, 1950.

In the following questions and answers are some of the reasons why I sincerely believe that the welfare of our Nation requires that rent control be extended.

I urge my colleagues in the House to ponder these reasons and I earnestly hope that they will recognize the driving necessity of such further legislation.

The discussion follows:

ARE RENT CONTROLS NECESSARY?

ANNOUNCER. Here in Washington, the fight over keeping rent control another year is growing more intense. Those who want controls to stay on tell us that without them, there will be a terrific rise in rents, a rise most tenants can't adequately pay.

Those who want controls taken off declare that landlords have been denied fair rent increases under the present law. The question soon will be voted on by Congress.

Here to tell us his views on rent control is Congressman JOHN B. SULLIVAN, Eleventh District, of St. Louis. To start out bluntly, Congressman SULLIVAN, do you think rent control still is needed?

Representative SULLIVAN. I do. I certainly do.

Question. Why?

Representative SULLIVAN. It's wanted. And the reasons it's wanted come in the letters I get—I and the other Congressmen—and in the cold bare facts.

Question. Letters—from whom?

Representative SULLIVAN. From people—people who rent. People who work hard to make ends meet. Wives who know how much has to be spent on food, on clothing for their youngsters, on other necessities. Husbands and wives who know the absolute maximum they can afford for rent. Here's a letter, for example, from a middle-aged gentleman in the Eleventh District in St. Louis, which I represent. His job brings in $55 a week for himself and his wife. There aren't any children. But—he says:

"Last year we were put out of our old place; the house was bought, and the new owner took the downstairs while a relative moved into our flat upstairs.

"We looked and looked for another flat; we couldn't find anything. I took off from work to look, and some weeks I lost 3 or 4 days' pay because my wife couldn't get around so good and I had to find us a place to live.

"The places we saw wanted much more than we could afford. Finally, one of the men at work told me his cousin was buying a place, and this flat would be for rent.

"We went to see the landlord right away, and he was nice about it; he just said we'd have to take care of the repairs. There were three rooms and they did need working on, and the rent was $75. But we figured we had to have a place, even if the rent was higher than we figured on, so we took it.

"We've been scraping pretty hard to get by. The landlord already told us the rent goes up to $100 if rent controls stop.

"I don't know what we could do then because the wife can't work; I don't guess anybody would hire her because she hasn't worked since we were married except keep house. I don't know how I could bring home any more money, either. So please vote to keep on rent control."

That's one letter. Here's another:

"We live in a rooming house because it's all we could find. We have two rooms for my husband, me, and our three children. We pay $20 a week rent now. It used to be $12.50 a week. My husband drives a cab; he brings home about $40 with the tips included in that. The rent has gone up twice and the landlord is trying to get it raised again. He gets $80 a week now from the people who live in this house. So I just pray every morning and every night that nobody takes rent control off because if it is taken off, I don't know what people like us will do."

Question. Those letters are typical?

Representative SULLIVAN. They're duplicated hundreds of times. I get 50 letters like that to every letter coming in to ask that rent control be ended. Now, it used to be that a tenant could shop around and find a place to live. That isn't true any more. His choice is strait-jacketed. There are high rents on the vacancies—and there are very few vacancies, if any at all.

Question. But JOHN, you think that if rent ceilings were removed, that more vacancies would show up—and that rents might rise, but they'd level off in a short while?

Representative SULLIVAN. Let's not kid ourselves. To begin with, we have too many families living in crowded quarters, doubling up, living in places that should have been condemned a long time ago. If any vacancies would show up—at reasonable rentals—they'll grab them. But with the rise in population—and in St. Louis, the population has gone up an estimated 200,000 in the past 10 years—we can appreciate the problem. It's simply this—we've had that rise in population—we've had an uncounted number of families living together in small, cramped quarters—and the Department of Labor now tells us that last December there were just about 1,500 dwelling units for rent in the entire St. Louis area. There just isn't the rental housing available that people need. Now, as far as rents going up and then leveling off—we've had an unforgettable experience with that contention. Back in 1946, you remember, a fight was made on price control. We were told that if price control was taken off, prices might go up but they, too, would level off and would come to rest at less than the OPA price. Is that what happened? No, there were exorbitant price increases. And the consumers paid through the nose. The same thing would occur if rent controls came off. The spiral would begin—and soon would be out of reach of those least able to afford an increase.

Question. What about the cities where decontrol has been tried?

Representative SULLIVAN. Well, take Omaha, Nebr., for example. Rents were reported up 166 percent there after decontrol last November. Dallas, Tex., is another city. Rents went up 35 percent in Dallas. They went up 41.3 percent after Houston tried decontrol. And so on around the country, wherever decontrol was established. Did they come down again? You know the answer.

Question. What does this mean in terms not only of money but in terms of people, in terms of national welfare and economy?

Representative SULLIVAN. It means just this: With general rent increases, tenants would have to pay a lot more money in rent. That would mean that they'd be cutting down on buying food, clothes, and other necessities. When people cut down on buying, industry finds it has to produce less. That brings about unemployment. And I might point out that a jobless tenant often can't pay any rent at all.

Question. Do you take the position, then, that landlords don't deserve any rent increases?

Representative SULLIVAN. No one has ever opposed fair and justified rent increases for landlords. I do take the position that the law must be fair to both, and that the fairness is to be judged, not by one side or the other, but by the national welfare and interest. Now, I would like to point out here and now that 10,787 St. Louis area landlords received authorized rent increases between November 1949 and the end of April. These increases alone amounted to $97,663 more each month for the landlords. They averaged almost $6 for each of the 16,958 dwelling units covered during the 6-month period by the increases.

In April alone, raises in rents were O. K.'d for 1,608 landlords. These applied to slightly more than 3,000 housing accommodations.

Question. Why, then, is pressure being applied for the end of rent control?

Representative SULLIVAN. The pressure has a profit purpose. On the scales used to measure this demand that rent controls be halted, a sack of gold weighs more than public need. But let's calculate again on the basis of more cold facts. Look through a St. Louis newspaper. See the listings of rooms and apartments and flats for rent. Most of them start at $80, $35, $90 a month. And the people who need rental homes just don't make that kind of money. Those rents aren't going to come down if rent controls are ended. On the contrary, they're likely to go up. Well, we're told, a lot of people who are renting now will buy homes if rent controls are taken off. Let's not be taken in by that argument, either. Again, the fact is—and the loan companies will tell you this—that an increasing number of American families spend more than they earn.

Question. Where will they get the money to buy? There's a limit to what they can borrow.

Representative SULLIVAN. Equal with that is the fact that the backbone of our housing system is rental dwellings. Any break in that backbone will be felt along the entire body of our Nation. It would mean social and economic disruption, hardship for many of our people. And this will remain a danger as long as we continue to have more people looking for places to rent than we have rental accommodations to take care of them.

The public good will not be served by an act so ill-timed and so ill-advised as dropping rent controls now. Such a move would bring sudden sky-high rent boosts. It would result in a chaotic scramble by families to find new rooms when they are forced to leave their old dwellings by rents which are raised beyond reach of their pocketbooks.

It would mean cutting down for many of food bought, of milk and meat and vegetables and fruit, of clothes and household goods and appliances and the thousands of other items and services on whose steady and high production our good economy depends.

Much stronger consideration could be given the arguments for ending controls if landlords now were not being fairly treated. But, under the present law, they are receiving rent increases.

I am working for a strong Federal rent control law—a law that will cover all States. We cannot depend on the exigencies of chance; we cannot anticipate that the legislatures of our States all will come through and pass laws to protect tenants.

Sound sense and reason—the welfare of our Nation—dictates that rent controls—national rent controls—must stay on.

Growth of Alabama Business From 1939 to 1948

EXTENSION OF REMARKS

OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1950

Mr. ELLIOTT. Mr. Speaker, preliminary figures recently released by the Bureau of the Census of the United States Department of Commerce indicate a remarkable growth of Alabama business receipts during the period 1939 to 1948.

Examples of this growth are as follows:

	1939	1948
Retail sales	$436,000,000	$1,631,400,000
Wholesale sales	415,700,000	1,641,100,000
Service trades receipts	22,700,000	89,000,000
Hotel receipts	4,800,000	13,000,000
Amusement business receipts	7,000,000	20,800,000

The period also witnessed a remarkable growth in employment in certain businesses, examples of which are as follows:

	1939 employees	1948 employees
Retail trade establishments	54,774	91,366
Wholesale trade establishments	14,636	26,007
Selected service trades	11,333	20,465

Mr. Speaker, in my judgment, no State in the Union has more possibilities for future growth and development along business and industrial lines than does the State of Alabama. Our great natural resources of good climate, high annual rainfall, coal, timber, water power, industrial water, oil, gas, gravel, salt, limestone, iron ore—to name only a few, coupled with the enterprise of our people point the way to an expanding economy in the years that lie immediately ahead.

As a part of my remarks, I include a letter and statement from the Department of Commerce:

DEPARTMENT OF COMMERCE,
Washington, May 22, 1950.

The Honorable CARL ELLIOTT,
House of Representatives,
Washington, D. C.

DEAR MR. ELLIOTT: Enclosed is a copy of the preliminary release of the 1948 Census of Business for the State of Alabama, which I though would be of interest to you.

If you have need for additional copies, please let me know.

Sincerely yours,

NELSON C. PIERCE,
Special Assistant.

UNITED STATES DEPARTMENT OF COMMERCE, BUREAU OF THE CENSUS, 1948 CENSUS OF BUSINESS — RETAIL, WHOLESALE, SERVICE TRADES—PRELIMINARY

ALABAMA

Retail, wholesale, and service establishments located in Alabama showed a substantial expansion in dollar volume of trade from 1939 to 1948 according to preliminary figures from the 1948 Census of Business released today by the Bureau of the Census, United States Department of Commerce.

Retail sales in the State during 1948 aggregated $1,631,400,000, an increase of 274 percent over the $436,000,000 sales in 1939, when the preceding Census of Business was taken. Wholesale sales volume in the State showed a 295-percent rise over the same period, reaching a total of $1,641,100,000 in 1948 as compared with $415,700,000 in 1939. The service trades included in the Census of Business reported receipts totaling $89,900,000 in 1948 compared with $22,700,000 in 1939. Hotel receipts moved from $4,800,000 in 1939 to $13,000,000 in 1948. Amusement businesses in the State recorded receipts of $20,800,000 in 1948 compared with $7,000,000 in 1939.

Employment in the State also rose over the 9-year period between 1939 and 1948 for the trades covered by the Census of Business. Retail trade establishments reported 91,366 paid employees for the workweek ended nearest November 15, 1948. Of these, 74,791 worked the full week, and the remainder part of the week. The comparable total and full workweek figures for 1939 were 54,774 and 44,551. Wholesale trade establishments reported a total of 26,007 full- and part-week employees for the week of November 15, 1948, compared with 14,636 for the same week in 1939. For the selected service trades, November 15, 1948, paid employees numbered 20,465; the comparable figure for 1939, adjusted for change in scope between the two censuses, was 11,333.

These preliminary figures have been compiled from similar releases being made available for each county in Alabama. Final figures, superseding the preliminary data for Alabama, will be included in a State bulletin to be issued in several months. Similar data will be made available in preliminary and final form for each of the States.

TABLE 1.—*Census of business preliminary results for 1948, by trade group—Alabama*

Trade group and kind of business	Number of establishments	1948 sales and receipts	Active proprietors of unincorporated businesses November 1948	Paid employees, workweek ended nearest Nov. 15, 1948	
				Total employees [1]	Full workweek employees
Retail trade, total	28,669	$1,631,403,000	27,903	91,366	74,791
Food group	11,848	415,138,000	11,680	13,549	9,749
Eating and drinking places	3,970	82,700,000	4,005	13,475	11,439
General merchandise group, general stores	2,368	248,430,000	2,164	18,845	13,451
Apparel group	1,185	113,600,000	1,041	7,707	6,191
Furniture, home furnishings, appliance group	1,240	91,694,000	1,066	5,596	5,181
Automotive group	1,239	293,434,000	1,164	10,721	10,311
Gasoline service stations	2,891	86,066,000	2,886	4,971	4,967
Lumber, building, hardware group	1,102	115,629,000	1,172	6,259	5,674
Drug and proprietary stores	866	50,538,000	859	4,333	3,603
All other retail stores	1,960	134,174,000	1,866	5,799	5,199
Wholesale trade, total	2,578	1,641,053,000	2,037	26,607	[2]
Merchant wholesalers, total	1,524	774,643,000	1,281	18,394	[2]
Groceries, confectionery, meat	277	167,885,000	257	3,075	[2]
Farm products, edible	183	72,151,000	200	2,289	[2]
Tobacco	28	33,418,000	23	380	[2]
Furniture, home furnishings	15	3,083,000	9	105	[2]
Automotive supplies	171	25,023,000	163	1,320	[2]
Electrical merchandise	63	45,851,000	27	770	[2]
Hardware, plumbing, heating	46	75,708,000	20	1,491	[2]
Lumber, construction materials	111	77,148,000	95	2,005	[2]
Machinery, equipment, industrial supplies	215	74,002,000	154	2,570	[2]
All other merchant wholesalers	415	199,374,000	322	4,388	[2]
Manufacturers' sales branches, offices	246	418,784,000	3	3,886	[2]
Petroleum bulk plants, terminals	428	150,577,000	388	1,850	[2]
Agents, brokers (merchandise)	208	197,925,000	187	774	[2]
Assemblers of farm products	172	99,124,000	178	1,123	[2]
Selected service trades, total	6,946	89,917,000	7,006	20,465	18,705
Personal services	4,232	51,610,000	4,198	15,606	14,341
Business services	210	6,727,000	176	1,226	1,079
Automotive repairs and services	1,406	19,451,000	1,466	2,259	2,060
Other repairs and services	1,098	12,129,000	1,166	1,364	1,228
Hotels	207	13,036,000	169	3,468	3,305
Tourist courts and camps	170	2,282,000	166	405	355
Amusements	801	20,769,000	535	3,706	[2]

All-American Conference To Combat Communism Wins Endorsements

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, June 1 (legislative day of Wednesday, March 29), 1950

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD resolutions adopted by the State convention of the Knights of Columbus at their meeting last month in Illinois. This information comes to me from Vincent L. Knaus, grand knight of the Knights of Columbus for Illinois, and I call special attention to the resolution endorsing the newly organized All-American Conference To Combat Communism, of which Rev. Daniel A. Poling, of New York City, is now the national chairman.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

Realizing the seriousness of the times we live in, when over one-half of the world is enslaved by totalitarian communism, our own people remain indisposed and idle to the threats all around us, to destroy our constitutional liberties and our American way of life, and the agents and stooges of the Kremlin are ever on the alert to divide the American people so as to render us impotent in the coming struggle of God against Satan.

We make the following recommendations to this convention, to be transmitted to the local councils of our great State and Nation.

I

We recommend that under "good of the order" at the council meetings there be a 10-minute discussion on the attendant evils of socialism and communism and the value of our inherited constitutional liberties and achievements of the American way of life by a competent speaker. That this matter be well and ably handled and that it be given widespread publicity in the local press—the sentinels of liberty—in our communities.

II

That a splendid publication on the subject just recited is Counterattack, a weekly four-page letter that not only exposes the evils of totalitarianism, its agents and stooges here in the United States and elsewhere—names names and makes specific recommendations on a week-to-week basis that gives us ammunition with which to fight our enemies, that is reliable and can be accepted and that each council ought to subscribe to this publication which costs $24 a year and which is cheap at the price and is now considered the No. 1 enemy of communism here in the United States of America.

III

That in order to destroy the ugly scourge of communism, there must be presented a united front against the enemy by uniting with other organizations recognized, as representative and national in scope and have a record and present a determination to fight communism and express and accept the ideals of American principles, ideals and objectives and such an organization was just organized in this city May 13, 14, 1950 and known as the All-American Conference to Combat Communism.

Our forces must be united and not dispersed, our attacks must reach the objectives sought to be attained, because if we are not united, divided we will utterly fail and will never recover our lost constitutional liberties and regain the achievements of the American way of life.

We, therefore, recommend that the Illinois State Council and the Supreme Council affiliate with the All-American Conference to Combat Communism, at once.

IV

The the revelations at Fatima and the occurrences at Lipa demonstrate beyond the shadow of a doubt that in waging a war against this satanic ideology we must be spiritually armed and protected—that prayer and sacrifice are concomitant barrages to storm heaven to avert our threatened catastrophe and destruction.

We recommend the family rosary, recited daily, in the homes of our members. That the Knights of Columbus inaugurate in our beloved State—a 15-minute radio program—State-wide—under the direction of our beloved State chaplain and bishop, to reach Catholic and non-Catholic alike—to a method of prayer that has never failed and will not fail us now.

That our council meetings, at the closing prayer a decade of the rosary be recited, dedicated to the coronation of our blessed mother as queen of heaven.

V

That annually in the State, as an observance, of the Illinois State Council and by local councils—at a suitable date—we offer our prayers and hold an annual Communion Sunday in memory of Archbishop Aloysius Stepinac and Joseph Cardinal Mindszenty, (and all other martyrs to the same cause), of the torture and struggle they underwent and now remain the symbols of freedom against depravity in government.

That our beloved State chaplain and bishop be consulted on this program—to make it a fitting tribute to these two men and others of our faith that stood up against tyrants and confessed their faith before men. (In this connection we recommend the sale and distribution of the Cardinal Mindszenty Commemorative Medal.)

VI

That there is no substantial difference or distinction in the brand of world communism, whether it be Russian, Titoism, or Chinese, as all seek to enslave man totally—both in body and soul. That this totalitarian ideology is directed at America as an enemy and that any help of any kind given by our Government of our money or influence to the Russian satellite countries be roundly condemned as action of disloyalty to the principles and ideals many times expressed by our Government in world affairs.

We recommend that our members, council and the State Council so express themselves in letters to our elected or appointed servants of all political faiths of our Government whenever the opportunity presents itself and not to quit for a time and leave the matter dormant but make it a barrage of letters until the matter is finally disposed of and concluded. This is our duty and responsibility as men and we must be ever true to our allegiance to our God. This is not meddling in politics.

VII

We commend the excellent work done by Rev. Edward J. Duncan, director of the New Man Foundation at the University of Illinois, and ask his kind assistance and cooperation with his staff in the work of the Religious Liberty Committee and we present our solicitude to Rev. Robert T. Hutch, director at Carbondale, with the same objectives in view.

Conclusion

That in order to insure this committee in its great work throughout the State that our State Deputy continue to appoint a State committee on this subject, representative of the whole State and that meetings be called at least four times a year.

Dated May 16, 1950.

HENRY H. FONKE,
Vice Chairman, Breese.
BERNARD MILLBURG,
Secretary, Morrisonville,
DAN DOYLE,
Alternate, Taylorville.
HOWARD WOODBURY,
Father Marquette.
VINCENT L. KNAUS,
Chairman, Santa Maria Council, South Chicago No. 1511.
FRANK J. PREE,
Centralia.

Plugging Loopholes in Our Tax Laws

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 31, 1950

Mr. SABATH. Mr. Speaker, sometime ago I wrote a letter to the chairman of the Ways and Means Committee of the House, expressing my feelings and views relative to plugging the loopholes in our present tax laws. This is a statement that I would have made personally had it not been for the illness of Mrs. Sabath which precluded my appearance.

I feel that the committee should give due consideration to my views set forth in the enclosed statement and, under unanimous consent, I embody both the letter afore-mentioned and the statement in the RECORD:

HON. ROBERT L. DOUGHTON,
Chairman, Committee on Ways and Means, House of Representatives, Washington, D. C.

DEAR MR. CHAIRMAN: Due to the illness of Mrs. Sabath and myself, which I am pleased is not serious, I was precluded from appearing personally before your committee.

Therefore, I submit to you the importance of enacting legislation which will eliminate the many loopholes in the present tax laws and at the same time eliminate the several tax exemptions to trusts, so-called charities, institutions of higher learning, life insurance companies, and the mining interest depletion allowances, all of which are evading Government tax in one form or another and which amount to hundreds of millions of dollars annually. If my suggestions be carried out you can easily repeal the excise tax and eliminate deficit spending.

All of you, I am sure, desire to bring about the reduction of the burdens that fall on the average taxpayers, as you so frequently point out. I feel that if you consider my enclosed statement, you too will come to the conclusion that it is deserving of your favorable consideration.

Sincerely yours,

A. J. SABATH,
Member of Congress.

REPUBLICAN DUPLICITY

Mr. Chairman, the President, in a recent message to this Congress, urged the inclusion in the proposed tax revision bill of specific provisions for closing the many loopholes in the present tax laws, and to repeal the exemptions presently allowed many corporations such as oil companies, life-insurance companies, and other corporations and organizations, on the huge sums used by them for purely speculative purposes. Some of our major education institutions are included in this category because of the tax exemptions granted in their original charters as charitable or eleemosynary institutions.

Some years ago certain industrialists who had accumulated tremendous wealth conceived the idea of setting up trusts or foundations effective upon their death for the very laudable purpose of benefiting our institutions of learnings, for research in medicine and other fields—to aid the needy, and for other worth while purposes of improving the general welfare. Among these are the Carnegie Foundation, the Russell Sage Foundation and later, the Rockefeller Foundation. The profits from their operations were quite generally used for the specific purpose for which they were originally created. They have added to the material growth and welfare of our country. They were placed in a tax-exempt status because their income was used for humanitarian and worthy purposes.

Realizing the looseness of the provisions of the present law, a large number of greedy individuals conceived the idea of taking advantage of the law to serve their own selfish purposes, with the result that in the name of charity and higher education thousands of so-called family trusts have mushroomed in the last few years, resulting in a loss of hundreds of millions of tax dollars to the Government each year.

The Virginia Law Review of February 1948 reported that there are in existence today more than 10,000 foundations of this type, and the vast majority are of the "family" variety. The actual number is not known, it may well run into double or tripie that number. These trusts are very secretive about their business. They take the position that their finances are nobody's business. They have long feared the spotlight of publicity and the possibility of legislative action to bring them in line. These foundations receive today preferred tax treatment. They are definitely obligated to justify their public sanction. The larger and older foundations have recognized this responsibility; annual reports are published and the public can ascertain where the income goes. All should be required to report their financial and other operations, and tax exemption should be limited only to their direct contributions to institutions with an active program for social welfare.

Let me point out a few of the operations of recent date of some of these so-called trusts or foundations.

The Hershey family formed the nonprofit Hershey Industrial School, which today owns most of the profitable Hershey Chocolate Co. Because of its tax-exemption status, operating costs of the company are not high. True, they contribute to the school, but it

would be very interesting to know the exact story of the millions of its profits that have gone into the building of a sugar empire in Cuba.

In October 1948 a Chicago real-estate operator organized the Boston Foundation. Its first move was to purchase and lease the Edgewater Beach Hotel on Chicago's lake front. The real-estate operator is now president of the operating company, leasing the property from his own foundation. Its contributions to Chicago charitable institutions last year was $105,000, in tax-exempt money. It would be interesting to know where the balance of the profit went.

A year ago one of the South's profitable textile operations was turned into a tax-exempt foundation, involving its $34,000,000 holdings. The community gets about $400,000 in tax-exempt moneys—about equal to the taxes the company formerly paid locally. All of its other huge profit total is tax-exempt to the Federal Treasury.

Our universities and colleges have gone into business in grand style under this strangely overlooked weakness in our laws. Union College recently purchased all of the properties of Allied Stores Corp., one of the largest national department-store chains. The same college recently acquired the Abraham & Straus property in Brooklyn for $9,000,000 and immediately leased it back to Abraham & Straus at low rentals under an 80-year lease.

Oberlin College owns Montgomery Ward, Sears, Roebuck, and Woolworth locations in many parts of the country. The University of Pennsylvania, headed by that eminent Republican, Harold Stassen, and a Presidential candidate of that party, owns the Lit Brothers Store property in Philadelphia. Lit's, of course, leases it from the University at a very favorable rental.

Columbia University, the haven of General Eisenhower, owns the site of much of Rockefeller Center. Cooper Union owns the property upon which the Chrysler Building stands. New York University has gone into the macaroni business in a big way; it is also interested in the manufacture of piston rings, table china, leather goods and other products through the ownership or control of business institutions, all enjoying tax-free status. Had these particular corporations remained in private status last year, they would have paid $1,500,000 in Federal taxes. The Bureau of Internal Revenue, realizing that noodle making was stretching the dough too far, went into court to compel the university to pay taxes. This case is pending at the moment in our Federal courts.

Meanwhile, the involvement of educational institutions in the field of banking, real estate, commerce and industry goes merrily on. Universities own haberdasheries, citrus groves, movies, cattle ranches, the Encyclopedia Britannica (owned by the University of Chicago) and a large variety of other enterprises. The University of Wisconsin controls patent pools and collects royalties. Universities and colleges, together with foundations, have an annual income from their business activities of well over a half billion dollars annually. Were this income not tax-exempt, they would pay $173,000,000 in Federal taxes annually.

Realizing the danger involved in the rapid spread of this system, the Association of American Colleges has issued a warning that the right to tax exemption has been abused by many colleges, and should be watched very carefully.

Some of our Republican friends in Congress are directing blasts against the cooperatives for not paying just taxes. However, I want to point out the cooperatives are in an entirely different position from these so-called charitable trusts and educational institutions. Cooperatives are set up to supply goods and services needed by their membership. Furthermore, about 30,000 cooperatives do pay income taxes, while only about 5,000 do not. By selling goods to their members at reasonable prices, the co-ops have succeeded in throwing much-needed light on the exorbitant prices charged by many of the big private monopolies, while these so-called charitable trusts and foundations, interested in securing all the profit they can possibly squeeze out of their commercial operations, do nothing that might offend the corporate giants they are nested in. The Biblical observation, "Charity covers a multitude of sins," applies very aptly to the operations of these family trusts and foundations of recent years.

An interesting light was thrown onto the operations of one of these so-called trusts some months ago as a result of the investigation conducted by the Senate Committee on Interstate and Foreign Commerce into the operations of Textron, Inc.

This investigation disclosed that Textron, Inc., had employed the device of charitable trusts to a substantial extent as a means of acquiring risk capital which was used in its business transactions, such as sales and leases of plants and equipment and by substantial loans to Textron, Inc., and its affiliates. A number of trusts were created to provide the large funds this firm needed for its gambling operations. The operators of this scheme formed six different trusts in the New England area. First. The Rhode Island Charities Trust—named the city of Providence Community Chest as the sole beneficiary. The trust was formed in 1937, but testimony revealed that not a cent was paid to the Community Chest until 1945, and then the sum of $10,000 was turned over to it. During 1945, 1946, and 1947 the Community Chest received a total of $85,000 from the trust, while the officers and the bank handling the funds for the trust received a total in excess of $140,000. This trust has never made an accounting to the beneficiary, nor has its books ever been audited. This is the story, substantially, of most of these so-called charitable trusts.

But the most disconcerting and dangerous feature of all in the operation of some of these trusts is brought out by the experience of the city of Nashua, N. H., with this corporation and trust. They purchased the Nashua Textile Mills in 1945, a mill which had been a mainstay of the economy in this community since 1823. Its previous owners were essentially manufacturers and not speculators in mill properties. Through the cooperation of loyal local labor the mills and the community prospered. Textron closed this plant shortly after acquiring it, transferring its activities in this field to Puerto Rico, where cheap, sweat-shop labor was available, throwing 5,500 real American workmen out of jobs and demoralizing the community.

This is a clear indication of tax-free income misused to destroy American unions, and to blight the spirit and destroy the well-being of American labor. It is high time some action was taken to eliminate such demagogic and un-American practices through the inadvertent cooperation of our own Government.

These loop-holes and tax-evasion schemes must be eliminated. If prompt action is taken, the present excise taxes can be reduced or repealed as I have so consistently urged, and it would aid materially in reducing or eliminating the deficit we are faced with and place the country in a sound financial position.

I am informed, however, that 10 of the Republican members of the Ways and Means Committee, unfortunately, in combination with a few southern Democrats, are holding back the efforts of the Democrats who seek to remedy the pernicious situation referred to above. I fully realize these Republicans are under the influence of the National Association of Manufacturers, among other pressure groups, which are opposed to any fair elimination of these loop-holes in the law. The Republicans themselves should try to pry themselves loose from this vicious influence and I sincerely hope that some of the afore-mentioned 10 Republicans will recognize their responsibility to the people and aid the Democratic Members in amending the present law.

There is one more point I want to bring out clearly in connection with these lease-back deals made between the trusts and foundations who purchase businesses, land, and properties, and the firms who lease them back at favorable long-term rentals. The rent they pay is a deductible item in their income-tax returns, again reducing the taxes they would otherwise pay to the Federal Government, and also giving them an unfair competitive advantage over the small-business competitor. It is tending to build up monopolies more and more, while driving the small-business man to the wall.

In the interest of legitimate, honest small business, and in the interest of the honest taxpayer, as well as in their own interest, these Republican members should join with the Democratic members of this committee who are trying to bring out a bill as urged by our President, and vote to eliminate these loopholes that are resulting in the loss of hundreds of millions of dollars of revenue to the Treasury each year. Not only that, but these same Republican members should vote with the sincere Democratic members to eliminate the exemptions that have been given to life-insurance companies, oil and mining interests, and other giant monopolies via the so-called depletion allowances, by which these groups have been able to evade their just contribution to the cost of government which protects and safeguards their far-flung interests.

In addition to those now being charged with tax evasion, I have noticed that the steel and lumber racketeers have robbed the American people of millions and millions of dollars. I also observed that the textile manufacturers who controlled the price of textiles and the shirt manufacturers who boosted the price of $1.50 shirts to $5 and $6, saying the least, their actions have been criminal.

I feel that their activities should be penetrated as well as those of the war profiteers whose activities have been ignored.

I feel, therefore, Mr. Speaker, that if the Ways and Means Committee fails to report a fair bill, eliminating these loopholes and tax-avoidance schemes, the full responsibility will lie with the Republican members of that Committee, and the Republican Party will be foreclosed from charging that we Democrats failed to repeal or reduce excise taxes as recommended by the President and which we Democrats desire.

If the Republicans continue to oppose a fair tax bill, I shall insist in the next Congress that the number of Republicans on the Ways and Means Committee, as well as on some of the other committees where legislation recommended by the President is held up in which the masses are vitally interested, be reduced so that the majority party as now constituted, and as I know will continue in control of our legislative body, shall actually have a working majority in the next Congress and work for the will of the people.

How Does Rural Housing Affect Family Living?

EXTENSION OF REMARKS
OF

HON. ROBERT E. JONES, JR.
OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1950

Mr. JONES of Alabama. Mr. Speaker, recently I asked a farmer who had just completed construction of an entire new set of buildings on his farm, "Just what do you think of this farm housing loan program which has made your new construction possible?" His answer was, "My wife got the house she's always wanted, and she's satisfied. I've got the new barn I want, so I'm satisfied. She'll enjoy working in the new house, and her work will be easier, too. And my new barn's as good as our old house used to be, so it's taken a lot of work out of the chores and we can enjoy those things now while we're young enough to appreciate them, and not wait until we're so old that we can't enjoy them even if we can afford them then."

I have heard a lot of comments like that, and each time I hear them I am glad once more that I introduced H. R. 1373 during the first session of the Eighty-first Congress. That rural housing bill, cosponsored in the Senate by Senator SPARKMAN of Alabama, has since become the farm housing title of the Housing Act of 1949; and in 6 months has already made it possible for over 2,000 farm families to have better housing than they had before or than they could have paid for without Government aid. An estimated 140,000 farm families will eventually have more adequate housing because Congress passed this law, and with that much improved housing in our Nation, the rural-slum areas will almost disappear.

But just how will this new farm housing affect rural living?

The home, whether it is a magnificent residential estate or a small dwelling unit, is the center of our better human relations. The home which, with its surrounding environment, has the atmosphere of being healthy, safe, and wholesome is the very essence of democracy. It is where our good citizens are born, grow up, and take their place in the community and Nation. By improving the home, then, we automatically improve the future citizens of our communities and Nation.

When no real home exists, or where the home is inadequate, unhealthy, unsafe, and unwholesome, we are breeding disease, high infant mortality, and social instability. In slum and blighted areas, such as now exist in many parts of our rural South, we are breeding bad future citizens, families which may listen when foreign ideologists whisper, or who would be physically unable to fight for our country if we should be attacked.

Have you forgotten that the highest percentage of rejects for physical reasons during the draft was in our southern rural areas?

The kind of housing that a family has plays an important part in the success or failure of that family. Our homes should provide comfort, convenience, privacy, an opportunity for the development of personalities, an opportunity for mental and physical development, and the cultivation of friendships. How many of these six goals are actually possible in the rural slums which are all about us? Not many. Yet with the hopes held out for 140,000 new farm buildings through Government aid—about half of which will be in the South where the need is greatest—all six are again possible.

But if we are to accomplish this goal, it will require the united efforts of all of us, not merely the passage of legislation and the appropriation of some money with which to make loans. The things which can be done by individuals to help bring about better rural living are exemplified by the recent work of the Virginia Federation of Home Demonstration Clubs. That group made an unbiased survey of actual housing conditions and needs in their State, and published it under the name "Farm Housing in Virginia." Then this booklet was used as a study piece by the various clubs, and each club set up some project which would help make better housing possible in their State. The same idea could be used in every State, and with any group which is really interested in helping farm families live better.

How serious is our rural housing situation today? A few figures may startle you, but should convince you of the need for better rural housing if we are to create a more healthy America. Did you know that 9 percent of all farm dwellings have no toilet facilities at all, and over 80 percent still depend upon outdoor toilets? Did you know that only 2 percent of all farm dwellings have kitchen sinks? Only 29 percent have any sort of water at all within the dwelling? The most common source of water on the farm is a well or a spring—and only 6 percent of the wells or springs in the South are adequately covered to protect them from disease and filth. In one county studied recently, 90 percent of all the farm dwellings were without screens for their windows, and many did not even have glass in the windows.

It is to correct evils such as these Senator SPARKMAN and I decided it was necessary to include farm housing in the Housing Act of 1949. Now it is possible for a farm family to obtain the housing they need for adequate, safe, and wholesome living; using Government credit if they are unable to obtain the improvements otherwise.

Under procedures established by the Farmers Home Administration to administer this program, certain minimum standards have been set up, and no farm housing loan will be approved unless the dwelling meets these standards. Let us see what some of these standards might mean in increased convenience to the housewife, increased safety to the family, and in more wholesome living for everyone who enters the new dwelling.

First, there must be ample room. We consider a city section a slum where the dwellings have less than one room per person average; yet the average of all farm dwellings is more crowded than that. But the FHA standards require that the new dwelling provide ample space for the entire family, not merely a place where they can be herded together for the night like cattle.

There must be adequate storage space. A farmer's gross income is probably the smallest of any occupational field, yet a family which grows and stores its own food can live adequately from that income. The FHA standards require that the family have enough storage space so they can store all the food they need during the growing season, for use later in the year. There must be closets, too, for storing things other than food. If you go into most farm dwellings today, you will find them almost completely devoid of adequate storage space for clothes, linens, quilts, cleaning supplies, medicines. But the new dwellings built from loan funds authorized by the Farm Housing Act of 1949 will provide this badly needed closet space.

Perhaps the most important thing that the Housing Act of 1949 can accomplish for the farm housewife is to make over her kitchen into something which is the model of convenience and smart appearance. Running water will be installed, built-in cabinets included, modern kitchen equipment made possible by installation of plumbing and electrical inlets. Assistance in planning the kitchen lay-out, too, will make it possible for the housewife to save many steps.

For the 80 percent or more of farm families who still depend on the washtub for their bath, the biggest convenience added through proper use of loan funds will be the bathroom. What this means in added privacy alone will be worth the entire program.

Suppose we stop for a moment and see just what has been done during the first 6 months of operations of this farm-housing program. Reports of the Farmers Home Adminstration indicate that by June 1st they had received applications from over 20,000 farm families who desired housing loans to modernize or rebuild their farm dwellings. Of these, approximately 2,000 have already received loans amounting to $7,500,000; another 5,000 have been tentatively approved for loans, subject to appraisals or title clearance. Another 5,000 are presently being submitted to county committees for approval. It is estimated that $25,000,000 will have been loaned to farm families for new housing by July 1st.

Of the loans made to date, about half have been for complete rebuilding of the dwelling. Old structures with their leaky roofs, sagging walls, and unsafe foundations have been torn down and new, modern structures built to replace them. About a fourth of all money loaned to date has been for building other than dwellings, and three-fourths to rebuild or remodel existing dwellings. Water systems have been installed in all cases where it did not already exist, and

installations of electrical fixtures have also been included where not already available.

In the 4-year program set up by the Housing Act of 1949, a total of $275,000,000 was authorized for rural-housing loans, and this would make it possible for an estimated 140,000 farm families to have more adequate housing than in the past. With half the Nation's farm population in the South, and with the housing problems more acute in the South than elsewhere in the Nation, it is estimated that somewhere near 75,000 southern farm families will have better housing under this program within the next 4 years. A thousand or more of these probably will be in north Alabama.

The first loan in the Nation was made in Jackson County, Ala., and I had the privilege of attending the ceremony when the disabled veteran received his check, and have since seen his modern six-room house which replaced the ramshackle house he previously occupied. The new dwelling has asbestos shingles on the sides, a fireproof roof, a decorative front and back porch. Inside there are hardwood floors, which are kept highly waxed and would grace any city dwelling. There is a nice fireplace in the front room, closets in each of the bedrooms and in the connecting hall. The kitchen has built-in features and—for the first time—running water. The loan funds included money to install an electric pump and to pipe the water inside the house. If the same house were in a good residential district up in Washington, D. C., it would sell for $12,000—but the veteran built it for less than $4,300. The family's first child, born recently, made its start in a new home which it will enjoy for many years to come; but, without this loan it might have been born in the drafty, unhealthy, impossible-to-heat old house.

I am proud that I had a part in making it possible for this child, and thousands of others, to be born into a more American home atmosphere than would have otherwise been possible. Let us give the same opportunity to all our farm families.

I sincerely believe that a farm family will work harder, make more money, and fight to maintain a farm home if—should adversity strike—that farm home is a comfortable and attractive one. If the place is dilapidated and run down, or if it lacks the modern conveniences which make living worth while in America, the family is more likely to have an "Oh, what is the use?" attitude. They have less reason to desire to farm efficiently, participate in community affairs, or to share their homes with friends.

I also believe the rural church and the rural schools will benefit by this new housing program. Indirectly, perhaps, but the church or the school is no better than the component individuals who make up its congregation or assembly. The child will take more interest in its studies and do a better job of preparing its homework where there is a good lighting system in the home. There will be less chance to pass disease from one scholar to another if the sources of some of these diseases are wiped out by home improvements. There will be a better comradeship among the pupils if the child feels he can bring his companions home to also enjoy the modern conveniences. And the church, depending as it does upon contributions from persons who attend, will find that with the prosperity of a new home or more efficient farming buildings, the farmer can come to church more regularly and contribute more to its upkeep.

The home demonstration clubs will benefit too. Families who might have once held back from attendance because they didn't want to invite other club members to their homes will not have that reason for nonattendance now. And many of the lessons in good homemaking, which are learned in home demonstration club work are not possible to practice in the present dwellings of our southern farmers, but will be possible under the new housing program.

Our State Department

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 31, 1950

Mr. SABATH. Mr. Speaker, a very interesting article was brought to my attention on a discussion of a diabolical scheme involving our State Department, which bears out my contention that, unfortunately, the State Department gentlemen of our Government have been, and are presently being, influenced by shrewd, conniving British diplomacy. It is a privilege to insert this discussion in the CONGRESSIONAL RECORD:

A DIABOLICAL SCHEME AND OUR STATE DEPARTMENT

The Economist of London, a weekly review, stated in an article on Jordan, Israel, and the Arab world, that it was most likely that the Hashamite Kingdom of Jordan and Arab Palestine would eventually become one and that, as King Abdullah always relies on the Arab Legion to maintain himself in power, without its support, he "could not keep his throne for a week" and realizes that he owes his position to the British "who are responsible for building up, training, maintaining, and financing the legion."

Hence, it is obvious that the so-called peace negotiations, almost reaching fruition, between Jordan and Israel, were merely a blind to learn how much Israel was ready to concede in order to attain peace, so that British Bevin might estimate how much to demand of Israel by way of the threat of the British concocted and controlled Mufti's Arab League and of the heavy armament Great Britain has been introducing among the Arab States that might be prepared for the second round, in the hope of recapturing all of Palestine and the Arab world under British suzerainty. All else is camouflage. Abdullah's surrender to the Arab League was a foregone conclusion as soon as Britain thought the time ripe.

Handing over Arab Palestine to Abdullah is tantamount to turning it over to the British. Is there any legal or logical reason why Jordan should be permitted, by a mere unilateral declaration, in view of the UN resolution of November 29, 1947, or any subsequent events, to annex Arab Palestine and thus become a constantly threatening thorn in Israel's sides?

The chief disappointment, however, is the agreement with this diabolical scheme manifested by our State Department.

When will it recognize that America's acquiescence to the British Foreign Office conspiracies is entirely out of harmony with American interests? These demand a strong, democratic, and industrialized Middle East, not a Middle East eroded and milked dry by the greedy appetite of British colonialism. The willingness of certain influential members of our State Department to follow the British line wherever it happens to lead, surely is as fit a subject for congressional investigation as was the activity of those other men who were fascinated by the Communist idea and who have done so much incalculable harm through their influence in the making and carrying out of American policy. Whether consciously or unconsciously, a subversion of our policy in favor of the British is quite as dangerous to our welfare as one in favor of the Communists.

Kansas in the Springtime

EXTENSION OF REMARKS
OF
HON. HARRY DARBY
OF KANSAS
IN THE SENATE OF THE UNITED STATES

Thursday, June 1 (legislative day of Wednesday, March 29), 1950

Mr. DARBY. Mr. President, spring in Kansas is beautiful and picturesque, especially at this time of year in the enchanting Flint Hills in southeastern Kansas. Within this vast agricultural area, one may gaze from hill to hill observing Herefords grazing against a backdrop of oil derricks—and silos, that seemingly stand guard like sentinels spaced across the sweep of grasslands. Few writers are more capable of capturing on paper the magnificence of such splendor than Mr. M. Seaton, publisher of the Coffeyville (Kans.) Daily Journal. He is one of our outstanding journalists and civic leaders—a young and very capable one—whom we Kansans proudly admire.

The Flint Hills country, covered with the famous blue-stem grasses, makes the best pasture land in the world. Cattle gain more weight per day in this area than in any other section. Because of the importance of this district in my State to the livestock industry, I want to call to the attention of my colleagues and other readers of the CONGRESSIONAL RECORD an editorial by Mr. Seaton, entitled "Spring in the Flint Hills." I ask unanimous consent that it be inserted in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SPRING IN THE FLINT HILLS

One of the loveliest experiences of spring in southeast Kansas is a trip across the Flint Hills on a lazy, sunny day.

Last week we drove down against the dusty wind from Abilene to El Dorado, on down to Winfield, and then to Coffeyville. As we turned east across the hills of Cowley county the wind dropped, and from Winfield to Sedan the beauty of the blue stem country spread out around us.

Nature was in a pleasant mood the day she designed Chautauqua and Cowley counties. The hills roll like swells in the open ocean. Streams turn and twist in the troughs, bordered with the green of budding trees. As your eyes travel up or down the stream from the highway they are met with the wondrous beauty of redbud trees, bending gently forward over the current as if they were bowing in a watery minuet.

High up in the grassland, spotted here and there like diamonds on a velvet cloth, are man-made ponds whose waters gleam as bright blue in the sun as mountain lakes.

From high points in the hills one can see far ahead vistas of promised beauty shrouded in the mist of distance. At nearly every turn similar scenes reappear, changing slightly as one advances but only as friends change with time's advance, basically the same with just the shade of difference that heightens interest.

Herefords graze against a back-drop of oil derricks. Silos stand guard, symmetrical sentinels spaced across the sweep of grasslands. Nestling in safety beside these guardians stand the farmhouses of cattlemen.

The beauty of the Flint Hills in spring is the kind of beauty some women have: The smiling, kindly face that gives assurance of a peaceful mind and loving heart.

To drop down into the valley of Sedan after a drive across the western hills is the perfect homecoming.

Potential for Prosperity: Peaceful Trade Between Israel and Rest of Middle East

---

EXTENSION OF REMARKS
OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1950

Mr. SADOWSKI. Mr. Speaker, a very interesting article on trade and commerce in the Middle East appeared in the magazine Israel Speaks, the May 26 issue. It is my firm belief that through trade and commerce lies the road to peace and prosperity.

Mr. Nortman, the author of this article, is an economist on the staff of the Jewish Agency for Palestine, and is author of the agency's definitive brochure, Investing in Israel.

POTENTIAL FOR PROSPERITY: PEACEFUL TRADE BETWEEN ISRAEL AND REST OF MIDDLE EAST

(By P. Bernard Nortman)

From an economic viewpoint, Israel and the states of the Middle East complement each other to a very marked degree. The Arab countries produce many of Israel's needs, while Israel turns out products essential to the people of the Middle East.

The Middle East includes not only the Arab States (Egypt, Syria, Lebanon, Transjordan, Saudi Arabia, Yemen, Iraq), which at present carry on little or no trade with Israel, but also Turkey, Iran, Ethiopia, Aden and Cyprus, which at present—especially Turkey—carry on extensive trade with Israel.

When trade relations between Israel and the Arab States are resumed in the future, many areas of economic cooperation can be worked out—not only in the exchange of products, but for mutual assistance in developing agriculture, industries, banking, insurance and shipping, and in such public services as social hygiene and education for the Arab States.

NINETY MILLION PEOPLE

In the Middle East area live 90 million people, 80 percent to 90 percent of whom are tied to the soil as peasants, engaged in primitive agriculture, barely earning subsistence for themselves. Nevertheless, sharp though the contrast may be between a modern standard and their present way of life, these 90 million souls are potential customers for the fruits of modern industry. In Israel, on the other hand, only 20 percent of the people are engaged in agriculture, while 80 percent are involved in industry, commerce, trade and the professions.

The occupational distribution of the people of the Middle East has deep economic significance. First, since the Arab countries produce the same things, mainly food and raw materials, they have little need to trade with each other. This is borne out by the relatively little trade, with few exceptions, that now exists among them.

Second, although the Arabs do not have to trade with each other, Israel can provide a large market for middle-eastern food and raw materials, with which the demands of its population and industries can be met. What can the Arab countries receive in return from Israel? The answer is: A vast variety of semi-finished products, machinery and finished consumers' goods. Even with the low subsistence level of the Middle East, there are at present millions of actual customers in this area able to pay for goods.

The accompanying chart indicates the type of trade which Israel and other Middle East nations can carry on with each other. For example, Israel can get grains, leather, manganese, iron ore, oil, phosphate rock from Egypt, while Egypt can buy a whole variety of metal products, diamonds, shoes, chemicals, pharmaceuticals and citrus fruits from Israel. It is possible to multiply this one example many times over for each of the Middle East countries.

Third, trade between Israel and the rest of the Middle East would help alleviate the foreign-exchange difficulties which exist in all these countries.

Beneficial as the exchange of raw materials and food from the Arab countries for finished products from Israel would be to the economy of each, economic relations between the two can achieve even higher goals. These are countries, which, compared with American standards, economically are still in the eighteenth century. Each could help bring the other up to modern standards—Israel, by offering its skilled and professional labor, her neighbors, their food, raw materials, and vast potential market. Thus trade between Israel and the other Middle East countries is a natural. Furthermore, the people everywhere behind the borders, are eager for resumption of this trade.

RAISING SIGHTS

Another point: It is a well-known fact that the largest volume of foreign trade is carried on not between raw-material-producing countries and manufacturing countries, but between highly industrialized nations. America's trade is greater with Great Britain and France than with raw-material-producing nations.

Nations which produce only raw materials usually have a low standard of living and cannot afford to import manufactured products in quantities sufficient to raise this generally low standard of living. At present most of the manufactured goods that the Arab countries import go to a very small percentage of the population. The goal to aim for in trade between Israel and her neighbors is not merely an exchange of currently produced goods, but an industrialized Middle East and an improvement in the standard of living which would bring all sections of the population up to modern levels.

At present, the huge local demand for Israel-manufactured goods created by the tremendous increase in Israel's population, leaves only a small portion for export. To supply both the domestic and export markets, Israel must modernize and expand her industries on an efficient, technically modern low-cost basis.

New additional capital, especially foreign capital, has an opportunity to go in now to build up Israel industry so that when Near East trade is resumed in the hoped-for near future, goods can pour forth to the millions in the Middle East who cry out for them.

PALESTINE TRADE WITH MIDDLE EAST

(Major items only, based on 1944–45 figures)

Imports from

Egypt: Rice, wheat, and other grains; cigarettes, raw cotton, fibers and hairs; molasses; glassware; wool yarn and textiles; flax, hemp and jute, leather; books and other printed matter.

Saudi Arabia: Camels, sheep, other livestock; hides and skins.

Iraq: Barley and other grains; sheep and other livestock; fruit juices; dates; crude petroleum; linseed; hides and skins.

Iran: Legumes and nuts; dried fruit; tombac leaves (chewing tobacco); crude petroleum; hides, skins, furs; carpets; motor fuel.

Syria and Lebanon: Barley, wheat, and other grains; livestock; dairy products; apples, other fresh fruit, nuts; potatoes and other fresh vegetables; raisins, oilseed; tree trunks and branches; agricultural seeds; wood products; cotton piece goods, silk crepe; rayon fabrics; cordage and twine; cloaks and wearing apparel.

Turkey: Cake meal and oilseed; sheep and other livestock; fruits, nuts, fresh and frozen fish; dried fruit, olives; tobacco and cigarettes; wood, timber, linseed oil.

Transjordan: Barley, wheat, and other grains; legumes; sheep and livestock; bananas, grapes, other fruits; tomatoes and other fresh vegetables; raisins; clay; raw wool; hides and skins; chemical fertilizers.

Exports to

Egypt: Oranges, diamonds, plateglass; refined fuel and motor oils; iron, steel, other metal products; industrial machinery; wool, silk, rayon, leather, other apparel; chemicals, drugs, and medicines; paints, dyes, and varnishes; leather bags, etc., leather goods.

Saudi Arabia: Oranges, plate glass, shoes, other footwear; brass, copper products, insulated cable, wire.

Iraq: Fruit juices, liquors, diamonds; chocolates, sweets, starch, glucose; glassware, plate glass, stoves, burners; iron and steel products, cotton textiles; industrial machinery, shoes; socks, stockings, wool, other apparel, lamps; tanned hides, leather, toiletries, matches.

Iran: Fruit juices, liquors, olive oil, plate glass; mirrors, glassware, diamonds, safes, textiles; door, window fittings, stoves, burners; iron and steel products, drugs, medicines; tanned hides and leather, leather products; handbags, shoes, other footwear, stationery; wearing apparel, paints, dyes, varnishes.

Syria and Lebanon: Oranges, grapefruit, melons, tobacco, cocoa; cocoa butter, raw

wool, refined fuel; motor oils, bricks, earthenware, plate glass; mirrors, glassware, safes, stoves, batteries; electrical, iron, steel products; insulated pipes for wiring, cotton textiles; industrial machinery, socks, stockings; wearing apparel, underwear; fertilizers and chemicals; paints; dyes, and varnishes; tanned hides, leather, leather goods; toilet preparations and dentifrices; kerosene, motor fuels.

Turkey: Refined fuel and motor oils, kerosene; diamonds, asphalt, furs; razor blades; dry batteries; chemicals, motor fuel; essential oils.

Transjordan: Machinery, iron and steel products; shoes, other footwear, textiles; wearing apparel, legumes, wheat flour; melons, oranges, dried figs, sesame seeds; olive oil, other edible oils, olives, soap; potatoes, other fresh vegetables, sweets; cement, plate glass, lamp glass, glassware; wood tables, other furnishings, kerosene; motor spirits, tanned hides, sole leather; matches, toilet preparations, stationery.

The Jerusalem Question

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1950

Mr. MULTER. Mr. Speaker, the United Nations Trusteeship Council is scheduled to begin its seventh session today at Lake Success. One of the most important problems on the Council's agenda is the Jerusalem question. This question can be reasonably solved at the present session of the Trusteeship Council. I am optimist enough to believe that such a solution is possible, and with it we shall remove a major obstacle in the way of peace in the Near East.

Just a week ago, on May 24, a group of 285 distinguished Americans, including many outstanding Christian religious leaders throughout the country, submitted a proposal to President Truman for a solution of the Jerusalem question and the protection of the holy places. They suggest the establishment of a United Nations Commission, comprised of the representatives of the various religious faiths, as an international curatorship over the holy places.

The proposal of the 285 American leaders merits the fullest attention and consideration by the Trusteeship Council, the United States Government and its representatives in the United Nations, and the members of both Houses of Congress. The ideas and proposals contained therein are not contradictory to the plans advanced by the Government of Israel, but are supplementary thereto. Both should serve as a practical solution of the Jerusalem problem. In fact, a solution of this grave problem at this time would be a great moral boost to the work and the efforts of the United Nations in other fields of international activity.

Mr. Speaker, I am placing in the RECORD the statement presented to President Truman and the names of the 285 sponsors of this proposal and commend it to the attention of all my colleagues:

MAY 24, 1950.

The Honorable HARRY S. TRUMAN,
President of the United States,
The White House, Washington, D. C.

DEAR MR. PRESIDENT: The undersigned have the honor to submit to you a proposal for the settlement of the grave problem confronting the United Nations, and, therefore, the United States, respecting the protection of the holy places in the Jerusalem area.

This proposal is submitted to you in behalf of the appended list of 285 distinguished Americans, who have studied this question for some time. They include 19 Protestant Episcopal bishops, 18 Methodist bishops, 6 Evangelical bishops, 1 African Methodist Episcopalian bishop, 42 heads of Christian theological seminaries, 7 college presidents, 20 college professors, 9 writers and editors, 77 Protestant Episcopal leaders, 25 Unitarian leaders, 26 leaders of other denominations, and 35 outstanding personalities in various walks of life.

Our proposal is that there should be established an international curatorship for the holy places throughout the area formerly known as Palestine, to be discharged by a United Nations commission composed of the representatives of the Catholic, Protestant, Jewish, Greek Orthodox, and Moslem faiths.

The function of such a commission would be—

(a) To authenticate the holy sites in Palestine.

(b) To be responsible for their preservation.

(c) To insure free access to them at all times.

(d) To supervise the restoration of such holy sites, if any, as may have been damaged in the Palestine war.

The international commission shall have the power to employ guards.

It shall be responsible to the Security Council.

Respecting the political administration of the Jerusalem area, we propose that there shall be established two zones—

(a) A Jewish zone comprising those sections in which Jews now live and have lived since 1860, to be integrated with the Jewish State.

(b) An Arab zone, comprising the areas in which Arabs now live and have lived since 1860, to be integrated with an Arab State.

We offer this plan as a substitute for the proposals now pending before the Trusteeship Council of the United Nations. We ask that the principle embodied in the proposal for an international curatorship be accepted as the basis for American policy with a view to the later presentation of a statute to the United Nations based on this principle.

The proposal for an international curatorship for the holy places was initially submitted to the last session of the General Assembly of the United Nations by 15 American leaders. Neither this nor any proposal received serious consideration by the General Assembly in the unfortunate atmosphere which produced the resolution of last December.

We bring this proposal to your attention now because events have amply demonstrated that the internationalization of the Jerusalem area through a corpus separatum, in the sense of the December 1949 resolution, is both unfair and unfeasible. The statute which has been drafted by the Trusteeship Council can never be carried out, not only because Jordan and Israel both oppose it, but primarily because the statute is based on neither a legal nor a practical reality.

Under the statute the United Nations is called upon to establish an international city in an area of more than 100 square miles with a population of 160,000 in order to protect 36 holy places concentrated in an area of less than 1½ square miles.

In a statute consisting of 43 articles, there are precisely 2 articles dealing with the holy places, religious buildings, and sites holy place, religious buildings, and sites shall be protected and freedom of access to them secured.

It is noteworthy that under the status quo of May 14, 1948, the holy places, so recognized, were limited to 10 in an area of 1 square mile. Not one of these places was in the area held by Israel. In the course of its deliberations of recent months the Trusteeship Council prepared and accepted a new definition of holy places under which the original 10 were augmented by 26. Of the 36 sites now designated as holy places by the Trusteeship Council, only 2 are within the Israel zone of Jerusalem. The remainder are largely concentrated behind the walls of the old city, held by the Government of Jordan.

It is to protect these 36 sites that the United Nations, under the statute drafted, is called upon to establish and maintain a vassal United Nations city or state. There is no provision in the Charter for such an international enclave. The Charter, in describing the purposes of the trusteeship system, declared that its purpose is "to promote the political, economic, social and educational advancement of the inhabitants of the trust territories in a progressive development toward self-government and independence, as may be appropriate to the particular circumstances of each territory and its peoples and the freely expressed wishes of the peoples concerned."

The draft statute not only fails to conform to this provision, it would turn the clock backward. It provides that the internationalized area shall be under a governor, appointed by the United Nations, subject neither to the legislative council to be set up, nor to the courts. The populations of the city are to be represented through a legislative council of 25 elected members and 15 appointed members. In a city where the Jews constitute the overwhelming majority, with a population of 110,000, the Moslems more than 40,000, the statute provides that the Moslem, Jewish, and Christian communities each shall elect eight members, and those who adhere to none of these communities, one. In addition, the three religious communities are to be permitted to name 15 members on a ratio to be decided by the governor.

No provision whatsoever is made for the economic welfare of the 160,000 inhabitants of the Jerusalem area. The economic aspects of the situation are dealt with in one article of the statute, whereby the governor to be appointed by the United Nations is empowered to take prompt steps "to formulate with the advice and help of such experts as may seem to him desirable the economic and financial principles upon which the government of the city is to be based." The governor is given 6 months from the time of his appointment to submit to the Trusteeship Council a plan for the economic and financial organization of the city.

What the statute entirely ignores is (1) that the city of Jerusalem is divided into two zones, and is operating as such, i. e., an Arab zone under the command of King Abdulla of Jordan and a Jewish zone now fully integrated into the State of Israel: (2) that neither the Arab nor Jewish community is now or ever has been self-sustaining.

Virtually the entire Arab population of Jerusalem, some 50,000, live behind the walls of the old city. Not a single Jew is to be found in the old city of Jerusalem.

For the Arab population, internationalization with its so-called autonomy, spells dis-

integration. Under the mandatory government the Arabs were the special concern of Britain which spent considerable sums on Arab education and health services and the modernization of its agricultural methods.

Under the draft statute no substitute for the help of the former mandatory power has been arranged. Today, the local Arab authorities in the old city are unable to maintain educational and health services on their own or to insure employment. Only full and recognized integration with a state responsible for its welfare can save the Arab population of the old city from disaster.

Jewish Jerusalem is a new city, 90 years old, initiated in 1860 and developed by Jewish funds and efforts. Under the mandate the economic progress of Jewish Jerusalem was made possible by the fact that it was the home of the central Jewish authorities, thus creating employment; that it received funds from tourist traffic; and that direct contributions were made by Jewish funds abroad to various institutions in Jerusalem.

Today, the Government of Israel has assumed responsibility for the welfare of the new city. Saved during the war by Israel efforts, the Jewish community owes its rehabilitation to the Israeli Government and people. The latter have assumed responsibility for repairing war damage, creating employment, establishing industry, providing an essential public-works program, and assuring security.

To maintain the entire corpus separatum the United Nations has voted the sum of $8,000,000.

To meet the most essential need of Jewish Jerusalem alone, the State of Israel, operating on an austerity basis, has already appropriated more than $21,000,000. The municipal budget for Jewish Jerusalem for the period 1949–50 is IL £1,500,000 ($4,200,000). The income of the municipality is estimated at IL £520,000 ($1,456,000), leaving a deficit of more than IL £900,000. The Israeli Government has appropriated IL £900,000 ($2,520,000) to meet that deficit. In addition, it has appropriated IL £4,700,000 ($13,160,000) for administrative, police, and public services; IL £5,500,000 ($15,400,000) for enlargement of the water supply, housing, repair of war damage, credits for the purchase of raw materials for local industries, and so forth, a total of $21,080,000.

Under the draft statute Israel and Jordan, both, are asked to move out of the picture. But no provision is made for the United Nations to assume the responsibilities of which these governments are to be divested. The resultant economic chaos can be envisaged.

Nor is this the total story. In view of the opposition of both Jordan and Israel to the draft statute, the United Nations would have to impose it. This would require a large police or military force, which the United Nations does not have.

For the administration of a peaceful city the Israeli Government employs 400 policemen at a cost of $4,400 annually to maintain 1 policeman and his equipment, but emphasizes the need for rural police and frontier police. Under the armistice agreement, 3,200 soldiers maintain peace and security as between Israel and Jordan.

It is clear from the foregoing that the objective of protecting holy places is best served by a plan which is acceptable to both peoples and in conformity with the provisions of the Charter. The principle of an international regime, applied solely to the protection of the holy places, on which the proposal for an international curatorship is based, is likely to find such acceptance.

What is equally significant, it would satisfy the essential purposes of the United Nations. For it offers protection to the holy places, their preservation, and access to them, not only in the Jerusalem area, but throughout the Arab and Jewish territories. It removes the holy sites from the realm of factional dispute. It establishes an effective deterrent to desecration. At the same time, it assures that the two communities shall be enabled to develop normally and in freedom.

A United Nations commission, representing the principal interested faiths, and backed by the Security Council, is the best possible safeguard against any misuse of the holy sites. For any breach of the agreements respecting the holy places would automatically invoke the action of the Security Council. That in itself would serve as a potent deterrent.

By permitting the integration of the Arab and Jewish zones with the Jewish state and an Arab state, the United Nations puts responsibility for the well-being of 160,000 human beings where it belongs. This is a responsibility which the United Nations is in no position to discharge but which, nonetheless, must be discharged.

The settlement of the Jerusalem question along lines which reflect the realities of the situation will go far toward resolving the problems which still remain. Arabs and Jews, living side by side, in a peaceful Jerusalem, can do more to hasten peace between Israel and the Arab world than any fiat of an international body.

It is not in the interests of the United Nations to continue to press for a statute which must remain one of record and not of fact. The plan submitted by the signatories is feasible, provides the foundation for lasting peace, and, if adopted, will redound to the prestige of the United Nations.

You, Mr. President, who played so large a part in bringing about the resolution of November 1947, establishing the partition of Palestine, can help to put an end to unnecessary controversy by authorizing the American delegation to take the leadership in resolving this question.

The record of our country on this issue is a good one. It has opposed the internationalization plan on the score of its unfeasibility. More than that is now required, namely, leadership in espousing a constructive proposal as a substitute for an unjust and unworkable one.

It is our hope that, under your direction, the United States will now sponsor a democratic and practical solution such as we believe the international curatorship proposal to be.

Respectfully submitted.

SPONSORS OF PROPOSAL FOR THE ESTABLISHMENT OF AN INTERNATIONAL CURATORSHIP FOR THE HOLY PLACES SUBMITTED TO PRESIDENT HARRY S. TRUMAN

PROTESTANT EPISCOPAL BISHOPS

Rt. Rev. Douglas Henry Atwill, Protestant Episcopal bishop of North Dakota, Fargo, N. Dak.; Rt. Rev. Carl Morgan Block, Protestant Episcopal bishop of California, San Francisco, Calif.; Rt. Rev. Wallace E. Conkling, Protestant Episcopal bishop of Chicago, Chicago, Ill.; Rt. Rev. Henry H. Daniels, Protestant Episcopal bishop of Montana, Helena, Mont.; Rt. Rev. Angus Dun, Protestant Episcopal bishop of Washington, Washington, D. C.; Rt. Rev. Goodrich Robert Fenner, Protestant Episcopal bishop of Kansas, Topeka, Kans.; Rt. Rev. Charles Kendall Gilbert, Protestant Episcopal bishop of New York, New York, N. Y.; Rt. Rev. Charles F. Hall, Protestant Episcopal bishop of New Hampshire, Concord, N. H.; Rt. Rev. J. Thomas Heistand, Protestant Episcopal bishop of Harrisburg, Harrisburg, Pa.; Rt. Rev. Henry W. Hobson, Protestant Episcopal bishop of southern Ohio, Cincinnati, Ohio; Rt. Rev. Charles A. Mason, Protestant Episcopal bishop of Dallas, Dallas, Tex.; Rt. Rev. Arthur W. Moulton, Protestant Episcopal bishop of Dallas, Dallas, Tex.; Rt. Rev. Norman B. Nash, Protestant Episcopal bishop of Massachusetts, Boston, Mass.; Rt. Rev. George Ashton Oldham, Protestant Episcopal bishop of Albany (retired), Washington, D. C.; Rt. Rev. Austin Pardue, Protestant Episcopal bishop of Pittsburgh, Pittsburgh, Pa.; Rt. Rev. Lambe Edward Parsons, Protestant Episcopal bishop of California (retired), San Francisco, Calif.; Rt. Rev. Noble C. Powell, Protestant Episcopal bishop of Maryland, Baltimore, Md.; Rt. Rev. Frank Archibald Rhea, Protestant Episcopal bishop of Idaho, Boise, Idaho; Rt. Rev. John Moore Walker, Protestant Episcopal bishop of Atlanta, Atlanta, Ga.

METHODIST BISHOPS

The Very Reverend James C. Baker, Methodist bishop of southern California, Los Angeles, Calif.; the Very Reverend Fred Pierce Corson, Methodist bishop of Pennsylvania, Philadelphia, Pa.; the Very Reverend Ralph S. Cushman, Methodist bishop of Minnesota, St. Paul, Minn.; the Very Reverend Dana Dawson, Methodist bishop of Kansas, Topeka, Kans.; the Very Reverend Ivan Lee Holt, Methodist bishop of Missouri, St. Louis, Mo.; the Very Reverend E. W. Kelly, Methodist bishop of Missouri, St. Louis, Mo.; the Very Reverend Gerald Kennedy, Methodist bishop of Oregon, Portland, Oreg.; the Very Reverend Paul B. Kern, Methodist bishop of Tennessee, Nashville, Tenn.; the Very Reverend John Wesley Lord, Methodist bishop of Massachusetts, Boston, Mass.; the Very Reverend Francis J. McConnell, Methodist bishop of New York (retired), Lucasville, Ohio; the Very Reverend H. Clifford Northcott, Methodist bishop of Wisconsin, Madison, Wis.; the Very Reverend G. Bromley Oxnam, Methodist bishop of New York, New York, N. Y.; the Very Reverend Glenn R. Phillips, Methodist bishop of Colorado, Denver, Colo.; the Very Reverend Clare Purcell, Methodist bishop of Alabama, Birmingham, Ala.; the Very Reverend Marshall R. Reed, Methodist bishop of Michigan, Detroit, Mich.; the Very Reverend Alexander P. Shaw, Methodist bishop of Maryland, Baltimore, Md.; the Very Reverend Donald H. Tippett, Methodist bishop of northern California, San Francisco, Calif.; the Very Reverend William T. Watkins, Methodist bishop of Kentucky, Louisville, Ky.

BISHOPS OF THE EVANGELICAL UNITED BRETHREN CHURCH

Bishop A. R. Clippinger, Evangelical bishop of Ohio, Dayton, Ohio; Bishop F. L. Dennis, Evangelical bishop of Indiana, Indianapolis, Ind.; Bishop E. W. Praetorius, Evangelical bishop of Minnesota, St. Paul, Minn.; Bishop C. H. Stauffacher, Evangelical bishop of Missouri, Kansas City, Mo.; Bishop I. D. Warner, Evangelical bishop of California, Puente, Calif.; Bishop V. O. Weidler, Evangelical bishop of Missouri, Kansas City, Mo.

BISHOPS OF THE AFRICAN METHODIST EPISCOPALIAN CHURCH

Bishop Reverdy G. Ransom, African Methodist Episcopalian bishop of Ohio, Wilberforce, Ohio.

HEADS OF THEOLOGICAL SEMINARIES

Dr. I. H. Alston, Allen University Divinity School (AME), Columbia, S. C.; Dr. Edward R. Bartlett, Iliff School of Theology (Methodist), Denver, Colo.; Dr. Conrad Bergendoff, Augustana Theological Seminary (Lutheran), Rock Island, Ill.; Dr. W. Barnett Blakemore, Jr., Disciples of Divinity House (Disciples), University of Chicago, Chicago, Ill.; Dr. Ahva J. C. Bond, dean, Alfred University School of Theology (Seventh Day Baptist), Alfred, N. Y.; Dr. Stephen J. Corey, acting president, College of the Bible (Disciples), Lexington, Ky.; Dr. Raymond L. Cramer, Simpson Bible Institute (Christian and Missionary), Seattle, Wash.; Dr. E. E. Flack, Hamma Divinity School (United Lutheran) of Wittenberg College, Springfield, Ohio; Dr. Sandford Fleming, Berkeley Baptist Divinity School (Protestant Episcopal), Berkeley, Calif.; Dr. Eugene B. Hawk, dean, Perkins School of Theology, Southern Methodist University, Dallas, Tex.; Dr. J. Arthur Heck, president, Evangelical School of Theology (Evangelical United Brethren), Reading, Pa.; Dr. Bernard J. Holm, Wartburg Theological Seminary (American Lutheran), Dubuque, Iowa; The Very Reverend Alden Drew Kelley, dean, Seabury Western Theological Seminary (Protestant Episcopal), Evanston, Ill.; Dr. M. B. Lanier, Simmons University (Baptist), Louisville, Ky.; Dr. Bernard M. Loomer, Divinity School (Northern Baptist), University of Chicago, Chicago, Ill.; Dr. Arthur Cushman McGiffert, Jr., president, Chicago Theological Seminary (Congregationalist), Chicago, Ill.; Dr. Walter Muelder, Boston University School of Theology (Methodist), Boston, Mass.; Dr. Algoth Ohlson, North Park College Theological Seminary (Evangelical), Chicago, Ill.; Dr. O. R. Reuben, Morris College, Theological Department (Northern Baptist), Sumter, S. C.; Dr. Harry V. Richardson, president, Gammon Theological Seminary (Methodist), Atlanta, Ga.; Dr. Ralph W. Riley, American Baptist Theological Seminary (American Baptist), Nashville, Tenn.; Dr. Thomas D. Rinde, Western Theological Seminary (United Lutheran), Fremont, Nebr.; Dr. Wallace W. Robbins, Meadville Theological Seminary (Unitarian), Chicago, Ill.

Dr. Walter N. Roberts, president, Bonebrake Theological Seminary (Evangelical United Brethren), Dayton, Ohio; Dr. Lawrence Rose, General Theological Seminary (Protestant Episcopal), New York, N. Y.; Dr. George W. Sadler, acting president, Baptist Theological Seminary, Zurich, Switzerland, secretary, Foreign Mission Board, Southern Baptist Conference; Dr. Wilbour Eddy Saunders, Colgate Rochester Divinity School (Northern Baptist), Rochester, N. Y.; Dr. F. W. Schroeder, Eden Theological Seminary (Evangelical Reformed), Webster Groves, Mo.; Dr. Henry H. Shires, the Church Divinity School of the Pacific (Protestant Episcopal), Berkeley, Calif.; Dr. Lorin J. Sieck, Concordia Seminary (Lutheran), St. Louis, Mo.; Dr. Willard L. Sperry, Harvard Divinity School (undenominational), Cambridge, Mass.; Dr. Russell Henry Stafford, the Hartford Seminary Foundation (interdenominational), Hartford, Conn.; Dr. W. R. Strassner, Shaw University School of Religion (National Baptist), Raleigh, N. C.; Dr. Charles L. Taylor, Jr., Episcopalian Theological School (Protestant Episcopal), Cambridge, Mass.; Dr. G. H. J. Thiboudeaux, president, Lampton Theological School, Campbell College (African Methodist Episcopal), Jackson, Miss.; Dr. J. S. Ladd Thomas, dean, Theological School, Temple University, Philadelphia, Pa.; Dr. Harold W. Tribble, Andover Newton Theological School (Northern Baptist), Newton Centre, Mass.; Dr. Harry Trust, Bangor Theological Seminary (Congregational Christian), Bangor, Maine; Rev. Percey L. Urban, dean, Berkeley Divinity School (Protestant Episcopal), New Haven, Conn.; Dr. Guy L. Vannah, New England School of Theology (Advent Christian), Brookline, Mass.; Dr. George Ross Wells, dean, Hartford School of Religious Education, Hartford Seminary Foundation, Hartford, Conn.; Dr. Alexander C. Zabriskie, dean, Protestant Episcopal Seminary, Alexandria, Va.

PROTESTANT EPISCOPALIAN CLERGYMEN AND LAY LEADERS

Rev. Melvin Abson, East Syracuse, N. Y.; Rev. Roger W. Bennett, Newton Lower Falls, Mass.; Rev. E. A. De Bordenave, Tappahannock, Va.; Rev. Dillard H. Brown, Washington, D. C.; Mrs. John K. Burleson, Berkeley, Calif.; John K. Burleson, Jr., Berkeley, Calif.; Katharine A. Burleson, Berkeley, Calif.; Miss Gertrude C. Bussy, Baltimore, Md.; Rev. Thomas H. Carson, Texarkana, Ark.; Rev. Thaddeus Clapp, Worcester, Mass.; Rev. David R. Covell, Jr., Cleveland, Ohio; Miss Grace A. Crosby, West Barnstable, Mass.; Rev. Gardiner M. Day, Cambridge, Mass.; Rev. George H. Easter, St. Louis, Mo.; Dr. John H. Fitzgerald, secretary, the House of Bishops of the Protestant Episcopal Church, Brooklyn, N. Y.; Prof. Joseph Fletcher, Cambridge, Mass.; Rev. Kenneth Ripley Forbes, Philadelphia, Pa.; Rev. George Lorenzo Grambs, East Orange, N. J.; Rev. William Grime, Great Neck, N. Y.; Rev. John M. Groton, Westerly, R. I.; Beatrice M. Hamilton, Boston, Mass.; Rev. Robert Hampshire, Farmingdale, N. Y.; Rev. Robert Hatch, Waterbury, Conn.; Rev. William Heath, Buffalo, N. Y.; Rev. F. Douglas Henderson, Minneapolis, Minn.; The Very Reverend Louis M. Hirshon, dean, Christ Church Cathedral, Hartford, Conn.; Davis R. Hobbs, Tunkhannock, Pa.; Rev. J. Ogden Hoffman, Jr., Monrovia, Calif.; Rev. Kenneth DeP. Hughes, Cambridge, Mass.; Rev. Philip W. Hull, Martins Ferry, Ohio; Rev. David R. Hunter, Boston, Mass.; Miss Ruth Jackson, Littleton, N. H.; Rev. Gordon M. Jones, Toledo, Ohio; Rev. Orrin F. Judd, Upper Montclair, N. J.; the Very Reverend John M. Krumm, dean, St. Paul's Cathedral, Los Angeles, Calif.; Mrs. Mary Leakey, Hawthorne, N. J.; Rev. Henry Lewis, Ann Arbor, Mich.; Rev. Charles W. Lowry, Chevy Chase, Md.; Rev. Hugh McCandless, New York, N. Y.; Rev. Robert Magill, Lynchburg, Va.; Rev. William H. Marmion, Birmingham, Ala.; Miss Lucy Randolph Mason, Atlanta, Ga.; Mrs. Mortimer Matthews, Glendale, Ohio; Mrs. Stanley Matthews, Tucson, Ariz.; Rev. Randolph C. Miller, Berkeley, Calif.; Rev. A. T. Mollegen, Alexandria, Va.; Mrs. John F. Moors, Brookline, Mass.; Rev. J. Brooke Mosley, Wilmington, Del.; Deaconess Elizabeth Newbold, Burlington, N. J.; Rev. Thomas F. Opie, Great Barrington, Mass.; Rev. W. Norman Pittenger, New York, N. Y.; Rev. Richard Greeley Preston, Worcester, Mass.; Robert J. Riddle, Philadelphia, Pa.; Rev. Robert N. Rodenmayer, Northampton, Mass.; Rev. Wallace E. Rollins, Sweet Briar, Va.; Rev. William B. Schmidgall, Tunkhannock, Pa.; Miss Vida D. Scudder, Wellesley, Mass.; Rev. Oscar J. F. Seitz, Gambier, Ohio; Rev. Massey H. Shepherd, Jr., Cambridge, Mass.; Rev. Arthur M. Sherman, New York, N. Y.; Mrs. Mary K. Simkhovitch, New York, N. Y.; Rev. C. H. Simpson, New York, N. Y.; Rev. Robert E. Smith, Trenton, N. J.; Rev. C. E. Snowden, Philadelphia, Pa.; Rev. William B. Sperry, Detroit, Mich.; Miss Lucy C. Sturgis, Boston, Mass.; Rev. Malcolm Taylor, Brookline, Mass.; Mrs. William G. Thayer, Boston, Mass.; Rev. Cornelius P. Trowbridge, Morristown, N. J.; Rev. Luther Tucker, Cincinnati, Ohio; Rev. Charles E. Tuke, Lansdowne, Pa.; William C. Turpin, Macon, Ga.; Rev. William M. Weber, Littleton, N. H.; Rev. Theodore O. Wedel, Washington, D. C.; Rev. Walter N. Welsh, Syracuse, N. Y.; Rev. Bradford Young, Manchester, N. H.; Mrs. Robert Zava, Laguna Beach, Calif.

COLLEGE PRESIDENTS

Dr. A. H. Compton, Washington University, St. Louis, Mo.; Dr. George L. Cross, University of Oklahoma, Norman, Okla.; Dr. William W. Edel, Dickinson College, Carlisle, Pa.; Dr. Bryn J. Hovde, New School for Social Research, New York, N. Y.; Dr. D. W. Malott, University of Kansas, Lawrence, Kans.; Dr. Henry B. Trimble, Emory University, Emory University, Ga.; Dr. Charles J. Turck, Macalester College, St. Paul, Minn.

UNITARIAN CLERGYMEN

Rev. Waldemar W. Argow, Baltimore, Md.; Rev. Joseph Barth, Miami, Fla.; Rev. Dr. Leon M. Birkhead, New York, N. Y.; Rev. Raymond B. Bragg, Boston, Mass.; Rev. Edward A. Cahill, Nashua, N. H.; Dr. Dale DeWitt, director, Middle Atlantic States Unitarian Association, New York, N. Y.; Dr. Frederick May Eliot, president, American Unitarian Association, Boston, Mass.; Rev. Samuel Atkins Eliot, Cambridge, Mass.; Rev. Norman D. Fletcher, Montclair, N. J.; Rev. Donald Harrington, New York, N. Y.; Rev. Ralph N. Helverson, Ithaca, N. Y.; Rev. Dr. John Haynes Holmes, New York, N. Y.; Rev. Duncan Howlett, Boston, Mass.; Rev. Charles R. Joy, New York, N. Y.; Rev. Robert Killam, Cleveland, Ohio; Rev. Leon R. Land, Flint, Mich.; Rev. John G. MacKinnon, Wilmington, Del.; Rev. Jack Mendelsohn, Jr., Rockford, Ill.; Rev. Wilburn B. Miller, Cambridge, Mass.; Rev. Leslie T. Pennington, Chicago, Ill.; Rev. Palfrey Perkins, Boston, Mass.; Rev. Charles Francis Potter, New York, N. Y.; Dr. Curtis W. Reese, dean, Abraham Lincoln Center, Chicago, Ill.; Rev. Alson H. Robinson, Princeton, N. J.; Rev. Hugh Weston, Natick, Mass.

RELIGIOUS LEADERS (MISCELLANEOUS)

Rev. H. Parr Armstrong, Fort Worth, Tex.; Dr. Roger D. Bosworth, Columbus, Ohio; Rev. Rogers T. Burton (Congregational), Irvington, N. J.; Rev. Charles H. Campbell, Flushing, N. Y.; Rev. Donald B. Cloward, executive secretary, the Northern Baptist Convention, New York, N. Y.; Rev. Henry H. Crane (Methodist), Detroit, Mich.; Rev. E. F. Farnham, Los Angeles, Calif.; Rev. Dr. Theodore Ainsworth Greene, New Britain, Conn.; Rev. Harvey W. Hollis, Executive Secretary, Federation of Churches of Christ in Albany and vicinity, Albany, N. Y.; Rev. Dr. Roy M. Houghton, New Haven, Conn.; Mrs. Esther Holmes Jones, Philadelphia, Pa.; Rev. Donald G. Lothrop, Boston, Mass.; Rhoda E. McCulloch, New York, N. Y.; Rev. Dr. Charles S. MacFarland, Mountain Lakes, N. J.; Rev. Dr. William Pierson Merrill, New York, N. Y.; Rev. Frank N. Miner, Executive Secretary, Flint Council of Churches, Flint, Mich.; Rev. Dr. Wilhelm Pauck, Chicago, Ill.; Rev. Rockwell Hammon Potter, Hartford, Conn.; Rev. Ralph H. Read, Maplewood, N. J.; Rev. Dr. Paul Scherer, New York, N. Y.; Rev. Dr. G. Vaughn Shedd, Boston, Mass.; Rev. Dr. Harold Paul Sloan, Philadelphia, Pa.; Dr. Norris L. Tibbetts (Presbyterian), New York, N. Y.; Dr. Joseph King Vivien (Methodist), Nashville, Tenn.; Whitney S. K. Yeaple, Executive Secretary, New Hampshire Council of Churches and Religious Education, Concord, N. H.; Rev. Dr. Reuben K. Youngdahl, Minneapolis, Minn.

COLLEGE PROFESSORS

Dr. James Luther Adams, University of Chicago, Chicago, Ill.; Prof. John L. Childs, Columbia University, New York, N. Y.; Prof. George S. Counts, Columbia University, New York, N. Y.; Prof. Clyde Eagleton, New York University, New York, N. Y.; Prof. Henry Pratt Fairchild, New York University, New York, N. Y.; Prof. Leland M. Goodrich, Brown University, Providence, R. I.; Prof. Paul L. Hanna, University of Florida, Gainesville, Fla.; Dr. Georgia Harkness, Garrett Bible Institute, Evanston, Ill.; Dr. S. Ralph Harlow, Smith College, Northampton, Mass.; Dr. Alvin Johnson, New School for Social Research, New York, N. Y.; Prof. Horace M. Kallen, New School for Social Research, New York, N. Y.; Dr. Frederick D. Kershner, School of Religion, Butler University, Indianapolis, Ind.; Dr. Halford E. Luccock, Yale Divinity School, Yale University, New Haven, Conn.; Prof. Reinhold Niebuhr, Union Theological Seminary, New York, N. Y.; Dr. Harry A.

Overstreet, Mill Valley, Calif.; Dr. Thomas Clark Pollock, Dean, Washington Square College, New York, N. Y.; Prof. Harris Franklin Rall, Evanston, Ill., Dr. H. Shelton Smith, Duke University, Durham, N. C.; Dr. Leonard A. Stidley, Graduate School of Theology, Oberlin College, Oberlin, Ohio; Dr. Henry U. Wieman, University of Oregon, Eugene, Oreg.

WRITERS AND EDITORS

William Rose Benet, New York, N. Y.; Dr. Henry Seidel Canby, editor, Saturday Review of Literature, New York, N. Y.; Marshall N. Dana, editor, Oregon Journal, Portland, Oreg.; Oscar Hammerstein II, New York, N. Y.; Spencer D. Irwin, editor, Cleveland Plain Dealer, Cleveland, Ohio; Freda Kirchwey, editor, the Nation, New York, N. Y.; Archibald MacLeish, Boston, Mass.; Dr. Thomas Mann, Pacific Palisades, Calif.; Rex Stout, Brewster, N. Y.

DISTINGUISHED AMERICANS (MISCELLANEOUS)

Dean Alfange, New York, N. Y.; Mrs. David Alter, Pittsburgh, Pa.; Mrs. Sherwood Anderson, New York, N. Y.; Dr. Henry A. Atkinson, secretary, the Church Peace Union, New York, N. Y.; Dr. Frederick T. Bertram, Willimantic, Conn.; J. M. Bialock, Columbia, S. C.; Mrs. Jeanetta Welch Brown, president, the National Council of Negro Women, Washington, D. C.; Dr. Hugh Chamberlin Burr, Rochester, N. Y.; Miss Elisabeth Christman, secretary, National Women's Trade Union League, Washington, D. C.; Bartley C. Crum, member, Anglo-American Commission of Inquiry, New York, N. Y.; Representative Helen Gahagan Douglas, Washington, D. C.; Dr. Clark M. Eichelberger, director, American Association for the United Nations, New York, N. Y.; Frank B. Frederick, Boston, Mass.; Mrs. Louise S. Freese, Sioux City, Iowa; Lloyd K. Garrison, New York, N. Y.; Dr. Charles Hartshorne, Chicago, Ill.; Sidney Hollander, Baltimore, Md.; Dr. John Paul Jones, president, National Peace Conference, Brooklyn, N. Y.; J. M. Kaplan, president, Welch Grape Juice Co., Westfield, N. Y.; John F. Lewis, Jr., Philadelphia, Pa.; Dr. Walter C. Lowdermilk, Berkeley, Calif.; Marshall McDuffie, New York, N. Y.; Dr. Victor Obenhaus, Chicago, Ill.; Rita Ochmann, Cleveland, Ohio; Mrs. G. Edgerton Parsons, New York, N. Y.; James G. Patton, president, Farmers Educational and Cooperative Union, Denver, Colo.; Judge Harry N. Peterson, St. Paul, Minn.; T. Edwin Quisenberry, Chicago, Ill.; Walter Reuther, president, United Automobile Workers of America, Detroit, Mich.; Quentin Reynolds, Longmeadow, Mass.; William Rosenblatt, vice president, Advisory Council, the Nation Associates, New York, N. Y.; James H. Sheldon, administrative chairman, Non-Sectarian Anti-Nazi League, New York, N. Y.; Mayor Paul H. Todd, Kalamazoo, Mich.; Dr. Charles Trexler, New York, N. Y.; Sumner Welles, Oxon Hill, Md.

In Fact Exposes $200,000,000 Advertising Kitty—Spurs Six Big Magazines To Join Anti-Welfare-State Smear Orgy—26,000,000 Readers Propagandized by Popular Weeklies, Plus Monthly Reader's Digest

---

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1950

Mr. SADOWSKI. Mr. Speaker, it is only too obvious to everyone that the Republicans have been engaged in a terrifying campaign of smear and vilification, the lowness of which we have never witnessed before.

Every low breed of character assassin—immoral and discredited ex-Communists, stool pigeons who are proven wife beaters and who deserted their small children—any hireling who will lie for money, is being used in this desperate campaign by the Republicans.

The injustice, misery, the broken careers and ruined reputations of decent courageous Americans, caused by these spiteful and unfounded charges, arouse our anger and indignation.

The method employed by these Republican accusers to injure or eliminate people who differ from them in their political views is nothing novel. It was used by the ancient Romans against early Christians. The guide will tell you an interesting story as he takes you through the catacombs at the Franciscan Monastery in the city of Washington, and of course we all remember how the Nazis used it on a gigantic scale against the Jews. That is why it is important that everyone read the following article that appeared in the little, but fearless, magazine, In Fact, on May 29, 1950. It clearly shows how the Republicans, big business, and big propaganda are all tied in together:

TWO HUNDRED MILLION DOLLAR ADVERTISING KITTY SPURS SIX BIG MAGAZINES TO JOIN ANTI-WELFARE-STATE SMEAR ORGY—26,000,000 READERS PROPAGANDIZED BY POPULAR WEEKLIES, PLUS MONTHLY READER'S DIGEST

Papers shape public opinion with reactionary propaganda. This fact is not only well known, but is probably accepted by many of the 52,000,000 Americans who each day buy that many copies of the 1,750 dailies published in the land. "You can't believe what you read in the papers," has been an accepted adage for a long time.

Fewer readers, however, are aware that the popular weekly magazines do much the same propaganda job, disguising their work behind a subtle, sugar-coated facade of slanted news, entertaining fiction, photos and fancy four-color ads.

Yet analysis by this weekly of just six of the more popular weekly magazines, plus the Reader's Digest, shows that more than 26,000,000 Americans who buy each issue are actually buying the political, social and economic views of the powerful groups fighting the public welfare.

PUBLICATIONS ASSAIL MAGAZINE BIAS, SMEARS

"For perhaps the first time in this country's history big magazines of wide circulation, supposed to be entirely free from bias on political and economic issues, are becoming bitter and untruthful organs of propaganda," the railroad paper Labor noted April 8.

In an article headed: "Big magazines go on smear orgy," the paper continued "Heaven knows the daily press is bad enough in its attempt to confuse and mislead the public, but the magazines are going still further. They are generally subtle and always utterly unscrupulous."

In a special editorial May 6, the Madison (Wis.) Capital Times, one of the few dailies which speaks for the general welfare, also took note of the increasing amount of propaganda in the magazines as well as the newspapers—one of the few times a daily newspaper has said anything in criticism of papers and publications. In an editorial headed: "Spotting propaganda," the paper said it would begin a regular series to "expose the tricks of suppression, distortion, deemphasis, and overemphasis given to current developments. * * * It is our purpose to expose treatment of the news that creates an unfair and biased opinion in the public mind. The instances of biased reporting and editorial comment which ignores important facts are becoming more numerous. The Capital Times believes that these efforts to propagandize the American people should be exposed."

ARTICLES ECHO BIG BUSINESS PROPAGANDA LINE

This weekly's investigation of the leading magazines engaged in this activity shows that in each case, the weeklies are well paid for their work on behalf of big business. The six slick weeklies last year received $201,290,267 in advertising revenue. In each instance, the propaganda campaign in the magazines' columns paralleled the propaganda campaign of the business organizations, such at the NAM, or the political party of these interests, the GOP. The only instance of a big magazine not in on the advertising payoff is the Reader's Digest, which accepts no advertising for its domestic issues, but believes in reaction as a matter of principle.

Here is the line-up of the six weeklies probed by this weekly, plus the Digest, and the amount each received, as well as the number of buyers each fools with every issue.

Magazine	Circulation [1]	1949 advertising revenue
Life	5,341,626	$76,346,727
Saturday Evening Post	4,034,169	59,259,119
Collier's	3,072,298	17,064,959
Look	3,041,630	15,064,179
Time	1,535,993	23,771,730
Newsweek	672,589	9,783,562
Reader's Digest	9,000,000	[2]
Total	26,708,305	201,290,267

COLLIER'S HITS MONOPOLY PROBE, REASON BARED

One of the best examples studied by this weekly is Collier's, exposed several years ago as closely tied to the J. P. Morgan banking and industrial empire. In recent months, faced with tough competition from the Saturday Evening Post, Collier's "jazzed up" its format, made a big appeal for popularity by aiming its material toward the common man. But analysis of current issues shows that scarcely a week goes by without a Collier's assault on some phase of the common man's welfare.

Here's just part of this year's picture:

January 7 issue: An editorial: Let's Not Chop Ourselves Down, an attack on the monopoly investigation in Congress headed by Representative EMANUEL CELLER. Inasmuch as all monopoly probes over the past decade have shown that the House of Morgan is the single most influencial and dominant outfit in the field of banking, industry, and utilities, by last count controlling more than $30,000,000,000 worth of assets, among them 13 giant industries with hundreds of subsidiaries, 12 utilities with dozens of subsidiaries, 7 major railroads, and 3 of the country's largest banks, the Collier's attack on the Celler monopoly probe could hardly be described as one from an objective or disinterested observer. (For the benefit of people who can't visualize how much a billion is, Frederick H. Ecker, chairman of the multibillion Metropolitan Life Insurance Co., recently offered this definition: "If you were to count every minute in every day since the birth of Christ, you would just about reach a billion. We (Metropolitan) have ten of those." And the Morgan empire has 30.)

LABOR, SCHOOLS, HEALTH AMONG MAGAZINE'S TARGETS

January 14 issue: Another editorial: We Are for Taft's Reelection, describing the coauthor of the Taft-Hartley law as just an old-fashioned liberal.

March 4 issue: Article by former Secretary of State James F. Byrnes, now a powerful force in the Dixiecrat movement, attacking Government spending—the old line of big business for curtailing spending for social services while increasing expenditures for arms.

April 8 issue: Article by Senator TAFT, Is President Truman Taking Us Down the British Road? This was an attack on the welfare state, the smear word with which reaction hopes to block and defeat proposed Fair Deal legislation like housing, health, FEPC, and so forth.

April 22 issue: An editorial headed, "Let's win the cold war," a play on words. The editorial was not concerned with the East-West propaganda war but with the campaign to expose antihistamine pills as useless and harmful. "The hot campaign against cold pills seems both exaggerated and unworthy," the editorial said. It did not say that the patent-medicine manufacturers are among the Nation's biggest advertisers, nor did it approve the action of the Federal Trade Commission in accusing five of the most widely advertised pill makers with false and misleading advertising.

April 29 issue: Article by Maj. Benjamin H. Namm, Brooklyn department store owner and one-time endorser of Mussolini, headed, "Would you enter a door marked socialism." This was another attack on the welfare state, this time with an appeal for an even greater propaganda offensive by big business to force their concept of the American way down the Nation's gullet. Textbooks which question the wisdom of the NAM's philosophy should be banned from schools, teachers who don't praise without stint the laissez faire concept of free enterprise should be purged, and every propaganda medium should be used to ram home Namm's and NAM's beliefs, the article said.

LABOR DISSECTS TAFT-COLLIER'S FAIR-DEAL SMEAR

It isn't very often that a small publication will take on both a goliath magazine and a political sacred cow, but the railroad weekly, Labor, last month did a job on both Collier's and Senator TAFT worth mentioning. Commenting on Taft's anti-welfare-state article in the magazine, Labor wrote (April 8):

"The article constitutes the maddest kind of effort to fill the hearts of Americans with fear and suspicion.

"First, TAFT gives a highly distorted picture of what's happened in Britain under what he calls the Socialist program of the Labor Party. Then he claims President Truman's Fair Deal proposals 'parallel almost exactly the measures enforced by the Labor government of Britain.'

"What's his proof? The answer would be funny if not so serious. His first piece of evidence is that Truman made a postwar request to Congress for certain temporary price-fixing powers to curb inflation, which was a direct result of the war. Yet TAFT tries to make it appear that the President wanted permanent peacetime price-fixing. That's a plain lie.

"Next TAFT claims Truman sought power to go into business. What are the facts? Truman in a message to Congress asked authority for a study of production facilities which are in short supply, such as steel 'and, if found necessary, to authorize Government loans for expansion of production facilities to relieve such shortages.'

"At that time the steel industry wasn't meeting the needs of private business, and so Truman sought some tentative means of overcoming the bottleneck. That's a far cry from the kind of Government nationalization which TAFT portrays.

"The Ohio Senator really reveals his hand in his third exhibit. He cries that Truman wants to establish more TVA's around the country to develop cheaper power, as well as build transmission lines and finance generating plants for the Rural Electrification Administration cooperatives.

"Clearly, in his attack on the TVA and REA and the farmers co-ops, TAFT is cuddling right up to the power trust. One wonders what the farmers of Ohio and the Nation will think of a Senator who cries socialism at a Government which entered the field to give farmers electric power at reasonable prices through the REA because private companies had refused to do the job. * * *

"Finally, TAFT comes to Truman's proposals for health insurance, disability insurance and Federal aid to the States for the care of the needy. All these he lumps under his blanket bugaboo of socialism, British style.

"That and more pure, unadulterated propaganda fills the article, and Collier's gives it the leading position. We don't question the right of Collier's to run an article glorifying TAFT, but if it professes the least claim to impartiality its columns should also be opened to the other side.

"There's little chance of that. Collier's, along with the Saturday Evening Post and Reader's Digest and other national magazines, have been carrying a flood of propaganda articles smearing organized labor and the Fair Deal program, while closing their pages to anything remotely resembling a defense of the labor movement or of progressive legislation. That's not what Americans call fair play."

LUCE'S TIME-LIFE MAJOR FORCE IN PUBLIC OPINION

As the publisher of the biggest, richest, and lushest weeklies in America, Henry Luce and the arrogance of his Life-Time magazines have long been a topic in journalism circles. With an advertising income of more than $100,000,000 annually from just the two publications, it is small wonder that Time-Life always champions the cause of what Heywood Broun called the upperdog.

"Often wrong but never in doubt," has been a suggested motto for Time-Life journalism for many years.

Of Luce himself, New Republic, March 27, said, he has a conviction that his periodicals are saying what God would say if God had all the facts.

Typical of Luce's Life-Time approach to their readers was his picture magazine's special midcentury issue last winter.

Adhering to the Luce concept that the American half century was solely the work of big-business men and politicians, with a sprinkling of professional entertainers and sporting characters, Life selected as its typical, average American, a salesman earning slightly more than $10,000 a year, living in the most modern equipped house in one of the best neighborhoods and enjoying all of the luxuries and comforts which are described in the $100,000,000 worth of four-color ads featured in Life-Time last year.

Also in keeping with the big business theme that America is perfect, and anyone who mentions the defects in the system and seeks to correct them is either a Red or at least a fellow traveler, Life has joined the campaign to oust Secretary of State Acheson. "Mr. Acheson has great virtues, but they do not include a confident belief in America," the magazine pontificated in March, when the McCarthy attacks on the State Department got under way.

SATURDAY EVENING POST IS SLICK ORGAN OF NAM PROPAGANDA

Like its main competitor, Collier's, the Saturday Evening Post can also boast to its advertisers that in return for the $59,000,000 it received last year, scarcely a single issue hits the stands without some attack on the welfare state or its component parts, particularly organized labor.

In recent weeks it featured several hoaxes to put over its reactionary propaganda line. One story, The Federal Snoops Are After Me, told in tear-jerking fashion how an unhappy publisher of a weekly paper was terrorized and victimized by the Government which took a dim view of his employing children to fold papers after school for a "lark," for "cider, cookies" and a "little pin money." Upon investigation after the story appeared in print, the Labor Department revealed that the great-hearted publisher, Robinson McIlvaine, had hired children as young as 11, worked them as late as 11:30 p. m., and paid them as little as $1.25 for 8 hours' work. The Saturday Evening Post story reached over 4,000,000 buyers. The Labor Department correction made a few labor publications. The great Saturday Evening Post refused to print a correction.

Controlled by Walter Fuller, a past president of the NAM and now an active member of its governing board, the Saturday Evening Post has always followed the NAM line. Today, the NAM campaigns against the welfare state, Government spending, and bewails the success of left-wing agitators in promoting Socialist measures. Analysis of the Saturday Evening Post's articles and editorials over a period of months shows substantially the same expressions of alarm.

SMEARS LABOR, REJECTS REPLY, FACTS CITED

In a story headed: "SEP lies again in dirty campaign to defame labor," the railroad weekly took note of a current Saturday Evening Post editorial a little more outrageous than some of its others.

"An extraordinary drive to smear organized labor and labor legislation has been started by the Saturday Evening Post. Ordinarily it would be called a propaganda campaign, but it's worse. It's a campaign of outright lying," the paper said.

It went on to take apart the Saturday Evening Post's editorial, 'Must Propaganda Be the Monopoly of Our Leftists. Among those it described as leftists were the AFL and its League for Political Education, and the CIO's Political Action Committee, the Americans for Democratic Action, and the American Farm Bureau Federation, which is admittedly far over to the right in the political spectrum.

The AFL sought space in the magazine to refute the charge, but like the Labor Department, was turned down.

In the answer, the AFL's radio commentator, Frank Edwards, described the editorial as a magnificent piece of piffle, adding:

"Big business and big banking spend eight times as much for lobbying as all their so-called leftist opponents combined. Free speech is so nearly nonexistent that it exists only in fragmentary form where it can be found at all. You can count the real independent newspapers of this country on the fingers of one hand."

Among the facts contained in Edwards' detailed refutation of the Post's charges was a section dealing with radio, which the Post said was being monopolized by labor.

"There are 3,000 broadcasting stations in the United States; we reach about 150 of them," Edwards said. "The Post calls that pressure. What kind, gentlemen. Low pressure?"

The American Economy: Freedom's Test

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1950

Mr. RABAUT. Mr. Speaker, under leave to extend by remarks in the RECORD I wish to make known to my colleagues

that there exists in Detroit the Economic Club and it is most ably presided over by its president, Mr. Allen B. Crow. Through his administration there has been brought to the city of Detroit from time to time some of the outstanding students of the country, and the membership of the Economic Club constitutes a roster of Who's Who in dynamic Detroit. It is indeed a pleasure for me to insert in the RECORD the able remarks of Mr. Leon H. Keyserling, chairman of the Council of Economic Advisers, on this most fitting subject, Freedom's Test:

Mr. KEYSERLING. Mr. Chairman, and all of you who have been kind enough to come and talk together today, I wish that Mrs. Keyserling were here, because then I would have a chance to straighten out one of my domestic problems. That problem arises out of the fact that on a recent occasion when I had to make a talk, and Mrs. Keyserling was present, the person next to her asked her what I was going to talk about and she said, "I can't be at all sure, but you may be sure it isn't the topic assigned to him." Well, I could straighten myself out a little bit if Mrs. Keyserling were here today, because I am going to try very hard today to talk about the topic assigned to me, The American Economy: Freedom's Test.

And let me say at the beginning that I wish it were practical to organize meetings of this kind in a manner that would permit more freedom in the course of the meeting itself. By more freedom, I mean that I would like it if we could start a meeting of this kind by having those of you across the table raise points for discussion, because it is perfectly obvious that the American economy and its problems are so vast, so complex, that it is awfully hard for someone in my spot to know even where to begin without knowing just what is on the top of your minds at the present moment. So I do cherish, as one of the most valuable parts of a meeting of this kind, some opportunity, not for a question period but for a discussion period at the end, and I hope that you will begin sharpening your pencils so that although the time allotted to us is not too long we may have that give and take, that exchange of ideas and frank response, which seem to me of the essence of our kind of free society and free economy.

The fact that I think the American economy presents a test of freedom is the reason why I'm interested in economics at this time. For if the problems of the American economy related only to the question of our daily bread, only to the troublesome question of meeting payrolls, or meeting the cost of living, these problems would be important indeed but they would seem in some respects secondary compared with the vast, looming, overwhelming problems which face our Nation of 151,000,000 people—if I forecast the census correctly—in a world of something like 2,250,000,000. But when we look at ourselves in the context of the current world situation, we realize that the American economy is indeed freedom's test, we realize that whether we shall survive, whether we shall prosper, whether we shall be able to hold on to those freedoms which we all value more than anything else—the fundamental freedoms of human beings, in their business lives and in their personal lives and in their social and political lives—we realize that the outlook on all these momentous issues depends very much on the strength and stability and progress of the American economy. And that is why I think the problems of our economy are so transcendently important, because I think that how effectively we deal with them will determine more than anything else how fully all that we cherish most does survive here and elsewhere in the world.

I don't think that the most important aspect of this issue is whether our economy is strong enough to maintain national security or defense measures. It is. Nor is it whether our economy is strong enough to maintain its international programs and obligations. It is. In a more fundamental sense, our future depends on how well we thrive and prosper in the advancement of our own economic system because the other peoples and the other nations of the free world are looking to the United States as the demonstration of that blend of free enterprise and free government which has made us strong and to which we look to keep us strong. And if we should perchance, through neglect or mishap, give even a temporary demonstration that we cannot retain this economic strength in full, then we shall have removed from the eyes of the other peoples of the world the thing which gives us more influence, which gives us more leadership, which gives us more prospect for success, than armaments and other things—although those, too, are important.

In this connection, we have to take account, as realistic people, of how we are judged by others. And I think it very important to recognize that they do not judge us always by the tests that we apply to ourselves. It is not satisfactory to them to say, although it is important, that we are economically more powerful than the rest of the world—although we are; that we're infinitely more productive and more ingenious than other industrial nations—although we are; that we have the highest standards of living and have made the most progress. All this is true, but I think we will be judged primarily in the eyes of the world—not to speak of in the eyes of our own people—not by what we have, for which there are many historic and other reasons for which we should be thankful, but rather by what we do with what we have. After all, the test of the salt of a man is not the talents he was born with but how well he uses what he has. We all prefer the industrious hard-working person of reasonable ability to the person blessed with great ability who wastes his time and accomplishes little. So the test of the American economy will be, not whether we have more than others, but what we do with what we have. And that test will be posed primarily—in the eyes of the free world, I say again—in terms of how well we are successful in avoiding what others have come to think, rightly or wrongly, has been one of the liabilities of the American economy, its inability to achieve a reasonable measure of stability and a reasonably steady rate of growth. That liability from time to time has cut across the path of our economic progress; it has created from time to time a degree of unemployment of plant and resources and manpower to an extent which has made those in other places, and some within our own country, look askance at our resources and at our institutions. Thus, I think that the greatest task we have in the years ahead is to find the ways—I say "the ways" because there is no one way or no one panacea to bring more stability and growth into the American economy than it has shown in peacetime years in the past.

I say "more" advisedly. I don't say "perfection," because let me make it clear at the very beginning that I realize that while there is no absolute conflict there needs to be some reconciliation between security and stability and the dynamism which has made our economy grow the way it has. Perhaps if we sought for absolute security, if we sought for absolute stability, we would have to sacrifice too large an amount of the initiative and of the dynamism and of the drive which in the long run have enabled us to accomplish such great results. But there must be some reconciliation, at least to the extent of not paying a price for our progress so high that from time to time it unduly jeopardizes our progress. If there is any one thing upon which I think the majority of us would be in agreement, it is that we could not afford a degree of instability which might bring to our economy, in terms of its current size, anything even roughly comparable to the degree of instability, or the degree of unemployment that we have had measured against the size of our economy in the past.

To make myself clear when I talk about unemployment, let me say that I'm not talking simply about jobless workers. I'm talking also about unemployment of managerial skill, unemployment of our plant and resources, unemployment of our financial resources, which are really the counterpart of unemployment of manpower. For let us always remember that manpower itself has no wealth-creating value in our economy except insofar as it is united and wedded to managerial skills, to plant and equipment, to financial resources, and to business know-how. So when I use that simple word "unemployment," I'm talking about our economy as a whole and not talking only about jobs.

Yet I do think that jobs are one of the important measures of unemployment, and the reason for that goes beyond purely material things and gets into certain other values. Certain trends are taking place in thinking within our own country, not to speak of the rest of the world, to the effect that a high level of joblessness cannot be defended. Even if on strictly economic grounds we were to accept the view—which I emphatically do not accept—that our system might become more efficient with five or six or seven million unemployed, or at least could support this number without strain, public opinion holds otherwise. I think it is part of practical and realistic business people not to argue a question which is already determined in the public mind. We must recognize as a given factor in the situation, just as surely as rain is a given factor in a situation, that if unemployment does rise above a certain level, the composition of freedom about which we have been talking cannot so easily be assured. No one can look with confidence upon any advent of high and sustained unemployment. I would be the first to say that in such a period, as in the past, the combination of experimentation, of rapid change, which is forced upon the people and the Government by that kind of situation, does not provide a full solution even though it brings some improvements.

Therefore, it seems that the first prerequisite of trying to maintain and advance our freedom, to maintain those values which are the hallmark of the American economy, is to start at the rewardingly high economic levels where we are now and try to avoid any critical downturn; because the hour of crisis necessarily produces rapid improvisation and experimentation. We should try to avoid the advent of conditions which, as they became more severe, would become harder and more dangerous to deal with. In fact, we must strive for still higher activity and for much lower unemployment.

Let me try briefly to cite just a few figures—I don't want to bore you with many—as to the size and nature of the problem of maintaining reasonably stable growth in the American economy. Many people wonder why, with our economy for 1949 as a whole only 1 percent below 1948 in total level of real output (after adjusting for price changes) unemployment which averaged about 2,000,000 in 1948 changed to about 3,500,000 in 1949 and was about twice as high at the end of 1949 as at the end of 1948. Why did that great change in unemployment take place, when 1949 as a whole was only 1 percent below 1948 in total output of goods and services?

The reason it took place was twofold, and in those twofold conditions we have evidence

not only of the strength and the magnificence and the awe-inspiring quality, but also of the central difficult problem, of the American economy. These twofold conditions are: Increases in productivity, which means being able to do more with the same number of people, and second, growth in population and in the labor force.

Now we come into 1950 and we see, in the first quarter of this year, at roughly speaking the levels of business activity of the latter part of last year, a further increase in unemployment, and for the same two reasons.

I well recall that in the years 1946 through 1948, when I talked with many business economists about productivity, in view of their concern as to whether productivity was really going to increase, I said: "I think enough of the American system of business, of its enterprise and its judgment, to be absolutely incredulous when it is said that an American industry which invests more billions of dollars than ever before in peacetime history in the fundamental improvement of plant and equipment will not achieve vastly increased productivity when we settle down from the immediate postwar situation and when we have a time to digest the results of that improvement."

While the indexes of productivity are always slow in coming in, that increase is now taking place, and I believe that 1950 and 1951 and 1952 will bring ever-increasing evidence of a new release of productivity forces which should at least maintain the best records that we made in any comparable number of peace-time years in the past—and I wouldn't be at all surprised if it exceeded them.

Let's just look a very few years ahead and see what this current and potential increase in productivity, plus the growth in the labor force, put before us as the central problem of the American economy. Let's just take a period of 5 years, roughly speaking, to 1954. Now, that may seem like stargazing, but is it really a long time in the life of a great nation? Does it seem to us a very long time ago that the war ended? And that was almost 5 years ago.

Over a 5-year period, if we maintain the increase in productivity which our past record (even when averaging periods of depression as well as prosperity) would indicate, and maintain only the same level of business activity and the same level of total national output which we had in 1948 (which seemed to us like a phenomenally productive year) then we would end up within four or five years with ten to twelve million unemployed. To make myself perfectly clear, I'm not predicting ten to twelve million unemployed. I don't think we're going to have it. I think we've got to avoid it. I think we will avoid it. But I'm merely using this statistical illustration to show that the great and most important law of our kind of economy is that it cannot be stable by standing still. It must grow in order to live and thrive and prosper. Therefore, if I may say so, when I hear people saying, "Well, conditions are perfect because national income, output, employment, are just as high as they were in 1949, and that was a good year, and pretty nearly as good as 1948 which was the best year we ever had, and so we're all in the clear"—when I hear this said, I must register my dissent. The fact is that if employment and output and level of business activity remained constant, even at the highest levels we have ever known, we would year by year accrue more unemployment of business resources, of financial resources, and of manpower. And we would accrue all of the problems that go with such increasing unemployment.

Let me illustrate that in just one more way, and then get to some questions of program and analysis. Suppose we take it in dollar terms instead of taking it in job terms. If between now and 1954 we achieve that minimum desirable rate of steady growth, about 3 to 4 percent a year, which is necessary to prevent unemployment of all kinds from rising constantly above its present base, our national income over the next 5 years in the aggregate would be approximately $125,000,000,000 higher than if we stabilized output and income at current levels, and would be about $300,000,000,000 higher than if over the next 5 years we went up and down as in some cyclical periods in the past. Over a 10-year period, the respective figures would be around $500,000,000,000 and $800,000,000,000. These figures are a measure of the size of the problem of expanding our markets to absorb the potential output of our technology and our business resources and our skills and labor force at reasonably full employment. And when we think of these figures measured against the cost of the last war, measured against the size of the national debt, measured against the best national income that we ever had in any year before the war, then we appreciate the size of the problem, a problem of business analysis and of business action in exploring and encouraging and developing prospective and potential markets.

It does stand to reason that, however much we may look across the seas for the further development of those markets, we must find most of them fundamentally within our own shores. The very simple reason for this is that, in the long run, as a simple proposition of economics, if our foreign trade of whatever size it may be is to be on a stable basis, it must in the long run be balanced—and I won't go into all the complexities and details—by an inflow as well as by export of materials and goods and services. There may be some variance, depending upon undisclosed items and upon a lot of technicalities, but broadly speaking as we expand our markets abroad they must be balanced in one way or another by imports because if they are not we are simply compounding a problem rather than moving toward solving it. And since that rough balance must take place, the fact remains that in the long run, we still have the problem here at home of finding domestic markets roughly approximating our domestic output. I always like to mention this, because I hear in so many places that facile assumption that if in some way we can exploit foreign markets, if in some way we can develop undeveloped areas, then we will no longer have the fundamental problem of the relationship between our home product and our home output.

So as not to be misunderstood, I do not mean by this that a program of developing world trade is unsound. I think it is necessary. I do not mean that such things as the point 4 program have no point. I think they're good and desirable. I think we need a healthy world economy and a healthy world trade, but let us not confuse that fact with the assumption that if we are successful in that problem we can avoid the central problem here at home.

Now, coming finally to the question of what broad problems confront us as we are faced with the challenge as to whether over the next 5 years we can very substantially reduce unemployment below the 4,700,000 figure of February 1950, or whether we face a rise to six or eight or ten or twelve million.

Economics is a peculiar science. It's a science of words as well as of facts, and when someone talks words alone one gets many different answers to problems and much seeming disagreement. But when one talks facts, it is surprising to note the extent to which businessmen, labor people, economists, and others in the long run identify the problem rather similarly. They identify the problem as one of balance among the various forces of the economy. By that balance they mean, first of all, that our price structure, our price machinery, which is really the operation of our economy, yield enough in profits to business to provide both the funds and the incentives—and I use both advisedly—the funds and the incentives to continue the improvement of its plant and equipment, to continue its basic expansion, to continue the maintenance of its necessary reserves, at those levels which make full use of our great technology. If business income, as a part of the total flow of national income, is not high enough for these purposes, we may temporarily have a high and rewarding level of consumption, but we will be impoverishing that central basic resource, our technology and our plant and equipment, our industrialization, in other words, which enables us to progress in the long run.

As a corelative those of this problem of balance, if it happens that business income is higher than is necessary for these purposes, and other forms of income correspondingly too low, we have that deflation which results from inability to clear the markets of goods. Looking at the other side of the coin, with respect to personal incomes of all kinds all over the country, which are sometimes called consumer incomes, if they get too high in relation to output we have inflation and overdemand for the products available. But if they get too low, I repeat, we have deflationary pressures.

In this task of seeking balance—a balance which will never be a perfect one, but which must be kept within workable limits if we are to have reasonable stability—what forces have we at work in the private economy? We have three great forces. We have the powerful force of organized labor, organized both on the political and on the economic front. We have the great force of farmers, organized not so much on the economic front because the nature of their industry does not permit that, but certainly organized on the political front for the seeking of a larger share of national income than they would get if the programs which they favor were not adopted. And then we have organized business, which in its various ways is seeking self-protection and self-advancement.

There are only two ways in a free economy by which those three great forces may seek adjustment. One way is through conflict. Conflict on the economic front, through the breakdown of collective bargaining. Conflict on the political front, through the bidding of favors, based upon the delivery of votes.

We have gotten along thus far despite this kind of conflict, and we would certainly none of us surrender all of this kind of conflict for anything that might take its place. We would rather have the conflict, we would rather have the headaches, we would rather have the trouble, than to have the suppression or the restriction or the national planning which could be the only substitute in the kind of economy we have for some of this conflict.

But I think many of us are coming to realize increasingly that some of this conflict must be replaced, or at least ameliorated, or at least reduced, by a second way. This involves use of certain other guides to the conduct of freemen in a voluntary free enterprise economy.

What are these other guides? In the final analysis, they cannot be self-denial or self-sacrifice or altruism, because in the final analysis it is the very definition of our kind of economy that the pursuit of gain, the following of self-interest, is the motivating force which drives the economy forward. Those people who go around saying that labor should be unselfish, that farmers should be unselfish, that businessmen should be unselfish, seem to me to propose no solution to the problem. It seems to me that they don't even state the problem. The problem is rather to find some restatement of this ostensible conflict so that it is made clear that there are many areas in which the self-in-

terests of one and the self-interests of the other coincide. In other words, we must find more ways of stating what I believe to be an ultimate truth about our economy—that in the long run, for our economy to grow and thrive and prosper and be reasonably stable under a free system, there must be more and more areas where labor and business and farmers appreciate that their real interests do not conflict in the long run.

If a farmer should achieve a price-support program which holds out to him the hope of a higher portion of the national income than is consistent with that level of wages or that level of profits which is needed for a healthy industrial system, if he should get a level of supports which holds out to him the inducement to a volume and composition of agricultural output which our economy simply cannot digest, then the farmer in the long run will not benefit thereby. And the same thing applies in the case of the businessman and the worker, neither of whom can benefit in the long run by getting more than the economy can afford to give.

How can areas of mutuality of interest be more carefully defined? It depends upon men of good will, and I believe, despite anything that may be said to the contrary, that a majority of the responsible leadership in all of the vast groupings of the American economy are men of good will. If we don't start with that assumption, we can't get anywhere. There are the troublemakers, there are the recalcitrants, there are the adventurers, but we must start with the assumption that most of the leadership is made up of men of good will who are groping for answers that will be workable answers in a free economy.

It seems, under these circumstances, that to get this reconciliation of interest so that there will be more areas of agreement, lesser areas of conflict, and at least a reduction of the areas of conflict upon some of the most dangerous ground, we must all try through improved economic study and analysis to define more carefully how the whole economy works in its main parts, and how its related parts synchronize and fit together.

This does not mean national planning. This does not mean the adoption of laws to put all or most of these things into effect, although laws in some areas of national policy are necessary. Let us remember that, in our kind of free economy, even laws must rest upon majority agreement and the broadening of areas of consent because without these you don't get the laws enacted in the first place and you certainly don't get them effectuated even after they are enacted. So those who say "Let's substitute law for voluntary study, for agreement on a voluntary basis" are just avoiding the problem because the problem exists in either event.

The most promising approach to this widening of areas of agreement, involving management and labor and farm groups, is to try to define over some reasonable period of time what a few broad requirements and prospects of our economy are—prospects which we all sense and should share. For example, suppose we start with the proposition that a 300 billion or higher annual national output within 4 or 5 years is not a pipe dream, is not pie in the sky, but is simply a factual definition of a goal that we have to reach if we are not going to be in serious trouble. And then suppose we try to use improved analysis and economic study to examine candidly and frankly, for example, what kind of funds business needs for investment in plant and equipment, what kind of output of steel and of agricultural products are broadly consistent with these objectives of a free and growing economy, and what all this implies for certain price adjustments and for certain wage adjustments and for certain farm policies. There would still be a range of conflict. I think it would still be true that each group would try to shape and edge its analysis a little bit to its own particular point of view. But I also think that through some such method of voluntary approach and consultation there would gradually emerge some broadening areas of agreement which would reduce the conflict and which would provide guides to viable, voluntary decisions in a free economy.

What does that optimism arise out of? Not simply out of a Pollyanna feeling. Let us look back to the first half of 1949. There then appeared many of those factors which in the early 1920's and again in the late 1920's and early 1930's produced a very serious and prolonged decline; there was a sharp commodity break, a sharp farm price drop, and a rapid decline in profits in many industries, a sharp rise in unemployment. The business sentiment that was accruing at that time was fraught with uncertainty. Yet we came through that test in 1949 much better than in earlier periods. Why? Because, throughout the economy at many main and strategic sectors of the business community, there were voluntarily practiced and put into effect improved economic judgment and knowledge based upon broader horizons and wider study and more information than had been available 15 or 20 or 30 years ago. In the handling of inventories, in the management of prices, in the handling of payrolls, and other items too innumerable to mention in the short time here, I think there was a very decisive change for the better as against years ago. At these various strategic points in the economy, there was more impartial study, more analysis, and more effort to relate the problems of each particular industry to the country as a whole.

Finally, we come to Government policy, which I have not the time to discuss at great length here. By defining these common objectives in broad areas, we could undertake a practical, business-like and economic examination of how Government programs, designed initially with the narrow purpose of raising revenues or supporting farm income or paying social security benefits, would be tested by their effect upon the wealth and the health and the stability of the economy as a whole. They would be tested by the incentives which they provide for general growth and stability and expansion through the normal channels of voluntary trade.

Applying that approach to tax policy, I think that a primary judgment of tax policy should be, not only how much revenues it raises on paper in the first instance, but also what its effect upon the whole economy is—how it affects incentives, how it effects growth, how it affects initiative, and many other matters of that kind. And while those responsible for tax policy would still in the final analysis have to make certain reconciliations of judgments, they would have a star to guide themselves by, which I think now is partly lacking.

So that both in the area of private policy and in the area of public policy we have need for this study, this refinement, and this redefinition of the vast and inspiring and realizable goals of the American economy.

In closing, I want to say just one thing about how that might affect business policy. The businessman is always torn by the problems of tomorrow as against the problems of next year. So long as the business community focuses entirely on the problems of tomorrow in a literal sense, on how the next strike may be settled, or on how a current strike may be settled, on whether a majority of economists or others guess that the next 6 months will be good or bad—I think that so long as attention is focused solely upon these very short-run considerations alone, there will be a tendency for businessmen to take the kind of action which in itself tends to make the economy somewhat more unstable.

For example, if a large group of businessmen, strategically located, should feel that the economic outlook over the next 6 months or over the next year is not good, then their policies of investment—which seem to me to be a primary conditioner of the economy—would trend in the direction of liquidity rather than in the direction of use of funds. This, if in large enough volume, would in itself exert a pronounced downward-pressure factor. If, on the other hand, wide and strategic sectors of the business community look more years ahead, recognize that in the long run we have not begun to tap the full potentialities of our markets, that our standards of living are not a fixed thing, that our ingenuity in the development of new products is not a fixed thing, that our capacity to adjust prices to markets is not a fixed thing—if the business community looks ahead in this way and realizes that America should not be sold short, then the investment and pricing policies of business, as well as the policies of other organized groups, would move in step with the long-range upward movement of the American economy.

If there is any utility in the enterprise in which some of us in Washington are engaged, it is not in anything that we may ourselves arrive at in an "ivory tower," it is not solely or mainly in what the Government may find or decide to do, but it is rather in having some slight effect upon stimulating throughout the economy in all its parts a real sense of the things which unites and hold together the American people. These things which hold us together, in world terms, are vastly more important than the things which seem to divide us. The questions which we need to solve together are much more important than any questions which the faint-hearted may think are insoluble. The record of our past is, on the whole, inspiring regarding our capacity to move ahead. If we can bury the hatchet, define our problems commonly, apply to them the best judgment and the best thought of our business analysis and our economic study, and try to arrive at more agreements and wider common consensus as to what needs to be done, then we have never lacked and we never will lack the technical ingenuity and the skill and the resources to go ahead to a successful conclusion. [Applause.]

Mr. CROW. Dr. Keyserling, I have a few questions here. Two I shall read as one because they really express the same idea.

(Reading question:) "As a realistic and presently a prosperous people, how long can we stand deficit spending and $42,000,000,000 budgets?"

The other, bearing on the same issue. (Reading question:) "Do you not think it important for the Government to begin to reduce its expenditures and live within its income, as private enterprise must do?"

Mr. KEYSERLING. Those two questions are fundamentally the same, and it's perfectly obvious that I couldn't answer either of them to my satisfaction, not to speak of yours, in a very short period of time. So I will just make a few very brief points.

In the first place, it is the objective of the Government, as I understand it, to balance the budget as rapidly as feasible. I think that the level of national income and general prosperity are now high enough to justify a balanced budget and a surplus for the reduction of the national debt. At the same time, our economy adjusts itself slowly to change, and the decisions on the tax side and the decisions on the expenditure side which have been made in the past would seem to me to make it unwise to try to achieve a complete budget balance overnight.

Let me illustrate by one simple example. I might believe that, if taxes had been reduced by $3,000,000,000 instead of 5 or 6 in 1948, we would now be closer to a balanced budget and our business system would not have been appreciably worse off if the tax reduction had been smaller. But it would not necessarily follow from this—in fact, it does not follow from this, that I would believe that taxes ought to be increased by $3,000,000,000 now, because in the current stage

of the economy the increase of taxes by $3,000,000,000 now would, I think, do a great deal more damage than if we had reduced taxes by $3,000,000,000 less than they were reduced 2 years ago.

I use this merely as an illustration. Realistically, looking at a cross section of the situation in where we are now, I think we ought to try to balance the budget as rapidly as feasible by moderation in tax policy, and by economy in expenditures. We should not think that if we reduced public outlays by $5,000,000,000 tomorrow, we would immediately bring the budget into balance. The fact is that either one of those two things—I shouldn't say the "fact" because it can't be proved—but the prospect is that either one of those two extreme things would hit the economy a blow more rapidly than it can absorb the blow. Therefore, I think we should move gradually along various paths to a balanced budget.

But let us always remember, realistically, that the most important path of all toward a balanced budget is a resumption of the normal growth pattern of the economy. With profits being the most volatile part of the income structure, the drop in revenues which results when there is even a slight cessation of the upward movement o the economy affects the Federal budget very adversely. We can easily balance the budget over a 3- or 4-year period, even with some tax reduction in the totality, and even if current levels of expenditures should not change, if the economy resumes its normal growth pattern. But if the economy does not grow, if unemployment increases, you have two results: You have, first, a greater drain upon the public purse, which would be imposed—and you all know realistically that it will, whether you would be for it or not—at Federal, State, and local levels; second, you would have much lower tax revenues at any given level of tax rates in a declining economy.

That is why I think we must always center upon those policies which will do most to resume the normal upward growth trend of the economy as the most important step toward a balanced budget. We should practice economy in expenditures in all those areas where this can be safely and prudently done, but some of the figures running into five or six billion dollars as to what might be accomplished through administrative improvements in the government, are just not borne out by the facts.

Mr. CROW. We're getting some good questions here, gentlemen.

(Reading question:) "It was an accepted concept of the New Deal that we were faced with a contracting economy. What occasioned the Fair Deal to accept the concept that our economy is an expanding economy?"

Mr. KEYSERLING. Well, that is just because knowledge comes but wisdom lingers. As we go along we make progress. And I think that there are many respects in which the American people—the business system, the labor system, the farm system, the government system—learned a lot from the experience of the 1930's.

There are two very important things we learned. One of these very important things is that the most dangerous thing to do is to wait until you have a serious economic crisis before applying thought and action to the problem before us. And this is the greatest present test of freedom in our democracy. As a democracy, we have always been able to rally after the crisis appears. After we're bombed, after we have a depression, we work our way out of it. But I don't think that either in the international field or in the domestic field can we safely afford to wait for a crisis again because the first bombing might be more serious. The impact of a depression might be more serious. And, therefore, the first thing we learned from the New Deal period is that we cannot again indulge in that process of waiting.

The second thing we learned is that if the economy moves too far downhill, it doesn't seem that the range of governmental measures which may be then used are in themselves sufficient to bring about complete recovery. I haven't time to document this. Some will say that this was only because these measures weren't on a large enough scale, but I don't think that's the case. I think it's rather because our economy is so predominantly a private-enterprise economy that unless there is reasonable health, and unless there is full attention to the problems of stability in that private enterprise section of the economy, the complementary action of government while important, cannot alone do the job. And that's why I think we are quite validly placing a great deal more stress upon what combination of programs, private and public, will do most to create and to promote an environment in which reasonable stability and a reasonable rate of progress will be attained in our private enterprise economy itself. That is one of the reasons why there has been a shift, and I think a legitimate shift, from what was called the theory of stagnation to a recognition that we have by no means even begun to reach the frontiers with respect to the growth and the expansion, the fair profit return, the enlargement of employment, the enlargement of markets, which can be attained within that great and predominant sector of our economy which is and should remain privately operated.

Mr. CROW (reading question). "How much unemployment can be accounted for by an educational system that turns out too many unemployables?" [Laughter.]

Mr. KEYSERLING. I think that anyone who carefully studies the facts of the past few years will find a correlation between business trends and unemployment trends which will show that unemployment results primarily from a decline in the levels of business activity, or, in the alternative or together with it, a failure of fundamental business activity to grow fast enough to provide a larger number of jobs.

There may be some unemployment caused by attitudes among the unemployed. But I don't think that this is the basic thing, and I think that those who feel that it is the basic thing may perhaps be distracted from the real problem. For the most part, when our industrial system is growing and thriving and expanding, the number of jobs increases. For the most part, when our economic system is faltering or hesitating or moving backward, the number of unemployed increases. And, after all, this is a two-sided problem. It isn't only a problem of the person being adjusted to the job. It's also a question of the job being adjusted to the person. For example, I think we have witnessed over the years, and I think we are going to continue to witness a growth in the number of people over 55, or over 60, or over 62. That's just the nature of our population. We are going to continue to witness an increase in the number of people over 40. We are going to continue to witness an improvement in general education, which will make fewer people willing or suited for certain types of work which 25 or 35 years ago people were willing to do, or at least did.

As these changes are taking place, and they are going to continue to take place, they impose a responsibility, not only upon the educator, not only upon the physician, but also on the business system itself, gradually to realize that through its training programs, and through the whole scope of its business management, some adjustments must be made and some new thinking done.

Mr. CROW. We have just time for one or two more. Here's a very fundamental one.

(Reading question:) "Do you believe that this better balance between agriculture, labor, and management can be attained without enforced Government quotas and the control of wages and prices?"

Mr. KEYSERLING. I think that a great deal of progress can definitely be made, in times of peace, without enforced government control of quotas and prices, and I think that's freedom's test. I don't think, though, that you dispose of a problem by showing that it's difficult. In some ways it's more difficult to do things through consensus than to do them by force. But the whole nature of our economy, the whole nature of our Government, and the whole nature of our free society, is that we have always elected, and will always continue to elect, I hope, to do as many things as possible through consensus, and as few things as need be through force. That makes it harder to do, in some ways, but I think it's the better way. I think it's the way that has made our economy what it is, and the way that we must continue with increasing efforts to try for in the future.

Mr. CROW. Here are two more questions that again mean about the same.

(Reading question:) "What part would prices play in attaining the $400,000,000,000 or $800,000,000,000 national income? That is, the inflationary factors."

(Reading question:) "Why should we have a $325,000,000,000-a-year national income when, in the light of the past, prices will increase proportionately, thereby penalizing the thrift of individuals and the people who are on pensions?"

Mr. KEYSERLING. Well, in the first place, the second question involves, as I understand it, a mistake of fact. If prices generally had increased proportionately with growths in dollar national income, the real output of the economy and the real standard of living would not be higher now than it was before the war. That is palpably not the case, because if you compare 1949 or 1950 with 1939 or 1929, or any other year that you choose, even after making adjustments for changes in the price level—in other words, even when you deflate the gross national product—you still find a real national output which is ranging between 1¾ and 2¼ times as high as before the war. When you adjust this for increases in population, you find an actual improvement in standards of living, or per capita consumption as a whole, which is about 40 percent or more higher than before the war.

So, my first point would be that it simply is not true that we haven't made real progress in national growth in any period in the past long enough to overcome the effects of short range instability—in other words, the depression eras.

Secondly, it is true that if real national progress is made but is accompanied by an increase in the price level, rather than by a general decrease in prices, there are hardships placed upon fixed income groups. That's perfectly true. I think this simply means that we have to look to the question of whether certain supplementary programs might not be helpful in alleviating their lot to a certain extent. I think anybody who would say that, in order to readjust, we should have a return to the price level of 1939, or even two-thirds or one-half or one-third of the way back to the price level of 1939, would be committing us to about as big a recession as any that we have known. I think we have reached a plateau of a higher price level than we had before the war. And I think that if we can reasonably stabilize at this point, and make some further moderate adjustments, we have reached a safe enough foundation in most areas to move ahead to rounded growth.

There is another part to that question that I think I didn't get.

Mr. CROW. Well, I'll give you three more and we'll close with them. You can answer these three as one. [Laughter.]

(Reading question:) "What is the composition of the present unemployment figure? Isn't some degree of unemployment normal in a capitalistic society?"

The other two bear on the same question.

(Reading question:) "How many presently 'unemployed' are retired or institutionalized?"

(Reading question:) "Aren't there at least 5,000,000 Americans who are more or less nuts—including some Republicans, as well as many Democrats?" [Laughter and applause.]

Mr. KEYSERLING. Well, I wouldn't applaud the assertion that a lot of Americans are nuts. If it were true, I would be worried about it. [Laughter].

But, more seriously, the estimate that I made that over the next 10 years we would have to have a total aggregate national output $800,000,000,000 above the level of what it would be in a period of cyclical instability was not an estimate based upon changes in the price level. It was merely the transposition of a constant price level into real output of goods and service. In other words, if you simply start with the national output as around $250,000,000,000 in 1948, and calculate the 3 to 4 percent growth per year (which, of course, compounds from year to year because you're starting from a higher base each year) which would be necessary to hold unemployment to low levels, and then you add up your results over the next 10 years and measure the total against an output over the next 10 years which fluctuated as it did between 1929 and 1939, then you would arrive at the figures I have given. So these figures are the real measure of the economic problem confronting this Nation over the next 5 or 10 years, and they are not based upon a rising price level. Of course, if you had some rising price level during that period, your dollar figures would be bigger, and if you had some falling price level they might be somewhat smaller.

Now, coming to the question of the composition of the unemployed and whether we need unemployment in this country for various reasons, I would say this: I am perfectly willing to have that question asked, so long as those who ask the question realize that among those entitled to answer the question are the unemployed themselves. In other words, so long as you realize that the four or five or six million people who happen to be unemployed shall also be asked what is a healthy level of unemployment, and that they have quite as large a stake and quite as large an interest in that problem as those who are employed, then I think it's a sound question. That isn't based upon sociology or morals. That is simply based upon the fact that we live in the kind of society—and I happen to be glad that we do—where people who are unemployed, provided that they are able to hold jobs, feel that they are entitled to an opportunity to hold a job. And I'm also glad that we live in the kind of society where there are enough other people besides the unemployed who feel the same way. In any event, that sentiment is a given fact, and I think the faster we recognize realistically that it is a given fact the safer our business system will be and the safer our free society will be.

As to the exact desirable level of unemployment, some people will set two million, some will set three, some will set three and one-half, and some will set four, as the safe or maintainable level. I think that the safe or maintainable level needs to be lower, relative to the size of the labor force, than it was during the 1930's because I don't think that during the 1930's we had a sufficiently stable and sufficiently prosperous economy. And, also, I think that because of world events a ratio of unemployment to the total labor force and to total population even somewhat but not much lower than it was in the 1930's would impose a very severe test upon our basic freedoms as I have defined them.

Therefore, I should say that it should be our goal to try, through a composite of private and public actions, to hold unemployment down to levels ranging between two and three million. I would set that as the prime goal. I certainly think that, whatever the optimum desirable level may be, a situation where unemployment is growing, as it has been growing now—allowing for seasonal variations—for about 15 months—I think that is disturbing. I think that's our great central national economic problem. And as I have said before, this isn't only an unemployment of manpower, it's also unemployment of business resources because business resources are not fully used until they are wedded to labor in the production of goods and services. [Applause.]

Mr. MARSH. Thanks for that audience participation, and thank you Mr. Keyserling for coming here and presenting those viewpoints of yours. The meeting is adjourned.

Adjournment.

Poland Looks Toward Peace—Poles Seen Stressing Industrial Progress Over Military Plans

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1950

Mr. SADOWSKI. Mr. Speaker, I wish to submit for the RECORD a very interesting article that appeared in the Washington Star Tuesday, May 30. It is an article by Daniel De Luce, a very reputable Associated Press foreign correspondent. This information confirms reports that the Poles are putting their energies into reconstructing and rebuilding their much destroyed nation and not into a military-armament program. The article follows:

POLES SEEN STRESSING INDUSTRIAL PROGRESS OVER MILITARY PLANS

(By Daniel De Luce)

WARSAW, May 30.—Poland, a cornerstone of the Soviet bloc, apparently counts on a long peace in Europe.

Military preparedness is directed by Polish-born Soviet Marshal Konstantin Rokossovsky. But it is taking a back seat at present to the 6-year economic plan.

For rebuilding Warsaw, the Government this year is spending as much as for the combined armed forces.

For industrial developments, three zlotys are appropriated to each one given Marshal Rokossovsky's Defense Ministry.

The military share of the Polish annual budget is 10 percent—equivalent of $214,235,000.

Western sources describe Poland's military situation as typical of other bloc powers. None has been armed to the teeth except Yugoslavia, which subsequently broke with Moscow.

In sight is a gradual build-up of eastern armies during the 1950's. Each will try to indoctrinate all ranks with communism and political officers will exercise great authority. There will be standardization of weapons and tactics with Russian help.

RECONSTRUCTION HAS PRIORITY

Yet reconstruction has priority over remilitarization. That includes, of course, the creation of strategic heavy industries, steel above all, in once backward agricultural countries.

Soviet military tutelage is by now commonplace in the bloc. Poland's invitation to a Soviet marshal to join her government and politburo, however, seems likely to remain unique.

When Marshal Rokossovsky turned up in Warsaw last November, he was no stranger. He had led a Soviet army group, including the Polish First Army, in liberating a large chunk of Poland from the Germans. Since the war, he has stayed in Poland as commander of the Soviet line of communication through Silesia.

Marshal Rokossovsky was born in the Warsaw area in 1896, when it belonged to the Russian Empire. A Communist-approved biography relates that his father was a locomotive engineer, his mother was a school teacher, and he was left an orphan at 13.

By turn a factory apprentice, stonemason, and Czarist military conscript, he was barely out of his teens when the Bolshevik revolution flared up. He joined the Red Guards and won distinction as a cavalry officer. Years later, he showed the same dash as a tank force commander outflanking the enemy at Stalingrad.

TITOISM WAS RUMORED

Rumors of Titoism (nationalistic behavior) circulated here concerning some key Polish officers before Marshal Rokossovsky took control. Retirements instead of criminal trials have marked a quiet shake-up in the general staff.

Marshal Rokossovsky exercised special care in naming a new chief of political leadership in the armed forces, his choice being Brig. Gen. Edward Ochab, a fellow member of the politburo.

The regular strength of Poland's armed forces was 160,000 men last year and may have been increased to 200,000. During several postwar years, they were outnumbered by the security police.

Marshal Rokossovsky appears in Parliament wearing a Polish uniform devoid of medals and ribbons. Six feet four inches tall, and ramrod straight, he seems tactful and modest behind his military reserve.

He has tightened up security. Important frontier zones have been sealed off from civilian tourists. Tanks, aircraft, truck borne rocket launchers, and field guns have been sent to him by the Kremlin.

But the main attention of the Warsaw government, despite Marshal Rokossovsky's presence, is not on remilitarization. It is on a thousand and one industrial targets to be hit by 1955.

The question is not guns or butter. It is blast furnaces.

So You Want To Write Your Congressman?

EXTENSION OF REMARKS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1950

Mr. MICHENER. Mr. Speaker, many groups and associations are urging their members to write directly to the Congressman concerning legislation in which these groups are interested. This attitude on the part of these associations has undoubtedly increased congressional mail manyfold.

A constituent has called my attention to an article in the Link, published by

Carter Oil Co., and pursuant to the permission granted by the House, I am including that article, which is as follows:

SO YOU WANT TO WRITE YOUR CONGRESSMAN?

So you would like to write your Congressman? Equally interesting is the fact that your Congressman would enjoy getting your letter.

Hundreds of thousands of letters are cascaded upon the desks of Congressmen in Washington each week. But millions of other Americans have never written their Congressman. Many of these citizens at one time or other have felt a desire to make their views known on important questions but have hesitated to write to their Senator or Representative. As a result, vocal minority groups have profoundly influenced legislation, while the great majority of Americans sat idly by in indifferent silence.

"Next to voting in elections, writing letters to Congressmen—Senators or Representatives—is the highest privilege a citizen has in fulfilling his part in the Democratic process. Every citizen has this privilege and can exercise it as often as he pleases. Those who sit back and say to themselves that it is useless to tell their Congressman how they feel about pending legislation are failing in their duty and missing the right to grumble when things don't go as they wish."

The quotation is from the CONGRESSIONAL RECORD—Appendix issue of Monday, March 3, 1941, and was an extension of remarks of Hon. Fritz G. Lanham, of Texas, in the House of Representatives.

A condensation of additional information in the remarks follows:

Congressmen are profoundly influenced by their mail. More often than not it determines how they will vote on vital legislation. An avalanche of correspondence on one side or the other usually affects their vote. They contact their party leaders to find out what it is all about and often, if there are complaints against an administration measure, take their problem directly to the President.

When you have something worth while to say to your Congressman, feel free to write. He expects you to write when you want to express your views on important matters.

The average Member gets 200 letters a day—and woe to him if he ignores them. He knows that every letter represents a potential vote, and unless he is a rare exception, he wants to keep his seat. Also, many Representatives have their eyes on the Senate, and many Senators have theirs on the White House. But, even forgetting their personal ambitions, they know it is their duty to reply to their constituents and to others interested in their activities.

So important do Congressmen consider this duty that they try to answer all letters within 24 hours. An average of half of each day is devoted to reading them and dictating replies. Often they work late at night.

They are impressed by well-written letters, but the contents of your letter are what count.

There is an art to writing a Congressman. Here are the fundamentals:

Address him correctly, using the accepted forms: Thus: Hon. Robert D. Jones, United States Senate, Washington, D. C.; and the salutation is My Dear Senator. Or: Hon. John Smith, United States House of Representatives, Washington, D. C.; Dear Mr. Smith. If you don't know your Congressman's name, write to the Secretary of the Senate, or to the Clerk of the House, and ask them, respectively for lists of the Senators and Representatives by States and districts. They will answer by return mail. Or ask your local newspaper editor who is well informed on such matters.

Make your letter express your individuality. If you are joining others in writing on a certain subject, use your own words. Don't let anyone else write your letter.

Be brief and to the point. State your case as concisely as possible in the first paragraph. In the second, if you are not a personal friend of the Congressman, identify yourself; who you are, your business connections, your reasons for being interested in the question, your family connections—especially if any relatives are in politics. This information may be vital to the Congressman in casting a vote.

Be sure to give your address and sign your name legibly. A surprising number of persons neglect this and bear lifelong grudges against Congressmen who have been unable to reply.

If you are a woman, tell about your family connections; the Congressman may be a friend of your husband, father, or brother. Also, if your given name could be either feminine or masculine identify your sex.

Letters generally are more effective than telegrams except where time and distance make a wire imperative. There have been instances in recent years when investigations have disclosed wholesale receipt of telegrams by Members of Congress bearing the names of persons who have denied ever sending or authorizing such messages.

If your Congressman votes the way you wish, or does you a favor, write him a thank you note. Congressman are often criticized for the way they vote; they seldom receive praise. Accordingly they often get a one-sided view of public opinion, and switch their votes under the erroneous belief that they are doing what the public wants when actually they may be following the desire of a carping minority.

A note of appreciation will make the Congressman remember you favorably the next time you write, and if it has to do with a favor done you, it will enable him to close his files on your case, thus helping him in the orderly conduct of his office.

If you have a problem with any of the Government departments, bureaus, commissions, or boards, write your Congressman and get his advice about procedure. He knows how to cut through governmental red tape.

And there are a number of things you should not do in writing your Congressman:

Don't apologize for writing and taking his time; it is his job to give you a hearing.

Don't begin with "as a citizen and taxpayer"; he assumes that you are not an alien and he knows you pay taxes.

Don't say, "I hope this gets by your secretary." The secretary always reads the mail first, unless it is marked "personal," and you are implying that the Congressman does not know how to run his office.

Just because you disagree politically with your Congressman don't ignore him and write to one from another district about something that pertains to your own community; congressional courtesy calls for the delivery by the recipient of such a letter to the Congressman from the district involved. Thus, it is wise to write to him direct.

If you write the two Senators from your State, don't send your Representative a carbon copy; write to him also—it's the courteous thing to do.

When a measure in which you are interested is pending in the House, write your Representative; don't write your Senators until it has passed in the House and reached the Senate.

Never threaten a Congressman by saying, "I'll never vote for you if you don't do such and such." He will probably tell you that he doesn't want a vote of that kind.

Former Vice President Garner, veteran of 38 years in Congress, had this to say about his mail:

"Letters are a Congressman's bread and butter. If they fall off, he is like a movie star about his fan mail. He thinks he is losing his popularity. Throughout my long service, I have made it a point to reply to every letter and to ask the writers for information and what they believe and think about national questions."

It is after all the straight-forward letter, carrying the appeal of earnestness that commands the interest and respect of Members of Congress. A Congressman never tires of hearing from constituents who have something to contribute to the welfare of the Nation. He knows they write straight from the heart, that he is their voice in Washington and their friend at court.

Epitaph for Rufus Woods—American Idealist

EXTENSION OF REMARKS

OF

HON. HENRY M. JACKSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1950

Mr. JACKSON of Washington. Mr. Speaker, the West—and particularly the Northwest—was saddened by the death, this week, of one of its outstanding citizens and journalists—Rufus Woods, editor of the Wenatchee Daily World, in the State of Washington.

Thomas L. Stokes, in a column that appeared on May 31, in the Washington Evening Star, has captured the spirit of Rufus Woods, a true American visionary who lived to see his vision become a reality.

At a time when idealism and visionaries are frequently the objects of ridicule, the story of Rufus Woods is particularly worth noting and remembering. I feel privileged to insert in the RECORD Mr. Stokes' article:

NEW FRONTIERS AHEAD—GREAT DREAM OF SMALL-TOWN EDITOR CAME TRUE IN GRAND COULEE DAM

(By Thomas L. Stokes)

A fellow named Rufus Woods died this week.

You may not have heard much about him. He was a hustling, bustling, alert, constantly curious editor of a small-town newspaper in a still new country—the Daily World of Wenatchee, Washington. He was a dreamer and a true pioneer of our new frontier, a man-made frontier of great dams that provide cheaper power for homes and industry and water for reclaiming arid lands to offer new opportunities for our people. He is part of the saga that has made us a great Nation.

Rufus Woods leaves his monument, already built, in Grand Coulee Dam, of which he had been called the father. He was far away from there, at Toronto, Canada, on a trip with his family, when he was stricken—still searching, looking into apples for cultivation in the great agricultural area that Grand Coulee has opened up, and into power development problems. He closed a full life of service at 72.

GREAT DREAM CAME TRUE

This reporter recalls the first time he met the buoyant, energetic editor, back in 1937, on a trip with President Roosevelt to Grand Coulee Dam, then in the process of construction. Rufus Woods was an excited, eager man that day; his great dream was coming true. He got on the Presidential special train, his arms filled with copies of his newspaper containing reprints of an article he had written 19 years before, with the long headlines familiar to small papers of that era, but telling concisely the whole story:

"Formulate brand-new idea for irrigation grant, Adams, Franklin Counties, covering

million acres or more. Last and newest and most ambitious idea contemplates turning of Columbia River back into its old bed in Grand Coulee, the development of a water plant equal to Niagara and the construction of the greatest irrigation project in the world, first conceived by William Clapp, of Ephrata, Wash."

Beside the reprint was a box:

"On July 18, 1918, appeared the first article ever written on the Grand Coulee Dam. The Wenatchee World editor had gone to Ephrata, where he met W. Gale Matthews. Cale said 'Come with me. Let's go over to Bill Clapp's office. He has a story for you.'"

Rufus Woods got the story, the conception of the Grand Coulee project, and from that day in 1918 he began a crusade that eventually brought the hundreds of men we saw that day 19 years later in 1937, tiny ants far below in the Columbia River bed, working at the dam which since has been completed and which President Truman visited again on his recent trip to the Pacific Northwest.

MET USUAL SKEPTICISM

Rufus Woods met the usual skepticism of the pioneer. One of his friends, Judge P. S. Steiner, of the Supreme Court, wrote him after reading his story in the newspaper: "You are proposing damming the Columbia. Verily, Baron Munchausen, thou art a piker."

But in 1922, Rufus Woods got Gen. George Goethals, builder of the Panama Canal, out to inspect the site, and General Goethals said it was practical. Presidents Coolidge and Hoover said it should be done, but did nothing about it. It was not until Franklin D. Roosevelt came along that it found the dynamic creator and dreamer who pushed it forward, another part of his great plan for our new frontier which saw creation of TVA in the Tennessee Valley, Bonneville in Oregon, the Central Valley project in California, and envisioned other great projects still waiting for realization—an MVA for the Missouri Valley, a CVA for the Northwest, tying together in one great system Grand Coulee, Bonneville, and other developments along the mighty Columbia, and the St. Lawrence-Great Lakes waterway, among others.

It is a good time to think of Rufus Woods, his idealism, and his unselfishness, and his unflagging persistence.

We have got to keep our new frontier moving forward always.

Fiat Money and Its Consequences

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 1, 1950

Mr. REED of New York. Mr. Speaker, our Government is operating under a debauched currency. The present system of cheap devalued money is cheating the farmer, the wage earner, the pensioner, the annuitant, and the life-insurance policyholder.

Unsound currencies have brought ruin unspeakable to nations throughout the centuries. The Biblical injunctions in Deuteronomy xxv: 13, 14, 15 warns in these words: "Thou shalt not have in thy bag divers weights, a great and a small. Thou shalt not have in thy house divers measures, a great and a small. But thou shalt have a perfect and just weight, a perfect and just measure shalt thou have."

I have introduced a bill (H. R. 3262) to restore the right of American citizens to freely own gold and gold coins; to return control over the public purse to the people; to restrain further deterioration of our currency; to enable holders of paper money to redeem it in gold coin on demand; to establish and maintain a domestic gold-coin standard, and for other purposes.

Under leave to extend, I am inserting as a part of my remarks an address by Dr. Walter E. Spahr, executive vice president, Economists' National Committee on Monetary Policy, entitled "Federal Monetary Policy":

FEDERAL MONETARY POLICY

(By Walter E. Spahr, executive vice president, Economists' National Committee on Monetary Policy, professor of economics, New York University)

Dr. Spahr, asserting our monetary policy aims at easy and cheap money, attacks present irredeemable monetary system as dishonest and as depriving people of power to exercise direct control over public purse. Holds our irredeemable currency system opens gate to socialism and yields to demands of selfish pressure groups, in addition to fostering destructive disease of inflation. Contends, because of our money system, we no longer have a healthy economy.

Our Federal monetary policy is that of easy or cheap money. Practically every device known to man for providing a people with a depreciated and cheap money was employed by our Federal Government in 1933–34. Provision was made for the issuance of fiat United States notes, for depreciation of the dollar by suspension of redeemability of all currency except silver certificates, for devaluation of the dollar, for expansion of our currency by means of various silver laws. Pump-priming programs and deficit financing by the Federal Government contributed much to the great expansion of our deposit currency.

The Government's cheap money policy, since the devaluation of the dollar in 1934, and aside from the relatively minor effects of our silver laws, rests upon our system of irredeemable currency as a foundation.

Such a currency provides the Government with what is perhaps the most subtle device thus far discovered with which to get control of a people without revolution, without their approval, and without their understanding until it is much too late. It is probably the most important device a government can employ in instituting government management of a people and their economy.

KEYNES ON DEBAUCHING THE CURRENCY

The late Lord Keynes, who gave so much attention to these matters and who contributed so much to the institution of governmentally managed economy in this country and England, stated a fundamental truth in 1919 when he said in his book, The Economic Consequences of the Peace (Harcourt, Brace, and Howe, New York, 1920), pages 235–236, that "There is no subtler, no surer, means of overturning the existing basis of society than to debauch the currency. The process engages all the hidden forces of economic law on the side of destruction, and does it in a manner which not one man in a million is able to diagnose."

An irredeemable currency is a debauched currency. And Keynes' assertion that not one man in a million is able to diagnose the manner in which a debauched currency operates on the side of destruction of a private-enterprise economy seems to be borne out in this country in high degree. The executive department of the United States Government, the Treasury, most Federal Reserve authorities, the majority of Congress, and, of course, the general public, including a large number of economists and newspapers of the social, pro-Government-management variety, are all doing their best to perpetuate an irredeemable currency in this country.

Some of those people know what they are doing—they want a governmentally managed economy. Others do not understand; they fall in that large group, mentioned by Keynes, who are unable to diagnose the evils in an irredeemable currency.

Perhaps there is another group—those who understand the evils of statism and do not want it, yet who, for reasons of personal gain, wish to keep the good will of, or obtain favors from, our Federal Government and therefore fawn upon it. They do nothing to fight off statism; and they either embrace, or fail to oppose, an irredeemable currency.

Keynes made another observation that is pertinent to such people—and he was not referring to the great mass of people who do not understand the principles of monetary standards and system; he was referring to what he called the great capitalist class. Said Keynes (ibid., p. 238): "They allow themselves to be ruined and altogether undone by their own instruments, governments of their own making, and a press of which they are the proprietors. Perhaps it is historically true that no order of society ever perishes save by its own hand."

OUR CURRENCY IRREDEEMABLE

The nature of our variety of irredeemable currency needs to be understood by the responsible men and women of this country who wish to save the United States from the evils of a governmentally managed economy.

Domestically, all our currency—money and deposits—is irredeemable insofar as gold for domestic monetary use is concerned. Silver certificates are redeemable in silver for monetary purposes; but the silver money is not directly redeemable in, or convertible into, gold.

Internationally, we are on a restricted gold bullion standard. We permit foreign central banks and governments to sell gold to the United States for dollars, or to redeem their dollars in gold bullion at the statutory rate of $35 per fine ounce under Treasury regulations. Other foreign holders of dollars do not in general have this privilege.

EVILS OF IRREDEEMABLE CURRENCY

The evils in our system of irredeemable currency, with the right of redeemability denied to all but foreign central banks and governments, may be summarized as follows:

1. It is a dishonest currency. It gives our Treasury and Federal Reserve authorities privilege without corresponding responsibility. They are authorized to issue promises to pay which they do not intend to redeem and do not redeem. They cannot be held to an accounting by the holders of these so-called promises—foreign central banks and governments excepted.

Although a promise to pay is one thing, and the thing promised is something else, these so-called promises to pay (except in the case of silver certificates) are merely redeemable in other equally irredeemable promises. The thing promised becomes nothing but the promise itself.

The essence of the issue involved in this confusion of promise and performance was stated by Chief Justice Chase in the case of *Bank* v. *Supervisors* (7 Wallace, 31 (1863)) when he said that "The dollar note is an engagement to pay a dollar, and the dollar intended is the coined dollar of the United States. * * *"

Similarly, Justice Bradley, in the *Legal Tender cases* (12 Wallace, 560 (1871)), said: "No one suppose that these Government certificates are never to be paid; that the day

of specie payments is never to return. And it matters not in what form they are issued. Through whatever changes they pass, their ultimate destiny is to be paid."

Said Secretary of the Treasury John Sherman in 1877—it was John Sherman who did so much to make the greenbacks redeemable in 1879: "There is a large class of people who believe that paper can be, and ought to be, made into money without any promise or hope of redemption; that a note should be printed: 'This is a dollar,' and be made a legal tender.

"I regard this as a mild form of lunacy, and have no disposition to debate with men who indulge in such delusions, which have prevailed to some extent, at different times, in all countries, but whose life has been brief, and which have shared the fate of other popular delusions."

This form of lunacy prevails in this country today; and the fact that it is a popular delusion that ends in national tragedy, if not overcome by statesmen, is not yet understood by a majority of our Congress.

2. When the Federal Government in 1933 deprived the people of the United States of a redeemable currency it also deprived them of their power to exercise direct control over the Government's use of the people's public purse. When our people had a currency redeemable in gold, every individual had power, to the extent he possessed money and deposit currency, to register his disapproval of the policies and practices of the banks and Treasury by demanding redemption of their promises to pay. Each individual had the power to send his message of disapproval to the central signal system in the Treasury and Federal Reserve banks—to their gold reserves—over the golden wires, as it were, provided by a system of currency redeemable in or convertible into, gold. When distrust of the value of the banks' and Treasury's promises spread, the number of warning signals increased. Every demand for redemption was recorded by a drawing down of the gold reserves of the Federal Reserve banks or Treasury. No individual needed to join with other individuals in some organization for the purpose of sending a plea to the Reserve banks or to the Treasury or to Congress in behalf of sounder monetary or fiscal procedures; each individual could act alone and could record his judgment directly.

With the institution of our system of irredeemable currency, all the golden wires, running from all our people to the central signal system, were cut. The power of the people to record, in an effective manner, their approval or distrust of bank, Treasury, and Government monetary and fiscal practices was destroyed. The signal lights went out both at the central signal board and for the people of the United States. It was as though our people had been deprived of the right to vote. The right to record their preferences for different types of dollars is probably as important, as a method of controlling the public purse, and, therefore, the Government, as is the right to vote one's political preferences. Power to control the public purse by direct pressure of the individual is imperative if the individual is to retain his freedom and is to be able to record his prefererences in any effective manner. We need to consider the fact that individual freedom, private enterprise, and freedom of international trade and exchange reached their greatest period of development when nations had redeemable currencies.

Since the golden wires to the central signal system were cut in this country in 1933, our people have only had the power to protest and to appeal through other devices—through organizations, appeals to Congressmen, letters to the press, and so on—all of which efforts have been ineffective because they can be, and have been, ignored

When a government deprives a people of the power to exercise direct control over its use of their public purse, it frees itself from responsibility to them; it can and generally does ignore their protests; and it can, and often does, become their boss.

3. The use of irredeemable currency has enabled our government to purchase the support of vote-delivering pressure groups and to put the people's purse at their disposal.

When a government frees itself of the possibilities of direct control by the people over its use of their purse, it cannot be held effectively to an accounting and, if so disposed, it can use the people's purse to buy the support necessary to keep itself in office. A basic policy then is to gain the support of large vote-delivering pressure groups. The people's money is distributed in a manner designed to insure the desired political support. Vote-delivering pressure groups soon perceive that monetary favors are to be obtained in exchange for political support and rush to Washington to make the best terms possible. One result is that the Government becomes the prisoner of those whose support it can purchase, and the people's purse is passed by Congress to the control of the vote-delivering and favor-seeking pressure groups.

That is, in the main, the state of affairs that prevails in the United States today, the basic cause of which lies in the institution by the Federal Government in 1933 of our system of irredeemable currency.

Pressure groups need to be dealt with in accordance with the standards of statesmanship rather than in accordance with those of the politician. The latter is a self-server; the statesman considers the national welfare solely. Statesmanship requires the brand of character revealed by Governor Lee, of Utah, who is reported to have said regarding government support of farm prices: "I would say to the farmers, 'The price of freedom is the same to you as it is to everyone else—a little hardship when times are adverse.'" (Time, April 24, 1950, p. 28.)

Since statesmanship does not characterize the majority of our Congress, the people of this country have seen their purse put in the hands of favor-seeking pressure groups by politicians; and our system of irredeemable currency has made it impossible for our people to correct this state of affairs.

OPENS GATES TO SOCIALISM

4. Our irredeemable currency opens the gate to, and invites, socialism. The purchase of the support of vote-delivering pressure groups places the Government on the road to socialism in high degree or in a thoroughgoing manner. Incomes of helpless groups must be funneled to the members of these pressure groups. Wealth must be taken from some and be given to others as benefits. Projects pleasing to the pressure groups must be undertaken. Competitive markets must be hampered, circumvented, or destroyed in order to extend favors in the form of price controls, subsidies, rent controls, monopoly powers to organized labor, and so on, to those whom the Government endeavors to favor. The Government enters into unfair competition with private enterprise by engaging in productive activity, free of tax and similar burdens borne by private enterprise; by lending the people's money to unprofitable enterprises at noncompetitive rates; by extending other favors and services at prices below those of competitive markets.

This great variety of Government undertakings, most or all of which constitute steps in the direction of socialism or paternalism or totalitarianism, is made easy, and is invited by our system of irredeemable currency. Since the Government is freed from accountability to the people, money is made easy for the Government and its beneficiaries to get; and the favors of pressure groups can be obtained without the central signal board flashing any lights of protest and warning.

There is, apparently, no instrument as potent, or as fundamental, or as necessary, as an irredeemable currency if a government is disposed to lead a people into socialism. Conversely, there is probably no more effective device that can be employed to arrest a march into socialism than to make the people's currency redeemable, thus restoring to them the power to exercise direct control over the Government's use of their purse.

The evidence seems overwhelming that a defender of irredeemable currency is, wittingly or unwittingly, an advocate of socialism or of government dictatorship in some form.

So long as a government has the power over a people, that is provided by an irredeemable currency, all efforts to stop a government disposed to lead a people into socialism tend to be, and probably will prove, futile. The people of the United States have observed all sorts of efforts, organized and individual, to bring pressure upon Congress to end its spending orgy and processes of socialization. It should be amply clear by this time that none of these efforts has succeeded. Moreover, there is no good reason for supposing that any of them, except the restoration of redeemability, can succeed in arresting our march into socialism. A government possessing the powers given it by an irredeemable currency can ignore the pleas and protests of such groups and individuals. And, if it be disposed to lead a people into socialism—which appears to be the policy or tendency of our Federal Government—it does ignore such groups and individuals.

If, therefore, the majority of Congress would spare the people of the United States the suffering and disasters inherent in socialism, that majority must face the fact that the first and necessary, and possibly the only, means of doing this lies in the restoration of redeemability in our currency.

5. Our Government's move toward socialism and its yielding to the demands of self-serving pressure groups has resulted in profligate spending and dissipation of our national patrimony. There seems to be no good reason for supposing that this spending and dissipation can be ended so long as the majority of Congress is composed of politicians and so long as they have an irredeemable currency at their disposal.

These politicians have been and are converting our Federal Government from what should be the responsible agent of the people into their autocratic boss. The fact that our United States Government is, constitutionally, a government of restricted and delegated powers, while the States have governments of general powers, seems today to be ignored. The implication of that should be pondered by us all. This most basic concept in our constitutional arrangements is treated today as though it does not exist. One may ask: What has become of constitutional law in this Nation? When constitutional law dies and the people are deprived of the power of control of their public purse, that nation is on a road that has led many another country to catastrophe. There seems to be no valid reason for supposing that if the United States continues on such a course it will be immune from these common consequences.

6. Our system of irredeemable currency has enabled our Government to build a huge bureaucracy, national and international, that cripples private enterprise domestically and in foreign trade and exchange. Since gold imports and exports, legally made, are under the control of our Federal Reserve banks and Treasury, these and other Government-owned or dominated institutions automatically gain control of all legally

conducted transactions in foreign exchange. Such control reaches to exchanges of goods to investments, and to travel, and subjects the ingenuity of private enterprize to the crippling impedimenta of government regulation. This is an important part of government management of a nation's people and economy. It is totalitarianism at the international boundary line; and, from that point of vantage, government control is reflected back into the internal economy of our country in many and often subtle and far-reaching ways.

MULTIPLE QUOTATIONS OF DOLLAR

7. Our system of irredeemable currency has provided multiple quotations for our dollar at home and abroad. This is a characteristic of weak currencies. After resumption of specie payments, beginning January 2, 1879, Secretary Sherman, one of our greatest students of monetary principles, said in May of that year: "I want to convince everybody that * * * the United States is not bound to have its notes hawked about at a discount, but that a note of the United States may travel about the world, everywhere received as equal to gold coin, and as good as any note ever issued by any nation, either in ancient or modern times." Today our Government cannot correctly make that claim. It cannot and does not prevent the so-called promises of our Treasury and Reserve banks, in the form of irredeemable money, from being hawked about at a discount.

8. Under our hybrid system of irredeemable currency and restricted international gold bullion standard, the gold reserves in the United States Treasury are usable only by foreign central banks and governments. Although the gold certificate reserves in Federal Reserve banks are computed against all their Federal Reserve notes and deposits, only foreign central banks and governments can obtain these reserves, and, through them, the Treasury's gold. All other holders of Federal Reserve notes and deposits are denied this right. Our people and institutions, with claims against those reserves of precisely the same kind as those held by foreign central banks and governments, are denied access to those reserves, while they are placed at the disposal of foreign banks and governments.

That sort of discrimination cannot have any valid defense. If there must be discrimination—and normally there should not be—it surely should be in favor of our people and institutions. During World War I, we suspended gold payments in our dealings with foreign countries, but we maintained freedom of redemption at home. Since 1933, we have reversed this procedure; we have maintained redeemability for foreign central banks and governments while denying it to our own people. This is merely one aspect, but an important one, of the obsession in behalf of internationalism that has swept this Nation like a mania.

CONSEQUENCES OF IRREDEEMABLE CURRENCY

The consequences of our use of an irredeemable currency have diffused themselves throughout our economy in a multitude of ways. Money is the bloodstream of a nation. An irredeemable currency is a diseased and corrupted bloodstream. Secretary Sherman said of it in 1877: "A depreciated paper money cheats and robs every man who receives it of a portion of the reward of his labor or production, and in all times it has been treated by statesmen as one of the greatest evils that can befall a people" (Recollections, I, p. 589). Keynes said in 1919—and he assumed he was quoting with approval a statement supposed to have been made by Lenin—that by "* * * a continuing process of inflation, governments can confiscate, secretly and unobserved, an important part of the wealth of their citizens. By this method they not only confiscate, but they confiscate arbitrarily; and, while the process impoverishes many, it actually enriches some * * *" (Op. cit., p. 235).

Irredeemable currency, easy money, and a depreciating purchasing power of the monetary unit constitute a destructive disease—subtle and far-reaching in nature. Nevertheless, the popular demand is for more and more of a depreciating currency—for the very thing that injures. As the artificially stimulating effects of a depreciating currency wear off and as maladjustments and hardships multiply, the popular demand for this narcotic becomes more intense. In due time great distortions appear, fears become widespread, and the rate of depreciation tends to increase. Productive machinery stalls, savings disappear, and unemployment, hunger, and distress stalk the land.

We in this country seem to take the position that we shall escape these evils. There is perhaps no way at this date to estimate with accuracy what the final outcome for us is to be if we continue with the poison inherent in an irredeemable currency. Our disease is of the creeping variety, and extremely deceptive, because of the hybrid nature of our irredeemable currency system. Nevertheless, we have our powder kegs. For example, besides the basic evils mentioned, there are the great potential dangers which exist in the huge surplus of reserves in our Federal Reserve System. These could support an expansion in our bank deposits to the extent of $360,000,000,000 in addition to the present $162,000,000,000. The annual rate of turn-over for our great volume of bank deposits is relatively low (12.3 for 332 reporting centers as compared with the rate of approximately 30 in 1929). Should the rate rise to that of 1929, prices could reach fantastic levels in this country. The expansion of consumer credit is now two and a half times that of 1929.

WE NO LONGER HAVE A HEALTHY ECONOMY

A healthy economy is one in which the maximum harmony in relationships exists among the agents of production and the forces operating in the exchange of our goods and services, in consumption, and in the distribution of income. Today we have a mixture of the healthy and unhealthy with the two sets of forces apparently almost in balance. Among the unhealthy forces at work, our irredeemable currency, easy-money policy, and various governmental policies—particularly those involved in governmental management of our economy—are eating more and more deeply into our structure. As the maladjustments grow relatively more important as against the forces that contribute to harmonious relationships in our economic system, we should expect a corrective reaction to set in.

If at that time additional injections of cheap money should be made by Government planners in an effort to overcome falling prices and losses, the poison in the economic system would merely be increased and the painfulness of later readjustments would be magnified.

It needs to be emphasized that national well-being and harmonious relationships are not necessarily indicated by expansion in such aggregates as the volume of money and deposits, total spending, and national income figures. Aggregates of that type may reveal nothing as to economic harmonies or maladjustments. When a nation's currency is depreciating rapidly, as, for example, in Germany in 1920–23, such aggregates would reach great size. But no sensible person would suppose that they would reflect economic soundness or prosperity. Economic collapses can start from any high point in any major index of production or price expansion when a sufficient number of strategic factors are pinched between costs and prices and severe distortions overbalance the forces struggling for harmony. Much attention is being directed these days to such aggregates as national income, national product, total volume of wages paid, total profits, total savings, total spending, and so on. These aggregates are a favorite tool of the Keynesian economists and economic planners. The concepts commonly involved, and the manner in which these aggregates are often used—to say nothing of the unreliability of the data—frequently will not withstand careful analysis. The inferences sometimes drawn are too simple to fit the facts; and sometimes they have dangerous implications because of what they obscure. It is with harmonies and disharmonies in our economic system, rather than with aggregates, that we should concern ourselves chiefly in our analyses of business conditions and economic well-being.

We also need badly to stop our practice of looking at assets while ignoring liabilities. The debt of our people is stupendous. Any individual with wealth to mortgage can create the appearance of a great increase in his well-being by borrowing to the limit and spending freely. He may increase his assets and his productive activity, and he may easily demonstrate that he is better off—if he will ignore his liabilities. A great proportion of the analyses and discussions of our economic well-being is concerned solely with assets while the liabilities, which may become the ruthless bosses at any time, are ignored.

It also needs to be emphasized that harmonious relationships are fostered only when objective standards of appraisal are given free play, and that the only objective standards that exist as to what is the proper price for a commodity or service are those provided by the operation of the forces of supply and demand under conditions of free and fair competition. The price of a bushel of wheat is proper when all buyers and sellers involved determine it in a freely competitive market. Every other notion as to what is a proper price for a good or service is subjective. The employment of subjective standards is the device of the wishful thinker and the dictator. When a government substitutes its judgment as to what prices should be, in lieu of their determination by all buyers and sellers in free markets, it is instituting dictatorship. There is no objective or scientific standard of appropriateness involved in a subjective standard. The latter is merely a matter of the wish and of the will of the authority which has the power to enforce its will.

Government dictatorship creates economic maladjustments rather than greater harmonies in economic relationships. Government prescription of minimum wages, of prices for farm products, of interest rates, of profit margins are all acts of dictatorship. The management of a nation's currency, as it is done when the currency is irredeemable, is an act of dictatorship at one of the most sensitive nerve centers in a nation's economy.

There has been a rapid increase in the infliction of the subjective standards and will of Government officials on the people of this country in recent years. We are in the midst of a struggle between those pushing for Government dictatorship and those who desire free markets and the objective standards they provide.

When President Truman stated recently that he proposed to claim credit for such prosperity as we now have, he revealed, perhaps inadvertently, that he thought we had already attained a sufficiently high degree of Government management of our economy for the party in power to claim credit for what he seemed to regard as a healthy prosperity. The implication of his claim seems to have been lost upon the people of this country.

Since a healthy economy rests upon the determination of values and price by the objective standards of the free market, rather than by the employment of the subjective standards inherent in dictatorship, it is the duty of a good Government to provide the people with objective standards for measurement. A good monetary standard requires that there be a monetary unit of

fixed weight and that all substitute monetary promises be redeemable in the standard monetary metal—if standards of honesty are to be respected. Tampering with a standard of measurement after it has been prescribed, whether it be the foot, the gallon, the pound, or the dollar, has no defense. Such manipulation is an attempt to substitute subjective desire and will for the objective standards on which all science rests.

The unsound in Federal easy-money policies and in many other aspects of our economy cannot be eliminated so long as we attempt to operate with an irredeemable currency which is a basic feature of a governmentally managed economy which, in turn, rests upon subjective evaluations—the tools of dictators.

SUMMARY OF SOUND MONEY BENEFITS

The benefits to be obtained from the institution of a redeemable currency may be summarized as follows:

1. Our people would once more have an honest currency; and Treasury and Federal Reserve officials would once more be conforming to accepted standards of honesty in respect to honoring promises to pay on demand.

Dishonesty is a fatal element in the social and political fabric of a nation. Its consequence is trouble. There is no valid defense for this current manifestation of dishonesty in officialdom. When the bonds of integrity are loosened at official levels, the disease spreads rapidly through the foundations of society and its social institutions.

Secretary of the Treasury John Sherman stated correctly in 1877 (Recollections, I, p. 589) that "There are times when such [irredeemable] money is unavoidable, as during war or great public calamity, but it has always been the anxious care of statesmen to return again to the solid standard of coin. Therefore it is that specie payment * * * is pressed by that great body of intelligent men who study these questions, as an indispensable prerequisite for steady business and good times."

Sherman made another pertinent observation: "Why ought not anyone who issued a promise to pay on demand be made to pay it when demanded, or pay interest thereafter?" (Ibid., p. 591.)

2. Power to control the Government's use of the people's purse would be returned to their hands where such power belongs. The fact that they might exercise that power slowly or too late, as has been the case sometimes in the past, does not alter the fact that the constant threat of its use tends to keep a Government and the banks within bounds which do not raise fears. Every individual would be free to exercise his own judgment as to what percentage of his dollars he would prefer to put in gold in an effort to protect the value of his savings. If, with this freedom of choice, people are misled and fail to take the proper protective measures, they cannot charge their misfortune to a lack of power to use their own judgment. With a redeemable currency at their disposal, they would have a power not possessed today, and it seems reasonable to suppose, if our Government should continue with its programs of profligate spending and dissipation of our national patrimony, many people would begin to exercise their power to protect their savings and to this degree tend to bring this practice to a halt.

3. Multiple quotations for different kinds of dollars should disappear. All our currency would be convertible into, and have equal value with, gold. Restoration of redeemability would be somewhat like the replacement of a weak and dangerous foundation of a tall building with the best and strongest foundation materials known.

4. The introduction of redeemability should instill confidence and provide incentive for more saving, more investment, more trade and, consequently, more and safer prosperity. The consequences would depend much upon the management of credit and the behavior of all the other forces that affect production and prices. A good basic monetary system, like good strong rails on a railway, is a great facilitating instrument and, moreover, contains some elements of safety. But neither provides an insurance against the consequences of human foolishness or stupidity or recklessness or bad management. Although the institution of redeemability should invite great social benefits, bad fiscal and banking policies and practices could precipitate a serious situation despite the existence of a gold standard and redeemable currency. The problem is to get good monetary management under the restraints of a redeemable currency. The solution to the problems inherent in the uses of credit is not to be found in freeing money managers from the restraints provided by a redeemable currency.

Said the wise John Sherman: "To resume is to recover from illness, to escape danger, to stand sound and healthy in the financial world, with our currency based upon the intrinsic value of solid coin.

"Therefore I say, may resumption be perpetual. To wish otherwise is to hope for war, danger, and national peril, calamities to which our Nation, like others, may be subject, but against which the earnest aspirations of every patriot will be uttered." (Recollections, II, p. 704.)

5. Return to a thoroughgoing gold standard and redeemable currency would permit a free flow of all our money into and out of the country. Private individuals, free to go when and where they can and will with their dollars of all kinds, should revive and stimulate foreign exchanges of goods and services in every form. Private ingenuity could go to work once more; and, when millions of interested people, in search of profit and pleasure, are given freedom and opportunity to accomplish their purposes, they usually manage to succeed in high degree. No Government agency or Government plan can match the accomplishments of private individual initiative in the development of international exchange of goods and services.

6. With the great benefits of private ingenuity freely available once more in international exchange, and with all our dollars freely interchangeable with gold at a fixed rate, at least those aspects of the difficulties in exchange which now exist between us and the rest of the world because of the irredeemable features of our currency, would be eliminated. The great benefits of our return to redeemability, which should soon be obvious, should set an encouraging example for other countries, should hasten the removal of restrictions by them, and should in the end make their road back to redeemable currencies much easier.

7. A restoration of redeemability could not and would not insure people against sharp ups and downs in productive activity and prices. All that it could do is to provide the best type of currency known—one that, by its nature, does not cause a country to take the course to disaster made possible by an irredeemable currency. Before that unfortunate course can be taken the redeemability of a currency must be destroyed.

Business and price fluctuations are the result of a multitude of forces. The part played by a redeemable currency might well be of minor or negligible importance in the fluctuations of production and prices. In no event could it be the controlling factor. In high degree it is a facilitating instrument, a self-liquidating, and therefore sound, medium of exchange—a passive factor. It is an irredeemable currency that becomes a potent causal force because the elements of depreciation and the potential dangers inherent in such a currency enter into people's calculations and plans. A gold standard and redeemable currency, on the other hand, do not carry these germs of disease; they must come from outside—from abuse in the use of credit.

There is perhaps no single act of Government that could bring more important benefits to the people of the United States than a restoration of redeemability of our currency at the present statutory rate of $35 per fine ounce. Responsible people who wish to serve their country well probably could do nothing so important as to persuade their Congressmen and Senators to pass the Reed bill (or Hale bill) which provides for such redeemability. Shortly after the institution of redeemability the multitude of distortions and evils caused by irredeemable currency and by the Government's easy money policy should begin to disappear; our persistent march into the Death Valley of socialism should be brought to a halt; and our Nation should be back on the course that should lead to better days for the people of the United States.

Chicago Leads Again

EXTENSION OF REMARKS
OF
HON. CHESTER A. CHESNEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1950

Mr. CHESNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to insert the following article which appeared in the June issue of the American magazine.

Further articles on this great movement started in Chicago appeared in February's issue of Red Book, May's issue of the Reader's Digest, the Catholic Digest, Good Housekeeping magazine, and many of the country's daily newspapers.

I believe that this article, and the information contained therein, merits the attention of all of us:

THEY MEND BROKEN MARRIAGES

Several months ago, a couple went to Attorney Samuel M. Starr, of Chicago, Ill., seeking a divorce. Their bitter wrangling drove Starr out of his own office. In an adjoining room was waiting one of his former clients, a divorcee, who had had a problem similar to that of the pair in his office. On an impulse, Starr asked her to talk to the quarreling couple. She agreed, and the next thing Starr heard, the couple had patched up their differences and were second honeymooning.

The success of this chance meeting prompted Starr to form a unique organization in Chicago called Divorcees Anonymous. It consists of 100 ex-mates who voluntarily give time and efforts to help others save their marriages. These women range from business executives and insurance brokers to school teachers. All have one thing in common. They know first-hand the loneliness and frustration, the social and economic dislocation that follow divorce, and have frequently found these to be worse than the problems that broke up their marriages.

When a wife goes to Starr asking for a divorce, he first asks her if she wants to save her marriage. If she does, he introduces her to a DA member with a similar personality, one who had a similar problem in her own marriage. The member becomes the woman's sponsor, and not only points out the disadvantages of divorce, but also offers constructive help to save the woman's marriage.

Starr says the chief causes of divorce are the "other woman," money, and liquor. If the DA finds that the troubled wife has "let her appearance go," she suggests ways to correct it. She helps work out family budgets. The sponsor will take the woman to DA meetings. Starr presides at all meetings, and when a man's touch is needed, he talks to the husband alone, or to the wife. Most members of DA, he says, feel that if they had it to do over again they could save their marriages.

While the organization is in Chicago, Starr helps out-of-towners by mail. Starr and the DA's give their time without pay. Ministers, divorcees, and lawyers in other cities have sought out Starr with the idea of starting chapters in their own cities, having heard of the movement through word of mouth. Starr is a divorce lawyer exclusively, is happily married, himself, and the father of three children. When away from divorce problems he enjoys fishing, golf, and baseball.

A Witness Would Correct the Record

EXTENSION OF REMARKS
OF
HON. EDWARD T. MILLER
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 1, 1950

Mr. MILLER of Maryland. Mr. Speaker, in an extension of remarks by the distinguished junior Senator from Virginia, under the title of "Lynch Law for Ducks and Geese," which appears in the Appendix of the CONGRESSIONAL RECORD of May 24 last, certain references appear to a speech made by Hon. William C. Coleman. In prefacing his article, the author says:

It deals with a meeting of sportsmen in Baltimore for the discussion of shooting regulations, at which the senior Federal judge of Maryland, Hon. William C. Coleman, of Baltimore, is alleged to have made the astounding statement that he did not intend to enforce the Federal regulations which prohibit the shooting of ducks and geese over baited waters.

In fairness to all concerned, the record should be put straight. As one of those in attendance at the meeting in question—which took place in Annapolis, not Baltimore—and who listened closely, I know that no such statement was made directly, or by implication. To the contrary, Judge Coleman, speaking informally by request of the chairman, as an individual lover of sport, clearly stated as preamble to his remarks, that as a judge he would continue to enforce all laws regardless of his personal views as to their merits.

William C. Coleman's long record of scrupulous integrity and ability as a judge, lawyer, and citizen, makes any defense of him personally superfluous. However, the Senator from Virginia, for whom I have high regard, has been misled by loose reporting and interpretation of the forthright statement made by the judge at the public meeting, which was held under the auspices of the United States Fish and Wildlife Service in Annapolis, Md., on April 28.

The purport of the pertinent portion of his remarks was that Judge Coleman frequently found the evidence produced with respect to alleged baiting violations too nebulous to warrant conviction in a criminal case, or to even justify prosecution. He stated there was widespread evasion of the law in the Chesapeake Bay area; and that he considered it ill-advised and unfair to hunters who strictly conform to regulations, and that as an individual he believed the law should be changed. He compared the situation to the lawlessness that developed during prohibition when lack of public support resulted in a worse condition than that which the law sought to improve.

The meeting in question was largely attended, and those present included leading sportsmen, hunters, and conservation authorities from many localities. Not a single voice was lifted in criticism of the judge's comments. His views were enthusiastically received. It is to be regretted that there was no transcript made of the proceedings. Were one available, I am confident that the Senator would read the judge's remarks with interest and appreciation, if not with approval.

Some Thoughts on Savings Bonds

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 1, 1950

Mr. VELDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Peoria Star of May 29, 1950, entitled "Some Thoughts on Savings Bonds":

SOME THOUGHTS ON SAVINGS BONDS

The United States Government is now pushing another savings bond drive and the bonds, without doubt, are an excellent investment. We would have no comment here interpreted to mean anything else.

But there are complicated problems back of the savings bond drive and it is interesting to glance at them.

Ten years ago, savings bonds, returning in 10 years four dollars for each three invested, were sold to the public. Since this is the maturity year, almost three-fourths of a billion dollars will have to be paid to holders of the bonds issued in 1940. How is the Government to raise the money to redeem these bonds? The current sale of savings bonds is the answer. The Government is simply making an effort to sell the bonds back to the people.

A similar but greater effort will have to be made in 1951 when the number of maturing bonds will be double those of this year. In 1952, the Government will have to sell almost $4,000,000,000 worth of the bonds back to the people, or find some other source of revenue for redeeming them. In 1953 the amount will be $6,800,000,000; in 1954, $8,700,000,000; in 1955, $7,500,000,000. And in the next 5 years they will level off at around $5,000,000,000 a year. In the next 10 years, the Government is faced with the problem of refinancing $57,000,000,000 worth of savings bonds.

During the war, people bought bonds for patriotic reasons. That motive does not now exist. Buyers now appraise the bonds for their value as investments. They will be in competition with other kinds of investments. How can the Government meet the competition?

Not by offering a higher rate of interest, because that would depreciate the value of all outstanding bonds. Nor can the Government heavily emphasize the virtue of investing $3 now and getting $4 in return 10 years from now; because people are learning that unbalanced Federal budgets inflate the currency, and $3 today may buy more than $4 (or even $5 or $6) in 1960.

With the Government committed to a policy of deficit financing, it would seem an utter impossibility to redeem $57,000,000,000 in savings bonds in the next 10 years except by borrowing through negotiable bonds, the kind that find their way to banks and become the basis of further currency inflation. Yet the savings bonds were originally offered to the public for the avowed purpose of avoiding wartime and postwar inflation.

A couple of weeks ago, President Truman was offering to double the income of the average American family. It is just such things as this savings bond problem that make the President's promise sound hollow. For the same process that would double the average family income by 1960 would return the equivalent of $2, instead of four, for every three invested in savings bonds this year.

The Accumulation of Dried Skim Milk Is Not Surprising

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 1, 1950

Mr. MURRAY of Wisconsin. Mr. Speaker, the fact that the CCC has now accumulated 260,000,000 pounds of dried skim milk worth a value of some $33,000,000 is not surprising. Why is this product accumulated?

Before World War II the annual production of dried skim milk was between four and five hundred million pounds for animal feeds and human consumption. The 1949 production was 937,000,000 pounds. This adjustment was a means of providing additional food during the war. Farmers were asked to: First, sell whole milk; second, the dairy plants were asked to divert dried skim milk from animal feed to a product for human consumption. The dairy farmers and the dairy plants conformed to this request with the result that a large accumulation prevails. There is a support price of some 12 cents per pound. It is the cheapest form of animal protein. It contains 35.6 percent of digestible protein. This is twice as much protein as in meat costing up to a dollar a pound. While considerable quantities have been used in the baking and other industries, a method of finding a ready, desirable and expanding market for this good product has not been developed.

One of the drawbacks and hindrances of finding an expanding market for this skim milk has been the trade barrier or embargo that has been erected in our cities. Take Washington for example, skim milk from grade A milk or milk reconstituted and made from grade A milk cannot be legally sold in this city the only city in the United

States where the Congress controls the legislation. It is a ridiculous situation. We have distributed millions of pounds of dried skim thru the school lunch program to millions of American children including those in Washington and yet the same product is denied millions of Americans on phony trumpt up public health requirements.

If the Congress put a support price on a product and then prevent the same product to be sold on the market how can one expect anything but an accummulation of the product?

It was evident that this dried skim would be in abundant supply when the ECA was passed. I introduced an amendment that earmarked $65,000,000 for purchasing this most excellent food. The amendment was deleted in the other body. No doubt it was one more example of the influence of King Cotton since over $500,000,000 worth of this product was purchased.

During the past years over 100,000,000 pounds of this product was sold through the ECA for 3 cents per pound, leaving the farm program the opportunity to take a $9,000,000 loss to be charged up to the agricultural program. My understanding is that the ECA is just waiting for Congress to adjourn so that another one of these deals can be made. In the meantime, I presume additional thousands of bales of cotton will be shipped at parity of above parity prices.

We can expect to hear additional criticism of these accumulations but keep in mind that the domestic trade barriers that are and have been erected and also realize the facts that millions of pounds are and have been imported.

Anytime the public wishes to demand that this product has the same marketing consideration that the Coca-Cola enjoys and anytime these trade barriers and embargoes are removed, this wonderful product will find its way in the channels of trade. Until then of course the metropolitan press will have a topic to discuss and I hope with all the facts in mind. In the meantime a visit to an automat should provide a method of providing mass consumption of this great product.

We should also keep in mind the millions and billions involved in readjusting the business and labor postwar domestic and foreign programs. In comparison, the cost of the agricultural readjustment has been small.

Ten Little Free Workers

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, this is the story of 10 little free workers in our free land. These are the workers: Reddy, doctor, railroader, miner, steelworker, farmer, lawyer, grocer, sales clerk, and reporter.

Ten little free workers in this country fine and fair.
But if you cherish your freedom—worker have a care!

Ten little free workers—Reddy was doing fine,
Until the Socialists got him—then there were nine.

Nine little free workers laughed at Reddy's fate
Along came Federal medicine—then there were eight.

Eight little free workers thought this country heaven
But the Government took over the railroads, then there were seven.

Seven little free workers 'til the miners got in a fix
Uncle said coal's essential and took over, leaving six.

Six little free workers 'til the day did arrive
The steel mills too were federalized—then there were five.

Five little free workers—but the farmers are free no more
The farms have been collectivized—that leaves only four.

Four little free workers the Government did decree
All must have free legal advice—then there were three.

Three little free workers—the number is getting few,
But with Government groceries selling food—then there were two.

Two little free workers—our story's almost done,
With clerks at work in Federal stores—that leaves only one.

One little free worker—the reporter son-of-a-gun
Musn't criticize Government—so now there are none.

Ten little workers—but they are no longer free
They work when and where ordered, and at a fixed rate you see,
And it all could have been prevented if they'd only seen fit to agree
And work together instead of saying, "It can never happen to me!"

What Your Dollar Is Worth

EXTENSION OF REMARKS

OF

HON. HAROLD H. VELDE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1950

Mr. VELDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Peoria Journal of May 28, 1950, entitled "What Your Dollar Is Worth":

WHAT YOUR DOLLAR IS WORTH

President Truman delivered an address at Kansas City last September 29 in which he declared that the national income of the United States could be raised from $200,000,000,000 to $300,000,000,000 and that each family with a 1949 income of $2,000 a year then should have $4,000.

The President didn't explain whether he was speaking of income less taxes. Nor did he promise that when the national income went to $300,000,000,000 that the price level would remain unchanged.

These conditions would make a considerable difference in the effectiveness of a $4,000 average income for the families of the United States. If prices or taxes go up along with the national income, the family with a $2,000 income today won't find that a $4,000 income gives them twice the purchasing power that they have with $2,000.

If the dollar continues to devaluate as it has in the last 10 years, the man with Mr. Truman's $4,000 income won't be much better off than he is now with only $2,000.

The dollar on April 15 last, according to Editorial Research Reports, was worth in consumer purchasing power only 59½ cents of the 1939 dollar. The average family with an income of $2,000 in 1939 needed $3,365 on April 15, 1950, to buy the same goods and services as 11 years before.

A break-down in consumer purchasing power of the dollar on April 15, 1950, as compared with the 1939 dollar, is as follows:

	Cents
All items	59.5
Food	48.5
(Meats, 43 cents.)	
Wearing apparel	54.0
Rent	85.0
Fuel, electricity, refrigeration	70.0
(Gas and electricity, $1.02.)	
House furnishings	54.0
Miscellaneous	65.0

Then, in addition to having a devaluated currency, there is the matter of increasing income taxes that also take a nibble at the family dollar.

To consider only the Federal income tax, in 1939 a married man with only his wife to support paid nothing on a net income of $2,000. In 1950 his Federal income-tax obligation is $101. A single person with no dependents and a net income of $2,000 paid $32 for 1939 Federal income tax; he pays $201 on that income now.

Looked at in the light of a depreciating currency, assailed by increasingly high taxes, Mr. Truman's $4,000 average family income and $300,000,000,000 national income don't look as big as he would like them to. If the trend which has developed under his administration continues, we will need that much and more just to keep even.

Biggest Story

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the thirty-eighth article by Mr. Frank C. Waldrop on the infiltration of communism in our country:

BIGGEST STORY

(By Frank C. Waldrop)

The first really full-scale, carefully drawn project to organize all life in Russia on a pattern of scientific socialism began on October 1, 1928.

Up to that time, the Communists were only temporizing from day to day. They were preoccupied with getting a grip on the organs of control at home and on setting up their Communist Internationale, to produce revolutions in every other country.

But in 1928, they uncorked the first great 5-year plan, to socialize all the means of production and distribution.

To get the factory system going, they imported a considerable force of foreign engineers and technicians. The most famous of these was an American, Col. Hugh Cooper.

Colonel Cooper built the best of all the Soviet industrial weapons, the great Dneprostroy, a hydroelectric dam across the Dneiper River in the Ukraine, that supplied power for development of the coal and iron system in the Donetz Basin and set the pace for further development at Magnetogorsk, a sort of Siberian Pittsburgh behind the Ural mountain chain, but lacking any qualities of decent living for the unfortunates condemned to duty there.

The Dneprostroy was the key and arch supporting the whole Soviet industrialization program, and except for it there could have been nothing improved at all.

In 1942, incidentally, the Russians blew it up to keep Hitler from using it and not until 1947 was it even partially restored to operation.

The Dneprostroy was the greatest single achievement in Russia between two wars, and it was American in concept, design, and execution.

Stalin's government accomplished nothing within sight of it, though visitors at the New York World's Fair who saw a model Dneprostroy there with running water, lights, and factories around it, were never told so.

Stalin's government showed its ability in supplying the manpower and operational talent for the industries built by American, British, and German technical genius.

The first of the great Soviet trials and shooting campaigns under the 5-year plan began early in 1930. Factory managers walked in fear of their lives, and with good reason. Moscow set production schedules, failed to supply the means of achievement, and then held the manager guilty of sabotage for any deficiencies.

Stalin's withering touch next was felt on the farms.

In the old days of propagandizing against the czars it had been standard policy for the revolutionaries to promise bread, peace, land.

In a region where vast undeveloped emptiness lay all around the monarch held title to more real estate than did any combination of his subjects.

Collective farms were a long-established imperial practice and the people hated them, just as they hated the imitation czars of the nonroyal nobility.

And so it was that in the early years of the Soviet regime the farm population was pacified by allowing it to think the land it worked so hard and fiercely was the people's own property.

Then Stalin, in the application of the great 5-year plan, lifted his blood-dripping finger.

The small landholders soon found themselves enemies of the people. Off they were dragged to work on construction jobs at the other end of the empire. Their families were broken, their lives came to nothing. They were just horses to be worked until dead.

Once more the czar, Stalin, took back the land in accordance with the local variety of the Brannan plan of government agriculture.

The farmers fought back in their own way. They refused to turn in their crops. They killed their cows and ate them, also their sheep and pigs.

The Russian domestic animal population, already far below the 1913 census, took another catastrophic plunge. It has not fully recovered to this day.

Stalin sent troops into the Ukraine, Russia's richest growing region, and confiscated the produce. Meanwhile there came one of those famines periodic in the Russian wheat country, a combination of very cold winter and no rain.

The result: Some 12,000,000 people died in the Ukraine and Caucasus Basins while Moscow held onto the food seized the year before.

As in the factories and on the farms, so in the Moscow palace politics. The first of the great series of trials and executions of Communists by other Communists began in 1929 with the case of Nicholas Bukharin, the head of the Comintern (Communist Internationale).

This was as if Mr. Truman, after his famous quarrel with Secretary of State Byrnes, had set the FBI on him.

Something He Overlooked

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 1, 1950

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Mount Vernon (Ohio) News:

SOMETHING HE OVERLOOKED

President Truman denounces as obstructionists and mossbacks those who oppose his Fair Deal program or any part thereof.

His implication is that these obstructionists are standing in the way of progress and are, for selfish reasons, fighting measures designed for the general welfare of the American people.

But the President doesn't tell the whole story; he has overlooked something, either intentionally or unintentionally.

That something is the cost of the program he advocates. The Senate Committee on Expenditures in the Executive Department has just completed a study of the cost of Mr. Truman's proposals.

Fifteen proposals in this program are now under consideration by Congress.

If all fifteen received the approval of Congress, $7,000,000,000 would be added to the Federal budget for the fiscal year 1951.

That would be just a starter, however. Within 5 years, the study revealed, they would add more than $25,000,000,000 to the annual budget, bringing it to above $65,000,000,000 a year.

The 15 proposals and their first-year and subsequent yearly cost, respectively, are:

National health insurance, $15,000,000 and $7,000,000,000.

Social-security extension, $250,000,000 and $6,000,000,000.

Industrial safety program, $3,000,000 and $5,000,000.

Aid to education, $300,000,000 and $500,000,000.

National Science Foundation, $15,000,000 and $100,000,000.

National Commission Against Discrimination in Employment (FEPC), $600,000 and $5,000,000.

Special assistance for rental and cooperative housing, $10,000,000 and $50,000,000.

Labor Extension Service, $3,000,000 and $27,000,000.

Universal military training, $600,000,000 and $3,000,000,000.

St. Lawrence seaway (operating costs), $8,000,000 and $30,000,000.

St. Lawrence seaway (construction costs), $100,000,000 and $100,000,000 (for 10-year period).

Military housing and public works, $600,000,000 and $1,400,000,000.

Assistance to underdeveloped areas (point 4), $35,000,000 and $500,000,000.

Brannan farm plan, $5,000,000,000 and $6,000,000,000.

Commercial production of natural resources, $11,000,000 and $400,000,000.

Incentive payments for development of minerals, $70,000,000 and $70,000,000.

The grand totals are: For the first year, $7,020,600,000; and for subsequent years, $25,187,000,000.

Some of these proposals have merit, some are in the questionable status, and some should under no circumstances be enacted.

But the wisdom of taking on the added expense of even the meritorious proposals is to be doubted.

The United States, along with the rest of the world, is passing through a critical stage of history. This country, in its role of leader of the free people of the world, is committed to extraordinary expenses, such as maintaining a huge defense force in time of peace and helping friendly nations with economic and military aid, at great cost.

Our first responsibility is to build defenses of such strength that they will deter the Communists from aggression, or, failing in that, assure that democracy will survive the onslaughts of communism or any other ism.

We cannot do that and have all the "progress" Mr. Truman advocates simply because the American people cannot afford to undertake this double burden.

If we neglect our defenses to finance the Fair Deal program, all the "progress" gained by these expenditures would be quickly nullified if it came to a test with some totalitarian power, as it undoubtedly would if our attention were diverted from building our defenses by concentration on the Fair Deal program.

Character Assassination: Disloyalty Charges

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 1, 1950

Mr. SADOWSKI. Mr. Speaker, an interesting book entitled "Character Assassination" has just come off the press. The author is Jerome Davis, who himself won a libel suit against one of America's most popular magazines for labeling him as Communist. The enclosed article is a review of the book by Ernest Pisko in the Christian Science Monitor:

DISLOYALTY CHARGES: ILLUMINATING SURVEY

(By Ernest Pisko)

Those who are libeled today as "disloyal," "un-American," and "Communist" are in distinguished company.

In George Washington's own words, every act of his administration was misrepresented so insidiously as to make him appear a Nero or a common pickpocket. Thomas Jefferson was called a traitor who first gave the stab to American liberties, Abraham Lincoln was called hater of the Constitution, and pledged to subvert it. Franklin D. Roosevelt was charged with being a dictator, Communist, and Fascist.

It is likely these four Presidents were confident in their more serene hours that history would vindicate their actions and that the mud splashed upon them by their contemporaries would crumble, fall, and allow the true flame of their character to serve as beacon for coming generations.

But to people in a less exalted position, the thought of posterity does not offer the same measure of consolation. They are more dependent upon, and therefore more concerned about, the reputation they have in the eyes of their fellow citizens. While a Lincoln

could shrug off the charge that he was disloyal to the Constitution, a civil servant, teacher, or businessman—publicly accused of disloyalty—may soon find his career broken and his economic existence gravely threatened. The records of the past 5 years show hundreds of cases where this happened or almost happened.

We read about them in our newspapers, hear of them from our favorite newscaster, but rarely is our reaction more than short-lived indignation. Still less do we try to visualize the suffering that slander inflicts upon its victim. That is why Jerome Davis' book Character Assassination must be earnestly recommended as a guide to what lies behind the headlines of recurrent Washington disloyalty stories. It is a poignant and a disturbing report on the injustice and misery resulting from doubtful, unfounded and often plainly malicious charges of a quite arbitrarily defined "un-Americanism."

The method thus employed to injure or eliminate people who differ from the accuser in their political views, their religion or their race, is nothing novel. It was used by ancient Romans against early Christians; by the Roman Catholic Church against all kinds of heretics; by the courts of the Holy Alliance against liberals; by the admirers of Johannes Brahms against the admirers of Richard Wagner; on a gigantic scale by the Nazis against the Jews; and in the United States, as in many other countries, against the advocates of social progress.

Mr. Davis, who himself won a libel suit against one of America's most popular weekly magazine for labeling him as "Communist," analyzes the technique of character assassination as employed against groups—labor, Negroes, Jews—as well as individuals. His documentation is comprehensive, his presentation unemotional. That in many past instances the methods and basic attitudes of the Congressional Committee on Un-American Activities, and of some individual Senators, appear rather close to those of obscure "masters of the smear brush" outside Congress, is not the author's fault. As the great Russian satirist Gogol wrote: "Don's blame the mirror if you dislike the face it shows you."

In his concluding chapter, Recovery of Faith in Freedom, Mr. Davis makes several valuable suggestions as to how to insulate our minds against intolerance. While general adoption of these suggestions would be desirable as a means to insure cleaner fighting, it would not, as the author apparently believes, render fighting altogether obsolete. Not all disagreements spring from intolerance. There is such thing as an honest difference of opinion. And there are limits to the freedom to differ for which Robert M. Hutchins, of Chicago University, pleads in his introduction to Mr. Davis' book. Within these limits, however, a healthy democracy will be harmed less by vigorously expressed differences between its citizens than by their mutual indifference.

The Climate Is Better Than the Day's Weather

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 1, 1950

Mr. O'HARA of Illinois. Mr. Speaker, for years in Chicago Charles E. Merriam has been an institution. His fame is international. As the Morton D. Hull distinguished service professor, now emeritus, at the University of Chicago, he contributed a mighty force to the molding of the political thought of several generations. As counselor to Presidents, governors, mayors, and others in high public office, his influence upon the developments of his times has been large. Today as an elder statesman, as it were, he occupies a unique and enviable position of eminence.

From Charles E. Merriam has come the contribution of a phrase that might well be an accepted expression of the American outlook on the present troubled sea of international affairs. Mr. Merriam, trusting in the loftier and mightier powers of justice and brotherhood, is undisturbed by the menaces of the cold war and the ugliness of the clouds. To him they constitute merely the weather of the day and the climate, he adds hopefully, is better than the day's weather.

I am happy to bring to the attention of the House the following excerpt from an article on world government by Mr. Merriam in Common Cause magazine in which this phrase is used:

> The inventiveness of mankind is equal to the demands made upon it for creative development of legislative and representative agencies, adequate to the lofty purposes of emerging world order. A yes or no to the problem of the precise locus of power, military and fiscal, is not likely to be found without the helping hand of human fraternity, inspired by the hope of realizing the highest ends of humanity. These balances are important, no doubt, but reliance upon the means rather than the ends of world order will prove very difficult and even disastrous. But this is no reason why energy and inventiveness in other areas than those of steel and gold should not be applied to the tests.
>
> Complex and baffling as this problem may be, the alternative of world chaos staggers the imagination. The dreadful possibilities of calamity quicken our pace toward a world community and commonwealth in which justice and right preside. After all, hope is a more powerful motive than fear in leading us to the realization of the highest destiny of man. As a long-time student of government, I do not counsel surrendering to hate, violence, duress. I look to and trust in loftier and mightier powers of justice, liberty, welfare, brotherhood. The climate is better than the day's weather.

Address of Vice Adm. C. E. Rosendahl

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 1, 1950

Mr. AUCHINCLOSS. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am glad to call the attention of the House to a memorable occasion in Ocean County, N. J., which took place on May 24, 1950. On that day the governor of the State and other high officials dedicated the new bridge across Barnegat Bay between Seaside Heights and Island Heights and it was officially opened to traffic. This new bridge has taken the place of an old wooden bridge built in 1914—36 years ago, under the sponsorship of the man whose name the new bridge bears—Thomas A. Mathis.

It was a fine occasion in which many citizens took part and it will do much to enhance the many attractions of Ocean County and make them more available to the public. It is significant to note also that this year marks the centennial year of the founding of Ocean County and it is most appropriate that this bridge should be available for use of the public at this time.

Vice Adm. Charles E. Rosendahl, retired, whose record in the Navy is well known as the most prominent advocate of lighter-than-air craft, is chairman of the Ocean County Centennial Committee and he made the principal address at the official opening of the Thomas A. Mathis Bridge; I am very glad to include it in my remarks.

> Your Excellency Governor Driscoll, Congressman Auchincloss, Commissioner Miller, Captain Tom, Mr. Hansen, citizens and friends of Ocean County, the County of Ocean, one of the jewels of the necklace of the State of New Jersey; land and sea of romance, sportsmanship and tradition, heartily welcomes you here on this milestone occasion in our history.
>
> This year of 1950 is our centennial as a major political entity of the State; but this is only one of the recent facets in the history of this vicinity. You recall that New Jersey itself was one of the original thirteen Colonies. But our part of the State gained recognition as far back as the year 1609, yes, 1609, when the Dutch sailing Captain, Henrik Hudson, sailing in the *Half Moon*, sighted a section of southern Ocean County where now is located our world-famous Barnegat Light on Long Beach Island. Writing in his log-book of this sighting, Captain Hudson said: "A pleasant place to see and a good land to fall in with." With that we all agree.
>
> Another Dutch sailing captain, for whom Cape May was named, gave the name of Barendegadt (in the true Dutch spelling) to the inlet since of that name, meaning "rushing waters." The famous yachting authority, Clarence Lovejoy has called Barnegat Bay, "the finest shallow bay in America."
>
> And while time does not permit my mentioning here the many other outstanding features of our county, I hope you will forgive my slightly prejudiced mention of the fact that Lakehurst was one of the very first international transoceanic airports in the world.
>
> If one really tried, he could stand almost indefinitely and boast of our county, but there are others better at that than I. However, one cannot omit mention of the prominence of our waters in the sailing world; that some of the best beach bathing and sunburns; some of the largest fish—and understandably some of the tallest fish stories—spring from our waters.
>
> We may not have an actual "fountain of youth" but surely something just as good. For here today in our midst is our county's oldest living citizen, Martin Schwarz, Sr., now in his ninety-second year; and still going strong at his market he has operated in Toms River for now over 62 years. Something besides business must have been good to him all these years.
>
> And to prove that we still turn out sturdy men in this county, in this parade today we had William Richard Waller, Jr., of Seaside Heights, born exactly 4 days ago.
>
> To at least two other distinguished men also here, this must be a sentimental and heartening occasion. Our old friend, Cap-

tain Tom Mathis, is one of the two men still alive who privately financed the present—and soon to become the past wooden bridge alongside us, put into service in the year 1914.

And in proof that progressive mental and technical growth are still rewarded, it is no mere coincidence that the builder of this fine modern edifice being dedicated today, is none other than the same Ole Hansen who in 1914 built the lift bridge alongside us—still functioning perfectly today—both Mr. Hansen and the lift.

A centennial year is not a bad occasion to ponder where we can go from here in other developments as well. Let me mention but one suggestion. To land travel, this fine new edifice we are dedicating today is a great asset and adjunct to our county and State. But let us not forget that the abundant waterways in our midst, also are both pleasant and profitable travelways, and we should not overlook their comparable development.

To Captain Tom and his contemporaries it must be heartening to realize that Ocean County has certainly not stood still in the 36 years since the adjoining wooden structure was the last word. Indeed, this new modern cousin is the most dramatic illustration possible, of the progress of Ocean County. This strong, sturdy, sinew is striking evidence that we are still young and growing stronger.

Let us not forget that this bridge will be utilized and enjoyed not only by ourselves but also by the many thousands of visitors who come from far and wide to share with us the beauties, pleasures and resources nature has bestowed upon us. By coincidence, it was on the 24th of May, 1883, some 67 years ago that the Brooklyn Bridge was dedicated, to become a household word and known to countless millions. Who can estimate the millions who will come to know our most modern bridge in six decades to come?

I assure you, Governor Driscoll, Commissioner Miller, Captain Tom, Mr. Hansen, and all the other far-sighted men responsible for this splendid accomplishment, that we of Ocean County are indeed grateful for your efforts in providing us with this modern facility for these modern times.

So, in behalf of the Board of Chosen Freeholders of Ocean County, and as national chairman of the Ocean County Centennial Commission, I hereby express to New Jersey the gratitude and appreciation of our people for this fine bridge, dedicated as it shall be to the peaceful pursuits and healthful recreation of all who live here or come here. This is indeed a most outstanding day in the history of Ocean County, and we are grateful to you for it. Thank you.

Address of Gen. George C. Marshall

EXTENSION OF REMARKS
OF
HON. JOHN KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1950

Mr. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Gen. George C. Marshall at Memorial Day Services, Arlington National Cemetery Amphitheater, May 30, 1950:

This is Memorial Day—a day dedicated some years ago to the stirring of our memories of those who fell in the country's battles, many of whom surround us here in Arlington Cemetery. There have been many Memorial Day addresses here and there will be many more, but as for me, my memories go back to a certain day where in an olive grove on the scene of a fierce battle which had just terminated in a great allied victory, I joined with troops resting from the ordeal of battle on that field. They observed their Memorial Day on the ground they had first fought for and where their fallen comrades had but a few days previously been laid to rest. There we were not talking of the remote past—our thoughts were centered on the scenes of fury and devastation around us and the certainty of greater struggles soon to follow. Many of the men in that particular regiment, an unusually large percentage as a matter of fact, fell in the further fighting, and it was evident that each man was thinking of the sacrifice he very probably would too soon be called upon to make. The setting that evening, the expressions on the faces of those men, and the prospects of the immediate future made a profound impression upon me which I would recreate in your minds today, if it were possible for me to translate the emotions of that hour. Those men quite evidently looked to us to redeem the sacrifices their comrades had already made and that they felt they were soon to make, as so many did. The situation was concrete and very much of the present, and not a retrospect of the past as is largely ours today.

As chairman of the Battle Monuments Commission I am concerned with plots of ground all over the world where our men lie buried, young men brought to a sudden ending of life in the fight to maintain our way of life. Our great responsibility to them is to protect their loved ones and their friends from the agonies and miseries of war. Their living comrades, the veterans of today, alone know what war really is—that there is nothing to be said in favor of war except that it is the lesser of two evils. For it is better than appeasement of aggression because appeasement encourages the very aggression it seeks to prevent. And it is far better than submission to tyranny and oppression, because without freedom and respect for human dignity life would not be worth living.

Unless we are faced with the choice of these terrible alternatives, I think we should concentrate on finding peaceful solutions to the world's problems. Peace should be a dynamic force and not a negative condition that is merely the absence of armed hostilities. We should support to the full every existing instrument to the building of a more stable world. So long as there is a forum for open discussion of international disputes, the United States should be a participant. So long as there remains a conference table around which the nations can gather, the United States should be the first to attend and the last to retire. Only thus can we earn the right to stand here in the presence of the graves of these many men who were cut off in their youth from the life we enjoy and say in good conscience, "We are doing our best to justify your sacrifice."

A most terrible aspect of war is the toll it takes of the youth of the country. The average age of the men of the armed forces in the last war was about 26 years. The average age of those who perished would probably be less since the older men in service were not generally employed in combat.

And so, we lost almost 300,000 of the Nation's youth.

Repeated depletion of vigorous and productive manpower has been the undoing of many civilizations. We have been relatively fortunate in that our wars have not resulted for us in wholesale destruction. But we cannot be certain of the future.

It would be unwise, it seems to me, to console ourselves with the thought that we would ultimately win if hostilities should break out again, because I fear that the victorioues power in another war will stand amidst its own ruins with little strength left to reestablish itself or to offer assistance to its neighbors. It will only enjoy the empty triumph of inheriting the responsibility for a shattered and impoverished world.

To one who follows the current trend of thought among the western European powers it is evident that they are well aware of this. They realize that whoever wins another war, their generation will lose it; they know that peace is a condition necessary to their survival and they look to this country not only for material and military strength to offset the probability of war, but more importantly I am sure that they look to us for a clear restatement of the moral principles we feel are essential to a peaceful international society.

Some have suggested that the United States should take the lead in dissolving the United Nations and in setting up a new organization composed only of like-minded nations. Personally I think it would be unfortunate for the peace of the world deliberately to upset the precarious equilibrium that now exists. The United Nations symbolizes one of mankind's highest aspirations—an international house of democracy, a true brotherhood of the nations. We should not, it seems to me, deliberately turn away from that symbol, else we would weaken our moral position before the world and surrender at least a part of our leadership in the fight for peace.

One of the things for which our comrades gave their lives was to bring fellowship closer to reality. We have not realized that dream. Admittedly the United Nations is an imperfect organization. But remember it does provide a forum where words can be used instead of bullets. And so long as this forum remains open there are cracks in the iron curtain through which some of our ideas will penetrate.

Those who have lost faith in the organization profess alarm because the eastern powers use it as a platform for the dissemination of Communist propaganda. But we also have the privilege of telling our story through the same medium. And in any contest of ideas I think honesty will finally win in the long run, for truth must prevail, and I'll wager my money on American principles of freedom and equality under law, and tolerance and justice for all men.

Then, too, we have much the better story if we tell it well and tell it affirmatively. We have taken the offensive regarding communism. But we should constantly remind all people that no nation has ever embraced any form of totalitarian rule through exercise of the popular will.

However, the ferment that is stirring around the world today is not all Communist-inspired. A large part of it, I believe, results from an upsurge of peoples who have long suffered in poverty and misrule. And the millions who live under such subnormal conditions are entitled to a fair share of the God-given rights of human beings. It is a challenge to the more favored nations to lend assistance in bettering their lot.

Furthermore, self-interest demands that we give close attention to these peoples, for their situation is the seedbed for either one of two ways of life—democracy or communism. If we act with wisdom, we can guide this yearning to the better things of life through democratic channels.

We must present democracy as a force holding within itself the seeds of unlimited progress for the human race. We should make clear that it is a means to a better way of life within nations and to a better understanding among nations. Tyranny inevitably must fall back before the tremendous moral strength of the gospel of freedom and self-respect for the individual.

But we must have in mind that these democratic principles do not flourish on

empty stomachs. And that people turn to the false promises of dictators because they are hopeless and anything promises better than the miserable existence they endure.

However, I am certain that material assistance alone is not sufficient. The most important thing for the world today, in my opinion, is a spiritual regeneration which would restore a feeling of good faith and good will among men generally. Discouraged people are sorely in need of the inspiration of great principles. Such leadership can be the rallying point against intolerance, against distrust, and against that fatal insecurity that leads to war. I hope that we will provide that leadership. But we will have to get back to first principles if we are to speak with a voice that will kindle the imagination and rouse the spirit.

We have made much of America's strength and material prosperity. We have talked a great deal about the American way of life. But our material prosperity may or may not be exportable. A dynamic philosophy, on the other hand, knows no restrictions of time or space. And we do have an American creed that comes to us from the deep roots of the past. It springs from the convictions and hopes of men and women from many lands who founded this Nation and made it great. You will find that creed, that heritage in the Declaration of Independence and the Constitution with its Bill of Rights.

Although it may have been without a clear realization, those were the things for which our men fought and died; those are the ideals which we can offer to the world with the certainty that they have the power to inspire people and to impel them to action.

I do not mean that we should try to persuade other people to accept our form of Government, but rather the great fundamentals on which it is based. I mean that the basic principles on which our Government was founded are timeless and have validity for all mankind.

But it must be remembered that raising our voice to the world imposes upon us a most serious obligation. We cannot convince others unless we are true to ourselves. We must be satisfied in our own hearts that we give more than lip service to these principles we profess.

When we call for our great individual freedoms, we must be sure that no infringement of these rights is permitted or tolerated because of emotions of the moment.

In some such spirit let us devote ourselves to a generous service to our fellow men just as these dead about us dedicated their lives to that service. I believe that our lost comrades would want it exactly that way.

We have before us the greatest task ever faced by any generation of men in the fight to preserve peace. War, I say again, is no longer just an evil. In this age it seems intolerable.

Our greatest tribute to our dead will be a devotion to the resolve that war must not happen again. But we must not—I emphasize, we must not, as we invariably have done in the past, render ourselves impotent, an invitation to the ruthless aggressor. Also, we should not place complete dependence on military and material power. It is a difficult road we have to follow but we have a wealth of lessons from the past and with clear heads and with genuine willingness to support our efforts, I think we can lead the world into a better life than now seems apparent.

"With malice toward none; with charity for all; * * * let us strive on to finish the work we are in * * * to care for him who shall have borne the battle, and for his widow, and his orphan * * * to do all which may achieve and cherish a just and lasting peace among ourselves, and with all nations."

Reckless Misgovernment

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks I am including an editorial by Arthur Capper on the subject of Government spending. He calls attention to the fact that a Nation which accumulates a deficit of $12,000,000,000 in two peacetime years is recklessly misgoverned. I agree. I am including the article at this point:

A Nation that runs up a deficit of $12,000,000,000 in two peacetime years is being recklessly misgoverned. It seems probable that deficit spending by our Federal Government will amount to that huge sum before June 30, 1952. The deficit this current fiscal year is estimated at six and one-half billions. There is nothing to indicate that spending during the next fiscal year will be much reduced—it seems more likely to be increased—and the deficit in 1951–52 easily could exceed $6,000,000,000. The 2-year total probably will not be less than 12 billions and might be a billion or two higher.

Incurring such deficits, without doing anything about it, is evidence that those in authority are indifferent to the dangers that such a course creates—dangers of inflation, of crushing debt, of a weakened economy that may, in a future emergency, be unable to survive.

All over the United States today the spenders are in the saddle and are riding high. If they can't get enough money from the people through taxes, they borrow it. Emergencies which can be used to justify additional spending appear in Washington in endless procession. And it is not much different in some States. The spending racket has been thoroughly organized and perfected during the last 18 years, and even the small fry in Government have muscled in on it.

But the blame is not all on public officials, guilty as many of them are. It comes right back to the folks at home. Everybody seems to be grabbing for Federal money. Chambers of commerce, city administrations, civic groups, airport officials, State governments, colleges, hospitals, schools, highway commissions, corporations, farmers, businessmen, individual citizens—all have their hands stretched out in the direction of the Federal Treasury and they are clamoring for handouts.

These folks constitute the biggest, the most powerful lobby in the United States. It puts tremendous pressure on both the legislative and executive branches of Government. The projects being promoted usually are desirable, even though they may not be essential. But the sad part of the situation is that these folks, most of whom are worried by high taxes, great debt, and deficit spending, don't seem to realize that the demands they continually make have much to do with keeping the spending spree going at top speed.

Mr. Average Citizen is the fall guy. He works. He pays taxes. He votes for the persons who so recklessly spend his earnings. He has a $257,000,000,000 Federal debt burden on his back, not to mention his personal debts and those incurred by States, counties, and cities.

Bad trouble lies ahead if we continue on this course. It almost seems, sometimes, as if a deliberate attempt was being made to bankrupt our country, to bring about an economic crash that would destroy our free enterprise system and overthrow our democratic form of government. Whether this is true or not, the end result will be the same. No nation can follow the course we are traveling along the reckless spending trail and not eventually go on the rocks. Any citizen knows that. His good sense will tell him so.

What can you do about it? You can do a lot. You are the only one who can do anything about it, you and other folks who are paying taxes and shouldering debt to keep the spenders going.

Here are some of the things you can do:

You can protest to your Congressman and Senators and urge them to vote against new spending and to support every move for economy.

You can refuse to ask for Treasury handouts, either on your own account or as a member of a group.

You can vote against the spenders in city halls, in county courthouses, in State capitols, and in Washington.

You can protest about high taxes.

You can talk to your neighbor and persuade him to follow your lead.

This reckless spending will stop when the people demand it and not until then. It is up to you.

ARTHUR CAPPER.

An Experiment in Higher Education Expands

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1950

Mr. O'HARA of Illinois. Mr. Speaker, I am sure that I voice the sentiment of my colleagues from Illinois in expressing regret over the loss of the Illinois colony in the National Capital of Aaron J. Brumbaugh, and his brilliant wife, who has been so active in the fight for home rule in the District and in other civic causes.

As vice president of the American Council of Education, Mr. Brumbaugh rendered a distinguished service to the cause of education, the effects of which will be lasting and will be reflected in educational thoughts and patterns in countries far removed as well as in our own United States. The new work to which he is going holds a challenge that was understandably irresistible to one whose life work has been to bring within the range of an ever greater number of people the cultural influence of higher education.

It will be recalled that during the presidency of Robert M. Hutchins, now chancelor, at the University of Chicago a bold experiment in admitting to college courses students who satisfactorily had completed 2 years of high-school work attracted wide national attention. The curriculum, having met the test of practical experience in the colleges of the large university, is now being extended under the direction of Mr. Brumbaugh to a small middle western college, with a rich historical background.

Because of the great interest of the House in education and the attention its Members must give to all phases of the educational problem as it affects us nationally, I am sure my colleagues will find interesting and helpful the following article in the University of Chicago magazine of May 1950 by Robert M. Strozier, dean of students:

BRUMBAUGH FOR PRESIDENT

Aaron J. Brumbaugh, A. M. '18, Ph. D. '29—well remembered by university alumni as a former dean of the college and dean of students—is leaving his post in Washington, D. C., as vice president of the American Council of Education. He is to become president of Frances Shimer College at Mount Carroll, Ill., on July 1. [Succeeding Albin Bro, now on an important assignment to Korea.]

Equally interesting, Frances Shimer will then become coeducational, and adopt a curriculum of liberal education modeled on that of our own university college. The 4-year program of liberal education will begin after the end of the sophomore year of high school, and an AB degree be awarded, after completion of 14 basic courses, as at Chicago.

John Russell, now acting president of Shimer, and I made a trip to Washington to see Mr. Brumbaugh and work out a plan of affiliation; subsequent meetings of the boards of both the university and Shimer confirmed the plan.

A coeducational school only 120 miles from our campus, administering much the same college program in quite a different setting, should prove to be a most interesting experiment. Shimer College, which is 97 years old, has an excellent physical set-up, attractive surroundings, an able staff, and a commitment to general education. From time to time, I meet parents who would like to have their children enjoy our college program, but who prefer not to send them to a large university.

Shimer may prove the solution for them. Its campus offers such added attractions as a stable of riding horses, tennis courts, swimming pool and golf course. Mount Carroll is a charming, small town and the college is almost a self-contained community.

The decision to adopt the Chicago curriculum, according to an announcement made by Shimer trustees, is in order "to promote and expand the opportunities for a general liberal education, and to cultivate the teaching and testing techniques which best support such an education." For several years, Shimer has been experimenting in the use of some of the general courses, offered by the College of the University of Chicago. Now it will not only extend the use of these courses, but adopt the testing and examining procedures of the Chicago plan. In addition to the required basic program, students will be able to take the noncredit courses in music, art, and drama for which Shimer is well known.

The University of Chicago is interested in the collaboration since it permits expansion and development of the Chicago type of liberal education in a college not directly a part of the university. Chancelor Hutchins, of course, has consistently maintained that the Chicago college offers a kind of education which can be universally established through colleges generally, and the Shimer adoption should provide independent evidence as to the value of the Chicago program.

To provide for cooperation, an affiliation which has existed legally with the university since 1896, but which hasn't been in practical effect for many years, will be reactivated. There has always been a continuing informal relationship between the two institutions through their boards of trustees. Dr. Harper was a member of the Shimer board, as was Thomas W. Goodspeed, Alonzo K. Parker, Frank J. Miller, and Lathan A. Crandall. President Ernest Cadman Colwell of the university is presently a member of the board and its vice president.

The new affiliation agreement will be revived at the end of 5 years, but may be terminated before that time with the consent of the boards of both institutions. Thereafter, either may terminate upon a year's notice.

Frances Shimer originally was established in 1853 as a coeducational college. During the Civil War all its male students were in the Union Army, and Shimer became a woman's college. For a period after World War II it admitted some male veterans, as nonresident students. In 1896, Mrs. Frances Wood Shimer, cofounder with Miss Cinderella Gregory, transferred control to a self-perpetuating board of trustees. The original academy buildings were destroyed by fire in 1906 and replaced by the present quadrangle of 12 main buildings of stone and brick, of colonial style architecture. Average enrollment has been running about 200.

Irish Ambassador Addresses American Irish Historical Society

EXTENSION OF REMARKS
OF
HON. WALTER A. LYNCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 1, 1950

Mr. LYNCH. Mr. Speaker, the annual dinner meeting of the American Irish Historical Society of New York was addressed this year by the first Ambassador from Ireland to the United States, Hon. John J. Hearne. On this occasion the society celebrated its fifty-third anniversary by the presentation of its gold medal to Chief Justice John T. Loughran, of the New York State Court of Appeals.

Annually the society selects an outstanding individual as the recipient of its award. Mr. John S. Burke, president of B. Altman & Co., said in making the presentation to Justice Loughran that the award this year was "in tribute to his eminence as a jurist." Previously Mr. Joseph Scott, of Los Angeles, head of the American League for an Undivided Ireland, was the recipient of the medal, which has been presented to a distinguished list of historians, writers, and others who have achieved prominence.

The American-Irish Historical Society was organized in New York 53 years ago and is located at 991 Fifth Avenue, where its extensive library on Irish historical subjects is available for reference work. One of the founders of the society was President Theodore Roosevelt. Heading the society today is Mr. James McGurrin, commissioner of jurors for the city of New York and himself an author of note. His excellent biography of Bourke Cochran is a most authoritative work on the heroic life of that distinguished lawyer, Congressman, and leader of the cause of freedom.

Mr. Terence J. McManus, secretary of the New York County Lawyers Association, was the chairman of the dinner and presented to the guests from various parts of the Nation, the speaker of the evening, Ambassador Hearne.

The text of the address by Ireland's Ambassador, for which I have received unanimous consent to include in my remarks, is as follows:

Mr. President, ladies and gentlemen, 3 years or so ago the American Irish Historical Society celebrated its golden jubilee. The occasion was marked by appropriate ceremonies and the event itself became a landmark in the progress of your society as well as an episode of unusual interest and importance in Irish-American history. The half century of the existence of your organization spans the whole eventful interval in which the national political movement in Ireland, interrupted by the death of Parnell, successfully continued for a while under the leadership of a United Irish Parliamentary Party, interrupted again and ruptured if not shattered by the impact of World War I on Anglo-Irish affairs, was finally consolidated in the counsel and reformed in the philosophy of Sinn Fein. It happens that the period of which I speak largely synchronizes with that of my own lifetime, a coincidence, I do not need to add, of no significance at all in Irish history, but, as you can imagine, a circumstance of more than passing interest to the first Ambassador of Ireland to the United States of America.

When, some weeks ago, I received your invitation, Mr. President, to be your guest speaker on this occasion, it occurred to me that it might not be inappropriate to offer you a brief account of political developments in Ireland with which you are long since familiar, but which, when presented to you at the end of a definite period or phase which has already become a turning point in our affairs, may commend itself to a great historical society like yours not only as a record but as a review. I know that the primary object of the American Irish Historical Society is to place the achievements of our own people in America in their true light in American history. Notwithstanding that fact, or rather because of it, I am sure that a review of the political achievements of our people at home during the period of which I speak will have a deeper interest for you than for any audience anywhere as distinguished and as devoted as this to the study of the authentic history of our people abroad, but to the study also of the story of the historic Irish Nation itself, its significance for other nations, and its place in the peaceful and harmonious development of the world.

The major political problem of Ireland in our time, Mr. President, was that of national freedom. The struggle for freedom had taken various forms. Within it had been fought the Irish land war, from it came the revolution and the cultural revival, and around it there crystallized, in the final or penultimate phase, the greatest constitutional controversy of the age. My purpose this evening is to indicate the broad course of the constitutional struggle as I saw it take place, that is, in the half century or so between the treaty of 1921 and the proclamation of the republic last year.

Irish constitutional history in that interval is a record of uninterrupted progress through a continuous evolutionary process. The whole story of that evolution, and its political background at home and abroad, remains to be written. No work with which I am acquainted has followed it through the stages by which the constitutional system was gradually changed and finally transformed. The national constitution of Ireland, enacted by the people in 1937, was in one sense the logical culmination of these events. In another, it stands apart from them and in a wider historical context. For when that instrument was adopted the episode was over in which Irish constitutional history could be summed up as the record of a successful effort to free our institutions of the restrictions imposed on them from

outside. The path had been cleared for developments in a new direction and of a wholly different kind. The time was, moreover, ripe for an authentic expression of the national will upon the form and basis of our society. And so, when the national constitution was adopted, a whole new policy emerged with an unfettered organic structure enshrining a national code of doctrines and principles of permanent value and universal validity.

The treaty of 1921 stands at the beginning of the development of which I am speaking as the most sharply controversial document in modern Irish history. It became, however, as much by the criticism of its opponents as by the patriotism of its authors and the advocacy of its supporters, an instrument of progress. Hailed, on the one hand, as a stepping stone to freedom, as freedom to achieve freedom, and condemned on the other as an attempt to foist the British colonial system on an old European nation with no colonial history or outlook, the treaty almost wholly determined the trend of our constitutional policy for over a quarter of a century. It largely determined our international policy as well. For out of the treaty emerged a great national objective; that is, an objective of the two major political parties in the state, to remove at first the colonial implications, and ultimately, the colonial form of the constitutional system based upon its more objectionable terms. That objective was achieved by the work of successive Irish delegations at British Commonwealth Conferences culminating in the Statute of Westminster of 1931.

Out of the treaty came at the same time a national objective to secure some general recognition of the status of Ireland in the world at large. This was achieved by the appointment of ministers in the key capitals of the world, the attendance of Irish representatives at international conferences, the conclusion of treaties with other states, and, above all, the determination of all parties to keep the foreign policy of the country steadily based on the League of Nations. The two strategies were not separately conceived or separately pursued: they were distinct, but complementary, and, together, constituted the best plan we could devise for a diplomatic campaign on two very complicated and, sometimes, fugitive political fronts. Their success was not immediate. It was slow, gradual, but inevitable, and, in the end, complete.

A detailed account of the succession of textual constitutional amendments which accompanied or followed our steady advance in those years, amidst difficulties which, at times, seemed insurmountable, would fall outside the scope of these observations. Let me sum up what took place in that connection by saying that, in a period of 11 years, 38 articles of the constitution of 1922 had been amended or repealed. Only 32 of the original 74 had remained intact. The character of the parliament, the executive and the judiciary had undergone a fundamental change. Legislative, executive, and judicial sovereignty had been established. Let me sum up what resulted, in a wider connection, by saying that the whole legal machinery of the colonial British Empire had been disassembled, and that the method of agreement had replaced that of imperial control as the instrument of cooperation between the countries of the group which then came to be called the British Commonwealth of Nations. And let me sum up what resulted in the world at large by recalling that, one by one, the countries of the British Commonwealth had established diplomatic missions abroad and had otherwise generally followed the path we had taken to national sovereignty and separate membership of international society.

All I am saying, Mr. President, may seem trite, somewhat outdated, and archaic. I am fully aware of that. But I am trying to sketch for you as briefly as I can the picture as I saw it on my way to Washington. It was a very long and arduous journey, because I have come a long distance and have been coming a very long time. I am not speaking personally. I am referring to the first ambassador of Ireland to this great country.

I have indulged in that seeming digression to escape from the rigor of my text. But let me continue.

The absolute liberation of our political system, by democratic processes, to the extent which I have described was the chief development of all prior to the National Constitution of 1937. The treaty-constitution settlement broke down internally and externally. It broke down internally because it imposed a system of government on our people which, however acceptable to others, was axiomatically unsuited to the genius and traditions of the historic Irish nation. It broke down externally because it sought to define relationships, avowedly international, in constitutional terms. It stood against a permanent national tradition and a contemporary international trend, which, together bore down upon it, and bore it away. The evolutionary process in which the settlement of 1921 was caught up, and which, for the reasons I have stated, it accelerated, belongs to our constitutional history, as an incident in the struggle for freedom, rather than as a normal event in the substantive development of our national life. The real force which mostly, and most continuously influenced, and, at the appropriate time deflected our course in the years under review, as you and I can so clearly see it this evening, was a coherent public opinion amounting to a national frame of mind on the basic issues involved. It preceded, informed, and survived the whole abnormal episode, so that, in the end, it was the people themselves who determined the form of our fundamental law and defined the juridical character of our relations with all other nations.

I remarked a moment ago, Mr. President, upon the length of time it took to reach the point at which full recognition was accorded to our international standing by the reception in Washington and elsewhere of Irish representatives of the highest diplomatic rank. Let me tell you of the circumstance which postponed that development for so long. It was our preoccupation with the problem of national unity. During all that time national unity was the chief politics of every Irishman worthy of the name. The whole soil of Ireland is the property and domain of the whole Irish people. If any man tells you today that the question of the ownership of the national territory of Ireland, or of jurisdiction over this or that part of it, can only be settled by dividing it into two, that man's argument will, I know, have the same effect upon the mind of every member of this society and on the mind of every American citizen as the plea of the false woman who would solve the question of the ownership of a little child by putting it to the sword, had upon the judgment of King Solomon. The partition of a small nation, Mr. President, is a wholly evil thing. It is one of the cruelest wrongs that can ever be inflicted upon a people.

All the principles involved in 1921 in the issue of independence have ever since been involved in the issue of national unity. The main question is whether the majority of the Irish people, living in Ireland, have the right to rule the whole of our famous island. To put it in another way, the question is whether any power has a right to forcibly occupy any part of the territory of another country against the declared wishes of the people of that country. For the partition of Ireland was not effected by Irishmen. The problem of Irish unity is not primarily an Irish problem: it is an Anglo-Irish problem. At every stage of the constitutional development which I have been describing, party after party offered hostages to their political fortunes in Ireland to secure British friendship, and British cooperation on plans for a united Ireland. National unity was not forthcoming, on the basis of the British Crown, or on the basis of membership of the British Commonwealth. We offered every kind of guaranty for the protection of the religious minority. We offered proportional representation. We retained, for a time, the British Privy Council as a final court of appeal as a safeguard for minority rights. We offered a federal system. And on the abdication of King Edward VIII, we enacted the External Relations Act as a symbol of cooperation abroad and a basis of unity at home. All these efforts failed. And almost everyone of the offers made imperiled domestic peace, but our leaders, holding that national unity was an issue prior to every other, save that of national sovereignty, kept on keeping the door to unity open. Don't think for a moment that because our efforts failed, they were not justified. We want unity, but we also want peace. And we are going to achieve unity without civil war. Never were our people more united than they are today on that challenging and unchangeable policy. It is an issue good enough and great enough to command the duty and the discipline of all Irishmen at home and throughout the world. Twenty-five years ago we blazed the cause of Irish independence across every continent and placed it in the keeping of this great democracy. Today, we are taking the same course and committing the cause of national unity to the same keeping. The same principles of democratic liberty which made America great will make Ireland one.

And, one day, Mr. President, an Irish Ambassador will speak to this great society of yours on behalf of a United Ireland. Would to God it were I. And he will explain to you why he was so long in coming as the representative of an Ireland again one and undivided and entirely free, as I endeavor to show you tonight some of the obstacles that lay in the path of the representative of an Ireland not entirely free on his way to Washington. And his audience will think as, I am sure, you are thinking this evening what a pity and a shame it is that elementary justice can so long be withheld from, and elementary right so long denied to a storied, peace-loving land, cradle and nursery ground of missionaries of peace in every corner of the earth, cofounder of Western civilization, and beloved motherland of so many communities of free and moral men which now forever girdle the globe.

Let me turn for a brief moment, Mr. President, to an aspect of my subject which has not often been overlooked or obscured. What has mattered most to our people and our leaders through all the phases of our constitutional history has been the inner life of the nation rather than the external form of the state. Freedom can be lost and won, and lost and won again. But if the life of a nation is destroyed it can never be restored. Ireland might never gain the whole world but she had gone perilously near suffering the loss of her own soul. It was only when the inner life of the nation was at stake that Irish nationality came to be expressed in terms of freedom. Freedom is not an end in itself. It is a condition of self destiny. The whole purpose of the age old Irish stand against aggression and persecution had been to secure for those who would survive the struggle, however long it might go on, freedom to found an Irish commonwealth on the tradition of life for which our people have been known. Irish national policy had always been expressed in these positive terms. To end alien rule yes,

but to end it for a great spiritual purpose. That was why even before all the obstacles in the way had been removed, our people gave themselves a new national constitution which embodied the whole philosophy of life with which our race had been identified at home and throughout the world for more than 1,000 years. That was why at the same time we began the great work of reconstructing our society from top to bottom in the part of the national territory we at present effectively control, and ultimately upon the whole island. Now we go forward confidently under the aegis and star of a system of our own making, dedicated to the Almighty God of our fathers, in which the sacred and secular civilizations of our glorious legend, transfigured again, are woven at last into the organic life of the nation.

Memorial Day Address

EXTENSION OF REMARKS
OF
HON. W. KINGSLAND MACY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1950

Mr. MACY. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the following Memorial Day address I made on May 30, 1950, at Central Islip, Long Island, N. Y., in dedicating a park and stone monument commemorating the war dead of that village in the last war:

Mr. Chairman, honored and distinguished guests, ladies and gentlemen, it is a great and signal honor for me to have a part in this solemn ceremony in which you of Central Islip dedicate your war memorial. Here today you record for posterity the names of your men and women who responded to our country's call and pay everlasting tribute to those who left this village never to return. While we cannot believe that anywhere in America its task forces have been forgotten, not every community sees its hope of a memorial realized. It is to Central Islip's great credit that its civic-minded and patriotic citizens, working as individuals and through local organizations since 1943, reached the desired goal.

The entire village shared in this endeavor, and from that fact alone I am sure those whose names are perpetuated on this memorial know deep gratification. Many have had a part leading up to this day of dedication: Thomas P. Walsh (chairman), George Davison, Richard D. Clarke, Sr., George Howarth, the late Patrick Clerkin, Fred Cordes, and Dr. Earl McCoy, not forgetting Arthur Mulligan, who served with the committee until his death, when this labor of love was taken up by his mother. Others were Mrs. Dorothy Wagner, Judge Vern L. Furman, Michael Van Ditto, Harry Rude, Henry Wolf, Sr., Dorothy Waddington, Marcella O'Connell (secretary), and Dr. Corcoran. There were others, too. Everyone had a hand.

To secure a fitting site for the monument, which is enblazoned with 10 gold stars and the names of Central Islip's entire fighting complement of World War II, the people of this community sought land from the county and procured it for this memorial park. Designed and laid out under the supervision of Dick Clarke, it will belong for all time to the people, even as the memory of the names on this monument about to be unveiled will belong to them.

As we are gathered here this morning to think on our dead, men are gathered all over these States. In almost every community for miles on miles we are turning out of our homes and converging at this hour on our Main Street corners and village squares in an observance that has, for me, at least, something of native America in its very essence. This is Decoration Day.

It is a day for sad observance, but it is not wholly a sad day, and by that very reservation America is proved a young people, accepting sorrow in their portion, bowing their heads, and then again taking up life's forward march.

We stand here together now with full heart, remembering. We congregate quietly, not forgetting that the possibility of our so doing is owed to the valiant resting forever in the seas or far places or brought home to sleep in our village graveyards. We think on our Nation's past and momentarily grow fearful of our Nation's future. We pause to reflect solemnly on life, its brevity and meaning, but this afternoon, after we have laid the last flower on the graves of our dead, we will put away our shining fire wagons, lay aside our uniforms, and crowd the children into the family car to drive them to the movies. We Americans can take sorrow in our stride and our bitterness turns to optimism so swiftly that older nations, long rancoring, do not understand us. This is not shallowness. This is the surging of strength. In this, this resiliency, this ability to see the sun anew each day as a new thing, lies America's brave defense against the destructive forces of science and the evil as yet inherent in men.

This is a day of national awareness and civic communion. From public gatherings and intermingling there emanates a pervading communal power that can be assuring and even elevating, or, in the case of an incited mob, destructive. Thus it is as we gather this morning, neighbors and friends together, we become participants in action. Possibly we may not think of it as action, since it needs must be quiet action (call it resolve, if you will), but here and now this morning let us silently determine to bend our efforts toward safeguarding and bettering our land.

Can we be in the presence of our starry flag, surrounded by men and women in the uniforms of their country, without vowing to ourselves humbly and without grandiloquence, that nothing shall despoil it or harm in anywise the things for which it stands? Can we be in the presence of our flag without realizing that though it is a symbol of safety, so powerful a Nation have we become, it is at once a stern and terrible emblem reminding us that it, and it alone, has first call upon our lives?

The blood and agony and the anxiety of war are horrible, but more horrible still is the stupidity of war. America is a great force for peace, for today deep in its subconscious there is instinctive aversion to the idea of aggressive warfare. With our might and technocracy we could set out like some Alexander to conquer the world, but we do not want to fight at all except to defend those things we hold precious. If this were true of all other nations, we would not need to pour billions into the maws of the armsmakers but could spend our heritage upon the enlightenment and betterment of all our people. As it is, with global conditions as they are today, we can only maintain our vigilance, trust our leaders will find sustaining wisdom from within our great tradition, and hope that as mankind climbs slowly up evolution's hill to greater spiritual heights, reasoning will do away with warring, and peace will no longer be but intervals of bickering truce used to build armaments instead of understanding.

We cannot look on the flag on this day three generations have set aside to bedeck the graves of heroes, without thinking thus of the flag and its dominion over our bodies as mere flesh and blood, but corollary to it is the flag's symbolism of home and fireside which is the contracted essence and heart of the thrilling expanse that is freedom.

It is to this thing, this freedom, we can direct our will today, and in the days ahead to next Decoration Day. If we are to keep it, we must work unremittingly. We can let nothing—Government or individuals—destroy it.

We must protect the law's orderly process, but we must not let it coil itself around us; we must not bureaucrat ourselves into ineffectuality; we must not trade our great historic concepts with the potential of proof for attractive theories that must forever remain hypotheses because they are not grounded in truth.

This is the task that confronts us historically. Ours is an era of preservation, just as the era of the Revolution was an era of creation. We must dedicate ourselves to the belief that freemen can remain free within the framework of our Government.

This is a difficult thing but is a simple thing too. It demands performance on the simplest level, the level of the individual, which, conversely, as God and our Constitution decree, is the highest level.

Only if the individual in the home, in the church, in the school, in the polling place, in his heart, insists on the maintenance of first principles will we keep our freedom. Only if America safeguards that freedom so we can go forward seeking deliberately for brotherhood, only then will war be an antique reminder of an age long past, and generations to come will not know the sorrowful pride of carving the names of sacrificing men on monuments such as this which we now dedicate in gratefulness and thoughtful humility.

Today as we look upon its beauty and renew our faith to it, we are proud it was this flag—this flag and what it has given and promises—that took James Krause thousands of miles from Central Islip to die in the invasion of Okinawa, and made Edward Francis McGrath to give up his young life in the transport run of the North Atlantic and its dark waters. It was for this flag that Dale Watts died on the Siegfried Line, and William Sykora in a Nazi prison camp. It was this flag's defense that took the lives of Frederick Dietz in action in the South Pacific, Arthur Mayer in embattled France, and Thomas O'Kane in shell-torn Italy. For this flag these youths have been transmuted for our sake into gold stars, and, with their companions in arms, Robert Storey, George Monsen, and John Duffy, they will live in memory not only as lads once known in this village, but as a part of the history of the United States of America.

For it, for us, they laid down their lives and this morning our hearts go out to those they left bereft and longing. The unlived years of these 10 men are a gift to us.

United States Is Without Effective Leadership

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, that outstanding writer, Mr. David Lawrence, points out in a recent article that the United States is without effective leadership. I am including as part

of my remarks the article which appeared in the Washington Star of May 23, 1950:

PLEA FOR A COMMISSION GIVES IMPRESSION THAT PRESIDENT HAS FAILED

When a newspaper of influence in the National Capital comes to the tragic conclusion that fear and frustration abound in the country and that a commission of citizens should be appointed to survey the major aspects of national security, it is a rather clear indication of the fact that America is without an effective leadership today, either in the executive or legislative branches of the Government.

The Washington Post presents a lengthy editorial analyzing the deep and troubled state of the Nation's mind, and comes up with a suggestion for a national commission. Senator HUMPHREY, of Minnesota, Democrat, promptly introduces a resolution calling for the appointment of such a commission.

What is most remarkable is that the editorial finds considerable fault with so-called witch-hunting and congressional investigations and condemns those who have tried to capitalize for selfish political gain the frustrations of the hour, but does not say a single word about the utter lack of competence of the leadership in the Congress, nor a single word about the fact that America is supposed to have elected in 1948 a Commander in Chief who presumably was deemed by a majority of his countrymen capable of dealing with the very problems that a commission is now asked to solve.

PRETTY LARGE ORDER

The editorial recommends that the commission be unpartisan and that it survey "the internal menace of the fifth column, civilian defense, development of new weapons, the size and use of military expenditures, economic restoration of our friends and allies."

This is a pretty large order and gives the impression that somehow the President of the United States has failed or there would not be now a suggestion that a national commission take over and do what the President and his Cabinet officers and various national security councils and interdepartmental committees should have been doing right along.

What would be more to the point would be an examination of the reasons why the morale of the country has deteriorated under the Truman administration. It doesn't require any resolution by Congress, either, for a group of prominent citizens to assume the initiative and take a look at the serious damage that has been done to America by the ward politicians in both parties.

The country is sick and tired of politics—the machine variety that is tied up with gambling and gangsterism, and the machine variety that appoints to office only persons cleared by a national political committee.

The country is also sick and tired of political junkets that are brazenly called nonpolitical. It is sick and tired also of the way in which innocent persons are smeared while whitewashes of guilty persons are permitted.

COVERUPS SUSPECTED

The word from the country generally is that there is strong suspicion of all sorts of coverup of scandal and wrongdoing. The Amerasia case, the Fuchs case, the Hiss case, the mess at the Army finance center at St. Louis have all contributed their share to Nation-wide distrust. Also, no matter how many denials or counterdenials are issued, the fact remains that China has been lost to the west and the Communists rule more territory than any government ever acquired without a war.

The leadership in Congress is lacking because the central issue is not how many Communists stole papers or what persons sent in memoranda to formulate foreign policy. The real issue is why China was lost. The so-called white paper doesn't explain it, and only the other day Paul Hoffman of the ECA admitted publicly that China might have been saved from the Communists if a realistic attitude toward that country had been pursued in time.

The basic trouble with America today is that it is saddled with rigid tenure for Presidents. In Britain or Canada or Australia they can overnight turn out a leader who fails and get another in his place. They can turn out one legislative body and elect another that is responsive to the people's wishes. In America, leadership can be inadequate and it takes months and months and sometimes years to get a new leadership. If a commission is needed now, it is one that will propose an amendment to the Constitution permitting the recall of executives and legislators as is the custom in other democracies.

Arkansas, Land of Opportunity

EXTENSION OF REMARKS

OF

HON. WILBUR D. MILLS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1950

Mr. MILLS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following addresses of the Secretary of the Treasury, Hon. John W. Snyder:

ADDRESS BY SECRETARY SNYDER AT THE SIXTIETH ANNUAL CONVENTION OF THE ARKANSAS BANKERS' ASSOCIATION, HOT SPRINGS, ARK., WEDNESDAY, MAY 24, 1950

ARKANSAS, LAND OF OPPORTUNITY

I am glad to be able to participate in this annual meeting of the Arkansas Bankers' Association, for it recalls many memories of my early days in banking here. It is always a real pleasure to be able to renew so many old friendships, and to revisit familiar and cherished scenes.

It is usually on the occasion of a return visit that you find out what has been going on since you have been away. That is not the case today, for I have constantly kept in touch with developments here. The progress of Arkansas has commanded Nation-wide attention and your accomplishments have aroused intense interest.

As the close of the war, Arkansas, along with the rest of the Nation, faced a crucial economic test. Under the pressure of wartime activities, our economy had grown to unprecedented heights. Concern was widespread as to whether such a high level of wartime production could be converted into comparable peacetime production.

Arkansas had an answer to this problem. It called for business and government to work together in unified effort—not just to maintain the gains already made but to move forward to even greater growth. The tremendous wartime expansion of your industrial facilities had awakened the entire State to possibilities that had for years lain dormant in Arkansas' fields, forests, rocks, and streams. The people of Arkansas accepted this great new challenge and went to work.

The farmer, the banker, the factory worker, and the tradesman joined hands to build up their own home towns. They knew their State's strength was dependent upon the growth of their individual communities. As a result of this cooperative effort, Arkansas has not only met its civilian readjustment, but is finding an even greater prosperity.

As leaders in the financial field, as well as in your own communities, you bankers have played a most important role in Arkansas' decade of matchless progress. The important thing is, however, that you have only made a beginning in the achievements that can be yours if you continue to work together in common bond. For it is in your possibilities for future development that Arkansas merits its title as the "Land of Opportunity."

The better balanced economy which this State enjoys today has come, as you know, from increased industrialization. Manufacturing leads the way in a growing region. And, as manufacturing grows, so grows the entire economy.

Arkansas is, of course, essentially an agricultural State. But it is dynamic industrial development which brings even greater productivity to agriculture. It has already brought science to agriculture on a scale which even the most visionary would not have thought possible at the beginning of the decade—airplane sowing and fertilizing, mechanical equipment cultivating and harvesting your cotton and your rich new crops of alfalfa, soybeans and rice.

The great strides you are making in continuing to bring new industries to your State is a tribute to your cooperative endeavors. As a result of the industrial awakening here during the war, you have added some 1,500 new manufacturing enterprises in the postwar years.

Much of the new industrial wealth that is being added to your State comes from increased mineral production and fabrication. Arkansas is especially well-known for its bauxite which has attained not only national but world importance. It is here that over 90 percent of the bauxite or aluminum ore mined in North America is produced.

This strategic material was an invaluable asset to our Nation in wartime. Arkansas was able to step up the production of this mineral from 362,000 tons in 1939 to over 6,000,000 tons in 1943—a 17-fold increase within just 4 years. As you have converted to a peacetime production, bauxite continues to be highly important to your State's economy. Bauxite is currently bringing in an annual income of around $9,000,000, and even greater returns are forecast as your plants move into capacity production.

You may be interested to know that it was back in 1891—the year Arkansas bankers held their first annual meeting—that bauxite was first discovered in this State. Only a century ago, in fact, aluminum was so scarce, it had a price equal to gold. Later, in 1863—the Treasury was considering the possibility of using this newly discovered metal in coinage. The Director of the Mint, in the annual report of the Secretary of the Treasury for that year, admitted, however, there was one serious deterrent, and that was price. Aluminum was then selling at $10 a pound. But the Director went on to state that if the cost per pound shall be reduced to one-third of its present price * * * this subject will deserve, and should receive, the earnest and favorable consideration of the law-making power. It is interesting to review this statement in light of today's market price of around 17 cents a pound. I might add that there is no consideration being given today to using aluminum in our coinage.

Bauxite is, of course, but one of Arkansas' many mineral resources. Your future as a mineral producer and fabricator will depend in a large measure on the development of your nonmetallic deposits—limestone, dolomite, clays, shale, sand, gravel, tripoli, novaculite, barite, and gypsum.

Barite, a product of just this past decade, has already shown dramatic gains. With an initial production of 2,500 tons in 1939,

valued at $16,000, your barite production increased by 1948 to 362,000 tons at a value of over $2,500,000. Arkansas now ranks first in barite production in the United States.

The tremendous supply of high-grade clays likewise offers great possibilities here for the ceramics, as well as other industries.

Technological developments in the petroleum industry also hold exciting challenges for Arkansas' future development. This industry, originally producing kerosene and lubricants, then gasoline, is rapidly becoming a chemical industry. It has been estimated that some 5,400 products are being currently produced from petroleum. Additional by-products are being discovered daily. Expansion of facilities along these lines will bring even higher returns to your petroleum industry.

As bankers in your individual communities, you, of course, have the information and experience to judge the particular lines of expansion which offer the greatest opportunities for sound development in your own localities. A prime consideration, of course, is that there be a market for your products. In determining market potentialities, however, you are no longer restricted by county lines or State boundaries. The expansion of air-transportation facilities here during the wartime period opened up vast new markets for your products. Your fresh fruits and vegetables, for instance, which not so long ago had to be sold in neighborhood markets or not sold at all, are now, within a matter of hours, on dining tables in far distant States due to developments of refrigeration and more rapid transportation.

Markets, fundamentally, are people with purchasing power. Within your present Southwest trading area live approximately 36,000,000 people. Moreover, within a 500-mile radius of Arkansas there are over 66,000,000 people, representing a tremendous potential marketing area. Many of your products, of course, move into every State in the Union and some go into export trade.

In evaluating your opportunities for growth, it is essential, therefore, that you be alert to business trends not only in your own State but throughout the Nation.

Today, business sentiment, on a national scale, is noticeably optimistic and new business has been on the upgrade. There is a general feeling of stability and there is a growing conviction that 1950 will prove to be one of the most profitable business years in our history.

People this year have more money to spend and invest than ever before. Personal incomes, even without the veterans' dividend, are running at an exceptionally high annual rate of over $212,000,000,000. In addition, personal savings, which represent potential purchasing power, amount to another record $200,000,000,000.

Last summer we had an impressive demonstration of the powerful influence of consumer demand—the underlying strength of our economy. Despite a downturn in production and employment, consumers showed no tendency to curtail their buying. Retail sales remained high month after month, until factories eventually were obliged to step up their production.

The continued high level of retail sales, which shows no slackening in 1950, provides a firm foundation for this year's business trend. Total retail sales so far this year, in actual unit volume, are over 6 percent higher than during the comparable period last year.

Reflecting our profitable business outlook, industry recently has engaged in a record-breaking program of capital expansion. New plants have been built, improved processes have been initiated, and new equipment has been installed to take advantage of the great technical advances of recent years.

This plant and equipment expansion is still strongly under way. In fact, new contract awards in April for prospective construction of commercial and manufacturing buildings were 66 percent higher than in the same month last year, with a gain of 22 percent for the entire first quarter. New awards in the first quarter for public-utility construction were one-fourth higher than last year. New orders for machinery and machine tools have been rising sharply since the third quarter of 1949.

The expansion of industrial capacity will provide new jobs for our growing labor force. This is currently being evidenced by a substantial upturn in employment.

Other business trends likewise lend an optimistic outlook. With our population increasing at a rate of 2,500,000 persons each year, we have an ever-growing market for our goods and services.

Also, our accumulated demand for many products, dating back to the long period of wartime shortages, is still far from being satisfied. Automobile production in May, for example, is likely to establish a new high record, yet this will be only the second month to exceed the monthly production record established 20 years ago. And we now have 30,000,000 more people to buy automobiles than we had then.

The construction industry this year is establishing new records. New home construction, as you undoubtedly know, is at the highest level in our history. Moreover, new contracts awarded for future construction of residential units continue at a spectacular pace.

Since we entered the war in 1941, the number of electric power customers has been increased by more than one-third, but we are continuing to add 2,000,000 more customers a year. The gains in this industry, I know, hold particular significance for the people of Arkansas.

All these business trends point to continued economic growth. We have every reason to expect that the firm business foundation we have built in these postwar years will be maintained. It will be maintained so long as we avoid excesses of speculation or credit expansion, which, in the past, have been the direct cause of business recessions. I am certain the bankers of the Nation will continue to accept the responsibilities that fall to them in assuring orderly credit conditions.

America looks to the future with confidence. Never before has our economy been stronger. Our opportunities for further growth are greater than ever before. We know, however, that with opportunity comes responsibility. If we continue to work together—in both domestic and international affairs—our opportunities of today will be realities tomorrow. This, I am sure, we will do. For here in Arkansas, as well as in America, we are blessed with an abundance of human resources as well as natural resources.

ADDRESS BY SECRETARY SNYDER AT MEETING OF THE LIONS, KIWANIS, ROTARIANS, AND OTHER CIVIC GROUPS, AT BLYTHEVILLE, ARK., FRIDAY, MAY 26, 1950

It's good to be back in Blytheville—to mingle with old friends, to refresh old memories, and to again enjoy your fine hospitality.

Mississippi County enjoys many distinctions in the field of agriculture. The people of the Nation know its dark, rich farm lands produce more cotton than any county in the United States; more soybeans than any area in the South. Mississippi County's undisputed dominance in the production of cotton fiber brought the world's championship cotton-picking contest to Blytheville—an annual event which attracts thousands of contestants and visitors from all over the country.

Crops of the soil have spread the fame of Mississippi County all over the world; but, in the presence of you old friends, I am more convinced than ever that the county's best crop is people. For nowhere are they finer, nowhere are they friendlier or more generous.

I am indebted to Blytheville's Lions, Rotarians, Kiwanians, and other civic organizations for the opportunity they have given me to be your guest here today.

As an honorary member for more than a quarter century of the Forrest City Rotary Club, I feel quite at home in a meeting of these combined service organizations here in Blytheville.

I have always been a strong believer in clubs and organizations such as those represented in this meeting. Your service to the town, county, State, and Nation lies not alone in the development of ideals but in placing those ideals into practice. Through your good works you have taught men and women everywhere that service—honest, helpful, cooperative service—is one of the greatest offerings of humankind. I am deeply interested in the international scope of your clubs, for I am confident that if the spirit of the Lions, Kiwanians, and Rotarians could be planted in every community throughout the world, the prospect for world peace and unity would be greatly enhanced.

Unity, the motivating force behind clubs like yours, is thoroughly American. Historically, its first demonstration came with the establishment of our political independence, and down through the years this spirit of cooperative action has sparked all of our victories and achievements. The manifestations of unity are on every hand. They take the form of parks, roads, schools, playgrounds, and recreational facilities. Better educational systems, better social conditions, better towns and communities—these are all tributes, not to the efforts of individuals, but to groups like yours working together, for man's greatest accomplishments come through cooperation with his neighbors.

A fine example of volunteer cooperative action is the savings-bonds program of the United States Treasury Department—a sales program which depends in large measure upon the efforts of a large body of men and women who are willing to give a part of their time to the service of their Government. While I should, perhaps, not engage in shop talk at this very pleasant reunion of friends, I do want to point out that this volunteer organization, active in every State, has sold the idea of thrift to millions of Americans, who now hold over $48,000,000,000 in United States savings bonds.

Some people ask what the rewards are of community service—where and how it profits the individual to give of his time and energy to public causes and programs. The answer, it has always seemed to me, is a simple one. Whenever a man contributes to the betterment of his community; contributes to the enlarged influence of his State or Nation, and makes them better places in which to live—he contributes to himself as well as to the welfare of his fellowmen.

America is but the reflex of the communities which in the aggregate constitute it. Therefore, your manifestations of civic conscience and civic interest in Blytheville are of concern to the Nation as a whole, not only for what you do among yourselves alone, but for what you inspire in others.

All of our real achievements as a Nation had their beginning at the community level, where the fundamentals of good citizenship—free discussion, cooperative effort, and individual responsibility for progress—have their greatest meaning. When you work together in the creation of a better community or a better town, the results of your efforts are not confined to local boundaries. You have also made a fine contribution to a better county, a better State, a better America.

The accomplishments we have made in this country since the close of World War II

bear testimony to the effectiveness of our system of government in the face of changing conditions. Quickly converted back to peacetime use, our industries have modernized and expanded their productive facilities and extended the benefits of the new processes and techniques of the war years to such an extent that 1939 and 1940 already seem to belong to a more distant past.

Television, air freight, frozen foods, the new plastics, new sources of electric power, tens of thousands of miles of new highways, high peacetime farm production, 3,500,000 new homes—these are but a few instances of the tremendous surge forward in the period since the war.

Personal incomes are running at a rate of well over $200,000,000,000 annually, and the total liquid savings of the American people amount to another $200,000,000,000. Industrial output is at near-record highs. Our economy is flourishing, and our financial position is sound. We are fast recovering from the effects of world conflict and have been able to share some of our well-being with less fortunate nations, who seek to restore their war-wrecked economies. We have worked and are working earnestly for a lasting peace throughout the world, while of necessity maintaining defenses against any aggression that might threaten our free institutions.

To attain our goals on both the domestic and foreign fronts, we must rely strongly on our system of free enterprise—a system which has brought us safely through every trial and emergency of the past. I have a deep and old-fashioned faith in that system, which gives me a calm and pervading faith in the future of America. I feel that we are making unusually fine progress.

In listing the assets of the Nation, I failed to enter what we all consider to be one of this country's prime holdings—the moral character and determination of its people, for it has truly been said that "a State to prosper, must be built on foundations of moral character; and this character is the principal element of its strength and the only guaranty of its permanence and prosperity."

ADDRESS BY SECRETARY SNYDER AT THE FIFTH ANNUAL CRAIGHEAD COUNTY 4-H CLUB BANQUET, JONESBORO, ARK., MONDAY, MAY 29, 1950

I am happy to join with the people of my home town in honoring these outstanding 4-H Club members—boys and girls who are making such a fine contribution to their community, their State, and Nation. My warmest congratulations are extended to the central figures at tonight's banquet—Craighead County's 4-H Club champions, Alma Jean Boley of Herman, and Virgil Griffin of Otwell; and the entire membership of the Dixie Club, whose group and individual achievements have made theirs the outstanding 4-H organization in the county. And Billy Pugh, president of the Craighead County 4-H Club Council, deserves special commendation for the able manner in which he is presiding over this meeting.

Surely no finer program has ever been devised than that being carried forward by 4-H clubs. With the encouragement and aid of such adult groups as the County Farm Bureau, 4-H develops among its members those qualities of character which are so essential for useful citizenship. They are taught how to create better homes for better living—how to conserve nature's resources for security and happiness—how to produce more abundant crops. But of equal or greater importance is that part of the 4-H program which stresses good health, the sharing of responsibility for community improvement, and the necessity for maintaining peaceful and friendly relations among the nations of the world.

Yours is the largest rural youth organization in the world today. Its membership last year was almost two million strong, and since the first 4-H Club was organized, over thirteen and a half million boys and girls have benefited by its teachings—and the Nation has been greatly strengthened through its accomplishments.

The four-leaf clover emblem, representing your motto of "head, heart, hands, and health," went along with American forces during the recent World War. In Japan, the islands of the Pacific, and western Germany, the wholesome philosophy of 4-H has taken firm hold. Requests, I am told, are coming in from far-away lands for advice in forming clubs. Typical of the spread of this work was the recent organization of a club of 55 members on the island of Saipan by a native agricultural worker, who, as a student at the University of Hawaii, had become familiar with modern farming techniques, and the aims and objectives of the 4-H organization.

Your interest in world activities is reflected in the recently inaugurated International Farm Youth Exchange project, a project which last year enabled 48 4-H Club members to go to Europe, and brought young farm people from 9 European countries to America.

I have a very deep feeling that this group of boys and girls from our Nation's farm communities constituted a most effective diplomatic mission.

As a native of Jonesboro, my pride in the boys and girls of Craighead County is understandable. But, abandoning personal interest, I can say to you in all sincerity that Arkansans are deeply grateful for the work you have done and are doing.

Back in 1927, Arkansas was named the Wonder State by action of the State legislature. But all of us are aware that the Wonder State, as we know it today, was actually created long before that date by young people like you, who lived on Arkansas farms and in Arkansas fine towns and communities.

Many of the members of my generation fell victim to the notion of the times that greater opportunity lay in the large centers of population—that the small town and farm did not hold sufficient promise for the future. So they migrated to the cities, not realizing, as do you 4-H Club members, that making two ears of corn or two stalks of cotton grow upon a spot where only one grew before, presents as great a challenge as any ordinarily encountered in business or industry or statecraft. But in the light of more mature understandings, they now realize that without the production of the farms you 4-H members represent, without your energy and enthusiasm and vision, the arteries of trade would wither, and the cities of the land would vanish.

The cooperative farm extension program in which 4–H clubs are affiliated, has been an important factor in bringing the farms of eastern Arkansas to their present fine production. County, State, and Federal governments have joined forces, here and all over the country, to help farm people with their problems—to teach them the values of conservation, crop rotation, and livestock improvement. The development of rural electrification has made electricity the servant of the farm and farm home. And a system of price supports has removed some of the elements of chance from the business of agriculture.

While the Government has lent its support to the Nation's farmers, I am convinced that the genius of the individual has been of greatest importance in achieving the marked changes that have taken place in Jonesboro, in Craighead County, and throughout our country during recent years. Government may create a favorable atmosphere for achievement—but, in the final analysis, the success of any venture is based largely upon the ingenuity of individuals—upon their ability to work harmoniously together in pursuits and causes of common interest. These characteristics—ingenuity and unity—enabled us to make our great contribution to victory in the recent war; and, when applied on an international scale, they will help us to maintain our leadership among the nations of the world.

These same characteristics have made possible Arkansas' notable advances in agriculture and industry. Its roads and schools and homes are among the Nation's finest and, after having seen a good part of the world, I am convinced there is no place under the sun I had rather call home. The primitive settler, who inspired the dialogue and music of "The Arkansas Traveler," has long since moved on. The fertility of the eroded fields of his time has been restored, and all-weather roads have replaced the rutted trails over which his oxcart passed in the long ago. A modern school occupies the site of his log cabin, and a factory has been built where the old fellow swapped yarns with passers-by.

Business and industry here have kept pace with the Nation's forward march. Arkansas has seen many changes, but the people themselves retain the friendliness and hospitality for which they have always been noted. I feel quite sure that these fine human qualities were developed long ago to the highest perfection possible, and that no device of the electronic age can improve them.

As a Nation we have made rapid strides toward full recovery from the effects of a long and costly war. Our credit structure is in a strong and healthy position. We are building as never before, and the opportunities for the future appear limitless.

Of course, there are situations that require constant watchfulness. In the international field we must exert every effort to strengthen the forces working for peace. We must maintain adequate national defenses. We must unite as never before in solving the problems which came in a war's aftermath, both at home and abroad. Above all, we of the older generation must strive constantly to make the decisions and do the things for you boys and girls—the future citizens of America—which will insure a peaceful world, a prosperous world, a world of freemen.

ADDRESS BY SECRETARY SNYDER AT THE DEDICATION OF A WAR MEMORIAL OF THE KING-BEAZLEY POST OF THE AMERICAN LEGION AT FORREST CITY, ARK., TUESDAY, MAY 30, 1950

You have accorded me a great honor by inviting me to attend these ceremonies in connection with the dedication of this beautiful war memorial, this monument you have erected to honor the brave men from St. Francis County who gave their lives in the two World Wars.

Forrest City is a second home to me, and the presence in this assembly of so many friends, made during the years I spent here, adds greatly to the pleasure of my return. The King-Beazley Post of the American Legion, which is sponsoring these ceremonies, was organized as the Forrest City Post in 1919, and I was one of its charter members.

That was in the days, as many of you will remember, when people talked of Chateau-Thierry, of Belleau Wood, of the Meuse-Argonne offensive. The first great World War had just been won by the forces of democracy, and the troops of Arkansas had returned to their homes with new garlands of victory on their battle standards.

Guadalcanal and Attu, the Normandy Beachhead and the Burma Road, Anzio, the Belgian Bulge, Okinawa and Iwo Jima had never been heard of. They were the battlefields of the future, the strong points of another world war to be stormed and conquered a quarter century later by the sons of the men who had crossed the Rhine in 1918.

As a member of the Expeditionary Forces of 1917–19, I personally know something of the bravery and spirit of the men from this

area who fought in the First World War. And the heroic deeds of Arkansas-born soldiers, sailors, and marines, who gave their strength to more recent victories of our forces on the coral beaches of the Pacific and in the hedgerows of Normandy, are still fresh in everyone's memory.

Engraved in the granite of this impressive memorial are 109 names—familiar American names like Allen, Andrews, Ferguson, Hall, Williams, and Young—all St. Francis County men who failed to return home from the great wars. Listed in this roster of heroes are the names of the two Forrest City boys for whom your Legion post has been renamed—Frank King, Jr., who gave his life in Germany; and Ralph Beazley, whose life was sacrificed in the western Carolines. These were sons of old friends of mine, Frank King and J. W. Beazley, who, with me, had no thoughts when I left Forrest City 26 years ago that we would ever be engaged in a second world conflict.

The men honored by this memorial died in defense of those ideals of justice and freedom which have made America the strongest nation in the world, her people the happiest. They bravely carried the standards of decency across wide oceans and strange continents; sacrificing life itself that our own liberties might be preserved, and in order that people everywhere might be given opportunity to enjoy a way of life which has been ours since the birth of the American Republic.

In the hearts of each of you, memory has erected an invisible monument to your war dead—this memorial of stone has been built in order that future generations may know of their heroic deeds. There is, however, a greater and more lasting monument to the heroic dead of every war in which we have engaged since the Republic was founded. It is this broad country of ours—still free, still vital, still a land of opportunity, still the leader among all the nations—a monument upon which succeeding generations may look with admiration.

Our country is working, as never before, for the causes of peace. We know that the prosperous country is not the war-torn country, but the one that devotes its energies to constructive building, to the development of its resources, to the betterment of its institutions. But until all of the nations of the earth join with us in our quest for lasting peace, we must adequately maintain our defenses, we must make sure that no aggressor nation threatens the freedoms we have purchased at such a great price.

In describing the spirit that made the American soldier the ablest fighting man in the world, the late Gen. George Patton told this impressive story:

When our troops were driving across North Africa, the General saw a Signal Corps private, oblivious of personal danger, climb a telegraph pole under direct enemy fire. Patton asked him what he was doing on the pole at a time like that. "Fixing the wire," the soldier replied. "Isn't it pretty unhealthy right now?" the officer inquired. "Yes, sir, it is," the boy answered, "but this blasted wire's gotta be fixed."

Members of the forces which today fight for permanent peace should be inspired by this story of a courageous soldier—a soldier who knew his job had to be done regardless of the dangers involved.

As we dedicate this memorial to the men who gave their lives on world battlefields, we should resolve to emulate their high courage in solving the problems which are ours to solve in this postwar period.

Unfortunately, peace is never achieved on the battlefields. The supreme sacrifice made by members of the Army, Navy, Coast Guard, Marines and Air Forces in campaigns on opposite sides of the world represented the initial and most important part of our latest struggle. Their victories made us a more confident Nation. They helped us to retain that dynamic spirit which built America as a world leader. The job must be finished by us who live.

At the close of the war, we faced a crucial economic test. Under the pressure of wartime activities, our economy had grown to unprecedented heights. Could such a high level of wartime productivity be converted into secure peacetime production? That was a question the country had to answer.

In the presence of Governor McMath and other distinguished guests from all over the State, let me say with the excusable pride of a native, that Arkansas was a leader in this Nation-wide effort to bridge the economic canyon which lay between war and peace. The people of Arkansas have undertaken to see that business and Government work together as a team—not just to maintain the gains already achieved, but to move forward in ever-greater growth. The necessities of war had awakened Arkansas to the possibilities which for a century had lain dormant in the State's fields, forests, mineral deposits and streams. With the same courage that characterized your fighting men in uniform, you accepted this great new challenge and went to work—united, as never before, in a common purpose.

The results lie on every hand—increased industrial output; new factories and new homes; expanded mine production; hundreds of miles of newly paved roads; new sources of electric power; better schools, and better towns, and more productive farms. As a single example of your enterprise, 1,500 new businesses have been added, providing nearly 30,000 new jobs, and industries are continuing to locate here at the rate of around 500 a year.

United as never before, your farmers, bankers, factory workers, and tradesmen joined together to build their own home towns—good towns like Forrest City—in the confidence that their State's strength was dependent upon the growth of individual communities. So Arkansas has not only met its problems of readjustment, but is finding ever-greater prosperity in peacetime. You have kept faith with your fallen heroes. You have done your full share toward keeping the Nation strong and vital—our best guarantee of a peaceful and prosperous future.

Never before has the American economy been stronger—never before have our opportunities for further growth been more evident. The development of our human resources has kept pace with the marked development of our natural resources. We have gone a long way during these few postwar years, but we must continue to work closely together in order that the achievements of the future may compensate for and reward the great sacrifices of the past.

We believe in democracy; we believe in freedom; we believe in peace. It is our responsibility—our very great opportunity—to prove to men and women everywhere that the American system of free entrprise, which is based on these beliefs, can accomplish more than any other system on the face of the earth.

Harry Outen Cole—An Outstanding Builder of the Panama Canal

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1950

Mr. WOODRUFF. Mr. Speaker, a year ago I was privileged to be the principal speaker at the fourteenth annual dinner of the Panama Canal Society, of Washington, given in special honor of one of our former colleagues in this Chamber, Hon. Maurice H. Thatcher, of Kentucky, and member of the Isthmian Canal Commission and Governor of the Canal Zone during the construction of the Panama Canal. That was a notable occasion, at which our colleagues Congressman Reed, of New York; Cannon, of Missouri; Michener, of Michigan; Thompson, of Texas; former Congressmen Smith, of Idaho; and Bradley, of California; the Ambassadors of Panama and the Dominican Republic, Lt. Gen. Robert L. Eichelberger, Maj. Gen. Sandiford Jarman, together with other distinguished men and women—some of them who served with Governor Thatcher on the Isthmus—were in attendance and joined in paying him tribute. My address then given was placed in the CONGRESSIONAL RECORD.

On Saturday evening, the 27th of May, the society held its fifteenth annual dinner at the Broadmoor Hotel in Washington, and there was again a fine body of men and women in attendance, with the Army Band Orchestra to render the musical program. Mr. Edward H. Davidson, an old-timer, president, presided. Again I was a guest. Memorialization of Harry Outen Cole, recently deceased, was the feature of the dinner, and the principal address of the evening was that given by Governor Thatcher in tribute to Mr. Cole, who was one of the outstanding engineers engaged in the construction of the Canal, and in charge of the great works in the Pacific division. The address was, in every respect, a splendid effort, and, under leave accorded, it is included with my remarks, as follows:

HARRY OUTEN COLE: A EULOGY

(Address of Maurice H. Thatcher, former Governor of the Canal Zone, and former Representative in Congress, at the fifteenth annual dinner of the Panama Canal Society of Washington, D. C., on the evening of May 27, 1950)

Mr. President, distinguished guests, fellow members of the society, ladies and gentlemen, it has been written—

Where are the Friends of Yesterday? They sleep
For aye; and we who tarry Here must keep
Their Mem'ries greener than their Graves until
Our own Farewells cause other Friends to weep.

However, while this occasion is one of memorialization, we do not mean that it shall be sad or mournful. We pay tribute to one who, in his career, typified all that is best in our American life. By his own industry, diligence, perseverance, talents, integrity, and ambition he rose to the highest place in one of the Nation's most honored professions. By the best school and college preparation, and through the exercise of the indicated qualities, he climbed the arduous slopes of worthy achievement, and climbed them with such dispatch that while he was yet in robust and youthful vigor, he stood on the summit of a well-earned fame.

Nothing is more commonplace or trite than death, yet we would wish to believe it a gate rather than a wall. But whatsoever it may be, it is well that life be lived at its best for the good of all. He whose memory we commemorate this evening certainly chose the better part, and thus toiled and wrought. Our Panama Canal Society of

Washington now seeks to do him honor—and thereby to honor itself—for what he was and did. It desires to pay tribute to his memory for the worth of his life and labors; and particularly, for the splendidly effective and useful service he performed in and about the building of the Panama Canal. This society was organized by those who were his fellow-workers in that great undertaking—most of whim knew him in the construction days.

To these he was a friend and comrade; and they are especially desirous of indicating, in a just and appropriate manner, their appreciation of his Isthmian labors. They bring to this altar of memory their roses of affection and esteem. They are proud of his deeds, and are grateful that they witnessed their performance. I have been chosen to express—as best I can—these sentiments for both those of the construction era yet surviving, and those who have carried on since that time—members of the society. For the honor thus accorded me I am grateful, and only wish that I were better able to say that which I know and feel.

In the death of Harry Outen Cole, of Morgantown, W. Va., which occurred on the 13th of February 1950, another old-timer has passed into the Great Beyond. During the construction of the Panama Canal he was one of the outstanding engineers of that mighty project. From 1908 to 1914 he was engaged in the work of building the locks, dams, and other features of the Pacific Division of the Canal set-up, from 1908 to 1912 as assistant resident engineer; and from 1912 to 1914 as resident engineer of the division, succeeding the late Sydney B. Williamson in that post, and thus serving until the work of the division was completed and the entire Canal job finished.

It was my privilege to serve as a member of the Isthmian Canal Commission and head of the Department of Civil Administration of the Canal Zone during the years 1910, 1911, 1912, and 1913. My headquarters and residence were in Ancon on the Pacific side. Throughout my Isthmian tenure I saw Harry Cole thus employed and I can bear witness to his faithful and highly efficient services. He was a civilian engineer; and, as we know, the entire Canal personnel was predominantly civilian. Skilled and widely experienced in his profession, in the full vigor of health and enthusiasm, of boundless energy, resourceful, tireless, and clear-visioned, he performed his difficult tasks in superb fashion. He achieved enduringly. Whatever he did in the building of the great interoceanic link has stood the tests of time and use; and his name is imperishably written into the history of the Canal.

Those who were employed in this work of construction—in whatsoever branch—have been known as old-timers. Their ranks have been greatly depleted by the passage of the years. Perhaps less than a half dozen of the engineers of that period yet survive; and what is true of the engineers is largely true of every other group thus participating.

A native of West Virginia, Harry Cole—as we always called him—was born near Morgantown April 3, 1874, the son of Nimrod Cole and Sara Jane (Lough) Cole. In the schools of his State he received his education, graduating from the West Virginia State University in 1898, with the degrees of B. S. and C. E., and with membership in the Phi Kappa Sigma. He was married twice: first, in 1901, to Mabel Wilson, whose death occurred in 1921, and who was survived by their one child, a daughter, Catherine, yet living, and married. His second marriage was in 1929, to Margaret Buchanan, who survives him, as does, also, his brother Otis O. Cole, who honors us with his presence this evening, and a sister. He was draftsman and designer, 1898-1904; bridge designer for several railroad companies, 1904-08; designer, assistant resident engineer, and resident engineer, Pacific Division of the Panama Canal, from 1908 to 1914, as already stated. After completing his work on the Canal he rendered important service in Chile for the Chile Exploration Co. and Braden Copper Co. developments. From 1920 to 1945 he headed, as president, the Cole Bros. Construction Co., engaged in the building of highways, bridges, and other works, chiefly in West Virginia—in which activities he was greatly interested because of his ardent desire to serve the State of his nativity. Since 1945, up to the time of his death, he considered himself in retirement, though his concern for whatever affected the Panama Canal and West Virginia was deep and abiding. Among his varied services might be mentioned his membership on the National Panel of Arbitrators and the American Arbitration Association. He was, also, a life member of the American Society of Engineers, and was accounted one of the ablest members of that important organization. In addition, he was a life member of several Masonic bodies, and had membership with the Elks, Kiwanis, and other fraternal groups.

All in all Harry Cole was one of the Nation's most eminent civil and construction engineers, and his work in the two American Continents—including that on the Isthmus of Panama—bears eloquent testimony of his skill and enterprise. Collectively, his achievements constitute an outstanding and lasting monument to his memory. He was a man of character. In addition to his eminence in his chosen field, he was possessed of the finest qualities of forthrightness, courage, sound judgment, diligence, and simplicity; and he had an undoubted capacity for friendship. He never failed to measure up to whatever came to him in the way of responsibility; and whatsoever he undertook, he accomplished with efficient promptitude. While the loyalty and affection for the Panama Canal, on the part of all its builders, have been proverbial, with him it was especially true. As regards the various important enterprises with which, in a long, full life, he had been connected, undoubtedly that of the construction of the Canal held first place in his heart of hearts. The difficult problems encountered and mastered in that work; the vast value and significance of the mightiest of all water-links, built, owned, maintained, and operated by the great country of which he was a son and citizen; and the fact that he was privileged to perform such an important role in such a vital enterprise, all united to create in him, in marketd degree, the sentiment of attachment just named.

On the Isthmus we noted his skill, his clear judgment, his ceaseless activity. Day by day we saw great projects, under his hand, grow into form and shape, and become the fruitage of the dreams which conceived them. These works stand in enduring evidence of his genius. Yet what he did so well was, in that aggregation, more or less typical. Others, in his own and other fields of Isthmian service—caught up by the same spirit of inspiration—wrought similarly in all the categories, engineering, construction, health and sanitation, and civil affairs. What a mighty team the whole constituted! And Harry Cole stood up with the highest and most capable of the lot.

And thus there was brought to a glorious consummation the dream of the centuries and the miracle of the ages: the sundering of the land to unite the seas in the veritable Passage to the Indies, so arduously—but unavailingly—sought by Columbus and the many other indomitable navigators and explorers that followed him. How fortunate it was to have been associated or identified with the stupendous task. With what pardonable pride may everyone feel who was engaged in it—especially those of our own great Nation. In the old flat arch in the city of Panama each brick or stone was indispensable; each was a key; and thus this architectural paradox has stood through the generations, a monument to the craftsmanship of Spanish builders. In like manner each person, each group, that contributed in any worth-while way to the construction of the Canal, helped to rear the watery arch from ocean to ocean, over which the commerce of the world is moving, and earned the world's gratitude thereby.

In all this I would, of course, include the Government, the officials, and the people of the Republic of Panama. Their aid and cooperation, throughout, were absolutely necessary, and most freely given; and our Panamanian friends join us in profound gratification that, in the providence of things, the Panama Canal was built and has been maintained. The interests of the two countries are identical, and we must be, and remain, friends—each striving for the common interest and in the spirit of the Golden Rule.

And in this general connection I may add that I have long hoped to see erected in the Canal Zone a memorial, collective in character, which would provide appropriate and adequate recognition and memorialization of the services of all those individuals, groups, and agencies that—directly or indirectly, and in a substantial way—contributed to the genesis and construction of the Canal, beginning with the early discoverers and navigators, and coming on down to the French effort and the finished work. In Congress I proposed such a memorial, and introduced a measure therefor, approved by two Governors of the Panama Canal, but, at the time, considerations of national economy were such as to preclude enactment. While I would not in the least subtract from the fame of the outstanding figures, I have always believed that to all those who made their contributions tangible and enduring recognition is due and that a grateful Nation should remember and memorialize all. Indeed—

There were workers great, and workers small—
As judged by rank—in the enterprise;
But glory enough there was for all,
And each was great to seeing eyes.
Let fame take care that her scroll be just,
And to give to each his meed of praise—
Else, out of the ashes and the dust,
The shade of censure shall upraise.

There is something else which might be appropriately mentioned. Although his engineering labors and accomplishments in and about the construction of the Panama Canal constituted, indeed, the crowning work of his life; yet in the current discussions of the type that should be adopted for increasing the capacity of the Canal, Harry Cole was willing to see the splendid monuments of his toil scrapped to be recreated in a single grouping of the three flight-locks on the Pacific side under what has come to be called the "Terminal Lake Plan"; and with his accustomed candor, courage, and vigor he so expressed himself by voice and pen. I mention this, not in any spirit of controversy, nor for the purpose of entering into any discussion of the issues—touching which able men may differ—involved in the so-called "Battle of the Levels," but solely with the idea of illustrating the character of the man, and his habit of rising above purely personal considerations in any matter of grave importance. In various public ways he gave currency to his opinions and conclusions. Because of his eminence as an engineer, with such outstanding Canal construction experience, his views commanded and held the attention of all informed persons interested in the subject; and especially of those in Congress who were immediately charged with any duties relative thereto, or who were especially interested in trans-Isthmian waterways. Thus, what he had to say in this connection—whether by address, statement, or publication in technical periodicals—be-

came parts of the CONGRESSIONAL RECORD, and entered into the libraries of the Nation. There was never any doubt of the fact that in all this he was motivated by his best judgment and experience, and by patriotic impulse; and his views commanded, and will continue to command, the serious consideration of all.

Two years ago he was the principal speaker of this society at its thirteenth annual dinner, given in tribute to Sydney B. Williamson, his predecessor as resident engineer of the Pacific division, and he then spoke with his accustomed forcefulness and frankness in regard to these matters.

In all his domestic and public relationships Harry Cole's conduct was altogether praiseworthy; and he was a man of faith and reverence. The world is immeasurably better for his life; and his example, professional and private, will serve to light the way of those who, in their day, strive to walk the ways that he knew. Unfailingly he bore a torch. Of optimistic spirit and outlook, he was ever active, and in apparent health until almost the moment of his death. His widow and those of his blood have the general sympathy; and they will find comfort in the memory of what he was, and did. The Nation is made poorer by his passing, but has been greatly enriched because of his achievements.

And so it is that while we must lament the fact that he is no longer with us, we are deeply grateful that he lived, and labored as he did; and that many of us knew him as a fellow worker in the construction period, and through the years that followed, cherishing meanwhile the important friendship thus induced. We rejoice that there was given to his beloved country such a life and career; that he was spared to a mature age, serving every public and private cause of merit possible; that he was himself to the last, with his faculties unimpaired; that he lived as the "happy warrior," with life as a glorious adventure; and that when the time came for him to go, he went quietly, suddenly, and without lingering distress.

"How soon, how soon the Threads of Life are spun!
How quick the Sands of Life's lone Glass are run!
How strong the Tide that bears us out to sea!
How Much is hoped, but ah, how Little done!

Yet, when the Light shall wane within the West,
May we not count ourselves as something blest,
If, on the Whole, in justice we can say,
Our All—though Little—was, and is our Best?"

Harry Cole, too, gave the world his all; but it was by no means little, and he also gave the world his best which, indeed, was the best. His death emphasizes the value of his life, and its worth and fame will long serve to inspire those who come after him. If the mortal span were not comparatively short, and if men and women did not have to work under the pressure of necessity, their achievements would, in all probability, be far less than they now are. Whether we are able to recognize it or not, there must be an overruling logic in what we call life and death, and we must strive to be comforted by this consideration. All was well with Harry Cole here, let us have faith to believe that all is well with him there, and that what he did so well here will, in some way, serve him there. His memory will surely be kept vital by his old associates, and by his friends generally, until they follow him; and so long as there shall be a Panama Canal, or any history of it extant, so long will the splendid story of his deeds endure.

Stockpiling and Mineral Security

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1950

Mr. ASPINALL. Mr. Speaker, it should be one of the current obligations of our Government to see to it that we have a healthy and commanding metal mining industry ready at all times to take care of our needs whether our Nation is engaged in peaceful pursuit or armed conflict activities. This can be done without an excessive drain upon our Federal Treasury. It can be done by private industry with very little governmental interference, providing it is afforded some protection from unfair competition with slave-produced metals from foreign countries.

In my opinion, it is not to the credit of our National Government or those connected with it that our metal mining industry finds itself in the sickened condition which exists today. Neither is it to the credit of those in administrative authority that the Buy American Act has been bypassed as it has in relation to the stockpiling program. It is my thought that the situation, as it currently exists, is very clearly shown by an address of Robert S. Palmer, executive director of the Colorado Mining Association, made before the Mountain States Association at Boise, Idaho, on May 22, 1950. In his talk on stockpiling and mineral security, Mr. Palmer pointedly shows that there is an immediate necessity of aid to our domestic mining industry. I am pleased to print his remarks in the Appendix, under the permission which you have heretofore given me. They follow:

STOCKPILING AND MINERAL SECURITY

(Address of Robert S. Palmer, executive director, Colorado Mining Association, before the Mountain States Association, Boise, Idaho, May 22, 1950)

Congress recognized the importance of minerals to our well-being in times of peace and to our safety and security in times of emergency by enacting Public Law 520, approved by the President on July 23, 1946. The act is cited as the Strategic and Critical Materials Stock Piling Act but is generally referred to as the Stock Piling Act.

The policy of Congress was clearly set out in the first section as follows: "It is the policy of the Congress and the purpose and intent of this act to provide for the acquisition and retention of stocks of these materials and to encourage the conservation and development of sources of these materials within the United States, and thereby decrease and prevent wherever possible a dangerous and costly dependence of the United States upon foreign nations for supplies of these materials in times of national emergency."

The statute provides that the Secretaries of War, Navy, and Interior, acting jointly through the Munitions Board, shall determine the quality and quantity of materials to be stockpiled. Provision is made in section 3 of the act for purchase at the direction of the Munitions Board by the Procurement Division of the Treasury and for storage, refining, rotating and under certain circumstances disposal. Section 7 provides that the Secretary of the Interior, through the Director of the Bureau of Mines and the Director of the Geological Survey, "is hereby authorized and directed to make scientific, technologic, and economic investigations concerning the extent and mode of occurrence, the development, mining, preparation, treatment, and utilization of ores and other mineral substances found in the United States or its Territories * * * which are essential to the common defense or the industrial needs of the United States, and the quantities or grades of which are inadequate from known domestic sources, in order to determine and develop domestic sources of supply, to devise new methods for the treatment and utilization of lower-grade reserves, and to develop substitutes for such essential ores and mineral products; on public lands and on privately owned lands, with the consent of the owner, to explore and demonstrate the extent and quality of deposits of such minerals, including core drilling, trenching, test pitting, shaft sinking, drifting, crosscutting, sampling, and metallurgical investigations and tests as may be necessary to determine the extent and quality of such deposits, the most suitable methods of mining and beneficiating them, and the cost at which the minerals or metals may be produced.

In addition to the Stock Piling Act, there are two other statutes which affect the organization for stock piling. Under the provision of the National Security Act of 1947, as amended, the Munitions Board became the successor to the Army and Navy Munitions Board. The act also created the National Security Resources Board, which was made responsible for advising the President concerning policies for establishing adequate reserves of strategic and critical materials, and for the conservation of these reserves. Under the Federal Property and Administrative Services Act of 1949, the affairs of the Bureau of Federal Supply were transferred to the General Services Administration and the Federal Supply Service of that Administration succeeded to the function of the Procurement Division (later the Bureau of Federal Supply) of the Treasury Department.

In addition to the basic stockpiling acts and the organization authorizations, there are a variety of arrangements providing for the purchase of materials under the Economic Cooperation Administration Act of 1948. This act, as amended, provides for assistance to European countries, and in section 115b5 provides that in consideration for such assistance participating countries are to facilitate the transfer to the United States of materials in actual or potential deficiency in this country. Subsection 115b9 provides for access to such materials by United States nationals. Section 117 of the ECA Act provides for promotion by the Administrator of an increase in production of materials in which the United States is deficient. In section 8d of the amendments to the ECA Act of 1948, approved April 19, 1949, provision is made for allocation of not less than 5 percent of the special local currency accounts for the purchase of strategic and critical materials and for local administrative expenses of the United States in the participating country. Further provision is made for the Administrator to initiate programs and aid where appropriate services to obtain or stimulate increased production of materials are needed in the United States. The administrator is also authorized, with the approval of the Director of the Federal Supply Service, to enter into long-term contracts (not to exceed 20 years) for the purchase of strategic and critical materials for the stockpile.

There are several additional statutes relating to the methods of obtaining materials

for the stockpile. Section 204e of the Federal Property and Administrative Services Act of 1949 provides that the administration may accept strategic and critical materials in lieu of cash to cover the proceeds of lease or sale of surplus property. Such strategic and critical materials may then be transferred to the stockpile. Two additional statutes relate to the use of surplus agricultural commodities. For example, the Commodity Credit Corporation is authorized under an act approved June 7, 1949, to accept strategic and critical materials produced abroad in exchange for surplus agricultural commodities in its possession. This statute provides, however, that the Munitions Board retains the right to determine the quality and quantity of such materials and provision is made for reimbursing the Commodity Credit Corporation from stockpile appropriations at the market value of such materials.

This detailed account of the legal authority for the stockpiling program should be understood before we can grasp the full significance of policies of our Government relating thereto, and the conflict engendered by the philosophy of those in and out of Government who have come to the conclusion that we in the United States have so exhausted our mineral reserves that we should depend upon foreign production largely in building up our national stockpile.

Strategic and critical materials, as applied to stockpiling, have been defined as "materials whose procurement in adequate quantity, quality, or time is uncertain during war. The uncertainty may be due to lack of sufficient domestic or other dependable sources of the raw material, lack of production facilities and equipment, inadequate transportation, poor distribution of supply, lack of skilled manpower, and lack of electric power. * * * Materials become strategic and critical because they are required in a war economy to such an extent that the need exceeds the supply."

The classification of what is a strategic or critical material may change, as witnessed during World War II, much to the distress of the civilian population of the United States which was denied many of the metal necessities required to carry on ordinary living according to American standards.

The amounts of money expended for stockpiling seems to be somewhat of a secret, but the best information obtainable indicates that up until the present appropriation which has been approved by the House of Representatives, there has been appropriated $1,065,000,000 plus 470 million for contract authorizations. When considering such huge expenditures it is a bit startling until it is realized that approximately $42,000,000,000 have been made available for foreign aid.

What effect has this program had on the domestic mining industry and the development of domestic sources of supply of these essential materials? Using a recent study of the condition of the small mines the picture is not good, for 73 percent of the lead, zinc, copper, silver, and gold mines in the 11 Western States have closed since 1940. In that year there were 8,246 producing metal mines in the Western States while only 2,244 were recorded in 1948. The percentage of closures on a percentage basis since 1940 is as follows: California 77 percent, Colorado 83 percent, Arizona 69 percent, Montana 71 percent, Idaho 71 percent, Nevada 62 percent, Oregon 92 percent, New Mexico 73 percent, Washington 82 percent, Utah 43 percent, and Wyoming 75 percent. As the present Director of the Bureau of Mines said recently in St. Louis, "The domestic mining industry is a sick industry. The price of (mine) products is not keeping pace with increasing costs of metal production and increasing costs of exploration." He also said, "It has become obvious to all but the most blind that our reserves have not been developed at the desired rate. The need for encouraging exploration must become more fully recognized."

Similar testimony depicting the deplorable condition of the domestic mining industry was presented to the Senate Committee on Interior and Insular Affairs and the House Committee on Public Lands at extensive hearings. A cost study of mining in the Rocky Mountain region further revealed that the mining industry's main cost is labor and that the grade of ore is falling off. To illustrate: In 1939 the average zinc-lead content per ton of ore was 16 percent, but dropped to 10 percent in 1948. While the metal content of the average grade ore was receding labor costs were mounting to the extent that the costs for mining were increased 2.9 times or practically 3 times those of 1939. The studies further showed that the labor cost alone for metal in the Western States was 8.7 cents per pound, or 4.6 times the 1939 mining cost per pound of contained metal. Today the labor cost is estimated at 70 percent in our area of the total operating cost per ton mined. This is greater than that of any other industry and does not include the labor costs of producing finished metal products.

The causes of these increased labor costs are well known to most thinking Americans. Perhaps they can be attributed largely to actions of our Government. Social advances have proven an expensive item. In addition, innumerable taxes have been heaped upon the industry and have become so burdensome that in many cases mines have been forced to close, and in others development and exploration programs have been given up as too expensive. All of this bears directly upon the national safety and security of our Nation, for without a healthy, active, going mining industry we can have no security in this country nor can we maintain a sound economy.

While these burdens were being heaped upon the American producers by our Government, we find that liberal aid and assistance was being extended abroad. In using the word "assistance," this is the term used in Washington when speaking of financial contributions to foreigners or foreign governments; but when similar aid with reference to the domestic mining industry is proposed, those who are primarily interested in developing foreign sources of materials with cheap labor and direct financial aid are prone to yell "subsidy." Possibly they do this because they have portrayed the word "subsidy" in such a way to make it most objectionable to the average American citizen.

Aid extended to the socialistic government of England or the communistic government of Yugoslavia is sanctioned but aid to the domestic mining industry is called "socialistic." Witness the most recent release from the Economic Cooperation Administration, dated May 2, 1950, as follows:

"A new search for copper, manganese, lead and zinc now is being conducted in the desert and mountains of Algeria with the aid of Marshall-plan dollars" (United States taxpayers' dollars). "Thus far French geological crews, working under the supervision of the Algerian Mineral Research Bureau, have been furnished about $1,140,000 worth of American equipment. In addition about $2,604,000 worth of Marshall-plan equipment is helping to modernize existing Algerian mines. Algeria's major lead mine is being converted from an underground system of mining to an open-pit operation. Other mining programs (and I am quoting from the report), including electrification and road building, are being financed with the equivalent of $2,625,000 in counterpart funds—francs deposited by the French Government to match ECA direct dollar aid."

A similar program for domestic mines is still pending before the Congress of the United States, although the Eightieth Congress did enact such legislation designed to encourage domestic exploration and development only to have the bill vetoed by the President.

Perhaps the additional influx of lead from Algeria into our markets will add to the difficulties now being experienced even by the low-cost high-grade integrated lead-mining companies of this Nation. A Lead Committee has presented a petition to the Tariff Commission asking tariff relief under the escape clause of the Reciprocal Trade Agreements. In its petition this group alleges: "That the lead-mining industry is threatened with and has already suffered serious injury from an unprecedented peacetime flood of lead from Mexico, Canada, Australia, Peru, Germany, Yugoslavia, and elsewhere." You will note that Algeria is not mentioned in this list. The petition continues: "The main reason for the extraordinary volume of lead imports to the United States has been the low tariff on lead ore and metals and the unforeseen currency devaluation by Mexico in 1948 and by Great Britain and other countries in September of 1949. Imports have multiplied sixfold compared with the prewar record and have grown to the point that imports are equivalent to or above the domestic mine production in volume."

The lead committee states further that "the lead industry does not believe it is in the best interest of the country to be overwhelmed. Unemployment is increasing in the lead mines and numerous properties have already closed down. Part of the competition objected to comes from lead diverting from Europe to the United States by communistic Yugoslavia, where labor conditions are utterly different from what they are in this country." The petition continues: "It is imperative for the mining industry to seek the restoration of traditional reasonable tariff protection under which the lead-mining industry of the United States has maintained world supremacy." It recommends an upward revision of the tariff on lead in ores and concentrates from the present rate of three-fourths of a cent to 2¼ cents and an upward revision of the tariff on lead in bullion and metal from the current 1.06 cents to 3$^{3}/_{16}$ cents. The 1930 rates on lead ores were 1½ cents, and on metal 2½ cents. These were cut 50 percent by the Mexican Trade Agreement, with the proviso that they should be restored to 1.2 cents per pound on lead in concentrates and 1.7 cents per pound on metal 30 days after the termination of the unlimited national emergency. Unfortunately, the unlimited national emergency has not terminated.

An examination of this brief shows that in 1932 the tariff protection provided per pound of lead in ores of 47.2 percent; that the tariff protection in 1950 on the same item was only 6.8 percent. It should be kept in mind that not only have tariffs on metals been severely cut but the United States is at present operating in a comparable inflationary economy while other countries importing this metal to our shores have devalued their currencies to such an extent that it is very doubtful whether the increased tariff recommended by this distinguished group of gentlemen would produce the desired results. In passing it should be noted that the devaluation of the pound not only nullified modest tariff protection but provided an additional bonus or subsidy of 2.26 cents a pound to the Australian lead producer. The committee evidently feels that this is not a fair competitive development and urges immediate tariff relief.

The zinc situation is not quite the same, for although under the Tariff Act of 1930

the tariff was 1½ cents a pound on zinc bearing ores and 1¾ cents on zinc slabs, it was cut to ¾ cent a pound in the Geneva agreement of January 1, 1948, on the first item and to 0.87½ cent a pound on the second. The supply of zinc concentrates is short in the United States today and there seems to be a world-wide shortage of this metal which, among other uses, is combined with copper in the making of brass. Perhaps you have forgotten but many soldiers who used the substitute of steel cases for cartridges when zinc and copper became so short during World War II have not forgotten how important it is to maintain a dependable supply of these metals for the use of our armed services.

Other suggested relief measures include tax concessions, which of course are desired by the mining industry. The repeal of the Securities and Exchange Acts have also been advocated; but the more practical people in the mining business—largely those who are not drawing salaries unless their mines are actually operating and producing metals profitably—have come to the conclusion that something has to be done to save our domestic mining industry—but quick. These mining people by the hundreds, together with their employees in the mines of America, have joined forces in support of S. 2105, commonly known as the O'Mahoney bill. This measure passed the Senate of the United States and died in the House on March 16, 1950, for lack of 22 votes. Among those who opposed the passage of the measure in the House was a group of Congressmen who felt that the Stockpiling Act as referred to earlier in our discussion should be applied in such a way as to bring about the desired result, which all agree should be a healthy, active going mining industry. Some of these men were sincere in their views and they have shown their sincerity by requesting the Committee on Armed Services of the House of Representatives to appoint a subcommittee for the purpose of studying the serious problem.

In a communication dated March 21 of this year between this committee and the Munitions Board, it is stated that on March 16 of this year a debate took place in the House of Representatives which related in many important respects to the national defense; that the committee is extremely disturbed by the information brought out in the debate on S. 2105; that the bill was defeated by a vote of 166 to 144; that the legislation was directly pertinent to the Stockpiling Act, and that similar legislation has been coming before Congress since the passage of the Stockpiling Act; that each time the legislation has been defeated by the narrowest of margins. The committee stated further that it is convinced that the Stockpiling Acts contain ample authority to accomplish the National Defense purposes of S. 2105; that the debate brought out that it is the policy not to implement the stockpiling authority in accord with the intent of the law; that if this is correct there is evident need for corrective legislation. Further the committee stated that it would sponsor such legislation unless remedial action is indicated. Additional information is contained in the letter which serves no purpose here except that it points out that one of the objectives was the conservation of strategic and critical materials whenever and wherever possible through the exploration, development, and production of such materials in this country. According to the committee any other course of action is ridiculous from a national defense viewpoint.

The committee also stated that it is compelled to the conclusion from the March 16 debate on S. 2105 that a serious situation has been permitted to develop in the domestic mining industry through intentional failure to carry out the expressed intent of the stockpiling acts.

In answer to this letter the committee received a letter which evidently enjoyed the approval of the administrative agencies. In this it was stated that the Government's efforts to assure sources of materials in the interest of national security are larger than the stockpiling program; that officially in commenting on S. 2105 the Munitions Board on behalf of the Department of Defense had stated:

"It is the position of the Department of Defense that any reasonable measure designed to support a strong productive and efficient mining industry is in the interest of national security. The Department of Defense has, however, consistently stated that any program designed to provide such support should remain entirely distinct from the program of stockpiling for national-security purposes. Under no circumstances should the separate objectives of the two programs become confused in the process of developing legislation supporting the mining industry."

Further, "There is nothing in the statute nor in its history which indicates that there is any intent or that it is the policy of Congress to encourage subsidization of high cost production." Here let it be noted that no such interpretation was made of the foreign-aid program, and yet in the interpretation of the Stockpiling Act it is quite apparent that those in our Government are determined that we shall not subsidize the domestic mining industry in like manner to the aid being extended to foreign producers: The letter continues:

"We are aware of no means by which the application of the Buy American Act to stockpile purchases can accomplish the purposes of S. 2105. This bill, as we understand it, was offered as a means to stimulate private exploration and development of domestic mines and to preserve marginal minerals producing capacity by making payments to mine owners to help them keep their mines pumped out and properly timbered when not in production. There have been repeated suggestions that the Stockpiling Act be employed to carry out these purposes, but we have not felt either authorized or justified in taking any such action."

Further, the official position of the defense agencies and of the administration, as stated in the official letter to the Armed Services Committee, shows that that group favors "any reasonable action to preserve domestic minerals-producing capacity in an operable or stand-by condition, even if its production is not now required for the stockpile or able to compete on the open market. * * * That it is clearly in the interest of the national security to preserve production capacity of strategic and critical materials that would be available to this country in time of a war emergency. It is a matter of significance to the national security. A strong, productive, and efficient domestic mining industry contributes importantly to the national security."

Congress intended the Stockpiling Act be used as an aid to the domestic mining industry, but a directive of the Executive has so tied the hands of stockpile authorities that there is little likelihood that the domestic mining industry will ever receive the aid which it needs from that statute. True, several contracts have been made with domestic producers but they are not of much help to the vast majority of mines which are experiencing the rashes of distress imposed upon them by a government which only this week has appropriated three billion one hundred and twenty-one million additional American dollars for foreign aid—$35,000,000 of this to be used for backward nations and a certain portion for guaranteeing investments in foreign countries.

A statesman once said, "Never attempt the impossible nor oppose the inevitable." Perhaps tariff relief can be obtained under the present administration but realistic students of the subject are not convinced that such a program is possible. Perhaps tax relief can eventually be secured for the mining industry but this also may take time. The only possible aid which can be secured before the adjournment of the present session of Congress is, in the judgment of those closest to the problem, the passage of H. R. 8221, which is in fact the O'Mahoney bill revised in the House so as to eliminate the Board and place the administration directly in the hands of the Secretary of the Interior. The appropriation has been cut in half and other minor amendments have been made, but in substance this is the same measure which has had the support of the rank and file of the mining industry of the United States.

Those of us who have worked diligently to aid and assist the mining industry appeal to you who represent numerous lines of business to join with us in strengthening the mining industry of the United States, with the idea in mind that by so doing you will be securing your own safety and the safety and security of our Nation. There are many battle crys being used in an effort to pass legislation during this day and age of changing conditions, but at no time in the history of this Nation has there been a more vital question before the Congress of the United States. Let us hope and pray that those charged with the responsibility of acting will do so now before it is too late. If we can't have a bipartisan foreign policy let us hope that we can at least develop a bipartisan domestic mineral policy.

Memorial Day, 1950

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 1, 1950

Mr. VAN ZANDT. Mr. Speaker, the residents of Altoona, Pa., in cooperation with the various veterans' organizations and patriotic groups, conducted the annual Memorial Day program at Fairview Cemetery on May 30.

It was my privilege to deliver the following Memorial Day address:

This is a day of prayer and reflection—prayer for those in whose honor we observe this Memorial Day and for the loved ones they left behind; reflection upon the noble principles for which they gave their all and upon the manner in which we cherish and safeguard those principles.

Memorial Day symbolizes the spirit of the American people—the will of a great, free, and enlightened nation to pay proper tribute to its honored dead. Today, from a myriad of flagpoles, Old Glory flutters at half staff as a moving reminder that, busy though we are, we still are willing to pause and remember the sacrifices of the heroes in whose honor we are gathered here.

Yet, free as we are, enlightened as we are, we are divided in our allegiance to the freedoms and the blessings for which these heroes died. While we and untold thousands of other Americans are reaffirming our fervent hope for an end to the anguish and the horror of war, others among us, cringing with fear of another conflict, are beseeching us to lay our precious heritage of freedom upon the altar of "peace at any price."

What more appropriate time than on Memorial Day to consider certain dangers which threaten our country today?

It is the day when we look back and review the causes in which our departed comrades died. By the same token, it can and should be a day for looking ahead in appraisal of the forces which seek to destroy us and make a mockery of the noble principles for which those honored dead gave their full measure of devotion.

Every thoughtful American is deeply concerned over a growing movement that has as its ultimate objective the destruction of the United States as a free, independent Nation, and the abject surrender of our national sovereignty to a visionary and untried system of world government.

Such a proposal is embodied in several resolutions now before the Congress of the United States. It has the backing of a number of groups, and each has advanced its own ideas of the form such a world federation should take.

But basically, they are the same. They have a common objective—unconditional surrender by this country of its powers and prerogatives as a free and independent Nation.

It is common knowledge that servitude cannot buy peace and freedom. No truer words have been spoken than those of Patrick Henry when he voiced his immortal query: "Is life so dear or peace so sweet as to be purchased at the price of chains and slavery?"

There is no longer room in this country for extreme nationalism. Never again can we withdraw behind our two oceans with a sense of security from attack from any quarter.

Likewise, there is no place in America for the other extreme—the super-state idea with its dream of peace through surrender, its false assumption that nations with diverse interests, different languages, and varying standards of living, can be welded into a federation of states comparable to the American Republic.

The world state idea is not new. As early as the fourth century before Christ, Plato dreamed of a world republic. Plato's effort to bring peoples together in such a union failed, and that failure set the pattern for subsequent unsuccessful attempts.

Perhaps the nearest approach to a successful world federation was the Roman Empire, that is, if one may use the word "successful" in describing a union that was held together by sheer force of arms. This "superstate" lasted for 500 years, its unity maintained largely because of the might of the Roman legions.

Napoleon dreamed of a world empire or world state. He, like Alexander the Great, sighed for more worlds to conquer, but he found that conquest alone could not unify peoples of divergent interests, conflicting religious beliefs, and differing ideas of the fundamental principles of government.

Sir Thomas More got nowhere with his utopia of the sixteenth century. Francis Bacon found no takers for his "New Atlantis" in the sixteen hundreds. The German philosopher, Immanuel Kant; the French novelist, Anatole France, and an English philosopher, James Harrington, all failed in their proposals to set up world government, as did one William Ladd with his international solution in the eighteen thirties.

Within our own generation, we have seen the collapse of two "superstate" attempts—those of Kaiser Wilhelm and Adolf Hitler.

It is noteworthy that, in modern times, efforts to form world federations have inevitably brought war. The unification of Germany led to domination of the whole by Prussia, and brought on two wars—the Franco-Prussian War of 1870, and the First World War in 1914.

Attempted unification of Italy led to dreams of revival of the old Roman Empire. The rise of fascism, then war, were the inevitable results. When the Yugo-Slav federation was formed, with a union of Serbs, Croats, Montenegrans, and Hungarians, unity was lacking, and minorities looked to Germany, which even then was preparing for the war which came in 1939.

A distinguished American, Warren R. Austin, one of the United States representatives at the United Nations, has described any attempt to create a world government as "a stepping stone into a cloud-cuckoo land of mutually inconsistent possibilities," and he added that he does not believe that world government "is feasible in the foreseeable future."

Our own State Department is of like mind. Testifying recently on a world government resolution introduced in Congress by Senators TOBEY, of New Hampshire, SPARKMAN, of Alabama and KEFAUVER, of Tennessee, Assistant Secretary of State John D. Hickerson has this to say:

"We recognize that the growth of a world community requires the existence of an impressive beacon which reflects the aspirations of the world's peoples. We recognize the importance of working through the standards which have been set forth in the Charter of the United Nations.

"We recognize the concern of the American people and their desire to review under present world conditions what we undertook to accomplish in creating the United Nations. We also recognize that organizational form can contribute to clarifying public understanding of what they do and do not want to accomplish through international organization.

"But for the reasons given we cannot support this resolution."

He stated further that "We cannot afford to risk jeopardizing or losing what we have without some real assurance that we are getting something better in its place."

Proponents of world government schemes have carefully avoided answering two vital questions concerning their proposals. One has to do with the Soviet Union. They advance their ideas of world government as the most logical means of stopping the armament race among nations of the world. But, in the same breath, they admit there is little likelihood that Russia would join a world federation now or in the foreseeable future.

Can we assume for one moment that a world federation with Russia on the outside would put an end to the building up of armed strength? Would the Soviet Union halt, or even slacken, its armament program while the proposed federation went ahead with the building of a world army, navy, and air force?

On the other hand, should the Soviet Union and its satellite countries join the federation, would not Russia and its puppet states be in position to exercise a majority vote in the world government?

Available figures clearly indicate that such would be the case.

Were the government to function on a popular representation basis, Russia, China, and the Soviet satellites in Europe would have a total of 750 votes, while the peoples of the North Atlantic Pact nations, and the peoples of South America could muster no more than 500.

Even with a smaller differential, we could not for one moment assume that the United States, in most cases, could win the support of all the non-Communist nations within the federation.

The other question which the world federalists have left unanswered is that of immigration. Under any system of world government worthy of the name, there would have to be freedom of movement among all its citizens—just as we in this country are free to go from one State to another without restriction or regulation.

This could mean only one thing: That the gates of the United States would be thrown open. With its high standards of living, its high wages, its unlimited industrial opportunities, the United States would be a magnet that would attract teeming hordes of the underprivileged from other countries.

The result would be an unprecedented burden upon the labor market and upon the economic machinery of this Nation. Could the United States, by any stretch of the imagination, expect to gain the support of a world congress in erecting barriers against such an invasion?

Upon this day of prayer and reflection, upon this day when we pause to honor those who have died in the cause of freedom, I beseech the American people to heed this warning of imminent peril. I beg them to recall the words of Abraham Lincoln, who said, "You cannot strengthen the weak by weakening the strong." I plead with all true Americans to join a crusade against the spread of the plague of world federalism.

George Washington, in his infinite wisdom, told us that "There can be no greater error than to expect or calculate upon real favors from nation to nation. It is an illusion which experience must cure, which a just pride ought to discard."

Let us, on this Memorial Day, rededicate ourselves to the noble causes in which these our comrades died. Let us fortify ourselves to resist the evil schemes that would tear down the structure we have reared in the blood of these heroes.

Peace we must have if we are to survive. But it must be peace with honor. Let us here, beside the resting places of our honored dead, resolve to give our best—all that is in us—in the cause they espoused. More we cannot give. To give less would bring dishonor upon them.

Jefferson-Jackson Day Dinner Address by the Vice President

EXTENSION OF REMARKS
OF
HON. TOM CONNALLY
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, June 2 (legislative day of Wednesday, March 29), 1950

Mr. CONNALLY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the Jefferson-Jackson Day dinner address delivered by the presiding officer of the Senate, the Honorable ALBEN W. BARKLEY, Vice President of the United States, at Austin, Tex., on May 27, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am greatly complimented by the invitation to come to Texas at this time to participate in the Jefferson-Jackson Day dinner. I am greatly complimented by the great crowd which has assembled here in the name of democracy's two earliest heroes—Thomas Jefferson and Andrew Jackson.

I am happy to be here because the Democratic Party today is still true, and has always been true, to the fundamental principles laid down by Thomas Jefferson and Andrew Jackson in the establishment and fortification of the democratic ideals in the Government of the United States.

I am happy to be a member of the Democratic Party, not alone because of its origin, not alone because it is the only continuous, uninterrupted political organization in the history of America, but because of the unexampled record which it has made, and is

making, in applying democratic principles and ideals to the solution of the people's problems.

The Democratic Party has written into the statutes of this Nation a greater record of progressive legislation than all other political parties combined. It is, and has been, the only real progressive political organization in the history of the Nation. Most of the legislation which the growing complexity of our economic and social life has made necessary was enacted under Democratic leadership. The first rural mail route in America, and the first act to regulate commerce, were brought about under Grover Cleveland, the first Democratic President since the War Between the States. The initial steps toward the reformation of our civil-service system were taken by him.

Following the stalemate and deadlocks during 12 years of Republican administrations following Mr. Cleveland, the Democratic Party produced another great leader, during whose administration more recognition was given to the current needs of an enlightened legislative program than in any previous period.

It was under Woodrow Wilson that the first act granting Federal aid in the construction of highways was authorized. It was under Woodrow Wilson that a workable farm credit system was set up. Of course, it ceased to function under the Hoover administration because of the lack of confidence of the people in that administration and in its method of dealing with the tragic problems of the people. But after that it was revived again and is and has been a serviceable agency of the Government in behalf of agriculture.

It was under Woodrow Wilson that the Federal Trade Commission was set up, offering a forum for honest business to seek redress against monopolistic practices. It was under his administration that the Clayton antitrust law was enacted, modernizing the machinery against monopolistic practices, and giving to labor and agriculture a charter under which they might form associations for their advancement and protection.

It was under Woodrow Wilson that the great Federal Reserve System was established, which has given us the soundest and the best banking system in the history of this country, or of the world. It was under the Wilson administration that the policy of dollar diplomacy began to give way to an era of friendship among the republics of the Western Hemisphere. It was under Woodrow Wilson that a new freedom was set before the American people as a worthy goal of government and its relationships with them.

World War I interfered with this great progressive legislative program for dealing with our domestic economy, and concentrated all our efforts in the world's greatest struggle for democracy up to that time.

Then came Harding, Coolidge, and Hoover, which was characterized in the beginning by the great era of public corruption in the Nation, and in its ending by the greatest depression and debacle in the history of the Nation. As has always happened, the people turned again to the Democratic Party for leadership. It turned to the great Democratic leader, Franklin Delano Roosevelt, and elected him by an overwhelming majority.

No President ever faced a more tragic situation. No President was ever called on suddenly to infuse new confidence into the people. He did this by a series of bold, dramatic demonstrations in support of Jefferson's belief and his lifelong policy that the Government should be the servant of the people and not their master. Roosevelt made the Government the servant of the people in every field of human activity, whether of labor, industry, agriculture, or international trade. He revived the waning confidence of the people in government itself.

The long list of legislative enactments to make our Government and its people more responsive and responsible to the growing need of the modern day in which we live cannot be matched by any previous record in the history of the Nation.

Farm legislation, seeking to put agriculture on an economic basis equal to industry, was enacted, which included not only an Agricultural Adjustment Act but soil conservation, rural electrification, farm supports, research into the discovery or greater markets and greater uses for agricultural products. This was linked with flood control to protect our river valleys from recurring and devastating floods, which each year destroy more property than it would cost to protect the people permanently against these disasters.

A Fair Labor Relations Act, giving equality to employer and employee, was enacted. Minimum wages and maximum hours were provided for labor.

A reciprocal trade program, which has expanded our trade with the nations of the world, was inaugurated, and has been continued over the opposition of the antiquated Republican idea of unscalable tariff walls.

A social-security system was initiated, providing old-age pensions, old-age assistance, and unemployment compensation, and recognizing the duty of society to those who have spent their lives in its service. This system is now on the verge of further expansion and greater benefits.

These are only a few of the great measures which the Democratic Party, under its leadership for more than three-quarters of a century, has brought to the American people. I challenge any other political organization, past or present, to show such a record.

World War II came to interfere with and retard this great domestic program of rehabilitation. But, in spite of World War II, with all its tragedies and expenditures, we are still the most prosperous and most happy and most democratic Nation under the shining sun.

This great record of progressive legislation and administration has been continued by President Harry S. Truman, who is carrying on the burden of government in the tradition of Jefferson, Jackson, Cleveland, Wilson, and Roosevelt.

We are seeking to make democracy more democratic, government more responsive, and the people more conscious of their obligation to government, no less than its obligation to them.

Many of these measures to which I have referred, from Grover Cleveland to Harry S. Truman, were objected to and opposed on the ground that they were paternalistic, or that they invaded the field of private enterprise. But, we know that great national problems can only be solved through the cooperation of the people and their government. It is of no value to call measures for the benefit of the people either paternalistic or socialistic. Jefferson was called a visionary and a demagog because he advocated equality of the people, because he advocated the public education of the children by the State, and established a great university as the capstone of that system.

Jackson was called a dictator because he used the rough and ready powers of his personality and his office to destroy institutions that were gnawing at the vitals of democracy. It was Cleveland who said that "Public office is a public trust, and not a private snap."

They accused Woodrow Wilson of being a scholar in politics and a visionary dreamer, but his dreams came true in the realization of a magnificent program that benefited all classes of our people, regardless of their occupation.

They applied epithets to Franklin D. Roosevelt and they have applied them to President Truman. But we do not believe in government by epithet. We do not believe in government by slogan alone. A little segment of the reactionary Republican leaders has issued a slogan for the 1950 congressional elections, "Liberty versus socialism."

But the American people are no more frightened by epithets than are the leaders of the Democratic Party. The American people are not beguiled by euphonious slogans. They are not beguiled by empty promises and empty phrases, because of the bankruptcy and intellectual sterility of those who lead the opposition. The record of the Democratic Party is its slogan. It hurls no epithets at its opponents. It invites them to an enlightened consideration of the day in which we live, and an enlightened solution of the complex problems which face not only our people, but face the world.

In the midst of this great record in behalf of our domestic prosperity and happiness, we have been required, in one generation, to fight two World Wars to preserve democracy, liberty, and free institutions. Peace has not yet settled upon the world, and because of this, we have been required to undergo additional sacrifices in the way of aid to the freedom-loving peoples, in order that they may bolster their own courage and their own institutions against communistic invasion and economic chaos. We have been compelled to maintain a peacetime armed force greater than ever before, and greater than any of us anticipated at the conclusion of World War II.

While these burdens are heavy, we have enjoyed a prosperity which is unequaled in any period in our history. Republican mouthpieces claim we are on the road to bankruptcy and we are on the last mile toward the police state. No nation is on its road to bankruptcy whose people enjoy a national income of $220,000,000,000 per year. No nation is on its way to bankruptcy which, in 1 year, produced $250,000,000,000 worth of goods and services, for which it finds a ready market. No nation is on its way to bankruptcy which has more than $100,000,000,000 of savings, which it has accumulated since the dark days of the late 1920's and early 1930's. No nation is on its way to bankruptcy which is able to guarantee the deposits of the people in its banks without crippling the soundness of its economy. No nation is on its way to bankruptcy which finds 60,000,000 people employed at higher wages than ever before. No nation is on its way to bankruptcy into whose hands the leadership of the world has been thrust, and which is seeking and is able to carry the torch which is essential to light up the dark places of economic and political realities, so as to make our own democracy and our own institutions safe, and prevent our having to become an armed camp to protect ourselves against the godless and ruthless ideology which seeks to engulf the world.

These are the things that make Democrats proud. We may have some individual differences over issues that are vital, or seem vital to many groups of our people, but, in spite of these, we are more completely united than any political party that offers us opposition. This grows out of the fact that we look forward, instead of backward. We are not like the South American bird that flies backward and never knows where it is going, but only where it has been.

I congratulate the democracy of Texas upon its outstanding delegation in the Senate and House of Representatives, not only now but in the days that are gone. I am happy in the company of my old friends and fellow workers for a generation, Speaker SAM RAYBURN, Senator TOM CONNALLY, and a new and able Senator, LYNDON JOHNSON. Through the years I have served in both Houses with many of the outstanding statesmen of Texas, and I have received inspiration from their courage and their forward looking viewpoint in dealing with the problems of this complex day.

I look forward to long and honorable service by the Democratic Party on behalf of the people. We live in a democratic age. We must act democratic in dealing with this age, and the Democratic Party and its leadership afford, at present, the only instrument through which this leadership can be secured.

Address by Hon. Elbert D. Thomas, of Utah, on Unveiling of Statue of Brigham Young

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES

Friday, June 2 (legislative day of Wednesday, March 29), 1950

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD the address which I delivered yesterday at the ceremonies held in the rotunda of the Capitol in connection with the presentation of the statue of Brigham Young by the State of Utah.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Brigham Young has been dead 73 years. Few people who hear my voice saw him. He is, therefore, a figure of history. Mention of his name produces emotional reaction. Like all great men in history, he both attracted and repelled his contemporaries. An uncle of mine was an idealistic follower of Brigham Young and sacrificed unbelievably to join him in the "valleys of the mountains," only to turn against him at first sight. Yet my father saw Brother Brigham and thought him the greatest man alive and honored him as such to his dying day.

In my family is one who is a descendant on both his mother's and father's side from the first group of 1847 pioneers who entered the Salt Lake Valley with Brigham Young. Today, therefore, is a day of happiness to me as it is a day of happiness to all other sons and daughters of our Utah pioneers.

The placing of Brigham Young's statue in the Nation's Capitol is acknowledgment of his contribution in the building of this Nation. Just to mention the number of Brigham Young's sons, grandsons, and great-grandsons who served in the armed forces of the United States in time of war is honor almost beyond comparison for one man and a service outstanding enough to bring the thanks of the Nation.

It took courage to conquer the desert. It took sacrifice to build a home in a barren place. It took faith to select a wilderness for a "promised land." But to leave to unborn generations the ultimate success of his great undertaking demanded an understanding of eternal purposes both for his people and his country. Brigham Young lived, planned, built, and worked in tune with the Infinite, and God was his companion not only when he prayed but in all walks of life. We who were raised by those who knew Brother Brigham know that they perish who are not led by vision. Faith, love, courage, sacrifice, devotion to a cause and to one another, understanding, and wisdom, are all words which will ever be associated with Brigham Young and his work. We, today, sensing our debt to our pioneers because of their courage, faith, and zeal in carrying the American flag into foreign territory, find in those attributes complete satisfaction. But because these attributes are so worthy of honor we sometimes fail to recognize the real national and international significance of what they did. Therefore, my task today is to present the meaning of the migrations, under Brigham Young's leadership, in the making of America.

In 1847, Utah was Mexican territory. The contest for the control of what is now the western part of the United States had been going on for years. The Spanish-Mexican control reached as far north as Oregon. The Russians were in Alaska and had settlements as far south as California. French fur traders had penetrated most of the West and traders from all nations were wandering over it. The British claimed the Pacific coast between what was Russian and Mexican territory. The United States seemed, therefore, to be checked as far as ultimately having a Pacific coastline.

America, for many years before 1847 and for several years after, was on the alert and restless about her boundaries. There were the Texas independence and later the Mexican War. These represent active, expanding cultural and political groups with economic hopes. The people of the United States were not united in their reactions to these great movements. No one saw clearly, as we do today, the naturalness of our expansion to the Pacific. The period was one of political disagreement, plans and counterplans, and internal strife which ended only with the close of the War Between the States.

During the Mexican War the Government recruited Mormon boys as an active unit and, before that, did nothing to hamper Sam Brannon's sea journey to California. But counteraction to overcome the success of both journeys was in minds of many. Americans feared Americans quite as much as they did the British, the Russians, and the Spanish-Mexicans.

There were four separate migrations which, as far as the people who took part in them were concerned, were above pure adventure, conquest, pursuit of wealth, or expanding empire. One, although connected with war and therefore part of conquest, was the march of Kearney's army with its Mormon battalion. This march cut the Mexican-controlled empire in two.

Two movements were wholly inspired by Mormon thought and necessity; the pioneer journey, under the leadership of Brigham Young into the Salt Lake Valley; and the trip of Sam Brannon and his associates around the Horn to San Francisco. The fourth decisive journey was the sister movement of those who carried the Bible and the plow into the Oregon Territory.

The journey to Oregon was for home-making and home-building. The Mormon expeditions were for the same purposes, but motivated by revelation and in fulfillment of prophecy. They carried with them the Bible with its prophets of the past, but they always acknowledged being led by living prophets of the present.

Brigham Young led a band of religious devotees to a new home. His life's mission was to bring souls to God. But in founding a home for such souls, gathered out of the world, he wanted to make that home a place where those souls could develop to their ultimate spiritual and temporal potentiality. Therefore, his settlements meant not only the home, the plow, and the Bible, but also the school and the theater. Add to these the irrigation ditch, the source of life on earth, and the temple, the promise of life hereafter, and we have the basic institutions on which Utah was founded. Work conquered the desert, but religion put meaning into the work.

As a founder of a State, Brigham Young wanted that State to be a place where soul growth would never be hampered. He believed that men's lives could be bettered by better conditions for life. He was both a man of religion and a founder of a State. And what State in history has persisted without religion?

But from the standpoint of Nation-building, the Brigham Young inspired movements had above their vision, their relying on the plow and the Bible, and their home-building culture, something even more significant. It was their international effect. Millions have made homes in foreign lands without affecting the international politics of those lands. But the Mormon journeys resulted in the transferring of political sovereignty, a transporting of a culture and a civilization, and making certain of a land dedicated to the free.

America's expansion did not stop with the coast. Perry with his ships was in Japan by 1853. Caleb Cushing had negotiated his treaty in China in 1844. The Mormon-credited part of America's restlessness in the Pacific was Gibson's so-called conquest in Hawaii in 1861. Mormon missionaries had circled the globe before the death of their prophet-founder in 1844 and before the migration to the Rocky Mountains began. Brigham Young represents the spirit of all this activity, world-wide in its significance and ultimately global in its effect.

The Utah pioneer movement, whether viewed as part of the spread of the white man over the globe, or whether viewed as a movement inspired by United States restlessness, has left its mark on its people and in the development of American culture and traditions. Every true follower of Utah pioneer ideals, whether he be American or foreign-born, knows the part Brigham Young's leadership played in the building of America. And when he is thoughtful of things to come, he views with unquestioning faith the influence of this great leader of men in the destiny of the world.

One cannot speak of Brigham Young and Utah's pioneers without using the word "Mormon." And when once the word is used one thinks of religion. But, in the building of Utah and the vast country which became Utah Territory, men and women from many nations and many faiths took part. All people contributed, all influences were there, all constructively built, and, in the main, cooperatively.

It is the united people of Utah who today honor Brigham Young in the placing of this monument. It is the united people of Utah who have builded our State and Territory. Utah is not a one-religion State. Its people are of all nationalities. Utah is as cosmopolitan as any State in the Union. But her people are all Americans. They are as free as the glorious air they breathe, for, in spirit, Utah is America.

Washington News Letter by Hon. Francis J. Myers, of Pennsylvania

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Friday, June 2 (legislative day of Wednesday, March 29), 1950

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the RECORD my Washington News Letter of May 4, 1950, which is in the nature of a personal report to the people of Pennsylvania.

There being no objection, the news letter was ordered to be printed in the RECORD, as follows:

WASHINGTON NEWS LETTER—A PERSONAL REPORT TO THE PEOPLE OF PENNSYLVANIA

MAY 4, 1950.—A $42,400,000,000 Federal budget was recommended by President Tru-

man for the coming year. House and Senate Appropriations Committees, seeking ways to reduce this figure, are nearly finished with the one-package appropriation bill which will provide funds for operation of our Government between July 1, 1950, and June 30, 1951.

War accounts for 71 percent of the budget—paying for past wars, and preventing future ones. The four largest budget items, totaling nearly $30,000,000,000, make up this 71 percent.

National defense: $13,500,000,000 (almost one-third of the entire Federal budget) is earmarked thus: Navy, $4,100,000,000; Army, $4,100,000,000; Air Force, $4,400,000,000; development of new weapons, $250,000; and stockpiling strategic materials, actually an investment, is listed as a $650,000,000 expenditure.

Veterans' services and benefits: $6,100,000,000 for our 19,000,000 veterans of all past wars. This is $800,000,000 less than last year, and the money goes for care of the disabled, construction of hospitals, education and training, loans, and pensions to some 3,000,000 veterans or their families.

Interest on the public debt: $5,600,000,000 for interest on savings bonds. Our national debt, now $258,000,000,000, increased sixfold during World War II.

International affairs: $4,700,000,000 is the estimated cost of our bipartisan measures to achieve peace and halt communism. This is for programs such as the Marshall plan and point 4, for military aid abroad, for conduct of our foreign affairs, and for our contributions to the United Nations.

All other costs of Government are estimated at $12,500,000,000, or 29 percent of the budget. Of this total, $3,300,000,000 goes direct to States in loans and grants for programs which the States administer, frequently matching Federal funds with their own. Loans to industry, and for purchase of mortgages, will total $1,600,000,000, and $2,000,000,000 goes for Federal public works, such as flood control, reclamation, etc. The $12,500,000,000 consists of:

Social welfare, health, and security: $2,700,000,000 in grants to States for care of the aged, blind, and dependent children, for public health programs, school lunches, grants to communities for hospital construction, and so forth.

Natural resources: $2,200,000,000 for maintenance of rivers and harbors, flood control, forest and mineral resources, fish and wildlife. Eight hundred million dollars of this money goes for atomic developments for peacetime and national defense.

Agriculture: Two billion two hundred million—$500,000,000 less than last year—for price supports, loans, conservation, rural electrification and telephones.

Housing and education: One billion eight hundred million dollars for aids to public and private housing, slum clearance, school housing, school aids, libraries, and museums.

Transportation and communication. One billion seven hundred million dollars for highway construction by States, local airport construction, merchant marine, and the Post Office.

All others: One billion eight hundred million dollars for RFC loans to business, unemployment compensation, labor mediation services, statistical compilation, everything else.

The President estimated this budget would cause a $5,300,000,000 deficit. However, if you consider that Government loans to business, to communities, and to individuals, actually are investments that will be repaid, these investments would be listed as "assets" under many business accounting practices—and thus, our actual deficit would amount to something between $1,500,000,000 and $2,000,000,000, instead of $5,300,000,000.

A balanced budget is everybody's goal. Cuts which undermine our peace efforts or that threaten national security are out of the question. Nor can cuts be made in programs such as slum clearance, flood control, FHA insurance, RFC loans, farm credits, and many others, which encourage new growth of private business and strengthen our national life. But many economies can be achieved. The number of Federal employees has been cut almost 50 percent in the past 5 years, and today, 3 out of 4 Government workers are found in the Department of Defense, the Post Office, and the Veterans' Administration—three vital fields. Hoover Commission recommendations already carried out by the President and the Eighty-first Congress will permit big savings in the future—and still greater economy can be had by carrying the Government reorganization work forward. I have consistently supported the Commission's purposes—as I have other sound measures for achieving economy—and I shall continue to do so.

Natural Gas at the Crossroads

EXTENSION OF REMARKS

OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, June 2 (legislative day of Wednesday, March 29), 1950

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an address entitled "Natural Gas at the Crossroads," delivered by Mr. Roderick Stephens on the occasion of the annual convention of the Pennsylvania Retail Coal Merchants Association, at Wernersville, Pa., on May 25, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

NATURAL GAS AT THE CROSSROADS

I have never been sufficiently interested in the subject of ostriches to discover whether this powerful bird really does bury its head in the sand when danger approaches. But I am sufficiently interested in the fuel industry to have studied the growth of the natural gas market and its impact upon the Nation's economy and security. And, in either case, you don't have to do much studying to know that burying your head in the sand is not a very good method of dealing with danger.

So, I was very pleased to hear from Langdon Cook, your program chairman, that the Pennsylvania Retail Coal Merchants Association had scheduled two talks on natural gas—a subject that involves serious problems for you as citizens and as fuel dealers. If what they say about ostriches may be true, but it is obviously not true about you.

Of recent years, my associates and I have had occasion to make an intensive study of natural gas and its vital role in the Nation's peacetime and wartime economy. We have also studied the impact of natural gas upon all branches of the coal industry and upon the oil industry. Out of these studies has come one all-important conviction.

It is this. Granted that, at the moment, natural gas is a cheap, convenient fuel; that does not necessarily mean that the public welfare will be served by the construction of facilities adequate for its distribution, for unlimited domestic, commercial, and public-utility use, from the Pacific to the Atlantic and from Canada to Mexico.

For one thing, we do not know that we have enough natural gas for such widespread use. There has never been an authoritative, disinterested determination of the quantity that is actually available from pools already discovered. All estimates so far made have come only from interested industry sources and the discrepancies in these estimates, as officially recorded, are startling and ominous.

We should also calculate the amount of natural gas which will be required yearly for the efficient operation of the extensive network of long-distance pipelines already constructed or authorized. These lines are supplying certain areas and certain types of users, each of whom has already invested in gas-burning equipment. Each of these pipelines has been promoted and authorized on the basis of an assured supply for 20 years. On such representations users in these areas have been induced to discard coal- or oil-burning facilities and to buy new equipment. Should we not demand a comprehensive and authoritative estimate of the total amount of natural gas already dedicated by contract to supply these pipelines and these areas and these users to the end of those contracts? Should not this information be had before new consumers are induced to scrap existing facilities and invest in new equipment? Wouldn't Governor Dever, of Massachusetts, and others who are demanding that natural gas be piped into their communities, be wise to demand such information before users are urged to discard fuels which are giving satisfaction, and of which a supply is assured for centuries?

Nor do we know how much natural gas remains undiscovered. Obviously estimates of the total content of new wells struck in the course of test drilling are subject to all the uncertainties and exaggerated hopes and ofttimes desperate need of wildcatters and promoters of varying degrees of responsibility. Yet it is on such irresponsible data, so-called, that additions to proven reserves of natural gas are soberly reported, year by year, by committees of the American Gas Association. The same sort of data are relied upon by committees of the American Petroleum Institute to justify reports of additions to proven reserves of petroleum. By identical processes joint committees of these two Nation-wide, powerful, and representative industry associations report jointly on the proven reserves of natural-gas liquids.

Earlier this month, I addressed the Anthracite Conference at Lehigh University on the topic Our Fuel Resources and the National Defense. I refer you to that address (which I can supply in quantities) for chapter and verse to support my earlier statement that our information on natural gas and oil reserves is undependable; in fact, is misleading.

When natural gas was first used in Pennsylvania and in New York State, it came largely from within each State. Today, however, these local wells are largely exhausted and these States are now depending for their present and future supply on natural gas that must be transported by long distance pipelines from Texas, Oklahoma, and other fields almost 2,000 miles away. To propel natural gas for so great a distance, very high pressure must be maintained throughout the ystem. Pressure booster pumping stations must be installed at intervals. Also, the pipes must be laid near the surface so that repairs can easily be made. This system does make for quick repairs. It also makes sabotage correspondingly easy. Even in peacetime every foot of this great network of pipe lines is actually policed by inspectors. Helicopters are being used to speed the discovery of breaks in the lines. In the event of war, I wouldn't want to be solely dependent on so vulnerable a source of fuel. And I wouldn't want to be living near one of those pipe lines. When they explode, brother, they really blow.

This explosion factor is no bogey raised by jealous competitors. All one has do is to refer to the record. Not a week goes by that an

explosion is not reported along the Big Inch or Little Big Inch lines. Not only is this a hazard of the long-distance transcontinental lines; it is a hazard wherever gas is distributed under pressure. It is my belief that this accounts for the increasing frequency of reports of violent explosions in gas-served homes. More high-pressure local service areas are being created. It is obvious that the greater the pressure, the greater is the amount of gas that will escape, if a leak occurs. This means a larger area of explosion, once an explosive mixture develops and is ignited.

Admittedly, gas is convenient, but convenience is a relative term. If the consumer wants convenience, it can be had from coal or from oil or from manufactured gas. Many persons do not realize how much convenience has been built into the newest automatic coal-burning equipment. Why, then, go 2,000 miles for natural gas?

Some say it's cheap. How cheap, say we! Not today, as a household fuel! Tomorrow, perhaps, not for industry. Why not find out? Why climb on the band wagon of the promoters of long distance pipelines until you know what the cost of natural gas will be tomorrow, next year, and beyond? Already, the price of natural gas has doubled in the field. There is much glib talk about the cheapness of natural gas. Why not get the facts before spending hard-earned dollars to convert perfectly good coal or oil-heating systems? That is a question that many people have ignored, to their sorrow.

Where I come from, veterans are being sold cheap houses. Many of them have a little gas furnace in the attic. It has a tiny insulated smoke pipe running through the roof. It's automatic. It's cheap for the builder, but it's costly for the veterans. He's tied to gas for his heat and hot water. Only last month, our local paper reported a survey of the county. Its headline read, "Gas Heat Cost Found Higher Than Forecast Before Rate Rise." The article closed with this comment: "The mild December-January period this year increased the gas bill only 34 percent compared with a 28 percent increase in the first year of the new rates. But the subzero snaps in February were reflected in gas bill jumps of 49 percent last year and 62 percent this year. Such a gas user can hope we don't have a normal winter—or switch to an oil burner." Notice, please; no mention of coal. That is a reflection of the essential unity of the oil and gas industry. They will always gang up against coal.

That last remark points up a vital problem; the problem of convertibility. This involves the question of ability to convert if the need arises, as well as the question of the availability of the fuel. If conversion is for the sake of economy, delay would not be too serious. If it is a matter of necessity, delay in obtaining equipment or unavailability of fuel might be serious. In an emergency—a war emergency perhaps—it could entail tragic consequences for those whose gas supply has been interruped.

Is war so remote a contingency that the public can afford to ignore the danger and to make its decision on the simple basis of convenience? I don't think so and I don't believe you think so. Certainly, such responsible and diverse authorities as the Chairman of our Joint Chiefs of Staff (General Bradley), the new Chairman of the National Security Resources Board (Mr. Stuart Symington), and the eminent Republican consultant to the State Department, John Foster Dulles, all agree that we cannot afford to disregard the threat of war.

Less than 10 days ago, Mr. Dulles warned the Nation that if we wait for a shooting war before imposing the discipline of wartime on our economic and political life, "we shall have waited too long."

"Usually free societies shift over to disciplined action only under compulsions of armed attack," Mr. Dulles said. "If that kind of attack were to come now, we would respond with quick transition. * * * Our political confusions would be brought to an end. * * * Political smearing would be called off. * * * Our economy would quickly be shifted from its fabulous production of sport cars, radios, television sets, and gadgets, to meeting more serious needs. Certain consumers would tighten their belts and exercise self-discipline."

On May 14, the executive secretary of the Munitions Board, Petroleum Division, Rear Admiral Biggs, United States Navy, said that "every last drop of oil that this hemisphere could produce would be required were this Nation to become involved in another war. Some may say," he continued, "that we have about 1,000,000 barrels per day excess productive capacity and that, plus savings, should carry us—but," he warned, "while a parallel set of conditions carried us through World War II, let us not lose sight of the fact that conditions have changed. In the first place, military demand in another war would be greater. Secondly, on the civilian side, each year sees demand getting greater and greater." On the subject of military demand, he cited as one example, the jet engine, which "requires 7 times as much fuel per hour as the conventional reciprocating-type engine." Admiral Biggs also asserted that "we must realize that the more civilian demand increases, the less we will be able to cut it back in the event of war, since less and less of the total being consumed can be classified as nonessential."

It would be interesting to review the significance of Admiral Biggs' reference to our need for every last drop of oil this hemisphere could produce. Does he mean to imply that our Defense Establishment could protect tankers bringing oil from South America? If that is so, it would have an important bearing on our fuel situation. If, as I have reason to believe, we will be wholly dependent upon what we can produce and transport within our borders, then the problem is even more serious than his statement seemed to imply. This situation points up the need to project and adopt a national fuels policy.

As fuel men, you will also be interested in a statement by Mr. Frank W. Abrams, chairman of the board of Standard Oil Co. (New Jersey) at a very recent meeting of the Committee for Economic Development. Mr. Abrams suggested that management must apply to its relations with the rest of the community "the same type of searching analysis that it would make of its more usual business problems." Speaking for business, Mr. Abrams continued: "We must curb our occasional enthusiasm for special protection or other forms of assistance. We must be sure we do not support the imposition of measures that are of benefit only to the interests that we may personally represent—measures that may fail to service the interests or may even be contrary to interests, of everyone else."

In the light of this statement by Admiral Biggs, repeated in almost identical words on Monday of this week in San Francisco by Fleet Admiral Nimitz, I wonder whether Mr. Abrams might not now be prepared, as a matter of public service, to recognize the need for an authoritative and disinterested study of our reserves of fuels, our fuel needs, and our ability to meet those needs, in the event of war?

I use the word "now," advisedly, for I have yet to see or hear of a public statement by the Standard Oil Co. of New Jersey or an official of that company or any other major oil company, projecting the situation that would confront their company, or their industry, or the oil-consuming public, in the event of war.

If the glaring discrepancies of official industry estimates can be reconciled and if a study of present and potential domestic demand for oil and natural gas disprove the fears that our lack of a national fuel policy invites disaster in the event of war, such a survey will more than justify itself, in the consequent demand for these fuels.

I pointed out on another occasion that it was with precisely such thoughts in mind that Senator FRANCIS J. MYERS, from Pennsylvania, introduced on the floor of the United States Senate by unanimous consent, on March 15, past, a resolution of inquiry which was referred to the Senate Committee on Interior and Insular Affairs. This resolution, known as Senate Resolution No. 239, proposed that the committee (or a subcommittee) shall inquire into the available fuel reserves of the United States, with the aim of formulating an over-all domestic fuel policy.

Can we now look to Mr. Abrams to join in urging passage of the Myers resolution? Will Eugene Holman, too, agree to support a disinterested appraisal of our fuel supplies and fuel needs?

While other resolutions have been introduced in this Congress to inquire into the fuel problem from various standpoints, Senate Resolution 239 is the only one that goes directly to the heart of the problem. In urging favorable action, Senator MYERS suggested that our growing dependence on oil might require the development of a synthetic-oil industry upon which we could depend if the onset of war ended our imports of oil. That question would, of course, be directly within the scope of the inquiry he is urging.

In his introductory speech, the Senator referred to a similar problem which we faced at the onset of World War II when our principal sources of natural rubber were cut off by enemy action. By deep civilian rationing and the expenditure of huge sums of money, we hastily improvised a synthetic rubber industry which saved the day for us and our allies.

If there is likely to be similar need for a synthetic industry to produce high-octane gasoline and other essential products of petroleum, our first and most logical course of action would be to erect these plants in natural-gas territory. The reasons for this are simple. We have the know how and are actually producing high octane gasoline at present-day competitive prices from natural gas in a large commercial plant in Brownsville, Tex. It is true that the Government and private industry are experimenting with processes to convert coal, also oil shales, into gasoline, but such projects are still in the experimental or pilot-plant stage. For those reasons, it may well be that it is contrary to the national interest to use natural gas as a low-grade boiler fuel. This may sound like a plug for coal. Actually, I believe it is a plug for national defense.

Rail transportation service and facilities are also directly involved in the problem of national defense. Transportation of men and material involves the military problem of logistics. There is no more important problem of logistics than the logistics of fuels for defense. Here, too, it is vital to recognize that we cannot improvise rail facilities and we will do well to determine how rail transportation will be affected, if a widespread conversion of fuels will be demanded by defense needs.

This whole question of fuels deserves serious thought. It also demands vigorous action. We need to know the facts. I know no better way of learning the facts, than by way of the Myers resolution. If you agree, I suggest you communicate with your two Senators and urge them to press for a favorable report from the Committee on Interior and Insular Affairs. That will bring the resolution to the floor for adoption. Once it reaches the floor, I predict favorable action will follow without delay.

Natural gas is at the crossroads. Let's see to it that it takes the right turn.

To the Pioneers

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES

Friday, June 2 (legislative day of Wednesday, March 29), 1950

Mr. THOMAS of Utah. Mr. President, the unveiling of the statue of Brigham Young in the Capitol has brought forth the thoughts of pioneer days in the minds and hearts of many. I ask unanimous consent to have the poem written by Leonard R. Bailey, of Salt Lake City, Utah, printed in the Appendix of the RECORD.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

TO THE PIONEERS

The Mormon pioneers' faith was strong;
They worshipped God in prayer and song.
They did not cross the dreary plain
In quest of power or worldly gain.
They were an exiled band to flee
From a land their fathers helped to free.
New England gave to that noble band
The choicest blood of all her land.
Trials over which their sires had won
Were none too great for these valiant sons.
It took that stock and breed of man
Who crossed the seas to cross the sand.

The despot had no place with them;
For they were all God-fearing men.
They broke no laws, nor e'en rebelled
Though tortured by the imps of Hell.
No sect nor creed loved country more;
They were the products which she bore.
Then need a nation blush with shame—
Born and made in freedom's name—
For on her borders that winter's night
Homes burned and men were put to flight.
Pursued by a lawless drunken band,
They bade farewell to their native land.

Befriended exiles on foreign soil,
Homeless after a life of toil,
Not a murmer escaped their tongues
As they turned to the land of the setting sun.
These were the pains that were sent to warn
That the virile West was not yet born.
No greater march was ever planned
O'er a thousand miles of desert land.
Who took that journey knew his mind;
The weaker ones were left behind
With heirlooms garnered through the years—
A parting fraught with hope and tears.

To give one's all for religion's sake
When even life is set at stake,
That belief is more than mere pretense;
Truth demands such recompense.
Had they been loath this price to pay,
There would have been no West today.
Gold and adventure took men by,
Sagebrush attracted not the eye;
Yet a triumphant gaze stood on every face
As their leader exclaimed, "This is the place!"
They thanked their God on bended knee,
And unfurled Old Glory to a western breeze.

Days were divided into pounds;
The quotient small was passed around.
Each household had its meager share
Meted out with a mother's care.
The wolf of want lived at their door,
There were no rich, for all were poor.
Yet the greatest love that was ever known
Was found in those first Mormon homes.
The sound of a prattling babe was there;
A mother's love song filled the air.
There was no time to give to strife
When time for all had a lease on life.
The day of trial and want is o'er;
The West has opened wide her door.
Where once all life appeared entombed
Now a thousand orchards bloom.
The streams that nurtured desert seed
Are harnessed to a city's need.
Where sagebrush flanked the paths they trod
A Temple rises to their God.
Proud we are to bear the name
And laud the sires from whence we came.
Now that their long, long race is run
The load is shifted to their sons.

Then praise the man whose faith and might
Gave substance to a dream for right.
Genius, seer, and statesman great—
A town unique lies in his wake.
Symbolic, Brigham Young will stand
Among the heroes of our land—
A man who led, yet could abide
The counsel of a Higher Guide.
Who shall say that his day has passed
So long as the glowing West shall last.
As we see the outgrowth of his plan
We're proud to claim the Pioneer Man.

—*Leonard R. Bailey.*

Biweekly Report by Hon. Francis J. Myers, of Pennsylvania, to People of Pennsylvania

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Friday, June 2 (legislative day of Wednesday, March 29), 1950

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the RECORD No. 26 and No. 27 in the series of biweekly reports made by me over the radio to the people of Pennsylvania.

There being no objection, the broadcasts were ordered to be printed in the RECORD, as follows:

TEXT OF TRANSCRIPTION BY UNITED STATES SENATOR FRANCIS J. MYERS OVER PENNSYLVANIA RADIO STATIONS, WEEK END OF MAY 12–14, INCLUSIVE (NO. 26 IN BIWEEKLY SERIES)

Senator MYERS. Now that spring is really down to business in putting on its annual show, millions of people all over Pennsylvania are busy making plans for all sorts of out-of-door activities—long drives into the country or picnics or hiking or bird walking or fishing.

We in Pennsylvania have been particularly fortunate because our State has been heavily endowed with a great many natural attractions. We have our mountains, our great forests, our lakes and streams and rivers, and a widely varied selection of plant, animal, and bird life which have been the proud possessions, not only of Pennsylvanians, but of people all over the country.

America has always been blessed with great natural resources, but as a Nation we have not always used our natural bounties wisely. Our early history is dotted with tales of wild extravagances in slaughtering great numbers of birds and animals, of denuding great areas merely to strip them of their timber, then leaving the land to be carried away by erosion, and the instances of this sort of thing are innumerable.

But for half a century or more we have had a growing consciousness of our duty to preserve these natural resources for the generations to come. Today, as a result of the efforts of those who fought long and hard for conservation, every State has its own parks, and forests, and there are national forests and national parks scattered from one end of America to the other. Moreover, conservation efforts made on privately owned land have done an almost unbelievable job in helping to restore our forests, save our land and our wildlife. Our States have enacted game laws, and as a result of a treaty with Canada, we have the laws which protect migratory birds. These are, all of them, examples of what is being done to preserve our natural resources for the use and enjoyment of our people.

On this broadcast, I have invited Mr. Albert M. Day, Director of the United States Fish and Wildlife Service of the Department of Interior to join me in a discussion of some of the programs that are going on today in Pennsylvania. Mr. Day, when he became Director of the Fish and Wildlife Service in 1946, brought with him to that job more than a quarter of a century of distinguished Government service in the field of conservation and wildlife management.

Mr. Day, I know that for some years now there has been a Cooperative Wildlife Research Unit in operation at State College. Could you tell us something about it?

Mr. DAY. The Cooperative Wildlife Research Unit at Penn State, Senator MYERS, is 1 of 14 such units that have been established in land-grant colleges all over the country. The original program was established by Congress back in 1935 to assist in the training of specialists in wildlife management, and to provide information for the proper use of wildlife resources.

All of the units receive cooperation from the land grant colleges where they are located, and the balance of the funds for the program are furnished by State game commissions, the United States Fish and Wildlife Service, and from the Wildlife Management Institute. I might add that the Wildlife Management Institute, though it cooperates in the program, is a private organization, and contributes to the units because the institute shares with the schools, the States, and the Federal Government a real interest in promoting wildlife management work.

The unit at Penn State is one of the older ones in the program, and has done a fine job in helping to train men and in bringing back a number of birds and animals that needed better management.

Senator MYERS. What are some examples, Mr. Day, of the work that's been done at the cooperative unit at State College?

Mr. DAY. The wild turkey is a good example. Fifteen years ago, wild turkeys were quite scarce, and were becoming fewer every year. The Pennsylvania Game Commission went to work on the problem and started taking eggs laid by wild birds, and hatching them out in incubators where, under controlled conditions, many more of the young birds survived. After the first set of eggs was taken, the birds in the wild would nest a second time, and that way it was possible to get two broods a year. Today, as a result, wild turkeys have increased greatly in numbers. There are more wild turkeys in Pennsylvania now than in any other Northern State—more than in all the other Northern States together. The cooperative research unit worked closely with the commission on many phases of this wonderfully successful turkey-restoration program.

Senator MYERS. What about deer? Although I find it hard to believe, someone told me recently that there are probably more wild deer in Pennsylvania today than there were in Columbus' time. Is that really true?

Mr. DAY. Yes, Senator MYERS, there are probably more deer in Pennsylvania now

than there were when America was discovered, although there aren't as many today as there have been in the past. At the peak, there were perhaps a million deer—and only about half that number now.

Senator MYERS. Why is that, Mr. Day?

Mr. DAY. You see, Senator, deer depend upon getting their food close to the ground—and they do very well in young forests where there is a lot of underbrush. Under those conditions, 3 to 5 acres of land will support enough food to feed one deer. But when the forests grow older, and the trees get tall enough to shade out the underbrush, a single deer may be forced to range over 50 to 75 acres to find enough to eat. People who remember seeing many deer in a particular area in the past are always surprised when the number diminishes, but they don't seem to realize that the forests have grown up in the meanwhile, and the woodlands will then support fewer animals.

So, while the amount of underbrush is being replaced by aging forests in Pennsylvania today, there is still much more food available for deer now than was to be found in early colonial times when most of the State was covered by giant forests.

Senator MYERS. Are other animals and birds affected by the changes that take place in the way the land changes over the years, even when there is no hunting? I'd think that deer wouldn't be the only ones affected by the fact that forests grow older and that underbrush disappears.

Mr. DAY. Oh, yes, Senator MYERS. All wildlife feels the effects of changes in the kinds and amounts of food. Many of the game birds—take the ruffed grouse, for example—thrive best where there is a lot of ground feed and cover, and because they are woodland birds, the grouse population changes with the changes in the character of woodlands. That's true of the woodcock and the bobwhite as well.

Senator MYERS. What are you able to do, Mr. Day, when you see particular kinds of animals or birds declining in population as a result of diminishing food supplies?

Mr. DAY. A great deal, Senator. Most people who live in the country get a great deal of pleasure from having many wild animals and birds around them, just to have them there, or perhaps for hunting. So a great many private landowners want to know what they can do to their land to restore certain kinds of wildlife when they're on the decline.

The cooperative research unit at Penn State and the game commission have an extensive educational program in operation—and for that matter, so do many private organizations—among the sportsmen and others interested in conservation. As a result, we are able to advise landowners as to changes they can make on their own land. And the changes generally improve the land at the same time. It's usually safe to say that if you find a reasonable amount of animal and bird life in an area, that the land itself is valuable and is in good shape. On the other hand, run-down land generally is pretty well depleted of wildlife, so landowners are generally anxious to make changes that increase wildlife and improve the value of land at the same time.

Senator MYERS. Well, what about farm ponds, Mr. Day? In driving around Pennsylvania in recent years, I've noticed more and more ponds on farms, and in talking to farmers about them, I've been told that these ponds serve many purposes. They store water that runs off during a rain, and the ponds don't need to be fed by springs or streams at all—so they provide the farms with more water, and at the same time, lessen the dangers of floods on the rivers to some extent.

But the farmers tell me, too, that they are stocking the ponds with bass and sunfish and that some of the fish are coming from hatcheries owned by the Federal Government.

Mr. DAY. That's quite correct, Senator MYERS. The United States Fish and Wildlife Service has hatcheries at Lamar and Farnsworth, and last year we furnished about 50,000 bass and sunfish for farm ponds. That was about one-tenth of the fish we produced in those two hatcheries. The hatchery up at Farnsworth stocks the streams in Allegheny National Forest, and this year Farnsworth is ready to stock the Allegheny Forest with about 45,000 legal-sized trout.

Senator MYERS. Where does the State fish commission fit in with the two hatcheries operated by the United States Fish and Wildlife Service, Mr. Day?

Mr. DAY. The United States Fish and Wildlife Service does all of the stocking done in Allegheny National Forest, and we furnish stock for the farm ponds, because the State fish commission doesn't participate in either of these programs. We of the Fish and Wildlife Service also stock streams and rivers elsewhere in Pennsylvania in response to the applications which we receive, and in this field we work along with the State fish commission so that our program of stocking streams fits in with their own.

Senator MYERS. The Pennsylvania State legislature does not appropriate any State funds at all for these fish and game programs as I understand it, and both the Fish and Game Commissions must depend upon revenues from the Federal Government received under the Pittman-Robertson Act, and from license fees collected from sportsmen through the sale of hunting and fishing licenses. I understand that license fees brought in about $3,500,000 last year as a result of selling some 600,000 fishing licenses and over 850,000 hunting licenses in Pennsylvania. As I recall, the State of Pennsylvania got quite a bit of money from the Federal Government for conservation work last year under the Pittman-Robertson Act. Do you happen to recall the details, Mr. Day?

Mr. DAY. Yes, Senator MYERS. The Pittman-Robertson Act provides that the Federal Government should turn back to the States the money collected in excise taxes on the sale of sporting firearms and ammunition. The share each State gets depends upon the number of licenses sold in each State, and upon the area of each State. Last year, the money turned back to Pennsylvania under the Pittman-Robertson Act came to $431,000. The only condition which the act imposes on the States is to require that the money be spent only for wildlife purposes, and for no other. In Pennsylvania, it has been used for farm game development, forest wildlife improvement, and for research.

Senator MYERS. One more question, Mr. Day—though this is a bit early for this one—how do you expect the duck-hunting season to be this year?

Mr. DAY. Tough question, Senator. We hope that it may be about the same as last year—but a lot depends on whether there are drought conditions on the northern breeding grounds. There has been a big increase in hunters since the end of the war, and we have had a few dry seasons on the breeding grounds—so the ducks haven't fared so well. But that is one of the problems we are really devoting a lot of attention to, and the revenues from the Federal duck stamp are doing much to keep the ducks and geese on the wing.

Senator MYERS. Thank you very much, Mr. Day.

My guest on this broadcast has been Mr. Albert M. Day, Director of the United States Fish and Wildlife Service.

TEXT OF TRANSCRIPTION BY UNITED STATES SENATOR FRANCIS J. MYERS OVER PENNSYLVANIA RADIO STATIONS, WEEK END OF MAY 26 to 28, INCLUSIVE (No. 27 IN BIWEEKLY SERIES)

Senator MYERS. Some things seem almost impossible to picture. Can you imagine, for instance, a circus without a clown? Or a schoolroom without blackboards? Or this country of ours without millions of cars and trucks streaming along millions of miles of highways?

And yet, just 50 years ago, in the lifetime of many of us, a handful of cars—8,000 to be exact—and practically no surfaced highways was the picture. Even by 1916 our State of Pennsylvania only had 230,000 registered motor vehicles.

But today America has more than one vehicle for every four persons. Pennsylvania itself has over 100,000 miles of highways. Over 6,000 cities in the country are entirely dependent on busses and automobiles for transportation. Almost 90 percent of the Nation's farm products now reach their markets by highways, and some could not even be harvested without highway transportation. The fact that four out of five farms today have electricity can be traced, to a large degree to the availability of highways. We have consolidated rural schools, week-end motor trips, rural-mail delivery—in short, a way of life the continuance of which depends a great deal on having cars to drive—and highways to drive on.

The Federal Government, from its very beginning, has played an important role in developing our highway system. Our Constitution assigns to the Federal Government the duty of providing for national defense, establishing post roads, and encouraging commerce among the States. And any of these duties offers plenty of justification for the active steps taken by Congress to grant help to the States for constructing highways.

Today, I have as my guest, Mr. H. E. Hilts, Deputy Commissioner of the Bureau of Public Roads, that division of the Department of Commerce which handles the Federal-aid program for the construction of highways. Mr. Hilts, a native of Pennsylvania, has had many years of experience in this field, both with the State and National Governments. He served as deputy chief engineer of the Pennsylvania Highway Department back in its infant days in the 1920's, and has been with the Federal Government since 1936.

Just when did this business of constructing decent highways first begin to receive serious attention, Mr. Hilts?

Mr. HILTS. That depends on how far back you want me to go. As a matter of fact, our State, Pennsylvania, can claim the most important development in highway construction in the early days after the Revolutionary War. Back in 1792, a 65-mile stretch from Philadelphia to Lancaster was macadamized. And this surfacing, according to highway historians, marks the beginning of construction of hard surfaces suitable for use throughout the four seasons of the year.

Senator MYERS. Well, I didn't really mean quite that far back. Didn't some legislation passed by Congress back in President Wilson's administration represent the first important effort to handle the problems brought on by rapid growth in the number of motor vehicles?

Mr. HILTS. That's right, Senator. In 1916 Congress passed the Federal-Aid Road Act, a large number of States—Pennsylvania was not among them—had not even organized State highway departments. But since the legislation provided that no grants could be made unless the States had working organizations to handle the highway construction, all the 48 States soon had highway departments.

Senator MYERS. What was the main objective of this initial legislation—was Congress

aiming primarily at helping those living in cities to move from one large community to another?

Mr. HILTS. The 1921 amendment to this early legislation provided for a Federal-aid primary system—which consists now of 233,588 miles of rural and urban roads. Incidentally, Pennsylvania has 7,899 miles in the primary syster and eligible for improvement with Federal funds. Though most of the first construction did in fact represent connecting roads between cities, the one group which most welcomed this work were the farmers, whose battle cry was "help get us out of the mud." Federal help was particularly important back in those days because unless the roads could be made at least, shall we say, navigable, people were not going to buy cars. And unless people bought cars, the State governments could not receive the large income from license taxes and gasoline taxes needed to build up their highways.

Senator MYERS. Since that time, of course, Congress has amended the original legislation and passed additional legislation to carry on with this important work. The present law authorizes Federal grants amounting to $450,000,000 a year through 1951, and the Senate Public Works Committee is now beginning work on a bill already passed by the House which carries the program, with some modifications, through 1953. How do you determine what share of this $450,000,000 goes to the various States?

Mr. HILTS. Three factors receive primary consideration—the State's area, its population, and its mileage of post roads. Pennsylvania rates high on all of these and as a matter of fact, only two States receive a greater allocation than Pennsylvania's $24,000,000. But getting back to Federal legislation dealing with highways, I think the effect of the 1944 legislation deserves some real emphasis. It designated two new highway systems in addition to the already existing Federal-aid primary system. One, the National Interstate Highway System, is considered by most experts to be the Nation's most vital, both in peace and war. This system will include 40,000 miles of highways and city streets which pass through one-third of the counties of the Nation and connect most United States cities of more than 50,000 population. And the system carries 20 percent of the Nation's rural traffic, though the roads make up only a little more than 1 percent of the Nation's total mileage.

The other system is to be made up of the principal secondary and feeder roads, including farm-to-market roads, rural free delivery mail, and public-school bus routes, either inside or outside municipalities of less than 5,000 population. This system now includes nearly 400,000 miles of roads.

Senator MYERS. Yes; I remember those provisions well. I was a Congressman at the time and supported the bill. Under that 1944 act and under the 1948 amendments, and under the new amendments now being studied, definite allocations are made for each of these three categories of highways. But let us talk now about specific projects in Pennsylvania. How does your office work? Do you insist that Pennsylvania and the other States meet particular standards on each project before you grant them financial aid? It would seem to me that different States have different traffic problems and different weather conditions, and that standards for the whole country would be mighty tough to set up.

Mr. HILTS. That has been the Bureau's feeling, Senator. Certain suggested minimum standards drawn up by the American Association of State Highway Officials are used by us as a guide, but the States have wide latitude in proposing the character of improvements. Most of them, of course, are quite willing to conform to the association's standards.

Senator MYERS. How is Pennsylvania using most of its Federal aid these days, Mr. Hilts?

Mr. HILTS. Well, here's what's happened: There are serious deficiencies on all classes of highways. Pennsylvania has elected to use much of the primary Federal-aid funds in removing the big bottlenecks in cities.

Senator MYERS. The cities certainly do need help. There's nothing quite as aggravating as traveling 160 miles on the Pennsylvania Turnpike within a few hours and then running into a bottleneck when you approach and enter Pittsburgh.

Mr. HILTS. Yes; Pittsburgh's a perfect example. But when that Penn-Lincoln Parkway is finished in a few more years, you'll be able to go through the city in a matter of minutes. The whole project is scheduled to cost about $31,000,000, with the Federal Government assuming approximately half the bill. There will be a 27-mile-long, 4-lane highway, 23 separation structures, a 4,225-foot twin tube tunnel through a section of the city, and ample ramps and interchanges to provide access to and from the parkway. And when one considers the importance of Pittsburgh in the industrial production of our country, it is easy to understand why the Federal Government is so willing to encourage any plan which will aid speedier movement in and out of the city.

Senator MYERS. Then there's the $3,356,000 highway now being built on the southern approaches of Williamsport, with Federal aid totaling $1,898,000. This project, already about 10 percent completed, will consist of a modern four-lane divided highway crossing the Susquehanna River on a new bridge placed above the flood crest of the river.

Mr. HILTS. Yes; and that's another project in which Federal funds—over $6,000,000, to be exact—are being used. Experts have estimated that when completed, this facility will accommodate a traffic volume of 50,000 vehicles per day.

Senator MYERS. These projects we've talked about all go through certain cities in Pennsylvania. Are there any projects under way which completely circumvent city streets?

Mr. HILTS. Plans are now being drawn up for just such a highway in Lancaster. This city is a very compact, congested one, and a highway by-passing the city will mean local traffic can move much faster. This will be a $2,000,000 project and Federal aid will total $1,000,000.

Senator MYERS. What about some of the other activities of the Bureau of Public Roads? I've been told the Bureau does extensive research work.

Mr. HILTS. Most of our research today centers around such projects as making a detailed analysis of observations of actual maximum volumes of traffic for the many and varied conditions found on both rural and urban highways, or studies on speed and driver behavior. Our research work has enabled us to avoid failures and improve all classes of road surfaces. For example, modern heavy duty concrete pavements are twice as strong as those built in 1920. Bituminous pavements are far more satisfactory. Study of traffic and driving habits enables us to design roads for actual rather than imagined needs.

Senator MYERS. Does the Bureau grant any funds to the States for research purposes?

Mr. HILTS. Yes, Senator, Pennsylvania and the other States are allowed to use 1½ percent of their funds for highway planning surveys. Furthermore, the Bureau has undertaken to assist the States in organizing surveys and coordinating work so that data could be used for analysis on a national basis.

Senator MYERS. One last question, Mr. Hilts. How does the national defense situation affect the highway construction picture? Are any plans being made for military highways?

Mr. HILTS. Yes, the main highways used by normal traffic are the most important military highways. Defense authorities have told us to go ahead with present plans laying particular emphasis on the National System of Interstate Highways. We discovered during the last war that with only a few exceptions, the areas that had a great deal of traffic in peace time and needed improved highways were the same areas that produced war material. Thus all the present expenditure could—without stretching the point—be classified as defense expense.

Senator MYERS. Thank you, Mr. Hilts.

Communists in the State Department

EXTENSION OF REMARKS
OF
HON. JOSEPH R. McCARTHY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Friday, June 2 (legislative day of Wednesday, March 29), 1950

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an address on Communists in the State Department delivered by me on May 25, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow Americans, thank you very much for the opportunity to be with you tonight to discuss a subject which, in my opinion, towers in importance above all others. It is the subject of international atheistic communism. It deals with the problem of destroying the conspiracy against the people of America and free men everywhere. There are many phases of this subject which we might well discuss. However, the time is limited. Therefore, your program chairman and I have agreed that I shall briefly hit a few of the high spots and then will try to answer some of the many questions which I understand you editors want to ask about the anti-Communist fight in Washington.

Ladies and gentlemen, many of you have been engaged in this all-out fight against communism long before I came on the scene. You have been engaged in what may well be that final Armageddon foretold in the Bible—that struggle between light and darkness, between good and evil, between life and death, if you please.

At the start, let me make it clear that in my opinion no special credit is due those of us who are making an all-out fight against this Godless force—a force which seeks to destroy all the honesty and decency that every Protestant, Jew and Catholic has been taught at his mother's knee. It is a task for which we can claim no special credit for doing. It is one which we are obligated to perform. It is one of the tasks for which we were brought into this world—for which we were born. If we fail to use all the powers of mind and body which God gave us, then I am sure our mothers, wherever they are tonight, may well sorrow for the day of our birth.

To fight, however, we must have facts. Those facts we do have. They stand as clear silhouettes, outlined by the fires of communism that are sweeping across Europe and Asia and flickering on the shores of America.

We know that the major aim of communism, as stated by its atheistic leaders more than 30 years ago, is to create a Red

China, thence a Red Asia, wash it with a Red Pacific—and then enslave America.

In this connection let us take a look at the magnitude of Russian success and the enormity of our disaster in China. This is the disaster to which Mr. Acheson refers as the dawning of a new day; the disaster to which Mr. Lattimore refers as a "limitless horizon of hope."

For whom is Mr. Acheson's new day dawning? Who faces Lattimore's limitless horizon of hope? Not China. Not the forces of democracy in America, but the military masters of the Soviet Union.

The question in the mind of a man elected to represent the people of this Nation and indirectly the people of the world is, Why is this so?

Is it because we are less intelligent than the Communists? Is it because we can't match them in courage? Is it because their devotion to atheism is greater than our devotion to God? Is it because we are less willing to stand up and fight for what we think is right? Ladies and gentlemen, the answer to all those questions is "No." Then what is the answer? Is it in our leadership? To that my answer is "Yes," and I challenge anyone to find another answer.

I have been naming and presenting evidence against those leaders who have been responsible for selling into Communist slavery 400,000,000 people—those leaders responsible for the creation of Communist steppingstones to the American shores.

Those in power in Washington say that this is not so; that those are not the men. Now if I have named the wrong men, then the American people are entitled to know who is responsible for the tremendous Communist victory in Asia and the dismal American defeat—the greatest defeat any nation has suffered in war or peace.

It is essential, therefore, that we put the spotlight of exposure on those who are responsible for this disaster. This is important, not for the purpose of exposing past failures, but because those same men are now doing America's planning for the future. Unfortunately they have become so deeply entrenched that almost every power of the Government is used to sabotage any attempt to expose and root them out.

Let me give you one example of the difficulty experienced in pointing the spotlight of exposure on those who are a threat to this Nation. It is an example of the extent to which men honored with high positions will go to conceal communism, men whose shadows hover like vultures over the corpse of China and whose actions rip at the backbone of freedom in America.

It is an example of the extent to which the State Department will go in order to deceive and practice a deliberate fraud on the American people. In order to give you this example, it is necessary to publicly divulge information, which I had hoped could be properly presented to the committee. I am going to give you several reproductions of secret loyalty files.

I have first carefully eliminated any material which might in any way interfere with the workings of our investigative agencies.

The documents which are being given to you tonight should under no stretch of the imagination be kept secret. The secrecy label could only be applied to protect those who would cover up their incompetence or double-dealing.

First, let me give you a brief history leading up to the decision to make those files public. When I began the presentation of the case against Owen Lattimore, the State Department's architect of our Far Eastern policy, I considered it necessary to present evidence having to do with his sabotage of a wartime ally, an ally because of whom many of your sons and brothers are today alive.

I, therefore, informed the Senate that Lattimore in a letter to Joseph Barnes (an individual whose activities have been described in executive session before the subcommittee) instructed him, in effect, to get rid of all Chinese employees in the Office of War Information who were loyal to our Chinese ally, Chiang Kai-shek, and to replace them with Chinese Communists or with Chinese loyal to the Communist cause.

Later, when addressing the American Society of Newspaper Editors, I furnished them complete copies of and discussed the Lattimore-Barnes letter. The State Department then came screaming to Lattimore's defense. It produced an 8-page white paper to show that McCarthy was a liar, especially in regard to the Lattimore letter.

This white paper, which took nearly a month to produce, was supervised by Edward Barrett, Mr. Acheson's publicity chief. He was Mr. Lattimore's superior when both worked in the Office of War Information. He was also the superior of Dr. Chi and Mr. Chew Hong, whom I shall discuss.

Now, Mr. Barrett got the Lattimore letter from the files of Chew Hong, and if he wants to deny that, I will name the hour and the day he removed it.

When Acheson's publicity director and his expensive staff prepared the white paper they had before them the same files which I shall present to you tonight.

I had hoped it would be unnecessary to produce these files in public. I frankly would not have produced them merely to present a link in the Lattimore chain of evidence. But I feel that I owe the American people a duty to show them the calculated, vicious fraud which the State Department tried to sell to the American people.

The Department was given a chance to come clean, and refused. Now I could merely tell you what is in the files which I am about to show you. This I have done in a number of instances, but always with the same result; namely, the issuance of a press release from Acheson's official spokesman, backed by all the power and prestige of the State Department, saying that McCarthy lies—there is no such evidence in the files. Obviously if I were merely to tell you what was in these files the State Department would issue its 14 points or its white paper tomorrow denying each and every statement made in regard to the files.

Therefore, I ask you, ladies and gentlemen, what would you do if you were in my position? In view of my past experience with Acheson's hatchetmen, could you recommend any course other than the actual production of the files?

The copy of the Lattimore letter, as well as the files to which I shall refer, is being supplied to you. You will find a copy of all of the documents to which I refer in these brown envelopes on the table. I invite you to take complete sets along with you.

Now let me read to you from the State Department white paper sent to some 500 newspaper editors and produced by the State Department's $10,000- to $15,000-a-year men.

"Point 12: Senator McCarthy said to the ASNE: 'This letter from Lattimore to Joseph Barnes, dated June 13, 1943, * * * was an order to Barnes to get rid of all Chinese employees with OWI who were loyal to Chiang Kai-shek, and supplant them with Chinese loyal to the Communists.'

"The facts: * * * The letter does not say what Senator McCarthy asserts it did. What it does say is: 'In the circumstances, we have to be extremely careful about our Chinese personnel. While we need to avoid recruiting any Chinese Communists, we must be careful not to be frightened out of hiring people who have loosely been accused of being Communists. * * * For our purpose, it is wise to recruit as many unaffiliated Chinese as we can, to pick people whose loyalty will be reasonably assured on the one hand by the salaries which we pay them and on the other hand by the fact that they do not receive salaries or subsidies from somewhere else'."

The purpose of the white paper is to prove that the Lattimore letter actually instructed Barnes to avoid hiring Communists. Now in this respect, in view of the fact that both the State Department and McCarthy have the facts, one or the other is a liar.

Furthermore, both the State Department and McCarthy had plenty of time to study this letter and the files which explain it. So that the lie of which the State Department or McCarthy is guilty must be deliberate.

You will note the Lattimore letter tells Barnes to get rid of all Chinese except Lr. Chi and Chew Hong and to replace all of the discharged Chinese by employees from the New China Daily News. Now this, as you will note, is mixed up with 4 pages of double talk.

Now I ask you to keep in mind those three names—Dr. Chi, Mr. Chew Hong, and the New China Daily News. Those names are the key to this letter and the State Department's fraudulent cover up.

You editors will find that the Lattimore letter boils down to the statement "Keep Dr. Chi and Mr. Chew Hong as a nucleus, fire everyone else, and then hire only those connected with the New China Daily News."

Unless, of course, you have personal knowledge of the New China Daily News or have the information in the Government files on this Communist publication and unless you have the files of Dr. Chi and Chew Hong, you could easily be deceived by the State Department's barrage in regard to this letter. I am, therefore, submitting to you the secret files on those two men who were indispensable to Lattimor's operations, showing that the Civil Service Commission had found that one of them was unfit for Government service because of his Communist connections and that the other had been rejected by one of the examiners because of his communistic activities, and that his case was still pending at the time Lattimore intervened to keep them both on. You will note also that the files show that Dr. Chi whom Lattimore fought to keep with him at all costs had been discharged as commissioner of education in Shansi Province in China because of his Communist activities.

You will note also that at about the time of the Lattimore letter to Barnes the Civil Service Commission, at Lattimore's request, reopened the case on Chew Hong and Chi. You will note that the files show that Lattimore stated that even if Hong were a Communist he still wanted him in this job. You will not further the official finding that the New China Daily News was a publication by and for the Communists and that both Hong and Chi had been editors of that Communist paper.

You will also note from the files that Lattimore was informed of the complete background of Chi and Chew Hong, which included the fact that Chi's son was a member of the Communist Party, and, in fact, so high up in its councils that me was a delegate to the Third International in Moscow. In connection therewith I call the Justice Department's attention to Lattimore's testimony on pages 1859 and 1860 of the record in which he states he never had any information from any source to indicate young Chi was a Communist.

I also call your attention to the fact that Dr. Chi's son had been designated by the Communists as their representative to the United Nations and is waiting until Latti-

more, Acheson, and Trygve Lie maneuver the recognition of Communist China.

I further call your attention to the statement of Admiral McCullough in the Steely report to the effect that if Hong, who had been declared ineligible because of his communistic activities, were to be removed that others higher up in the organization should go for the reason that the evidence against them was more damaging than it was against Hong.

You will note from the file that all of the Communist activities of Chi and Hong and the fact that the New China Daily News was a Communist paper were brought to Lattimore' attention, but that he nevertheless insisted that Chi and Hong be retained and his order to Barnes to hire only employees of the Communist paper still stood.

Now, ladies and gentlemen, this information was all known to the State Department when its white paper was issued. It was known to Mr. Barrett who was Lattimore's and Chi's boss in OWI—Barrett, who incidentally in his white paper says all of the OWI's correspondence is now in the State Department and available to him.

The evidence in the files of Chi and Hong forms merely one of the links in the Lattimore case that could have been supplied without using the files and frankly the files would not have been used for that purpose alone.

The State Department cover-up changes the picture, however. It was only after it became obvious that the State Department was using its entire press corps to defend Lattimore that I decided to take this step.

It will be necessary to reveal other files if the cover-up continues. This cover-up is worse even than the Lucas-Tydings-McMahon whitewash. It is deliberate fraud, organized and propagandized with one idea in mind; conceal, cover up, keep from the American people the truth. This, ladies and gentlemen, makes one sick way down deep inside. I cannot stomach it. I am sure that you would not either. I doubt that any American would. Ladies and gentlemen, I would consider it criminal for any elected official to stand idly by while this fraud is being perpetrated. For it is a sinister effort to avoid honesty. It bears a basic corruption that permeates the State Department's small closely knit high command. Instead of shooting square with the American people, we find men in high places who offer us bits and pieces of evidence to help them conceal instead of reveal the truth. These men are not paid to dishonestly protect reputations of the inner circle. They are paid to put it on the line for America, not to shuffle off the bottom of the deck.

This is not the time to play games with half-truths. We cannot afford the luxury of high-paid phonies peddling propaganda to protect the reputations of men who have proven themselves unworthy of the confidence of the American people.

Let us call on those men once and for all to come clean. Let us make the honest voice of this land reverberate in their ears until they tell the truth, now and forever. The tracks of liars always leave a trail. In tracing for you tonight that trail, let me say now that wherever it leads, whoever is revealed walking in those tracks, the trail will be followed to the very end. We cannot and we will not be sidetracked now by sly men who would rather save their jobs than see America secure.

In that white paper the State Department also called attention to another alleged falsehood in one of my speeches. Let me again quote therefrom:

"5. Senator McCarthy said to the ASNE: 'First let's look at that perennial joiner, Dr. Philip Jessup, our Ambassador-at-large. * * * Why does he always join Communist fronts? Why not anti-Communist organizations?'

"The facts: Dr. Jessup testified, before the subcommitee, that he had joined no Communist-front organizations."

For your information I am enclosing in the folder for each of you photostats of five Communist-front organizations with which Jessup was affiliated. You will note that Mrs. Jessup appears on the executive committee of a sixth Communist-front organization. The reason for including this with the photostats on Philip Jessup is because of the close affiliation of Philip Jessup with this organization also.

I again quote from the white paper in regard to Jessup:

"6. Senator McCarthy said to the ASNE: "* * * Dr. Jessup had control of the magazine Far Eastern Survey, when the Communist campaign in 1943 was initiated therein to smear Chiang Kai-shek and deify all the Communists. * * * I pointed out that he was head of the Research Advisory Board having complete control of the magazine during the height of the Communist Party line campaign."

"The facts: Dr. Jessup was not chairman of the Research Advisory Committee of the American Council of the Institute of Pacific Relations in 1943. He was merely one of 50 trustees of the American Council."

The purpose of this, of course, was to show that Mr. Jessup did not have charge of the Far Eastern Survey. You will note the clever double talk. They quote me as having stated that at the height of the Communist party-line campaign on the part of the Far Eastern Survey that Dr. Jessup was head of the Research Advisory Council which had complete control of the magazine. The "facts" they give were that he was not the chairman in 1943.

Now those who prepared the white paper had my speech before them. They knew that I did not say he was chairman in 1943. They knew I said he was chairman at the time the Communist smear reached its height, which was in 1944.

Now here is a photostat to show that he was head of the Research Advisory Council in 1944, at the height of its Communist Party line campaign, as I stated, and, ladies and gentlemen, photostats do not lie—and incidentally the Research Advisory Council has complete editorial control of the publication.

In connection with the statement, and I quote:

"He was merely one of 50 trustees of the American Council."

Let me quote Mr. Jessup's own testimony under oath:

"I was a member of the board of trustees of the American Council of the Institute from about 1933 until my resignation * * * in 1946. I was chairman of the board of trustees of the American Council during 1939 and 1940. I was the chairman of the Pacific Council from 1939 to 1942. I have also at various times served as a member of the executive committee of the American Council and in 1944 as chairman of the Research Advisory Committee."

I also pointed out to the ASNE that this publication controlled by Jessup and which was following the Communist Party line, was being sponsored by Communist money. At that time I had succeeded in obtaining photostats of checks totaling $3,500. The State Department in answering belittled the Communist money, stating that it totaled only $3,500 as compared with a total expense of $200,000. Now, you can be sure that the State Department had the facts and knew exactly how much Communist money had been contributed to Jessup's publication. It was very easy for them to get this information because all they had to do was to ask Jessup. Now, let us see how truthful they are about this figure of $3,500.

Since that time I have succeeded in digging up photostats of another $3,000, making a total of $6,500 paid to support the publication which Mr. Acheson's Ambassador at Large Jessup supervised. You editors know how difficult it is to obtain a photostat of checks from an unfriendly source—an almost impossible task—so you may be reasonably certain that when I have succeeded in getting photostats totaling $6,500 that many, many more thousands of dollars of Communist money was used to support that publication. Photostats of those checks are also enclosed in the folder.

Now Mr. Budenz has suggested to the committee that they subpena the records of the Communist, Field, who was signing the checks, but the Tydings committee says "No—we will use him and Browder as character witnesses for Lattimore, but we will not put on the record the total amount of Communist money used to support Jessup's publication, nor will we put on record what projects of other State Department experts were supported by Field's Communist funds."

It would not seem unreasonable to ask Messrs. Lucas, Tydings, and McMahon to explain why they fear the financial records of Mr. Field. I have no power to get those records. They can do it very simply by subpena.

Ladies and gentlemen, I have suggested time after time that a man who uses Communist money to support a publication which is selling the Communist Party line, should under no circumstances whatsoever hold the high position of Ambassador at Large, in which position he is helping make the plans to spend billions of American dollars to fight communism.

As I have said before, if Philip Jessup was too dull or too naive to know why the Communists were supporting the magazine which he was controlling, you can be certain that the Communists knew what they were buying and made certain they were getting more than a dollar's worth for every dollar spent.

When this information was brought to Truman's attention, immediate action was taken. This action consisted of giving Jessup top-secret clearance to A- and H-bomb information. And, in the face of this, there are those who say McCarthy's tactics of publicly exposing these men is wrong. He should dig up the information in secret and secretly give it to the President. What think you, ladies and gentlemen?

Ten days ago I stated I would spend some time tonight answering the now thoroughly discredited attack which Senator Chavez made against Louis Budenz, one of the witnesses who is responsible for lodging many Communists in jail. However, in the meantime Chavez's attack has been thoroughly discredited and effectively answered by others more competent to do so than I.

As many of you know, it is now an open secret that Chavez had practically nothing to do with writing the speech and even had difficulty reading this typical Communist Party line attack put together with the assistance of a Communist lawyer—a Communist lawyer who certainly deserves a promotion in the party for having succeeded in using the floor of the United States Senate as a transmission belt.

I suggest that you analyze that speech so that you may fully grasp the clever Communist line, the creation of which the Senator from New Mexico is not capable. For example, let me read to you one short paragraph:

"Members of the Senate and House should stop competing with the Executive branch of the Government in purging alleged subversives. This is a demand that all congressional committees stop trying to investigate Communist infiltration in the United States."

This certainly requires no comment.

I have been extremely happy that Protestants, Jews, and Catholics have spontaneously come to the defense of Louis Budenz since this stupidly vile attack upon him, his wife, and his family. It indicates that the Communist Party shall not be successful in its attempt to inject religious bigotry into this fight.

Now I was not disturbed in the least by this attack from the standpoint of its effect upon Louis Budenz. As we all know, for a period of time he was a top official of the Communist Party. However, since that time he has dedicated himself to the cause of Americanism. He has given unlimited help to the Federal Bureau of Investigation. He is in an all-out campaign to expose Communists in dangerous places. This is being done at great risk to his life and to the reputation of himself, his wife, and his family. Thus he has truly carved for himself a place in the hearts and minds of all people who love America.

Each of these Communist inspired attacks upon Louis Budenz cause him to increase in stature and will not even remotely deter him from testifying against those who would destroy America.

However, I was very deeply disturbed by the fact that Senator TYDINGS, chairman of the committee which ordered Budenz to appear, and Senator LUCAS, majority leader of the Senate, on the Senate floor supported this attack. In so doing they very seriously impeded the task of exposing Communists in our Government.

Their actions notified every prospective witness that he and his wife and family would also be subjected to this type of insanely vicious communistically inspired smear if he dared to help expose Communists in Government. Unfortunately, it has had the effect of making it more difficult to obtain valuable witnesses who are less courageous than Louis Budenz.

Ladies and gentlemen, in the brief time spent with you tonight I have tried to give you the high lights of a difficult and dangerous situation that exists. You have as a flaming back drop to my remarks the facts of the world as you find them today. Communism is no longer a creeping threat to America. It is a racing doom that comes closer to our shore each day. To resist it we must be intelligently strong.

Such strength will come only from men and women dedicated to the whole hearted defense of democracy. The average American who constitutes the heart and soul of this Nation is so dedicated. We must be sure that those who seek to lead up today are equally dedicated. We cannot survive on half loyalties any more than we can find the facts of the Communist conspiracy with half truths.

Reverend Herbert's Sermon at Linton Hall Military School

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1950

Mr. SADOWSKI. Mr. Speaker, Linton Hall Military School is a grammar school for boys, and has classes up to the eighth grade. It is located near Bristow, Va., among the rolling hills and beautiful valleys. It is not far from where the bloody battle of Bull Run was fought.

I wish to submit a short, but excellent, address that was delivered by the Reverend Walter W. Herbert, of Alexandria's St. Mary's Church, to the boys attending this Catholic school on the Nineteenth Annual Military Day:

A school is like a great tree which grows from a tiny seed planted in the depths of the earth. Each year, it puts forth leaves, and then, when they are mature, sends them out on the wings of the wind to all parts of the earth. And each one of these leaves bears unmistakably the mark of the tree from which it came.

Fifty-six years ago, a seed was planted in this green valley. Now, it has grown and become a great school which each year sends forth its students, each bearing the mark of the things he has learned here.

Out from this valley they go, one by one, that they may be lights to light up the darkness of our times. They go out that by the teachings of our Lord, they may be guides to lead in a world in which leadership has come to mean the same as force.

The challenge which the world throws into the face of you who go out from this school is not an easy one. Here in classroom and chapel, you have learned of the gentle Christ and have been taught that you should obey Him. But if you try to be good, the only thing the world will say is that you are weak. Here you have been taught of the goodness of God, and yet if you believe in God, the only thing that men may say about you is that you are old-fashioned. Here you have been taught that your soul is more important than anything else in the world, but if you value your self-respect more than the opinions of others, the only thing that they may say about you is that you are foolish. They said the same things about our Blessed Lord in his day, and He knew that nearly 2,000 years later they would be making the same remarks about His followers, and that is why He could declare from another mountain to those sitting in another green valley:

"Blessed are ye when they shall revile you and persecute you and speak all that is evil against you untruly for my sake, for your reward is very great in heaven." (Matthew v: 11–12.)

And that is why also, in the Sacrament of Confirmation, He sent you the Holy Ghost, to make you strong and perfect Christians and soldiers of the King.

But as you go out into the fight for Christ, we would that you be not merely fighters in the ranks, but leaders. We wish that your good example may shine before all that many may be moved to draw close to God because of you. It is a strange thing but true that a soul which turns its back upon God is not satisfied to go along its own miserable way to destruction alone, but must draw others after. But if that is true, it is equally true that if a soul loves God it cannot rest until all around it love God also. That is why saints are so unpopular and disturbing to many in the world. That is why they are thought to be weak, old-fashioned, or foolish. That is the challenge that you have to face. This is the challenge for which you have been preparing these many years at Linton Hall.

You will take many memories with you as you leave these grounds in a few short weeks. There will be memories of friends, of good times spent, of games won, of the give and take of school life, which is only a little preview of the give and take of your life outside. As the years go on and these things become dim in your memories, you will forget much of what has happened. But there is one thing about Linton Hall that few of you will ever be able to forget, and that is the sacrifice and devotion to those who labor here. Fifty-six years ago, four nuns planted the seed that is today Linton Hall. The struggles that have intervened have not been easy. There have been dark days when all seemed lost, days of hardship and poverty, but in spite of all this, Linton Hall prospered. For it is like the house in Scripture: "The rains descended and the floods came, and the winds blew and dashed against that house and it fell not because it was founded upon a rock." (Matthew vii: 25.)

Those four brave souls have now become 84, and the original handful of students has become 247. And now a new hall must be added to shelter the ever-growing number of those who come. Indeed, these stones must rise and continue to rise in the years to come as a glowing tribute to the dreams of those who first planted the seed, and as a pledge that all those who have labored here have not labored in vain.

May nothing that you ever do betray the trust that those who have been your teachers place in you as you go forth. May nothing that you ever do erase the mark which Linton Hall places upon you, for it is the mark of the cross of our Lord.

May you keep your faith, may you love all men. If you do, then in the words of St. Paul:

"I am sure that neither death nor life, nor angels nor principalities, nor powers, nor things present, nor things to come, nor might, nor height, nor depth, nor any other creature shall be able to separate you from the love of God which is in Christ Jesus our Lord." (Romans viii: 38–39.)

Arming of the State of Israel

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 31, 1950

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting a petition from my good friend, Hon. George W. Armstrong, of Natchez, Miss., to the President of the United States with reference to arming the State of Israel at the expense of the American taxpayers.

We owe a duty to those Arabs who have occupied that country for approximately 2,000 years. Many of them were Christians, and they were all on friendly terms with the United States until this so-called State of Israel was set up and recognized overnight by the administration without consulting the Congress of the United States.

For my part, I am not willing to appropriate money out of the pockets of the overburdened taxpayers of the United States to underwrite the Crucifixion, or carry on a war with a friendly people.

Mr. Armstrong's petition to the President follows:

MAY 27, 1950.

To the President and the Congress of the United States.

GENTLEMEN: The Associated Press of May 26, 1950, reported that Secretary of State Dean Acheson entered into an agreement with Prime Minister Attlee of Great Britain and Prime Minister Schuman of France, by which the United States would permit the shipment of arms to the State of Israel and to the Arab countries for alleged defense purposes. As an American citizen I protest against this unrighteous agreement.

It is in fact an agreement to sanction the invasion of Arab homes and lands by the Zionists and deny the Arabs the power of

self-defense. Israeli is supported by the Zionists of the world with unlimited funds for the purchase of arms and munitions, while the Arabs are poor and unable to cope with them.

I therefore petition you to repudiate this vicious and unholy agreement.

Respectfully submitted.

GEO. W. ARMSTRONG.

Growth of Business in the Southeast From 1939 to 1948

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 1, 1950

Mr. ELLIOTT. Mr. Speaker, the following facts about the 9 Southeastern States of Alabama, Florida, Georgia, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, and Virginia, are confirmed by recent releases by the United States Bureau of the Census covering the 1948 census of business:

First. Between 1939 and 1948, retail trade in the States mentioned increased 252 percent, as compared to a 214 percent increase for the United States as a whole. The figures for 1939 are $4,500,000,000. The figures for 1948 are $16,000,000,000. Thus, these Southeastern States had a remarkable growth over this 9-year period as a consumer market.

Second. Alabama retail sales had a remarkable growth during this period, growing from $436,000,000 in 1939 to $1,631,403,000 in 1948. This is an increase of 274 percent as compared with a 214 percent increase for the United States as a whole. Thus, Alabama's increase is 60 percent greater than the United States increase. Alabama almost quadrupled her retail sales between 1939 and 1948.

Mr. Speaker, these figures indicate that the South is experiencing great growth. New sources of income, improved methods of farming, diversification of agriculture, new industries, all are a part of the picture.

As a part of my remarks, I include an article styled "Markets and Finance: Southeast's boom officially confirmed," by Joseph K. Heyman, which appeared in the Birmingham News, Sunday, May 28, 1950:

MARKETS AND FINANCE: SOUTHEAST'S BOOM OFFICIALLY CONFIRMED

(By Joseph K. Heyman)

ATLANTA, May 27.—The tremendous growth of the Southeast as a consumer market has been officially confirmed by figures from the 1948 Census of Business, current Census Bureau releases show.

Stores and other retail outlets in nine Southeastern States rang up total sales of more than $16,000,000,000 in 1948. The total was $4,500,000,000 in 1939, the last census year.

These figures are derived from preliminary reports of the 1948 Census of Business which are just now being released in piecemeal form. On the basis of thees reports we have calculated retail sales totals for each Southeastern State and for the region as a whole. The final official figures may vary slightly from ours, but probably by not more than 1 or 2 percent.

The Southeast enjoyed a sales gain of 252 percent between the two census counts. This is substantially better than the 214 percent gain for the United States as a whole. It is further evidence that Dixie is on the rise.

Every State in the region beat the national gain. The rankings of the percentage increases are shown in the accompanying chart.

Florida and Alabama top the list. Both of these States almost quadrupled their retail sales between 1939 and 1948.

The other seven States were close together, with increases ranging from Mississippi's 251 percent to Georgia's 234 percent.

The new census clearly confirms that the Southeast is a bigger part of the total United States market than it was prewar. It is a segment of the United States market which is continuing to grow, a fact that businessmen throughout the Nation will carefully note.

In the decade from 1929 to 1939, the Southeast increased its share of the national trade dollar from less than 10 cents to more than 11 cents.

By 1948, our share had jumped further to 12.5 cents.

Every State in the Southeast except two—Mississippi and Alabama—shared the rise in retail sales between 1929 and 1939, relative to the United States as a whole. And all nine bettered the United States average gain between 1939 and 1948.

Our huge jump in retail trade has come about mostly because of our hike in income. Total income payments before taxes were about $7,000,000,000 in 1939. This figure had ballooned to over $24,000,000,000 by 1948.

In addition, Southerners spend a larger portion of their total incomes in retail stores. We have to, because our incomes are lower. We must pay more of our earnings out to the grocer, the druggist, the clothing salesman, etc., for the necessities of life.

Nationally, retail stores took a little over 63 cents out of every dollar of income in 1948. In the Southeast, trade took about 67½ cents from each dollar.

We are closing the gap as compared with other United States citizens, however. In 1939, the average southerner spent 6 cents more out of each income dollar in retail trade than the average United States citizen. In 1948, we spent only 4 cents more than the average.

Despite our great improvement in retail trade, we are still well below the national average on a per capita basis. The average southerner bought a total of $640 of merchandise from retailers in 1948, as compared with purchases of $880 per person for the country as a whole. We still have a way to go to reach the level of the rest of the country.

The table below shows the dollar totals of retail sales for 1939 and 1948 by States and the percentage gain between the two censuses.

	Millions of dollars		Percent change
	1939	1948	
Alabama	436	1,631	+274
Florida	615	2,329	+279
Georgia	625	2,086	+234
Louisiana	486	1,668	+243
Mississippi	282	991	+251
North Carolina	633	2,210	+249
South Carolina	332	1,143	+244
Tennessee	607	2,074	+242
Virginia	628	2,200	+250
Southeast	4,644	16,331	+252
United States	42,042	130,200	+210

Award to Twentieth Century Club of Iuka, Miss., in the Build-a-Better-Community Contest

EXTENSION OF REMARKS
OF
HON. JOHN C. STENNIS
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES
Friday, June 2 (legislative day of Wednesday, March 29), 1950

Mr. STENNIS. Mr. President, the General Federation of Women's Clubs, have been laudable and forward-looking sponsors of a Nation-wide Build-a-Better-Community Contest, which drew 2,912 entries. Prizes were awarded at the recent fifty-ninth convention of the federation.

The Twentieth Century Club of Iuka, Miss., an organization of 17 women in a fine Mississippi city of 2,000 persons, was awarded the $10,000 sweepstakes prize for the Nation's best betterment program and $5,000 for the best job done by a club with less than 50 members.

For its project the club established an eye, ear, and nose clinic, brought in two doctors for a general health clinic, organized garbage disposal, started a cancer study unit, organized cub scout packs, bought a merry-go-round for a playground, ran a clean-up campaign, landscaped parks and the yard for the Negro school, and instigated a dial telephone system.

I take great pride in the outstanding achievements of these fine ladies, who had the cooperation of the inhabitants of this splendid little city and wish to commend all of them publicly for their unselfish devotion to the public interest and the outstanding accomplishments of their combined efforts. I see this as another indication of the progress Mississippi and the entire South are making.

The report of the splendid achievements of these patriotic and forward-looking ladies is of value and interest to the Members of the Congress and the people of the Nation, and I therefore request unanimous consent that the attached news item from the Washington Post of June 2 be inserted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MISSISSIPPI CLUB TOPS—FEDERATION NAMES NINE CONTEST WINNERS

BOSTON, June 1 (U. P.).—The Twentieth Century Club, of Iuka, Miss., an organization of 17 women, won $15,000 in prizes tonight for a "face lifting" operation on Iuka—a town of 2,000 persons.

The prizes were awarded at the fifty-ninth convention of the General Federation of Women's Clubs, sponsors of a Nation-wide "Build a Better Community" contest which drew 2,912 entries.

The Mississippi women's group was one of nine clubs honored by the federation for civic improvement programs. Iuka won a $10,000 "sweepstakes" prize for the Nation's best betterment program and $5,000 for the best job done by a club with less than 50 members.

Honored by President Truman as "one of the most vital forces in American democracy," the Iuka Club won top honors for work done almost entirely by the 17 club members.

For its project the club established an eye, ear, and nose clinic, brought in two doctors for a general health clinic, organized garbage disposal, started a cancer-study unit, organized cub-scout packs, bought a merry-go-round for a playground, ran a clean-up campaign, landscaped parks and the yard for a Negro school, and instigated a dial telephone system.

Other winners of $5,000 prizes were the Tippecanoe County Federation of Women's Clubs, Lafayette, Ind., for establishing a Girl Scout camp, and the Senior and Junior Women's Clubs of Marianna, Fla., for work in combating hookworm disease in Jackson County, Fla.

Prizes of $3,000 went to the Sorosis Club, of Orlando, Fla.; the Cosmos, Fidelis, and Searchlight Clubs, of Overbrook, Kans.; and the El Progreso Club, of Alpine, Tex.

Other national contest winners were the Harrodsburg Women's Club, of Harrodsburg, Ky.; the Junior Chilhowee, of Maryville, Tenn.; and the Twentieth Century, Study, and Women's Clubs, of Roilla, N. Dak., each of which was awarded $2,000.

President Truman's message, read at the presentation ceremonies, said the federation's contest is "helping to strengthen democracy at its very foundations in the local community."

"Communist and other totalitarian states believe in running affairs from the top down," Mr. Truman said. "In the United States we are proving how superior it is to carry on our Government from the grass roots upward."

Prize money, donated by the Kroger Co., Midwest retail food chain, is to be used toward furthering civic-improvement projects. The contest awards high-lighted the third day of a meeting of 2,500 delegates representing 11,000,000 clubwomen in the United States and abroad.

No Whitewash, Please

EXTENSION OF REMARKS

OF

HON. WILLIAM F. KNOWLAND

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Friday, June 2 (legislative day of Wednesday, March 29), 1950

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "No Whitewash, Please," which appeared in the May 23 issue of the Oroville (Calif.) Mercury.

There being no objection the editorial was ordered to be printed in the RECORD, as follows:

NO WHITEWASH, PLEASE—WASHINGTON POST PROPOSES TO FEED CONFIDENCE TO THE PEOPLE—WE WANT SOMETHING BETTER

Things are at a pretty pass in Washington. The Capital has been "seized and convulsed by a terror," according to the Washington Post, which comes out with a full-page editorial about it—an editorial that apparently has been reproduced in many large newspapers throughout the country, for it appeared in the San Francisco Chronicle in full-page display form.

The Post devotes the space to a denunciation of witch hunts such as have gripped Washington. By witch hunts it refers to such campaigns as that conducted by Senator MCCARTHY, who has been making rather wild charges directed at the State Department.

The Post refers to the cancerous growth of totalitarianism, the great menace of Russia and Russia's fanatical fifth column in every country, including ours, which is menacing our safety.

The Post comes up with a solution. It demands appointment of a commission of leading citizens to assess our over-all security "and to give to the American people the fullest possible information." The commission would be appointed by the President and would be nonpartisan, etc., etc.

Two-thirds of the page is devoted to denouncing witch hunts. They are so bad that it is trite to denounce them. The question is, what causes witch hunts and would a nonpartisan commission, as advocated by the Post, remove the causes back of witch hunts.

The editorial devotes some space to the present plight of the State Department and cites this:

"Revilement of our diplomats has come to such a pass that in a recent line-up for tickets for a symphony concert in Washington a man who admitted to a reporter that he was from the State Department was publicly laughed at."

Such is the situation. Can a correction be made without getting at the cause? We think not.

Then, what was the cause?

We submit that Senator MCCARTHY, liberally dealt with in the Post's editorial, would have got no where with the public had he not had a rich field in which to sow his seeds of distrust.

Here are some facts that all remember, but should be set down here to explain what led up to the present sad situation with regards the State Department:

In 1945 the State Department helped to hush up the Amerasia case so that the public never got to know how it happened that hundreds of State Department documents were stolen. No one ever was brought to trial although six were arrested. Two were assessed small fines on pleas of guilty. The cases of the others were dropped. The Amerasia scandal would have died right there had it not been for the Hiss case.

Years ago many of the facts in the Hiss case were taken to the State Department by Whittaker Chambers, but the State Department sneered it down. The Hiss case simmered along until Congressman NIXON broke it open in the House Un-American Activities Committee. Now Hiss stands convicted as a traitor. Hiss had been very prominent in the State Department, helped write the United Nations Charter and stood behind President Roosevelt at Yalta when China was sold out to Stalin. Even after Hiss was convicted, the Secretary of State would not turn his back on him.

Still the State Department might have escaped the witch hunt had it not been for the Fuchs exposure, with which it had nothing to do, and the loss of China to the Communists, with which it had everything to do.

After the sell-out of Chiang Kai-shek at Yalta, where Hiss was operating "on our side," the Russians proceeded to move in on China, and a vigorous and influential clique in the State Department proceeded to belittle Chiang and praise the Communists. They influenced Secretary of State Marshall until his uterances caused Chiang to lose face sufficiently to lose all.

This major defeat for United States policy—a loss that nullified most of what we had fought for in the war of the Pacific—placed the State Department in a vulnerable position, to the extent that all the other faux pas came up to slap it in the face.

These are the reasons for the present witch hunt, if such it is. The country isn't convinced it is just a witch hunt, thinks something else exists that has not been uncovered, and that the State Department may have been covering up.

Give a man or a department a bad reputation and he or it must work himself out of it the hard way.

It is not enough merely to call it a witch hunt and dismiss it—by appointing a commission "of leading citizens."

Meanwhile the President, who has refused data to Congressmen, finally lets them see it, but not to make notes, not to take their attorneys with them, not this and not that.

Meanwhile the President breaks down the nonpartisan foreign policy by his actions and the Republicans take the opportunity to blame the State Department, and make it stick, too.

No, you can't salve the American people by appointing a commission of leading citizens to pass glorified hand-outs to the press. The State Department must show by its actions that it will not tolerate infiltration by Communists and will not tolerate Communist-inspired policy. It will take time for it to work itself back into the confidence of the American people, but it will take more time than necessary if it and the President don't start now, instead of following the white wash proposal of the Washington Post.

"Tories" Using Teachers to Warp Young Minds; "Heat" on Churches

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1950

Mr. SADOWSKI. Mr. Speaker, the enclosed article reveals the clever way in which big business has set out to beat the Democratic Party and the Fair Deal program that was adopted by the Democratic convention. This article appeared in last week's issue of the progressive and very alert weekly newspaper, Labor.

"TORIES" USING TEACHERS TO WARP YOUNG MINDS; "HEAT" ON CHURCHES

Close all your town's schools for the day. March the teachers to a labor union hall. Give them a fancy dinner, and talks on the misdeeds of big business and political reactionaries. Tell them to pass this "information" along to their school children.

Impossible? Businessmen would "raise the roof" if anything like that were tried in your town? They certainly would, but they are doing exactly that kind of thing in cities and towns all over the country.

How it is being done wholesale in one State is told in a series of articles in the Madison (Wis.) Capital Times, progressive paper published by "Bill" Evjue, who knows propaganda when he sees it.

"B-I-E DAYS"

The National Association of Manufacturers and the United States Chamber of Commerce, the articles explain, have joined in a program of Business-Industry-Education Days. Labor exposed this program when it was first revealed about a year ago. Since then, it is now disclosed, B-I-E Days have been held "in a score of Wisconsin communities."

In each of them, a program carefully planned by the NAM and C. of C. was fol-

lowed by local businessmen. The program has these steps:

The schools are closed, either all day, or at least half a day.

The businessmen take the teachers on "personally conducted" tours through local industrial plants.

BANQUETS FOR TEACHERS

Then comes a "banquet in the evening, at which the teachers are fed and entertained by the local chamber of commerce or some other organization of business or industry.

"At each of these banquets there was a speaker—usually a prominent local banker, businessman, or industrialist.

"An analysis of the addresses given at half a dozen of these B-I-E days in Wisconsin communities reveals the following dominating themes:

"1. High taxes are killing private enterprise and initiative.

"2. The Truman health program is the same as socialism or communism.

"3. Government regulation of business is ruining the American way of life.

"4. Teachers should tell their pupils that freedom in America is being stifled by radical plans made in Washington.

"5. Government spending leads to communism.

"6. Public housing, publicly owned electric power systems, and public welfare programs are leading the United States to socialism."

FORM CHILDREN'S THINKING

At Stevens Point, Wis., for example, over 200 school teachers heard a B-I-E Day speech by Carl N. Jacobs, corporation president and a director of the United States Chamber of Commerce. Jacobs gave the usual scare talk about the welfare state, complained that "business is maligned by those whose sympathies are for Government or labor," urged the teachers to carry his message back to their schools, and told them this:

"You can inspire the youth of today to choose its form of society. The choice will, in large measure, be determined by the kind of thinking you stimulate." Could anything be plainer than that? Plant our propaganda in children's minds, reactionary big-business spokesmen tell the teachers, and the children will grow up thinking what we want them to think.

When George E. Watson, Wisconsin State superintendent of schools, was asked about these B-I-E days, he said they were perfectly proper.

But when asked whether he would approve closing the schools for a Labor Union Day, he said, "I will have to think that over."

"HEAT" PUT ON CHURCHES

This column has discussed John T. Flynn's reactionary propaganda book The Road Ahead. Hundreds of thousands of a boiled-down version of it are being distributed by the so-called Committee for Constitutional Government.

The complete book contains a chapter 10, which attacks the Federal Council of Churches. That organization, composed of liberal churchmen of various Protestant denominations, champions progressive measures and the cause of labor.

The Reader's Digest magazine, which originally published the boil-down of Flynn's book, also printed a nasty article by Stanley High about what he called Methodism's pink fringe. This article also was an attack upon liberal churchmen.

NO ONE SAFE FROM SLANDER

Why are these attacks significant? Because they show that not even prominent and obviously respectable church members and ministers are safe from slander as pinks and Reds, if they dare to challenge the reactionary interests represented by such propagandists as Flynn and High.

As an eminent Presbyterian minister recently wrote Labor: "The 'heat' is being turned upon the churches. Ministers who have long stood with you for social justice are being persecuted by a smear campaign. Pressure is being put on us to go backward from our social viewpoints."

REA Power Lines in South Carolina

EXTENSION OF REMARKS

OF

HON. GUY M. GILLETTE

OF IOWA

IN THE SENATE OF THE UNITED STATES

Friday, June 2 (legislative day of Wednesday, March 29), 1950

Mr. GILLETTE. Mr. President, I ask unanimous consent to have printed in the RECORD a communication by Claude R. Wickard, Administrator of the Rural Electrification Administration, relating to REA power lines in South Carolina. The communication was published in the Washington Post of today.

There being no objection, the communication was ordered to be printed in the RECORD, as follows:

REA POWER LINES IN SOUTH CAROLINA

(By Claude Wickard, Administrator, Rural Electrification Administration)

A full-page advertisement by the South Carolina Electric & Gas Co. in the Washington Post of May 21 charged the Rural Electrification Administration with a misuse of Federal funds.

Because of the national influence which your paper exerts and because of the false, misleading, and unfair statements and implications contained in the advertisement, we are taking this means of calling to your attention and the attention of your readers the facts regarding our lending policy in general and the facts in this case in particular.

The power company advertisement was directed specifically against a loan of $7,595,500 made by the Rural Electrification Administration in January 1949, to the Central Electric Power Cooperative of South Carolina for the construction of transmission lines. These lines will bring low-cost hydroelectric power from the Santee-Cooper Dam to rural areas served by REA cooperatives in South Carolina.

The authority of the REA Administrator to make loans not only for distribution lines but also for generation and transmission facilities was clearly set forth by the Congress in the Rural Electrification Act.

Although not required under the law, it has been REA policy since the beginning of the program to make loans to finance generation and transmission facilities only where one of two conditions exists: Either that an adequate and dependable supply of wholesale power is not available to meet the cooperatives' needs, or that a saving can be achieved in the cost of power to rural consumers. This policy is well known and has been reviewed from time to time by various committees of Congress. The application from the South Carolina cooperatives satisfied not merely one but both of the requirements listed above.

This loan will bring about a saving averaging more than a quarter of a million dollars annually over the life of the loan for farmers of the State under rates they have been paying. Furthermore, with power from Santee-Cooper Dam delivered over their own transmission system, the rural people will be assured of adequate power to meet their growing needs.

As to the adequacy of the present facilities in the area, Chairman Winchester Smith, of the South Carolina Public Service Commission had this to say before the REA loan was approved: "The power transmission lines in lower, central, and eastern South Carolina are wholly inadequate • • • there is a woeful shortage of distribution lines, inadequate service and power in the area above-mentioned."

Contrary to the impression the advertisements tried to create, the transmission system to be built by the co-ops will not only improve service and effect a saving for the present 43,000 consumers, but will assure adequate low-cost power that will enable the co-ops to bring electric service for the first time to about 25,000 additional rural families.

No duplication of lines is involved. Only about one-fourth of the co-op lines will parallel the commercial utility facilities and in these cases the co-op lines are necessary to carry additional loads that the utility lines are not capable of handling. When a single-lane highway becomes so overcrowded that it cannot carry the traffic, the addition of another lane may be paralelling, but it certainly cannot be classed as duplication. Any Arlington or Alexandria motorist will testify that the new Potomac Bridge does not represent any unnecessary duplication of the Highway Bridge.

The existing transmission facilities of the power companies were constructed to serve municipalities and densely populated areas. They were not built to handle the loads which the cooperatives have created in areas the power companies would not serve. The sole purpose of the REA loan is to enable the co-ops and the rural people to serve themselves with ample low-cost power over transmission lines designed and constructed specifically to meet their needs.

The loans made by REA must be repaid to the Government with interest. The repayment record of REA borrowers is outstanding. Therefore, these loans are no burden on the taxpayers of the Nation and there is no basis whatever for the insinuation that this loan will waste at least $9,000,000 of your money.

The charge that the loan will result in killing the power company is palpably absurd. The cooperatives cannot take away from the company any business the company itself has developed. The only business involved in the REA loan is the business which they, the cooperatives, have themselves developed and which they have been giving to the power company through their purchase of wholesale power. And, according to its own statement to the SEC, the power company's sale of power to the electric cooperatives amounts to less than 1 percent of its total revenues.

The cooperatives are simply exercising their right, as private business enterprises, to purchase wholesale power where they find it most advantageous. Obviously, this is fully in accord with our system of free enterprise. On the other hand, a serious threat to our system of free enterprise lies in the actions of the power company, which wants to interfere with the free economy by maintaining a monopoly situation which would give the cooperatives no alternative and would force them to buy their power from the company on the latter's terms.

It is a matter of record that at the time the Santee-Cooper Authority was created the companies were charging the cooperatives 11 to 14 mills per kilowatt-hour for power. They had the field to themselves and they opposed the development of power at Santee-Cooper. When this effort failed and the dam was built they insisted that they buy all the power and transmit it to the cooperatives at high rates. They successfully opposed the building of transmission lines by Santee-Cooper to carry the low-cost power to the rural electric cooperatives. It was only after repeated requests of the Santee-Cooper Authority and the cooperatives that the

power companies reluctantly reduced their rates to the cooperatives.

The South Carolina Electric & Gas Co., which Mr. McMeekin represents, put up the strongest resistance to this request but finally agreed to charge a 7½-mill rate on the company lines. In addition, the cooperatives had to bear the cost of bringing the power from the company lines to their load centers. This 7½-mill rate was in effect at the time REA made the loan to the cooperatives to put in their own central transmission system, which would deliver power from Santee-Cooper to their load centers at 6 mills per kilowatt-hour.

On May 22, the day after the full-page advertisement appeared in the New York, Washington, and South Carolina newspapers, the cooperatives received a letter from Mr. McMeekin stating that he had reduced the rate to 5½ mills. Obviously, this latest reduction, coming 16 months after the loan was made, was for the purpose of confusing the issue and it should be viewed in the light of Mr. McMeekin's prolonged and stubborn resistance to making Santee-Cooper power available to rural electric cooperatives at a reasonable cost.

If Mr. McMeekin had been successful in his opposition to Santee-Cooper and the efforts of REA cooperatives to reduce power costs, the rural people in South Carolina would be paying so much for their power that it would be impossible for them to realize maximum benefits from this essential service. It also would have precluded the possibility of thousands of farm families in the State getting electric service under the area-coverage policy of the co-ops.

During the time that REA had the co-op's application under consideration, power companies were given many opportunities to present their case. In April 1948, South Carolina power company officials conferred with us regarding the proposed loan. Again on December 21, they were invited to a conference with REA. Neither at this meeting nor at any other time was a firm offer made which was nearly as favorable to the cooperatives as the Central Electric Power Cooperative plan, taking into account the combined factors of price, quality of service, and assured ability to deliver the amounts of power needed.

During January 1949 representatives of the South Carolina companies outlined two alternative plans. Neither contained concrete rate proposals and both were indefinite and unsatisfactory in many other respects.

On the basis of these facts, REA approved the loan and executed a loan contract with the South Carolina cooperative officials. This means REA has entered into a binding agreement with the cooperative to advance the loan money under the terms of the contract.

REA has no legal right to withhold funds now on the basis of proposals made subsequent to the loan by the power companies unless these proposals are approved and submitted to us by the cooperative.

CLAUDE R. WICKARD.

WASHINGTON.

Jet Transports

EXTENSION OF REMARKS

OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Friday, June 2 (legislative day of Wednesday, March 29), 1950

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Jet Transports," which appeared in the Washington Post for Sunday, May 28. The editorial relates to a bill, recently reported favorably by the Senate Committee on Interstate and Foreign Commerce, which would authorize the Government to flight-test new aircraft. As it is pointed out in the editorial, both Britain and Canada have experimented extensively with jet transports, and have proved their practicability beyond doubt. Meanwhile, American aircraft manufacturers have not produced a jet transport, nor do they have plans for doing so. I hope that soon we may see an American-designed transport equipped with a turbo-prop engine.

I am also very happy that the President has sent the name of Mr. John McCone to the Senate for confirmation as Assistant Secretary of the Air Force. Mr. McCone, together with Secretary Finletter of the Air Force, served with distinction on the President's Air Policy Commission, and made an intensive study of the whole field of aeronautics. I believe Mr. McCone and Secretary Finletter will make a brilliant team which will assure the United States maximum security in the field of air power.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JET TRANSPORTS

The recent flight of a Canadian jet airliner from Toronto to New York in less than an hour emphasizes the sad position of this country with respect to jet transports. To date there is not a single jet-powered prototype for civil use, and the military has shown no disposition to pioneer jet craft which might be adapted for airline traffic. Meanwhile, both Britain and Canada have experimented extensively with jet transports and have proved their practicability beyond doubt.

All this gives added importance to the Johnson bill now before the Senate Interstate Commerce Committee to authorize the Government to defray the costs of testing new transport aircraft. Unlike a similar bill to provide Government help for developing new private planes—a field which, despite the decline in sales, the manufacturers are capable of financing and marketing—this is a virgin territory. Neither the aircraft manufacturers nor the airlines can bear the expense of developing jet transports, though the airlines undoubtedly would buy models already proved. Yet several good engines are available for prototypes, one more efficient and more powerful than the British counterpart. The combination of jet power with propellers in the new turbo-prop engine gives promise of being as economical as the conventional piston-type engine, and incomparably faster.

American progress in jet transports is vitally related to national defense, because in wartime the military is certain to fall back on civilian airlines to supply rapid transportation. In any future war conventional planes will be hopelessly slow and outmoded. Yet if there is to be jet-transport development, it is apparent that the Government will have to help. Probably it is too late to expect the Johnson bill to be included in this year's appropriations, though it has the approval of the Bureau of the Budget. But certainly Congress ought to pass the authorizing legislation for implementation next year. Provision for continued progress in aircraft development is a good deal more important than most of the pork-barrel projects voted with such abandon.

The South Is a Cattle Country

EXTENSION OF REMARKS

OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1950

Mr. ELLIOTT. Mr. Speaker, the South is potentially the greatest cattle country in the United States. Cotton acreage control allotments are hastening a realization of this fact.

Alabama increased the number of its cattle in 1949 by 11 percent. Quality is also improving at a rapid pace .

Our climate, our high annual rainfall, our 10 to 12 months grazing season, our ability to grow grain crops with which to supplement our grasses and clovers, are some of the factors that will make us a great cattle country.

Under leave to extend my remarks, I include an article on this subject from a recent issue of the Gulf Breeze, published in New Orleans, La.:

THE SOUTH IS A CATTLE COUNTRY

We now have 53 head of cattle per hundred people in the United States—80,000,000 cattle for 151,000,000 people. The ratio of cattle to people has varied during the past 25 years from 48 per hundred people in 1928 to 62 cattle per hundred people in 1944. Cattle numbers per capita are still below average and are not likely to become excessive during the next several years.

In the period January 1, 1949, to January 1, 1950, there was a decrease in cattle population in California, Oregon, Montana, Wyoming, North Dakota, South Dakota, Colorado, and New Mexico and only an increase of 3 percent in Texas and Michigan, an increase of 2 percent in Washington, Nevada, and Utah, and an increase of 1 percent in Nebraska, Kansas, Minnesota, Wisconsin, Indiana, and Ohio, and no increase in Idaho. There was an increase of 1 percent in New England, 2 percent in New York, 2 percent in Pennsylvania. During this same period there was an increase in Oklahoma of 7 percent, Louisiana 8 percent, Mississippi 10 percent, Florida 10 percent, Arkansas 11 percent, Alabama 11 percent, and Georgia 11 percent. There were also definite increases in Tennessee and South and North Carolina.

It is interesting to compare the animal increase with increase in population of people. In 1940 we had in the continental United States, excluding possessions, 131,669,275 people. In 1950 we probably have 151,000,000 people. During the past 10 years the earning power of the American people has increased much more rapidly than has the population. We have 20,000,000 more people with more than double their former earnings, to buy livestock products, including dairy and poultry products. We show only a slight increase in cattle and hogs and a tremendous decrease in sheep; but a rapid increase in population and an even more rapid increase in purchasing power. With a minimum wage of 75 cents per hour as contrasted with a wage of 75 cents a day within the memory of many of us, the American people can afford to and do eat more meat, milk, and poultry products than ever before.

Only a few years ago the country west of the Mississippi River produced approximately 70 percent of all the cattle, and the country east of the Mississippi River consumed approximately 70 percent of all livestock produced. The growth in population in many sections in the East has been small but growth west of the Mississippi has been tremendous.

California and other Western States formerly shipped to other sections a great part of the cattle and dairy products produced in that section. Their industrial population has increased so rapidly that these States now cannot supply enough of the livestock products to feed their own people and other sections are shipping beef, pork, and even dairy products into these States that formerly exported much of their production. The west coast is rapidly becoming industrialized. The range country of the West where cattle have been produced is shrinking in area year by year, comparatively fewer people are living on the farm, and thousands have moved to industrial cities. Besides this, erosion, dust storms, drought, and hydroelectric development has had a tendency to decrease the grazing area.

In the South, and especially the Southeast, (God's country) the number of cattle is increasing rapidly and the quality is improving even more rapidly. We are learning to stop erosion and are learning to build good, permanent 12-month pastures, and we are rapidly learning to produce more grain—more corn and more small grain. We are becoming the great Clover Belt of the Nation, not only from the standpoint of pastures, but also from the standpoint of seed. We have increased and improved our marketing and processing facilities until now every farmer has a market and many communities have good markets and processing plants.

Our businessmen—bankers, merchants, manufacturers, and distributors—as well as our farmers, need to become cattle-minded. They need to know more about the value of livestock on the farm—how it increases the per capita agricultural wealth and how it furnishes additional income for the lawyer, the doctor, the banker, the mechant, and everyone not on the farm. The farmer himself needs to realize the dignity of agriculture and especially the dignity of the cow.

All farmers cannot be dairymen, beef-cattle farmers, sheep, hog, or poultry farmers, but there is a place on every southern farm for some livestock. First, we need livestock, dairy products, and poultry products to better feed our own people. We have countless thousands of people even on our farms, to say nothing of the towns and cities, who do not consume enough livestock and poultry products. This is true all over the United States but especially true in the South where we have many farmers who do not have milk for their families, do not have butter to spread on their bread, and do not know the value of the various types of cheese. We have farmers who do not have enough eggs to supply the family and who rarely ever have a chicken for home use.

If every American would add 10 cents a day to his meals in the form of some livestock product it would require more than a billion bushels of corn to produce the food consumed by this additional 10 cents expenditure on the part of American eaters. If we consumed more of these health-giving protein foods we would enjoy better health and we would also enjoy a better prosperity.

The Northwest and West simply cannot compete with the South in the production of livestock when the average southern farmer learns the value of good, permanent pastures, the need of better markets, and the necessity for better types of livestock and poultry. A cow producing 6,000 pounds of milk is worth five times as much as a cow producing 2,000 pounds. A hen that lays 50 more eggs than the average hen is of real value and if the average hen in the South could be made to produce 50 more eggs than are now produced, poultry would be profitable.

But we do not produce as many pounds of beef as some sections, and we do not produce as many eggs per hen; and it is simply because we are not trying to do a good job. We can become the great livestock section of the Nation—we should—we must—and we will—when we learn to utilize our natural advantages and learn to work more and play less, to plan more and dream less, and to have a pride in agriculture rather than a hope to get off the farm.

We have the climate, the grasses, the clovers, the water, and the advantages of a superior freight rate to the great consuming markets. We must quit dreaming and sleeping and get busy and every one of us assume the responsibility of doing our full part to develop our country.

What has been said as to cattle and poultry could be said with even more emphasis as to sheep. The sheep population of the United States has decreased 35 percent in 10 years. There is hardly a section in our district that could not profitably carry a few sheep. The lime lands of Alabama and Mississippi and the brown loam lands and the red lands of all of our three States can produce excellent pastures, and we should have within a few years 10 times the number of sheep in this district that we now have.

Eighth Annual Tournament of Orators

EXTENSION OF REMARKS
OF
HON. HERBERT R. O'CONOR
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, June 5 (legislative day of Wednesday, March 29), 1950

Mr. O'CONOR. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a statement referring to the eighth annual tournament of orators.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

We have long recognized the fact that a more thorough knowledge of American history and a better understanding of the contributions of our great forefathers toward the development of our constitutional form of government is necessary for the building of solid Americanism—indeed, it is the cornerstone of good citizenship.

Very recently there occurred an incident in Maryland which I should like to call to the attention of the Senate, an incident which has profound significance in the development of young minds throughout the Nation toward a more steadfast appreciation of their privileges as Americans.

The incident to which I refer is the eighth annual Tournament of Orators, sponsored throughout the Nation by the Hearst newspapers under the guidance of Mr. William Randolph Hearst, the eminent publisher.

Each year, the Hearst newspapers select one of our outstanding forebears as a personality to be eulogized by high-school and college students of America, in competition for some $25,000 in prizes and trips to the city staging the national finals.

This year, James Madison, fourth President and father of the Constitution under which we live and enjoy our liberty and freedom, was chosen.

Forensic competitions were staged in the metropolitan areas and attracted thousands of students into the long, grueling series of elimination contests.

Then, on Friday, May 12, the finalists from the Pacific coast, the Midwest, and the East coast met in Baltimore to determine the national champions of the high-school and college divisions.

It was my privilege and pleasure to have attended this inspiring scene, attended also by outstanding public officials and members of the judiciary, including jurists of the United States Circuit Court of Appeals, the Virginia Supreme Court of Appeals, and the chief judge of the supreme bench of Baltimore.

This tournament was widely commended for its great contribution to the development of young students into a spirit of appreciation of what their citizenship means to them, including commendations from a number of distinguished Members of the Senate itself.

For the record, I should like very much to set forth some of these tributes to the Hearst newspapers, for it is my considered opinion these newspapers have rendered invaluable service to the Nation at a time when our every thought should be directed toward loyalty and steadfastness in support of our American institutions.

From the Supreme Court of the United States:

Mr. Justice Stanley Reed:

"The contest that the Hearst newspapers are sponsoring makes an important contribution toward a better understanding of our Constitution. I hope that it will be most successful."

Hon. MILLARD E. TYDINGS, Senator from Maryland:

"Of the three men preeminent in establishing the Constitution—Washington, Madison, Marshall—James Madison has been named with historic justice, the father of the Constitution. Calm, studious, tolerant, deliberate, his constructive ability and conciliatory disposition fitted him admirably to take the leading part in the development and formulation of this instrument of our liberties. I am happy to see honor being paid to this great American to the end that all may become better acquainted with the foremost architect of our constitutional form of government."

Hon. HARRY F. BYRD, Senator from Virginia:

"There has never been a time when all of us needed more to be conscious of what our Constitution means to us, to realize the blessings it bestows upon us every day, and to rededicate ourselves to its fundamental principles.

"To study the life and works of James Madison is to do all these things, and therefore I congratulate you upon the selection of President Madison as the subject of the eighth annual Tournament of Orators and compliment you on the fine work you are doing through this competition.

"Of course I am pleased that you should select such an eminent Virginian as the subject for this year's orations. He shared honors with Thomas Jefferson as founder of the Virginia democracy and with Jefferson and others as founder of the American Democratic Party. He served as a representative of his community in the Virginia Legislature, and as a Representative of his State in Congress. He served his friend Thomas Jefferson as his Secretary of State, and he served his Nation as its President.

"But, with all his other public service, he is best known in the history of our country as the "father of our Constitution." In my opinion no man could ask for greater honor, and it is gratifying that the students of

this Nation should do him honor at this time."

Hon. A. WILLIS ROBERTSON, Senator from Virginia:

"Virginia contributed to the Colonial fight for freedom the greatest galaxy of unique minds and characters ever furnished in a limited area to a great cause.

"Washington, with little formal education, contributed a leadership based primarily upon his unselfishness and unsurpassed integrity. Patrick Henry, the "spark plug" of the Revolution, furnished the most eloquent voice this Nation has ever produced; in fact I would rate him as one of the greatest orators of all time; Jefferson furnished the leadership of a brilliant mind, highly trained, and I rate him as our greatest political philosopher.

"But it remained for the analytical mind and legal training of James Madison to present the meaning of the Constitution to the Thirteen Sovereign States in a way that brought about its ratification by the necessary majority. But for Madison, Virginia would not have ratified; and if Virginia had not, the new Nation would not have been formed.

"In my opinion, the name of Madison must be included among the truly great statesmen of history who have helped to shape the destiny of the world. It, therefore, is most appropriate that the News-Post should use the name of Madison in connection with its Tournament of Orators, which will focus the attention of our youth on the lives and accomplishments of the founding fathers who made this Nation great."

Hon. WARREN G. MAGNUSON, Senator from Washington:

"Your annual Tournament of Orators honoring President James Madison is an inspiration to American youth. My very good wishes go to you and the participants."

Hon. HENRY CABOT LODGE, Jr., Senator from Massachusetts:

"The Hearst Newspapers are to be congratulated in sponsoring this national contest and I send the finalists my very best wishes."

Hon. MARGARET CHASE SMITH, Senator from Maine:

"Our greatest hope for the future will come through our young people and I know of no greater contribution than the one that you and your associates are making in impressing youth with the need for appreciation of the basic principles of American freedom."

Five distinguished American educators served as judges to select the two national winners. Those chosen were Agnes Mary Ott, of Mount Mary College, Milwaukee, and John Rydgren, of Franklin High School, Seattle, Wash. Each was presented a $1,000 Government savings bond which the Federal Reserve bank in Baltimore had filled out back stage and made ready for presentation as soon as the judges' findings were made known.

It was a historic event and its inspiration will be felt for many years by those who witnessed it. The Hearst Newspapers have performed an exemplary service to the Nation.

The Civil-Rights Program

EXTENSION OF REMARKS
OF
HON. CLYDE R. HOEY
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, June 5 (legislative day of Wednesday, March 29), 1950

Mr. HOEY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article by Mr. Frank R. Kent in the Washington Evening Star of June 4, 1950, discussing the civil-rights program, in which he describes the whole movement as political.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CIVIL-RIGHTS PROGRAM TERMED POLITICAL

An incontestable fact about politics in this country—and, probably, in any country—is that lying and hypocrisy steadily increase as the voting population grows. The larger the vote, the more fruitful the field for the demagogues and fakirs.

Beyond dispute, this is the basic reason for the cheapening of our public service during the last two decades in which the vote in presidential elections has gone from 38,000,000 in 1932 to 49,000,000 in 1948. The estimate for 1952 is approximately 55,000,000. Few will dispute that in those years, from the White House down, ethical standards have been lowered while the intellectual and moral inadequacy of our public representatives has reached an all-time high.

Perhaps the most convincing illustration of the situation is in the so-called civil-rights program of Mr. Truman, the chief feature of which is the fair employment practices proposal now pending in the Senate. It is the simple truth that among the proponents of this legislation there is more humbug and less sincerity than about any other proposal that has been before Congress in many years.

With rare exceptions, not so much as a trace of sincerity on this issue exists among the politicians in either party. With these it is wholly a matter of politics. There is and has been for 14 years a contest between the parties to hold the Negro vote in the 10 States of the North where it holds the balance of power. Particularly, is this true of the Democratic Party, which since 1936 has become more or less dependent on this vote in most of these States and which only began to be interested in the Negro after 1936, when for the first time, it succeeded in weaning away from the Republicans a large percentage of the Negro vote which had been their basic asset since the Civil War.

The story of how this was done has been told before, but the present situation makes it worth briefly repeating. In 1934, ex-Senator Guffey of Pennsylvania sold the idea to James A. Farley, chairman of the Democratic National Committee, that with more patronage for the Negro he could carry Pennsylvania. Mr. Farley felt that if this could be done in that State it could in others. He and Senator Guffey sold the idea to Mr. Roosevelt, who enthusiastically cooperated. The start was made by naming a Negro editor from Pittsburgh as an Assistant Attorney General, the highest public office ever held by a Negro. This was followed by an avalanche of Negro appointments to a large variety of Federal jobs.

In the 1936 campaign, the astute Mr. Farley supplemented this by putting on the committee pay roll a large number of Negro preachers, teachers, deacons and others more or less oratorical who were sent through the 10 States to spread the gospel that Roosevelt and the New Deal were the true friends of the Negro. As a result of that campaign, more than 90 percent of the heretofore solidly Republican Negro vote was transferred to the Democrats—and most of it is still Democratic.

* * * * *

There was not an ounce of principle or sentiment in the whole performance. It was a coldly calculated and cleverly executed political plan. Ever since the Democrats have coddled, cuddled and cajoled the Negro vote in every possible way. The climax came in the 1948 convention when the civil-rights plank, upon which the FEPC is based, was adopted. Now so deeply committed that, despite the determined revolt in the South, administration leaders cannot let go without risking loss of a vote that has become vital.

Address of Clyde T. Ellis, Executive Manager, National Rural Electric Cooperative Association, at State Meeting of Rural Electric Cooperatives, Public Power Progress Day, Jackson, Miss., May 26, 1950

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, June 5, 1950

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks, I am inserting an address delivered by Hon. Clyde T. Ellis before the Rural Cooperative Power Association, at Jackson, Miss., on May 26, 1950, which I hope every Member of Congress will take the time to read.

Sixteen years ago, when we started the drive for rural electrification in the Tennesseee Valley area, only 10 percent of the farms of this Nation enjoyed the use of any electricity at all. Today we have 85 percent of the farm homes of this country electrified, and it is my hope that we may soon reach them all.

Electricity is the greatest servant mankind has ever known, and the only one the man or woman of ordinary means can afford, and they can afford it only when it is provided at rates based upon the cost of generation, transmission, and distribution.

One kilowatt-hour of electricity is equal to the strength of a strong man working 10 or 12 hours.

Every Member of Congress is, or should be familiar with the fact that a horsepower has always been considered to be equal to the strength of 10 men. A horsepower of electricity is 746 watts, which is a little less than three-fourths of a kilowatt. A kilowatt, which is 1,000 watts, is equal to the strength of more than 10 men. But for the sake of argument, let us say it is equal to the strength of 10 strong men. A kilowatt-hour of electricity then would be equal to more than the strength of 10 strong men working 1 hour, or 1 strong man working 10 hours.

In other words, pumping water the same distance, it would take a strong man more than 10 hours hard pumping to pump as much water as an electric pump would pump with one kilowatt-hour, which in the district I represent amounts to around 2 cents.

This not only applies to the water pump, but it applies to the washing machine, the milking machine, the feed grinder, the hay drier, the electric fan, including the attic fan, and other appliances that are now being used to remove the drudgery, brighten the home, inspire hope, and stimulate the pride of the farmers and their wives and children. It is, as I said, the greatest ser-

vant mankind has ever known, and if we will develop the rest of the water power that is now going to waste in our navigable streams and their tributaries, amounting to 394,000,000,000 kilowatt-hours a year, and distribute it to the people of this Nation, and especially to the farmers, at rates based upon the cost of generation, transmission, and distribution, we can make this the richest and most powerful Nation the world has ever known.

The organization of which Hon. Clyde T. Ellis, former Member of this House, is the head, is driving toward that end, and I take pleasure in inserting his speech in the RECORD at this point.

The speech referred to reads as follows:

ADDRESS OF CLYDE T. ELLIS, EXECUTIVE MANAGER, NATIONAL RURAL ELECTRIC COOPERATIVE ASSOCIATION, AT STATE MEETING OF RURAL ELECTRIC COOPERATIVES, PUBLIC POWER PROGRESS DAY, JACKSON, MISS., MAY 26, 1950

Mr. Chairman and friends, this day, May 26, 1950, will long be remembered, we hope, as the date in the fifteenth year of the rural electrification program of the United States on which you first celebrated Public Power Progress Day.

WHAT IS NRECA?

Perhaps I should say a word to you about my bosses. They are the farmers of Mississippi and 42 other States who are members of the rural electric co-ops and power districts which in turn are members of their national service organizations. They number some 2,500,000 rural families, or about 10,000,000 people. NRECA is a voluntary association. It was organized from the grass roots to perform several services for the rural electric systems country-wide just as Mississippi Services, Inc., was organized at the grass roots to perform several services State-wide.

About 86 percent of the rural electrics of the country are members of NRECA, and the membership is growing constantly.

MISSISSIPPI PLAYS LEADING ROLE

Mississippi has enjoyed a unique and significant position in America's internationally celebrated rural electrification program. The program was born in Mississippi, in the back of a furniture store at Corinth. It was there that a few Mississippi business and farm leaders met with Tennessee Valley Authority officials one afternoon in 1934 in search of ways and means of getting TVA power out to the farms. Following that meeting Alcorn County Electric Power Association was organized.

By the next year, 1935, other co-ops had been organized in the valley, and it was already evident that the co-op constituted probably the best vehicle by which the farmers might be served, or serve themselves, with electricity.

REA WAS BORN IN 1935

By that time, too, there was strong sentiment both in the valley and in other areas for the Federal Government to expand the opportunity for farmers to help themselves via the rural electric-cooperative process. And so President Roosevelt by Executive order established the Rural Electrification Administration that year and authorized it to lend public-works funds for construction of rural power lines.

It was thought then that most of the funds would be borrowed by commercial power companies. Over the next few years several million dollars were borrowed by them, but they soon lost interest.

The American farm families did not lose interest, though, and by another year the demand for a permanent and expanded program was so great that Congress enacted and there was signed into law in May 1936 the Rural Electrification Act.

Let it be remembered, too, that in the year 1936 only 1 farmer in 10 in the United States had electricity, and those were principally in the suburbs and along the main highways in the North and East. The situation was far worse here where only nine-tenths of 1 percent of the farmers in Mississippi had electricity. Let it be remembered, also, that by 1936 the electric age had been with us for about half a century, and that by then practically all of the farmers of Norway, Sweden, Denmark, Germany, and Japan had electricity.

WE WANT PEACE

As a southern farmer and an employee of farmers, I know but one language—the language of frankness. I am not here to criticize, and, if what I shall say may seem critical of anyone, it is only because the facts are that way. I must give you the facts. I can assure you that I have come here today with an olive b. ...ch in either hand. We want no fight with anyone. We want only to serve electricity to ourselves. We want to serve no customer of the power companies—and we cannot under the law take one of their customers. We want no part of either communism or monopoly. We want to strengthen, and we believe we are strengthening, the American free, competitive enterprise system.

PROGRAM HAS HAD DIFFICULT STRUGGLE

When the farmers began organizing electric co-ops most power companies refused to cooperate. They refused, and some still refuse, to sell us wholesale power at reasonable rates without restrictions on its use.

Those first years were a struggle indeed. As the program got under way, most power companies rushed their crews out to skim the cream, to serve the best areas, leaving us usually the more thinly settled sections. That is still going on in some States. For several years Congress did not provide adequate loan funds and it was also difficult to obtain loans in many areas under the requirements of the original act. The interest we were required to pay was about 2.7 percent and we were required to amortize the loans in 25 years. As you know, the commercial power companies never amortize their capital structure, but rather continue to pay interest dividends on their preferred stock-bonds. Finally the farmers, through their Rural Electric Cooperative Association, initiated and sponsored through the Congress what is known as the Pace Act. This amendment to the original act reduced our interest rate from 2.7 to 2 percent, which at that time still gave the Government a net profit of about 1 percent; and it extended the amortization period from 25 to 35 years.

The Pace Act was passed, however, after we were already at war and whereas it would have otherwise made possible a rapidly expanding, area-coverage construction program, we were suddenly stopped by an order of the Office of Production Management to cease all use of copper and aluminum. The farmers, however, through their NRECA, were soon able to prove to Government officials that where farmers would make certain uses of electricity, those uses would constitute the equivalent of one or more farm hands. OPM relaxed its order and our construction program was permitted to continue on a limited scale.

POSTWAR EXPANSION WAS RAPID

After the war our construction program was accelerated to a point never before achieved in the electrical industry anywhere in the world. As of last June 30, 78 percent of the farmers of the country had electricity. The rural electrics were serving well over half of them. Mississippi, like my native State of Arkansas, however, continued near the bottom of the list in percentage of farms electrified. By comparison with the national figure of 78 percent on June 30, only 49 percent of your farms were electrified. I shall return to this point but will note now that a principal reason for the lagging program in Mississippi has been the lack of dependable wholesale power at reasonable rates without restrictions on its use in some sections of the State.

REA PROGRAM IS MAJOR INDUSTRY

Even though your program has lagged by comparison with other States, it has nevertheless become a major industry. Already $46,907,105 have been actually invested by your 27 electric cooperatives, and REA has agreed to lend your systems $19,362,806 more. Your co-ops are already serving more than 175,000 farms and rural establishments over more than 40,000 miles of line. What industries in your State are larger than that?

Incidentally, I am sure you will be pleased to know that not one Mississippi co-op is delinquent on its repayments to REA. In fact, 18 of them are paid ahead of schedule a total of $744,333. Nationally REA has not lost a dime on an electric co-op loan and its less than one-tenth of 1 percent delinquencies excel all known loan-repayment records on a comparable scale.

Nor is the $46,000,000 investment already made by the co-ops the whole story. By the time the farmer has his house wired and purchases his refrigerator, water pump, radio, and other appliances, he usually has invested from one to two dollars for every dollar that the co-op invested to get the electricity to him. He buys his equipment, of course, from his local merchant and the local merchant advertises that equipment in the local newspapers and over the radios. This is all new business. The farmer thus helps the competitive, free-enterprise system of Mississippi. And in the industrial cities thousands of people labor to produce the refrigerators, water pumps, radios, and over 200 other appliances as well as to produce the construction materials that go into the building of the lines.

In the fiscal year 1949, your Mississippi electric co-ops purchased and sold to the farmers 239,399,633 kilowatt-hours. Thirty-nine percent of this was purchased from the commercial power companies, for which your associations paid the power companies $744,333.

Your co-ops expect to serve within a few years more than twice as many consumers as at present. They are already having to rebuild, "heavy-up," their systems because the farmers are using so much more power than anyone dreamed of a few years ago. With the farmers' loads already doubling every 5 years and with many new uses coming in, such as air conditioning, television, and high-frequency cooking (the farm wife may soon be able to cook her whole meal in 5 minutes)—with all these new uses we have no idea how high our loads will skyrocket, nor where the power is coming from. There is a growing need for your co-ops to generate some of their own power; and this will require further investments.

Based on these facts it would appear that the rural electrification construction program in Mississippi is not more than one-fourth completed.

MERCHANTS ARE BEING PROPAGANDIZED

The merchants of this State and of the country, many of whom depend upon the trade of our members, are being fed a lot of propaganda against cooperatives. This propaganda is coming primarily from the National Tax Equality Association, which, according to its lobby registration filing, is largely financed by the commercial power companies. NTEA is endeavoring to poison the businessmen against co-opes in general

and against electric co-ops in particular. It it endeavoring to persuade Congress to levy net income-tax equivalents on income we don't have.

Perhaps I should take a moment to give you the farmer's conception of what his electric co-op is. Let's take ten, or a hundred, or a thousand farmers who are neighbors. No one of them could afford to build his own power system, but all of them together could afford to build one to serve all of them. So, in order to get electricity, after waiting half a decade, they form a cooperative association in which each farmer is a member and has one vote. The association is just like any other corporation except that they agree that no one will make a profit, for the motive is service. Isn't that just about the way the farmers in the early days built the country schools and churches? The fact that the farmers now form a co-op really makes no difference; the co-op is merely a sort of partnership arrangement.

They then borrow money from REA to build their lines and they pay it all back with interest. They own the lines. They thus recapture and put to work again that same old pioneer spirit that has built America. Can anyone show me a better example of free enterprise at its best? Everyone benefits by the electric co-op, including the commercial power companies, who sell us over half of the power we use.

WHO PAYS WHAT TAXES?

The power companies constantly refer to themselves as "taxpaying electric companies." But they are really just tax gatherers, for we and their other customers actually pay their taxes. And the people have to pay them several dollars in profits for every dollar and companies pay the Government in taxes on those profits. The power companies, you know, enjoy a special income tax status under the law. They are not required to report all of their profits as other corporations are.

SPONSORED RURAL TELEPHONE LAW

Time will permit me to mention only a few more of our efforts and problems.

The farmers, through their NRECA, sponsored the Rural Telephone Act, but only after appealing desperately to the existing telephone companies over a 5-year period to serve the rural areas. We cannot have efficient electric service in the country without telephones to report outages quickly. The rural-telephone program is getting off to a slow start, partly because Congress has not approved adequate funds for administrative purposes. The Bureau of the Budget requested $50,000,000 for telephone loans for next fiscal year. The House has cut that in half. Budget requested over $2,000,000 for telephone administrative purposes and the House has cut that to less than $1,000,000. REA already has $35,000,000 in telephone applications on hand over and above those which it has funds to cover, and we expect the applications to continue to come in rapidly during the next fiscal year. We don't know what the Senate will do.

ADEQUATE RURAL ELECTRIFICATION LOAN FUNDS

The House of Representatives has again approved adequate funds for rural-electrification loans for the next fiscal year. It made some cut in the budget request for rural electrification administrative funds but this is believed to be not too serious. We congratulate the House of Representatives and the Agriculture Subcommittee of its Appropriations Committee upon its refusal to yield to the power companies in their demands for a restriction being placed upon our right to generate our own power.

Your able Congressman, JAMIE WHITTEN, is chairman of the Agriculture Subcommittee.

We don't know what the Senate will do.

POWER SUPPLY IS BIGGEST HEADACHE

The Rural Electrification program's most perplexing problem, however, both in Mississippi and throughout the country, is power supply. Your northern Mississippi cooperatives are more fortunate in being able to purchase wholesale power from TVA. But we should understand now that TVA is rapidly running out of hydropower and that more and more steam plants are going to be necessary, for TVA has assumed full responsibility for serving its area and it must not fail that responsibility.

Propaganda campaigns are being carried on not only to hurt TVA but in an effort to stop river-development programs in other areas. Multipurpose dams similar to those of TVA are being constructed across the river in Arkansas, but the power companies are waging bitter battles to prevent the wholesale power from being delivered to the load centers over Government transmission lines as is being done in TVA and in the Northwest.

The Government, as you know, is nowhere in the retail power business, and we don't want it in that business. Where the people's power is produced in the people's dams from the people's water, we do insist that the people's co-ops and municipally owned systems should be able to buy the power wholesale at cost delivered to the load centers over self-liquidating lines. That is America's power policy.

The power companies are endeavoring to persuade the Congress to require all Federal power to be dumped at the dams where usually only the power companies are big enough to go after it. Their fight is really a fight to maintain their monopoly over supply. It is the same fight that they are waging against your proposed generating plant in south Mississippi. Southern Mississippi cooperatives have never had a reasonable power supply. In the first place their rates have been too high; in the second place the power has not been delivered to their load centers; and in the third place the power companies tell the co-ops to whom they may sell power and in what amount. They even charge them a higher rate for larger loads served. Such practice is dictatorial and un-American.

In southern Mississippi, when the co-ops had finished their expensive engineering studies on a generating plant, the power companies suddenly decided they could give them a better rate. And REA in passing on the application considers that last deathtrap offer in determining whether there would be a sufficient saving to justify the loan. But no power company can make a contract that it or a stockholder who can show he is not receiving adequate return on his investment, or a customer who can prove he is discriminated against, cannot break. I find growing sentiment for a change of REA policy to require that, before any such last-minute offer is considered, the company shall be required to show that the rate is compensatory and nondiscriminatory.

These power company battles to kill our efforts to generate some of our own power necessary to achieve efficient, reliable area coverage have been particularly bitter against us in the South. I came here this morning from North Dakota where I was honored Tuesday to participate in a ground-breaking ceremony at Voltaire for a 40,000-kilowatt co-op generating plant to serve the farmers of nearly half the State. Ottertail Power Co. is cooperating and will wheel much of the power we produce out to our load centers for us.

As we stood out there on the prairie and watched Senator YOUNG turn over a spade of buffalo sod with a few hundred people, including descendants of the old Sioux warriors, and including power company officials, side by side with the farmers; as we looked toward the setting sun—the last remnants of a departing winter snow glistening back at us—to view in our imaginations a multimillion-dollar living monument to men working peacefully together in a free land; and then we bowed our heads to give thanks and saw the wild, purple, crocuses smiling up at us—well what do you think? I think He was there with us.

Another power company in North Dakota is operating one of our generating plants for us. We have a similar arrangement with a power company in Iowa. In these cases the power companies benefit, the farmers benefit, the merchants benefit—everybody benefits.

But we've seen nothing like that in Dixie. Our New York-controlled power companies don't seem to know the War Between the States is over.

Today the power companies of Virginia are fighting us in our efforts to generate some of our own power. They are waging an extended battle before the State regulatory body.

In Kentucky the power companies are fighting our efforts to generate some of our own power in an extended battle before the State regulatory body.

In Oklahoma, Missouri, Arkansas, and, to a lesser extent, in Louisiana, the power companies are engaged in bitter campaigns against our efforts to generate some of our own power. In Alabama and Florida the power companies, by court action, have temporarily stopped our efforts to generate some of our own power.

In South Carolina we are in the process of building a substantial generating and transmission system to supply part of our power requirements, but the power companies are carrying on a ruthless campaign to stop us. I hold here in my hand a full-page ad from last Sunday's Washington Post entitled "Did You Tell Your Congressmen to Kill My Business?" and signed, S. C. McMeekin, president of South Carolina Gas & Electric Co. This is directed at Congress and the executive branch, of course. Let me read you two sentences from it: "A Federal agency and a Government-financed power development have combined in a project which will ultimately destroy us." "The execution will waste at least $9,000,000 of your money and destroy a sound American company worth $100,000,000." Doesn't it seem a little ridiculous that a $9,000,000 farmers' co-op could destroy a $100,000,000 commercial power company?

Under the law our rural electric cooperatives cannot serve anyone who is already served, so we can't take one of his customers. How then could we kill his business? It sounds like Hitler screaming that the Low Countries were about to invade Germany. Enough propaganda like this could destroy our country.

OUR POLICY

In closing, I want to state what has been our policy during all of these years. We desire to work with the power companies. We are not against them.

In our retirement program we have purchased substantial quantities of their stock, believing it a good investment. We appeal again to the power companies, especially in the South where they are fighting us the hardest, to stop fighting us and work with us to build a better Southland and a better America.

Power companies of Dixie, you, too, are benefiting from TVA for you have beneficial power exchange arrangements with TVA. You are benefiting from our farmers' electric co-ops, for you are selling us great quantities of power. Now, won't you throw down the sword, accept our olive branch, and join with

us in making Public Power Progress Day a permanent public power progress, peace, and prosperity day?

We are honored to work with our colleagues, our county and home agents, our legislatures and State administrations, and our press and radio in this great program. We in your national office are honored to work with your able congressional delegation. No American has contributed more to this program than your own JOHN E. RANKIN.

We want to work with everyone.

It may require the supreme effort of all of us, working together, to keep the hordes of mechanized, pagan Communists from our shores and to preserve democracy for the world. God, help us.

Ireland United

EXTENSION OF REMARKS
OF
HON. WALTER A. LYNCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 5, 1950

Mr. LYNCH. Mr. Speaker, under leave granted me by unanimous consent, I am including in my present remarks my statement relative to the partition of Ireland which is part of the record of proceedings before the Foreign Affairs Committee.

Among the witnesses who testified were my old friends, Charles T. Rice, a classmate of mine at Fordham University, and Richard Dalton, an old-time resident of Bronx County, N. Y., a large portion of which is in my congressional district. My statement follows:

Mr. Chairman, I wish to express to you and to the members of the Committee on Foreign Affairs my appreciation for giving me this opportunity to make a statement with respect to House Resolution 270, introduced by our distinguished colleague, Hon. JOHN E. FOGARTY, of Rhode Island, and having to do with the partition of Ireland. I am thoroughly in favor of the resolution. It is my considered opinion that the resolution embodies that great American principle of the right of self-determination of all nations, and that being so fundamental an American principle it should be quickly and unanimously reported out by your distinguished committee. I have no doubt that it will be overwhelmingly passed by the House.

It indeed seems strange to me that there should be any opposition to this resolution. It is founded in justice. There is no reason that a foreign power like Great Britain should say to its small neighbor to the west that you may have your freedom except as to the people of six counties of your nation, and those people must remain under the domination of Great Britain.

Ireland is an entity; it always has been and it always will be. Naturally and geographically it is an entity with the people overwhelmingly of the same national origin. Ireland has always resented the imposition upon her of the force of British arms. She has never been conquered by the British because her national spirit and her national integrity have ever been bulwarks against any foreign subjugation.

It is as unseemly for the British to carve out six counties from the Irish nation as it would have been for the United States, when it granted independence to the Philippines, to have carved out from those heroic islands Mindanao, Cebu, or any other part of this new Pacific republic.

In spirit Ireland has been a republic since 1798 when the first Irish Republic was initially proclaimed by united Irishmen. On Easter Monday of 1916 the same spirit that had moved Irishmen more than a century previously again brought forth, and for the second time proclaimed the Irish Republic. There remained, however, the recurrence of that memorable date in the year 1949, for the Republic of Ireland to be internationally recognized as such. During the intervening years between these two later dates the voice of Ireland was not unheard in the councils of the world. Unfortunately it was unheeded. Had the strong protestations of DeValera not fallen upon the deaf ears of the nations of the world when he denounced the invasion of Ethiopia by Mussolini and the criminal attacks of the Japanese in Manchuria, perhaps World War II would have been averted. The Irish Prime Minister knew what it meant to have his small country invaded. He likewise knew that if the great nations of the world chose, as they did, to disregard the fundamentals of nationhood and permit a government to be imposed upon a people, contrary to their wishes, that the result would inevitably lead to further outrages and final war.

It is a strange commentary that the one nation who raised her voice for justice for Ethiopia and Manchuria should now be excluded from the council of the world, the United Nations, by the veto of communistic Russia. It is likewise a strange commentary that this one nation that is so essential to the defense of western Europe should be compelled to refrain from joining the partnership of the Atlantic Pact because to do so would have meant the unthinkable recognition by the Irish Government of the right of Britain to superimpose her will upon a portion of the Irish people, and refuse to them the right of self-determination in conjugation with their fellow countrymen.

Great Britain may delay the day but she cannot evade the day when all Ireland shall be united as one nation. Despite 12 generations of oppression and degradation under British rule, and despite programs of confiscation, exile, and death, the freedom and national integrity of the Irish nation will extend, not only to 26 counties but to all of her counties. Those places in the six separated counties that have been hallowed by Irish faith and Irish ties will once again be part of the Irish nation. When partition is ended Armagh will be what it has always been—a part of Ireland and not of Britain—and so with other places in Ireland made sacred by Irish sacrifice and Irish blood.

To partition Ireland, Britain had to commit two crimes—one, the partition of Ireland itself; the other, the partition of Ulster.

In order for the puppet government of Northern Ireland to exist, it was necessary that the British Parliament cut off from Ulster the counties of Donegal, Cavan, and Monaghan. By no other way than by this exclusion from the operation of the act of partition could the dominant position of the Unionist majority around Belfast be continued.

Mr. Chairman, if self-determination is to be granted to any people, it should be granted to the people of Ireland because the country meets every requirement of a united government. There are three well-established tests that bear me out. Ireland's natural boundaries are not man-made, but God-given. The Irish Sea is more of a boundary than the line that separates Canada from the United States. In its second test Ireland has a national history. I venture to say that no nation can claim a longer national history. Finally, the inhabitants of the island are of the same race, the same color, and speak the same language. It is true that there is a disparity of religion, but if differences of religion are grounds for national partition, then, indeed, there would be few nations in the world.

In conclusion, Mr. Chairman, permit me to urge, with all the sincerity at my command, that your distinguished committee favorably report the Fogarty resolution so that the House of Representatives might record its belief that all nations shall have the right of self-determination and that the Republic of Ireland should embrace the entire territory of Ireland unless the clear majority of all of the people of Ireland, in a free plebiscite, determine and declare to the contrary.

What Is the Difference?

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 5, 1950

Mr. REED of New York. Mr. Speaker, under leave to extend heretofore granted, I am inserting an editorial in the RECORD which appeared in the Wall Street Journal under date of June 5, 1950:

WHAT IS THE DIFFERENCE?

We pose the question: Who is more dangerous to the welfare of the Nation if left free to go his way, an uncaught race-track gambler or an undetected disloyal or untrustworthy public servant?

This question, to which the answer ought to be obvious, is pertinent because of the fact that President Truman recently denied a congressional investigating committee full access to Government records when it sought to probe charges of espionage yet he now throws open the records to another committee probing charges of gambling.

To track down and break up an alleged gambling syndicate, the President has authorized the opening of income-tax records in spite of the long tradition that these records be kept confidential and not be used as a general catch-all for other misdemeanors. He is also reported to have urged all agencies of the Government to cooperate with the investigating committee.

But to track down graver charges of improper security by Government employees, and still graver charges of some outright disloyalty, the President offers little help. His attitude is that the records of the FBI and other interested agencies in loyalty cases are closed. What is contained in these records is small business of Congress.

Now, the interest of the administration in putting an end to a gambling ring, if such exists, is highly commendable. If a congressional committee, with the assistance of the executive branch, can expose such a crime syndicate and put its members behind bars, it will have performed a signal service.

But is this more or less vital than the exposure of a spy ring, if such exists, and putting its members behind bars?

Mr. Truman has defended his refusal to cooperate with the spy probe on the grounds that Congress ought not to go around making blanket investigations—"fishing" expeditions, he called them—which invade citizens' privacy and might unjustly besmirch some citizens' characters.

Yet the gambling probe, with which he will cooperate, is likewise a blanket investigation. Many individual income-tax records will be

scrutinized merely on suspicion; the individuals will be questioned and cross-questioned merely on suspicion. Here, too, men who may be innocent will be grilled simply because they associate with some unsavory characters. And here, too, the victims will scream about "guilt by association."

The fact of the matter, of course, is that the so-called blanket investigation upon reasonable grounds is as old as the English common law. It is the principle of the grand jury, and it is a principle of great value to the common welfare.

Why, then, the distinction between one probe and another? There is none in law or logic, and the puzzled citizen will have to search for it elsewhere. The suspicion grows that while in one case the administration welcomes distracting headlines, in the other it dares not permit exposure.

Wake Up America!

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1950

Mr. VAN ZANDT. Mr. Speaker, one of the many Wake Up America programs sponsored by the Benevolent Protective Order of Elks was held at State College, Pa., May 25, 1950.

The program was preceded by a colorful parade which traversed the streets of State College, the line of March ending in the high school stadium where several hundred persons were in attendance.

It was my distinct honor to participate in the splendid patriotic program and to deliver the following address:

Mr. Chairman, Exalted Ruler, brother Elks, ladies, and gentlemen, I consider it a high honor to have the privilege of participating in the first annual Wake Up America program sponsored by the Benevolent and Protective Order of Elks.

As a member of the Altoona lodge, No. 102 (BPOE), I have long been familiar with the great effort of the Elks in promoting love of country which, in other words, is unadulterated patriotism.

This annual observance of Wake Up America is very timely and takes its place alongside the annual Flag Day celebrations sponsored for many years by the Elks throughout the United States.

I want to commend the officers and members of the State College Lodge of Elks for joining with other units of our great organization in a concerted effort to arouse the American people during these trying and perilous days.

This demonstration of patriotism is typical of the type manifested daily by members of the Elk fraternity. It is Americanism pure and undefiled, and not the watered-down version of patriotism that some supposedly good Americans are content to call love of country.

When I accepted your kind invitation to participate in this Wake Up America program, I did so because I wanted to make my contribution to your efforts to arouse the American people to the fact that the American form of Government is being challenged, as never before, and in a cunning and deceitful manner.

Since the close of World War I, many of us have watched the growth of communism and have warned our fellow citizens of what was taking place. Yes, many of us have been accused of being Red baiters and of seeing a Red behind every tree. Great patriotic organizations, including the Elks, have been ridiculed because they have pointed their finger at communism on the march.

I say to you, in all sincerity, it is time for America to wake up.

The fact is that while we meditate upon our standard of living, and work and pray for peace, Russia overruns the world. Already she has gone farther, taken more territory, and enslaved more people than Germany had done when we were drawn into World War II.

Czechoslavakia, China, Poland, Bulgaria, and half of Germany already have been swallowed; Jugoslavia, Malaya, Finland, and Formosa are almost within the Russian bear's paws. How far does it go until we are next?

The Russian aim, apparently, is not war, at least not in the foreseeable future.

Judging from their established pattern, the Soviets hope to exhaust us economically and then destroy us by subversive force.

Since the close of World War II, one fact has become increasingly clear. Communist aggression stands as an ominous threat to world peace.

We have lived so long in the atmosphere of cold war that unrest and chaos are taken for granted.

Communist seizure of China was virtually unopposed. Indeed, free nations have officially recognized the puppet government of Red China. This regrettable action is deplored by every red-blooded American. The Communist tactic of seizing free, sovereign governments stands as a direct violation of the spirit, if not the letter, of United Nations' Charter.

We Americans would do well to give heed to our position on the Soviet timetable of aggression. No one—with average intelligence—could believe that America is immune from Red expansion.

In the 1930's we were aroused by the marching slogan of the Nazis: "Today, we rule Germany; tomorrow, the world." Bitter experience, the blood at Anzio, Normandy, and Iwo Jima, burned deeply in our minds the significant lesson that tyrants love to brag about their plans.

On this occasion, when we implore America to wake up, that lesson rings in our ears. It forces us to examine the boasts of our modern tyrants.

In every issue of Communist dogma, under the title "Problems of Leninism," published over the signature of Stalin, appears this basic belief: "It is inconceivable that the Soviet Republic should continue for a long period side by side with imperialistic states."

Stalin continued, by saying, "Ultimately, one or the other must conquer. Meanwhile, a number of terrible clashes between the Soviet Republic and capitalist states will be inevitable," he said.

That statement of Communist philosophy has been repeated many times since the close of World War II. The leaders of Russia have not only emphasized their goal of world domination, they have predicted the doom of all other political systems—especially capitalism.

On May 2, 1950, in a speech in New York City, Hon. J. Edgar Hoover, Director of the Federal Bureau of Investigation, in speaking of the presence of subversive persons in the United States, said:

"The subversive elements are utilizing America's tolerance as a cloak to plan and to commit crimes, which, when successful, destroy the very tolerance which enabled them to gain their victories.

"They use tolerance as a springboard for infamy, deceit, and intolerance. These elements which would destroy American liberty are today at work in America."

The FBI director also told his audience that: "The times demand candid and forthright words. Communists have been, and are today, at work within the very gates of America.

"There are few walks in American life which they do not traverse. Their allegiance is to Moscow; their hopes are spurred by the writings of Marx and Lenin, not Jefferson, Madison, and Lincoln; their enthusiasm is whetted by expediency and deceit; not tolerance and brotherhood.

"Godless materialism is the idol of communism, and the destruction of the God of our fathers is their goal," said Director Hoover.

He deplored the fact that many unthinking Americans scoff at the menace of communism and attempt to laugh off the fact that such a destructive force has a membership in the United States of approximately 55,000 and that behind this force of traitorous Communists stand a half million fellow travelers and sympathizers ready to do the Communist bidding.

The FBI chief emphasized that "these Communist influences practice their double-dealing, double-minded, double-tongued, and double-faced tactics on all fronts of our American life, whether it be in politics, in labor, in the press, in radio, in motion pictures, in the schools, or even in some of our churches," said J. Edgar Hoover.

He warned Americans not to be misled by those who try to calm us by the statement that the Communist Party in the United States is not large in membership, or that they have not polled a large number of votes in an election.

"This line of talk," Mr. Hoover said, "is voiced by the ignorant and the apologists and appeasers of communism in our country in an effort to minimize the dangers of these subversives in our midst.

"In some places where there are only one or two men working the Communists cause, more results are obtained than where they have larger organizations," said J. Edgar Hoover.

He continued by saying: "The thought of a Soviet United States is at once revolting to every right-thinking American.

"We have seen the Communists at work and have observed the application of their principles sufficiently to know what would happen here if they succeeded in the attainment of their objectives.

"If every American faced the reality of what the fulfillment of the Communist objective would mean to him—he would be inspired to work harder to preserve the individual liberty and freedom which is part and parcel of our American way of life."

I have given you excerpts from the New York speech on May 2 of Hon. J. Edgar Hoover, Director of the Federal Bureau of Investigation, because he is a recognized authority on communism and subversive influences in the United States.

In addition, his timely admonitions are a stern warning to sympathizers and appeasers of communism who try to lull us to sleep by charging that vigilant Americans who ferret out subversives are afflicted with a bad case of the jitters.

The poor deluded Americans who peddle such a line are, whether they realize it or not, dupes of Moscow. "Let us not become hysterical," is their chant.

This phrase is Red propaganda of the brightest hue and it is uttered by prominent persons who are entrusted with the responsibility of molding young minds, and who are supposed to be above the average in intelligence.

The hysteria chant is directed to all Americans who insist that Communists, fellow-travelers, pinksters, and parlor Bolshevists should be unmasked and not allowed to pose as simon-pure Americans.

This hysteria propaganda is directed in the hope that it will depict America as a land of fanatics full of fear and panic and that all American citizens are living under a reign of constant terror in their daily lives.

The real objective is to divert attention from the Moscow gospel of hate and to discourage just criticism of the Communists in the United States.

To attain this objective we are asked to ignore communism as a menace to this Nation, and instead to shed tears for so-called intellectuals and self-styled liberals in our midst who are labeled as "martyrs" and victims of a Red scare.

I think you will agree that we Americans are a tolerant people when you recall the numerous spy rings and the traitorous actions of the Coplans, Eislers, Fuchs, and the 12 New York Commies, and Alger Hiss.

These are only a few of the parasites in our midst who have been brought to trial.

Yes; we have more patience than Job in dealing with subversive elements and when our American blood boils at the thought of these traitorous characters, it is not a case of hysterics, but it is the revulsion we feel when we think of the treatment accorded a nation whose sons have shed blood on every continent in the belief they were on a mission of universal peace.

If we are foolish enough to allow ourselves to be rocked to sleep while being told in baby-sitter fashion of the Moscow version of the little boy who cried, "Wolf! Wolf!" and by so doing spurn the advice of Hon. J. Edgar Hoover, Director of the Federal Bureau of Investigation, then we are first-class morons and we deserve the fate in store for us from our decision to trade our American liberty and freedom for a double-barreled portion of intellectual hog wash with its genuine Moscow flavor.

There is one happy and redeeming characteristic of the American people that the phony liberals overlook and that is the ability to detect an assault on the American form of government as soon as the pattern of the attack becomes obvious.

Already the rank and file of American citizenship is aroused over the treacherous conduct of many in our midst and you can be sure that they are not going to adopt a complacent attitude in dealing with these shyster Americans.

Who will deny that the world situation overshadows every other consideration in our lives today in importance and yet our actions are weak and inadequate. We need a bold program of action equal to the task and up with the times.

We need to purge the Communists not just from key positions in Government offices, but from everywhere. The plea of freedom of speech for Communists is nonsense, because they intend to overthrow the Government of the United States, and that is treason.

We need to double our world propaganda activities to carry the story of freedom to all peoples.

We need a rebirth of the spirit of our fathers who founded this country.

We need their courage, their common sense, and their concern for the common good of decent people.

We need to go forward together with the conviction of free people and with the spirit of humanity to meet the challenge that Communist dictatorship now makes against our religion, our freedom, our flag, and our very lives.

Yes, America must wake up if we are to survive.

Was Potsdam a Success?

REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 5, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, President Truman did not fool the American people when he told Secretary Acheson that the London Conference was the most successful meeting since Potsdam. Apparently he is unaware of the crimes that were committed in the name of the Potsdam Conference which he headed as Commander in Chief in July and August of 1945.

It is true that Mr. Truman, as successor to our war President, inherited the political sins of the Yalta and the Quebec Conferences, but it is not possible that he has forgotten the havoc and chaos that flowed from them.

Mr. Speaker, so that the record may be straight on the "success" of Potsdam, I call attention to a few incidents that have happened since that unfortunate meeting:

First. It confirmed and approved the sell-out of China to Communist Russia of Manchuria, Korea, and the Kuriles. China had no notice of the Roosevelt-Churchill-Stalin deal until 1 year later. Success?

Second. It confirmed and approved the double cross of the liberty-loving Polish people by insisting that certain boundaries be changed to accommodate the demands of Stalin. And further, the Conference insisted that a provisional coalition government be established, which ultimately led to Communist control of the political and economic life of the Polish people. Success?

Third. It was the Potsdam meeting that inaugurated the diabolical Morgenthau plan with the following results:

(a) Millions of people were robbed, raped, turned out of their homes, forced into slavery, tortured, starved, driven to suicide, and killed. Is this success?

(b) Dismantled German industrial plants that had no connection with the war and permitted the Soviet to take and ship heavy industries to Russia at the expense of the American taxpayer. The total cost was many millions of dollars, and dismantling still continues. Is this success?

(c) It cut from Germany 30 percent of its arable land producing 25 percent of its food, with the result that the United States was called upon to furnish food to starving people. Is this success?

(d) It approved the most inhuman dumping operation in history by Russia, in the uprooting and expulsion into Germany of 14,000,000 defenseless refugees from the Sudetenland, Austria, Hungary, and Poland. It crammed at least 68,000,000 people into a war-ravaged area smaller than Great Britain which could not support itself. Is this success?

(e) Decreed that Germany was to be reduced to the status of an agricultural and grazing society, notwithstanding that Germany prior to the war was almost wholly industrialized. Is this success?

(f) It authorized the Nuremberg trials of alleged war criminals and found many guilty by virtue of association, thereby setting a precedent unheard of in Anglo-Saxon jurisprudence. Is this success?

(g) It failed to insist upon the release of war prisoners contrary to the rules of war and international law. Unknown thousands are still held by Russia for slave-labor purposes. Is this success?

Fourth. At Potsdam, Mr. Truman, his State Department, and his military leaders, agreed to a plan which resulted in Russia setting up a blockade of Berlin that denied access to that city of American and British personnel. The Berlin airlift became necessary thereafter at a cost of millions of dollars to American taxpayers and the loss of American lives in that operation. Who was responsible for that fiasco, Mr. Speaker? The President was then Commander in Chief and it was his responsibility.

Mr. Speaker, if the Potsdam Conference was a success as the President said, then we can only hope and pray that Mr. Acheson's mission to Europe last month will never reach the same level; it was a new low in the history of our country. Even the Washington Post, in an editorial on May 31, 1950, referred to that meeting as "the flat, stale, and unprofitable Potsdam agreement." The Post has never been anti-New Deal. So Potsdam must be recorded as a rank failure and not a success as Mr. Truman intimated.

Ireland Must Be One and Indivisible

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1950

Mr. CELLER. Mr. Speaker, the recent visit of Sir Basil Brooke, Prime Minister of Northern Ireland, to the United States and Canada should serve to refocus the attention of the American people on the subject of partition in Ireland.

At this point, it seems to me, the Irish and Irish-Americans can use all the support they can raise to secure complete unity and freedom for Ireland. My coreligionists and myself, perhaps more than other groups, can readily appreciate the intensity of feeling which partition has generated in the hearts of the Irish and in those of Irish antecedents everywhere. Ireland to them will always be the little bit of heaven that dropped from out the sky one day and never, while they are conscious, will they be reconciled to what they consider England's occupation of their six northern counties. The Irish have not been niggard in their support of Jewish aspirations in Palestine and I believe it is due,

in part, to their own historic struggle for freedom and independence. They, too, have long felt the yoke of an oppressor.

It has occurred to me that some of my constituents, absorbed as they have been in a similar struggle in Palestine, may have lost sight temporarily of this problem which has bedeviled the Irish. To them, the establishment of the Republic of Ireland may mean the end of the matter. To the Irish, nothing could be further from the truth. The External Relations Act was repealed in December 1948, but as a tribute to the enshrined heroes of the abortive Easter Monday Rebellion of 1916, the proclamation of the Irish Republic was delayed until Easter Monday of 1949. Then, jubilantly, Ireland severed its last direct tie with the British Crown. For the first time in 795 years, Ireland was independent in law as well as in fact. As the saying goes, it was a great day for the Irish and they enjoyed it to the hilt. They could be safe in the thought that they were rid of the hated Black and Tans for good. The Irish could now unfurl the precious tricolor anywhere at any time, without reprisal. At long last, Pease and the martyrs who died with him were vindicated. In celebration, thousands upon thousands streamed into Dublin's fair city. Friendship with England did not seem impossible, as a touching message from England's King George was joyfully received. Pope Pius sent his blessing. It is said only De Valera frowned. "Public rejoicing is out of place," said he, "as long as our country remains partitioned."

You might well ask, "Why partition?" It must make as little sense to you as it does to the natives of Ireland. I shall try here to summarize the background of this problem, as gathered from Irish sources of information.

Until the second decade of this century, Ireland had always been regarded as a national unit, until the British Government maneuvered a very irregular division, due to a struggle for power between the two big political parties in Britain, the Liberals and the Tories. The Liberals were committed to self-government in Ireland and the Tories were violently opposed. As the Irish tell it, the Tories decided to kill two birds with one stone and used the proposed grant of home rule to Ireland to drive the Liberals from office. The British Tory leaders visited northeast Ulster, agitated the majority, armed the rank and file, and faced the Liberals with a crisis. The Liberals, rather than leave office, solved the dilemma by abandoning their pledges to Ireland and their own self-government bill, and adopted the expedient of partition.

For more than 4 years prior to December 1918, several British efforts were made to secure Irish acceptance for some plan of dismemberment but all such negotiations broke down. On December 14, 1918, a general election was held in which the whole of Ireland participated. The issue was whether Ireland, exercising the right to self-determination, proclaimed by the victors in World War I, would declare her independence and set up a national legislation. The election was held under British law and was carried out while a British army occupied the whole island. The result was overwhelmingly in favor of national independence. Excluding the universities, there were 101 parliamentary electoral divisions in Ireland. Seventy-eight of these declared for independence and only 23 against. In view of this trend, the elected representatives of the people assembled in Dublin on January 21, 1919, declared Ireland an independent nation and established a government and legislature.

But Britain refused to accept the right of the Irish people to make laws for themselves, and by the imposition of martial law, by the use of the Black and Tans, set off a systematic wave of terrorism which will live long in the Irish memory as well as that of the world. But the Irish people held tenaciously to their bitterly won progress and it was then that the British Parliament in 1920, passed the act dividing Ireland into two parts. The British then sought to impose their own governmental institutions on each part, through the use of an army of occupation.

The enforcement of such a settlement was rejected by five-sixths of Ireland. Britain succeeded, in Belfast, in setting up a separate government for the six northeastern counties.

In setting up this separate government in Ulster, Britain not only defied the democratically expressed will of the Irish people, but also the majority inside the selected area. The Tories of the northeast of Ulster were opposed to self-government for Ireland and to separation from Britain, but they were opposed also to the division of their country. While they accepted the separate government and parliament when set up, thereby accepting partition, at no time did they desire it as a solution.

You cannot expect an Irishman to view dispassionately the cutting up of his homeland any more than you could expect a mother to remain calm while some intruder in her home hacked away at her child. They cannot be expected to remain quiescent when they regard the obstinate, greedy domination of the six counties by a small clique of rich men who gained their power by force and fraud and maintain it by discrimination and gerrymandering constitutencies. Such practices justify any degree of Irish bitterness. The six-county area cut off in 1920 had never existed before as an entity in history, politics, or economics. It was not Ulster, which is a Province of nine counties. It had no natural boundaries or unity within itself. The Tories—whose existence was made the excuse for partition—were in a majority in a continuous area not as large as two of the counties, with smaller concentrations in other parts of the six counties. Their strength lay principally in Belfast, in County Antrim, and in the northern half of County Down.

It is the solid contention of the Irish that in the rest of the area, taken as a block—four and a half counties out of the six—there was and still is a majority for independence.

When partition was first imposed, the population of the six counties was 1,250,000. More than half of this population occupied Belfast, Antrim, and half of Down. In this area the political division was 552,000 Tories to 149,000 Nationalists. In the other four and a half counties, there were 281,000 Nationalists and 266,000 Tories. These figures tell the story. The numerical strength of the Tories in the one and a half counties would enable them to outvote permanently the Nationalist majority in the adjoining four and a half counties. Given a chance to vote, Armagh, Derry, Fermanagh, Tyrone, and southern Down would as a bloc have declared for union with free Ireland. However, they were given no such choice. To make assurance doubly sure, the British statute which partitioned Ireland added to the corner in which the Tory votes were concentrated as much Nationalist territory as it was believed those Tory votes could always dominate.

In separating the northeast from the rest of Ireland, Britain intended to hold a part of Ireland in pursuance of her imperial policy. In May 1949, the British Government introduced legislation known as the Ireland Act to determine the position of Irish citizens in Britain following the repeal of the External Relations Act by the Irish Parliament. Into this act, the British Government deliberately inserted a clause designed to endow the partition of Ireland with an abiding permanency.

The British already had the power to prolong partition. They themselves hold the border with a chain of British customs posts and customs officials. British armed forces occupy the six counties and the British treasury levies and collects some 90 percent of the total tax revenue, thereby exercising a great influence on the finances of the area.

Not content with these powers, the British Government put into the Ireland Act, the following, as an additional barrier to the reunification of Ireland:

> Parliament (i. e., the British Parliament) hereby declares that Northern Ireland remains part of His Majesty's dominions and of the United Kingdom and affirm that in no event will Northern Ireland or any part thereof cease to be part of His Majesty's dominions and of the United Kingdom without the consent of the Parliament of Northern Ireland.

It should be stressed that the area electing the parliament was carefully designed to insure that the nationalists and others who stand for the unity of Ireland would never win a parliamentary majority. The Belfast region, although only one-third of the area, elects 34 members of the house of 52.

Further, the Ireland Act specifically prevents the people of the six counties from deciding the issue. An amendment leaving the decision to the people and not to the parliament was rejected by the British Government. This has been the British policy since partition was imposed and Mr. Lloyd George in 1916, in a secret letter, stated that partition must continue even if the majority in the cut-off area wished it to end. Britain has always ignored any suggestion of holding a plebiscite on the issue of partition, just as she ignored the will of the Irish people in imposing partition.

In the Ireland Act the British provide themselves with two vetoes on Irish unity.

One through their own Parliament, at Westminster, and one through the Parliament they forced on Belfast.

The Irish make a telling point of the ingenuity of this system which enables British statesmen to insure that partition continues and at the same time to assert that the matter is really one for the Irish to settle among themselves. The antidemocratic nature of the partitionist clause was so evident that 140 members of the British Government Party, risking political repercussions for themselves, refused to vote for the act in the critical division. The bill passed, but not until nearly 200 members of all parties, with a very large proportion from Labor, had failed to endorse the clause which makes the Parliament of Northern Ireland sole arbiter of any change.

Complaint now rises not from the original act, as I understand it, but from the fact that it has never been repealed. It has been reinforced with restraints through the years. For instance, the Northern Ireland Minister of Home Affairs, or any police officer to whom he delegates power, may suppress any public meeting or newspapers merely by "proclaiming" it. This year St. Patrick's Day parades were banned in Northern Ireland and protest was so widespread, we now have Sir Basil Brooke publicly stating that he should not be blamed for the affair.

The St. Patrick's Day parades were banned by British home office, said he, because Nationalist element in North wanted to march into a Loyalist village.

I guess any reason is better than no reason, to Sir Basil Brooke.

A flagrant manipulation of the electoral boundaries has been permitted to the effect that where Nationalists are in a majority they can secure only a minority of the representation. For instance, Derry is the second city of importance in the partitioned area. For that reason the Tories were determined that the Nationalists would not represent it in Parliament. They so gerrymandered the boundaries as to create a new "city division," cutting the city itself in two, and bringing in a huge rural area. The excluded part of the city was then placed in another constituency. In district after district it is thus made impossible for the Nationalist majority to elect a majority of the local representatives. The Tory minorities are given substantial majorities of the seats on county councils, urban district councils and rural district councils in areas where the population is predominantly Nationalist.

Naturally this policy is encouraged by the British Government. A recent bill changed the qualification required of local electors. It gave those with property several votes and deprived many with lower incomes of the single vote they had. As the bill was going through the Belfast Parliament, a member of the administration admitted that its purpose was to prevent Nationalist voters, where they formed the majority, from controlling their own public boards.

All Ireland has a population of 4,248,165. Eighty percent of that population want Ireland to be one national unit. All Ireland has 32 counties. Of these a block of 30 counties, with an area of over 80 percent, want Ireland to be one national unit.

No one has truly benefited from partition, least of all the British, inasmuch as their policy in Northern Ireland has placed them in a wholly untenable moral position. She has pursued in Ireland tactics she has deplored in use against peoples elsewhere. She has served to create and maintain a festering sore in an island so adjacent to her own that the continuance of the injury seems to be the height of national folly. Britain is as dependent on the production of Ireland as she is sustained from that in Scotland and Wales.

The argument is raised that Ulster has a higher standard of living than Ireland on the average. Between World Wars I and II the economic situation in the cut-off area was so bad that the British Government listed the region as depressed area No. 1, worse even than the mining towns in South Wales. As the postwar boom subsides signs of economic depression are returning.

The Government of the Republic of Ireland has made very substantial progress in encouraging industry. Schools and hospitals have been built. A huge power plant in Limerick has harnessed the river Shannon and will eventually provide electricity to the whole country. Newspapers are well-circulated, and the people are well-informed. Unemployment is low and farm prices are up. It is believed that the Irish would be ready and willing to fight with the west. Although exponents of communism today flourish in many countries, there are few Communists in Ireland. It is abnormal and highly unsatisfactory for a small island to be split in two permanently in a world where unity is becoming more and more desirable. As for Ireland as a whole, this disruption of the country prevents the fullest development of the nation's resources through coordinated efforts on the part of all. Partition causes energy that would otherwise go to the building up of the country to be devoted to righting a wrong no group can suffer quietly.

The pattern of partition has persisted too long. It cannot be stressed too often that no rivers or mountains divide Ulster from the rest of Ireland. The frontiers established are highly artificial, cutting through streets, farms, town lands and even houses. Such an unnatural and fabricated line of demarcation is monstrous. It is obvious no British Government, no matter what its party composition, will lift a finger to end it. Yet the people in the Republic of Ireland are possessed of a passionate conviction that Ireland will once again be united. That their devotion to this ideal has not slackened was reaffirmed only recently by the Minister of External Affairs, Mr. Sean MacBride. He claimed that whatever party differences might exist on matters of internal policy, all the parties in the state were loyally cooperating with a firm determination that this time they would not allow any internal differences to hinder the progress of the nation or to weaken their effort.

Partition is the sole remaining issue between Ireland and Great Britain today. In commenting on the recent Ireland bill when introduced in the British Parliament, Minister of External Affairs MacBride voiced his chagrin about reports to the effect that the State Department in Washington had stated that American policy would not allow President Truman to intervene between Ireland and Britain to secure the ending of partition. He further stated:

I am fully aware that that has always been the attitude of the State Department. * * * I cannot help, however, regretting that the leading democratic republic in the world, should not at least take an interest in and assist in ending the situation which, in addition to being undemocratic, is dangerous and damaging to the unity which should exist in the democratic world.

The statement of Minister of External Affairs MacBride is eminently sound.

It does seem that the leading democracy in the world, the United States, should take a decisive step to right an obvious injustice. There is now pending in the Congress House Resolution No. 270, introduced by my distinguished colleague from Rhode Island, Mr. FOGARTY. This resolution states in part:

Resolved, That it is the sense of this House of Representatives that the Republic of Ireland should embrace the entire territory of Ireland unless the clear majority of all of the people of Ireland, in a free plebiscite, determine and declare to the contrary.

I am in thorough accord with this resolution and shall support it to the *n*th degree. I believe it should have the unqualified support of all the Members of the House.

Welcome, Veep, to Louisiana

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1950

Mr. LARCADE. Mr. Speaker, under previous authority to extend my remarks in the Appendix of the RECORD, I wish to submit an editorial from the Southwest Citizen, published in the largest city in my district, Lake Charles, La., in connection with the recent visit of Vice President BARKLEY, as follows:

WELCOME, VEEP, TO LOUISIANA

Few national officeholders would be more welcome in Louisiana than the Veep, and the Citizen joins the rest of the State in wishing Vice President ALBEN BARKLEY well when he comes to Baton Rouge and Hammond for speeches this week.

The Veep has brought color and life to an office that is altogether too often without it. The Nation followed his jet-propelled romance breathlessly, and has since accorded him a good will and an almost universal popularity that few political figures enjoy.

He'll make three speeches in the State—all at extremely important and worthy functions.

He'll participate in exercises marking the twenty-fifth anniversary of Southeastern Louisiana College in Hammond on Saturday,

May 20. That night he'll address a gathering in New Orleans.

Next day he will be guest of honor at a community-wide meeting in Baton Rouge under auspices of the United Jewish Appeal. He'll speak on "A World Mission of Mercy," and will describe the American effort to repair damage to human life and freedom in the aftermath of the war.

Louisiana is lucky to have such a pleasant-spoken and distinguished visitor. We are glad to have him on board.

Annapolis and West Point

EXTENSION OF REMARKS

OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 31, 1950

Mr. HINSHAW. Mr. Speaker, Maj. Gen. Hugh J. Knerr, United States Air Force, retired, was, at the time of his retirement, the Inspector General of the United States Air Force. During the existence of the Congressional Aviation Policy Board of the Eightieth Congress, General Kneer acted as alternate adviser to Gen. H. H. "Hap" Arnold.

Maj. Gen. Hugh J. Knerr graduated from the Naval Academy at Annapolis in 1908 and served as an ensign in the Navy until 1912 when he transferred to the Coast Artillery Corps of the Army. He was one of those dauntless spirits who, in 1917, became an aviator in the then young and startling Air Corps. In 1939, while air officer of the Eighth Corps area, he retired as a colonel because of physical disability incident to military service. However, later in that same year he returned to active service and was sent to England shortly after the outbreak of World War II, where he saw high administrative service in the United States strategic air forces in Europe. As stated above, he retired in 1948 as Inspector General of the United States Air Force.

He was associated with Gen. William "Billy" Mitchell and was long a partisan to get air power recognized as a strategic weapon for the United States. He collaborated with General Andrews in furthering the doctrines of a separate air force in active service.

In his work as alternate adviser to the Congressional Aviation Policy Board, General Knerr contributed enormously through his thorough knowledge and understanding of all three military services, having served in each. While strongly partisan for the recognition of air power as a prime strategic weapon for the defense of our country, he was thoroughly unsympathetic toward those who adhered to the ancient philosophy of the old school tie. His own service in all three branches of the Defense Establishment convinced him of the need for unification of all of the armed forces.

Mr. Speaker, under the leave to extend my remarks in the RECORD, I take pleasure in including an article by Maj. Gen. Hugh J. Knerr, United States Air Force, retired, which sets forth his ideas in connection with the service schools. The article follows:

SERVICE SCHOOLS NEED NEW IDEAS—THE PROFESSION OF ARMS DEMANDS CIVILIAN TRAINING AS WELL AS MILITARY KNOWLEDGE

(By Maj. Gen. Hugh J. Knerr, USAF, Retired)

While we are locked in a cold war with a relentless antagonist, to propose the abolition of the service academies at West Point and Annapolis may sound like a particularly virulent form of heresy. What! Abolish processes which gave us Grant and Lee, Dewey and Pershing, Arnold and MacArthur! That the proposal comes from a graduate of the Naval Academy only compounds the heresy.

Yet it is my conviction that if we are to educate our military properly for the responsibilities of the air-atomic age, we should, indeed, abolish these venerable institutions as they are presently constituted. We should abolish them because as undergraduate schools they do not meet our requirements; they create more problems than they solve; they are relics of the age of Clausewitz and Mahan.

I'll complete the heresy. The Air Force, instead of advocating the abolition of West Point and Annapolis, is now asking Congress to authorize a third service academy. The Joint Chiefs of Staff support this request. I spent 32 years in the Air Force and supported most of its objectives; but on this point I am in complete disagreement with the Air Force command. The third academy, I am convinced, would be an expensive step backward.

I believe the time has come when we should deliberately and thoughtfully redesign our system of military education. This is the age of technology. The preparation for and the waging of war has become an infinitely complex operation. Our military department is a vast and integral portion of our economy. Against an enemy who may array three-fourths of the earth's population against us, we can survive only by massive employment of superior technology. So the requirements of a military officer in 1955 and 1960 will be a long way from what they were in the gallant but simple days of cavalry movements across the plains.

In our military department now we have approximately 180,000 officers—76,080 in the Army, 60,600 in the Air Force, 44,000 in the Navy. In the peacetime future we shall need at least 12,000 new, young officers a year for active duty, and this will increase because technology demands a higher and higher percentage of officers.

How shall we select these officers? How shall we induce them to follow military careers? How shall we train them? What can we wish for them in the way of education so that they can be entrusted safely with the preservation of our western heritage?

It seems to me that the elementary requirement must be a liberal, well-rounded college education. Our industries seek their key replacements among college graduates. Our professional schools require academic degrees of their entrants; law and medicine require prelaw and premedical degrees. I believe the military must require a premilitary degree.

That we must have the college graduate is being demonstrated daily. Even as we fought World War II every branch of the service was frantically sending officers to college; yet, with all this activity, the percentages of college graduates including the service academies, in the officers corps in 1946 were: Navy 70 percent, Army 50 percent, Air Force 30 percent. Today all branches, particularly the Army and Air Force, are struggling to give their officers basic college training. So for the future we can start with nothing less than the superior, 21-year-old college graduate.

But each year where shall we find 12,000 superior 21-year-old college graduates who want military careers? West Point and Annapolis currently are providing about 1,000; some of these are held in service by compulsory 3-year contracts; and the relative importance of academy graduates in our military department steadily is declining.

Less than 10 percent of the officers now in the Air Force are from West Point or Annapolis. Our vital operational commands like the Strategic Air Command and the Tactical Air Command are headed respectively by Lt. Gen. Curtis E. LeMay, of Ohio State, and Maj. Gen. Willis H. Hale, who advanced from the ranks. Many of the Navy's most brilliant young officers never saw Annapolis; and the same is true of the Army.

Naturally, and for obvious reasons, most of the top commands were held by graduates of the academies. I do not disparage these officers; I am proud to have been one of them; I am aware of the historic contribution made by the academies to the safety of this Nation.

But I cannot agree that superior personal honor and patriotism can be instilled only at a service academy. In my experience the academy graduate has evidenced no superior capacity over the college graduate. In my own Air Force commands I have preferred the college graduate to the academy graduate because the former suffered from fewer inhibitions, was more eager to learn, and more receptive to innovation. Many senior officers in every branch of the service have agreed with this opinion; some have not.

So to our problem of providing each year 12,000 superior, 21-year-old college graduates who want military careers—to this there are three possible solutions. First, we can build the air academy and let the three academies provide about one-eighth of the graduates and the colleges seven-eights. Second, we can build the air academy, expand the three manifold, and hope that they can provide most of the 12,000. Or third, we can abolish the academy system and adopt a new plan whereby the colleges will supply them all.

Since the first course is the one we have followed until now, we are familiar with its disadvantages. That there is a natural conflict between academy and college graduates is well known. Rightly or wrongly, it is widely believed that the academy graduates control the Military Establishment and favor one another. So, since he is aware of this handicap to himself and since he has a natural antipathy for military service, why should the superior college graduate choose an active military career? The very fact that academy graduates seem to be in control of the military department often prevents our getting superior college graduates and forces us to take more of the inferior ones.

The second course can be objected to on several grounds. My principal objection is to the nature of current academy training.

I don't believe in educating American boys in a cloister. I think when you take a healthy 17-year-old away from his home environment and shut him up for 4 years, whatever you teach him, you are likely to do him more harm than good. You convert such boys into a class apart, and in an age when war has become total we don't want a samurai in America.

In trying to save western civilization our only resource is brains. All the advantages of brawn and numbers are on the other side. We can forestall a war—or win one—only if our people have better technical educations; only if our military leaders are superior technicians who are constantly finding the new and more effective means to enforce our will. I believe our colleges are more likely to produce men of this type than are our service academies.

Our academies are still placing too much emphasis on formal military training. In wars in the air-atomic age the only men who

need to march in step are the police. The pistol, the rifle, the manual of arms, squads east and west—all these are useful only to the police who establish order after the decision of war has been gained with atomic and biological weapons. West Point and Annapolis are institutions where the technical training of individuals is made secondary to gymnastic exercises in military bearing.

Their 1949 football records provide a fair guide to the two academies. Annapolis is the better technical school; West Point has an excellent physical education program; but in the matter of imparting technical knowledge and teaching men to think, they are both far behind our better colleges.

So I favor the third course, the plan under which we would abolish West Point and Annapolis as academies—as undergraduate institutions—and depend entirely on our colleges to supply the 12,000 superior and broadly educated 21-year-olds. The colleges can do the better job; the academies were founded in other times for other purposes; in any likely case the colleges must do most of the job; so why not have an end to the old conflict between college and academy graduates and pass the responsibility to colleges which have or will create good departments of military science and tactics?

This plan would not necessitate abandonment of our traditional congressional appointments to an academic education at Government expense. Public officials now making appointments to the academies could instead award scholarships to the approved Reserve Officers Training Corps colleges. We might even increase the number of such scholarships. But the appointee, instead of going to West Point or Annapolis, would first go to his State University or perhaps be allowed to choose any college which is on the approved list.

When the appointee reported to the college of his choice, ROTC officers would become his faculty advisers and administrators of his scholarship. They would begin teaching him military ethics; insist on a high order of scholarship and personal conduct; recommend technical courses to prepare him for his military specialty; begin teaching him to operate machines; send him to summer camps to train with his fellows; hold the power of dismissal over him; but otherwise, would allow him the widest possible latitude in the selection of his courses.

This doesn't mean that a military education would become any easier or any less Spartan than it is now at the academies. If anything, it would become harder; for there is no easy way for a man to educate himself for military responsibility in 1960. He can't avoid higher mathematics, physics, chemistry, astronomy or philosophy. He has to exercise his brain and prepare to think and reason.

But, by educating our officers in the colleges, we can put the emphasis on technical instead of on military training. We can, therefore, make the military career more attractive to a larger number of superior men; we can avoid the dangers of the cloister—of creating a class apart; we can leave the student in a natural civilian environment until he is 21; and, in my opinion, we can thus better create a young man who is more of an individual and better trained to think and initiate.

On graduation, on recommendation by his ROTC officers, the young appointee-graduate then would stand competitive examinations with all the ROTC graduates who aspire to military careers. The examinations would be to determine the recipients of 12,000 probationary commissions in the military department of the United States. In the competition for these commissions the boy who had been educated at Government expense would have no advantage over the one who had been educated, with ROTC, at private expense.

Suppose the boy educated at Government expense fails in the competitive examinations? He will have been given preparation for a civilian career and can be commissioned in the Reserve. At first this might seem wasteful, but it is actually less wasteful than the present system. A fifth of the appointees to West Point and Annapolis fail to finish, and a fourth of the graduates choose civilian careers.

The 12,000 successful competitors would be granted probationary commissions and would be ready for assignment to one of the three graduate schools of the military department: West Point, Annapolis, and Randolph Field.

Yes, I believe that West Point and Annapolis along with Randolph Field should be reconstituted as 2-year graduate schools of a single military department. The venerable academies should embrace a new and honorable destiny: they should cease dealing with 17-year-old cadets and midshipmen and begin dealing with 21-year-old college graduates; instead of training a few for 4 years they should train all of our peacetime regulars for 2 years.

Once this change were made at West Point and Annapolis, and Randolph Field were added to them, then many of our old problems would begin to disappear. The 12,000 college graduates holding probationary commissions could be assigned to one of the three: 4,000 to each school, thus giving each a student body of 8,000. For the first year the men could be assigned without regard to specialty since the first year should be largely devoted to an over-all study of triphibious warfare.

For the second year they could be shuffled again and assigned to the schools of their specialty; and upon successful completion of the second year they could be permanently commissioned and assigned to active duty.

The old conflict between Academy and college graduates would be ended: Promotion could be had on ability. The old Academy-spawned rivalries between Army and Navy could be forgotten, for these new officers would hold their commissions in the military department. They could all wear the same uniform and denote their specialties with suitable insignia. Even those who operated different types of machines would understand that modern warfare must be planned and waged as a single operation.

We would have done with much of the old waste and duplication. A capable supply officer could purchase food, not for the Army, the Navy, or the Air Force, but for the Defense Department. Our pilots could operate today from an aircraft carrier and tomorrow from a land base. Our experts in electronics—and they must multiply—would be expert whether they were operating on land, at sea, or in the air. We would need only one program for the development of guided missiles, not three, as we have at present.

In this connection, the Air Force command, in advocating a third Academy, is breaking faith with Billy Mitchell and with most of us old-timers who fought so long for the recognition of air power. Mitchell and the rest of us believed in a single military department: We believed in unification, not triplication.

The present organization is a compromise accepted by the Air Force in order to gain autonomy. If the Air Force is no longer to strive toward true unification, if Air Force energies are to be devoted to the construction of a third service bureaucracy, then Gen. Billy Mitchell can start turning over in his grave.

These are perilous times for America and for western civilization. The honorable profession of arms bears a terrible responsibility. One of our responsibilities is to attract to our profession the ablest young men of the Nation, then to train them to defend freedom's bastion in a totalitarian sea. If we are willing to be unselfish, if we are able to make the necessary changes, if we will cooperate first with our free colleges, and then with our free industries I believe we can build an American defense organization which will be equal to the challenges.

Foreign Agricultural Trade Policy Advisory Committee Stresses Importance of Foreign Trade to the American Farmer

---

EXTENSION OF REMARKS

OF

HON. STEPHEN M. YOUNG

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1950

Mr. YOUNG. Mr. Speaker, under leave to extend my remarks, I insert the following report, dated April 28, 1950, of the Foreign Agricultural Trade Policy Advisory Committee:

FOREIGN AGRICULTURAL TRADE POLICY ADVISORY COMMITTEE SUBMITS REPORT

The Foreign Agricultural Trade Policy Advisory Committee, formed in November 1949, to advise the United States Department of Agriculture in matters involving foreign agricultural trade and policies, has submitted a report to Secretary of Agriculture Charles F. Brannan following its second meeting April 24 and 25.

The report is the second submitted to Secretary Brannan by the committee. The first, rendered after the committee's initial meeting January 6, 1950, emphasized the magnitude of the foreign-trade problem and the need for detailed study by both Government and trade groups, and suggested full exploration of questions involved prior to specific policy recommendations. Seven policy areas were listed for such exploration. (Press release USDA 62–50.)

The Foreign Agricultural Trade Policy Advisory Committee is composed of representatives of farm organizations, land-grant colleges, the agricultural press and agricultural industry invited by Secretary Brannan to serve as members. (Press releases USDA 22–50 and 2526–49.)

The committee's second report follows:

"The agricultural industries of the United States are being rapidly and dramatically confronted with problems growing out of the alleviation of wartime and postwar shortages of farm products. As a result farmers and others interested in agricultural production and marketing policies must of necessity give prompt and vigorous attention to the developing foreign trade situation as it affects the probable future foreign markets for American farm products.

"One of the questions which needs to be weighed most carefully in this connection is the fact that any agricultural or other program which endeavors to maintain prices above market levels for any considerable share of the time is inevitably nationalistic. It comes into conflict with efforts to develop international trade and other forms of international cooperation.

"Such programs are nationalistic and take us back on the road to isolationism because—

"1. They lead to well-nigh irresistible demands that trade barriers be raised to keep products of other nations from sharing in the artificially high prices they provide.

"2. They involve keeping American resources out of fullest use to curtail output in order to raise prices, and it is not logical to expect that imports which will defeat that objective will be acceptable.

"3. They increase the difficulties of exporting because prices are above those from competing sources of supply.

"4. They foster programs of export dumping which invite retaliation from other countries.

"5. They require barriers to keep products sold abroad at lower prices from returning to our markets.

"6. They encourage an expansion of State trading because of the Government controls necessary in their effective operation.

"7. They encourage similar nationalistic programs for the expansion of uneconomic production in other countries to replace our products which in turn will lead to further demands for restrictive action.

"While the inevitable adjustments in the postwar pattern of international trade will probably impose rather heavy adjustment problems on some segments of agriculture, it must also be recognized that similar adjustments may be required of other segments of the American economy. To the extent that nonagricultural imports into this country may be developed as a result of a high level of domestic business, a high level of world production and trade, and a minimum of restrictive barriers, the necessary downward adjustments in our important agricultural industries may be minimized. Our agricultural and other programs should have sufficient flexibility to make them adaptable to a constructive foreign-trade policy.

"The United States today is the world's leading Nation. As such, it must weigh the consequences of its every action on its relationship to the rest of the world. Our efforts to get other countries to lower trade barriers and to work together for maintaining an enduring world peace will be seriously hampered, if not completely nullified, if this country pursues domestic programs in conflict with our international aims. It is essential that Americans generally recognize these facts."

Members of the committee who attended the April 24–25 meeting were: Homer L. Brinkley, secretary and general manager, American Rice Growers' Cooperative Association, Lake Charles, La.; E. F. Creekmore, E. F. Creekmore & Co., New Orleans, La.; E. W. J. Hearty, E. W. J. Hearty, Inc., New York, N. Y.; Edward J. Grimes, vice president, Cargill, Inc., Minneapolis, Minn.; O. B. Jesness, head, Division of Agricultural Economics, University of Minnesota, St. Paul, Minn.; Paul D. Sanders, editor, the Southern Planter, Richmond, Va.; W. A. Schoenfeld, dean of the School of Agriculture, Oregon State College, Corvallis, Oreg.; R. E. Short, vice president, American Farm Bureau Federation, Brinkley, Ark., and Jesse W. Tapp, vice president, Bank of America, San Francisco, Calif.

Committee members unable to be present were: A. S. Goss, master, the National Grange, Washington, D. C.; Robert F. Loree, chairman of board, National Foreign Trade Council, Inc., New York, N. Y.; W. I. Myers, dean of the College of Agriculture, Cornell University, Ithaca, N. Y.; Edward J. O'Brien, Jr., Edward J. O'Brien Co., Louisville, Ky.; and James G. Patton, president, Farmers Educational and Cooperative Union of America.

Communism

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Chelsea Record, Chelsea, Mass., June 1, 1950:

CHURCH AND COMMUNISM

Far from showing a disposition to pull out of Communist-controlled countries, the Presbyterian Board of Foreign Missions is planning special training for missionaries assigned to such areas, it was announced recently.

Viewing the rise of communism as a new problem for the church, and pointing out that it must be reckoned with in nearly every part of the world, the Presbyterian statement said that Christianity can neither flee from communism nor compromise with it on basic moral and spiritual issues. It must meet man's needs on the spiritual level, where communism has nothing to offer, say these churchmen.

This militant stand, contrasting with an attitude of aloof disapproval of communism, may prove in the long run to be an effective means of dealing with this destructive force. The patience needed in waiting for its results, however, is likely to be monumental.

Biggest Story

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the thirty-ninth article by Mr. Frank C. Waldrop on the infiltration of communism in our country:

BIGGEST STORY

(By Frank C. Waldrop)

For the 10 years from 1929 to 1939, Stalin's greatest political concern was that of killing other Communists who had tried to make a revolution against him because there was no legal outlet for differences of opinion.

Down below the Moscow stratosphere the people of Russia sweated and bled and strained to carry out the 5-year plan of 1928 and its revisions.

This was supposed to make Russia a fairyland of "scientific socialism" and guaranteed material plenty. The mere technical fact that it failed to do so has been overlooked ever since by Soviet apologists.

The Moscow palace wars came about because so many Communists themselves knew this plan was bunk and protested at the harsh and inhumane demands Stalin put upon the people in its name.

The consequential 10-year purge and bloodletting in high places should not be confused with the special and separate issue of Stalin's personal war on Leon Trotsky.

That was simply getting rid of a talented fellow-revolutionary who knew all the tricks of overthrowing a government and had his eye on Stalin's job.

The 10-year purges from 1929 to 1939 had overtones and undertones of Trotskyism, to be sure. But more than that they represented the resistance of ordinary common sense to the rigidity of Socialist planning.

The official records of the world-remembered "Moscow Trials" of 1933–39 contain such staggering evidence as the case of Henry Yagoda, head of Stalin's own secret police. Yogado first killed for Stalin and then was wiped out by Stalin with no thanks for services rendered.

One of the most fantastic Yagodo stories has to do with his use of drugs. He was a chemist. So he impregnated one victim's room with mercury paint to poison him slowly. Another had a bad heart. Yagoda ordered his medicines mixed so as to blow the heart muscles apart.

Karl Radek, once Stalin's favorite newspaper editor, made a confession that to this day has never been fully unraveled in all its peculiarities.

Just one tantalizing allusion concerned the case of Gavril Princep, earlier noted here.

Princep was the utterly obscure and unimportant Serbian student who shot the Austrian archduke, Franz Ferdinand, in 1914 and set off World War I.

Who put Princep up to that? And why, more than 20 years later, would Karl Radek, the old Bolshevik and confidant of communism's chiefest aristocrats, drag him into court as a part of his own defense? This is a challenge to lovers of international mystery and wheels within wheels.

Then, there is the case of Rosengoltz, the commissar of trade, who was exhibit No. 1 of the horrors of being religious in a regime officially atheistic. This same Vishinsky, who is now Russia's Foreign Minister and was until recently chief nuisance at the United Nations, prosecuted him.

Vishinsky confronted Rosengoltz on the witness stand with the charge that when arrested Rosengoltz had in his pocket a piece of bread. Within the bread there was a rolled-up cloth. Inside the cloth was a paper.

And on the paper? Not a coded message from Trotsky. Not a numbers slip, nor even the name of the hottest horse at Laurel raceways. On the paper was inscribed—incredible for an old Bolshevik—a prayer.

Exposed in this criminality, Rosengoltz defended himself by saying that he didn't think anything of the prayer. His wife made him carry it.

In 1933, 1,000,000 Communists were kicked out of the party. On December 1, 1934, Sergei Kirov, one of Stalin's closest friends, governor of Leningrad and specialist in chorus girls, was shot dead in the street.

In 1937 Marshals Gamarnik, Tukhachevsky, and seven other generals evaporated.

It was as if Generals Bradley, Collins, and their chief assistants in our general staff were snatched from the Pentagon and shot in the Justice Department basement.

It took Stalin from 1929 to 1938 to get up the nerve actually to shoot Bukharin, the old Bolshevik mentioned yesterday as the first of the top brass to be fired, but finally he did.

Also, he fired Maxim Litvinov as Foreign Minister in 1939 in spite of 18 years of faithful intrigue in his service.

Litvinov's crime was to have persuaded Stalin in 1934 into the League of Nations and in early 1939 to have favored lining up with Britain against Germany. He was defined as "too western."

But this is getting over into Soviet foreign affairs. Today's account is just a glancing note on the purges at home.

The actuality is too vast and complex and awful for handling in less than a very long book. The important point for now is that all of it was well known to the world at the time. By 1933 Stalin's character stood revealed to civilization as worse than Hitler's.

Yet President Franklin D. Roosevelt, who made a career of denouncing Hitler, took up Stalin. When citizens tried to warn him, he boasted, "Oh, don't worry. I'm an old horse trader. I can handle him."

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 5, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the fortieth article by Mr. Frank C. Waldrop on the infiltration of communism in our country:

BIGGEST STORY
(By Frank C. Waldrop)

Stalin's inability to govern the people of Russia by any peaceable means has been the theme of this chapter now coming to a close.

How many Americans have ever heard of Gen. Anton Vlasov? Today, Vlasov is a scattered handful of dust, lost and forgotten in the shattering upheavals of nations and nationalities that have been the pastime of this century.

But he remains a symptom of the indestructible worm in Stalin's apple.

When the Germans attacked Russia on June 21, 1941, Anton Vlasov was one of the Soviet Army's most trusted high officers. He commanded the whole front just north and west of Moscow.

Hitler's first, whirling attack, as the public record shows, carried the Germans deep into the best of Russia. In fact, German scouts actually got close enough to Moscow to take a long-range photograph of it.

And General Vlasov? All he did was lead an army of 100,000 Russians over to Hitler. Next, he set up at Brest-Litovsk in Poland where the first German-Soviet treaty was made by Trotsky a generation before, and began a radio campaign calling on the Russians to come one and all, over the line.

Did they come? Well, Americans landing on the Normandy coast on D-day found thousands of Russian troops in the German defense lines.

They were fugitives from Stalin who preferred Hitler.

And one of the great problems of resettling civilization in Europe at the war's end was that other thousands of Russians who had escaped the iron curtain in the confusion and refused to go home.

Can you name any victorious nation in history—in all human history—that has had such a problem?

That its citizens, in victory, would choose wandering the face of the earth rather than to go home?

Can you imagine two States of our Union having been so disloyal if we had been invaded in 1941, as to have their constitutions jerked as soon as Washington could get around to it?

Well, that happened in Russia.

In September 1941, the Volga-German Autonomous Republic of the U. S. S. R. was dissolved. The "Germans" had been Russians for 200 years, but that wasn't long enough for Stalin.

In 1945, the Crimean Autonomous Republic was also bounced. Too many citizens had gone over to Hitler during the occupation.

As a matter of fact, serious students of the German operation contend that Hitler could have won Russia altogether if he had not been so orthodox a Nazi.

In the first fighting of 1941 the German military had the complete dissolution of the Soviet Empire well under way.

The German Army's target was the Russian Army. And it had that army badly whipped and on the run. The civilians left in the wake of the fight were little worse off than before. In fact, a number of German military governors were having excellent success with them—better than we have had in Germany, as a matter of fact, according to much evidence.

But in 1942, the Nazis took over from the military governors and were so cruel and stupid, politically, they drove Russia back into Stalin's arms.

In a way, it was repayment to Stalin for having in 1933, driven Germany into Hitler's.

The revolution Stalin had predicted and undertaken for the world in 1929 had been a catastrophe for mankind, but no success for Stalin.

The United States of America had eluded him, as he had been warned before the attempt by Communist delegations from this country.

In Germany, the Communists from 1930 on collaborated with the then insufficient Nazis, to destroy the Weimar Republic that had already too impossible a task put upon it by the cruel and Draconian peace of Versailles which the United States of America, to its eternal honor, had refused to sign in spite of Woodrow Wilson's bullying.

At Stalin's order, the German Communists precipitated for the second time after 1918 a revolutionary crisis.

The result was Hitler, so many Communists turned Nazi.

They supplied a theory and doctrine for what otherwise was just a brutish rabble, and the spirit of their doctrine evolved straight from Marx and Lenin.

Never forget Nazi was an abbreviation for National Socialist Party.

Finally, Stalin by 1933, had a revolutionary crisis of his own at home. Factories were idle. Farmers were idle. People were in revolt all around him.

Suddenly there came a call from over the sea from F. D. Roosevelt, Stalin was saved.

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 5, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the forty-first article by Mr. Frank C. Waldrop on the infiltration of communism in our country:

BIGGEST STORY
(By Frank C. Waldrop)

The historical facts of Mr. Roosevelt's secret maneuvering on Soviet recognition in 1933 are at last beginning to come out, and as in all his other transactions with Stalin, the facts devastate his reputation.

It is well known to all in Washington who have survived the Roosevelt dynasty that the late President was preoccupied with fixing records in such a way as to glorify his imperial memory in the histories.

He is the only President of the United States ever known to do such a thing as set up a museum and library of his career papers, carefully arranged and edited with the utmost precaution to guide the thinking of those who would undertake to evaluate him in time to come.

But for all his precautions Mr. Roosevelt failed to bar the gate against the record.

I happen to know of one eminent personage who is even now writing his memoirs. This personage has an impeccable standing, both as to his character and as to his knowledge of the facts.

He has decided to spill the beans under the provocation of the frauds and the distortions that attempt to make Roosevelt's record on Russia something that it is not.

His book is well on its way, and it is nonpolitical, literal, and personal. But it is prejudiced. It is prejudiced toward the facts.

It is going to make some liars' faces red, for they cannot successfully challenge either the veracity or the personal experience and knowledge of the personage involved.

Out of respect for him and his position, I am going to cut off on this matter right here, except to say the gentleman in question has never run for public office in his life, but politicians all over the civilized world—and Stalin as well—know him and know that what he writes has the support of indisputable fact.

His memoirs will be in print within the year, I am told. The manuscript is already going through a final revision. I mention this just by way of seeing how much hog's caution is left between the ears of current so-called historians.

These have given themselves up to propagandizing for the Roosevelt dynasty instead of reviewing objectively the things that have actually happened in the U. S. A. under that dynasty's malign and disastrous abuse of power.

If any such historian reads this, and can guess the identity of the personage now preparing those memoirs for publication, the said historian will not be the best of company for his wife and family, hereafter.

And so now we turn in this series to the final and worst chapter of all, the experiences of the American people brought down upon them like the plagues of ancient Egypt and the afflictions of Job, by Mr. Roosevelt's granting of diplomatic status in this country to the Communist conspiracy against civilization.

Mr. Roosevelt took office, you will remember, at a time of wildest fear and panic. An assassin had almost shot him a short while before. The banking system of the Nation was utterly jammed and stalled.

Very few people indeed even heard, let alone heeded, the obervations of careful and nonpolitical economists who said that the United States of America was already coming out of the depression of 1929.

Whoever wants an insider's account of Mr. Roosevelt's temperament and behavior of those times will enjoy Raymond Moley's After Seven Years.

Mr. Moley was chief of staff of the original brain trust. But he didn't last long, once his master was in office.

His precise and devasting record of the goings-on of the times will tell you why.

At any rate, whoever was around here then can remember that 1933 was a time of excitement and a feeling of impending change such as Washington had not known in the memory of the oldest inhabitant.

As for me, I was as excited as anybody. At the start of this series I told how I met up with communism in New York City in 1930 as a very young, undeveloped reporter.

By the time I got to Washington, July 31, 1933, I was a little more experienced and I was beginning to realize that some influence utterly revolutionary really was taking hold in the United States of America.

Something was making people restless and dissatisfied with the Constitution that laid down the rules of the American game. Something was drilling into the heads of public officials that means could be excused if only they would profess ends that appealed to popular ideals.

The only necessity was to disguise the means, when these were unpopular, and to label a governmental bludgeon as a feather.

Then, perhaps, the people would not feel its blows.

It was in this climate of Rooseveltean deceptiveness that Communists and their friends undertook their campaign to obtain official United States diplomatic recognition for Stalin's dictatorship.

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 5, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the forty-second article by Mr. Frank C. Waldrop on the infiltration of communism in our country:

BIGGEST STORY
(By Frank C. Waldrop)

Would you say that William Green, head of the American Federation of Labor, has more sense than Justice Felix Frankfurter and a whole shoal of professors?

Well, get a copy of the New York Times for January 30, 1933 and look on page 4.

There, you will find what Green had to say about United States recognition for the Soviet Union.

Alongside it is the position of the professors. Frankfurters position was, as usual, given in secret, but in a few paragraphs I will tell about it.

Here is what Green said:

"It is the opinion of the officers of the American Federation of Labor that upon the question of recognition of Soviet Russia the issue is clearly drawn."

On the one side, he said, were those who "seek to cherish and foster American principles and to preserve American institutions."

On the other, "those who would risk all that our citizenship has gained through almost 200 years in experimentation in the principles of free government for a probable and uncertain increase in the sale of American commodities."

He was talking about the propaganda campaign of the day, so reminiscent of the first Soviet campaign over here in 1918–20, that if the United States of America would only let down the bars it could do business with Stalin.

Said Green:

"This argument is not influencing and will not influence the judgment and opinion of American labor in favor of Russia, Russian recognition or Sovietism."

Green held that until the Soviet Union had abandoned its program of world revolution, its operations in the United States of America, and had adopted the principles laid down by Charles Evans Hughes when he was Secretary of State, the American Federation of Labor would fight recognition in every way.

Now that was statesmanship on the part of old Bill Green, I submit. Yet the Soviet was recognized, and the labor movement in the United States of America was riddled and racketeered and used by communism in a generation-long operation that is not finished even yet.

But even, so, the record as above emphasizes once more, as I have tried to show from the beginning of this series, that communism in the United States of America is not a labor movement.

It is a drive for power by maladjusted intellectuals, idle rich who cannot find useful work to do, and by neurotics of all varieties.

For instance, right on the same page with Green's declaration in that same New York Times you will find a story headed:

"Two hundred and sixty eight colleges join in plea for Soviet. Eight hundred faculty presidents and faculty members urge Roosevelt to press recognition. Status held peace peril. Petition started by Fellowship of Recognition also holds curb on Japan is prevented."

Among the signers of the petition were such famous educators as William A. Neilson, Robert Morss Lovett, Sidney B. Fay, Manley O. Hudson, John Dewey, Nathaniel Peffer, George S. Counts, William H. Kirkpatrick, Marion E. Park, William I. Hull, Ernest Minor Patterson, Thomas Woody, Benjamin H. Williams, Alva W. Taylor, John R. Commons, Alex. Meiklejohn and E. A. Ross.

Prof. Reinhold Neibuhr was chairman of the "Fellowship of Recognition," but he wasn't the real brains. As usual, the Communists had a front man and a hidden manager.

I have the story of the fellowship from the man who organized it, J. B. Matthews.

Matthews eventually became director of research for the House Committee on Un-American Activities and has given his life ever since to showing Americans what communism really means. Matthews tells me:

"I worked for many months as executive secretary of the Fellowship of Recognition on this petition for the recognition of Soviet Russia.

"Among those whom I personally solicited was Prof. Felix Frankfurter. He sent word back that we should kill the campaign and the press release, inasmuch as he had the President-elect in his vest pocket and could guarantee recognition."

Among those who helped him get signatures, said Matthews, was Margaret Lamont, wife of Corliss Lamont, the son of Thomas Lamont, member of the House of Morgan and one of America's most famous bankers.

And there you have a comparison between the American Federation of Labor the American intellectuals and Mr. Felix Frankfurter, as the stage was being set in 1933 for F. D. Roosevelt to turn the Communists loose on the United States of America as never before.

Reorganization Plans

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 5, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Daily Evening Item, Lynn, Mass., June 1, 1950:

STREAMLINING GOVERNMENT

Vital streamlining of the Federal Government still has a long road to travel.

Thanks to a late spurt in Congress, we made more progress this year than it seemed we would. But that doesn't obscure the fact we should have done a lot better.

In one big batch President Truman submitted 21 reorganization plans, most based fairly closely on the recommendations of the able Hoover Commission which studied the problem exhaustively. The Senate killed 5 and the other 16 are now in effect.

Offhand that score looks good, but the results need to be analyzed a little. Former President Herbert Hoover, who headed the Commission, says only 1 of the 21 plans calls for major surgery on a Government department. That's the one putting the Maritime Commission into the Commerce Department.

The Hoover group recommended 19 major administrative shifts. Three others, besides the Commerce Department change, have already been approved. They include reorganization of the State Department and unification of the armed services. But that still leaves 14 to be acted on.

Not until these are instituted can the Government begin to realize the efficiencies and economies promised from this great streamlining program. Saving of perhaps $3,000,000,000 annually depend on carrying the plan to completion.

Mr. Hoover does not appear to be worried because some of Mr. Truman's proposals vary from the Commission's. "The President has the right and duty to present his own ideas in these matters," he says.

What does trouble Mr. Hoover is the kind of opposition some plans have aroused. Proposals for realining the Treasury, the Agriculture Department, the Interstate Commerce Commission, and the Federal Communications Commission were killed. Mr. Hoover is said to feel pressure groups worked hard against reforms that would affect them, while shouting loudly for all the others.

Toward all of these the Senate and House should take a constructive, statesmanlike attitude. If they do not, congressional spouting about Federal waste and inefficiency will have an empty sound for a long time to come.

Our Economic Advisers

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, June 5, 1950

Mr. JENKINS. Mr. Speaker, there is no question that the confusion in Washington extends to every department of the Government. Likewise, there is no question that the most serious confusion manifests itself in the White House.

The president has surrounded himself with economic advisers who are noted for their advocacy of wild, radical theories. Leon Keyserling is now the President's chief economic adviser but his theories are not consonant with the theories that made America great.

I see that the President, no doubt upon the advice of Keyserling, has added to his Council of Economic Advisers one Roy Blough who was formerly connected with the Treasury Department in the days of Secretary Morgenthau and Randolph Paul. In those days, as I remember, Roy Blough and Randolph Paul were the principal advocates of placing a tax on spending. They evidently felt that with the income tax taking practically all the money that many people had left after keeping their families that the Government should then proceed immediately to tax every item that the citizen spent. Think of that; taxing spending with a tax on earnings and a tax on spending how far are we from socialism?

Mr. Speaker, I repeat, the White House surely is confused.

The editor of the Athens Messenger, which is published in the district which I have the honor to represent, recently published an editorial in line with what I have said. The editorial is as follows:

DANGEROUS ADVISERS

There is a group of advisers to President Truman called the Keyserling group, none of whom have ever had any successful business experience, but whom the President considers experts on economics. It is probably the most important radical group of people steering this country further and further into a

chaotic condition because their belief is that printing-press money and government subsidy is the way to prosperity.

The Keyserling group says that profits are too high (even while it counts on siphoning off the greater part of profits by taxation, wherewith to continue the Government's wild spending) so the profits must be decreased by increasing the expense of doing business.

The group says that wages should be raised, to decrease profits; that prices should be further raised, but not enough to cover increased costs. They claim that Government deficit is a good thing—that it is O. K. to spend more than is received. The Keyserlings plan to so conduct the Government that these ideas will be realized, so that more inflationary conditions will exist, bringing greater trouble to readjustment, which is inevitable.

They justify this crazy reasoning with their "purchasing power theory" which says that the Government will pump money, one way or another, into the hands of the greatest number of people, who, of course, will spend it for goods and services. This stimulates business, everything expands automatically, and everybody thinks it is just dandy, and votes for more of the same stuff.

The theory is just like the rat-and-cat farm, where rats were to be raised to feed the cats, whose carcasses (after skinning) were fed back to the rats, the product of the project being cat skins. Supposed to economics in perpetual motion, if anyone asked about the market demand for cat skins, the whole thing showed up for the joke it was.

One high Government official feels, however, that such phony economics as the Keyserlings feed to the President all the time is not reasonable. He holds, on the other hand, that the faults of our Government come from the failings of the Members of the House of Representatives and the Senate, who, in too many cases are unwilling to represent the people correctly because they think more of holding onto their jobs and playing smart politics than they do of the country's welfare. He advocates a replacement-of-Congressmen campaign, to put new life and guts into the national legislature.

That, of itself, would be a good idea; that is, get enough capable men to run for congressional seats opening throughout the Nation, to put a new complexion in Congress. But, how long would it be before the new Congress would follow dangerous radicals like the Keyserlings, too?

Soil Conservation on Indian Lands

REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1950

Mr. JENSEN. Mr. Speaker, as all my colleagues know, I have long advocated proper and effective soil conservation for America. I have also constantly insisted that the Indian service practice more soil conservation on the Indian lands of our country, especially on such as the Navajo Reservation.

I have in my hand a letter from a soil conservationist, Mr. Flory, who handles soil and moisture conservation for the Indian service. It proves conclusively that the most effective thing this Congress can do for our Indians in order for them to go forward and have a higher standard of living is to see to it that their soil is conserved and that it is made more fertile.

Mr. Speaker, the Indian problem will confront us so long as they are left to eke out a bare existence between the weeds and rocks and dry dust, that is a certainty.

The letter referred to follows:

BUREAU OF INDIAN AFFAIRS,
BRANCH OF SOIL CONSERVATION,
May 3, 1950.

To: All Soil and Moisture Conservation employees.

Subject: Zeal and fire that will not falter or tire.

I cannot refrain from passing on to you the lift I got on my last field trip from an Indian farmer on a brushy, rocky, steep, small mountain farm. This man was about 50 years old. His family had been raised and had left for homes of their own. During all this period he had struggled with the slopes, the rock, and the brush in producing meager crops for a precarious living. His pastures were weedy, brushy, and of low-carrying capacity; his buildings and fences were dilapidated; and then, within the past 2 years, something happened. He was sparked by the zeal and enthusiasm of an understanding soil conservationist who has his hands in the earth. This Indian's eyes had a light in them that had never been there even as a youth because he was making a tired old farm live. He and the farm were being vitalized together. There is no doubt that the remaining years of his life will be richer and more exciting than all the past. He now knows what to do. He has a plan—a farm plan—made for him and his farm. He is confident of the response of the good earth. Evidence of his enthusiasm was at every turn. He had cleaned the brush and rock off his land; he had limed and fertilized it according to its needs; he was using each field according to its proper use. He had planted the best pasture mixture known. He was proud as Punch with the rich mixture of Kentucky 31 grass and ladino clover that had replaced the broom sedge, brush, and poverty grass on his steep hills. His eyes glowed with pride as he pointed out his contented fat cattle and hogs enjoying this luxurious repast. He had planted the best improved varieties of hybrid corn. He had repaired his fences and buildings. He was modernizing his home and was anxiously awaiting the coming of electricity this summer.

This man is on his way. He is not going to need much help any more, but what a shame that he was frustrated in his farming efforts during the most productive years of his life. What of the great numbers of young Indian men to whom land is available, who are indisposed, or apathetic toward using their land? Most of them don't know what they could do or how to do it. All they need is a sparking. Many of our SMC boys are giving that essential spark. Are you? Do you look over your work area and evaluate yourself in terms of people you have helped and inspired to a better way of life by getting them to work in harmony with nature, rather than against all her laws? It's like striking a spark from flint to tinder. Start the fire and it will go on and on, opening up constantly new excitements, new curiosities, and new stimuli for the rest of an existence. Curiously and happily, each such experience will carry you along also to greater heights of satisfaction in knowing that you had a small part in making a life more complete and in conserving and improving another bit of land for posterity.

The Indian lives closer to nature, understands more of her moods, and tries to accommodate his life and actions to her moods to a much greater extent than most other people. Great numbers go miles and miles to listen to Indian chants, watch the dances, and yet understand practically nothing of what the Indian is trying to portray. Few realize that what he seeks in these chants and dances is to become a part of nature, rather than view it as something apart like most of the whites do. His voice lifts to a shrill falsetto, then descending quickly to the deepest notes, repeated over and over to the timing of drums, tunes in with the sounds of the wind; the rising and falling sounds of water rushing downstream, the music of the stars. Nature's voice speaks to him and he joins his voice with it.

Do we know the fundamental, scientific facts of plant and animal nutrition, plant physiology, and plant ecology? Are we close enough to the land ourselves, and are we endowed with the intelligence, human understanding, zeal, and fire to make our knowledge an effective tool in the hands of the tiller of the soil, to use his land in harmony with nature?

A gratifying percent of SMC workers have the above attributes. I am inspired by their enthusiasm and their works on every field trip. This is to give them approbation and encouragement. There are, however, others who have missed the greatest satisfaction and remuneration a conservation position with Indians offers, because they have not caught this spark, and, consequently, cannot pass it on or warm themselves in its kindled warmth. They see obstacles instead of goals or heights to attain, but strangely, all the boys with the spark had the same obstacles but took them in their stride. The stumbling block to the diffident is a stepping stone for those with the zeal and fire that does not falter or tire.

Remember, we are not succeeding in conservation until a folk knowledge, a behavior, or cultural pattern of conservation, is firmly fixed. When the Indians in your area practice conservation from habit, then they have attained full stature as farmers and citizens.

EVAN L. FLORY,
Chief, Branch of Soil Conservation.

The SPEAKER. The time of the gentleman from Iowa has expired.

Lynn, Mass.

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article which is the thirty-third of a series of articles appearing in the Daily Evening Item, Lynn, Mass., June 1, 1950, on mayors who have served the city of Lynn, Mass., during the 100 years since Lynn became a city in 1850. The series is being written by Lawrence J. Quirk, whose grandfather, the late William P. Connery, Sr., was one of Lynn's most colorful mayors 40 years ago. Mr. Quirk is an honor graduate of Suffolk University and has had extensive experience as a newspaper and free-lance writer:

MAYORS OF LYNN, 1850–1950

(By Lawrence J. Quirk)

William P. Connery, thirty-third mayor of Lynn and the first to serve under the commission form of government, was one of the most beloved and respected men in the city. Known as the sage of Connery's Corner,

he was a man who was not afraid to fight all the way, whatever the personal sacrifice, for the principles he held dear. He willingly passed up numerous opportunities to make a fortune because he would not yield an inch to expediency.

A true and sincere crusader for total abstinence, he was for years a one-man membership committee for the famous old Father Mathew organization and brought hundreds of men into the society's Summer Street quarters to take the pledge. He was one of the foremost original members of the Anti-Saloon League organized by the Rev. Ralph Ward, now a Methodist bishop, of which he was treasurer.

Mr. Connery fought for progressive civic reforms and improvements for many years, making pithy pronouncements on all important questions of the day from his coal office at Connery's Corner, Pleasant and Wheeler Streets, where men of all classes and creeds were wont to congregate. His friends often called him too charitable for his own good. He gave unstintingly. Many a poor family found coal in its cellar without ever receiving a bill, and he thought nothing of taking off his rubbers or overcoat and handing them to a man in need.

A picturesque and colorful personality, he was noted for his philosophical wit and enlivened many a gathering with songs and dances from the extensive repertoire he had built up during his early minstrel touring days as Billy Barlow. As a speaker he was sincere, forceful, and persuasive, taking his audience straight to the heart of the matter under discussion with a meaty, pertinent statement of the facts as he saw them.

Elected alderman in 1901, at a special election to fill the vacancy caused by the death of Alderman Charles C. Fry, he immediately projected himself into the Walden Pond Dam controversy then raging. His fighting speeches resulted in a subsequent investigation of the contracting methods employed in that project. He loved the political game, its stimulation, its variety and challenge, and he always counseled his sons, William P. Connery, Jr., and Lawrence J. Connery, who later represented the Seventh District in Congress from 1923 to 1941, to "fight hard, but fight clean, and be honest at all costs."

Mr. Connery was personally responsible for launching the political career of many a noted city, State, and national figure, and if he thought a young fellow had the right stuff in him, he would put him through his paces in the best Connery's Corner style. He was known in Lynn as "The Father of Grade Crossing Abolishment," talked about the question constantly and kept it before the public, and while alderman battled at every turn for its serious consideration.

During his term as mayor, the overhead passes of the Boston and Maine Railroad were finally completed, though he had argued for a subterranean tunnel in the Central Square area as a better solution to the problem. He did, however, win out on the matter of keeping Silsbee Street open, and forced the building of an underpass to maintain the continuity of that thoroughfare.

Under the commission form of government, which went into effect at the start of Mr. Connery's term, in 1911, the mayor served also as Commissioner of Public Safety, along with four other commissioners, elected respectively for finance, public property, streets and highways, and water and water works. Mr. Connery was an eminently constructive and forward-looking mayor, strictly honest in all his dealings, and kept a firm hand on all city departments, notably the police, which he turned into an outstanding law enforcement agency which cut to a minimum all vice and crime in Lynn.

Motorcycles were first purchased at this time for police use, and Mayor Connery authorized the motorization of the fire department, for which new equipment was purchased and a two-way engine house constructed in the Highlands. A new Breed's Pond dam was built, increasing the water storage to 1,700,000,000 gallons, and several new pumping stations were constructed.

The school system was regraded and a kindergarten subprimary class was established. The Master Chase Schoolboys Association presented a fountain to the Whiting School in memory of the famous schoolmaster, Henry L. Chase. Classical High School was dedicated in June 1911 and the Brickett School was completed the same year. Many three-to-six tenement blocks were erected at this time, and a number of new factories went up.

The Lynn Tuberculosis Sanitarium was established late in 1911 as part of a program initiated by Mayor Connery's administration for the protection of public health. A 60-cent reduction was effected in the tax rate, which resulted in the coming of new manufacturing concerns to Lynn, and Mayor Connery's administration urged further reductions if they could be brought about without sacrificing important public services and improvements.

Other events of the Connery administration were the founding of the new Catholic parish of St. Pius in East Lynn, under the pastorate of the Reverend John P. Gorham; two serious fires, one at the Brett Lumber Co. building and the other at East Lynn Odd Fellows Hall; the renovation of the interior of city hall; the installation of city motorboats on the ponds for the protection of children swimming; and the erection of fire escapes on the exteriors of a number of school buildings.

Mayor Connery was born in Lynn, on Rockaway Street, on October 15, 1855, and attended the Lynn schools, after which he went on the stage, touring the country with enormous success as a singer, dancer, and monologist under the name of Billy Barlow. He later returned to Lynn, and in 1879 started a coal business. In 1882 he was married to the former Mary T. Haven, and in 1887 moved from his Alley Street residence to the famous Connery's Corner, Pleasant and Wheeler Streets. Afterward he constructed a home at 8 Wheeler Street while continuing to conduct business on the corner.

Active since 1876 in all worth while political movements in Lynn, he was alderman in 1901, a Democratic Presidential delegate from Massachusetts in 1904, and in 1911 and 1912 mayor of Lynn. He retired from the coal business and moved from the corner in 1915. He made his home on New Ocean Street until his death on November 24, 1928. He was the father of six children, the youngest of whom is the mother of the author. Connery Playground, in the heart of the brickyard he loved so well, was dedicated to his memory.

Constitutional Liberties Endangered by World Government Proposals

EXTENSION OF REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1950

Mr. RICH. Mr. Speaker, under leave to extend my remarks, I include the following editorial, which was published in the Retired Officers Bulletin, June 15, 1950, volume 6, No. 3, entitled "Constitutional Liberties Endangered by World Government Proposals":

CONSTITUTIONAL LIBERTIES ENDANGERED BY WORLD GOVERNMENT PROPOSALS

"He who sacrifices his freedom for security, loses both."—Benjamin Franklin.

Legislatures of 22 States have signified their approval of world government which has for its purpose to develop the United Nations into a world federation. Thirty-two States—only 10 more—can force Congress to call a convention with a view to amending the Constitution. Such an amendment, if ratified by 36 States—only 14 more than those now approving—would not only change our Constitution, but our entire way of life.

House Concurrent Resolution No. 64, Eighty-first Congress, reading: "*Resolved by the House of Representatives (the Senate concurring)*, That it is the sense of the Congress that it should be a fundamental objective of the foreign policy of the United States to support and strengthen the United Nations and to seek its development into a world federation open to all nations with defined and limited powers adequate to preserve peace and prevent aggression through the enactment, interpretation, and enforcement of world law," was introduced June 7, 1949, and hearings thereon were held October 12–13, 1949. The testimony given is contained in a publication of 292 pages. That resolution was sponsored by a total of 101 Representatives from 33 States.

Senate Concurrent Resolution No. 56, similar in import to House Resolution No. 64, was introduced July 26, 1949. It was sponsored by 19 Senators from 17 States. Hearings on the Senate resolution were begun, but not yet completed.

Also most alarming is the existence of a committee composed of 11 professors who have drafted and promulgated a world constitution. Six of those drafters are from the University of Chicago, while the remainder are one each from Harvard, Cornell, Stanford, St. Johns, and Toronto. It was their draft of a world constitution which was introduced at the Senate hearings, and may threaten the Constitution of the United States.

Proponents of world government claim it would eliminate chiefly the threat of future war, yet they fail to show that wars cannot be prevented until the causes of war are removed. Certainly any program that could end major wars appears meritorious, but let us not be misled by plausible reasoning and alluring arguments. We must face political realities and consider what requirements world government would impose upon us, the leading free nation in the world today. They would: (1) Abolish our Federal Constitutional liberties; (2) destroy our national independence and sovereignty; and (3) practically enslave over 2,250,000,000 people comprising the world population.

Moreover, a world constitution would supersede our Federal Constitution, eradicate the tripartite division of our Government, take away our constitutional system of checks and balances, obliterate the office of President of the United States, and erase our Supreme Court.

Were it not for the temporary success of Mein Kampf and the present socialistic plight of England, Russia and China, the beguiling scheme outlined in the world constitution, and which would subvert our Federal Constitution, would not be worth serious consideration.

But past events require that we be alert. The one worlders have already been successful in influencing some of our State legislatures and numerous Members of the Congress. There is no way of determining how many more might succumb to their subtle efforts, and it is timely, therefore, to point out that this so-called world government plan would further work havoc with our Senate and House of Representatives, and doom our Bill of Rights.

A few more of its serious consequences would admit of arbitrary searches and seizures, unfair trials, excessive penalties, ex post facto laws, the curtailment of free speech, and liberty of the press.

Just what would we do if called upon to answer for a capital or infamous crime with-

out a presentment or indictment of a grand jury? Or be twice put in jeopardy for the same offense? Or be compelled to be witness against ourselves? Or be deprived of property without due process of law; or have it taken for public use without just compensation?

Under such a sad state of affairs, one might possibly be arrested and even denied a speedy public trial by an impartial jury; or even kept in ignorance of the nature and cause of the accusation. Perhaps the accused would not be confronted with witnesses against him, nor would he have means of obtaining witnesses in his favor. Excessive fines might be ruinous; bail prohibitive. Cruel punishments could be inflicted; even the privilege of the writ of habeas corpus might be suppressed.

Through the liberty exercised properly by our free press, we have learned recently how those things are now being done in other countries. Thus they are not merely remote probabilities; they are cold facts which would confront us, if we chose that system of justice—or, rather the lack of it. Under "World Government" mind you, there would be no Federal Constitution, as we know it, interpreted by an independent judiciary. The individual freedoms upon which our country was founded would be lost. Gone also would be the freedom of thought which their current news inspires.

The power to lay and collect taxes would pass from our Federal Congress to the "World Government." Understandably, that would admit of unlimited taxation. The power to tax involves the power to destroy. The power certainly should not be vested in those who may wish to exploit our resources.

Socialist planned economy as suggested by the world government constitution would wreck our present economic system. In that connection, they would have the power to administer a world bank, establish fiscal agencies, regulate the value of money, issue currency, and control credit. In short, property values in the United States would be imperiled, and the economic welfare of our people, especially those dependent on retired pay and annuities, impaired.

Boundary lines, which are now within the jurisdiction of the Supreme Court to fix, would come within the powers of the world government. Possibly all existing State boundaries in our country would be eliminated or reoriented. In that event, the present distinction between State and National Government would be obliterated. Pride of State would be lost; for that matter of what country would our people be citizens?

No religious guaranty is contained in the world constitution. Obviously, that omission would not bother the Communists, but what would become of our Christian religion in the absence of our constitutional guaranty of religious freedom? Religious effort might be abolished. What, then, would become of our moral standards, and equally important, our spiritual values? Experience has proved that when people are once deprived of the freedom of religion, the loss of other freedoms follows fast. For when you destroy faith, you destroy the roots of human decency. Search for confirmation of that principle need extend no further than an examination of the effects atheism has wrought behind the iron curtain in Russia.

What also would become of "We, the people of the United States"? The world constitution dictates that we become the ward and pupil of the world commonwealth. Are we, the self-sufficient people of these United States to be reduced to the condition of needing a guardian?

An objective of world government is to fuse into a whole the many diverse groups of mankind, regardless of their peculiar customs, characters, and religious or racial differences. Within 3 years after the foundation of world government it would prescribe one language to be spoken, one unit of currency to be used, a single system of weights and measures, and a universal calendar. That visionary document is discreetly silent as to how a satisfactory universal language would be evolved, how it would be taught to the various language groups, or whether it would be accepted.

A further proposition is that world government would supervise and approve all laws concerning the movements of people, both as regards emigration and immigration, including the issuance of passports. That admits of a probability and even the possibility, if you please, of our eventually having an oriental population in lieu of one predominantly Aryan.

World government would take over the regulation of commerce which the Congress now supervises. Thus it is not difficult to figure out what might become of the agencies of the Federal Government charged with the regulation of commerce—foreign and domestic. The question should be asked: How can a super-government expect to succeed in such matters when our present Federal Government finds its own reorganization so difficult to attain?

With respect to representation under the plan for world government, the two and a quarter billion world population would be entitled to 2,250 delegates in its federal convention. Our representation would be about 150 delegates. Present party conventions would, of course, be a thing of the past. A world-government convention would be divided into nine electoral colleges, with each nominating three candidates. From that total of 27, three men are selected, and the one receiving a two-thirds majority is elected president.

The 9 electoral colleges select 27 men. Nine lists are presented to the convention by the nine colleges; thus making the membership of the world council of 99 men. In those men would be vested the power to enact legislation for the world republic. The president and the world council would then proceed to establish: (1) a house of nationalities; (2) a senate; and (3) an institute of science, education, and culture.

The world constitution places supreme judicial power in a grand tribunal composed of 60 justices; the chief justice being the world president. Those justices are appointive by the president for a tenure of 15 years. Five justices would be assigned to each of the five benches.

What they designate as the supreme court consists of seven justices; one selected from each of the five benches, with the chief justice (world president) as chairman, and the chairman of the world council as vice chairman. There are no constitutional provisions that the justices be learned in law, no limitations as to age, or that they are expected to follow precedent so that the law shall have any degree of certainty.

A tribune of the people is provided to represent the minorities. He is selected by a secret vote in their federal convention, but is not a member of the council. His official tenure is for 3 years. Allegedly his main function is to defend the natural and civil rights of over 2,000,000,000 individuals. Naturally, there could easily arise linguistic difficulties, and there would certainly be varied interpretations of right among the many diverse groups.

The world constitution provides for a chamber of guardians, with the president as chairman, and six councilmen elected for 3-year terms. That chamber would control all appropriations for the budget of peace and defense. The president, being protector of the peace, is deemed the proper leader of the chamber. The armed forces of the world republic would be under its direction. It would have a general staff and an institute of technology, which would determine the technological numerical level to be set as limits to the domestic militias of the single communities or states, or the unions thereof. Armed forces and the manufacture of armaments beyond the levels thus determined would be reserved to the world government. Officers holding professional or active rank in the armed forces of the federal republic, or in the domestic militia of any competent unit, would not be eligible as guardians.

World government jurisdiction would extend to the judgment and settlement of any conflicts among the competent units, with a prohibition of recourse to violence. Its authority would extend even further to the organization and stationing of the Federal Government Armed Forces, as well as to the limitation and control of weapons and of domestic militias in the component units.

It is at this point the claim is made that war can be outlawed and that peace must be universally enacted and enforced. Ironically, that is to say that they shall have peace, even if they must make war to secure it—a self-contradictory policy that runs counter to the lessons of history.

Thus, to world government would be given the power to prohibit the possession by any nation of armament and forces beyond an approved level, arbitrarily deemed to fit requirements. Just what would become of the existing military establishments of this or other countries is not set forth in their guiding manual. That same world government would likewise be empowered to provide armed forces, as may be deemed necessary, for world law enforcement.

Should our Government ever become involved in world government, our present Federal Constitution would, as stated previously, be superseded, and our control over our own armed forces would be lost.

Consequently, the power of our Federal Government to provide for the common defense of the United States, to support, increase, or reduce the strength of our armed forces, and to conscript, would terminate.

Our Congress would have no authority to call forth the military to execute or enforce our laws, or to suppress insurrections or repel invasions. All national defense statutes now in force would no longer be operative. No difference would continue to exist between the Regular Army and the militia, as the forces of world government would supersede both. The Congress of the United States, if one existed in those circumstances, would be powerless to provide for the organizing, arming, and disciplining of the militia, or even governing that portion employed in the service of our country.

No longer would we have our own President, with his status as Commander in Chief of our Armed Forces, whose authority it now is to direct the over-all movements and procedures of those forces.

Doubtlessly, the present constitutional right of our people to maintain and bear arms, within limits, would be infringed, and the consent of home owners would have no consideration when the world government might desire to quarter troops in private dwellings.

What would become of the glorious traditions of our armed services? Would our fine service academies pass into history? Could there possibly exist any feeling of security, defensively or otherwise, for the people of our country? Obviously, we would have to abandon the constitutional and statutory right of self-defense once we became a part of world government. Possibly we might be placed at the mercy of a powerfully armed international mercenary force responsible only to whatever clique of Asiatic or European politicians might be in power in the world government at a particular moment.

Furthermore, the world government would have the sole right to organize and dispose its forces. To that extent our sons would become slaves of the world state. The atom and H bomb would be taken over with our gold.

Remember, at least 101 Representatives and 19 Senators and 22 States have already

approved of world federation, which now has a world constitution to guide its activities.

Abraham Lincoln, whose great character is graphically portrayed in the front cover picture of this issue, once said: "You can fool all of the people some of the time, and you can fool some of the people all of the time, but you can't fool all of the people all of the time."

Let us not fool ourselves concerning the grave implications of this impractical dreamer's paradise. There are serious dangers lurking behind every facet of its structure that should be exposed. Experience has taught us to beware.

We gained our rich national possessions and our way of life the hard way and, if need be, we will preserve them in that same determined manner.

A significant remark once made by Grover Cleveland, which is as true today as when it was spoken, is that: "A government for the people must depend for its success on the intelligence, the morality, the justice, and the interest of the people themselves."

Accordingly, it is for all those who subscribe to the views herein stated to do everything within their power to bring this important matter to the attention of every person devoted to the preservation of our liberties, freedoms, culture, and institutions; lest, under the terms a world government would impose, they be taken from us, to be restored not again.

(EDITOR'S NOTE.—The views of this association expressed in the above article are based largely upon the researches and writings of the distinguished American jurist, Dr. R. J. C. Dorsey, LL. B., LL. M., M. DIP., M. P. L., D. C. L.)

River Development in New England

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 5, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following self-explanatory letter from the Honorable Paul A. Dever, Governor of the Commonwealth of Massachusetts:

THE COMMONWEALTH OF MASSACHUSETTS,
EXECUTIVE DEPARTMENT, STATE HOUSE,
Boston, May 13, 1950.

Hon. THOMAS J. LANE,
House of Representatives, Congress of the United States, Washington, D. C.

DEAR CONGRESSMAN LANE: I am writing to emphasize and underscore the statements contained in President Truman's recent message to Congress related to river development in New England.

The provision for New England river development, as contained in the rivers and harbors bill, falls far short of meeting the normal and justifiable legislative requirements of New England for its river development. New England industries are starving for cheap power. New England agriculture has never had the benefit of Federal development of our streams for flood control, irrigation, and soil conservation. The people of our cities have never had the advantage of river-basin development which takes into consideration protection from pollution, promotion of municipal and domestic water supply, and the development of recreational facilities.

The President showed clearly that the rivers and harbors bill does not spell out the development of our rivers on the basis of any such multipurpose utilization. Legislation which fails to take into account these varied uses of our water resources is defective and inadequate.

The President also put his finger on the lack in the rivers and harbors bill of any provision for cooperation in the planning stage on the part of all agencies with a definite interest in river-valley development. He further emphasized the exclusion of representatives of the New England States, specifically chosen for that purpose, from any survey and planning commission, and, finally, the President stressed the absurdity of planning for the development of an area like New England and at the same time excluding the St. Lawrence River from consideration.

I am thus reemphasizing what the President said as a means of urging you to bend every effort to remedy the injustice done your constituents in the rivers and harbors bill by supporting legislative and administrative measures to remedy this injustice. I have in mind particularly the bill introduced by Senator GREEN which would remedy all the defects I have above pointed out.

With kind regards, I am,
Sincerely,

PAUL A. DEVER.

Prosperity Under Democratic Administrations

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 5, 1950

Mr. O'HARA of Illinois. Mr. Speaker, as the summer comes on us and the work of the Eighty-first Congress is in sight of completion, it is heartening to all of us who are supporting the administration of President Harry S. Truman to know that all is well with the country, and that there is to be no break in the long years of prosperity which have attended the conduct of the National Government by Democratic Presidents and under laws enacted by Democratic Congresses.

The issue to be determined by the elections in November is whether the American people wish to hazard another depression such as was visited upon the country under the last Republican administration and which wiped out the fortunes, the savings, the jobs, and even the hopes of an entire generation.

David Lawrence's United States News and World Report in the issue just out prints the results of a long and careful research conducted for the primary purpose of advising American businessmen and investers of exactly the present state of the country economically, and what reasonably can be foreseen in the future. As to the future, the publication in its Newsgram From Washington, commenting on the fears of some businessmen of a bust after the pattern of Republican years, says that the businessman "who resists the idea of change, keeps looking for a bust as bad as 1929–33, or worse, holds off, resists expansion and sees trouble just around every corner" is the "businessman who has missed the boat to date and may keep on missing it."

The article from the United States News and World Report issue of June 9, 1950, follows:

ONE BILLION JUMP IN DIVIDENDS—STOCKHOLDERS REAP RICHES FROM 1950 PROFITS

Business profits point to a bonanza for stockholders this year. Dividend payments may top $9,500,000,000, a record. Company earnings are staying high. Less is being plowed back into the business. It means more for shareholders. There will not be extra checks for everybody. Prospects vary, industry by industry. Stockholders, watching the profits curve, can see what to expect

Stockholders this year are to get a record flow of cash in the form of dividend checks. Earnings are good and growing better. Boards of directors are in a position—and a mood—to pay out a slightly larger proportion of earnings, and to keep less in the business.

The result is a prospective total of dividends that will reach, and probably exceed $9,500,000,000 for 1950. That is $1,000,000,000 more than the previous record, set last year. It is more than $1,500,000,000 above the dividend total in the boom year, 1948. Flow of dividend checks will reach its peak in the last quarter of this year. Year-end extra dividends probably will be liberal and numerous.

Even after record payments to stockholders, corporations as a group will improve their position substantially in 1950. They still will have left about $9,700,000,000 of their profits for use in their businesses. That total is well under the $13,200,000,000 that corporations retained after paying out dividends in 1948. Now, however, there are less-urgent programs of expansion—inventory building and new plant and equipment will require smaller sums.

Profits totals this year probably will be the second largest in history. For all corporations, the aggregate will come to about $32,000,000,000 before taxes and $19,200,000,000 after taxes, on the basis of the present outlook.

Total earnings, in fact, may well be more than that, and are very unlikely to be any less. Output of most products—and for most companies—is growing. Efficiency of industry, too, is improving. Wage-cost increases are not the factor they were in earlier postwar years. Company pension programs granted in new union contracts are less costly than big wage raises would have been. Prices are holding firm or tending to rise, as demand for almost all products holds high or rises. These are signs that point to healthier earnings.

Net income, of course, is not going to be uniformly higher. Nor are stockholders' checks. Not all corporations are going to be rolling in profits after expenses are paid and Government takes its cut. Some industries are not keeping up with the broad trend, and many companies within prosperous industries are lagging behind. But for industry as a whole, big and little, the over-all prospect is excellent.

Brightest prospect right now is the one that faces owners of shares in manufacturing firms. These companies, as a group, are counted on this year to report a rise of about 17 percent in earnings after taxes. With a larger proportion of those earnings to be paid out, stockholders should get about 30 percent more in cash dividends than they did in 1949.

Profits of auto makers, immense last year, are to be even greater in 1950. Output is running at a spectacular rate of more than 9,000,000 cars and trucks a year. That performance could trim the fat from the car market again before many months pass. Then some of the smaller companies might not do so well. Yet earnings of auto makers for 1950, as a whole, are to be enormous.

Companies that turn out building materials and equipment for new homes are find-

ing another lush field. Their output and sales are being pushed up rapidly as the building boom rolls on at an astonishing rate. Lumber profits are to set new records for many companies. Lumber production is soaring, and prices are rising. Leading producers of building, heating, and plumbing equipment report first-quarter profits that averaged nearly 40 percent above those of a year earlier. Leaders in cement, stone, and glass showed gains averaging nearly 25 percent.

Many companies in other industries, too, are riding high on the building boom. Manufacturers of electrical equipment, radios and television sets are examples. Television sales—and profits—are counted on to boom for many months.

Profits that mean more cash for stockholders are confidently expected to be greater in steel and oil, too. Prices of both, particularly oil, have been rising. Steel mills now are expected to operate at capacity, or above, during most of 1950. Oil-company sales are being boosted by purchases of new autos, and by gas purchases of vacation drivers.

Stockholders are to watch the profit curve rise appreciably in still other industries. Outlook is good for companies that make paper and for those that fabricate rayon and rubber.

Profit declines that occurred for some industries in the first quarter are to be reversed during the rest of 1950. That is the prospect for companies producing nonferrous metals, machinery for industry, and equipment for railroads. Sales of these products are to rise as industry decides to spend more heavily in the growing 1950 boom.

Aircraft companies, meanwhile, are to become more active and prosperous on Government contracts. Profits also are expected to improve substantially for chemicals, paints, and similar products.

What these brighter prospects can mean to individuals who own stock, at a time when corporations can be more generous with their earnings, is shown by dividend trends already apparent.

Cash dividends going to stockholders already are in a period of rapid growth. For individuals who own shares in some 100 large producers of nondurable goods, checks received in the first quarter of 1950 were up by an average of 14 percent from the level of a year earlier. In the same period, the rise in profits of those firms was negligible. Stockholders of big oil companies got 35 percent more in dividends, while profits of their companies averaged 25 percent less than they had a year earlier.

Persons who own stock in companies making durable goods find the same trend. Shareholders of a group of the major machinery producers, for example, were paid 50 percent more in dividends in the first quarter of this year, while the rise in their firms' profits averaged less than 10 percent.

Other industries are likely to show more moderate gains in profits and dividends. Companies that sell the products of industry, at both wholesale and retail levels, probably will have an average rise of about 10 percent in profits this year. Stockholders, on the average, may get a dividend rise of no more than 5 percent.

Smaller gains in profits are being predicted for food and drug stores, and for restaurants. Clothing and general-merchandise firms may fare no better this year than last, but their earnings in the second half of 1950 are expected to be better than those of late 1949.

Electric-power companies are enjoying real prosperity, and are likely to do still better. Demand for power keeps rising. So do rates. Telephone and and other communications companies, too, have a bright prospect. Shareholders in communications and utilities probably can count on 15 to 20 percent more cash in 1950. A gain of about half that amount is due for investors in finance and service firms.

Railroads—at least those in class I—may end the year with a better showing than they have had last year. But the rest of the transportation industry, generally, is not counted on for much improvement over 1949.

The situation is less favorable for some other groups of companies. Entertainment business is off, particularly for the movie industry. Department stores, mail-order houses, and many producers and sellers of a wide variety of nondurable goods are not doing so well.

Altogether, however, the outlook for profits and dividends in 1950 is good. For 1951, too, the dividend prospect right now is bright. Any downturn that occurs in the next 2 years is expected to find many corporations in a position to go right on paying out dividends at a generous rate.

Marshall Plan and Point 4

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 31, 1950

Mr. MACK of Illinois. Mr. Speaker, it is my unbiased opinion that the Marshall plan has accomplished more for the security of our Nation and its people than any other bill passed by the Congress of this Nation. It is also comforting for me to know that this is a bipartisan measure and that Republicans are to be congratulated equally with Democrats for its success.

It is always distasteful to pay out sums of money for any cause, but we all abhor even to a greater extent the expending of money for the prosecution of a war which in addition to spending of enormous sums of money, could snuff out the lives of one-half our people overnight and destroy our natural resources. An ounce of prevention is worth a pound of cure, and it would be a greater service to our country to expend a few billions of dollars in precautionary measures now, than to squander hundreds of billions in the fighting of a disastrous war in which even the victor would be the loser.

It would seem to me that no sum of money however great is too much to spend to prevent a war or stop the onward march of communism. The money expended so far has, to a great extent, stopped the further spread of communism on the other continents, which means that we have a longer lease of life on our freedom and liberties here.

The sum of $3,000,000,000 outlay on the Marshall plan and point 4 program as a preventive of war is very small indeed, compared to some $300,000,000,000 which the last war cost, not considering the slaughter of young American men.

Aside from the commercial and humanitarian benefits of this program, it is important that resource developments be geared up to feed, clothe and shelter an ever-increasing population. It must be borne in mind that population growth always out runs the means of subsistence, and causes many of the world's ills. With an estimated population of 3,000,000,000 in the year 2000, which is an increase of 1,000,000,000 in the short spread of 50 years, it is imperative that the world prepare now to accomplish the herculean task of providing sufficient production for this increase of world population. The problem of feeding this increased population can best be met by introducing modern ways of production to backward areas.

We all are aware of the fact that we cannot afford to continue indefinitely pouring money out to these countries, and it is incumbent upon us to devise some means to help these countries to help themselves as in advocated in point 4 program. Our own undeveloped areas beyond the frontier were made productive, just as these areas can be made productive, by American private capital with negligible amount of Government financial assistance.

This program for the development of backward nations will cost the taxpayer of our Nation little if any money, and trade relations with these countries after they are developed will bring in billions in revenue to our Nation and perform a service to the people of the world that will be pleasing to God and man. It is high time that we were turning away from political rivalries and petty differences and accomplish something worth while for the common people.

Whether we like it or not, the American way of life and the Russian philosophy are in a race to death for world domination and every effort made now in support of our way of life will be well rewarded. This program can be carried on in a business-like way on a bipartisan basis. If we adopt a genuine bipartisan policy and throw the political spoils system to the four winds, success will crown our efforts.

Notwithstanding that ours is a rich and powerful Nation, the undeveloped nations number some 28 or 30 countries with a population of 1,800,000,000 with a per capita income of less than $100 per year. This is a threat to our way of life. With only 7 percent of the world's population, it is essential that we strive to train and educate a large percentage of the world's people along our way of thinking, our way of life and our democratic free-enterprise system if this Nation, comprising only 7 percent of the people of the world, is to survive.

That a great field exists for the dedevelopment of backward areas of the world cannot be denied. Such development financed by private capital as were the undeveloped areas in America, would cost the taxpayer little, if anything, and would be beneficial to all humanity. Older residents well remember when our own Nation, or large sections of it, was undeveloped; when the Indians—little less civilized than the people the President now speaks of—were herded into reservations so the West could be developed; when States like Oklahoma were staked off by the Government and thrown open to settlement that the land might be used for production purposes.

These States were just as unproductive then as the undeveloped countries of the world are now. At that time there was no need for the Government or private capital to go outside this Nation for the development of other backward countries throughout the world. There was great need then for a program of development right here at home that required all the assistance that both Government and private capital could furnish.

But today we have, technically speaking, no frontiers in America; and it is natural that both Government and private capital, not as a matter of exploitation, but for the good of all humanity, would look with sympathetic eyes on other undeveloped countries of the world and extend their scientific knowledge and know how in the improvement of these countries and their people.

Such efforts would not only materially help the people of America, but it would raise the standard of living of two-thirds of the world's population, who as President Truman said "are living in conditions approaching misery. Their food is inadequate, they are victims of disaster, their economic life," he says, "is primitive and stagnant. Their poverty is a handicap and a threat to them and to more prosperous areas."

One can visualize the millions of acres in undeveloped land on the continents where the people are unable, through lack of technical knowledge, machinery and perhaps intelligence, to grow sufficient food to feed themselves and their starving people. It would be a sin if this great Nation with its great flow of capital did not develop these vast areas which would benefit all civilization with little, if any, cost to the American taxpayers. Private capital would willingly furnish the finance needed and would be assured of good returns on their investment while the Nation would profit later through trade relations with these countries.

Such an undertaking, too, would be a contribution toward the elimination of communism, and a cushion against a major depression, and Congress should cooperate to the fullest extent with the President and American capital to enhance this program. It is surprising that something was not done about this before now. Often during the past years many economists pointed out that if we did not curtail the increasing population, it would be only a matter of years until the earth would not produce enough foodstuff and starvation would face the human race.

Our Government, with the capital and technical proficiency that we have in this country, could improve the conditions of the land and the people on the other continents to the extent of making them self-supporting, instead of pouring out money to them indiscriminately, and at the same time stop the onward march of communism.

One of our eminent commentators has said:

If we duck our responsibility western Europe would rather soon become a new province of the Soviet Empire, and we in the United States would experience the equivalent of a gigantic military defeat, probably without a shot having been fired.

If Russia would overrun western Europe we would have to increase our defense expenditures considerably.

A large point 4 program would benefit the United States immensely and is a necessary condition for a prosperous world as well as a prosperous America. When income of the underdeveloped areas is increased, the United States will profit from increased sales in these areas. The least we can do is to minimize the resentment of the world's poor by a system that will raise their standard of living as well as ours.

The opposition contends that this is one more part of the socialistic communistic scheme to further tax the American people. Nearly a half hundred organizations have besought Congress to adopt this program, and few, if any, reputable organizations are against it. Among the organizations supporting this program is the National Association of Manufacturers, the New York Bar Association, the Guarantee Co. of New York, and the Farm Bureau. It is hardly possible that these institutions and organizations are promoting communistic or socialistic schemes. All the organizations who are supporting this program know that the promoting of prosperity abroad means a prosperous economy at home—that a prosperous world is a peaceful world.

Oil Workers Dissatisfied

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, June 5, 1950

Mr. JENKINS. Mr. Speaker, the International Oil Worker in its recent issue carried the following significant editorial:

ORGANIZED LABOR IS GETTING TIRED OF PRETTY PROMISES BUT NO ACTION FROM DEMOCRATIC PARTY

There are many people who say that organized labor and the Democratic Party walk hand in hand and sleep in the same bed. These people say that CIO-PAC is simply a wing of the Democratic Party.

The time has come to make it clear that there has been no marriage between organized labor and the Democratic Party. It is true that they have been seen keeping company from time to time, but there has been no actual pact, formal or informal, between the two.

And furthermore, if the Democratic Party keeps treating organized labor as it has in the past few months, it is doubtful if there will be continued friendship between the two.

To put it bluntly, organized labor is getting plenty disgusted with the Democratic Party. Speaking for the Oil Workers International Union (CIO), at least, we can say that we have found the Democratic Party long on promises and sweet talk and terribly short on bringing home the bacon.

Let us itemize the promises and the deliveries of the Democratic Party since the workingmen and the farmers put it into power again in 1948:

The Democratic Party promised to repeal Taft-Hartley. With a clear majority in both Houses of Congress, the Democrats failed to do this.

The Democratic Party promised to pass fair employment practices legislation. It has failed to do so. In fact, 33 Republican Senators voted to stop the filibuster and take up FEPC a few days ago, while only 19 Democrats so voted. And the Democrats have 12 more Members in the Senate than do the Republicans.

Democratic Members of the House and the Senate, including House Speaker SAM RAYBURN, rammed through the infamous Kerr bill to raise natural-gas prices. President Truman, fortunately, had the courage to veto this one.

The Senate has not yet passed the improved social-security law, even though the industrialists are now in favor of it.

The Democrats sold out 25 cents and several millions of people short in the minimum-wage law. They settled for 75 cents instead of a dollar and excluded millions of people.

The Democrats blocked the removal of the infamous Robert Denham from his dictatorial power in NLRB. And we cannot forget that President Truman first appointed Denham and in so doing brought shame to the Government of the United States.

The Democrats have done nothing about the Brannan farm plan; instead they have allowed the present crazy-quilt farm plan to remain on the books. The Democrats have not even had the nerve to talk openly about national health insurance.

Offhand, we can recall two good measures passed by the Congress—the housing bill and the oleo tax repeal. Very good, as far as they go.

A good many labor people voted for Democrats 2 years ago—yes, and worked hard for them—because of the good party platform.

But apparently the platform is just window dressing to the party bigwigs.

Democratic Senator ED C. JOHNSON, in a recent Jackson-Jefferson Day dinner, said bluntly that "platforms don't mean anything."

Well, Senator, we in labor consider a platform a promise and we don't like people who break promises. We have a habit of tossing out on their behinds our union officers who break promises and we will endeavor to do the same to public officers.

Recently a State Democratic chairman said to a PAC representative: "We are not worrying about the labor vote. Labor has nowhere else to go except to the Democratic Party."

You may be mistaken, Mr. Chairman.

From all over the Nation, a groundswell of complaints against the Democratic Party is coming from rank-and-file union members to the headquarters of oil workers international union and to the union newspaper.

In essence, these complaints say: "The Democratic Party is kidding us—the Democratic leaders are talking sweet, and delivering nothing."

Sometimes the Democratic leaders do not even talk sweet. They pick their candidates and tell labor to take 'em and like 'em, without asking labor what we want in the way of candidates.

So what is organized labor going to do about the failure of the Democratic Party to deliver the goods?

Mainly, we are going to pay less and less attention to party labels and more and more to the individual candidate.

We are going to endorse and work for those individuals who look best, regardless of party affiliations.

Eventually, one party or the other—or a new party as yet unborn—will come to realize that the powerful labor vote can make or break a political party.

We mean to do no hollow chest beating. Frankly, the labor vote has not yet been as well-mobilized in the past as it should be and it probably will not be in 1950.

But year by year, the labor vote is being better mobilized. The power and the unity

of the labor vote is growing year by year. The time will come when it will be decisive.

And let it be perfectly clear to the Democratic Party that this vote will not necessarily be mobilized behind that party.

When the budding maiden that is labor political action has blossomed into a fully mature beauty, she will not be waiting patiently in the moonlight for Mr. Democrat to come along.

No, she has had her share of broken dates and she may be out seeing the sights with some other fellow—playing a little hard to get.

Larchmonter Founds Program To Buck Farm Price Control

EXTENSION OF REMARKS
OF
HON. RALPH A. GAMBLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1950

Mr. GAMBLE. Mr. Speaker, I present for insertion in the CONGRESSIONAL RECORD the following article which appeared in the May 25, 1950, issue of the Larchmont (N. Y.) Times by Francis S. Quinn, Jr., concerning the founding by George E. Bailey, of Larchmont, of the Association for the Abolition of Farm Price Support, Inc.:

LARCHMONTER FOUNDS PROGRAM TO BUCK FARM PRICE CONTROL

(By Francis S. Quinn, Jr.)

An enthusiastic young Westchester lawyer has jumped into the middle of the farm-price support controversy and is ready to battle Government-controlled prices with the weapon of public opinion.

As founder and head of the recently organized Association for the Abolition of Farm Price Support, Inc., George E. Bailey of 64 Ridge Road, Larchmont Woods, is convinced that the present policy of the Government in guaranteeing high prices to farmers by buying up abundant foods and letting them rot in Government warehouses is a criminal waste.

The ultimate goal of the organization is to lower prices for foods by doing away with governmental controls.

"There is no such thing as surplus of food in the United States," Mr. Bailey declares. "Merely a surplus of food at present prices."

Referring to the findings of a recent study made at Michigan State College by economists, he pointed out that a 2-percent increase in livestock in the United States would have more than taken up any wheat surpluses since 1930. And if meat were put on the market at a lower price, people would eat more and farmers would then sell all their livestock plus all the grain needed to produce the livestock to sell to the people.

Attorney Bailey was raised in Marion County, Ohio, and as a youth lived and worked on a farm. He studied agriculture in school and matriculated at Heidelberg College in Ohio for a year before attending Ohio State University where he received his LL. B.

After practicing law in Steubenville, Ohio, for 3 years, he entered the Army in 1941 and went overseas in 1943.

In Bari, Italy, he had first-hand experience with food in large quantities as purchasing officer for the Adriatic Base Command. The major portion of his purchases were of vegetables and other perishables and he soon had a clear picture of the marketing of farm products.

He joined the law firm of Reid & Priest of New York, tax specialists, in 1946 after he left the service. He married and settled down to what he thought was strictly a lawyer's career.

The subject of food prices began to crop up in spare-time luncheon discussions and although he doesn't recall exactly how it all began, eventually the discussions reached the point of putting up or shutting up. Thoroughly interested in farm price control and dissatisfied with the way the Government was handling the situation, he decided to do something about it.

In October 1949 press releases of his proposed stand against price control were sent to New York papers. Mr. Bailey was soon swamped with telephone calls, telegrams, and letters.

People were interested in his ideas. So, to show his own sincerity, he immediately formed the Association for the Abolition of Farm Price Support, Inc., with his own money, and the inquiries mushroomed to 800. They came from persons in all walks of life, from farmers, laborers, and bank presidents.

Needing some capital to work with, since the association is not only nonpolitical but nonprofit, he set up a regular membership fee of $1 with active sustaining members contributing $10 per year.

At the end of April the membership numbered some 300 from 13 States, and except for two or three obvious profit seekers, they are all interested parties with the future of our country at heart, Mr. Bailey sincerely believes.

"We are now getting about five new members per day with the average steadily increasing," he says.

The association went into an intense study of the farm problem before taking any constructive action, but early this year it began to roll as 1,000 copies of a pamphlet entitled "You Are the Victim of the Farm Price Support Program" were distributed all over the country. Last month another thousand copies were issued.

Why does farm price control exist today? In his pamphlet, Mr. Bailey states: "The enactment of the postwar farm price support program was possible only because there was no organized opposition from those adversely affected by the program. When the present farm bill was before the Eighty-first Congress, not one person appeared to represent the consumer and the taxpayer.

"The key to effective opposition to the present ruinous farm program is organization. To that end, the Association for the Abolition of Farm Price Support, Inc., has been organized."

He then appeared on Philip Alampi's farm news program on WJZ. After his talk, he received 80 to 90 replies asking for more information, which is all the more remarkable since the program goes on the air at 6 a. m.

"They were all favorable," Mr. Bailey says, adding with a grin "except one. And that suggested I ought to stick to law."

The queries were from persons mostly in the lower income levels and included a high percentage of laboring people and farmers.

A sudden wiping out of farm price supports would only create a collapse that would lead to chaos, he admits, so the elimination must be gradual.

"Price support does not create wealth," he declared. "It merely takes some wealth from one group of taxpayers and shifts it to another."

This in itself will benefit neither the farmer nor the consumer in the long run, Mr. Bailey maintains.

"Certain basic economic principles should be stated to understand this," he declares. "Production must be controlled by something or somebody. The American way of control is by price.

"If high price levels are artificially controlled, then the production must be controlled in only one way—by the Government.

"The American farmer has the choice of two methods of control: he can have high prices and complete governmental control of his production, or he can have price controlled by the market and he can have freedom."

Suppose there will be no revision of the present farm price support program?

"The administration, afraid of the public reaction to the tremendous cost of supporting prices, will impose rigid controls on production in order to limit expenditures," Mr. Bailey declares. "Unless that trend is reversed, complete socialization of American production will come within the next decade."

He hopes to make his association national in scope with branches in each State and chapters in each city.

Henry D. Bulkley, of 405 Weaver Street, Larchmont, now is attempting to form a local chapter of the organization in Larchmont.

Plans of the association include the publishing of a monthly newsletter to be sent to all members in addition to various pamphlets and other material.

Two months ago Mr. Bailey was invited by Chairman HAROLD COOLEY (Democrat, North Carolina) of the House Agriculture Committee to send witnesses to Washington to explain their views on farm legislation. No date, however, was mentioned in the invitation, merely "sometime after Easter," according to Mr. Bailey.

REA: Its Value to Business as Well as Farms

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1950

Mr. MONRONEY. Mr. Speaker, all the farmers of Oklahoma know and appreciate the great value of rural electrification—its record of accomplishment and service to the farm families throughout the Nation.

But in going over the State county by county, I find that few of the townspeople realize what REA has accomplished—not only for the farmer—but for independent Oklahoma business as well. Some townspeople, misled by utility propaganda and ill-advised statements of their political demagogues, have the effrontery to compare rural electrification with socialism or with Government dictatorship. Nothing could be farther from the truth.

REA is a going business concern in Oklahoma—as in our other 47 States. These farmer-owned and farmer-operated businesses are successful—not only in getting electricity at a reasonable rate to the farms of Oklahoma—but also in paying back to the Government with interest the money loaned to do the job. They pay State taxes, pay standard wages, and buy from Oklahoma's private businesses.

The farmers of Oklahoma and other States are doing the job that the high-up utility men said was impossible. They are disproving the big utility claim that

it took at least a $1,000 prepayment or more to bring electricity to each farm.

I have discussed the value of REA at seven annual meetings where from 800 to 2,500 farm members turned out to see that their enterprise is well-managed and to make decisions on important REA matters. It is their business and they are out to see that it continues to succeed.

Let us look at the record—a record unequaled by any other Government program for success and for repayment of loans. Let us see what REA has done, not only for the farmers but for Oklahoma business as well.

Free enterprise business in Oklahoma has built every one of the $60,000,000 worth of lines erected in our State. This work went to private contractors for the low bid. The worker, the lumberman, the insulator, and conductor distributor, the construction business were granted this $60,000,000 in new work because of the enterprise and pioneering of Oklahoma farmers. This sixty million in work would not have been possible without REA.

Nearly 100,000 members of REA now are on the Oklahoma lines. Each one spends at least $500 for wiring, lighting, and appliances—many much more. All this was spent through free enterprise stores in our towns. That is another $50,000,000 for Oklahoma business—a total of $110,000,000 in business for our State which would not have existed without REA. Is not this really strengthening and building up Oklahoma's private enterprise?

Oklahoma's invested wealth thus is $110,000,000 greater, the State is that much richer because of this investment—every penny of which went through private-business enterprise. Is any business which adds $110,000,000 to the independent business of Oklahoma unfair to business?

This is new business, business which would not have existed without REA. It is virgin territory—to fill a vital need where no other business existed in this line before. Only through Government cooperation with long-time interest-bearing loans could this new business have been created.

Fourteen years ago, 89 percent of the farm homes of America were in darkness. Only 11 percent of the farms had been electrified in the 40 years in which electricity had become an everyday necessity in the towns. Today—in 14 years, this 11 percent has been increased nationally to 78.2 percent of all American farms. In Oklahoma we have only 56 percent of our farms electrified, so there is much more work that must be done to extend our 36,000 miles of rural lines.

Up to December 31, 1949, these REA's of the Nation owed Uncle Sam $203,346,158 for repayments and interest due to that date. They have repaid him $223,114,845—about $20,000,000 ahead of time in their repayments. Can any other Government-lending operation show such a result? Of this amount, Uncle Sam has collected $91,999,730 in interest alone—and the remainder is repayment on principal.

The gross yearly business—again business which could not have existed without REA in Oklahoma, now totals more than $5,000,000 each year. This means pay rolls for workers, money spent for materials, tools, poles, and wire—all through private business enterprise.

Can this be unfair to business—contrary to our system? Even the big utilities who seek to discredit the REA so much—who spread unfounded rumors of Government interference with their monopolies—profit to the extent in Oklahoma of nearly a million dollars a year in the sale of wholesale power to the REA lines.

Each year the use of electricity on farms climbs to new heights as the farmers use more and more electricity in their farm work—as well as in good farm living.

This ever-increasing demand requires—makes absolutely necessary—that far-sighted farm managers of these REA's have some independent sources of electric energy. With a $60,000,000 investment in distribution lines, we cannot—we must not—be left without some firm and dependable source of energy to put on their lines to take care of an ever-expanding use of farm electricity. That is why I have insisted REA must have additional power properly distributed for REA use. Without a dependable source of reliable low-cost power we endanger this $60,000,000 investment.

The private utility lines were built years ago before REA started to serve city load centers. REA has developed an entirely new load pattern—far removed from the big cities—yet today using a vast amount of electric energy. Instead of being handcuffed and shackled, with no source of energy excepting that which the utilities are willing to sell—after meeting all of their city demands—REA needs access to some of the vast power generated at Government flood-control dams. Who would deny farmers access to this needed power? Not I. I do not want to see this power, created with public funds, turned over in special privilege deals to two giant utility concerns to sell this public power back to farmers at whatever price they can demand.

Adequate power, properly placed in the line, and at low enough rates to insure maximum use of electricity on the farms is my goal and also the goal of the Oklahoma REA's. Any effort to double-cross the farmers to put them at the mercy of the giant utility cooperations will be fought by every farmer on the line.

Oklahoma farmers cannot be fooled, they know the score—they know the issue—they know special privilege when they see it. As one old farmer told me: "Shucks, that ain't socialism—that's electricity."

I have dwelt long on the financial soundness of REA investments, its repayment with interest, its creation of new business for thousands of little businesses of Oklahoma. More important perhaps than all of this is the human side of REA.

Talk to the farmers yourself and get the feeling of the new life that comes to them and their families when that vital wire touches their farm. They leave the darkness of the nineteenth century and live immediately in the bright light of the twentieth century and modern full home life and better living. That REA wire means bright electric lights, electric irons, washing machines, dependable radios, refrigerators. Talk to the appliance dealers in the small towns. Most of them admit that from half to two-thirds of their appliance business goes to these lines that the big utility executives thought could not or should not be built.

Realize the years of drudgery that are removed from farm women when they have the same chance to have electrical labor-saving appliances that city wives have had for so long a time.

One appliance dealer in the western part of the State where a new line was being extended told me this story: "I asked the young GI farmer what appliances he was going to buy, now that the line had reached him.

"He said: 'Mister, I'm going to buy my wife every appliance you've got to sell that will make her work easier. I'm going to buy a washing machine, an electric stove, a separator, and lots of other things as fast as I get the money to buy with.

" 'You see, Mister,' he said, 'I saw my mother die at 40 doing the washing for us six kids, pulling the butter up out of the well, bringing in the wood for the stove, churning, and separating the milk, mending clothes over a kerosene lamp, and other chores.

" 'That REA line and the things that it'll run will let my wife live a lot longer and we're going to have all the things she needs.' "

Mr. Speaker, I am proud of the fights I have been in to help get more rural electrification for the farmers of Oklahoma and the Nation. It has not been an easy task—and those who oppose this great program are always on the job with the cry that Government is interfering with private business. These big utilities companies have their friends in Congress and in the Senate—some in powerful places where the damage they can do is tremendous.

Oklahoma needs to change its representation in the Senate this year. The record is clear and Oklahoma farmers cannot be misled or fooled. They want a man who understands and will fight for their interests—and not for special privilege—in that high office.

Another Tax Grab

EXTENSION OF REMARKS

OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1950

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Malden (Mass.) Evenings News:

ANOTHER TAX GRAB

Latest effort of the spenders to dig deeper into the earnings of the American people has to do with dividends from their investments. House tax arrangers have tentatively approved a withholding tax of 10 percent on dividends. The plan would be similar to that now employed with respect to wages,

the money to be taken at its source, and would bring an estimated $150,000,000 in new revenue. The tax eaters make the claim that many persons do not report earnings from such investments, and they are out to get their hands on the money before it comes to rightful owners. This plan would make the corporations collection agencies for the Government, as all employers now are. It would place a heavy burden on corporations and the cost of collection and necessary bookkeeping would be tremendous. This would reduce earnings, result in smaller dividends. This thing cannot go on forever. Eventually the American people will be forced to revolt against a Government which is milking them dry in the form of taxes. If the money went for necessary Government, to finance national defense, or to retire national debt, there would be hope for the future. But when millions are wasted in vote-enticing projects the time has come to call a halt. The only weapon available for an attack on the spenders is votes. They should be lining up now for the coming battle.

Federal Rent Control

EXTENSION OF REMARKS
OF
HON. M. G. BURNSIDE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 5, 1950

Mr. BURNSIDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter written to me by the Governor of West Virginia, Okey L. Patteson, dated May 25, 1950:

Hon. M. G. BURNSIDE,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN BURNSIDE: It has been called to my attention that, unless extended by pending legislation, Federal rent controls will expire throughout the Nation on June 30, 1950.

As you undoubtedly know, rent control now affects only those cities in West Virginia which are located in our highly industrialized sections such as Wheeling, Charleston, Huntington, and Bluefield. I am advised, however, by the rent-control officials, that there are about 300,000 rental housing units still subject to the Federal law and that these rental units house an estimated 1,000,000 people, which is only slightly less than half of our population.

I have seen the statistics gathered by the Bureau of Labor Statistics on rental increases in cities which were decontrolled during 1949 by local or State option and I am alarmed that such a possibility might exist in our larger cities in West Virginia. I am alarmed because of the possibility that labor may feel it necessary to demand wage increases to compensate for rent increases, which, of course, could mean considerable industrial unrest within the State and a corresponding loss of income to the State treasury.

According to the information which I have received, the extension bill should be before you for debate and a vote in the very near future. I feel it is my duty as Governor to urge you not only to vote for a continuation of Federal controls of rents, but also to take whatever measures may be available to you to the end that the extension legislation will be passed.

With the kindest regards, I am,
Sincerely yours,
OKEY L. PATTESON,
Governor.

The Real Issue in the Hoover Reorganization Plan

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 5, 1950

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Christian Science Monitor by Joseph C. Harsch, chief of its Washington news bureau:

BUREAUCRACY: ENTRENCHED AND UNCONTROLLED
(By Joseph C. Harsch)

Do we, or don't we, want our public affairs run by someone we can throw out of office come next election day?

That really is the issue behind all this furor over the Hoover Reorganization Plan and what Congress is doing to it.

Some of our public affairs are run that way now, Harry S. Truman and his Cabinet are subject to the will of the voters. We can turn them out in November of 1952 if a majority of us don't like the way they are running our affairs.

What we do not realize is that there is nothing the voters can do about large chunks of the Federal Government. We can't get at these officials directly at the polls or indirectly through the party in power. And they don't work for the public as a whole. They work in frequent fact for special group interests.

The elected President of the United States can control the members of his Cabinet, and through the members of his Cabinet he can control those portions of the departments of Government which take orders from a Cabinet officer. But not until you look through a Congressional Directory do you discover how many branches of Government there are which take no orders from anyone.

For example, the Patent Office is located physically inside the Department of Commerce Building. But the Secretary of Commerce has no authority over the Patent Commissioners. If the public became dissatisfied with Patent Office policy, there isn't a thing it could do about it directly, or immediately.

Of course, usually there is no great trouble about patent policy. And it isn't likely that the Commissioners of Patents would long pursue a policy which made them unpopular. They are human, and probably would adjust themselves to a great wave of public disapproval. But the point is that if some Patent Commissioner wished to defy the Secretary of Commerce and the President and public opinion there is nothing voters could do about it at the next election day. Getting rid of President Truman would not touch the Patent Office, because Mr. Truman has no authority over it.

The same condition is even more true of the great independent commissions of government such as the FCC, the SEC, the FTC, and the ICC. They are as independent of the elective process as the Supreme Court. We as voters can influence these commissioners in that vacancies are filled by Presidential appointment. Over the long run we can get commissions we like if we get a succession of Presidents we like. But it a long process. There is no direct responsibility to the voter.

This is the condition which the Hoover report on Government reorganization is trying to reduce. Mr. Hoover does not propose to abolish the system entirely. It is too deeply established for that. But his reorganization plan would expand the area of control of the President over the Federal establishment. It would give the President more authority. Therefore, it would give the voter more authority.

Also, it would make the President and his Cabinet more responsible than they are now for the affairs of government.

But the special interests served by these various agencies of government do not like tampering with the present system. The railroads protect the ICC. The banks protect the Comptroller of the Currency. They don't want him under the Secretary of the Treasury. The ship lines tried to protect the Maritime Commission, but that effort failed. The Maritime Commission had been so generous with the ship lines over such a considerable period of time that Congress wanted no part of it any more.

The issue lies between the theory of government by specialists and the theory of government by politicians. In Germany they use the theory of government by specialists almost exclusively. The politician has become a vermiform appendix on the German body politic. England is the great mother of government by politicians. We use both systems, but of recent years have been using the specialists more and the politicians less.

This is the trend Mr. Hoover is trying to halt and reverse for the simple reason that the voter does not control the specialist, but does control the politician—if he chooses to.

Labor and the Law

EXTENSION OF REMARKS
OF
HON. HENDERSON LANHAM
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 5, 1950

Mr. LANHAM. Mr. Speaker, the editorial which appeared in the Chattanooga Daily Times on Thursday, June 1, which I am including with my remarks, expresses what I think is the general feeling today relative to labor unions, their rights and responsibilities under today's industrial conditions and our complex civilization.

The editorial is so moderately worded and written in such a sympathetic spirit and so well expresses my own views on the subject that I am glad to give my endorsement to it and to present it herewith:

LABOR AND THE LAW

There is at present a great body of law on our statute books dealing with labor-management relations. The legislation has been made necessary because of the growing complexity of our industrial system and because the interplay of workers' demands and management's concessions has become so important to the national economy.

This mass of regulation is still fluid and is likely to be so for years as varying social, economic, and political factors come into play. Changes result not only from outright legislative repeal or amendment but also, more subtly, from judicial interpretation.

A story elsewhere on this page today deals with Supreme Court decisions handed down this term on labor matters. From them may be discerned a possible pattern for the measure of legality in labor relations. In essence, it represents the feeling that labor's powers must be made increasingly subject to reasonable control in the interest of the general welfare.

Most of the notable decisions have dealt with the right to picket, long regarded as an extension of the right of free speech. The seeming trend is toward limitation of picketing when it becomes more a matter of coercion than advertising, when it is employed to gain objectives which are not the rightful concern of the union, or when it is used in violation of valid State laws.

This newspaper has long supported labor in its attainment of rightful objectives. We will continue to do so, including the right to picket peaceably. At the same time, we realize that intemperate use of picketing—when it passed from the vocal or visual stage into that of the physical with violence to persons or property—has cost labor untold public support. The controls are a reflection of that withdrawal of sympathy and approbation.

But beyond that, the laws are also a recognition that the power of labor has reached the point that it carries with it definite responsibilities in its use. The legislator's task is to balance the two: To channel the power into outlets which serve labor's proper interests, and to assess the responsibilities which labor owes to society in general.

There are signs that labor-management relations are entering a new phase of stability. The recent General Motors 5-year contract is one such indication—and one marked by heightened statesmanship on the part of both the union and the company.

The hoped for goal is for the law to serve as a mere guidepost to peaceful settlements, rather than a barbed-wire barrier on which both sides lacerate themselves in costly struggles.

The present Supreme Court is liberal-minded. That it should be seemingly inclined to restrict labor's actions should be a stern reminder for unionists to avoid abuses of their great powers. As a continuing friend of the labor movement, we hope responsible leaders will accept the apparent trend in lawmaking for what it is—an indication of labor's approaching maturity as an economic force.

Guilty Before Trial

EXTENSION OF REMARKS
OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1950

Mr. REED of New York. Mr. Speaker, under unanimous consent heretofore granted, I am inserting an address entitled "Guilty Before Trial," delivered by Benjamin F. Fairless, president of the United States Steel Corp., at the Boston Jubilee of 1950, Mid-Century Celebration of Progress, Boston, Mass., May 18, 1950:

It is a pleasure and a privilege to be here today, and to take part in this great jubilee that the Boston Chamber of Commerce is staging. I am particularly happy to see assembled in this room such a representative cross section of American enterprise. Here at a table in front of me I see some of my old friends from the Smaller Business Association of New England, and at other tables throughout the room are many of the outstanding business and industrial leaders from almost every section of the country.

Believe me, gentlemen, I am proud indeed to stand in the company of men who have done so much to give the American people the most bountiful standard of living this world has ever seen. It is reassuring to know that success in business is not yet regarded as a disgrace in this great land of ours, and that fruitful enterprise is not without honor, except, perhaps, in some parts of our National Capital.

However, I must confess that I am a little surprised at the boldness of the Boston Chamber of Commerce in arranging this celebration at all. Now I wouldn't say, of course, that you are boasting or bragging about your city, because I realize fully that no true Bostonian would ever permit himself to take more than a modest and becoming pride even in Boston's most spectacular achievements. But I will say that you are certainly making no secret whatever of the fact that Boston is big and important and rich and successful.

Perhaps you gentlemen have forgotten that Boston is an incorporated city, and that no corporate entity today can safely possess the characteristics to which you are pointing with such natural and pardonable pride. So I think I should warn you that down along the banks of the Potomac, the wise and prudent businessman speaks of these things only in apologetic whispers and the motto that he follows is: "Grow slow."

I do not wish to convey the impression, however, that this antipathy toward bigness and success is universally entertained in Washington. It isn't. There are Government officials who, I feel sure, look with high favor upon big business and good profits; and it is a great pleasure to have one of these Washington friends with us today. I refer, of course, to the distinguished Assistant Secretary of the Treasury, Mr. Graham. He has my deepest sympathy for he has to meet what I suppose is the largest payroll in the world—the Federal payroll. On the other hand, I am certain that he must be very grateful indeed to all of us businessmen for the help we give him. I do not know, of course, how well he makes out with the rest of you gentlemen; but as far as United States Steel is concerned, the tax collectors are getting two and a quarter times as much out of our business as the stockholders are.

So I think we have a right to assume that we are all among friends, and that the long-range interests of the Government and of business are really the same things after all. How could it be otherwise when Government is wholly dependent upon the success of business and industry; when business and industry are equally dependent upon successful Government and when the American people are dependent upon both? So any development which threatens the welfare of business or of Government is—and ought to be—a matter of immediate concern to both.

And that is why I want to talk with you today about a problem that President Truman discussed in a special message which he sent to Congress 2 weeks ago—a message on small business. It was a temperate, reasoned, nonpolitical exposition of his views on the subject; and it is in this same temperate, reasoned, and wholly nonpolitical vein that I propose to comment upon it.

After saying a few guardedly kind words about big business, the President pointed out that—great and successful as this economic system of ours has been—it still is not as good as he, or any of us for that matter, would want it to be. He said that it is not providing jobs for all the men and women who want work, and that—if it is ever to provide full employment—more new businesses, and more small businesses, must be established. He recommended therefore that Congress pass legislation designed to provide these new, small businesses with capital and with technical assistance.

Now gentlemen, I have noticed that whenever our Government officials set out, these days, to be helpful to some segment of our economy, they think almost automatically in terms of money—of financial aids, or subsidies. These are governmental crutches which may serve well enough to support an economic invalid, but—of themselves—they can do nothing to cure his basic affliction. Unless the Government contemplates going into the crutch business permanently, therefore, the day must come when these businesses will be able to stand squarely on their own feet. So I can't help wondering if the President, in his program, has really probed down to the roots of the trouble.

Certainly we must recognize the fact that for more than 300 years, our American economic system has provided employment for our people as our Nation has grown. Of course, there have been temporary periods of depression and famine—the "lean years" that have always beset both the agricultural and industrial advances of mankind since the days of Joseph and the Pharaohs. But over the centuries, generally, there have been jobs in America for all.

Now, if what the President says is true—if our system is no longer fulfilling our employment needs in this day and hour when we are enjoying a relatively high peak of prosperity—then, somewhere, there is a monkey wrench in the machinery. And since all of us here in this room are intimately acquainted with the working parts of our industrial economy, it seems to me that it's up to us to find the monkey wrench before it is too late.

Let's look around. Here we are in Boston, the birthplace of American manufacturing and one of the Nation's great centers of investment capital.

More than 125 new manufacturing enterprises are established here in greater Boston every year. So, clearly, we do have new businesses. Moreover, Massachusetts has more investors in proportion to its population than any other State in the Union, and the savings deposits in Boston's banks are nearly three times the national average on a per-capita basis. Clearly, therefore, there is available capital for business here.

Why is it then that we do not have more new businesses? Why are investors unwilling to risk more of their savings? Or, why are our people unwilling to seek more of this capital and to set themselves up in business?

Gentlemen, as a mechanic who has had some slight experience with this great industrial machine of ours, it is my professional opinion that we will do well to look for that misplaced monkey wrench in the Washington gear box. In fact, it would not surprise me if we were to find several monkey wrenches there.

We shall certainly find tax laws that discourage investment and that encourage small businessmen to sell out, and to cash in on their capital gains.

We shall find widespread antagonism toward profits and a reluctance to recognize the facts of inflation. Everybody realizes that a worker who earned $30 a week in 1939 now has to get $51 in order to have the same amount of purchasing power. Yet few people seem to understand that the stockholder who got a $6 dividend in 1939, now has to get $10.20 on that same investment, just to break even in terms of our present-day, 60-cent greenbacks.

We shall find other laws and attitudes that will certainly tend to discourage even the most venturesome newcomer to the field of business but the biggest monkey wrench of all—the greatest single drawback to the effective operation of our modern economic system—is the amazing but undeniable fact that the minute any man successfully establishes himself in any business nowadays, he automatically becomes a potential jailbird.

Yes, the truth is that we have on our Federal statute books today a complete hodgepodge of so-called antitrust laws which have been allowed to grow, like Topsy, for 60 years, and which cannot be reconciled even with each other. And the only way a busi-

nessman can be sure of obeying them all is just to go broke.

Now gentlemen, I am not a lawyer and I'm not going to ask you to take my word for that. I shall merely read you a comment written by Supreme Court Justice Jackson when he was the head of the Antitrust Division in the Department of Justice. He said:

"It is impossible for a lawyer to determine what business conduct will be pronounced lawful by the courts. This situation is embarrassing to businessmen wishing to obey the law and to Government officials attempting to enforce it."

In other words, gentlemen, nobody in business, in Government, or anywhere else, knows what the law is except the Supreme Court of the United States, and sometimes even the members of the Court don't seem to be too sure about it. In fact, the present judicial attitude toward our antimonopoly laws reminds me of a quotation from Ralph Waldo Emerson which is carved in large letters on the side of the new Hunter College building in New York, but which might be equally appropriate if chiseled on the marble walls of the Supreme Court building in Washington. It says:

"We are of different opinions at different hours; but we always may be said to be, at heart, on the side of truth."

Now that is a very commendable philosophy. An enlightened willingness to change one's mind from hour to hour may be a fine thing in the academic atmosphere of any college or of any court, but speaking as a practical businessman, I can only say, "It's a helluva way to run a railroad."

So we come face to face with the fact that laws governing business are not really written in Congress, but in the courts, and what five members of the Supreme Court say the law is, may be something vastly different from what Congress intended the law to be.

Again I do not ask you to take my word for it. I refer you to a quotation cited by United States Supreme Court Justice Burton in his dissenting opinion in the Cement case. There it was pointed out that the basing-point system had been in use by industry for half a century, and that Congress—after repeated study—had steadfastly refused to pass any of the bills proposing to outlaw it. Then it was said:

"We know of no criticism so often and so forcibly directed at the courts—particularly the Federal courts—as their propensity for usurping the functions of Congress. If this pricing system which Congress, over the years, has steadfastly refused to declare illegal, is now to be outlawed by the courts, it will mark the high tide in judicial usurpation."

Yet the Court, as you know, did outlaw the selling methods used in the cement industry. The result was that the heads of more than 100,000 American businesses—men who had been conducting their affairs in a perfectly law-abiding manner—were suddenly confronted by the possibility of being classed as criminals.

Gentlemen, I don't have to tell you that if we persist in that kind of a system of law—and if we enforce it impartially against all offenders—virtually every business in America, big and small, is going to have to be run from Atlanta, Sing Sing, Leavenworth, or Alcatraz.

And that is no mere personal opinion on my part either. One of the severest critics of this legalistic merry-go-round we live on is Chairman Lowell Mason of the Federal Trade Commission, whose duty it is to enforce many of these laws, and who can therefore be regarded as one of the Nation's outstanding authorities on the subject.

He says:

"American business is being harassed, bled and even blackjacked under a preposterous crazyquilt system of laws, many of which are unintelligible, unenforcible and unfair. There is such a welter of laws governing interstate commerce that the Government literally can find some charge to bring against any concern it chooses to prosecute. I say that this system is an outrage, and that it's time the Government did something sensible about bringing its own operations up to the same standard of ethics that it expects of business."

Now those are strong words, coming from a member of the Federal Trade Commission and from a man who was appointed to that office by President Truman. Unfortunately, they are also true words.

The unhappy fact is that once a man goes into business, anything he does is wrong. We don't need a lawyer to tell us that. Most of us know it from our own personal experience. Let's take the question of competition, for example:

To a practical businessman—and stripped of a lot of legalistic gobbledygook—competition is a very simple thing. It exists when two or more companies are trying to sell similar products to the same customer. But when the businessman of today tries to compete in the open market, what happens?

If his product is of approximately the same quality as that of his competitor, if each competitor provides the same service, and if both enjoy equally good reputations for dependability and integrity, it is perfectly obvious that both are going to have to offer their wares at the same price in order to keep in the running.

But if both quote the same price, that fact alone is construed to be evidence of collusion and a violation of the Sherman antitrust law.

So our businessman cuts his price, tries to undersell his competitor, and thinks he's staying safely on the right side of the Sherman Act. Don't ever try that, my friends, because then you're in real trouble under the Robinson-Patman Act. Look what happened to Minneapolis-Honeywell, and to Standard Oil of Indiana when they tried to cut their prices to meet their competition. The A. & P. has been accused—among other things—of consistently underselling its competitors. And one of the charges in the suit that the Department of Justice has brought against du Pont is that the company lowered the price of cellophane 21 times.

So if our businessman obeys the Sherman law, he is probably violating the Robinson-Patman Act, and if he obeys the Robinson-Patman Act he is almost sure to be violating the Sherman antitrust law. He can't lower his price safely, and he can't leave it where it is; so the only thing left for him to do is to raise it. There's no law against that, of course, except the law of supply and demand.

If he raises his price, and his competitors don't, he goes out of business. If his competitors do follow his lead and raise their prices too, he can stay in business, but he's right back where he started so far as the antitrust laws are concerned, and in addition to that he is almost certain to get an invitation—or a subpena—from Senator O'MAHONEY and Congressman CELLER. Whatever he does, he's sunk.

It's no wonder people are reluctant to rush in and start new businesses today. The only mystery to me is that any new businesses are started at all.

But that is only a part of the story. The laws governing competition and prices have been changed frequently. Mr. Mason puts it this way:

"In 1932," he says, "we put a pants presser in jail if he conspired to fix prices. In 1933 we put him in jail if he didn't. Next year, vice versa again.

"Later on, if he went into the coal business, we assessed a heavy penalty against him if he didn't charge a fixed price. That is, of course, if the coal was soft. If it was hard, vice versa.

"Then take the meat packers. We made them get out of the retail chain-store business in 1920. But now there are half a dozen big retail chains in the meat-packing business. I guess the meat packers just went into the wrong business first."

Is it any wonder, gentlemen, that a businessman gets discouraged these days when not even his lawyer can figure out which end is up?

But that's not the end of his troubles either. In 1941, in the Rigid Conduit case, the Federal Trade Commission's staff came up with a wonderful new theory. It decided that it didn't even have to go to the trouble of finding a businessman guilty of any transgression of the law. His personal guilt—or lack of it—didn't matter. If the Commission felt that there was a social danger involved, it could issue an order against him anyway.

Lowell Mason, in a recent speech before the American Steel Warehouse Association, in Texas, pointed out that this interesting theory of justice—whereby a man could be penalized without being found guilty of anything—was introduced in Russia by Commissar Krylenko.

"It is not clear," he says, "whether the Federal Trade Commission got the idea from Krylenko, or whether Krylenko got it from the Commission."

In any event, he observes, Krylenko has since been liquidated; but the American authors of the same philosophy within the Commission have not.

These, then, are a few of the hurdles that confront the intrepid soul who would venture into the business world today—but they are only a few. A compilation of the orders already issued by the Federal Trade Commission shows that there are more than 2,200 different business practices that have been held to be illegal. So our newcomer in the field would, of course, do well to memorize this list with painstaking care before he even unlocks the door of his own office.

Gentlemen, I shall not belabor the point further. I merely submit that when every businessman in America can be found guilty of violating the law, then there is something wrong with the law—and not with the businessmen. From our theorists in Washington today, we hear a great deal about "tightening the loopholes" in our antimonopoly legislation.

In heaven's name, gentlemen, what loopholes?

What we need is not a tightening of the laws, or a loosening of them, but a complete redefinition of lawful business conduct. To quote one final thought-provoking sentence from Lowell Mason: "The Comintern loves it when the men of America who govern, pit themselves against the men of America who produce, and it's time that the Government and business stopped playing cops and robbers with each other."

To that, I think all of us here will utter a profound "amen."

It takes a man of real courage to go into business today, knowing that he must satisfy the conflicting remands of his workers, his stockholders, and his customers. Any man who can do that deserves to succeed for he is performing a great public service. And if he is willing to take such risks, it seems to me that he is entitled to look to his Government for aid—not in the form of loans, or grants, or subsidies—but in the form of clean-cut, understandable rules which clearly mark the boundaries of good and lawful business practice.

The defining of those boundaries should not be left to those who hate business, to those who seek personal or political power over it, nor to theorists who want to experiment with it. It is not a job for irresponsible

underlings in Federal bureaus. It is a job which requires the highest skills of Government officials who understand the problems of business, and of businessmen who understand the problems of Government. It is a job—in short—for men who have a mutual respect for the rights of each other, and a common devotion to the welfare of America.

If the realistic and informed men of Government will ever sit down with reasonable and experienced men of business and make up their collective mind as to what monopoly really is, what competition is, what business conduct is ethical and proper, and what business conduct is injurious, and wrong, I think we will find fewer monkey wrenches in the machinery, and the Government will be able to get out of the crutch business in short order. I believe we need then have no fears about our economic system. It will continue—as it has for these past 330 years—to provide us with the jobs we need and the abundance of goods and services that has made America the wealthiest, happiest, and most secure Nation in the world.

But all this is not just going to happen of its own accord. It is not going to happen at all unless we do something about it. As Americans we take pride in this historic city and in this historic State—in Faneuil Hall, the cradle of our precious liberties, and in the Bill of Rights which was forever to protect us from the petty tyrannies of thoughtless and indifferent government.

I can think of no more appropriate surroundings therefore in which to dedicate ourselves here and now to the task of winning from our Congress at Washington the one remaining right that today is unjustly denied to every businessman in America and to every man in America who may wish to go into business.

That is the right to be right.

A Visit With Scott Lucas

EXTENSION OF REMARKS
OF
HON. ALLEN J. ELLENDER
OF LOUISIANA
IN THE SENATE OF THE UNITED STATES

Monday, June 5 (legislative day of Wednesday, March 29), 1950

Mr. ELLENDER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "A Visit With SCOTT LUCAS," by G. Edwin Popkess, Jr., which appeared in Popkess' Dairyman's Journal for May 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A VISIT WITH SCOTT LUCAS

I had the pleasure during the last week in April to go to Washington on business and while there to have lunch with SCOTT W. LUCAS, senior Senator from Illinois and majority leader of the United States Senate. This was quite an interesting experience for myself and Benjamin O. Cooper, auditor of public accounts, State of Illinois, who accompanied me.

SCOTT LUCAS was a very gracious host, in spite of the fact that he is quite busy handling the affairs of running the United States Senate.

As we sat down in Senator LUCAS' quarters to have lunch with him, my first observation was the three big glasses of good, wholesome milk at our places at the table. Upon questioning him, Senator LUCAS informed us that he drank over two quarts of milk each day. My remark to this was that if every citizen in the country would do likewise, there would be no surplus supply.

It was quite interesting to observe that the Senator's luncheon included many varieties of dairy foods, including the one and only, butter, plenty of good American cheese and a cottage cheese salad. Naturally my reaction is that Senator LUCAS is a real booster of dairy products and a large consumer of all dairy foods.

Senator LUCAS was quite interested in discussing with me the many problems affecting Illinois farmers and dairy farmers specifically.

He stated to me that he wishes the individual farmers of Illinois would write letters to him to make known their wishes on farm legislation and other legislative matters affecting them.

In the case of the recent oleo legislation and other legislation affecting the farmers, he stated that he received very few letters from the farmers of Illinois, but received many from the city dwellers of our State. An interesting fact in this connection is that last month Senator LUCAS received and answered personally 50,000 pieces of mail from persons from all parts of the country. He told me that his average is approximately 25,000 letters a month.

We discussed many world affairs, including numerous Army problems, with which I am quite familiar. Naturally, a man in his position has carefully studied every problem affecting our country, but the amazing thing to me was that he could discuss each and every one of them in detail.

As I sat and visited with Senator LUCAS after lunch, I thought about the fine record he has made as the Senator from Illinois. I thought of how proud the people of our great State should be to know that an Illinois Senator has been chosen the majority leader of the United States Senate, the man who guides the destiny of all bills and all matters coming before the Senate.

After several hours of visiting with him, I knew that Senator SCOTT W. LUCAS is a man who is devoting his entire time in Washington to seeing that the wishes of the citizens of the State, which he represents, are carried out to the best of his ability.

After leaving him, we had an opportunity to visit with other Representatives, Senators, and distinguished members of the press in Washington. All of them had a good word for our Senator, SCOTT W. LUCAS.

As I left Washington, my reaction to my visit with SCOTT W. LUCAS was that he wants to do what the farmers of the State of Illinois want him to do, but in order to do this, he must be advised of their wishes. I feel that this is one place where our farmers have slipped. Too many of them have been willing to sit back and criticize without making their wishes known. It is one thing to elect a man to serve you, but in order to have him serve you properly, you must advise him of your wishes.

So I say to the farmers of the State of Illinois, your senior Senator SCOTT W. LUCAS is doing a real job for you in Washington. He is a man of experience, a real leader, and one that you should see to it is reelected in November to this high office.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1950

Mr. AUCHINCLOSS. Mr. Speaker, under the permission granted to me, I am glad to include with these brief remarks a copy of a letter I have today received from Mrs. Paul Megill, corresponding secretary of the Ladies Auxiliary to the National Association of Letter Carriers, branch 225, Asbury Park, N. J.

This letter very clearly and in a temperate manner describes the effect of Postmaster General Donaldson's recent ill-advised order curtailing the postal service. If the administration would endeavor to implement the recommendations of the Hoover Commission in the reorganization of the Post Office Department, there would be little need for curtailment of the service and the causing of distress to so many faithful governmental servants.

We are too apt to forget that the Post Office Department is a service to the people of the country and is not a business, and it is a service which the citizens expect to be maintained, nor do they expect it to be operated in an extravagant manner. Businesslike methods applied to this service would bring about a modernization and an increased efficiency which would be reflected in substantial savings and improvement of the service.

I feel confident that the Postmaster General will reconsider his decision in this matter so that the distress as set forth in Mrs. Megill's letter is alleviated. As she points out, no other nation in the world has curtailed its postal service, and it seems entirely out of order for us to do so. I hope my colleagues will read Mrs. Megill's letter, which follows:

LADIES AUXILIARY TO THE
NATIONAL ASSOCIATION OF
LETTER CARRIERS, BRANCH 225,
Asbury Park, N. J., June 2, 1950.

DEAR REPRESENTATIVE AUCHINCLOSS: In behalf of the Asbury Park Letter Carriers' Auxiliary, No. 225, we wish to take this opportunity to thank you for the reply to our letter concerning the curtailment of the Postal Service. We do appreciate all you have done and are doing to help us in the upheaval in the postal service.

Mr. AUCHINCLOSS, we are writing the following to inform you of the facts as we know them to exist in the Asbury Park Post Office.

The curtailment order which goes into effect on June 10, 1950, is this: The Postmaster has ordered 20 (8-hour schedule routes) cut to 13. The letter carriers are to report at 6:30 a. m. and case their mail for the route; due to the enlarged volume they are given approximately 3 hours to sort or case letters, magazines and papers. They are then to go out on the street and deliver that mail in approximately 5 hours street time but, Mr. AUCHINCLOSS, what is so inhuman about it is there are no provisions for lunch. The orders are, "take at least a half hour for lunch with whatever provisions you have made for lunch." For the few letter carriers downtown it isn't too much of a hardship to put his pouch in a box and walk to the post office where he can eat his lunch in comfort but what about all the other carriers who find themselves out in residential sections? Surely they are not able to carry their lunch pails all around the routes; if they should have their lunches sent out by mail truck where are they supposed to eat that lunch and find sanitary facilities? Residential areas have no public service stations and not even a chair is provided to sit on to eat that lunch nor is any protection from the extreme heat, rain or cold as the case may be. Mr. AUCHINCLOSS, is this the Government's re-

ward the carriers receive after years of faithful service, many men who have 25, 35, and 40 years of carrying mail? It will be a hard continuous grind for whenever the carriers load is lightened by delivery he will have to pick up another relay.

The relays by the way are not all sent to locked mail boxes but to private residence porches. This order has already had repercussions in two published articles: One was thrown away in the trash by an unsuspecting resident and another was the theft of seven sacks of mail from a New York apartment house. The respect a letter carrier has for mail is to guard it almost with his life and now the Government orders it thrown around promiscuously.

The letter carrier is not against economy in any form because he necessarily knows every meaning of the word, but it seems so ridiculous to spend millions of dollars to transport mail quickly from one part of the country to another just to lay around awaiting delivery.

In view of the recent strikes in industry we hesitate to think what would happen if these unions suddenly found that the provisions for lunch were completely wiped out of their workday.

None of the countries receiving aid from our country have cut their mail service.

These are the facts, Mr. AUCHINCLOSS, having no desire to delude a busy man like yourself.

Thank you for being so patient with a group of women who are much concerned about the endurance and health of our husbands.

Sincerely,

Mrs. PAUL MEGILL,
Corresponding Secretary.

NEPTUNE, N. J.

Tom Miller, of Texas

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 5, 1950

Mr. THORNBERRY. Mr. Speaker, on May 27, 2,400 Texans joined together in Texas' Jefferson-Jackson Day dinner to honor the Democratic Party and to pay their respects to several of today's outstanding leaders of the party. The dinner was held in Austin, the capital of Texas, and in the district which it is my privilege to represent.

On the Monday following the dinner, May 29, the Austin American, in a front-page editorial, gave high and deserving honor to the man who did more than any other one individual to make the dinner the success which it was—the biggest Jefferson-Jackson Day dinner held anywhere in the United States with the exception of the Washington dinner.

Texans attending the dinner had the privilege of hearing Vice President ALBEN BARKLEY, who had with him his lovely wife. Speaker SAM RAYBURN, Senator LYNDON JOHNSON, Congressmen WRIGHT PATMAN, BOB POAGE, JOHN LYLE, and OLIN TEAGUE were also in attendance.

The man behind the dinner, Tom Miller, has long been a keystone in the Democratic Party of Texas and the Nation. For 16 years he served as mayor of the city of Austin, and for the past few years he has served as finance chairman for the Democratic Party in Texas.

Only last year he was honored by the citizens of Austin in being chosen as Austin's most worthy citizen.

As the editorial says, "Tom Miller rates right at the top among Texans who really do things for Texas."

Big Texas takes off its hat to Tom Miller, the man who does things in a big way for his State and his party.

The editorial follows:

MILLER SHOWS HIS SIZE

The Jefferson-Jackson Day dinner demonstrated a lot of things as noteworthy as the cashier's check for $100,000 handed to Speaker SAM RAYBURN for deposit to the account of the Democratic Party.

In money and in spirit, the affair has already been tagged the biggest and the best in any of the 48 States. It was proof that Texans are still taking their party straight, undiluted and unhyphenated. It showed, convincingly, Austin's know-how in putting on and handling a whooping big show.

And, while the plaudits are still ringing, we think it demonstrated the fact that the man behind the dinner—Tom Miller—is a big man in a climate conducive to the production of big men. He rates right at the top among Texans who really do things for Texas.

Austin people have suspected this all along. The dinner is the most recent proof positive.

Any affair that fetches $100,000 and 2,400 people is quite a project. It requires the talents and the time of a lot of people and every member of the committee in charge is deserving of the glory. It doesn't minimize the efforts of anybody else to hand Tom Miller a lion's share of it. He was the man who gathered in money and victuals, handled a thousand details of worrisome aspect, saw to the comfort of incoming visitors from Vice President BARKLEY and his wife down to the least known Democrat from the forks of the creek and commanded a crew of loyal workers here in Austin.

He was, you can say, the man who caused the dinner to be.

Characteristically, Miller wasn't at the head table when the show came off. He wanted it that way. But the fourth table back on the south side of the coliseum, where he sat with his family, was a head table, too. A big man sat there.

Trygve Lie Should Not Be Invited To Address Congress

REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, June 5, 1950

Mr. RANKIN. Mr. Speaker, I thoroughly disagree with the gentleman from New York [Mr. MARCANTONIO] in his ardent desire to have us invite Mr. Trygve Lie of the so-called United Nations to address the Congress of the United States.

This so-called United Nations is already attempting to arrogate to itself the powers and prerogatives of a superstate, a supergovernment. It is already invading various States of this Union and meddling with their internal affairs.

Many of our States have alien land laws, which forbid an alien from owning land in those States. In my opinion, every State ought to have such a law. Recently a Japanese appealed to this so-called United Nations to outlaw the alien land laws of California. The United Nations, in violation of the Constitution of the United States, in violation of the Constitution of the State of California, in violation of the sovereignty of the United States of America, arrogated to itself the prerogative of declaring the alien land laws of California null and void.

There are a dozen or more States that have these alien land laws. If this Communist-dominated United Nations has the power of a supergovernment to invade the State of California or Louisiana, or any other State, and wipe its alien land laws from the statute books, then it can invade any other State, wipe out its school laws, its labor laws, its laws of descent and distribution, its marriage laws, its laws against various crimes, or any other laws with which the members of that supergovernment disagree. A large number of the Communist delegates would probably find all laws undesirable.

Strange as it may seem, a crazy court in California rendered a decision backing up this mandate of the United Nations declaring the alien land laws of California null and void. Every member of that court who voted for that decision should be impeached, and if the Supreme Court of California should go off on such a tangent, then the State of California should clean out its supreme court.

Thomas Jefferson said that if this Government was ever destroyed it would be destroyed by the courts.

The rest of you may do as you please, but I, for one, representing the people of the sovereign State of Mississippi, do not propose to sit here and see our Government destroyed in this way.

Our first duty is to protect our country from her enemies at home, as well as abroad. If we fail to discharge that duty, then God save America.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 5, 1950

Mr. HARRIS. Mr. Speaker, I have supported Federal aid to education for our public schools since I became convinced of the dire need and came to the conclusion that in this field there is a direct responsibility of the Government. After the principle of local control and other fundamental policies were determined in the last Congress, I supported the bill before the committee and even signed the discharge petition on the Speaker's desk after the Education and Labor Committee failed to report it to

the House for consideration. I made a statement of my position at that time.

It is disappointing to me that this Congress has likewise failed to assume the responsibility and provide this needed legislation. With others I had hoped that the Congress would have taken action before now. In that this second session of this Congress is well along and rapidly passing, I take this opportunity of again expressing my views and desire that some action yet will be taken.

In that the Senate has passed a bill authorizing $300,000,000 per annum for Federal aid to assist the States in financing their public schools, this now becomes a responsibility which rests upon this House.

Unfortunately the religious subject has been brought in as an issue. This question can and will be ultimately settled. I have previously stated my position that this program should apply to our public schools. This would be in keeping with the purpose and intent of the Constitution in preserving the separation of the church and state.

In my judgment there is no unfinished task before us that is of greater importance than the enactment of a Federal-aid-to-education bill.

The education of our boys and girls lies at the foundation of our way of life. In any nation where the power of government is derived from the governed the exercise of that power depends for its success upon the enlightenment of all citizens. Universal suffrage makes universal education a necessity.

'Tis education forms the common mind:
Just as the twig is bent, the tree's inclined.

The strength of our Nation is to a large degree the product of common knowledge and understanding on the part of men and women in every community in every State. That person best lends himself to democracy who is best grounded in the political, economic, and social institutions and traditions that distinguish the American way of life. The basic institution for the development of this common background of knowledge and understanding is our public schools. It is in the early years of the life of each citizen that the foundations of loyalty and of right attitudes are laid. The defense of our Nation is in the minds of our citizens. Good schools are essential and should be provided wherever there are children to be educated.

We know, however, that today there is in the United States no equitable distribution of educational opportunity. There are 10,000,000 persons who are for all practical purposes functionally illiterate.

There are several million school-age children who are enrolled in no school at all. There are perhaps 2,000,000 who are under the direction of teachers unable to qualify for the lowest standard certificate. In many instances classrooms are presided over by persons with no more than a high-school education. The ratio of substandard certificated teachers to teachers holding standard certificates today is 20 times higher than at the beginning of World War II.

It is of course impossible to appraise with exactness the penalties that flow from these conditions. We do know that they are heavy. They undercut our economy. Poverty and illiteracy are closely related. These penalties also constitute a threat to our national security in time of war, a fact that is strongly attested by the heavy rejection rate for educational shortages under selective service during both World War I and World War II.

"The sure foundations of the state are laid in knowledge, not in ignorance," declared G. W. Curtis, an outstanding leader of American thought in the last century. It is time, in the light of our own experiences in the twentieth century, that we shape a course of action with respect to the education of our young people that conforms to the basic needs of our country.

To my knowledge the House Committee on Education and Labor has this year given considerable time and study to Federal aid to education measures. In late March the committee agreed, according to reports that I am sure are reliable, to consider H. R. 5939—often referred to as the Burke public-school teachers' salary bill—sometime after April 17.

We are familiar with the controversies that have raged around Federal aid measures before the committee, particularly S. 246 which the committee rejected by a vote of 13 to 12. The Burke bill avoids the area of religious conflict in Federal-aid legislation by limiting the use of Federal funds to the salaries of public-school teachers. All benefits in controversy are excluded from such legislation.

I should very much like to have an opportunity to vote on a measure of this kind and I urge, Mr. Speaker, that the House Committee on Education and Labor advance a bill which will give an early chance to vote for the improvement of educational opportunities for our young people.

The most critical need today in education is for qualified teachers. We do not have as many of them as we need.

There is a shortage of qualified elementary school teachers in every State. We need 90,000 qualified teachers to replace those now employed on substandard certificates. We need an additional 75,000 each year to fill vacancies created by resignations, retirement, and death. Another 15,000 are needed to reduce overcrowding of classrooms in each year for the next 10 years. An additional 32,000 are required to take care of the extra million school-age children this year as a result of the wartime and postwar baby boom. A total of 212,000 public school teachers are needed now.

Estimates indicate that only 35,000 elementary school teachers will come from our teacher-training institutions this year, of which number only 22,000 will be college graduates. This contrasts sharply with the 103,000 that are required if our obligations to our children are to be met.

Mr. Speaker, every possible effort should be made by the House to pass a Federal-aid-to-education bill before adjournment.

This legislation should be accorded the highest priority on the House Calendar.

There is time in which to act on such legislation.

The Nation can afford to make a decent educational opportunity available for its children. We have voted a large sum, running into billions of dollars, for European aid. We have voted almost $2,000,000,000 for public works. We have voted an addition $1,500,000,000 for highway aid to be expended over a 2-year period. We have done these things without finding such expenditures to be particularly disturbing to a majority of the Members of this House.

But when it comes to authorizing the relatively small sum of $300,000,000 per annum for the educational welfare of our children there are those who begin to gag and say "This is the road to socialism" or to something else when as a matter of fact the Federal Government has been providing aid in one way or another to education for a century and a half.

This was effectively stated by the chairman of the House Committee on Education and Labor during the 1949 hearings on S. 246 and H. R. 4643, page 257, when, referring to organizations that have opposed the enactment of Federal-aid legislation, he said:

> The thing that astounds me with these organizations is that they get so meticulously careful in a matter of this kind—
>
> Federal aid to education—
>
> and I have hurdled more objectives than you might think to arrive at the place where I am—we get so meticulous about those things, but when it comes to a British loan, or $7,000,000,000 to Europe, or $1,000,000,000 here or somewhere else, there is never a protest. And I believe you will agree with me there is not a better investment on God's earth than education and children.

It is my firm belief that this House will pass any reasonable Federal-aid-to-education legislation which the House Committee on Education and Labor will report. It is my sincere hope that the committee will move to early action in order that all of us may have a chance to perform a service which has long been overdue.

The Right To Vote

EXTENSION OF REMARKS

OF

HON. RUSSELL V. MACK

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1950

Mr. MACK of Washington. Mr. Speaker, of all the rights of Americans, none should be more precious to them than their right to vote.

In Italy, where the people have far less educational advantages than in the United States, 89 percent of all eligible voters went to the polls in Italy's last election. In Germany and in France, the percentage of those voting in na-

tional elections has been even higher. Yet, in the United States in the last presidential election, only 52 percent of America's eligible citizens voted.

All of this goes to show, I think, that those who have been deprived of the right to vote, as most Europeans have in the times past, prize higher than we do the precious right to vote.

A very thought-provoking, informative, and patriotic editorial on this subject, written by Mr. Albert S. Goss, National Grange master, appears in the current issue of the National Grange Monthly.

In this editorial, National Grange Master Goss says:

THE RIGHT TO VOTE

The average American takes great pride in those sturdy souls who fought the Revolutionary War to gain the right of self-government, yet 48 out of every 100 citizens entitled to vote in the last general election did not take the trouble to cast their votes. The right to vote is very dear to those who have personally lived under the heel of oppression. In a recent election in Italy, despite all its illiteracy, 89 percent of the eligible voters voted. France and Germany have bettered this record but in 1948 only 52 percent of our eligible American citizens took enough interest to vote.

You may be sure that everyone who had some special ax to grind went to the polls. With half of our people staying home, every Communist and every crackpot in effect casts two votes. With a little ganging up and concentration in the proper places, they are able to wield tremendous influence because of the apathy of those of us who have come to take freedom for granted.

Most of the States in the following table should be thoroughly ashamed of their record. Even the best of them have nothing of which to be proud. The table shows the percent of eligible voters who voted in the 1948 general election:

Utah	74.6
Colorado	71.4
Delaware	70.9
Montana	70.3
Nevada	69.0
West Virginia	67.8
Idaho	67.6
Illinois	67.5
Massachusetts	66.8
North Dakota	66.5
Rhode Island	64.8
Indiana	64.7
South Dakota	64.6
Connecticut	64.0
Minnesota	63.6
New Hampshire	63.4
New Mexico	63.0
New York	62.5
Kansas	61.0
Iowa	60.0
Missouri	60.0
Wyoming	60.0
California	59.9
New Jersey	59.9
Wisconsin	59.0
Nebraska	57.7
Ohio	56.5
Washington	54.9
Michigan	53.0
Pennsylvania	52.5
Vermont	51.8
Kentucky	50.1
Oklahoma	50.0
Arizona	47.3
Oregon	47.0
Maine	46.6
Maryland	43.0
Florida	39.4
North Carolina	38.6
Tennessee	37.0
Louisiana	27.7
Texas	26.6
Virginia	23.7
Arkansas	22.0
Georgia	21.8
Mississippi	16.6
South Carolina	13.9
Alabama	13.7
United States average	52.0

The Granges throughout the land could render no greater service at this time than to lay plans for a practical program for getting out the votes. Some States already have held their primaries. In many States the days for registration will soon be over. It is not enough to get out the vote of the Grange members only. Granges should put on campaigns for getting every eligible voter registered and then follow up with a campaign to get out the votes.

We live under a representative form of government. Our duty is to see that those placed in a position of official responsibility are truly representative of the people within their districts. Much of the sad state of affairs into which we have drifted is due to the fact that we have allowed minority groups to take over.

It is high time that the people speak for themselves.

Both Union and Confederate Soldiers Are Honored by Chicago's Civil War Monuments

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1950

Mr. O'HARA of Illinois. Mr. Speaker, in the first session of the Eighty-first Congress I introduced a resolution for an all-faiths memorial, being joined by many of my colleagues as sponsors. As the authorization of this living memorial to the spirit of tolerance would not entail an expenditure of public funds and would serve a wholesome and useful purpose, I hope that some action on the resolution may be taken before we adjourn.

There is a distinction only in form between a memorial and a monument Both keep alive in the present the spirit of the past. They preserve and glorify the virtues of those who have trod the road before us and set the pattern of our course. I would say that no force is more potent in the molding of the national character of a people.

Each generation of Americans has made its own distinct contribution, both physical and moral, and the nature of this contribution can be read in the monuments and memorials that have been left in its wake. Our generation perhaps to a greater degree than any that has preceded has progressed along the lines of tolerance. Truly, Mr. Speaker, ours is the generation of tolerance. We have learned not only to work together, but to pray together even though our approach to the infinite ear is through different faiths and creeds. This is the thought behind the resolution for an all-faiths living memorial. The form of the memorial, it is provided, is later to be determined by the members of the commission that would be created.

Monuments and memorials often tell as much if not more of a people than the printed words in books of history. In Chicago, where Abraham Lincoln was nominated for the Presidency, is a monument to John A. Logan, great son of Illinois and a hero of the armies of the North. In Chicago also is a monument to some 6,000 Confederate soldiers who died as prisoners in the camp named for Lincoln's great rival in the political arena, Stephen A. Douglas.

Under the caption "Decoration Day Tour" Charles Collins, conductor of the Line o' Type or Two in the Chicago Tribune, has a description of monuments in Chicago associated with the heroes of the war of the sixties. I trust that my colleagues will find the article as interesting as I did. The Line o' Type or Two column is widely read in the Middle West. One of the predecessors of Mr. Collins as the conductor of the column was the late beloved Richard Henry Little, one of the greatest of the many great and famous newspapermen produced by Chicago. His sister, I might add, is the wife of Arthur Sears Henning, long known in the Capital as the head of the Chicago Tribune Washington staff. The article on Chicago's Civil War monuments follows:

DECORATION DAY TOUR

In Grant Park at the foot of Ninth Street, facing Michigan Avenue in an excellent position to review military parades, is the equestrian statue of Gen. John A. Logan, who led the movement for the establishment of Decoration Day as a national holiday. It stands on a high mound, which is often described by humorists as the only hill in Chicago. Such wags are always wrong, and in this case, it should be noted that there is a higher artificial mound in Lincoln Park, which bears a statue of Governor Oglesby, elected in 1865, 1872, and 1885.

The Logan statue, completed in 1897, represents the talent of a great American sculptor, Augustus St. Gaudens. [See also his seated Lincoln, a few blocks to the north.] Ancient wags of the town have been known to say that Logan's horse, a highly spirited animal, seems ready to flick a fly off its nose with its fore hoof. Connoisseurs of large scale public sculpture, however, have a high regard for this blending of horse and man in heroic bronze.

An inscription on the pedestal of Chicago's memorial to General Logan says that he is buried beneath the statue. This is a statement of an intention that was never carried out. He was buried in Washington. * * * Perhaps the inscription is no longer legible, for much of the bronze lettering and ornament around the base of the pedestal has been ruined by vandalism. The Chicago park board sleeps over this problem year after year. It will not wake up until somebody steals Logan's horse.

In Oak Woods cemetery, on the south side, there is an impressive memorial to the Confederate soldiers who died in captivity at Camp Douglas. Burials, about 6,000. Identified and named with rank and regiment on bronze tablets are 4,275. This roster forms a sampling of the racial backgrounds of the rank and file of the Confederacy. About 99 percent of the names are of English, Welsh, Scottish, and Irish origin.

In St. Boniface cemetery [Clark Street and Lawrence Avenue] near the west wall, there is a memorial to members of a regiment of German-speaking citizens of Chicago who fell in the Civil War. The inscription is

in German. Most of the names suggest orgins in the Rhineland area.

In Calvary cemetery, Evanston, near the Chicago Avenue entrance, partly visible to every passer-by, there is a monument in memory of Col. James A. Mulligan, a Chicagoan who recruited and commanded the Twenty-third Illinois Volunteers, entirely composed of men of Irish birth or descent. This regiment was called the Irish Brigade, but it is not to be confused with the other and larger Irish Brigade led by Gen. Thomas F. Meagher, a New Yorker.

Colonel Mulligan died of battle wounds at Kernstown, Va., July 26, 1864. His last command was, "Lay me down and save the flag." These words form his epitaph.

The Proposed Milk Embargo—We Hear About Free World Trade But We Must Meet the Domestic Embargoes

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 5, 1950

Mr. MURRAY of Wisconsin. Mr. Speaker, the proposal to reestablish an embargo on milk coming into Washington is of national importance. Washington is the only city in the Nation over which the Congress has direct control. While the administration invites larger and larger imports of foreign dairy products by continually lowering the duty, it is a party to erecting embargoes on the marketing domestically of dairy products. My contention is that grade A milk should be allowed to be shipped interstate the same as any other grade A product. The erecting of trade barriers under the guise of trumped up health standards will not stand analysis.

In a few months in my State, Wisconsin, where milk is now bringing as low as 5 to 6 cents per quart and where one-eighth of the milk of the Nation is produced, nothing but grade A milk can be produced.

It does not make sense to first, complain because the CCC accumulates dairy products when the Government itself is a party to preventing products from being marketed, second, to erect artificial embargoes that affect domestically produced dairy products and not even require imports to meet the same standards, third, to be a party to a program that subsidizes synthetic products like oleo, filled milk, filled cream, filled ice cream, and when this is done, to turn around and put an embargo on the marketing of grade A milk wherever produced.

First, if any milk, or milk products, like dried whole milk or evaporated milk, has the endorsement of doctors for baby feedings and, second, if any milk, or milk product is distributed by the millions of pounds through the school-lunch program, it looks ridiculous to try to maintain that the same milk is not good enough for the general public; third, if other drinks can be marketed by mechanical or self-service, there is no valid reason why grade A milk is not entitled to the same markets.

In the meantime please go slow when you complain about the price of milk, or when you complain about the CCC accumulations.

I include a copy of a bill I have introduced to meet this problem and my letter to Washington's health officer and his answer thereto:

H. R. 1555

A bill to authorize the shipment of grade A milk into the District of Columbia

Be it enacted, etc., That the dairy plants in the District of Columbia are authorized to purchase, receive, process, sell, and distribute shipments of (1) grade A milk from any of the 48 States in the United States; (2) to receive, process, sell, and distribute cream made from grade A milk from any of the 48 States in the United States; (3) to purchase, receive, sell, and distribute natural skim milk and dried skim milk manufactured from grade A milk; (4) and to receive, process, reconstitute, sell, and distribute in the District of Columbia, as bottle milk, any milk made from dried or natural skim milk made from grade A milk and cream made from grade A milk with present legal requirements for butterfat and milk solids.

This act shall take effect 30 days after its enactment.

APRIL 6, 1950.

DANIEL L. SECKINGER, M. D.,
Health Officer, District of Columbia, Washington, D. C.

DEAR SIR: It will be appreciated if you will kindly advise me whether or not it is permissible, under the present regulations in the District of Columbia to—

1. Ship skim milk, made from grade A milk, into the District of Columbia and distribute this milk.

2. Bring dried skim milk into the District of Columbia, reconstitute it and sell it as skim milk.

If this is not permitted, would you be kind enough to advise me why it is not?

Sincerely yours,

REID F. MURRAY,
Member of Congress.

GOVERNMENT OF THE
DISTRICT OF COLUMBIA,
OFFICE OF THE HEALTH DEPARTMENT,
April 13, 1950.

Hon. REID F. MURRAY,
Member of Congress, Seventh District, Wisconsin, House of Representatives, Washington, D. C.

DEAR CONGRESSMAN MURRAY: In accordance with your request of April 6, 1950, I am enclosing herewith answers to your questions relating to the distribution of skim milk and dried skim milk in the District of Columbia.

1. "Ship skim milk, made from grade A milk, into the District of Columbia and distribute this milk."

The Milk Act, Public, No. 496, Sixty-eighth Congress, approved on February 27, 1925, defines skim milk as "that part of milk from which the fat has been partly or entirely removed and shall contain not less than 9 percent of milk solids, inclusive of fat." This definition is taken from section 13. The health department has taken the position that skim milk sold in this city must be obtained from fluid milk from producers (dairy farms) who hold a permit and from pasteurizing plants (dairies) who likewise hold a permit under provisions of this act, which is enclosed herewith.

2. "Bring dried skim milk into the District of Columbia, reconstitute it and sell it as skim milk."

Section 10 of the Milk Act requires labeling of both skim milk and reconstructed milk and section 13 clearly defines reconstructed milk. Although the problem presented by your question has never arisen, the health department would take this position: Dried skim milk if obtained from dairy farms holding a permit, separated and dried by a pasteurizing plant (dairy) holding a permit, could be reconstructed and offered for sale as skim milk provided it was labeled "reconstructed skim milk." The term "reconstructed" used in the Milk Act is analogous to your term "reconstituted."

Section 2 of the Milk Act provides that anyone desiring to ship fluid milk or cream into the District of Columbia must first secure a permit from the Health Officer so to do.

In conclusion, will say that in the advent the Health Officer's authority would be challenged, the Corporation Counsel would be asked to render a legal opinion.

Sincerely,

DANIEL L. SECKINGER, M. D.,
Health Officer.

What's Wrong With Profit?

EXTENSION OF REMARKS
OF
HON. THOMAS G. ABERNETHY
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, June 5, 1950

Mr. ABERNETHY. Mr. Speaker, under leave to extend my remarks in the Appendix, I include the following editorial taken from a recent edition of Pathfinder magazine:

WHAT'S WRONG WITH PROFIT?

Several months ago the following item appeared in the Newark (N. J.) Evening News:

"The Pennsylvania Railroad was attacked today by the Essex-West Hudson CIO Council for 'devotion to the principles of profits first, the public welfare last.' Joel R. Jacobson, executive secretary, accused the railroad of fantastic greed and unmitigated gall in announcing a dividend of 50 cents and simultaneously accepting a rate increase."

The actual fact is that the dividend did not come out of current profits, because for many months the Pennsylvania Railroad had been just about making expenses and even at times operating at a loss. The 50-cent dividend was paid out of earnings from previous years, prudently saved for such a situation. But the most disturbing (and incomprehensible) thing about it is the kind of thinking that considers payment of a dividend evidence of "fantastic greed and unmitigated gall," and that it is wrong for a railroad to accept a rate increase in order to operate at a profit instead of a loss.

What's wrong with operating at a profit? Every business concern must make a profit if it is to stay in business. Any company that fails to take in more than it pays out is headed for bankruptcy—and its employees for the loss of their jobs. Indeed, it was a labor leader who said: "The greatest crime against labor is a business that fails to make a profit."

And what about the millons of people who have saved money and invested their savings in the stocks of the Nation's corporations? Aren't they entitled to a profit on their money? If not, why should they risk it? And from where then would come our factories and the jobs they provide?

Corporations are people, people just like you and me, people who have invested their savings under the very common, very human, very understandable incentive of making a

profit. There are 18,000,000 such people—corporation is only a legal word by which their investments are pooled for collective and efficient use.

There are some people who would have us believe that to make a profit is an evil thing. Yet they themselves expect interest on their bank savings accounts and dividends on their life insurance policies—and these are made possible by business profits. Everyone who owns a savings account or life insurance policy shares in the profits of American business.

The hope of profit is a universal driving force. America was built on it; it was the dream of profit that made people willing to risk their savings in the new factories, new machines, new ideas from which have come our high standard of living, our high wages, our steady growth. And our hopes for continued progress and prosperity and a still higher standard of living have a common foundation—profit. It is what spurs men on to make things more efficiently, to sell them for less, to make what is a luxury today available to everyone tomorrow.

We all want to keep America strong, its factories humming, its people steadily employed at good wages, but to achieve these goals, American business must be healthy and prosperous. And to be prosperous, it must operate at a profit. The man who sells his home for more than he paid for it is not condemned for having made a profit. Why should we deny the necessity for a legitimate profit to American industry and the 18,000,000 thrifty people whose savings enable it to operate?

Texas Production Credit Associations Are Farmer-Owned

EXTENSION OF REMARKS

OF

HON. W. R. POAGE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1950

Mr. POAGE. Mr. Speaker, on December 31, 1940, the 36 production credit associations in Texas returned to the Federal Treasury the last of the Government capital which had been advanced to them. They are now entirely farmer-owned institutions operating on the money and credit supplied by their own members.

I think this is an outstanding record. As chairman of the subcommittee of the Committee on Agriculture which has charge of all farm credit activities I am especially delighted that the farmers of my own State have set such a fine example for the Nation.

There should be very few who would be bold enough to criticize a Federal program of assistance in establishing this needed farm credit. Those who have criticized may find it difficult to explain that the farmers have paid off their indebtedness to the Government and are evidencing the ability to operate a sound and needed credit system.

As of this date, the two largest segments of our farm credit program in Texas are entirely farmer-owned. They are the Houston Land Bank and the 36 production credit associations. Our committee has sought to find a workable and sound basis for placing the Bank for Cooperatives on this same road to private ownership. This endeavor has not been easy, but I believe that, given time, we will be able to make of this cooperative bank another farmer-owned institution.

The REA financed cooperatives are not a part of the Farm Credit Administration, but they are closely related to its work. They, too, have made great strides and are making a wonderful record of meeting their obligations. Many of them have actually made substantial payments on their indebtedness before it became due. I think that the farmers of Texas are to be highly congratulated, and I think that they are entitled to the appreciation of the taxpayers of the entire Nation for the fine example which they have set.

The great achievements of the Texas production credit associations and of the land bank prove that farmers can and will use Government help to provide for their own needs and that they can and will stand on their own feet at the earliest opportunity.

A number of our leading periodicals have commented on this fine record. I attach some of these comments:

[From the Temple (Tex.) Telegram of January 2, 1950]

SUCCESS OF TEXAS PCA LAID TO FARMER, RANCHER GROUPS

(By Louis Franke)

Two things, to my mind, stand out in the announcement made yesterday that the Texas production credit district, 1 of 12 in the country, had repaid to the United States Treasury the last of $8,000,000 advanced to the Texas associations as operating capital under the Farm Credit Act of 1933.

Make it three.

The third is that it's hard to understand why anyone in these days would voluntarily give up the free use of Government capital and in so doing take on a tax bill that is going to run around a quarter million dollars a year. As one man put it to me, "The way everyone has their hands out to the Government these days, you could almost say that what the production credit associations did isn't the American way. I wouldn't be surprised if someone investigated them."

But the other two things together make up the plan or system which a lot of people believe is responsible for the success of the associations.

The first is the loan system whereby a committee of farmers and ranchmen pass on the requests of their neighbors who want to borrow. It just stands to reason that a man who is raising cotton would be a better judge of another cotton farmer's ability to raise cotton than anyone else. It's a wonder someone didn't think of that long ago.

Back of the loan committee plan is a pretty sound philosophy—look first at the man who wants to borrow. The committee also considers the repayment capacity of his business. Instead of looking at the proposition at first to see whether it is safe for the association, they figure out whether it is sound for the farmer.

They also go into the purposes of the loan. Will whatever he wants to buy make money for him? And here is a strange thing—they tell me it is not unusual for a committee to decide that the applicant is not asking for enough money. Then they call him in and say, "What you are asking for looks to us like it will not be enough to make your business as efficient as it could be. So we doubt if it will pay off, and therefore it is not a sound loan. But, if you will borrow a little more and do it right, we will approve the loan."

Finally they look at his financial condition, the progress he has been making and—and only then—his collateral. They figure that if the man, the repayment capacity of his business, his present financial condition and the purpose for his wanting the loan pass muster, the value of his collateral will be secondary.

It adds up to this: the more weaknesses that show up in the first four items, the more important the collateral; and the more important the collateral becomes, the less desirable the loan.

In 16 years of operation under this system, the 36 Texas associations together have made almost 240,000 loans totaling over $900,000,000; their losses ran to less than five cents on $100. That is a pretty good recommendation for the plan.

The second strong point seems to be the intermediate credit bank system, through which an association is able to discount its loans and reach into every part of the Nation to borrow money wherever private investors have money to loan.

Over in India it has frequently happened that people in one valley have a complete crop failure and starve while in a nearby part of the country there is a bumper crop and no market, due to the lack of transportation facilities.

The same thing has often happened in the past in the United States in the field of credit. Credit sources in one part of the country dry up and in another there may be plenty of money available.

The intermediate credit bank system has bridged the gap. The investment public has so much confidence in the short-term debenture issues of the intermediate credit system that private banks, trust companies, insurance companies and securities brokers oversubscribe each issue several times.

The sounder a loan is, of course, the lower the interest rate. The Federal intermediate credit bank issues currently pay a little less than one and a half percent interest—only a little more than government bonds.

The system stood the test of the depression of the early 1930's and never saw the time when it was not ready to discount any sound note.

[From the Temple (Tex.) Telegram of January 2, 1950]

WACO PRODUCTION CREDIT GROUP PAYS OFF LAST $5,000 OWED

Among the 36 production credit associations of Texas which retired the last of their Government capital last week was the Waco association, of which Bell, Coryell, McClennan, Bosque, and Falls Counties are members, Burt Davidson, field representative for the association in Temple, announced.

Mr. Davidson said that of the 36 associations in Texas, nine paid off their capital in 1948, six in the first part of 1949, and now the remaining 21 are paying off theirs.

The Waco association now has about 1,000 members of the five Central Texas counties, Mr. Davidson said. Bell County has about 200 members.

Originally the Government put about $350,000 into the Waco association as capital, and the association has been paying it off all along.

The last payment, which was made Saturday, was for $5,000.

"We will now be just like any other institution. We have retired all of our Government capital and are fully member-owned," he said.

The production credit association was set up in the thirties when it was difficult for farmers to obtain loans from private institutions.

Farmers can borrow from the TPCA for any agricultural purpose, including the education of children, to buy a new car, buy equipment, and other such purposes.

Interest is 6 percent, paid only on the number of dollars the farmer uses and on the number of days he uses them.

[From the Waco (Tex.) Tribune-Herald of January 1, 1950]

PCA PAYS OFF DEBT

An unusual story of how a group of farmers, in the depression year of 1933, accepted the invitation of the Federal Government to organize a production credit association for Bell, Bosque, Coryell, Falls, and McLennan Counties, and have seen the organization progress from rags to riches in 16 years, is revealed in the business records of the Waco Production Credit Association.

Ben D. Giles, McLennan County director and vice president of the association, told reporters that the last dollar of Federal capital was returned to the Government on December 31, culminating a program of retirement of Government stock begun 5 years ago by the local farmers and ranchers—over 1,000 in number—who are now the sole owners of the business.

All 36 production credit associations of Texas have done likewise, and Texas has led the Nation in attaining complete member-ownership.

With this voluntary retirement of all Government-owned stock, automatically follows the liability for the Federal income and all other taxes that other businesses and corporations pay. At a time when so many people and organizations are trying to escape taxes and to live off the Government, it is a novelty to see Texas farmers hand back their Government capital and voluntarily assume tax liability.

ORGANIZED IN 1933

Organization of the Waco association took place on December 28, 1933, when a meeting of 30 farmers and businessmen was held at the courthouse in Waco. John Gorham of Waco, route 3, was chairman and Louis Williams of Marlin was secretary of the group, which also included J. H. Youngblood, Ross Brown, S. Y. Meharg of Waco, R. L. McKnight, Jr., L. E. Ellwood of Temple, J. E. Masters, Sr., of Lott, W. C. Pallmeyer of Steiner, Tom C. Parks of Clifton, D. H. Attaway of Hewitt, R. J. Phillips of Iredell, H. C. Odle of Meridian, D. V. Poston, Charles E. Dansby of Valley Mills; T. W. Hander, Carl H. Aiken of Belton; John P. Geisler of Riesel; W. D. Walker of Satin; Holley Haynes of McGregor; Sanford Garrett, G. H. Bargainer of Reagan; M. Blankenship, A. C. Schloeman, D. I. Glass, P. H. Martin of Gatesville; S. J. Barnard of Mount; J. F. Dulaney of Mart; and J. W. Whittington of Oenaville.

The first board of directors was composed of Ed Brewster of Temple, M. Blankenship of Gatesville, Charles E. Dansby of Valley Mills, Ross Stricklin of Reagan, and Robert A. Gorham of Waco, Route 3.

The present board of directors is composed of Lloyd Williamson of Pearl, Ben D. Giles of Waco, Route 3; R. M. Jones of Clifton, Lathel O. Caskey of Belton and W. D. Walker of Satin.

GETTING THE RECORD STRIGHT

Carlos Val. Smith, secretary-treasurer and manager of the association, who succeeded J. R. Taylor in November 1944, said: "I am indeed proud that our members, by their loyalty and cooperation, have made it possible to realize the dream of owning our credit institution.

"I would like to get the record straight," he continued, "on two points about which the public has been confused.

"(1) Production credit associations are not 'relief agencies,' 'Government outfits,' nor even a 'New Deal' invention. They are owned, controlled, and operated by local farmers and ranchers. They are part of a complete system of credit for agriculture planned back in 1912, started off in 1915 with the establishment of the Federal Land Banks, carried forward another notch by the establishment, in 1923, of the Federal Intermediate Credit Banks, and rounded out in 1933–34 by the establishment of the production credit associations.

"(2) Production credit associations do not lend, and never have loaned, any Government money. The object of the system is to tap the great reservoirs of private credit in the money market of the country and make this credit available to agriculture through lending institutions owned and controlled by the farmers themselves.

"Our association," Smith added, "brought over $1,600,000 of this money into the central Texas community in 1949, to the benefit not only of farmers and ranchers but of people in all other lines of business."

[From the Dallas (Tex.) Morning News of Jan. 2, 1950]

TEXAS PCA CLEARS ITS INDEBTEDNESS

Hearty congratulations are in order for the State's 36 production credit associations and their coordinating agency, the Production Credit Corporation of Houston. During 1949, these associations put through a most remarkable transaction—they paid back to the Federal Government every cent of taxpayers' money that the Government used in organizing them in 1933–34. The associations, therefore, enter 1950 backed solely by private funds. They are full-fledged units of private enterprise. They must pay income taxes and all the other innumerable duties of which they have been exempt. And no one is happier about the whole thing than PCA itself.

PCA was organized and still exists solely to meet short-term credit demands of Texas farmers and ranchmen. Actually, PCA is an extension of the agricultural credit system that began with the establishment of the Federal land bank in 1917. The land-bank system already has returned its Government investment. And now PCA is following suit. Almost 33,000 Texas farmers and stockmen have dug into their pockets for $8,000,000 to cover the Government's original investment in PCA. Then the borrowers have forked up another $7,000,000 to establish capital and surplus needed to support PCA's volume of short-term loans.

The system requires borrowers to buy capital stock in proportion to the size of their loans—$5 in stock for every $100 loan. But the $15,000,000 raised includes only about $3,000,000 in capital stock that borrowers legally were required to purchase. Indeed, borrowers wanted to own the system to such an extent that they have retained $3,200,000 in stock they were under no obligation to keep. They also have purchased an additional $3,000,000 in stock, and they have kept intact about $5,600,000 in surplus from earnings over the past 16 years.

Embedded in the action of these Texas farmers and ranchmen is a neat little sermon on Americanism. They were under no legal obligation to put up that extra money. No other PCA district has done it. They could have retained Government investments in PCA. They could have continued to pile up tax-free profits and surpluses for many years. They could have enjoyed financial security. But they didn't. They weighed security against freedom. They chose freedom.

[From the Dallas (Tex.) News of December 8, 1950]

HERE ARE THE FACTS ABOUT PRODUCTION CREDIT ASSOCIATIONS IN TEXAS

1. They are organizations owned and operated by farmers and ranchers—making loans for crop and livestock production.

2. They obtain their loan funds by selling their loans to the Federal Intermediate Credit Bank of Houston, which in turn gets its funds by selling short-term bonds to private investors in all parts of the country.

3. In 1949 these associations brought about $100,000,000 of this money into Texas communities to the benefit not only of farmers and ranchers but of people in all other lines of business.

4. Although the Government furnished the initial capital stock back in 1934, these associations do not and never have loaned Government money.

5. The last dollar of this Government capital in the 36 production credit associations in Texas were paid off at the end of 1949, and all these associations are now completely owned by farmers and ranchers.

6. These associations now pay Federal income and other taxes just like other privately owned business.

The production credit associations and their 33,000 farmer-rancher stockholders would like for every businessman in the State, as well as all agricultural people, to learn more about what these financial organizations are and how their services benefit the whole community. Headquarters of the associations are located in the following Texas towns: Amarillo, Austin, Beaumont, Brenham, Bryan, Canadian, Coleman, Corsicana, Crockett, Crystal City, El Campo, Gonzales, Harlingen, Houston, Jasper, Laredo, Lubbock, Marfa, Marshall, McKinney, Memphis, Mexia, Midland, Plainview, Robstown, San Angelo, San Saba, Stamford, Stephenville, Sulphur Springs, Sweetwater, Texarkana, Tyler, Uvalde, Waco, and Wichita Falls.

[From the Country Gentleman of January 1950]

EXTRA! THESE TEXANS REFUSE TO LEAN ON UNCLE SAM

The 36 production credit associations in Texas are doing something that deserves the thoughtful attention of the whole country. They are paying off the last dollar of the capital advanced by the Federal Government to enable them to become established.

In a time when large numbers of people are seeking dependence on the Government, it is exceptional to find a group that is voluntarily giving it up. The action is all the more impressive when these facts are considered: The use of this Government capital was free and no time limit was set for its return. In paying it all off, the associations automatically became subject to Federal income and other taxes, from which Congress had exempted them so long as they retained any Government capital.

When Congress set up the production credit system in 1933 and appropriated $120,000,000 to get it started, it aimed to assure the permanency of the associations and also to permit the gradual return of Government capital. The PCA's were made cooperatives, with each borrower buying stock in proportion to his loan. Eventually, it was intended, the farmers and stockmen were to own these associations completely through the purchase of capital and the accumulation of earnings into surplus reserves. The responsibility for achieving these ends was put upon the farmer-stockholders. They were to operate and control the associations, performing the tasks of making repayable loans and building up strong, self-supporting institutions, through boards of directors chosen from among themselves.

The farmers and stockmen who directed the affairs of the Texas PCA's took these provisions literally. During a 16-year period they made loans totaling $844,434,623. Losses plus the reserves set up to take care of such contingencies amounted to less than 5 cents on each $100 loaned. They also kept in mind the other half of the arrangement. By last July 1 all but $105,000 of the $7,835,000 of Government capital once advanced to them had been returned. The last of it is being paid off right after January 1.

It took some hard effort and personal sacrifice by the PCA stockholders to attain this financial independence. To increase earnings they agreed to higher interest rates and service fees on their loans and they dug down into their pockets and bought more stock than was required of them. But they met the challenge, and they begin their self-owned status with around $15,000,000 of capital and reserves. This is a sum equal to 25 percent of their highest volume of loans, a ratio which they seek to maintain.

The Texans are the first of the 12 production credit districts to become wholly farmer-owned. By this action they have erased the charge, often made, that these farm credit agencies are subsidized competition. Their reasons, as well as what they have done, are worth noting by the rest of the country. They felt they should carry out their end of the bargain made by Congress. And they like to be independent. That attitude should bring a lift to the hearts of a lot of Americans.

[From the Saturday Evening Post of January 7, 1950]

A FEDERAL BENEFICIARY GETS OUT ON ITS OWN

A national trend has been reversed by the 36 farm production credit associations in Texas. Instead of leaning on the Government, they have voluntarily returned all the Federal capital that had been advanced them.

This action is remarkable because the use of this Government capital was free and the users of it were under no pressure to pay it back. It is even more remarkable because, by returning all of it, the associations became subject to Federal income and other taxes, from which they were exempt as long as they retained any Government capital.

Production credit associations are a branch of the Federal Farm Credit Administration. Congress created them in 1933, when short-term credit for farming purposes was difficult to obtain, and provided $120,000,000 to enable them to become established. They are cooperative institutions, operated and controlled by their farmer-stockholders through boards of directors chosen from among themselves. Borrowers are required to take out stock in proportion to their loans. Congress specified that the Government capital was eventually to be returned and the associations were to become farmer-owned through the purchase of capital and the accumulation of earnings into surplus reserves. But the law was indefinite as to when this was to take place.

The use of Government capital and their tax-free status frequently led to charges that the PCA's were a form of subsidized competition with banks and other lending agencies. To this the reply was made that they provided loans that banks were often unable or unwilling to make. Whatever the merits of the contending arguments, the farmers and stockmen who directed the affairs of the Texas PCA's decided they wanted no advantages. By last July first, all but $105,000 of the $7,835,000 of Government capital which they once held had been returned. The last was paid off immediately after January 1.

This independent status was not easily attained. The stockholders agreed to pay higher interest rates and service fees on their loans in order to increase earnings for the cooperative, and they bought more stock than was required of them. In this way they accumulated $15,000,000 in capital and reserves, a sum sufficient to enable them to become self-supporting.

These Texas farmers and stockmen were willing to assume the added obligations because they felt they should carry out their end of the agreement and return the taxpayers' money. One may hope that their example is a sign of a returning self-reliance in this country.

Danger Marks

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1950

Mr. McCORMACK. Mr. Speaker, I am pleased to include in my extension of remarks a splendid address delivered on April 26, 1950, before the Kiwanis Club of Los Angeles, Calif., by Floyd B. Odlum, an outstanding American, whose stirring message of decency and Americanism, as well as sound advice from a man of knowledge of world conditions, should be read by as many persons as possible.

DANGER MARKS

Ex-Secretary of the Navy John L. Sullivan wrote me last fall requesting that I make a speech on behalf of the National Conference of Christians and Jews. His letterhead bore on it the following purpose of the organization:

"To promote justice, amity, understanding, and cooperation among Protestants, Catholics, and Jews, and to analyze, moderate, and finally eliminate intergroup prejudices which disfigure and distort religious, business, social, and political relations with a view to the establishment of a social order in which the religious ideals of brotherhood and justice shall become the standards of human relationships."

That bylaw sold me immediately. I told Mr. Sullivan I would go anywhere my arthritic bones would permit and speak before any group, whether in high school, on street corner, or in banquet hall. I am glad he chose Los Angeles, for, while I earn my bread and butter in the East, my home, my voting residence, is in the desert section of Riverside County, Calif. I am also glad that a Kiwanis Club luncheon proved to be the forum because I have great respect for your organization and the effectiveness of its members to analyze what is good for our communities and hence our Nation, and then to translate into action a sound position.

When asked the other day for a title for my talk I spontaneously gave it as "Danger Marks," for I had been thinking about how things are going today in the world and I am disturbed because of serious basic danger marks I see. These basics are all directly contrary to the established objectives of Brotherhood Week and the purposes of the National Conference of Christians and Jews.

We are in the middle of a war today. We not only are fighting a war at this very moment, but it is probably the most serious war we have ever faced. Our way of life, which we here in the United States find generally to our liking, is in peril, great peril—yes even our existence itself for a great many of us is at stake.

Shortly after VJ-day, Stalin published a new edition of Communist dogma titled "Problems of Leninism" and it said among other things:

"It is inconceivable that the Soviet Republic should continue for a long period of time side by side with imperialistic states. Ultimately one or the other must conquer. Meanwhile a number of terrible clashes between the Soviet Republic and the bourgeois states will be inevitable."

In contrast with the above, I read a few days ago in a Los Angeles newspaper an interview with a returned American visitor from Russia, who said, "They (the Russians) say that capitalist and Communist countries can live in peace without necessarily even doing business with one another."

The first statement is direct from the horse's mouth, so to speak. The other could come from the same animal by a more circuitous and indirect route, whether the person knew it or not. It is representative in any event of one of the techniques of the Russian plan of conquest.

At about the time Stalin uttered the threat and forecast just quoted, he and his small group dominated approximately 200,000,000 people. Today they dominate nearer 700,000,000 people. And they are ever on the move for more workers in their ideological quarries.

The United States of America is the mortal enemy of the system that Stalin and his small group of codictators would impose on the world. Our way of life must perish or theirs must, according to their own affirmations, and I believe them. They are utilizing everything in and out of the books to accomplish our downfall. What is going on is rather lightly called by some a cold war. Strike out the word "cold." It is coldly planned, true enough, but it is plain unadulterated war to destruction. While keeping an iron ring around themselves so that their workers may not know the truth, the boss dictators are fighting with everything they have in this, the third world war. They shoot when they please. The fourth world war with its outright physical destruction in terrible form, will in my opinion asssuredly come by attack on us unless we win and win fairly promptly the third world war now on. The arsenal for the Communists in this, the third world war, consists of deceit, propaganda, the stirring up of prejudice between race and race and group and group, and the forcing of us in defensive measures to extend ourselves economically to the breaking point, and if possible in ways that will be wasteful. Stalin and his associates hope to lead us into depression so that out of the dissatisfaction, unrest, and turmoil that would ensue, and which they are now engendering with every means at their command, they may capitalize from within our own ranks, using our own people to conflict by revolutionary process with others of our own and thus save the risks to the Communists of an atomic or hydrogen bomb, guided-missile type of shooting, searing warfare.

But they are getting ready for that type of attack too and hope to name the day for its surprise start like the Japanese did at Pearl Harbor. But Pearl Harbor will be peanuts compared to the next surprise strike from Russia unless we nullify it now.

Russia has a land army greater than the combined armies of the United States and all its allies or potential allies. Russia has the world's largest submarine fleet and is building more and more. Russia has an air force that already has strength in nearly all categories larger than our own, and is building more planes at a faster rate than we are. Russia, with the help of the plant and personnel that were taken over in Germany, has the atomic bomb and is well advanced in the field of guided missiles. You don't need to take my word for this. I am quoting on this subject the public statement made in San Francisco last week by Secretary of Air Stuart Symington.

I say all these things because I want to arouse you to our real imminent peril. The people in a democracy control our national actions in the last analysis. That means you. It is therefore not good for the people to fail to comprehend the danger marks about them. Democracy can only live on truth. Dictatorship of the kind we have in Russia has the initiative but can only live behind iron curtains and on lies. We are spending a large portion of our national income for defense—about 50 percent of our taxes go that way. It should be spent as wisely as it is energetically. You should know about this and make your views known to others. Wastage should be a crime. Failure to spend where it counts most in the

war of today and tomorrow rather than along the lines of a Normandy or an Iwo Jima, for pure example, should be a double crime. Geography and shore lines no longer count. There is today a frontier only between ideologies. Our front-line trench is the truth—for ourselves and as an offensive against our enemies. Truth must be known here. We should have an aggressive campaign of truth abroad. We should know as much about what goes on behind the iron curtain as we blithely publish about our own defensive plans. We should carry the message of our democratic ideology as aggressively and more so than it is being sabotaged today by Russian dictators.

If communism is our greatest danger mark then next in line comes home-grown prejudices and intolerances. I don't need to tell you that prejudices and intolerances are wrong—you know it. But they are positively dangerous as well. They are the stuff on which the germs of communism and chaos breed and grow. And they are being fostered by our enemies every second in the day without holiday or sick leave or featherbedding.

One cannot legislate a man's feelings. Man's inhumanity to man makes countless millions mourn. Consider what the prejudices of Hitler cost the world. And these inhumane attitudes come from the heart and the mind. Understanding and respect for others must be learned. They are not natural traits. It is easy to contemplate tolerance benevolently after a good luncheon of today's sort, but later on I beg of you to think of this objectively and from the standpoint of our own national welfare as well as our own good and happiness as human beings living together in a society.

America is still the melting pot for humanity as well as the cradle of liberty. Here we have thrown together every race, color, and creed—and out of the composite must come a harmonious whole. It's not strange that we have had our impacts of temperaments and races. Strains of every race and strands of every nation make up the warp and woof of our American tapestry. An Irishman does not think or act like a Scotchman; or a Pole like an Italian. And in some cases we are hardly a generation away from the motherland; the old customs, legends, and traditions.

The result is the so-called minority groups with their pressures. Oliver Wendell Holmes said, "If a man is a minority of one we lock him up"; but the minorities we are talking about are not that kind.

You and I are parts of some minority or other. That goes for every race and every creed in this country. There is nothing inherently wrong about being a part of a minority—a view that some of my Republican friends will gladly support. So long as the minorities are trying to live together within the fabric of our chosen pattern of government and society, they have a right to be tolerantly and judicially heard. When they are banded together to destroy our Government they must be rooted out and destroyed. It's no longer a private fight. We should all get into it—all the other minorities.

We sometimes resent these minority pressure groups. We should in some cases rightfully blame these minorities who have seized upon civil rights and made them a club for political purposes and by so doing have not only obscured issues but postponed good results.

But please remember that here in the conglomerate of American life the minorities, taken together, make up the majority. And the rights of the majority so defined are paramount.

Al Smith in 1942 said, "The thing we have to fear in this country is the influence of the organized minorities, because somehow or other the great majority does not seem to organize. They seem to think they are going to be effective because of their known strength, but they give no expression to it."

Every problem in the field of group relations is really a problem of individual relations to be individually solved. The germ of intolerance is pretty difficult for one to identify within one's self. But this can be done. If allowed to run its course intolerance can be more destructive than most other diseases combined for it is a psychological disease. Get your feelings toward your fellow man out in the open for analysis. If we want our rights respected we must see that the rights of others who are living within the framework of our society are respected.

If we in America, against our background of free institutions and economic well being, fail to work out proper patterns of human relations, democracy is indeed lost. Man can this way be proved incapable of governing himself from within. The victories wrung out of two wars in our lifetime will prove fruitless unless we translate into reality the ideal of equality and freedom that belong with the word "America."

The cost of discrimination and intolerance in industry and commerce alone in terms of national income is tremendous, some say as much as $30,000,000,000 a year. Discrimination makes for unhappiness, inefficiency, and lower productivity.

Human dignity and vision are intangibles of industry. In factory or business, no one who does not respect the integrity of himself and those about him can be an asset to his company. No one who is hurt, angry, or disillusioned is going to develop much in the way of ambition or vision. And we need these qualities and work of the right sort as never before. Businessmen cannot afford the wastage of intolerance and discrimination in their organizations. They must start to eradicate it in the front office.

The individual is most important to our society. The rights of a minority are the responsibility of all the people of the United States. That responsibility can be neglected only at your peril.

Happily brought up in a Methodist parsonage as I was, and moving about with my preacher father from town to town and meeting in these new places communities of Swedes or Poles or English, I never knew what intolerance was. I see good and bad in all as individuals but not as groups or races. I wish we were all that way. As a boy I heard someone recite the following. It stayed with me in substance at least, although I don't know the author and have never seen it in print:

"America mine! Aye, brothers, and thine.
Thine from Ireland, from Africa's plains,
From the fair lands of Italy, Austria, Spain.
America! Thy very name ripples with music,
And rolls like the oceans that surge past the mystical poles.
Here on the sod under night's pall I cry out thank God!
For it's free and for thee and for me.
The fairest, the rarest that man ever trod,
The dearest, the sweetest twixt the sky and the sod,
And it's mine and it's thine, thank God!"

We have it here—America, with its resources, open spaces, opportunity, and freedoms. Let us preserve it for ourselves and our posterity—all of us. Let us do so by treating our fellow Americans as brothers, as a part of one great majority supporting our system and way of life, made up of individual human beings entitled within this framework to their little differences and personal opinions, even as you and I.

Because of the danger marks all around us and the forces trying to engulf us, it is time for us all again, for our mutual benefit, in the language found at the end of our Declaration of Independence, to "mutually pledge to each other our lives, our fortunes, and our sacred honor."

Tariff Reductions

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, June 5, 1950

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

To the Men and Women of S. D. Warren Co.:

You and I and all the others in the Warren Co. are facing a very real problem, and because it is a problem that may well develop into a highly dangerous situation, I want to tell you a bit about it.

This fall the State Department of our Federal Government is holding a meeting in England to reduce the tariff rates on certain foreign products that are imported into this country. The theory is that if we make it easier for foreign producers to sell in this country we shall adjust the balance of trade and close the dollar gap and thereby promote recovery in Europe.

Our kind of paper—book paper—is on the list of items that are to be cut in tariff rate. If tariff rates on our kind of paper are cut (and they are very likely to be unless we do something about it), then it will become easier for foreign paper makers to sell their printing papers in the United States.

Now, as a practical matter, this won't help Europe at all, because Europe needs all of the paper that it can produce with its limited supplies of wood, and it won't have any paper left to send over to this country.

But it will greatly help Canada. Canada has plenty of wood. Canada's wage rates in the paper industry are about 20 percent less than ours. Canada has devalued the Canadian dollar so that if a Canadian producer sells for 90 cents in this country, he gets a full Canadian dollar in return in his country.

If you put all these together—low wages, devalued Canadian dollar, and plenty of wood supplies—you see we have a very real threat across the border.

Some of you may remember that all tariff was removed from newsprint in 1913. That move killed the American newsprint industry so that today only five or six mills make newsprint in this country. Over 80 percent of the newsprint that is used in the United States is now made in Canada.

The same thing could happen to book paper. Our customers would stop buying from us because they could get similar grades made in Canada at a lower price.

Of course, the State Department and ECA and the others that are trying to build up Europe say that American industries can shut down, and that perhaps unemployment relief will be forthcoming. But unemployment relief is a poor substitute for wages.

Moreover, you may be certain that Canada is not lowering her tariffs. The Canadian tariff is so high today that we can't ship paper there. But our State Department wants to make our tariff so low that Canada can ship paper here. They call them reciprocal agreements, but it's a one-way street and there is no reciprocity whatsoever.

You can see how dangerous this is. If there were a tariff reduction, Canada, with lower wage rates, could gradually take over the United States book-paper market, as it did the newsprint market. In that case, you and I are going to have a tougher and tougher time.

I don't like this and I assume you don't, either. It's all unnecessary because it won't help Europe; it will help Canada, who doesn't need the help, and will hurt us badly.

I'm appearing before the Reciprocity Committee in Washington for the whole

paper industry the early part of June, but, frankly, I doubt if my arguing, and the arguing of others, does much good.

More good would come, I think, if a good many of you wrote your Senators and Congressmen in Washington and told them how you felt about this.

Lord knows, we don't want Westbrook and Gardiner to become ghost towns. Let's tell the lawmakers how we feel.

This is a pretty complicated subject and I've tried to simplify it as best I could. But if I've missed something, or if this isn't clear, drop me a line or ask Everett Ingalls.

In any event, I wanted you to know what we were facing, and the importance of it to all of us.

Sincerely,

GEORGE OLMSTEAD, Jr.,
President.

MAY 26, 1950.

Spirit of America Meets the Red Flag's Spirit and Old Glory Talks

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1950

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by William T. Kerr, Yeadon, Pa., founder and national president of the American Flag Day Association:

SPIRIT OF AMERICA MEETS THE RED FLAG'S SPIRIT AND OLD GLORY TALKS—AN AMERICAN PATRIOTIC FANTASY

(By William T. Kerr, Yeadon, Pa., founder and (since 1898) national president, American Flag Day Association)

The Spirit of America was returning from a regular round of visits to American historical scenes where our national liberties were saved or established, among them Lexington, where stands the memorial stone bearing these words "Stand your ground; don't fire unless fired upon, but if they mean to have a war, let it begin here. Captain Parker"; Concord, Ticonderoga, Valley Forge. Her last stop was Gettysburg, where the Federal Union and Old Glory were saved, with the words of Abraham Lincoln ringing in her ears, "Government of the people, for the people, by the people shall not perish from the earth." Interested as she always is in that greatest of all melting pots, our American public-school system, she stopped at one large city school, seeing boys and girls of all ages entering, all classes, races, and creeds, many of whose parents came from foreign lands seeking civil and religious liberty and an opportunity to worship God as their own conscience dictated. Waiting she heard united voices singing "My country 'tis of thee, sweet land of liberty," and delightedly watched through the windows the upraised arms as together they saluted our Stars and Stripes and heard them in unison repeat, "I pledge allegiance to the flag of the United States of America and to the country for which it stands, one nation indivisible, with liberty and justice for all." To another interested observer the Spirit of America said, "As long as we can maintain and protect from destruction our free nonsectarian American public-school system, recognizing one God as Father, undominated or controlled by any sectarian group, and they continue to teach loyalty and devotion to our Nation, our flag, and American institutions, the Republic is safe."

The Spirit of America resumed her journey stopping at Philadelphia and Pittsburgh. It was June 14 and they were celebrating Flag Day in honor of the Birthday of the Stars and Stripes, June 14, 1777, adopted by the Continental Congress, the great Commonwealth of Pennsylvania having made Flag Day a legal holiday in 1937. En route west leaving Pittsburgh where the English-speaking civilization was firmly established and Pittsburgh became the "Gateway to the West," she was surprised and stopped by the sudden appearance of a male figure completely in red. Meeting almost face to face Spirit of America said, "Will you please tell me what all this red means, is it some warning, I only know red as stop or warning." "Well," said the red figure, "that's what I am glad to do, I want the whole world to know it for that is my job. I am a Communist, our color is red, see this flag, it is the living red flag of revolution which my comrades and I have been preaching since Karl Marx days. That red, white and blue rag of yours that I see displayed will disappear, this is not a guess, we Communists are sure to take over this country as the sun shines, then behind our government will stand our red army to enforce our rule. You know of course we are trying to get control of all labor organizations and if we do and no one can work unless they belong to our unions, we will have absolute control of those who create the wealth of the world. Our rule will govern and our red flag will fly."

He said this with a straight face though he must have known that in no other place on earth are people as well taken care of except in isolated instances, or paid as much for their services or have easier working hours, more leisure, greater comfort, and more real freedom of all kinds than here in the United States.

Spirit of America smiled at the bravado of the red visitor and said, "Come and visit with me one of our imposing buildings, it is one of our county court houses, where with other public transactions justice is dispensed impartially by judges of the peoples own choice and not by dictators." In front stood a large monument of justice weighing the scales, in a wide hall near the entrance there floated from a staff a fine silken United States flag with its 48 bright stars and brilliant stripes, bright sunlight shining on them, streaming through a window.

"Admit, won't you," said Spirit of America, "That omitting everything else but the viewpoint of beauty alone, for you and your friends also like the beautiful, that this is one of the most beautiful you have ever seen. You called it a rag because you were ordered to but in your own heart you know it is beautiful as a picture alone, you also know that it represents nearly 145,000,000 Americans, many of whom came from your own land and are now a part of this Nation by naturalization. If your own people had free press and radio to know the real truth, you and others would know that our Nation saved you from destruction in the late world war and we sent over to your people thousands upon thousands of millions of dollars to help defend you and in peace after the war stopped continued to do the same to help feed you. Your leaders do not tell you that and make you believe that they give it to you. I haven't time to tell you more than we sent $20,000,000,000 overseas to help you and other nations recover and never asked a cent indemnity, but I want our flag to talk to you, so that if your leaders permit you, when you return, you can tell everyone what you saw and heard on this visit, come closer and listen while our flag tells you what she is and represents, listen:"

"I am the Stars and Stripes symbol of an indivisible united country, a Nation forever one.

I depict the Pilgrim Fathers and other freedom-seeking exiles, brave pioneers, the wilderness, savages, countless hardships, homes, schools, and churches erected, cities, towns, villages created, a new civilization established.

I envisage Lexington, Valley Forge, and Yorktown; Washington, the father of our country; Lincoln, the savior of our Nation; and other patriots who sacrificed all that I might have victory and honor.

I recall bugle summons, fife and drum beats, tramping feet, clanking sabers, flashing swords, clatter of horses' hoofs, rumbling guns, smoke and noise of battle, incomparable deeds of heroic men and brave women that can never be forgotten.

I symbolize, too, all that is above, beyond, outside of and finer than war, for I am the voice of peace.

I awake to duty where voices may be silent and betoken achievement in every sphere of usefulness and for humanity.

I never went on a selfish mission and wherever I go there is a shrine.

I belong to no political party, faction, age, rank, sex, color, or creed. When you salute me I rejoice for then I know you have not forgotten your great privilege of citizenship.

I am not for special occasions alone, but a constant living token of inspired service for God and country. When I hear the Star Spangled Banner, your cheers at my display, I know you are singing a psalm of praise expressing your love for our institutions.

I am the personification of your Constitution and laws, the voice of every citizen, emblem of the sovereignty of the people, a pledge of hearts devotion, then beacon light of liberty, and wherever I go on land, on sea, in air, there go the millions who make us the greatest Nation on earth.

I have flown proudly through all the years since my birth. Keep me unashamed for I am what you are—nothing more.

I am Old Glory, your flag, the only banner in the world's history which never dropped in defeat. "Protect us by Thy might, great God our king.

The last words came as a solemn prayer and the Red visitor seemed transfixed. America's spirit said, "Carry home, if you will this message of peace and good will, that is what we want for every people. We covet no other nation's lands and the thousands and thousands of millions of American dollars we have been sending to your people and others have been and are to restore your prosperity and success, with civil and religious freedom."

Like a flash Red vanished. To Old Glory, America's spirit said, "Would that you could only send your message into the hearts of the whole wide world. They should know it."

Equality for Women Under Law Defended

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1950

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Stella E. Barker which appeared in the Des Moines Tribune under date of Monday, May 29:

EQUALITY FOR WOMEN UNDER LAW DEFENDED

To the EDITOR OF THE TRIBUNE:

I was shocked beyond measure at reading the editorial from the Michigan Journalist printed in the May 22 issue of the Tribune.

I am trying to be charitable enough to think that Mr. Jim Murray, the author, tried to be funny, but he was very "unfunny."

In my generation I have never seen a woman cross a mud puddle on a man's coat, but I have seen our fine, sturdy women (and proudly) carry feed through the mud puddles to livestock on our Iowa farms; I have seen our courageous young women living in trailer camps while their GI husbands finished their delayed education; I have seen middle-aged women leaving their homes to take jobs in order to augment a family income and insure an education to their children.

Mr. Murray speaks of beauty. He refers to "Grandmaw's picture." My grandmother's picture showed stooped shoulders and the lines of suffering and privation as a result of pioneering, lack of medical care, improper food and heavy labor. Wasn't she a good citizen? And wouldn't you be willing to give her the dignity of lawful equality instead of classing her, as in some States, in the same category as a child or a moron?

Graceful postures, beautiful long hair, soft voices—Where are Jim Murray's eyes? Has he ever stood on a university campus and watched our young women, graceful as gazelles, walking from class to class; or seen the glowing head of hair she so proudly carries? And how can he discount the beauty of voices not only of singing stars, but the voices of magnificent speakers—and for women's equality—as Margaret Chase Smith, Katharine St. George and others in our Halls of Congress, as well as women like Michigan's Hazel Myers, California's Lester Fulwider, Iowa's Helen G. Irwin and Mrs. Raymond Sayre, New York's Pauline Mandigo, Missouri's Margaret Hickey?

Some women do drink, smoke, wrestle, and so forth—but do they do those things in greater proportion than men? Why not name names on the other side of the ledger?

The unloosing of the philosophy of kindliness, understanding, courage, tolerance, and willingness to accept a just share of political, social, and economic responsibility without the stigma of inequality under the law may well help both men and women to a fuller life in our democracy.

As a resident of Des Moines for 20 years, I am experiencing a sense of deep disappointment at the Tribune, that it would reprint an editorial like this. It is a far cry from the fine, fair comments that our late beloved Harvy Ingham used to put in his column. He fully believed in the contribution women, as citizens, could make and never failed to say so.

STELLA E. BARKER.

DES MOINES.

Armed Forces Day Address by Brig. Gen. Arthur G. Trudeau

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 6 (legislative day of Wednesday, March 29), 1950

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered on Armed Forces Day, May 20, 1950, at Sioux Falls, S. Dak., by Brig. Gen. Arthur G. Trudeau, Assistant Commandant, Army War College, Fort Leavenworth, Kans.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mayor Saure, Colonel Renth, fellow members of the Armed Forces, ladies and gentleman, it is a very great pleasure to be here today to contribute in a small way to the efforts you have made to set aside this week end with particular thought to what the Armed Forces of your country mean to you.

In days as fraught with a cold war and portents of impending war as these are, it behooves us to pause in our daily lives to consider from whence we came and whither we are going. To those of you who believe in a Supreme Being, I suggest, also, your frequent prayers that those who guide the destiny of both our own and the opposing forces in the world can find a peaceful solution to our problems. The gap is wide, the enemy is brutal and realistic. The way is very, very difficult.

The President of the United States has called upon the Nation for the first time to pay tribute to all the Armed Forces on this specific week end. It represents a departure from previous years when the Army and the Navy and the Air Force each had their own special days set aside. It represents an advance that has been made possible by the unification of the Armed Forces. All the difficulties that may have arisen are relatively small in nature compared to our accomplishments in bringing the Armed Forces under more unified control. Now we are "teamed for defense."

While planning on the joint level between the services is continuing to improve, we have achieved concrete gains in the way of a unified Military Air Transport Service and a unified Military Sea Transport Service. Purchases are being coordinated through the Munitions Board; medical service, through a joint committee; and civilian components and personnel, through joint policy boards. A uniform Career Compensation Act has been enacted and a unified code of military justice is well on its way.

In the same way that an industry must organize for efficient production and operation, or that labor and agriculture must be organized for the most efficient production and benefits as affect the whole, so also in this constantly changing world must our Armed Forces be organized and integrated to insure complete cooperation and collaboration between all elements concerned when the unfortunate business of war is thrust upon the Nation.

Only a relatively short time ago, Jules Verne considered encircling the world in 80 days as a major accomplishment, and it was a matter that intrigued all those who read his book. As of today the world has been circled several times in less than 10 days, and in the light of present-day supersonic developments, there is no reason to believe that it will not be possible to circle the entire globe within a matter of 48 hours within a relatively few years. Thus distance no longer means security or protection.

In the field of thought communication, whereas Washington had to send a man on horseback for a hard day's ride from New York to Philadelphia to carry the reports of events during the Revolutionary War, and news from Europe took at least 3 weeks by sailing ship. Today, in a matter of an hour, people can be informed anywhere on this globe of occurrences in any other part of the world. Such speed in thought transference and transportation means increased rapidity, not only in the conduct of our everyday business but, in particular, with respect to our need to be ready and able now to resist aggression on the part of an enemy power who is mobilized and able to operate over vast distances in amazingly short periods of time.

It is not a pleasant thought that this should be so, and all of us would like to be able to live our lives in a normal manner among our relatives, friends, and contemporaries without the constant possibility or threat of war hanging over our heads or without enduring the cold war that exists today. Nevertheless, such conditions are not possible today, and every single American fully realizes that fact. The line of demarcation between war and peace has disappeared under the Marxian theory of conquest. Let us not be deceived on this point. Furthermore, the advent of the atom bomb, guided missiles and other modern developments, together with the vastly increased range of the airplane, has endangered the security of people everywhere, even in the interior of our great country.

Fate has thrust upon us a certain role whether we like it or not. The crescendo of conflicting interests, played on the drums of destiny in this world of blinding speed and atomic power, finds us as one of two focal points around which all the forces on this earth are rallying. The verdict of the future—yes, the very continuance of the right to enjoy the moral, social, economic, and political values of our western civilization—will depend on our courage and astuteness in meeting this challenge by the Marxian theory of dialectic materialism called communism. History, like a fascinating woman, only bestows her favors on the brave and the strong, never on the bashful or weak. There must be no doubt as to our determination not only to contain but to destroy the virus of communism.

I am not sure that all Americans fully appreciate the nature of the threat that faces us. You undoubtedly realize that the manpower of the only nation on earth having the potential for aggression against us far outnumbers our own. I am sure that you also know that the present state of the already mobilized hostile army, navy, and air force is such that in the initial months, if not years, of a war, we would be severely pressed at every turn. While we boast of our great industrial capacity, the fact is that as of today the Communist production of war materials far outstrips our own. As a matter of fact, in certain critical items, she is producing more each month than the total of such items we have in the hands of our troops. While our over-all industrial capacity far exceeds any other nation's today, we must realize that the great proportion of our production is devoted to capital goods and to meet everyday civilian needs. The Communist zone, with their low standards and their regimentation and slave labor, has found no need to consider the comforts of its people, and nearly all of its very considerable and rapidly increasing production is devoted to turning out the tools of war. When these facts are considered, together with the mobilized force that is ready for action at any time, then the nature of the threat to America, Europe, and the world becomes more apparent.

I have just returned from 2 years in Germany where I had the privilege of commanding the First Constabulary Brigade, one of two such armored units in the United States zone of Germany. The other major tactical element was the First Infantry Division, of long and glorious fame. These units, supported by an almost negligible tactical Air Force, constitute all the combat troops between the eastern zonal border and the west. Of course, the British and the French in their respective zones of Germany have some counterpart of these small American forces, but the total force involved is entirely inadequate to do more than temporarily delay the advance of the masses of enemy troops, generously supported by tactical air forces that are available now in eastern Germany.

The recognition of this serious situation in which the likely aggressor has the capability to push us back to the Atlantic whenever it pleases is, of course, one of the rea-

sons why the implementation of the North Atlantic Pact and the Marshall plan are of such great importance. The nations of western Europe have done much with American help to restore some semblance of their prewar status and development; but until they are in a position where they have at least an even chance of resisting a hostile thrust from the east, they cannot, in confidence and with some hope for security, advance much farther on the road to stability and progress. The instability that has appeared in some western European governments is just another indication of the uncertainty the people of those nations have felt as to which way to turn in order to go forward to peace and security.

It is not a pleasant thought to realize that in a world where we like to think our civilization is advanced, such conditions can exist. Nevertheless, our civilization is no further advanced or secure than the most backward or recalcitrant of the powers that have the force to destroy it; and that force definitely exists today. Only when you can observe at close hand the conditions under which the peoples subjected to the Communist heel have to live, can you fully appreciate what it would mean to have America reduced to the status of a secondary power at best, or at worst, another colony under the hammer and sickle. Such occurrences are not impossible, and it is with a view to preventing them that we must be alert and understanding as to the national requirements for security.

In this connection, it is important to state that while the strength of our arms is very important, there are other factors of great importance, too. Our national security rests on our moral, social, economic, political, and military strength—and the strength of all other nations allied or sympathetic to our cause.

While we have given generously of our bounty in food, medical supplies and capital goods to other less fortunate nations—yes, even to former enemies, the No. 1 need in the west is to replace fear with courage, hope with determination, vacillation and compromise with the ultimate of objectivity and realism. To do this, a firm military posture is one of the prerequisites. Then with confidence in our cause and in our course we can go forward. No team ever won a game by merely hoping to avoid defeat.

Many of you here are descendant from ancestors who held this western frontier against the ravages of the Sioux and other warlike tribes over a period of many years. You know the stories of massacres and depredations during our westward push in the nineteenth century. I say to you that there is another vast and vital frontier wherever the prongs of communism infect the peoples of the world. One segment of this frontier today is in the United States zone of Germany, where 100,000 American troops and probably another 150,000 American men, women, and children representing South Dakota and the other 47 States and Territories, stand guard as an outpost against a threat that would make an Indian attack seem innocuous and gentle. You cannot divorce yourselves from a sense of real responsibility in this situation unless you wish again to feel the guilt that we Americans knew after Pearl Harbor and Bataan.

The National Government recognizes the seriousness of devoting too much of our national income and wealth to the Armed Forces. We are all hopeful that peace can be established, and every effort must be bent to that end. Nevertheless, there is a minimum standard below which our defensive capability must not fall, without the most dire threat to the future of the Nation. All services are being required to keep their regular forces to a minimum since, by virtue of the fact that they must be employed 365 days a year, they are the most costly. At the same time, more and more dependence is being placed on the increased readiness of our National Guard and reserve forces. The officers and men of these forces have a more serious responsibility facing them than may, at times, be apparent. We need the support of the entire population to provide additional officers and men for these forces and the sympathetic understanding and support of the entire population as to their purpose and their importance. The seriousness of the present situation is such that all Americans are more alert than ever before, and we must not be lulled into the sense of false security of olden days where minute men rose overnight to save the country. Our best estimate today on reaching wartime productive capacity is a minimum of 18 months, and it takes tanks and planes and ships to fight a modern war. Courage, while indispensible, is entirely inadequate. We must not fall into the category, phrased so aptly by that great ally and Englishman, Winston Churchill:

"God and the soldier I adore,
In times of danger, but not before.
The danger passed and all things righted,
God is forgot and the soldier is slighted."

The moral of this little poem should be clear, and the soldier means all of those who wear the uniform of this country and the industry and labor to support them in the field.

And so I feel that I can tell you this by way of assurance, that your Department of Defense stand is neither self-satisfied nor complacent. It feels deeply the compelling responsibility which rests upon it for making certain that if the means are not provided to maintain a balanced capacity in these times of peril, it will only be because the Nation is unwilling rather than uninformed.

Under these conclusions we must maintain trim, highly mobile, and efficient forces which must not be allowed to fall below a safe minimum, and a superior industrial posture capable of immediate explosive expansion. For should overt aggression come, it will be swift beyond measure. There will be no comfortable cushion of time again, in which to make ready; no safe opportunity to marshal a latent strength, as in the last two conflicts.

I have tried to present to you in a brief way the reasons I believe the readiness of adequate Armed Forces of the Nation is more important than ever before and why we need your understanding and support. It is also fitting at this time, however, that we pay tribute to all those of the Armed Forces of this country who have passed on, whether on the battlefield or with the passage of time. It would be hard to determine how many have served their country in war, from the founding of the Republic, through the days of Custer and Reno in this Territory, and on down to the soldier, sailor and airman of today who is also guarding a frontier. The contribution of these men and women, all citizens—all from the body politic, is quite apparent in the greatness of our country today. While our country has been made progressively great for 175 years by the courage, intelligence and initiative of all of its citizens, that progress could have been terminated on any one of the several occasions during which we have found ourselves engaged in major conflicts involving the life or death of the Nation.

Wars are the crises in the lives of nations. With courage and some blood we have been able to survive all the past operations. With vigilance, fortitude, a reasonable degree of preparedness and faith in God, we can hope to survive any the future may hold. That is the greatest challenge to the American people today.

Decisions by the Supreme Court—Newspaper Comment

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, June 6 (legislative day of Wednesday, March 29), 1950

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "An Historic Day in the Supreme Court," by Arthur Krock, which appears this day in the New York Times. I also ask to have printed an editorial entitled "Separate But Equal," also from the New York Times of today.

There being no objection, the article, and editorial were ordered to be printed in the RECORD, as follows:

IN THE NATION—AN HISTORIC DAY IN THE SUPREME COURT

(By Arthur Krock)

WASHINGTON, June 5.—The hitherto easy-going observance of the "separate but equal" doctrine, which the Supreme Court in 1896 (*Plessy* v. *Ferguson*) decreed as satisfying the "equal protection" mandate of the fourteenth amendment, and which the States and interstate carriers have relied on to legalize racial segregation in schools and transportation facilities, was a mass of tatters today after the Court read three decisions. It still exists in the realm of judicial theory; the Chief Justice said it need not be reexamined. But the net of the decisions was that "equal" must be as definitely proved as "separate," by tests which obviously will be difficult if not impossible for the States to meet, as Texas and Oklahoma failed to do today.

The Solicitor General, Philip B. Perlman, did not induce the Court to reverse Plessy and say that "separate but equal" facilities are repugnant to the Constitution because the very fact of segregating colored from white is a denial of colored equality under the laws. But he got the substance of what he was after, and unanimously. From now on a community must be able to prove beyond question that a segregated complainant receives educational services equivalent to those rendered the racial majority. And to do that will impose crushing financial burdens on the community.

Hence, while Mr. Perlman did not get the Plessy doctrine specifically overruled, he got the Supreme Court to put a price tag on it which may have the same effect in numerous localities. And in the field of interstate transportation the Department of Justice completely carried its point—that segregation in dining cars, etc., imposes an "undue disadvantage" on colored persons, sometimes on white also, that clearly violates the Constitution. In taking this position, which the Court sustained, the Department successfully attacked the finding of another arm of Government—the Interstate Commerce Commission—that this type of segregation was within the law.

MR. VINSON SETS A LIMIT

As in the case in which the Chief Justice declared for the Court that restrictive realty covenants, being repugnant to the law, were not by it enforceable, Mr. Vinson in the college segregation cases from Texas and Oklahoma did not attempt to extend legal restrictions to individual preferences in human association. In the covenants decision

he said it was not illegal for a set of private persons to agree among themselves that they would not sell or rent their properties to members of specified groups, but they could not ask the courts to require any of their number to keep the compact. In deciding today the complaint of McLaurin, the Negro student at the Graduate School of the University of Oklahoma, the Chief Justice wrote:

"For some time the section of the classroom in which [McLaurin] sat was surrounded by a rail on which there was a sign stating 'reserved for colored,' but these have been removed. He is now assigned to a seat in the classroom specified for colored students; he is assigned to a table in the library on the main floor, and he is permitted to eat at the same time in the cafeteria as other students, although here again he is assigned to a separate table.

"These restrictions signify that the State * * * sets McLaurin apart from the other students. The result is that [he] is handicapped in his pursuit of effective graduate instruction [because these restrictions] impair and inhibit his ability to study, to engage in discussions, and exchange views with other students * * *. State-imposed restrictions which produce such inequalities cannot be sustained.

"It may be argued that [he] will be in no better position when these restrictions are removed, for he may still be set apart by his fellow-students. This we think irrelevant. There is a * * * constitutional difference between restrictions imposed by the State * * * and the refusal of individuals to commingle when the State presents no such bar."

FACTS WEIGHED MINUTELY

In the case from Texas, the Negro petitioner, Sweatt, was not, like McLaurin, admitted to the graduate school reserved for whites. A separate law school finally was arranged for his use. But the Chief Justice today for the Court said "we cannot conclude that the education offered [Sweatt] is substantially equal to that which he would receive if admitted to the University of Texas Law School," and "we hold that the equal protection clause of the Fourteenth Amendment requires that [Sweatt] be admitted" to the latter.

The facts on which the Supreme Court decided that McLaurin and Sweatt as students were not receiving the equality of opportunity assured by the Fourteenth Amendment, and that therefore the partial segregation of the one and the full segregation of the other must be abandoned, were so minutely inspected that litigation inevitably will follow, based on conditions in segregated primary and secondary public schools and colleges. The Court made it crystal clear today that it will sympathetically entertain any plea of inequality.

In the field of lower education, especially in the secondary public schools, the social bases of segregation are much broader and deeper than in the colleges. If and when the Supreme Court applies today's formula and solution to these, where it finds segregated facilities unequal, the real test of community acceptance will come.

SEPARATE BUT EQUAL

The Supreme Court did not overturn the "separate but equal" doctrine in the three decisions involving segregation handed down yesterday. What the Court did seem to be saying in one opinion was that Negroes entering the Southern Railway Co.'s dining cars did not in fact receive facilities equal to those given white travelers. It was also true, as Justice Burton pointed out, that the railway's rules "impose a like deprivation upon white passengers," but it was not a white passenger who complained.

In two other opinions, involving the law schools of the Universities of Texas and Oklahoma, the finding was that Negro students were not offered, as Chief Justice Vinson said in the Texas case, a "legal education equivalent to that offered by the State to students of other races." The Court upheld the Negro's right to equality of treatment. In practice, the full exercise of this right might mean an end to segregation. But this was not what the Court said.

Decisions such as this have a compelling power on the individuals, corporations, or public agencies involved in them. They will not of themselves change folkways overnight. No matter what rules the Southern Railway Co. or any other southern railroad may adopt, some kind of segregation will doubtless persist on dining cars running into the Deep South. It will persist, too, in southern universities. An individual belonging to a recognizable minority lacking political power may easily be denied privileges to which he is legally entitled. There are, sad to say, more or less subtle ways of achieving this.

The Supreme Court has stated what the law and the Constitution are as of this present date. It is good to have this statement made. This Republic cannot recognize degrees of citizenship. But as long as considerable numbers of people, including the majority or dominant elements in whole communities, think differently, we cannot expect the millennium. The situation calls for a period of education—how long a period no one can say. Meanwhile, it is for the more liberal elements in the Southern States to see to it as well as they can that the broadening out of human rights is accomplished with as little friction as possible. There will need to be continued cooperation by the enlightened leaders of both races.

Diversion of Additional Water From the Niagara River for Power Purposes

---

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, June 6 (legislative day of Wednesday, March 29), 1950

Mr. LEHMAN. Mr. President, I have recently received a copy of a letter addressed to the distinguished chairman of the Foreign Relations Committee by Mr. Earle J. Machold, president of the Niagara Mohawk Power Corp.

The subject of that letter is the pending Niagara Treaty whose approval Mr. Machold unreservedly advocates. The support of this great corporation for the Niagara Treaty was expressed in such forward-looking terms that I issued a statement praising Mr. Machold's attitude. I join with him in urging immediate action of the treaty.

I have obtained the kind permission of the chairman of the Foreign Relations Committee to present Mr. Machold's letter for insertion in the Appendix of the RECORD. I ask unanimous consent that this letter be so inserted.

I also ask unanimous consent to insert into the Appendix of the RECORD the statement I issued in comment upon this letter.

There being no objection, the letter and statement were ordered to be printed in the RECORD, as follows:

NIAGARA MOHAWK POWER CORP.,
May 23, 1950.

Hon. TOM CONNALLY,
Chairman, Committee on Foreign Relations, United States Senate Office Building, Washington, D. C.

DEAR SIR: Your committee presently has pending before it for consideration and recommendations the treaty recently negotiated by representatives of the Government of the United States and representatives of the Government of the Dominion of Canada to permit diversion of additional water from the Niagara River for power purposes.

As chairman of the Committee on Foreign Relations, you may find it helpful in your deliberations, to have a statement of the policy and position of the Niagara Mohawk Power Corp. (which owns the Niagara Falls Power Co.) with respect to the proposed treaty.

The Niagara Falls Power Co. is presently the only company or organization, public or private, which utilizes the waters of the Niagara River for power purposes on the American side of the river It (the Niagara Falls Power Co.) holds a 50-year license from the Federal Power Commission, issued in 1921 (license No. 1) under the provisions of the Federal Water Power Act, authorizing the diversion of 19,725 cubic feet per second of water of the Niagara River for power purposes which, together with 275 cubic feet per second covered by temporary authorization granted in 1928, is utilized, under the terms of the license, in its Schoellkopf Station to develop 365,000 kilowatts of electric power. It also presently utilizes 12,500 cubic feet per second of water from the Niagara River under temporary permits, making use of its Adams Station, which develops about 80,000 kilowatts of electric power. In addition, the Canadian Niagara Power Co., Ltd., a subsidiary of the Niagara Falls Power Co., presently utilizes approximately 10,600 cubic feet per second of the waters of the Niagara River on the Canadian side to develop 80,000 kilowatts of electric power, 35,063 kilowatts of which are exported to the United States pursuant to a firm contract with the Niagara Mohawk Power Corp.

At the time the proposed treaty was negotiated, representatives of the two governments had available for their consideration the September 1949 report of the Bureau of Power, Federal Power Commission, entitled "Possibilities for Redevelopment of Niagara Falls for Power." This report sets forth in detail the recommendations of the Bureau for ultimate and complete utilization of the waters of the Niagara River for power purposes consistent with the preservation of the scenic beauty of the Falls in the Niagara River.

Representatives of Niagara Mohawk Power Corp. cooperated with engineers of the Federal Power Commission and of the Power Authority of the State of New York in preparing that report. All of the participants are in accord concerning the engineering recommendations contained therein, with the exception of certain minor details which are not important here.

The study from which the above-mentioned report of the Bureau of Power emanated actually was suggested by the writer to the Federal Power Commission and to the Power Authority of the State of New York early in the year 1947. After conferring with both agencies it was agreed that representatives of the two government agencies and of our company would endeavor to agree, from an engineering viewpoint, upon the manner of best utilizing additional waters of the Niagara River for power purposes, when and

if the International Boundary Waters Treaty of 1909 should be revised to permit additional diversion.

The report itself acknowledges appreciation of the cooperation and assistance given by Mr. Edwin S. Bundy, vice president and chief engineer of Niagara Mohawk Power Corp., in its preparation.

As the Bureau of Power report indicates, we advised the Federal Power Commission that, in the event additional diversions should be authorized by treaty between the two countries, this company desired to use such additional water for the development of electric power.

We are prepared to finance any such development and are fully able to do so.

The Niagara Mohawk Power Corp. renders service to about 880,000 electric customers in an area of about 21,000 square miles, having a population of approximately 2,800,000 persons, and extending from Albany and Hudson on the east to Buffalo and the Niagara frontier on the west, and north to and including Odgensburg and Massena on the St. Lawrence River. We will have constructed, since the end of the war, to and including 1952, additional electric generating capacity of 700,000 kilowatts (mostly steam) to meet the expanding demands of the farms, homes, commercial enterprises, and industry of this territory.

The entire Niagara Mohawk Power Corp. system is interconnected by a network of high voltage electric transmission facilities. It also has high voltage transmission facilities interconnected with the systems in New England on the east; New York City, New Jersey, and Pennsylvania on the south; and with the system of the Hydro-Electric Power Commission of Ontario on the west and north.

While recent widely publicized estimates of the need for additional electric-power development in the territory may be on the extravagant side, our own studies indicate that the Niagara Mohawk Power Corp. system must provide a minimum of 850,000 kilowatts of new generating capacity between 1952 and 1960 to provide for expected increase in demand for electric service in its territory alone. If you attribute the same rate of growth to the other systems serving the public in the State of New York, it seems certain that by 1960 the 1,132,000 kilowatts of additional generating capacity which will be made available by the proposed additional diversion of the waters of the Niagara River for power purposes will be utilized within the State of New York and, as a matter of fact, can be utilized in the system of Niagara Mohawk Power Corp. alone.

Electricity has contributed importantly to a better way of life and to the standard of living in this country. Dependable electric service has become a vital necessity to modern society. The availability and dependability of such service at the lowest possible price consistent with sound economics has become a matter of social as well as economic consideration and concern.

The furnishing of abundant, reliable, and low-priced electric energy to the people in the territory which we serve is one way we contribute to greater enjoyment of modern, comfortable living conditions and to the further advantageous use of electric service in rural and farm areas.

Almost 100 percent of the farms in the territory of Niagara Mohawk Power Corp. now are taking our service or have it available to them, and by the end of this year I expect to be able to state that electricity is available to all of the farms in our service area.

Much publicity has been given in recent months to the average rate per kilowatt-hour paid for electric service by domestic consumers in New York State. The New York State power authority reported the 1948 average use of electricity by domestic consumers in the State of New York to be 1,218 kilowatt-hours and the average cost to be 3.81 cents per kilowatt-hour. To set the record straight, I want to record that in the Niagara Mohawk system in 1949 the average cost for domestic consumption was 2.61 cents per kilowatt-hour (2.66 cents in 1948) and for farm use was 2.20 cents per kilowatt-hour (2.30 cents in 1948). The average use in 1949 for domestic consumption was 1,691 kilowatt-hours (1,623 in 1948) and for farm consumption 3,553 kilowatt-hours (3,148 in 1948). This use will be greater and the average cost less in 1950 due in part to a rate reduction made effective on May 1, 1950.

I have related these facts in order to inform you briefly of some of the circumstances and consideration, which lead us to be wholeheartedly in favor of the confirmation of the treaty between the United States and Canada authorizing further permanent diversion of waters of the Niagara River for power purposes.

The rapid growth in demand for electric service in the State of New York leads us to believe that additional substantial steam electric generating capacity will be required in the years ahead, even though all available hydroelectric power resources are fully utilized.

We are confident of further industrial expansion in the State of New York, and that domestic, farm and commercial customers will increase in numbers and in annual use of electric service. Greater use of electric energy, and its utilization for the performance of tasks to which it is not now applied, will contribute substantially to our expanding economy.

If the electric capacity and energy to be derived from the additional diversion of waters of the Niagara River are not made available, the companies now rendering electric service in New York State will have to provide other production facilities to meet the growing demands for electric service.

We urge you to give favorable consideration to the proposed treaty. In the event of its approval by the Senate of the United States, we expect to ask the Federal Power Commission to grant Niagara Mohawk Power Corp. a license for the development of electric energy through the utilization of the additional waters so authorized to be diverted for power purposes.

There are no considerations of navigation, reclamation, flood control or irrigation involved in the proposed additional diversion of waters of the Niagara River. Here is one instance where the problem is confined to the naked question of use of waters of a stream for power purposes alone.

By reason of its constant study and experience in the use of the waters of this very river for power purposes for over 50 years, Niagara Mohawk Power Corp. has the know-how to make this development and we are prepared to undertake it without the use of public funds.

In addition, we estimate that the private corporation making this development would pay approximately $23,000,000 annually in Federal, State and local taxes, divided as follows:

Federal	$9,250,000
State	4,300,000
Local	9,450,000

The difference between the estimated cost of electric energy from a public as compared to a private development, as set forth in the report of the Bureau of Power above referred to, its primarily attributable to the estimated taxes to be paid in the event of development by a private company, and to a differential in money costs. That report makes no allowances in lieu of taxes in the event of public development and financing.

I do not wish to be understood as favoring confirmation of the proposed Treaty only upon the assumption that Niagara Mohawk Power Corp. will be authorized to utilize the additional waters to be diverted for production of hydro-electric power.

The demand for electric service in the Niagara Mohawk Power Corp. territory, and in the State of New York will, in our opinion, increase so rapidly in the years to come that utilization of this natural resource for power purposes is imperative because of the economy in the cost of generating hydro-electric power from that source.

The Niagara Mohawk Power Corp. hopes that it will be permitted to construct and operate the facilities to utilize, for power purposes, the additional waters of the Niagara River proposed to be diverted.

Having confidence in the fairness of any governmental agency or agencies that may be concerned with the construction or operation of additional hydro-electric production facilities for utilizing the additional waters of the Niagara River, we feel certain that some fair method of cooperation and mutually satisfactory policy can be arrived at, in the event our company is not authorized to undertake the additional development.

The private utility companies now rendering electric service in New York State (their consumers, employees and stockholders) should be participants in the effort to utilize the full potentialities of the power resources of the Niagara River in a manner consistent with the best interest of the public and without jeopardy to the great scenic spectacle at Niagara Falls.

Very truly yours,

NIAGARA MOHAWK POWER CORP.,
By EARLE J. MACHOLD, *President.*

JUNE 2, 1950.

Mr. Earle J. Machold, president of the Niagara Mohawk Power Corp., has made available to me a copy of the letter addressed by him to Chairman CONNALLY of the Senate Foreign Relations Committee. I am very favorably impressed by the fowardlooking attitude shown by the Niagara Mohawk Power Corp. in regard to the pending Niagara treaty. I am very pleased to know that Mr. Machold states unreservedly his support of the pending treaty regardless of whether his corporation or any other private corporation is given the right to develop the power which will be provided under the terms of the pending treaty. I am also gratified to read that Mr. Machold has every confidence as I do that some fair measure of cooperation and mutually satisfactory policy can be arrived at between the Niagara Mohawk Power Corp. and whatever other entity is given the responsibility for developing the new power source.

I am, of course, unalterably committed to the development of this power as a public resource by public agencies since I do not believe that this resource which belongs to all the people of New York and of the United States as is firmly established by law and by court interpretation—should be diverted to private corporations with consequent profits at the expense of the consumers. Nevertheless, I am ready to let the Congress and the appropriate governmental agencies make this decision and, with Mr. Machold, I urge that the Niagara treaty should be approved without delay.

I do not agree with Mr. Machold that the forecasts of New York power needs falls on the extravagant side. Experience has shown that all such forecasts in the past have been on the conservative side. Not only must the resources of the Niagara but also those of the St. Lawrence and every other possible source of hydroelectric power potential in the Northeast be developed at the earliest possible time.

Origin of the Name "Washington"

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Tuesday, June 6 (legislative day of Wednesday, March 29), 1950

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a communication which appeared in the New York Herald Tribune signed by Eric Underwood, of London, England. It is always refreshing to note the interest which foreigners have in our George Washington.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE FIRST WASHINGTON—AN APPEAL TO SAVE ORIGINAL HOME OF PRESIDENT'S ENGLISH ANCESTORS ON BANKS OF THE WEAR NEAR DURHAM

To the New York Herald Tribune:

In this year in which the city of Washington celebrates the one hundred and fiftieth anniversary of its foundation, an Englishman will, I hope, be excused from reminding your readers of the origin of the name of the Capital of your great Nation.

In a mining district of a remote part of England on the banks of the River Wear a few miles from the city of Durham is a small village the name of which is first recorded at Wesyntone in a Saxon charter dated A. D. 973.

In the days when men spelt as they pleased the name is found in various forms, but as early as A. D. 1311, one William acquired the village of Washington, exchanging for it a neighboring hamlet which he released to the bishop of Durham for a "free rent of 4 pounds" and the service of "attending the bishop's great hunt with two greyhounds." About this time surnames were coming in, and William took the name William De Washington. He was the first man in the world to bear the name of Washington and the first definitely known ancestor of the first President.

For some 200 years the Washingtons lived in this village where may be seen the Saxon font in which they were baptized and the foundations of the house in which they lived. In A. D. 1376 they sold the property. The parchment recording the transaction and bearing a leaden seal on which are impressed the three stars and two stripes which, with an eagle as crest, had been adopted before this as the armorial bearings of the Washington family, is shown at Durham Cathedral.

The first distinguished member of the family was John Washington, Prior of Durham of 1416-46, who built the cathedral cloisters. The present dean of Durham has written the following lines on the link between Washington, England, and Washington, D. C.:

"Wind that carrieth random seed
Little it careth and hath no heed
Whence it cometh or whither blown
Nor of the crop thereafter sown—
If it be corn or idle weed.

"Over a thousand leagues of sea,
Rich in promise of things to be,
From a Durham village the seed was blown
And in far Virginian fields was sown—
Little seed of a mighty tree.

"Proud Mount Vernon, daintily set
On her rolling river, may well forget
The story told of a far-off day
And an English county far away—
But the old pit village remembers yet.

"Washington, heir to a noble name,
Knowest thou whence thy lineage came?
Yet great Potomac and little Wear
Are linked in a memory both hold dear,
Linked in a heritage of fame.

"Winds of God, is it all unknowing,
Careless alike of seed and sowing,
Careless of human hopes and fears,
That ye sweep idly across the years
Winds of destiny, blindly blowing?"

After the departure of the Washingtons the original manor house fell into decay and was rebuilt in 1613. It is today again in a dilapidated condition but not beyond restoration. It occurs to me that the preservation of the earliest place to bear the name of Washington and which still bears the name, the house of the first man named Washington and the residence of the Washingtons for two centuries, is a matter of at least as much interest to the citizens of the United States as to Englishmen.

I would like to suggest that a committee of outstanding men and women of both countries should be formed to consider the future of this house and whether it would be appropriate that it should be restored and equipped as a museum and shrine of the English-speaking peoples.

ERIC UNDERWOOD.

NEW YORK, *March 11, 1950.*

After Thorough and Detailed Study, the Air Force Concluded That To Move Watson Laboratories From Eatontown to Griffiss Air Base at Rome Is in the Best Interests of National Economy and Defense—Why Not Let Them Avail Themselves of the $36,000,000 Invested and Reduce Annual Operating Costs by $1,000,000?

EXTENSION OF REMARKS
OF
HON. L. GARY CLEMENTE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 6, 1950

Mr. CLEMENTE. Mr. Speaker, there has been a lot of shadow boxing done with respect to appropriations and the economy effected by the so-called one-package bill. This is particularly true as to the recommendations made to the Committee of the Whole with respect to the 10 percent cut in appropriation and the amendment providing that 1 vacancy in every 10 shall be filled. This is going to require a whole heap of explanation in the coming campaign.

Mr. Speaker, as a member of the Armed Services Committee, I for one cannot understand why, after the hearings were held and the subcommittee report rendered which so fully stressed the need for transfer of the Watson Laboratories, action was taken to strike this from S. 2440. This is an item about which we are going to hear a great deal spoken in the coming campaign. In fact, unless correction is made with respect to this matter before November, the shadow boxing which has taken place with respect to the consolidation of electronic research laboratories is going to become the subject of discussion that might easily decide some several seats in this House in the next session of the Congress.

I am referring particularly to the repudiation of the fact-finding by the special subcommittee of the House Armed Services Committee which involved the eventual transfer of the Watson Laboratories from their present location to some central location of a more permanent nature.

Mr. Speaker, they who have arbitrarily passed up the inestimable benefits which would have accrued to the Nation's defenses as well as that which would have resulted from the increased efficiency and economy effected by the consolidation of the electronic research centers are merely paying lip-service to the economy drive which this House is presumed to have under way.

There is no disputing the fact that this Congress would have saved practically $1,000,000 a year had we had the courage and the stick-to-it-tive-ness to have followed the recommendations made by the military personnel and supported by the hearings held by a subcommittee of the Armed Services Committee that looked into every phase and angle of this question.

Mr. Speaker, it is well to remember that the proposal to consolidate at some one central point all electronic researches applicable to the operations of our Air Forces was instituted immediately after VJ-day in 1945. It was instituted by the then Secretary of War, Robert W. Patterson, whose splendid record for achieving economy and efficiency in his Department is a thing of which American people everywhere are justifiably proud.

Mr. Speaker, this is a matter altogether of concern to the Department of the Air Force. Insofar as they are concerned, it involves merely the elimination of one installation, with a view to increasing economy and efficiency. When queried with respect to this change, the Honorable Louis Johnson said that it was not primarily a matter of the Department of Defense, it was an Air Force matter, and of a certainty it had his tacit approval inasmuch as it meant both an increase in national security and a savings to the American taxpayer.

The United States Department of the Air Force as we know it now was not then in existence. It was still a mere arm of the United States Army, so that the studies projected with respect to the consolidation of electronic research centers was a matter of investigation by the United States Army itself.

Two years of incursive and intimate study was made of that question which was begun in September of 1945. It was not until May 1947 that a decision was reached that in order to achieve a maximum of economy and efficiency—commensurate with costs—that the elec-

tronic center should be assembled at Griffiss Air Force Base located at Rome, N. Y.

During the intervening period various activities were conducted which aimed at perfecting the move, which in November of 1949, or four years subsequent to the time it was initiated, resulted in a directive to effect the physical transfer of the so-called Watson Laboratories and its personnel from Eatontown, N. J., to Rome, N. Y.

Mr. Speaker, that decision was reached only after long study by competent officials. It was predicated solely on the increased efficiency and national security as well as decreased personnel and costs which would inure to the taxpayer—but it was not pleasing from a standpoint of political skulduggery and back scratching.

As a result thereof, in January 1950 and prior to the actual physical transfer of the Watson Laboratories, the House Armed Services Committee created a special subcommittee to investigate the termination of work at Eatontown, N. J. and the establishment of the electronic center at Rome, N. Y.

Public hearings were held by the newly created subcommittee in Washington, D. C.

The subcommittee visited among others the present location of the Watson Laboratories at Eatontown, N. J., as well as the Griffiss Air Force Base at Rome, N. Y.

It was not until March 21 of this year that the subcommittee submitted its report to the House Armed Services Committee. That report, in effect, approved the action of the newly created Department of the Air Force in transferring the laboratories, but a minority adverse report was submitted by my good and long-time colleague on the House Armed Services Committee who sits on the other side of the aisle, the Honorable HARRY L. TOWE, a member of the subcommittee.

Now, Mr. Speaker, I note that in a statement made to the subcommittee Mr. TOWE points out and let me quote the gentleman from New Jersey:

> During the course of the controversy over the proposed move of this facility, numerous Members of Congress, as well as outside individuals and organizations, have expressed their desire to be objective about this situation. * * * My position is no different than theirs, but perhaps it will assume more validity when I say to you that the Watson Laboratory is not in my district. It is more than 70 miles away, and its retention or removal has no political significance to me.

Mr. Speaker, may I say that I count myself numbered among those who Mr. TOWE has stated are motivated solely by the best interests of national defense and an economy in Government, and moreover, like my good friend, HARRY TOWE, the Watson Laboratories are not in my district. Further, like the gentleman from New Jersey, I too am 70 miles or more distant from Eatontown.

I do not know why my friend from New Jersey chose to ignore the exhaustive studies started in September of 1945 by competent military authorities who have testified as to the actual conditions that gave rise to their recommendation for the change. Neither do I know why he waited until March 21, 1950, to render the statement. Certain it is that as a member of the Armed Services Committee he must have known of the proposed move, but Mr. TOWE dismissed all such considerations by stating in his communication that—

> I am sure that Members are well aware of the fact that pressure from the proper sources applied at the proper time will accomplish wonders.

There is no denying the fact that there should be a centralization of expenditures for electronics made applicable to our military air services.

It goes without saying that we in Congress should be guided by what we regard as unimpeachable testimony given by responsible military or other personnel as to operations and costs.

Of a certainty we, in this body, do not want our military to continue to pour money down rat holes and keep highly inefficient, out-moded military installations activated to serve political ends of certain strategically situated and powerful Members who achieve power in a large measure because of seniority in this body.

I have pondered on what my colleague from New Jersey stated when he said:

> Pressure from the proper sources applied at the proper time will accomplish wonders.

Despite all the testimony given with respect to the enormous savings that would be effected by the movement of the Watson Laboratories activities from one point to another, the taxpayers will be further assessed to carry on a highly inefficient, uneconomic, and wasteful operation due solely to the exercise of undue congressional pressure being placed upon somebody not as yet identified unless the conferees agree to stand by the bill as it passed the Senate.

Mr. Speaker, who is there in this House who would tell any administrator in the executive department that he may not save money and render even a greater public service by doing a job more economically and efficiently?

Mr. Speaker, from a reading of the report of the special subcommittee of the Armed Services Committee which was appointed to investigate the removal of the Watson Laboratories, I learned that the main area of Watson Laboratories comprises 163 acres of Government-owned land which was transferred to the Air Force from the United States Army Signal Corps at the time that autonomy was granted to the Department of the Air Force. The installation presently employs 1,191 civilians, 53 officers, and 25 airmen.

In order to improve efficiency and to reduce costs, the Air Force is desirous of returning to the Army Signal Corps one of its many centers of operations and removing the laboratories located thereon to another unit. This latter installation, known as Griffiss Air Force Base at Rome, N. Y., originally was constructed as an aircraft maintenance and supply depot at a cost of about $36.000.000. Replacement cost is now estimated at approximately $66,000,000. The Griffiss Air Force Base comprises an area of 5 square miles, and the buildings are of a permanent construction and in excellent condition. They are air-conditioned, centrally heated, and extremely well lighted with fluorescent lights. They are surrounded by excellent concrete highways and sidewalks. The base is amply served with rail and truck terminals. In addition, the base has a first-class airport with concrete runways and aprons. The air base is complete with administration buildings, signal tower, and hangars which the Air Force states can be used in connection with the type of work done at Watson Laboratories. The hangars are presently being used and are housing the experimental type aircraft necessary to the work at Watson Laboratories. Certain modification of the buildings at Griffiss Air Force Base is necessary. There is an item in the public works bill in the amount of $2,781,500 for this purpose. In addition, there is an item of $240,000 in that bill for construction at the Griffiss Air Force Base incident to the moving of the laboratories.

In comparison with the foregoing, the subcommittee reported to the Committee on Armed Services that they found the Watson Laboratories at Eatontown, N. J., to be occupying temporary quarters which were constructed during the last war and are mainly of a wood-siding and tar-paper construction. Furthermore, there is no landing strip at the present site of the Watson Laboratories, and they found it necessary for personnel to drive approximately 40 miles to McGuire Air Force Base, which is presently used in connection with the work at the Watson Laboratories. However, McGuire Air Force Base is a fighter base and presently being used for that purpose.

The Air Force contends that the electronic testing at the fighter base interferes with fighter activities, and when the test flying is being done it is often necessary to cancel fighter training in order that the two do not conflict. Furthermore, the experimental planes, which range from B–29 size down, are now based at Griffiss Air Force Base, and when testing is necessary it requires the planes to fly to McGuire Air Force Base, a distance of over 200 miles, undergo the experimental training and then to return to Griffiss Air Force Base. The Air Force contends that this is not only expensive, but is a loss of personnel working time, all of which could be avoided if the laboratories were physically located at Rome. In addition, the Air Force produced detailed airway charts which showed that the Watson Laboratories, McGuire Air Force Base, and Greater New York area to be one of the most densely air-traveled sections of the world. As a safety feature, this was compared with Rome, N. Y., which has only one airline connecting it with other points in the country. In lieu of this, a small privately owned airport can be used, but testimony showed that this airport has macadam runways and that landings on these runways have resulted

in continual wheel undercarriage and propeller repairs to aircraft. It is also contended that this airport is unsuitable because of its small size.

The Department of the Air Force contends that if Watson Laboratories are retained at its present site, it will be necessary to start a large building program which would eventually entail the expenditure of approximately $17,000,000 if all of the buildings are to be replaced with permanent-type structures. Even if this is not done, extensive repairs are now necessary. The Air Force further contends that it is not economical nor in the best interests of the national defense to allow an installation presently valued in excess of $30,000,000 to be declared surplus and stand vacant while permanent-type buildings are built at the present site of the Watson Laboratories.

The subcommittee did not find that there was any disagreement between the witnesses in favor or opposing the move concerning the fact that a considerable sum would have to be expended on Watson Laboratories if it was retained at its present site. The disagreement comes about as to how much it would be necessary to spend. The subcommittee reported, however, that it "is of the opinion that the representatives of the Air Force, who have spent many months studying this project, are in a better position to know of the needs for research and development within the Air Force than are the employees of Watson Laboratories or private citizens who are concerned only with that installation."

It is also significant to note that many of those opposing the move have never seen nor inspected the facilities at Griffiss Air Force Base.

The representatives of the Air Force further testified that it is the intention of the Department to consolidate other electronic activities at Griffiss Air Force Base, after the contemplated move has been completed, in the interests of coordination and economy. Without a considerable building program this could not be accomplished at Watson Laboratories. At Griffiss Air Force Base a long-range program of centralization could be accomplished without further expense for buildings inasmuch as there is ample space, not only for Watson Laboratories, in its present size, but for any expansion which may be envisioned at this time. Furthermore, according to the Air Force, many of the buildings at Griffiss Air Force Base are so built as to be readily adaptable to the type of work carried on at Watson Laboratories. Much of this work is confidential and secret. Therefore, buildings at Griffiss Air Force Base, with only one entrance and exit and with no windows, are ideally suited for this type of work as they are easily susceptible to being protected and guarded. This is not true at the present location of Watson Laboratories. The buildings are of such a construction that they do not easily lend themselves to secret-type experimentation.

It appears from the testimony that the contemplated move of the Watson Laboratories has been publicly known for some time. While witnesses disagreed as to when it was first made public, the acting president of the Rome Chamber of Commerce read newspaper articles into the record which disclosed that the move was contemplated and was a matter of public knowledge at Rome, N. Y., as early as 1948.

The congressional delegation concerned with this move stated that they first learned that the move would definitely be made in October or November 1949. The subcommittee cannot help but feel that the opponents of this move have delayed in bringing the matter to the committee's attention. On the day of this subcommittee's first meeting, two officers and some equipment had already moved to Griffiss Air Force Base. On February 8, 1950, between 66 and 70 additional officers and equipment were due to be moved and it is therefore, apparent that this committee is investigating an action which in part, at least, has already been accomplished. The entire move is phased over a period of about 2 years. This is done so as to disrupt the workings of the laboratories to the least possible degree, and the representatives of the Air Force testified that it phased the move so as to move all of the employees of a certain laboratory and its equipment at an identical time.

The subcommittee heard considerable testimony concerning the proximity of the Watson Laboratories at its present site to other laboratories in the immediate vicinity, and particularly to Fort Monmouth, N. J. It is recognized that the engineers at Watson Laboratories do work in close connection with the private laboratories and the universities in the locality. On the other hand, the representatives of the Air Force testified that by removing the laboratories to Rome, N. Y., excellent opportunities would be afforded for the scientists to work with a new General Electric laboratory which would then be only 35 miles distant. There is also testimony concerning the number of contracts with private concerns which are supervised by scientists of Watson Laboratories and which companies are physically located in the New Jersey area. The Department of the Air Force recognizes the fact that some additional travel will be necessary to continue this supervision until the contracts expire, but they feel the advantages of the new location far outweigh this disadvantage. The Air Force cited many facts and figures to show that by no means were its contracts entirely confined to the New Jersey area. The Department's testimony discloses that it has many contracts in the Midwest which is an electronics center, and that some contracts are being supervised as far away as Los Angeles. The Department points up the fact that due to the many different types of contracts necessary for electronics work, no particular location can be ideally suited, for the private contractors dealing in electronics are widely scattered throughout the entire United States. Suffice it to say that the Air Force expresses confidence that the removal of the laboratories from the New Jersey electronics area is not of such importance that the move should not be made because of this fact.

Testimony disclosed that there will be adequate housing at Rome, N. Y., or in other towns or cities within commuting distance. It was also shown that this housing was constructed by private capital, primarily for the employees who were to be moved to Griffiss Air Force Base. The subcommittee heard no complaints from the opponents of the move concerning inadequate housing of personnel at Rome, N. Y. At the suggestion of the Air Force, approximately 400 housing units have been constructed by private capital in the Rome area. In addition, the commanding officer of Griffiss Air Force Base informed the subcommittee that he is reserving 50 units on the base for key personnel. Furthermore, bachelor officers' quarters on the base will be made available for single personnel, both ladies and men, for temporary purposes until such employees find a permanent location suitable to them. As a matter of fact, representatives of the Air Force contend that it will not be necessary for moving personnel to incur one night's hotel expense while awaiting permanent quarters.

It is understandable that there is considerable opposition to this move. Many of the employees at the present site of the Watson Laboratories have purchased homes or have leases and, in addition, have their children in school in that locality. Furthermore, it is recognized that this section of New Jersey will suffer economically by the removal of this payroll from that section. On the other hand, it is felt that the interests of national defense and of economy should prevail over private interests. In this connection, it must be noted that when the subcommittee made its inspection several officers were questioned as to the matter of selling privately owned homes. Due to a housing shortage in the Watson Laboratories area of New Jersey, the persons questioned were of the opinion that privately owned homes could be disposed of at no loss to the owner, and, in many cases, at a profit, in the event the Air Force continues with its plans to vacate the laboratories. In fact, the program of the Signal Corps does call for some expansion at the base, and the subcommittee suggests, in the event the program of the Air Force is adhered to, that the Monmouth Army Base give thought and study to the complete utilization of the facilities of the Watson Laboratories.

There is need for a prompt decision of this problem. Some material has already been moved to Griffiss Air Force Base. Other equipment is crated and ready to be transported. The Department of the Air Force is holding the move, however, pending report by this committee. Further delay will result in serious inconvenience and expense to the Government and to the personnel employed at the laboratories.

Much of the foregoing factual information I have culled from report No. 179, which is a consideration of proposed removal of the Watson Electronics

Laboratory from Eatontown, N. J., to Griffiss Air Force Base, Rome, N. Y.

Mr. Speaker, in view of the foregoing and despite my membership on the Armed Services Committee, I am altogether at a loss to know why that committee voted to delete from S. 2440 a comparatively small appropriation that would have meant an undisputed savings of millions of dollars to our taxpayers. Certainly, the people as well as the press of upstate New York who are altogether acquainted with this problem—will, in the coming congressional and senatorial campaign, have many questions to ask for refusing to avail the armed services of an existing plant and structures wholly suited to their use with the present-day value of $60,000,000.

It baffles even me to understand why a branch of our military is not permitted to reduce its operating charges by as much as a million dollars a year and is compelled to carry on electronic research and other developments in tar-papered shacks, heated with potbellied stoves, as described by the special subcommittee of the Armed Services Committee in its regular report.

The Banker-Farmer Relationship

EXTENSION OF REMARKS
OF
HON. ROBERT E. JONES, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 6, 1950

Mr. JONES of Alabama. Mr. Speaker, recently my good friend Mr. T. E. Williams, a distinguished citizen of Athens, Ala., and the retiring president of the Alabama Bankers Association, addressed the annual convention of that group in Mobile, Ala. Mr. Williams' speech is so important I want to make it available to every Member of the House. No man in Alabama could be as well equipped and informed on the subject as Mr. Williams, and his vast knowledge of the economic problems facing the Alabama farmer makes his observations particularly interesting. No Alabaman has contributed more of his time, energy, resources, and imagination to the welfare of the farmer and farm life than has Mr. Williams. The product of his life work is to be found on every farm in north central Alabama. I commend his speech to you for your consideration. It follows:

Our State has made much progress in both agriculture and industrial expansion. Since we have a special topic on the industrial phase of our work, and since agriculture is the foundation stone of Alabama's economic life, I shall cal' your attention to the over-all Alabama farm picture, and the place bankers occupy in this picture as it now looks:

1. A ceiling on cash crops—cotton, peanuts, potatoes. There is nothing to indicate a bigger outlet for these products. So production control very likely will continue.

2. The only big opportunity for increasing farm production in Alabama is with livestock and trees. Since trees are different and will be discussed in a separate topic, we will confine this discussion largely to livestock.

3. The mule and horse days are gone. Tractor power has become a must for efficiency, for economy, and to do the kind of farming which is essential to good profits.

4. Our biggest handicap at present is inadequate capital. Information and land are available, and farm labor is adequate, but most farms are very inadequately financed.

When a two-horse farmer, for example, shifts from mule power and equipment to tractor power and equipment, he increases his financial needs for power and equipment 5 to 10 times.

Pastures and other feed crops are essential to profitable livestock farming, but land preparation for pasture is expensive.

A good example of this is alfalfa. To plant an acre of alfalfa calls for from $40 to $50. Other crops cost less, but any of them calls for big money. Fences, too, are expensive, and most farms don't have enough fences.

And buying livestock to get started, or to expand, also costs money. Around $200 is needed to buy either a good dairy cow or a good beef cow. Some use a higher figure. This means at least $2,000 for either a dairy or beef herd of 10 cows, which is not a big herd.

Underneath all this is the fact that there are millions of acres of land in Alabama now producing little or nothing. This land is adaptable to feed crops, especially grazing, and it should be in production.

To prepare, fertilize, and seed this land calls for much money, and the privilege to lend this money at reasonable rates is yours.

This brings us to the opportunity of the bankers—ye managers of money who hold the progress of your communities in your hands. We urge you to study the farmer's needs, the individual farmer, and the improved methods. Yes, get out from behind your desk and visit your farmer customers. Break bread with them. Get some sand between your toes, some manure on your shoes. You can then understand better his problems and his needs. You might be persuaded to loosen up and make more of what I consider the best type of loans a country bank can make—farm loans.

Livestock farming is the landowner's responsibility. While tenants and sharecroppers may have a part in the operation, bankers, as a rule, can and will deal with landowners.

No Government agency can serve the needs of the farm people as well as the individual country bank.

Lippmann Deplores United States Obsession With War

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 6, 1950

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article by Walter Lippmann, which appeared in the Detroit Free Press, Sunday, June 4:

LIPPMANN DEPLORES UNITED STATES OBSESSION WITH WAR

(By Walter Lippmann)

WASHINGTON.—General Marshall, speaking in Arlington Cemetery, found it necessary to warn the country against the "surrender" of any "part of our leadership in the fight for peace."

He used these words in replying specifically to Mr. Hoover's proposal to break up the United Nations. But he was thinking of something much bigger than that. The theme of this exalted and faithful address was that we are failing to provide leadership to mankind in the fight for peace.

Having said that, of course, we must remain well armed and that we must use our economic power constructively, General Marshall warned the country that "we should not place complete dependence on military and material power." The word complete was not, I think, carelessly and accidentally used. For no one who has been a close observer of things in Washington can fail to feel that for a variety of reasons, some of them objective, some psychological, some personal, some partisan and political, the administration's foreign policy has in the last year created the impression here and abroad that it places virtually complete dependence on military and material power.

This impression may or may not reflect the real views of Mr. Truman and of Mr. Acheson. But that this impression has been created and that it has spread around the world is certain.

It is reflected at home in the defeatism shown in the Gallup poll, which finds a majority of the people expecting war within 5 years. It is reflected abroad in a drastic decline of American popularity among the broad masses of the people. This country has hardly begun to realize the extent and the depth of the loss of confidence in our wisdom, and even in our motives.

We have allowed ourselves to become identified with the idea that war is inevitable, and that our whole foreign policy is determined by the strategic necessities of the United States. As long as that is the picture of ourselves which we permit mankind to regard as the true picture, no money we appropriate for armaments and no contributions we make to recovery can arrest the breakdown of American influence abroad.

"War," said General Marshall, "is no longer just an evil. In this age it seems intolerable." The plain fact is that we have allowed the Soviet propaganda to associate us with the intolerable evil of war. Indeed we have helped the Soviet propaganda by all kinds of incendiary utterances from the Pentagon, from the State Department, from various foreign missions abroad, in Congress, and in inspired radio and press commentaries.

We have played right into the hands of the Soviet propaganda by explaining that everything we do, every decision we take, is based on a strategical calculation about war. This damnable obsession has gotten to the point where we can hardly send milk to babies abroad without explaining that this is an important action in our cold war with Russian communism.

The official theory of peace has been that it can be preserved if the Atlantic community is united and strong. Until it is stronger and more united than it is now, we must not talk about peace. We must not let the Russians think we wish to negotiate. For that will only make them think that we are weak.

We must not let our own people think about negotiation. That will only make them soft and unwilling to vote the money, to create the armies, and to face the sacrifices which are necessary to make us strong. We must concentrate our whole attention and effort on strengthening and uniting the Atlantic community—and then, eventually, we shall extend the area of possible agreement.

This theory is, I venture to believe, almost but not altogether sound and true. It is more than a mere half-truth. It is decidedly less, however, than the sufficient truth.

The defect of the theory is that you cannot unite—and keep united—the Atlantic community unless you can convince the exposed nations of continental Europe that you are organizing peace. If you treat the Atlantic community as a military coalition for war, or allow the impression to exist that that is what you are doing, you will not, in my opinion, be able to unite the Atlantic community.

For there are many countries in the Atlantic community that cannot surely be defended in case of war. There are some which cannot be defended at all. They cannot be intimately associated with the Atlantic community unless they believe that in that association war can be prevented. The more probable that war appears to be, the stronger the tendency of the undefendable countries to break away from the Atlantic alliance.

Therefore, it is safe to predict that no matter what the agreements reached by the governments in London, the unity and strength of the Atlantic alliance will decline, not increase, unless the administration succeeds in identifying itself, once more, with the probability and with the hope of peace.

Effect of Foreign Importations on American Optical Industry

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, June 6 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter written to me by C. A. Mowrey, of the DuMaurier Co., of Elmira, N. Y.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DUMAURIER CO.,
Elmira, N. Y., June 1, 1950.

Hon. WILLIAM LANGER,
Washington, D. C.

DEAR SIR: Another vital American industry is being destroyed.

As you already know, industry after industry is being destroyed by our "benevolent" Government. Those that are not already bankrupt are rapidly approaching that condition.

The safety and well-being of this Nation depends on many of these industries. A world war III could easily be lost because of this short-sightedness.

Now the American binocular business is a victim. Manufacturers of binoculars and other optical instruments cannot hope to compete with the influx of Jap glasses. This condition not only makes for hardship to American manufacturers, but prevents the training of skilled help demanded for defense instruments.

During World Wars I and II the United States Government begged civilians for all kinds of binoculars, field glasses, and telescopes. Such conditions will again prevail if the wreckers in Washington are not stopped and stopped soon.

Let us take an example: A 7x50 millimeter prism binocular made in this country sells for $175 plus $35 excise tax. The Jap copy sells retail for $30 plus $6 tax. By no stretch of imagination could any American manufacturer hope to equal this.

This ruinous condition exists all along the line. Opera glasses are sold wholesale in the United States for the unbelievable price of 27 cents each, duty-paid and a profit to the importer. Reading-glass lenses for 8 cents each landed. This is below the cost of the rough glass to domestic makers.

The binocular production alone in Japan has reached the staggering total of 120,000 a year. Untold quantities of other optical instruments are also produced. Any American manufacturer who risks money on producing a new item is sure to have it copied in Japan, forcing him out of the market.

We defeat a cruel, arrogant enemy. We then slobber over them and allow their imports to come in at 10 to 20 percent of the American cost. Every such item takes that much away from our own workmen. And the amounts are reaching alarming proportions.

We do not object to clean competition, but do object strenuously to such unfair and baseless slaughter of our industries. They are wrecking our livelihood. They are wrecking our defense.

The Waltham Watch Co. is already bankrupt. The glove industry is on the rocks. The optical industry is being obliterated. The china industry is hard hit. Linens, shoes, necklaces, and countless of others. And the President wants still lower duties.

When will this damnable condition be stopped? We believe that import duties should be raised to an equitable level.

These deplorable conditions are being brought to your attention. We hope that you will use your influence to correct them before it is too late.

Sincerely,

C. A. MOWREY,
DuMaurier Co.

Happenings in Washington

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Tuesday, June 6 (legislative day of Wednesday, March 29), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, program No. 26 in a series of radio addresses entitled "Happenings in Washington," delivered by me on June 5, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

HAPPENINGS IN WASHINGTON

(Program No. 26)

This is ED MARTIN, speaking to you from the Nation's Capital, and bringing you another discussion of Happenings in Washington.

I want to talk to you at this time about the cat with 99 lives—about the subject that will not die.

I want to talk to you about communism in our Government. The administration has sought to whitewash the cat, to kill it, to whistle it away, to make people forget it is there.

Yet the subject remains very much alive. Our people continue to be disturbed over whether the seditious elements have all been purged from our Government.

In recent weeks there has been a great deal of confusion about communism. The air here in Washington has been clouded with charges and countercharges, statements and denials.

Under those conditions there is danger that we might lose sight of the main objective. And that is to drive out of the Government every one, high or low, who is tinged with disloyalty to our country and to crush the poisonous influence of communism wherever it may be found.

From time to time, new evidence is uncovered, indicating that official Washington is not yet cleansed of those who spread the corrupting ideology of communism and serve as spies for the masters of the Kremlin.

The last time I spoke to you about this was shortly after Alger Hiss had been convicted, a few months ago.

The administration seemed to feel that the Hiss case was probably the last of it and that now the cat was dead.

The administration took no action to improve the laws protecting us from traitors and spies in such situations as was disclosed in the recent arrest in Philadelphia of Harry Gold. You recall he is held under $100,000 bail on the charge of aiding the British scientist who turned atomic secrets over to Russian agents during the war.

I want to discuss two other recent developments.

The first is the notorious Amerasia stolen-documents case of 1945. The administration thought it had buried Amerasia under 6 feet of whitewash. But it is back, as alive, as smelly and as shameful as ever. I will tell you about that in some detail.

But, first I want to talk about a speech made 2 weeks ago by the Attorney General of the United States. In it he made the positive statement that the FBI knows every Communist in the United States and that not a single Communist is now working for the Government.

My fellow Pennsylvanians, think for a moment how much damage could be caused by that loose and careless statement.

It is no secret that loyalty investigations are being conducted in many departments of the Government. It is well known that the FBI is making secret check-ups. It has been stated that Federal grand juries have been considering some cases.

And here is the Attorney General saying, in effect: "There is no need to search for Communist disloyalty. Among the 2,000,000 men and women on the Government payrolls we don't have a single Communist."

I say, my friends, that the chief law officer of this Nation, at a time when these investigations are going on, had no right to make a remark like that.

I say he would serve the Nation better if he gave less time to such speeches and more time to suggesting ways of strengthening the espionage laws of our Nation, to protect us from traitors.

And now let us turn to the Amerasia case. For those of you who don't recall the details, let me remind you briefly:

In June of 1945, six people were arrested in connection with the theft and transmission from the State Department of certain "classified" documents.

They contained information concerning the activities of the State Department, the Office of Naval Intelligence, the Military Intelligence Division, Office of Strategic Services, and the Office of War Information.

Remember, we were at war at that time. And keep in mind also that papers referred to as "classified" are marked "secret," "top secret," and "confidential."

The charges were watered down. One defendant, Philip J. Jaffe, editor of a pro-Communist publication called Amerasia, got off with a $2,500 fine. It was held that he had merely collected the documents as background material to write articles for his magazine.

Another, named Larsen, a far eastern expert in the State Department, paid a $500 fine. The rest were cleared.

Two things stand out in connection with that case.

The first is that while the FBI thought it had a very strong case, the Justice Department insisted it was a weak case and that even the actions of Jaffe and Larsen, and I quote directly from the court record, "did not involve any element of disloyalty."

The second point is that the Government minimized the nature of the stolen documents. The Government claimed they were trifling, unimportant papers which were not really secrets at all. The Government speedily buried the Amerasia case and thought it would stay buried

And to this very day, they are insisting that the stolen documents were only small stuff.

I am going to list for you some of the papers which were found in the office of Amerasia magazine during the FBI raid.

There were two State Department documents marked "Top secret."

There were 20 original State Department papers and 14 copies of other State Department documents, all classified as "Secret."

There were two original OSS documents. There were two Naval Intelligence documents "Secret."

There were nine documents from Military Intelligence labeled "Secret." There were three OWI secret documents. Then there were dozens of papers labeled "Confidential."

When Larsen was arrested and his home raided, the FBI found 19 copies of State Department papers, 7 Naval Intelligence documents, 2 papers from Military Intelligence, and 2 War Department documents, all marked "Secret." And there were dozens of other papers from all these Departments and agencies labeled "Confidential."

This, mind you, was during the war. When our people first learned that the papers had been taken from the State Department files, high Government officials said it was not serious.

They declared "a lot of that stuff is nothing but bits of information about China, Korea, and India, of no value to any foreign country."

They are still putting up that argument down here in Washington. It seems to me anyone should know the answer to that now. Certainly, informed people should have known the answer in the middle of 1945.

We all know how the Russians armed the Chinese Communists and supported them in the drive to take over China from the anti-Communist regime of Chiang Kai-shek.

No wonder they knew how far they could go. No wonder they moved so surely and so boldly. No wonder they couldn't be bluffed or fooled. Imagine having such a mass of secret information about the attitude of our State Department and our armed forces in China and all of east Asia.

Let, even today, after all that has happened, there are those in high places in Washington who contend that the material was worthless.

Now let me move up a year to 1946, when a special House committee investigated the Amerasia shame in secret session.

At the conclusion of the hearings the committee made a report in which the Democratic majority approved the administration stand of a weak case.

One Republican member of the committee was ill. The other two filed strong dissenting reports, charging there was disloyalty and that the case should be reopened. The majority report did state that wartime security in the State Department was practically nil and that anyone could walk out of the place with secret documents.

The testimony before this committee, given behind closed doors, was impounded and not disclosed. Recently, as the pressure to look once more into the Amerasia case became stronger, the testimony was made public for the first time.

Let me tell you some of the interesting things which were not disclosed in 1945 when two men got off with small fines and four other persons went scot free.

First, it was disclosed that little Amerasia magazine, with about 2,000 circulation, had a large back room equipped with machinery to copy documents in large quantities. Operatives of our Government discovered that photo copies had been made of many of the secret stolen documents.

Now, my friends, can anybody suggest why a loyal publication would be making quantities of copies of Government documents marked "secret" and "top secret."

And the FBI files show that Jaffe, the man who ran the publication, was a member of many Communist-front organizations and had been many times in communication with Communist leaders.

Second, the State Department's own security officer, appearing before the House committee in 1946, was asked whether possession of the stolen documents by any outsider would be a serious threat to the security of the United States.

He replied, and I quote:

"Very definitely. There is no question about that."

Does that sound as though these documents marked "secret" and "top secret" were worthless?

One high official of the FBI testifying at those closed hearings said there was no doubt that Philip Jaffe, who ran Amerasia, had access to almost everything in the files of the Government wartime agencies.

Does that sound as though the Amerasia case was something to be brushed off and hushed up? Or should the Government have dug right down to the bottom, exposing every dark corner to the light?

Now we know that Alger Hiss was part of one ring stealing documents from the State Department. And at the Hiss trials, a former State Department man named Julian Wadleigh admitted that he was part of still another ring stealing documents from the State Department for Russian agents.

We know that Judy Coplon was found guilty of dealing with a Russian agent to betray Government secrets.

Here in the Amerasia case is a fourth example of a leak as wide as the Mississippi River through which secret documents poured out into unauthorized hands.

The American people have a right to know whether there was a fifth and a sixth and a seventh leak. They have a right to know whether disloyal rings operated in other departments and agencies as well, or whether their activities were confined to the State Department.

And furthermore they have a right to demand that their Government make a complete investigation and not a whitewash.

My own fight against communism is well known to you. I was in the thick of the fight when many of our people were unaware of the danger. In those days those of us who denounced communism as a menace to American freedom were ridiculed and called red baiters.

Even as recently as 1947, President Truman, in a letter to former Gov. George H. Earle, of Pennsylvania, wrote, and I quote:

"People are wrought up about the Communist bugaboo, but I am of the opinion that the country is perfectly safe as far as communism is concerned."

My fellow Pennsylvanians, if our country is to be made perfectly safe against communism, there must be no whitewash this time. There must be a full and complete disclosure. We must know where we stand. We must be assured of a thorough housecleaning in our Government.

This is ED MARTIN speaking to you from the Nation's Capital. I will be with you again in 2 weeks. Thank you for your attention.

The 15 Top Men in the United States of America

EXTENSION OF REMARKS

OF

HON. HARRY P. CAIN

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Tuesday, June 6 (legislative day of Wednesday, March 29), 1950

Mr. CAIN. Mr. President, Merryle Stanley Rukeyser, International News Service economic commentator, recently offered his judgment on 15 prominent American leaders. This evaluation appeared in the Seattle Post-Intelligencer.

Among the named leaders is Frank McLaughlin, of Seattle, a close personal friend of mine. Others named are colleagues of ours, and good friends, too.

I ask unanimous consent that the Rukeyser comments be printed in the Appendix of the RECORD, where they can be applauded by those who share Mr. Rukeyser's views.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE 15 TOP MEN IN UNITED STATES OF AMERICA

(By Merryle Stanley Rukeyser)

Who are the top men who are running the United States of America?

The question was raised in an inquiry from James R. Young, associate editor of the Anderson (S. C.) Daily Mail, who planned to discuss the subject in a civic club talk.

I think the significant personalities are not necessarily those in big posts. Sometimes the individuals at the top are creatures of circumstances, and depend heavily on the ideas and guidance of others. Sometimes the front-line thinkers are in inconspicuous posts. On the other hand, much publicized men frequently turn out to be little men in big jobs.

It seems to me that the subjoined have been making significant contributions to the survival of the American competitive system:

1. Gen. Dwight D. Eisenhower, president of Columbia University, for his meritorious postwar service in interpreting the American system in terms of liberalism and human freedom. He has been at the forefront of the battle against statism and collectivism.

2. Gen. Douglas MacArthur for his majesty of expression and sureness of execution of carefully thought-out programs in war and in peace.

3. Bernard M. Baruch, financier, philanthropist, and wise counselor of Presidents. Mr. Baruch has rare gifts of timing, of foresight, and of reducing complicated situations to simple terms.

4. Albert Einstein, physicist extraordinary, at Princeton University, whose creative imagination laid the basis for revolutionary explorations in the realm of atomic energy.

5. Senator HARRY F. BYRD, Democrat, of Virginia, who, as chairman of the Joint Committee on Nonessential Federal Expenditures, has through the years hewed to the line in behalf of national solvency and prudence.

6. Senator WALTER F. GEORGE, Democrat of Georgia, who with Senator BYRD and others has provided a common sense voice in the Senate, especially in matters relating to taxation and governmental finances.

7. Senator ROBERT A. TAFT of Ohio, Republican Senate leader, who as the antithesis of a demagog prefers to meet issues rather than

dodge them, and who had the courage to utter unpopular truths.

8. Alfred P. Sloan, Jr., chairman of the General Motors Corp., for his monumental work in building the world's No. 1 automobile company. Mr. Sloan's special genius has been in recognizing that the benefits of improving efficiency and better technology should be distributed among customers, workers, and stockholders.

9. Herman W. Steinkraus, president of the Bridgeport Brass Co. and president of the Chamber of Commerce of the United States, for his forthrightness in affirmative presentation of the merits of the American competitive system.

10. Fred J. Emmerich, president of Allied Chemical & Dye Corp., for his exemplification of the great value in the modern corporation of the comptroller's factual approach to the dynamic problems of business.

11. Ludwig von Mises, a new American, formerly head of the Austrian School of Economics, for his masterly theoretical proof that Marxism is reactionary and that modern capitalism is the creator of liberty and material advancement. His newest tome, "Human Action," is an effective antidote to Marx's "Capital" and John Maynard Keynes' "The General Theory of Employment, Interest and Money."

12. T. Coleman Andrews, Richmond, Va., accountant and former director of the General Accounting Office of the United States, for his revealing official audit of Tennessee Valley Authority, which debunked the pretense that it was a yardstick for measuring private utility companies.

13. Senator GEORGE W. MALONE, Republican, of Nevada, for his level-headedness in avoiding the bandwagon of internationalism. He ruggedly seeks to relate international economic policies to the needs and welfare of the domestic economy.

14. Father Edward A. Keller, director of the bureau of economic research at Notre Dame, for his development of a technique for analyzing contemporary social and economic trends in terms of simple, double-entry bookkeeping.

15. Frank McLaughlin, president of the Puget Sound Power & Light Co. of Seattle, for his unremitting effort to demonstrate to fellow corporate executives that the risks of positive expression may be less than the hazards of cowardly failure to face issues. Mr. McLaughlin has been a pioneer in the use of concept advertising.

The Missouri Valley Authority—Article From Burdick's Magazine

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 6 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, in North Dakota, there has been such a false and vicious campaign against the Missouri Valley Authority—commonly called the MVA by the Power Trust and their friends—that I am happy to insert in the CONGRESSIONAL RECORD an article written by Representative USHER L. BURDICK. For clearness, conciseness, and truth, the article is unequaled.

The Nonpartisan League for years has constantly advocated MVA; and it has been endorsed by its candidates on the Republican ticket, headed by T. H. H. Thoresen, for Senator; Usher L. Burdick and Martin Stenehjem, for Congress; and Frank A. Vogel, for governor, all of whom has supported the MVA.

I ask unanimous consent that an article entitled, "The Truth About the Missouri Valley Authority," which appeared in USHER L. BURDICK's magazine for May-June 1950, may be inserted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE TRUTH ABOUT THE MISSOURI VALLEY AUTHORITY

In North Dakota there are a great many against an MVA, and also many for it. I shall give my reasons for supporting the enterprise:

First of all, the Tennessee Valley Authority was put through Congress with intense opposition—not from the people, but from the Power Trust. Many faults were found with it, but principally the charge of "interference with private business." Right here, it must be remembered that this is not strictly a private business, but a great public business. When this great enterprise was started, the power rates in the South were prohibitive, running as high as 8 cents per kilowatt-hour, but today the same service is being delivered for 1 cent per kilowatt-hour. Along with REA, the Southern States are being electrified completely and it is a known fact that this cheap power has put the Southern States back on the map. More industrial development is now in progress in the South than in any part of the United States.

TVA'S COST YARDSTICK

Not only has TVA delivered cheap power, but it has developed a yardstick of costs that the private power companies have been compelled to consider in other sections. Today there are four of these great public enterprises furnishing power and the yardstick for a considerable section of our country.

They are:

The Tennessee Valley Authority; Tacoma, Wash., municipal.

The Bonneville power; and in Canada, the Ontario Authority.

Had the Tennessee Authority rates been in use in North Dakota in 1948, there would have been a saving to the people of $6,922,513.

Had the Tacoma, Wash., rates been in use in North Dakota for the same year, there would have been a saving of $7,304,898.

Had the Bonneville rates been used in North Dakota, the saving would have been $5,960,139.

Had the Ontario rates been used in North Dakota, there would have been a saving of $7,541,751.

Taking an average of all these authority prices for North Dakota, there would have been a saving of $6,932,325.

Remember also that today the people of the United States are paying $2,000,000,000 more in power rates than they should pay, and that without these authorities the people would be paying $4,000,000,000 more than they should.

As other public power authorities are created, the rates to the consumers everywhere will be reduced. Sharply reduced in areas covered by the authorities and much reduced in other sections where private power companies are compelled by these authorities' rates to reduce them.

The stock objection to these public power enterprises is that they not only interfered with private business, but it created another bureaucratic set-up that can defy not only the people, but the Government as well. There is no foundation, whatever, to this charge for the reason that public power is not a private enterprise, but a public one, and the directors of an authority are appointed by the President with the consent of the Senate, and can be removed at any time.

Pope Offers Plea for Social Justice

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 6, 1950

Mr. SADOWSKI. Mr. Speaker, the fight against communism cannot be won by merely building more armaments and making speeches of vituperation. The fight must be directed against poverty, hunger, injustice, disease, and unfair exploitation. We can no longer shut our eyes and say that what goes on in the rest of the world is none of our business. Likewise we should be on the alert against those who insist on throwing dead cats in our backyard. By that I mean all of those reactionary, backward, and repudiated rulers in the world who will not institute reforms demanded by their people, and finally when the people have lost all confidence in them, come running to us for money and help, with the cry that the Communists are after them.

We can win our fight against communism with the expenditure of very few dollars if we insist on social justice, and oppose human exploitation wherever we find it. No people desire to be shackled by communism.

I wish to submit an article which appeared in the New York Times, Sunday, June 4:

POPE OFFERS PLEA FOR SOCIAL JUSTICE

ROME, June 3.—Pope Pius today called upon people and governments to pool their resources in a world-wide campaign to bring about social justice and halt the march of atheism and materialism that might ultimately lead to a shooting war.

In making this appeal the Pope, according to Vatican circles, clearly indicated that he supported the United States economic policy in Europe, which has been advocating the removal of all restrictions to trade to bring about better exploitation of resources by all nations participating in the Marshall plan.

If this is not done, Pope Pius said in an address, there is a possibility that countless millions of people, lured by demagogs and false promises, will revolt against the existing social order.

"Only a coalition of all people of good will in the whole world, for large-scale action loyally and harmoniously carried out, can bring a remedy," he said. "This is the way in which one of the most preoccupying factors in the international situation can be eliminated—one which more than any other is feeding today the ruinous cold war and threatens to unleash a hot war, a burning incomparably more disastrous war."

SOCIAL JUSTICE NEEDED

The lack of social justice, Pope Pius declared, had made disgruntled and impoverished people a fertile breeding ground for "the spirit of evil," which Vatican officials said was in this case the papal synonym for communism. For that reason unemployment

was "the most urgent problem, which weighs like a nightmare" upon all old industrial countries, the pontiff declared.

The question then, he continued, was that of attaining a normal productivity capable of securing steady employment—a just, vital space for workers adequate to and compatible with the dignity of a man.

A healthy production, wisely adjusted to consumption and to the needs of the people instead of an economic policy that selfishly seeks to exploit material resources for pure gain and without paying heed to the needs of the human family is the surest way to bring about social improvement, the Pope said.

A sound economic policy can be followed without destroying the right of private property, which is upheld by Roman Catholic social doctrine, he declared.

PLEA FOR SOCIAL BENEFITS

He stated the workers should receive social benefits and the opportunity of improving their condition to the greatest possible degree without, however, forcing the employer to relinquish control of the means of production to place them under collective ownership.

Those who wish to push social policy further in this direction, "strike against a limit where the danger arises that the working class may follow the errors of capital," which consisted in the creation of large cartels. These big industries also eliminated private ownership, which they transferred to anonymous trusts.

"A Socialist mentality would accommodate itself very well to such a situation," the Pope said. "But this development would disquiet those who know the fundamental importance of private property in promoting initiative and determining responsibility in the economic field."

The removal of the danger inherent in atheism and materialism, the pontiff declared, can be attained if men act in "the spirit of justice, love, and peace." The church, he continued, which has foreseen that danger, is already doing whatever it can to alleviate suffering and therefore must be aided and supported by all those who are likewise fighting or will fight against social injustice.

Reconstruction Finance Corporation

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 6, 1950

Mr. CELLER. Mr. Speaker, with permission to extend my remarks in the RECORD, I am happy to attach an analysis made by Fiduciary Counsel, Inc., of the activities of the Reconstruction Finance Corporation. The Counsel is a truth-seeking organization whose job it is to get all the facts possible regarding particular subjects and present them in an unbiased manner. The attached analysis of the Reconstruction Finance Corporation is presented in exactly that manner. I was particularly impressed by the following statement appearing in the analysis: "Looking back on the Corporation's record, it is evident that under the guidance of its directors and officers its functions have been performed at a substantial profit and the over-all aid rendered to the economy far outweighs the relatively small number of objectionable situations."

The analysis of current operations of the Corporation was made through the fiscal year ended June 30, 1949, and balances shown in the analysis are as of that date.

I have obtained from the Corporation additional significant statistics for the first 10 months of the current fiscal year which are as follows: 4,499 business loans aggregating $454,226,000 have been approved during these 10 months; 50 percent of these were for $25,000 or less, and 88 percent were for $100,000 or less.

During this same period Federal National Mortgage Association, a subsidiary of the Reconstruction Finance Corporation, has made commitments to purchase $1,765,907,000 of home mortgages guaranteed by the Veterans' Administration or insured by the Federal Housing Administration. Actual purchases during this period have aggregated $760,982,000. The Association's and RFC's program of reselling these mortgages to private investors has been progressively successful during the current fiscal year and through May 19, 1950, approximately $226,000,000 of sales have been closed at premiums aggregating approximately $2,000,000.

Net earnings of the Corporation during these 10 months have been approximately $23,025,000 after making provision for estimated future losses of $7,613,000. The net earnings include $14,075,746 earned by Federal National Mortgage Association. Total loans and securities outstanding as of April 30, 1950, were approximately $1,900,694,000, exclusive of foreign loans and other assets amounting to $230,580,000.

Since preparation of the attached analysis, salaries of the Directors of the Corporation have been changed by Public Law 359 to $15,000 per annum with the salary of the Chairman of the Board fixed at $16,000 per annum. All employees of the Corporation are now under the Classification Act.

The analysis follows:

THE RECONSTRUCTION FINANCE CORPORATION

SUMMARY

Since organization in 1932, the Reconstruction Finance Corporation (the RFC) has been engaged in a wide range of constructive activities. Most notable, of course, was the assistance rendered to banks during the depression years following the crash in 1929. In the period 1932-38, loans aggregating $1,300,000,000 up to 5,816 going banks were authorized, of which $1,100,000,000 was used. In addition, the Corporation purchased a total of $1,100,000,000 of preferred stock, capital notes, and debentures in 6,139 banks. Moreover, loans were authorized to 2,773 closed banks, and $924,000,000 was advanced to institutions of this type for distribution to depositors. This aid was of considerable importance in bringing about a sound banking structure, which in turn was a prerequisite for the economy's recovery.

Throughout its life, however, one of its primary purposes has been to extend loans to business enterprises. Few, if any, of the requests for loans have originated from businesses carrying prime credit ratings since these were handled by private banks. Thus, most of the Corporation's loan activities involved situations carrying relatively high elements of risk. Although it has operated under such conditions, the RFC's loan record has been exceedingly good. Practically every financial institution in the country has losses from loans and the RFC is no exception. However, the actual loss ratio experienced by the Corporation has been relatively low. For instance, since 1932, on all types of loans and investments totaling roughly $10,000,000,000, net losses have been less than five-tenths of 1 percent. For business loans in its loss ratio has been about six-tenths of 1 percent.

Activities have been quite profitable and since inception net income before reserves has amounted to $559,000,000. The Corporation has taken a very conservative stand in regard to setting up reserves against future losses. As of June 30, 1949, total reserves for this purpose amounted to about $89,000,000. During the past year about 53 percent of earnings, or $9,200,000, was earmarked for this purpose, which in turn represented 1.4 percent of basic risk assets outstanding. Thus, it is seen that the Corporation is in a position to absorb relatively large losses (such as appears probable in the case of Lustron) without impairing its financial position. In accordance with the RFC Act, as amended, the Corporation in July 1948 retired, by payment of $225,000,000 to the United States Treasury, its capital stock in excess of the $100,000,000 authorized. Moreover, in December of the same year it paid $307,000,000 to the Treasury which represented dividends on its capital stock. The financial results mentioned above clearly refute the claim made from time to time that the Corporation loses the taxpayers' money.

Public reaction to the Corporation varies widely. Because of its political aspects it is very often difficult to find a truly unbiased opinion. It should be recognized that the RFC was created by and now operates under legislation passed by Congress. Therefore, the Corporation as an entity should be judged primarily on the following basis: Has it performed a beneficial service to the economy and has it carried out its functions as stipulated under the various acts? Looking back on the Corporation's record, it is evident that under the guidance of its directors and officers its functions have been performed at a substantial profit and the over-all aid rendered to the economy far outweighs the relatively small number of objectionable situations. This is borne out by a review of the various phases of the Corporation's life.

EARLY ACTIVITIES

At the beginning of the 1930 depression years, the shortage of available credit was considered one of the important stumbling blocks to recovery. In order to open up new sources of credit and thereby help to alleviate this condition, the RFC was created by Congress during the latter part of the Hoover administration in January 1932. Operations began in February 1932 and at the onset, its functions consisted of making loans to banks and other financial institutions, insurance companies, agricultural credit agencies, and railroads. With the exception of advances made to railroads, direct loans to business were not made. Later in the 1930's, it became apparent that there was a need for credit in other fields. As a result Congress broadened the Corporation's functions considerably. For example, additional legislation gave it the authority to purchase preferred stock of banks and insurance companies and the capital stock of agricultural credit corporations and national mortgage associations; to make loans to business enterprises, mining interests, agricultural improvement districts, and public school authorities, and to assist in financing the construction of public works and self-liquidating projects.

During this early period (1932–38) the work accomplished by the Corporation was of definite aid to the economy. Most notable, of course, was the assistance rendered banks. In this period, loans aggregating $1,300,000,000 to 5,816 going banks were authorized, of which $1,100,000,000 was used. Although 2,123 of these institutions failed after receiving aid, the remainder, or 3,688, were enabled to continue. In addition, the Corporation purchased a total of $1,100,000,000 of preferred stock, capital notes, and debentures in 6,139 banks. Loans were authorized to 2,773 closed banks, and during this period $984,000,000 was made available to these types of institutions for distribution to depositors. Many other sections of the economy were also aided. Loans were made to railroads, insurance companies, savings banks, and building and loan associations. Considerable assistance was given to States, municipalities, and school districts which made possible the construction of many useful projects, such as highways, aqueducts, bridges, housing developments, and schools.

THE WAR PERIOD

During the defense and war periods, Congress again broadened the powers of the RFC in order for it to carry out various programs deemed essential to the national defense and war effort. These functions, carried out mainly through subsidiary companies, included financing plant conversions and construction, providing war-production facilities, acquiring critical and strategic materials, paying subsidies deemed necessary by other governmental agencies and numerous other undertakings. During 1947, these wartime powers were terminated and at the present time all of these activities except the operation of the rubber and tin programs have either been liquidated or are in the process of liquidation.

CURRENT STATUS

Public Law 548, Eightieth Congress, which was approved during May 1948 constitutes the basic legislation under which the RFC presently exercises its loan functions. This legislation, which extended the life of the Corporation to June 30, 1956, set its capital structure, stipulated the purposes for which it was continued and defined its authorizations and lending limits. Capital was set at a maximum of $350,000,000, comprised of $100,000,000 of capital stock, owned by the Treasury of the United States with the balance, $250,000,000, representing surplus. Any surplus accumulated in excess of this amount is required to be paid to the United States Treasury in the form of dividends on its capital stock. As stated in the law the Corporation's primary purpose was defined as follows: "To aid in financing agriculture, commerce, and industry, to encourage small business, to help in maintaining the economic stability of the country and to assist in promoting maximum employment and production." In order to carry out its operations, the Corporation was given a wide range of authority (within certain limitations) to engage in the following loan activities:

1. To purchase the obligations of and make loans, directly or in participation with banks, to business enterprises, including railroads and air carriers.

2. To make loans to financial institutions.

3. To subscribe for or make loans upon the nonassessable stock of insurance companies, or to purchase capital notes or debentures of insurance companies. Limit—$15,000,000 outstanding at any one time.

4. To purchase the obligations of or make loans to States, municipalities, political subdivisions or public agencies. Limit—$200,000,000 outstanding at any one time.

5. To make loans deemed necessary because of floods or other catastrophes. Limit—$40,000,000 outstanding at any one time.

The aggregate of commitments for all of the above activities cannot exceed $3,500,000,000 at any one time. Within the over-all limits there is no restriction as to the amount which may be advanced to any one borrower. The specific lending authorities extend to June 30, 1954.

Congress also gave the RFC the authority to make loans to or purchase the obligations of businesses engaged in prefabricated housing and in large-scale modernized site construction of housing. A limit of $50,000,000 in commitments at any one time was placed on this category.

Through its only subsidiary, the Federal National Mortgage Association, the Corporation maintains a secondary market for mortgages on homes and rental housing projects insured by the FHA or guaranteed by the Veterans' Administration. By purchase of these mortgages, principally from mortgage companies, banks and other financial institutions, additional mortgage credit is made available to regular channels.

In addition to the above operations, the Corporation is also responsible for the following activities:

The tin program: In 1947 and 1948 the RFC was directed, by specific legislation, to continue the Government's tin program until June 30, 1951. Under this program the Corporation is responsible for the operation of the Government-owned tin smelter at Texas City, Tex., and for other related activities. Moreover, it is required to finance research in tin smelting and processing. The tin program was adopted early in the war in order to insure an adequate supply of this essential material. At the present time operations serve to maintain stand-by facilities in addition to providing a source of supply.

The rubber program: The Rubber Act of 1948 provided for the maintenance of synthetic rubber facilities and required that a minimum amount be produced and consumed each year. In addition, it was stipulated that research activities in this field should be continued. The President of the United States was given the power to carry out the provisions of this legislation. He, in turn, placed the operating functions in the hands of the RFC. Although the RFC has the authority to run the various Government-owned plants, they are at present operated mainly by private companies. This program is also designed primarily to provide standby facilities and as such it is an integral part of our defense program.

THE CORPORATION—ORGANIZATION AND LOAN PROCEDURE

Operations are carried out through its headquarters in Washington, D. C., and 31 regional agencies located throughout the country. The management is vested in a Board of Directors consisting of five persons appointed by the President of the United States by and with the consent of the Senate. No more than three members are permitted to be of one political party. The directors' salaries are set at $12,500 per annum, while that of the Chairman of the Board is fixed at $15,000 per annum. The process of placing all employees under Civil Service is being completed. Salaries are thus limited by over-all civil service policies. Aside from the Directors, the two top salaries are paid to the General Counsel and to the Special Assistant to the Board of Directors, both of whom receive $12,500 per year. Other salaries range up to a limit of $10,330 per annum. At the end of the last fiscal year, employees numbered about 4,600, of which approximately 3,100 were assigned to the 31 agencies.

Requests for loans originate primarily at the regional offices and they are authorized to approve all advances up to $100,000. Commitments of $100,000 and over require the approval of the Washington office. In accordance with the act, certain standards should be met before a loan is approved. It must be shown that the borrower tried to obtain the loan through regular channels, but was unable to obtain the loan on reasonable terms. Moreover, the loans should be of such sound value or so secured as to reasonably assure retirement or repayment. In addition, loans cannot have a maturity beyond 10 years, except in the case of loans to States or other political subdivisions, in which case they may run for 40 years.

From the above it is apparent that most of the requests for loans originate from parties who are unable to obtain reasonable terms from private sources. Since this is considered so important, what may be termed unreasonable? Usually, this involves either the rate, term, or collateral. The RFC does not make a loan merely because a higher rate, i. e., above the RFC 4 percent, is demanded by private sources. It should be shown that for the risk involved, the RFC rate is more in line with comparable risks. Many requests for loans are made because the term (maturity) offered by the private source is not acceptable to the individual business. In practice, the RFC appears more willing to grant longer terms on loans for working-capital purposes.

Since the Corporation does not strive to underbid commercial banks in the loan field, it cannot be classified as a true competitor. Moreover, it cannot be said that the RFC accepts just any loan refused by private banks. This is made clear by comparing the number of business loans authorized with the number requested. Although there is a lapse of time between application and approval, it is estimated that roughly 51 percent of the business loans applied for during fiscal year 1949 were turned down. Actually, commercial banks are often able to make loans by virtue of the RFC's participation in the transaction. Moreover, through its financial counsel, the RFC advises business concerns on management and financial problems. As a result of this aid, many firms are then able to establish credit lines in private channels.

Funds for the Corporation's loaning activities are obtained from its authorized capital and surplus of $350,000,000 and borrowings from the United States Treasury. There is no limit on the amount which may be borrowed, although it is clear that the Corporation's lending limits serve as an indirect ceiling. The Secretary of the Treasury fixes the rate on these borrowings, after giving consideration to the average interest costs on outstanding United States Government marketable obligations. Over the last announced period, this rate was set at 2 percent.

CURRENT OPERATIONS

The RFC is now one of the largest lending units in the country. On a consolidated basis, outstanding loans and securities held (which largely reflect loans) amounted to $1,250,000,000. By comparison, loans and discounts of the three largest private banks in the country at the end of 1949 amounted to $2,804,000,000, $1,381,000,000, and $1,350,000,000, respectively.

Business loans: During the fiscal year ended June 30, 1949, the Corporation approved 3,509 loans aggregating $348,900,000. Banks participated in 1,261 or 36 percent of these loans for an additional $39,600,000. A large number of the loans granted were to small businesses, evidenced by the fact that of the 3,509 loans authorized, about 52 percent were for less than $25,000, and 88 percent were for less than $100,000. The amounts involved, however, reflect a different picture. Of the loans authorized, 93 of them (3 percent) accounted for $200,400,000, or 57 percent of the total amount made available. Nevertheless, the above figures clearly bring out the fact that considerable assistance was given

to small business. Loans granted during this period were used primarily for expansion of facilities and working capital. Nearly 68 percent of the loans made was to manufacturing enterprises, while the balance was made to nonmanufacturing businesses.

Public agency loans: The importance of this activity has declined materially since the depression years of the 1930's. As of June 30, 1949, outstanding loans and securities of this type amounted to only $30,000,000. More recently, however, the Corporation experienced a sharp upturn in the demand for these loans and it is probable that they will approach the $200,000,000 limitation very shortly.

Catastrophe loans: In the past fiscal year the Corporation declared the existence of 20 emergencies resulting from major disasters. During this period 605 loans were made for a total of $3,800,000. A large portion of these advances were made to borrowers in the Columbia River area, where extensive damage resulted from floods.

Federal National Mortgage Association: This subsidiary has been very active in purchasing home mortgages insured by the Federal Housing Administration or guaranteed by the Veterans' Administration. During its fiscal year ended June 30, 1949, the Association purchased approximately 63,000 mortgages having a principal value of $423,500,000. This compared with a net increase in holdings of only $46,000,000 during the previous year. It is the Association's intention to resell its mortgage holdings to financial institutions. Although none were sold up to June 30, 1949, a small number were disposed of since that date. A review of a recent list of offerings showed that 4½-percent mortgages were offered at a premium of 2 points, while the 4 percent liens carried a premium of around one-half to five-eighths of a point.

Finances: Operations during the past fiscal year continued on a profitable basis. Consolidated net earnings for fiscal year 1949 amounted to $8,100,000 after deducting $9,200,000 as provision for losses. This figure includes net earnings of $2,900,000 resulting from operations of its subsidiary, the Federal National Mortgage Association. These figures do not include the results of the rubber and tin programs. During this period, operations of the rubber program resulted in a net loss of $702,000, which figure, however, included expenditures of $2,300,000 for maintenance and protection of stand-by plants and facilities. Operations of the tin program resulted in a net profit of about $8,000,000.

Total loans and securities held amounted to $1,254,000,000 against which it held $89,000,000 as reserves for losses. Other balance sheet items consisted mainly of cash $8,300,000, loans to Great Britain and the Philippines aggregating $174,000,000, and various other assets amounting to $62,900,000.

BOARD OF DIRECTORS, RECONSTRUCTION FINANCE CORPORATION

Harley Hise, chairman; age 60. Democrat; entered Government service as a clerk in 1913. Was examiner, then chief examiner, of the Federal Farm Loan Board. Later, went to the west coast to accept the position of vice president and manager of the Pacific Coast Joint Stock Land Bank of San Francisco. Afterward these banks as a group were liquidated by the Government and he worked in this field until 1938. In the intervening period he became associated with various real estate firms on the west coast and from 1927–29 was vice president of the American Trust Co. in San Francisco. In November 1940 the Governor of California appointed him custodian of accounts of the Pacific States Savings & Loan Corp. In addition, he was named State building and loan commissioner. The period from January 1943 to July 1947 was devoted largely to personal affairs, after which he was appointed director of the RFC. Presently he is director of Federal National Mortgage Association; director, Western Pacific Railroad.

Walter Lee Dunham, age 68; Republican; early work in the banking field included the position as vice president in the Highland Park State Bank, Detroit, Mich., after which he became vice president of the Dimes Savings Bank, Detroit. He was also president of the Detroit Savings Bank and president of the Detroit Clearing House Association. Appointment to the RFC was made in 1949. Presently, president, Walter L. Dunham Co., Inc.; vice president and director, General Foundry Co.; vice president and director, Bostick Foundry Co.; director, United States Commercial Co.

Harvey J. Gunderson, age 44; Republican; graduate of University of South Dakota, member of the bar of that State. Came with the RFC in 1932 as legal counsel and in 1941 made assistant general counsel. In 1937 he was appointed general counsel for the Disaster Loan Corp. In successive stages from 1940–45 he served as assistant general counsel, general counsel, and executive vice president and general counsel for the Metals Reserve Company of Washington, D. C. Appointed a director of the RFC in 1945. Presently, director, Federal National Mortgage Association.

Henry A. Mulligan, age 63; Democrat. At the start of his career he was assistant engineer Baltimore & Ohio Railroad Co., after which he was a liquidator for the United States Customs in New York. In 1920 he was an auditor with the Federal Reserve Bank of New York, following which he became auditor, later chief auditor, of the War Finance Corporation. From 1927–32 he served as examiner, later chief examiner, for the Federal Farm Loan Bureau. He came with RFC in 1932 as assistant treasurer and was later made treasurer. He was appointed a director of the Corporation in July 1941, Presently director, Federal National Mortgage Association.

William E. Willett, age 54; Democrat. Early employment was as a bank clerk and from 1920–31 was engaged in the banking and investment business. Appointed a national bank receiver in 1932 and became a district supervisor for the Comptroller of the Currency in 1933. Came to RFC in May 1934 as an examiner, later became assistant chief, examining division. From 1933–47 he was a special assistant to chairman of board and in June 1948 was appointed director of Corporation. Presently director, Federal National Mortgage Association.

[1] Decrease from 1948 reflects repayment of $225,000,000 of capital stock and transfer of $307,000,000 of surplus to the U. S. Treasury.

REGARDING FIDUCIARY COUNSEL, INC.

1. Fiduciary Counsel spends approximately half a million dollars annually on financial research and investment management. It is a truth-seeking organization. Its job is to get all of the facts possible which affect business, securities, and the stock market and interpret these facts for the purpose of protecting its clients' investments, rather than merely presenting what they like to read. It must be 100-percent unbiased in its studies and conclusions.

2. This money is spent and this information is gathered to protect the investments of less than 100 of the most distinguished families in America. Their investments total over half a billion dollars. This large aggregate fund and the small number of clients permits the most intensive work possible. Naturally, unusual results follow.

3. You may be helped by reading "Protecting Your Capital Against All Hazards." Simply request it from Fiduciary Counsel, Inc., 40 Wall Street, New York 5, N. Y.

Secretary of Defense Johnson Addresses the Graduating Class at Annapolis

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1950

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am including an address delivered by Hon. Louis Johnson, Secretary of Defense, before the graduating class of the Naval Academy at Annapolis on Friday, June 2, 1950.

In that address Secretary Johnson pointed out the fact that the Navy, working harmoniously with the Army and the Air Force, will give our country strength, and with that strength will come peace and honor.

The address referred to follows:

"The way of an eagle in the air."

"The way of a ship in the midst of the sea."

Gentlemen of the graduating class of the United States Naval Academy, you have chosen a career where you must make it your primary concern to learn the wonders of these two ways.

You have made an admirable start. You have met the rigid, physical, mental and

moral tests of the United States Naval Academy and have proved your right to take a place of honor and leadership in the defense of our country. You have gained the privilege of being known for the rest of your lives as Naval Academy graduates, and that is a distinction that will always mean a great deal to you.

You have every reason to be proud of that distinction. In evaluating the quality of your preparation for your duties, the Service Academy Board had this to say recently about both Annapolis and West Point:

"The mission of the service academies is to provide undergraduate instruction, experience, and motivation to each student so that he will graduate with the knowledge, character, and the qualities of leadership required of a junior officer. The Board is impressed by the extent to which the existing academies are achieving the objectives of this mission, particularly in the field of character and leadership."

The full significance of that citation may be more firmly grasped when I remind you that the Service Board included, in addition to the two Academy superintendents, such distinguished American educators as: James P. Baxter, president of Williams College; Dwight D. Eisenhower, president of Columbia University; Frederick A. Middlebush, president of the University of Missouri; Edward L. Moreland, executive vice president, Massachusetts Institute of Technology; George D. Stoddard, president of the University of Illinois; and Robert L. Stearns, president of the University of Colorado, chairman. I know of no more competent judges of education than these men, either as individuals or as a group and their generous praise of the quality of your training should be a source of great satisfaction to you.

The primary mission of Annapolis is to produce well-equipped ensigns for sea, air, and shore duty, but in doing so it is not neglecting qualities of a good education—a familiarity with culture, with literature, and with history, with economics and with government. The report of the Teaching and Testing Methods Panel to the Service Academy Board offers its opinion that "Academically, the Academy compares favorably with the best 20 undergraduate civilian colleges in the country."

I welcome you, therefore, not only as junior officers in the Department of Defense, but as educated men in a dynamic world that calls for the soundest and the most courageous thinking. You are entering upon your career at a time when all basic values and even scientific facts are under close scrutiny and unceasing challenge. As officers you will have to meet many vital issues. I have every confidence that you will do so with an open mind—that you will search for the truth and find it, and that you will always act upon it with the courage and the integrity that have become so much a part of you as a result of your training at the United States Naval Academy.

You are entering upon a naval career at a time of great transition, and you will be privileged to play a vital role in the scientific revolution that will unfold itself. Your ability to meet each scientific challenge successfully, the country may take for granted. Revolutionary shifts from sail to steam, from wooden ships to ironclads, from surface to aircraft and submarines, too, are the kind of changes to which the United States Navy traditionally adjusted itself. And no one familiar with the ingenuity of the present generation doubts your ability to adjust yourself to atomic energy, jet power, or guided missiles.

Moreover, the quality of your training, and the proficiency you have gained have made you eligible for service not only as officers in the United States Navy, and the United States Marine Corps, but also in the United States Air Force.

I have every reason to feel that those among you who have chosen the Air Force as your branch of service will likewise meet all the scientific challenges that will confront you with a similar degree of success. The fact, let me add, that you are entering the Air Force by way of Annapolis instead of West Point, which has been the customary way in the past, I assure you will prove no bar, of any sort, to your advancement. Indeed, such interchange between services is not anything new—for years, and long before unification became a fact, Annapolis men have been finding useful, happy, and successful careers among their sister services. As an illustration, I cite the fact that the Army and the Air Force have had 12 general officers who attended the United States Naval Academy between 1910 and 1920. When the roll of air generals is called in 1950, I am confident that this graduating class will be well represented.

Moreover, you will find both in the Air Force and in the Navy, officers who have attended neither of our two great National Academies, who will prove themselves equal to any position of responsibility, trust, or authority within the assignment of the services. Because of their specialized training, Academy graduates are rightfully expected to set a high standard for the entire service, but you will find many non-Academy colleagues who will adapt themselves quickly, and in the long run reach some of the highest ranks.

In your climb up the ladder you will find that every effort is made to promote men on the basis of merit. Forget about luck as an element in your selection. A few pennies tossed at the base of Tecumseh were never enough to help you when you were a midshipman. They will not be enough while you are an officer. In fact, there may be no Tecumseh available for your prayer or appeal. If you devote yourself assiduously to your career, the rest will take care of itself—above all, don't neglect your studies—for they have only begun.

By studies, I mean not only the formal textbook and classroom variety, although you will have plenty of that, too. In fact, the life of the serviceman has become just one school after another. You not only must prove yourself a specialist in some field and more or less of an expert in many others of your own service, but more and more you must show an ability to participate in joint activities with other services and be prepared to take your responsibilities in positions of trust affecting all of our Armed Forces.

Unification of our Armed Forces is now a fact, and graduates of the Naval Academy are contributing wholeheartedly toward its full realization. I am not prepared to say that all differences among the services have been resolved or that none will ever arise again. In fact, toward that kind of unification none of us aspires. We appreciate that vigorous men with strong loyalties are bound to disagree on occasion, but we have a right to demand that ultimately, after adequate discussion, they will get together in the national interest and come to definite decisions that will bind them all.

I say without any hesitancy whatsoever that the spirit of unification has become a real and universal force throughout the services. The progress made in the year has exceeded our most sanguine expectations. And I am especially pleased to make this statement in the presence of your superintendent, Admiral Harry W. Hill. For he, as Director of the National War College, successfully served to inculcate the spirit of unification among a large number of top-flight officers of the Army, Navy, Marine Corps, and Air Force who took the course. Likewise his predecessor as Superintendent of the United States Naval Academy, Admiral James L. Holloway, has performed similar useful services in the interest of unification. He never lost an opportunity to promote its cause among you, and you, too, played your part admirably.

The comradeship, the understanding, the friendships that have grown among Annapolis and West Point men as a result of the "Camid" joint exercises, for instance, and the exchange of visits between the two academies, in the long run have done much to promote unification, to strengthen the common effort of all of our services for the establishment of a sound and adequate common defense. Our common defense includes not only our armed might but the spiritual quality of our American creed, dedicated to help man everywhere in his struggle against any sinister forces that would deprive him of life, and liberty, and deny him the right to achieve, in human dignity, happiness for himself and his family in the way of his own choice.

In your course at the Naval Academy you have been introduced to the study of our Government, and our political and economic institutions. This study you should continue throughout your life, and the adherence to the principles upon which they are based should guide you in your everyday conduct throughout your career.

Your study of our Government and a thorough understanding of our democracy will strengthen your faith in our country and enable you to marshal favorably its performance and its promise against any of the alien doctrines that would subvert them. We live in a world where communism has millions of adherents. Some are Communists by blind conviction; some by compulsion. But there they are—millions of them, and we cannot bury our heads in the sand and deny their existence, or their influence upon the present state of world affairs. In fact, the present size of our own Military Establishment is an example of how seriously nations are being affected by the dangers of imperialistic communism.

As an educated man, as an officer, you must know and understand the purposes of the threat so that you can help in its repudiation as a philosophy and in its control as a military force. The more you study it and set it up beside democracy the more convinced you will become that communism is a retrogressive movement, that it destroys freedom, that it is a treacherous detour on the great historic road toward individual dignity, national prosperity, world peace, and security.

But you must not only study democracy, you must exemplify it in your conduct. As chosen representatives of American citizenship at its best, you must live democracy. The discipline inculcated here at Annapolis is calculated to raise the standard of your conduct to the highest levels. You are adhering to the code, not because you fear you will be punished if you violate it, but because honor, decency, and an appreciation of the right are the dominant principles which govern you. In following the code of American citizenship at its best, you will prove loyal to Annapolis as a worthy alumnus, to your service as an officer and a gentleman, and to your country as an exemplary citizen and defender.

You are the heirs of a great tradition. Those who have preceded you out of these gates into the world of service, have preserved the freedom of the seas for us and our friends, and have denied them to our enemies. They have given freely of their all to achieve the great mission of the United States Navy, which today remains as significant and as honorable as ever.

Under the leadership of those who are at the helm of the United States Navy today and with your own example of devotion to duty and to the ideals of our country, you

and those who will follow in your tradition will continue to perform in new glory the historic and honorable role of the Naval Academy in the defense of our country. America can be confident that the United States Navy, working harmoniously with the other members of the defense family, the Army and the Air Force, will give our country strength; and with strength will come peace and honor.

A Call to Conscience

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 6, 1950

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial which appeared in the Christian Science Monitor of Saturday, June 3:

A CALL TO CONSCIENCE

A shaft of light has just struck the United States Senate. It was generated by the courage of the Chamber's only woman Member. The conscience and common sense it expresses should dispel the miasma of confusion, suspicion, and fear in which national affairs have recently floundered. We will not try to summarize the simple, moving eloquence of MARGARET CHASE SMITH'S speech, but commend every word to our readers' attention.

The first notable thing about this statement and the declaration of conscience by seven Senators is that they put patriotism above politics. They are concerned primarily with the way too many in both parties have played directly into the Communist design to confuse, divide and conquer. They castigate the Truman administration for lack of leadership and complacency about Communist infiltration. They denounce Republican leadership for contributing to confusion and for political exploitation of fear, bigotry and intolerance.

Both parties are responding in political fashion. But we cannot too strongly emphasize that there is a call to conscience which should be considered first not for its partisan effects but for its aid in conserving basic American values. Mrs. SMITH'S light pierced behind the facade of current controversy to point out how basic principles of Americanism are endangered by character assassination. She listed the right to criticize, the right to hold unpopular beliefs, the right to protest, and the right of independent thought.

These rights are infringed when their exercise costs any American citizen his reputation or his livelihood. Here is one of the tender intangibles in the fabric of freedom which too many Americans are not sufficiently guarding in this time of tension. One of the reasons for opposing communism is that it attempts to dragoon thought and speech. But when the expression of independent or unorthodox opinion lays a citizen open to headlined charges of disloyalty and to disgrace and discharge from his job without any proof of guilt, it is time to recognize that the tyranny of totalitarian thought control can be imposed by mob hysteria as well as by Red dictators.

Anyone who looks into the long perspective of history to see how human freedom has been won and lost must be touched by this aspect of the Smith appeal. The Senator from Maine underscored it by asking the Senate to do some soul searching. She declared it has been made a rendezvous for vilification, for selfish political gain at the sacrifice of individual reputations and national unity. Certainly members of both parties should be jogged by their consciences when they permit members to use official privilege to persecute individual citizens with impunity.

It is this injustice, plus the dangers of intimidating free opinion by loose charges of communism, plus the damage to America's diplomatic front against Moscow, that causes this newspaper to oppose McCarthyism. We want no whitewashing of the guilty. We insist that Reds be rooted out, but by more efficient, professional methods. We hold no brief for the Truman administration, and feel it has been lax about leaks. We disagree with most of its domestic policies and have criticized its political tactics. But we are convinced that political tactics are causing some Republicans to use McCarthyism in a way to endanger several fundamentals of freedom and to do grave injustice to individuals.

This is not a partisan matter, as is proved by the fact that this position has been taken not only by other independent newspapers but by many Republican papers, and now by this important group of Republican Senators. We sincerely believe with them that this is a question of conscience. We believe it calls upon all of us for greater efforts to rise above personal prejudice or petty partisanship, for a new willingness to exercise prayerful citizenship.

Businessmen, Farmers, and the Brannan Plan

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 6 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, the Nonpartisan League, which endorsed its candidates on the Republican ticket, is supporting the Brannan plan; and I take pleasure in asking unanimous consent of the Senate that an article prepared by Representative USHER L. BURDICK, which appeared in Burdick's Magazine of May-June 1950, may be printed in the Appendix of the RECORD.

In my judgment, Mr. President, the above article correctly sets forth what the Brannan plan really is; and I am happy to announce to the Senate that I have been informed that every candidate endorsed by the Nonpartisan League on the Republican ticket is actively supporting the Brannan plan. At least, the Leader, the official paper of the Nonpartisan League, so states. These candidates are as follows: T. H. H. Thoresen, for United States Senator; Usher L. Burdick and Martin Stenehjem, for Congress; Frank A. Vogel, for Governor; Ray Schnell, for Lieutenant Governor; Frank Albers, for secretary of state; Berta E. Baker, for State auditor; Albert Jacobson, for State treasurer; E. T. Christianson, for attorney general; A. J. Jensen, for insurance commissioner; Math Dahl, for commissioner of agriculture and labor; and William Mills, for public service commissioner.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BUSINESS AND THE BRANNAN PLAN

No piece of legislation in recent years is so generally misunderstood as this so-called Brannan plan. It is misunderstood because it has been grossly misrepresented by large business interests. The support price in use now, and the support price under the Brannan plan is also misunderstood.

The reason and purpose of any support price to agricultural products is not to protect the farmer alone, but to protect all business in the United States. Keen businessmen should be enthusiastic supporters of support prices, for the reason that the depression of 1933–34 demonstrated clearly and definitely that when the agricultural belt cannot get a fair price for its products, a chain of events starts that demoralizes the business of the Nation. We remember 26-cent wheat in North Dakota, we remember that this price hardly covered the cost of harvest and threshing.

FARM BUSINESS SUFFERED

What happened? Local business in North Dakota felt the jar when the farmers had no income. Banks failed on every hand; stores were filled with merchandise but there were no buyers. Soon the manufacturers had their goods piled up in warehouses, but could not sell. When the manufacturers could not sell the goods, they had to stop their mills. Labor then went out by the tens of thousands, and at one time in that depression 15,000,000 men and women were walking the streets looking for jobs. That was the result of no price for farm products. The depression didn't stop there, farmers were foreclosed and dispossessed by the thousands because they could not pay their interest. Taxes went right along and thousands more, who didn't owe a cent, lost their lands through tax sales.

See the millions it cost this Government to supply these 15,000,000 people with food, shelter, and clothing. In one appropriation bill alone in 1935 the money for this purpose amounted to $4,000,000,000. Those of us who lived through that depression are determined that it shall not occur again, and without support prices, there is a bright prospect that it will occur again.

The present support-price program differs with the Brannan plan in only one particular, although both are supported by the Public Treasury. The Brannan plan permits agricultural products to move to market, and the price received is the market price. At the end of the crop year if there is a loss to farmers by reason of a demoralized market that difference is made up from the Public Treasury. There may or may not be a loss, but in any event the support comes from the Treasury, the same as it does today.

A MONEY SAVER

A man in business, at first glance, says why should I have to contribute tax money to support a bunch of farmers? When he gets over his first flurry of resentment he finds that he is supporting himself and his business. He is preventing a collapse that will destroy all business, from the local merchant to the manufacturing plants, and mean the support of idle millions in the labor fied. The cost of this support may not be large—it certainly will be less than the annual cost of supporting 15,000,000 idle people. On our program to support wheat, it has cost the taxpayers nothing, and, in addition to that, the Government has made a clear profit of $49,000,000. We have lost on potatoes, but that is because there was no production standard available to indicate

what amount each producer was to be supported on. Besides, we let down the bars and permitted the importation of potatoes from Canada at the request of machine manufacturers who could see no other way of being paid for machinery sold to the Canadians. The Brannan plan will prevent another potato loss such as we have had.

Another feature of the Brannan plan is to permit the consumers of America—the overwhelming majority of the people—to purchase their products at the market price. If the market is low they benefit. Well, what if they do benefit? In case of a Nation-wide depression poor people and the great bulk average of the Americans become distressed, and some of them will have to have Government aid which will cost more than any support from the Treasury under the Brannan plan.

In the interests of keeping our business healthy, every businessman in North Dakota should support the Brannan plan. Lay aside the prejudices you may have and see if you are not willing to contribute a tax to keep the business from the farm to factory normal.

What Reciprocal Trade Is Doing to This Country

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 31, 1950

Mr. BEALL. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include an address I made on a subject in which I am very much interested, reciprocal trade:

What is meant by reciprocal trade?

Is it really reciprocal?

How does reciprocal trade tie in with the International Trade Organization, commonly called ITO?

Many people are confused by these terms. So let us define them.

Reciprocal trade, in theory, is an excellent thing. It means that we manufacture certain goods, grow certain crops, and we sell them to other countries to keep our factories and our farms in a healthy economical condition. In turn, other countries manufacture and grow various products which we buy. In order to keep these goods and crops flowing freely between countries so that everybody can prosper and there can be a free exchange, we agree with other countries to lower our tariffs so that they can sell in our country.

We have operated under this so-called reciprocal trade treaty for more than 15 years now and have consistently lowered our tariffs until today they are lower than at any other time for 50 years.

Now is this reciprocal trade really reciprocal? The answer is "No." It has brought about a dumping of foreign goods into our markets at prices that make it impossible for our domestic markets to compete. The protection formerly given to our American workers is being wiped out. In spite of this, the State Department has announced that conferences will be held in England beginning September 28, for the purpose of discussing tariff concessions on 2,500 items. Seventeen nations in South America, Central America, Europe, Asia, and Africa will take part.

The International Trade Organization, hatched in Habana, Cuba, is another free-trade movement. It has 58 members. Fifty-four of these have already signed up. And this country will have one vote—the same vote, for instance, that little Costa Rica has. These representatives will meet once a year, add up the production and markets of the world and then divide these markets on the basis of population. So we will have to take and like what these representatives say will be our share of the world's markets. In turn, these countries will flood our country with cheap labor products, and the standards of our living here will go down just as sure as night follows day, if we sign up for ITO.

There are so many examples that it is difficult to select even outstanding ones. But let me begin with my own Sixth District in Maryland.

The Persian Gulf and Venezuela seem a long way from Maryland, and yet those two countries have had the effect of throwing men out of work in my own district. The Kempton coal mine is shut down, throwing the men out of work. Ten years ago these men were making $7 a day. Now they get $14.75; that is, if they could work. But oil imports have helped put them out of business. Kempton was one of Maryland's biggest mines. It employed 218 men and produced 1,300 tons of coal a day—enough to load 21 railroad cars. Now, what are these men going to do? What is going to happen to their families?

The Vindex mine closed down on March 1. All of you know what happened to Shallmar. These are not the only sections affected. The Georges Creek field near my home town of Frostburg has been affected. That field is the oldest bituminous field in the country. Instead of 6,000 miners employed, there are now only about 2,000 and most of them are idle. The answer lies in these figures. This imported fuel oil, directly competing with coal, totaled 42,000,000 barrels in 1946, increasing to 47,000,000 barrels in 1949 from Venezuela alone.

But that isn't all. We are dumping potatoes while we are importing them from Canada cheaper than we can buy them here. We are importing wheat while our wheat bins are overflowing. Agriculture as well as industry is being undersold by cheap labor foreign markets. Men are losing jobs all over the country because of the so-called reciprocal trade agreements and now we are confronted with further dumping through the conference to be held in London and the International Trade Organization.

The Waltham Watch Co. case is another typical example. In the middle 1930's, the United States was producing about 53 percent of all the fine, high-quality, jeweled watches—before the reciprocal trade agreements went into effect. Today about 85 percent of our jeweled watches and watch movements are imported.

What has happened? Our well-paid American workers have lost their jobs. They have been thrown out of work. They and their families and their communities are suffering. But, equally as important, is the loss of their skills. The watch industry is most important to our national defense. These men worked on fine precision instruments that were vital to our winning the war. Switzerland, which has taken our watch market, did the same kind of work for Germany. What will happen if this cold war turns into a hot war? How will we obtain the necessary precision instruments?

I was talking to some of my colleagues the other day about this all-important question. I asked a Member of Congress from West Virginia, "How are your glass and pottery factories getting along?" His answer was, "They are all closed down." I received practically the same answer from a Pennsylvania Member who told me men were laid off or working part time.

All these jobs are pawns in this international game.

Now further tariff cuts are contemplated—textiles, for instance. Now, we have a large synthetic textile plant in my district. What it will mean to those workers' jobs, I don't know. There is a further cut in pottery, glass, china, chemicals, rayons, paper, leather goods, clocks, fish products, wines, and dairy products. Knowing that some of these cuts are going to affect jobs in my own district, I certainly am not in favor of these cuts.

But we are not the only ones who are suffering. The hat manufacturers are in danger. Union officials have warned that the American hat industry is in grave danger and workers face the loss of their jobs. Felt imports from Czechoslovakia, one of the iron-curtain countries, have jumped 300 percent in this last year.

And in my own district linen napkins have been picked up in a chain store with the words "Soviet Union" on them. They are selling three for $1. Identical napkins made in the United States sell at $1 or $1.25 apiece. We are fighting a cold war, with a tremendous debt and deficit and with a tax load on our shoulders crushing every taxpayer in this country—and yet we are importing from Russia not just manganese that we need for steel, but linen handkerchiefs.

We are importing many other products made by slave labor. We have millions of pounds of dried surplus eggs that we can't even give away. But we are importing dried eggs from China which has gone communistic. We have more butter than we know what to do with, but we are importing butter.

Now this reciprocal trade business has been sold to the American people as a means to help our friends and allies get on their feet and help us fight the cold war. We are asked to sacrifice the jobs of our people to help in this global give-away program. Then is it right that our men should be thrown out of jobs, our factories closed, to help those who openly proclaim themselves our enemy?

Why are we letting slave-labor merchandise undersell the product of our American workers?

Is Russia our friend and ally, are Bulgaria, Rumania, Czechoslovakia, Poland, and Communist China our friends and allies?

We have been told that we are buying strategic materials from those countries—things to help us stockpile for our defense.

But what are we getting? Furs, shoes, rubber footwear, walnuts, and canned crab meat, among other things.

Are we going to furnish our soldiers with fur coats? Right now our domestic fur business is hanging on the ropes.

Is Russian canned crab meat a strategic material? Are we going to feed it to our soldiers?

Are walnuts from Communist-controlled Manchuria a secret weapon? Our California nut industry, which is suffering right now, would like an answer to that question.

Will rubber overshoes from Czechoslovakia be used for guided missile purposes?

We have a law in this country that states we may bar from our markets any goods produced by foreign slave labor. Why isn't this law invoked?

You can rest assured that Russia buys no handkerchiefs or frills from us. And they certainly don't buy anything that results in unemployment for their own people.

I ask you, why do we allow the United States to be made the dumping ground for iron curtain or any other countries?

Why do we allow the jobs of our workers to be exported?

There is no sense in this sort of competition.

I know we must trade with other countries and I am in favor of reciprocal trade if it is really reciprocal. I cannot see the United States being made a dumping ground for free trade at the expense of our own workers and their jobs. There has been nothing reciprocal about these trade agreements. Other nations do not reciprocate. In case after case, other countries have withdrawn their concessions with us while still enjoying the full benefits of our concessions. I say, when concessions are withdrawn by others, then let us withdraw ours.

I believe in helping free nations in need of assistance to restore and raise their standards of living. I believe we can do this without our American workers, in addition to being burdened with high and indirect and hidden taxes, being deprived of their jobs to bolster a foreign policy which, in my opinion, has not been an outstanding success.

The best security for the American worker is a good job at good wages. And that is the best security for peace.

Hon. Joseph E. Ransdell

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1950

Mr. BOGGS of Louisiana. Mr. Speaker, it is my great honor to incorporate in the CONGRESSIONAL RECORD an article which appeared a few weeks ago in the Monroe (La.) Morning World about former United States Senator Joseph E. Ransdell, when he was honored at a dinner at Lake Providence, La., when there was conferred upon him the papal distinction of Knight Commander of the Order of St. Gregory the Great.

I also enclose herewith an article which recently appeared in Catholic Action of the South, written by Mr. Adras LaBorde, Senator Ransdell's biographer.

I take this opportunity, too, Mr. Speaker, to add my congratulations to this great and distinguished son of my State. Senator Ransdell, now near 92 years of age, is still a tremendous factor for good in our Nation. It is fitting that the religious leaders of my own church, to which he has been loyal and devoted, should pay these great tributes to him while he is still with us:

EX-SENATOR FROM EAST CARROLL PARISH CONFERRED WITH HONOR

(By Mrs. H. T. Van Fossen)

Ninety-one-year-old Joseph E. Ransdell was honored recently at a dinner in Lake Providence, La., and conferred the papal distinction of Knight Commander of the Order of St. Gregory the Great.

The former United States Senator, who served as a legislator for 32 years and did much to promote the Carville Leprosarium, the National Congress for Rivers and Harbors and the National Institute of Health was cited as "having brought great honor and prestige to Lake Providence."

The Most Reverend Charles Paschal Greco, D. D., Bishop of Alexandria, commended the Senator for his many years of loyal service and devotion especially throughout the years that the Ku Klux Klan flourished in Louisiana and the Southland.

Bishop Greco pointed out that Senator Ransdell was repeatedly returned to Congress from an area of the State where only 1 percent of the voters were Catholic. He praised the American people for their fairmindness and appreciation of one's loyalty to duty whether of their faith or not.

Ransdell was later termed "a great servant of God and the people of Louisiana" by the bishop.

More than 200 friends and churchmen of Northeast Louisiana were guests of St. Patrick's congregation at the dinner honoring Senator Ransdell.

Speaking at the dinner, Judge Frank Voelker, of the sixth judicial district, asserted "this is a unique occasion, the average person rarely receives such recognition or has an accolade bestowed upon him during his lifetime."

Judge Voelker pointed out, "Senator Ransdell has brought great honor to our little town. His reputation as a statesman has brought prestige to his hometown and for this we can be appreciative."

A number of years ago Senator Ransdell was made a Knight of St. Gregory. The order of St. Gregory the Great is a pontifical order of knighthood founded by Pope Gregory XVI in 1831. There are civil and military divisions and each is ranked into Grand Cross Knights of the first and second class, commanders and knights.

"This order is bestowed in recognition of distinguished service to the church," Judge Voelker said.

"We honor a man already loaded with honors and prestige," Judge Voelker said, "a man who today is in his ninety-second year of fruitful living, one who despite his many years of useful service is still working day by day for the betterment of the community in which he lives."

Msgr. John C. Marsch, pastor of St. Matthews Church in Monroe, read the English translation of the papal rescript. Charles F. Zimmer was master of ceremonies.

Msgr. John Vandegaer, of Natchitoches, and Roy Aycock, of Alexandria, former pastors at St. Patrick, commended Senator Ransdell for his humbleness, helpfulness to his fellow men in East Carroll Parish, in dividing his large landholdings in East Carroll Parish into tracts and selling them to small farmers whom he financed, and assisted in inaugurating the first colored Catholic congregation in Lake Providence.

The Catholic church and school of 1925 and today was compared by Monsignor Marsch who pointed out that Senator Ransdell was a native of Rapides Parish and was a former classmate of his mother.

Overcome with emotion Senator Ransdell asserted, "I am too full for utterance. This is the greatest honor of my almost 92 years. I came to East Carroll Parish 67 years ago and the people here have been good to me. What I have been able to accomplish has been through the assistance of my friends here and throughout the State."

The dinner honoring the East Carroll Senator was sponsored by the Associated Catholic Men's clubs of northeast Louisiana and T. P. Coenen, of Rayville, and his brother, W. R. Coenen.

[From Catholic Action of the South of February 23, 1950]

INVESTITURE RECALLS LABORS OF HUMBLE SON OF MOTHER CHURCH

(By Adras LaBorde)

ALEXANDRIA.—When Bishop Charles P. Greco, of Alexandria, invests Senator Joseph E. Ransdell, of Lake Providence, as a commander in the Knights of St. Gregory, Sunday, he will be honoring one of the greatest Catholic laymen to appear on the Southern scene since Chief Justice Edward Douglass White.

Senator Ransdell, nearing 92 years of age, will become one of the select few named by the Pope to the high honor of Knight Commander.

A glimpse into the life of Senator Ransdell shows more than adequate justification for the honors bestowed upon him by his church.

Joseph E. Ransdell can look back upon a full life; full in the sense that he will leave the fruit of his work to the benefit of many generations to come, and full in the sense that he has used his God-given talents usefully, and in the courageous defense of his treasured Catholic faith.

The story goes back to 1858—just before fraternal strife tore up the Nation. Senator Ransdell was born in that year, on a cotton plantation on Bayou Roberts, in Rapides Parish, La.

His life covers nine-tenths of the fastest moving century in the history of man. His 50 years as a public servant span that great half-century during which America emerged from the shambles of civil war and a mere frontier to the greatest Nation on the earth—five decades crowded with breath-taking progress in transportation, communications, industrial, and social evolution.

STANCH CATHOLIC

The Senator is an integral part of the glorious history of those 50 years. More important still, as a Catholic layman, stanch in his faith by word and deed, his very presence on our Nation's stage has given him a stellar role in the phenomenal growth of the church he has loved and served so untiringly. He was born under a President who was elected by the anti-Catholic Know-Nothing Party. He reached the height in public life just in time to champion his faith against the fury of the Ku Klux Klan. With an avidity of interest and intellectual acumen which belies his years he daily follows with joy unfeigned the progress and victories of his church.

Joseph E. Ransdell recalls vividly the more sharply etched memories of his childhood—the slaves, the Union and Confederate armies, himself as a 6-year-old refugee of the war fleeing to Texas with his family, the poverty and toil and turmoil of reconstruction, his father's death in a sugar-mill accident when he was 11.

Having to work as a youngster to support a fatherless family, he had only a few months of formal schooling. He is indebted for his basic education mainly to his convent-reared sisters and to Father Menard, his pastor at Alexandria—the stalwart church pioneer of central Louisiana.

By the time he was 19, young Joe Ransdell was riding his pony 25 miles to Spring Creek to teach in a small country school. Thirsting himself for greater knowledge, he received a scholarship to Union College at Schenectady, N. Y. He fondly recalls his preparation for his first trip north, particularly how he procured Father Menard's lightweight overcoat by exchange for his heavy riding coat more appropriate for the pastor's horseback rides to missions.

GRADUATES WITH HONORS

Joe graduated with honors in 1882, winning the much-prized Blackford gold medal for oratory. His stay up North presented opportunities for the young student to manifest two traits which have characterized his life down through the years: A strong and vocal adherence to his faith in the face of adversities, and a penetrating evaluation of the common problems and general welfare of the Nation as a whole against local and sectional interests.

After graduation, Joe made his home with his brother-in-law, Tom Montgomery, in the delta town of Lake Providence. There he studied law under the tutelage of Tom's father. After 1 year he passed an examination and was admitted to the bar, in 1883.

Joe began his public life in a truly Washingtonesque manner that same year. He was appointed parish surveyor. The next year, at the age of 26, he was elected district attorney and was reelected without opposition in 1888 and 1892.

On November 15, 1885, he married Olive Irene Fowell, of Lake Providence, who had joined the church 2 days earlier. Not financially able to take a honeymoon or even to settle down, the couple were given lodging with Father Mahe, the pastor at Lake Providence.

Joe declined renomination as district attorney in 1896 and devoted himself to the practice of law for the next 3 years. During this period he represented his area at the Louisiana Constitutional Convention of 1898.

In 1899 he ran for Congress and won over four prominent opponents, because "I said only nice things about them." In December he began a term of duty in Washington which was to continue for 32 years.

Noteworthy in Joe's election for seven consecutive terms as Congressman from the Fifth District is the fact that only 1 percent of his constituents were Catholic. Some misguided politicians tried on occasion to make an issue of his faith but to no avail. His integrity and earnestness were too well known to become besmirched by the lies of demagogue or religious bigot.

His 14 years in the House of Representatives and 18 in the Senate were marked by accomplishments which cannot be detailed here. In brief, they included:

The rookie Congressman had seen the floodwaters of the Mississippi and its tributaries regularly rampage through the fertile fields of his homeland. It was natural that flood control should have been a pet project from the start. The United States Government at that time did not conceive of flood control as its responsibility. A means of winning friends for this new departure had to be devised. As a result of Joe's efforts, the National Rivers and Harbors Congress was reorganized and Joe served as its president for 13 years. In that capacity he was largely responsible for the steadily increasing appropriations for the Nation's rivers and harbors. The over-all, long-term, flood-control plan which has followed the disaster of 1927 is his crowning victory. Every citizen residing in lowland areas owes him a personal debt of gratitude.

PUBLIC HEALTH CHAMPION

Senator Ransdell's interest in public health was whetted by memories of the great yellow fever epidemic of 1905, when he had rendered personal service in his own community. Visits to Puerto Rico and Panama during the fight to make the tropics safe for human habitation further confirmed his determination to provide man with every weapon against disease that modern science could devise.

In a speech on the floor of the Senate in 1916 he reminded his colleagues that rural health was the Nation's prime duty—that if billions could be spent to advance the art of killing in war, certainly smaller sums should be spent to advance the art of prolonging life. Ten years later he introduced his bill creating the National Institute of Health, a great clearinghouse of health for mankind, for scientific techniques in the conquest of disease. It took him 4 years of utter persistence to sell the strictly humanitarian measure to patronage-minded Congressmen. Nothing of its kind had ever been pushed through. An eminent medical authority epitomized the value of his labors in establishing the Institute in these words: "* * * there are probably 1,000,000 people living in this country today who would not be living if it had not been for your advocacy of that public health measure."

Along these same lines it was Senator Ransdell's efforts that led to the establishment of the national leprosarium at Carville, La.

The Senator held remarkably advanced views on American foreign policy. He supported President Wilson wholeheartedly in World War I. After the armistice and upon learning that the President was going to Europe to confer with Lloyd George, Clemenceau, and Orlando on world peace, he urged Wilson to make his foreign policy bipartisan by taking along ex-President Theodore Roosevelt as adviser. In reply, Wilson admitted that he needed help, but not that man.

Senator Ransdell deplored the President's partisan politics when so much was at stake. He publicly deplored, too, the fact that proceedings leading to the Versailles Treaty did not mention the name of God, and that the proceedings did not open with prayer or appeals for Heavenly aid.

ALINED WITH WILSON

He alined himself with Wilson in the postwar fight for ratification of the treaty and for United States membership in the League of Nations. In one of his strongest speeches in his long public life he predicted before the Senate that 50 years hence it will be a matter of common wonder that there should have been any opposition to the League of Nations. His prediction was wrong only in that it came to pass much sooner.

As the dominant Catholic layman in the public life of the Nation for half a century, Joseph E. Ransdell had many opportunities to speak out for his faith. He never missed such a chance.

In June of 1914 Notre Dame University recognized his catholicity by conferring upon him an honorary doctorate of laws. At commencement exercises that night he proved his ability to foresee social evils by devoting his talk to the dangers of divorce. He predicted that the divorce rate would increase steadily to threaten the foundation of our society. That very year he introduced in the Senate a proposed constitutional amendment which would prohibit divorce with the right to remarry. Even then he was running deliberately counter to the spirit of the times.

He found time during the busy war years to make three important speeches on his faith: "The patriotism of Catholics," a timely topic at a Knights of Columbus celebration at Richmond, Va.; "The influence of Bishop Russell"; and "What a nation has a right to expect from the Catholic college graduate," at the graduation exercises of Villanova College, Philadelphia, Pa.

PAID HIGH HONOR

High honor was paid him in 1926 when he was invited to address the International Eucharistic Congress at Chicago. His talk on "The holy Eucharist doing for the soul what the hand of God the Father has done for material nature" was to be long remembered by the tens of thousands who heard it.

From the crowded coliseum of Soldiers' Field, Chicago, the Senator's inspired language flowed into the Halls of Congress to refute unjust criticism of his church. The refutation was in answer to vitriolic attacks of Senator Tom Heflin, of Alabama, who tried to slander the church in general and the KC in particular.

After 32 years in Congress—the longest tenure of any Louisianian—Joe Ransdell's popularity as an honest, God-loving public servant collided head-on with the ascending political star of Huey P. Long. His defeat shocked him, but left him without rancor. To this day he says that his defeat was a favor in disguise. Already in his early seventies, he returned to Rose Villa, his home on the cypress banks of Lake Providence, to resume his role as country gentleman, and to attend to his business interests and the public welfare.

On March 9, 1935, Mrs. Ransdell passed away. The Senator's grief was heavy, but his faith eased the burden.

By now, far beyond the classical life span of threescore and ten, the Senator gave no indication of feeling his years. He divided his properties into family farms and established almost 100 tenants, white and colored, on land of their own. Of his work in this connection, an official said, "East Carroll will always owe a debt of gratitude to Senator Ransdell. He gave opportunity to many poor farmers who otherwise would still be share croppers. Their success stands as a monument to Mr. Ransdell and the encouragement he gave these worthy people."

On February 13, 1938, in his parish church at Lake Providence, Joseph E. Ransdell was invested as a Knight of St. Gregory the Great. It was the first time a layman in a rural community of Louisiana had been so honored, and the first time any man in the diocese of Alexandria had received the coveted knighthood.

Despite his memories of applause when he shared the limelight on the national stage, despite the high recognition accorded him by his church, Joseph E. Ransdell remains a humble son of mother church, a wonderful parish man. At 91 he assists at mass, missal in hand, and receives holy communion every morning.

His great love is the new parochial school his generosity made possible. He is an active member of the Holy Name Society. A few months ago he helped to organize the Associated Catholic Men's Club of Northeast Louisiana. More recently he drove 180 miles to Maryhill to inspect with gratification the magnificent plant, seminary, retreat house, and youth camp which his bishop (Bishop Greco) was erecting. He looks forward to an early retreat at Maryhill.

Truly, Joseph E. Ransdell deserves the honor of commander in the Order of St. Gregory.

Winthrop College Commencement Exercises

EXTENSION OF REMARKS

OF

HON. BURNET R. MAYBANK

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 6 (legislative day of Wednesday, March 29), 1950

Mr. MAYBANK. Mr. President, on last Sunday, June 4, the Honorable John E. Peurifoy, Deputy Under Secretary of State, addressed the graduating class of Winthrop College at Rock Hill, S. C.

This was an important occasion for two reasons in particular.

First. More than 300 young ladies were completing their formal education in one of the largest girls' schools in the Southeast and were about to enter into the everyday activities with which we in the Congress have such great concern.

Second. The address was delivered by a native South Carolinian who has already rendered at a youthful age important and illustrious services to his State and his Nation.

The remarks of the Secretary were well and appropriately directed to the members of the graduating class.

I ask unanimous consent that the address be printed at this point in the RECORD.

Mr. McCARTHY. By whom did the Senator say the speech was made?

Mr. MAYBANK. By Deputy Under Secretary of State, Mr. John E. Peurifoy, at Winthrop College. I may say to my good friend from Wisconsin, we are fellow South Carolinians. I am very proud of him.

Mr. McCARTHY. I have no objection.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY THE HONORABLE JOHN E. PEURIFOY, DEPUTY UNDER SECRETARY OF STATE, TO THE GRADUATING CLASS OF WINTHROP COLLEGE, ROCK HILL, S. C.

I have always been pleasantly aware of Winthrop College. It is a known fact that this institution, through its many hundreds of graduates, has exerted a strong and beneficial influence on South Carolina. I, personally, have felt that influence. For one thing, my foster mother is a Winthrop graduate. Then, some of the teachers who struggled with me in my early school days were trained here. And, many of the girls with whom I grew up received the benefit of the sound education that is given here. So, coming to Winthrop is very much like renewing an old acquaintance and, at the same time, making a new one.

In the last couple of weeks, as I was anticipating this trip I experienced the usual pleasant expectations of visiting South Carolina, but here there was a new and stimulating element included—the thought that this would be no ordinary occasion. On the contrary, for the more than 300 of you who are concluding your undergraduate work and venturing out on the careers of your choice, this, I realized, would be a unique event, a milepost or a turning point in your lives. This realization gave me a sense of particular interest and, at the same time, evoked a feeling of personal responsibility. I thought it would be useful if I passed on to you some fundamental ideas that have impressed themselves on me in the course of my experience in the Department of State.

It occurred to me that education is a process that never stops. To him who has, it shall be given—as long as a man draws breath he will be learning more and more new things and through experience the old things that he has known will shine in new and varied colors. And I do have hope that through education the world progresses and, in the lives of good people, civilization moves further and further away from the law of the jungle.

I cannot look upon international problems from a detached, impersonal angle. Instead, I see and have always seen problems in terms of human beings. When a great issue comes up I see behind it families, homes, and the solid human values that you have learned about here and in which we all place such great importance.

It was with those values in mind that I cast about for some conclusions that might help you see more clearly the problem of peace and security in the world of today and, at the same time, help you toward a more constructive and perhaps a happier life.

There is an inscription carved on the pediment of the Union Station in Washington. When you visit your Nation's Capital remember to look for this inscription. It says, "He who would bring home the wealth of the Indies must take the wealth of the Indies out with him."

We cannot go empty-handed into the world and expect to reap a harvest. What we reap depends on what we have to give. You of the class of 1950 are not going empty-handed into the world. You are taking with you much more than the wealth of the Indies—the wealth of an American tradition, the wealth of 4 years' experience on the Winthrop College campus, and the wealth of nearly 2,000 years of Christian heritage. Added to this wealth is the dividend of youth, and all that youth embraces—vigor, imagination, courage, independence.

This wealth which makes you strong is the target of our enemies just as much as the material and industrial wealth of our great country. There is no loubt at all that our country has been singled out as the main target of Communist aggression. That fact in itself is significant. It is, in a way, a tribute to our moral and material strength.

We are fair game because we represent everything communism opposes. We believe in God. Communism is an avowed philosophy of nonrecognition of God. We believe in freedom and human rights, and we work ceaselessly to extend them more and more each day. Communism denies the rights of the individual. In Russia there is only one right, the right of the State above all else. We have the secret ballot and Russia has the secret police. We believe in free enterprise—the Russians oppose it. We permit our national neighbors to go and come freely across our borders. There are no military barriers between us and Canada or Mexico. The Russians control the people and dominate the governments of their neighbors.

So we see communism is not at all a positive philosophy but a very negative creed. It opposes every principle for which we stand. Let me warn you of the class of 1950 that far too many people in this world go through life always against and never for anything. It is so easy and often even popular to be against everything. Some, animated more by emotions than by convictions, become professional crusaders, against their government, against certain religions, and sometimes even against the young people.

I'm sure all of you have at some time heard that the younger generation is going to the dogs. It was going to the dogs when I was a boy. My father told me it was said to be well on the way to the dogs when he was a boy. In the days of Cicero, Terence delivered tirades on the hopelessness of the young Romans. So it is an old stale story, and I want to go on record as saying never have I had more confidence in the youth of America. You are a great improvement over what I was at your age. You are more poised, more mature, and more spiritual. Never could Lucinda Matlock say to you—

"What is this I hear of sorrow and weariness,
Anger, discontent, and drooping hopes
Degenerate sons and daughters,
Life is too strong for you.
It takes life to love life."

I hope that you of the class of 1950 will be positive and not negative in your attitude and approach toward life. Let us all be affirmative—not negative. Let us be constructive—not destructive. Let us talk less about communism and talk more about democracy. Let us play down Russia, and play up America. While we must take a realistic view of our weaknesses, let us always remember our sources of strength. While recognizing our flaws, let us capitalize our virtues. Naturally we have differences among us, but let us advertise our unity.

The great nations of this world, those that have exerted most positive influence for good on the history of men, are those nations whose leaders were men of vision with great spiritual qualities. The iconoclasts, the dictators, have their brief innings, fall, and are remembered, if at all, only for the evil they worked.

The achievement of moral leadership lives on forever. Ancient Greece, constricted in size and arid in soil, gave the standards of truth, beauty, and liberty as we know them today. From tiny Palestine came a philosophy which has determined the moral code of the Christian world for 2,000 years. The might and wealth of greater nations have vanished, but the vision of the prophets of Judah and the teachings of Christ are a potent influence in the world today.

One key to the future is what I have called the fourth dimension in citizenship. We Americans have learned through long years of practice to accept the responsibilities of citizenship in our own home towns and our own States. We have demonstrated that we are both willing and able to handle the broader responsibilities that go with citizenship in this great Nation.

But now something more is required of us. The security problem to which I have already referred, plus the ever-increasing compactness of our world and the interdependence of peoples, all those elements combine to make necessary a new level of individual responsibility. For want of a better term let us call this new requisite world citizenship. I don't mean world citizenship in a literal sense, of course.

The application of the fourth dimension in citizenship by the American people and by peoples in other countries has been growing steadily since the end of the last war. Acceptance of the concept derives from two factors. The first, of course, is self-interest. Whatever help we give other freedom-loving people to become strong is, in the long run, helping ourselves. The second factor—the moral one behind world citizenship—is realization that we have a responsibility toward our fellow man, that we are, in fact, our brother's keeper.

You will recognize the interplay of both of those factors in the major foreign actions that the United States has been carrying out since the last war. That interplay is evident in our support of the United Nations, in the Marshall plan, in the Truman doctrine, the Rio and North Atlantic Treaties, the Mutual Defense Assistance Act. It is also inherent in the point 4 program and our support of such other cooperative ventures as the International Trade Organization.

Secretary Acheson has recently described one phase of our foreign policy as creating "situations of strength" against Communist expansion. He said that, being very realistic people, the Soviet leaders of communism could be influenced by such situations of strength where nothing else meant anything to them. Wherever communism has been faced up to in a determined manner it has generally been checked.

If we are to continue to hold off immediate threats to the peace by opposing them with strength we must continue to think and act in the fourth dimension of citizenship. Likewise, the long-pull job of creating lasting conditions in which peace can thrive will require that we exercise increasingly our responsibility on the world scale.

The thousands of young men and women who, like yourselves, are graduating from colleges and universities everywhere will one day fall heir to the reins of leadership on all levels of activities. You are relatively few in number. Because of that, upon you must fall the responsibility for the spread of the fourth dimension of citizenship. Yours will be the responsibility in that you have been given the opportunity to understand the nature of the stakes at issue.

You will have the duty of maintaining standards and extending them among those who have not had equal opportunities. That means, in plain words, that each member of this graduating class must take on the job of acting and speaking his knowledge and convictions on the world issues which can, like a thunderbolt or an earthquake, bring disaster into the most secluded of American communities. And, if I may say so, seeking

to achieve those standards gives a zest and an excitement to adult living.

As you assume your places in the order of things you will be playing a role of ever-increasing importance, no matter what your walk of life. What is more, you have as inspiration the accomplishments of your predecessors at Winthrop who are a credit not only to this institution but to the great State of South Carolina as well.

A small percentage of you may find your way into the Government, bringing to it the fourth dimension of citizenship that I have been talking about. In the Federal service, I am proud to say, there are many dedicated people, people motivated by an overwhelming zeal in the accomplishment of their duties, a zeal which denies any selfish considerations of personal gain.

There are a good many such people serving this country in the Department of State. I have special reference to our people who have, for all practical purposes, given up all the comforts of life as we know them to represent democracy and freedom in the farthest reaches of civilization. These people are serving in places where food is all canned, where water must be boiled, where disease is rampant, and in many instances where one must contend with secret police. These people are really on the frontiers enduring hardships that would be forbidding to most of us. These courageous Americans are working at the level of the fourth dimension. They are doing an essential job, helping to bridge the gap between our standard of life and that of people who have been submerged for centuries. They are the modern-day pioneers. They are all too few in number.

Those of you who do find your way into the Federal service will find the Washington scene to be exciting and, at the same time, challenging. But you will find inspiration, as I do, in the example of the service that has been rendered our country by South Carolinians who have become preeminent in world affairs.

You who are graduating here today will bring home the wealth of the Indies because you are taking it out with you.

GOP Woman Senator Blasts Four Horsemen of Calumny—Margaret Smith's Declaration of Conscience Hits McCarthyism

---

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 6, 1950

Mr. SADOWSKI. Mr. Speaker, on May 5, 1950, I delivered a radio speech in Detroit, in which I stressed the fact that the Republicans were deliberately engaged in a campaign of smear, fear, hate, and suspicion; and that they expected to ride to victory on this appeal to these base and low emotions of the human race.

On June 1 the Senator from Maine was joined by six other Republican Senators who admitted publicly that they could not stomach the dirty, filthy, smeary, character assassination that their own Republican Party was engaged in.

This statement of repudiation and disassociation from those who would play in the garbage pail will be well received and highly commended by all decent citizens.

I wish to include an article by the very able and distinguished Washington correspondent, Blair Moody, which appeared in the Detroit News on June 2, 1950:

GOP WOMAN SENATOR BLASTS FOUR HORSEMEN OF CALUMNY—MARGARET SMITH'S DECLARATION OF CONSCIENCE HITS MCCARTHYISM

(By Blair Moody)

WASHINGTON, June 2.—It remained for the lady from Maine, Senator MARGARET CHASE SMITH, to lead Republicans in a repudiation of McCarthyism and to lay on the line in a declaration of conscience, what many in the Senate (and in the press gallery) have been thinking, feeling, and privately saying for weeks.

"I am not proud," said Senator SMITH, as Senator MCCARTHY (Republican, Wisconsin) sat a few feet away, "of the way the Senate has been made a publicity platform for irresponsible sensationalism * * * a forum of hate and character assassination sheltered by the shield of congressional immunity.

"As a Senator I am not proud of the reckless abandon in which unproved charges have been hurled from this side of the aisle * * * or the obviously staged, undignified countercharges from the other side * * *.

"I do not like the way the Senate has been made a rendezvous for vilification, for selfish political gain at the sacrifice of individual reputations and national unity.

"I am not proud of the way we smear outsiders from the floor of the Senate and hide behind the cloak of congressional immunity * * * and yet if we say the same thing in the Senate about our colleagues we can be stopped on the grounds of being out of order * * *. Surely we should be able to take the same kind of character attacks that we dish out."

THE FOUR HORSEMEN

"I don't want the Republican Party to ride to political victory on the Four Horsemen of Calumny—Fear, Ignorance, Bigotry, and Smear."

Six other Republican Senators—IVES, of New York; AIKEN, of Vermont; TOBEY, of New Hampshire; MORSE, of Oregon; HENDRICKSON, of New Jersey, and THYE, of Minnesota—joined with Mrs. SMITH in a joint statement, accusing both the Democratic administration and certain elements of the Republican Party of unwittingly, but undeniably, playing directly into the Communist design of confuse, divide, and conquer.

"It is about time," said the seven Senators, "that we stopped thinking politically as Republicans and Democrats about elections and started thinking patriotically as Americans about national security based on individual freedom. It is high time we all stopped being tools and victims of totalitarian techniques * * * techniques that, if continued unchecked, will surely end what we have come to cherish as the American way of life."

While Senator SMITH's demand that Senators "do some soul searching * * * weigh our consciences * * * on the manner in which we are using or abusing our powers and privileges" was directed principally at her own party, she also blistered President Truman, without naming him, for lack of leadership.

NATIONAL FRUSTRATION

She said that there exists in the country a national feeling of fear and frustration that could result in national suicide from lack of effective leadership in either the legislative or executive branch.

The Democrats, she asserted, have provided the Republicans with plenty of political issues without resorting to political smears.

"The Democratic administration," Mrs. SMITH charged, "has completely confused the people by its daily contradictory grave warnings and optimistic assurances * * * by its complacency to the threat of communism here at home and the leak of vital secrets to Russia * * *. It is time for a change and Republican victory is essential to the security of this country.

"Yet to replace (the President) with a Republican regime embracing a philosophy that lacks political integrity or intellectual honesty would prove equally disastrous to the Nation."

It was then that Mrs. SMITH said she did not want to see the Republican Party "ride to victory on the Four Horsemen of Calumny." and went on:

"I doubt if the Republican Party could—simply because I don't believe the American people will uphold any political party that puts political exploitation above national interests. * * * Such a victory would be a lasting defeat for the American people. * * * It would ultimately be suicide for the Republican Party and the two-party system."

AMERICANS FIRST

The seven-Senator statement declared, "we are Republicans—but we are Americans first."

"It is high time," Mrs. SMITH said, "that we remembered the Constitution speaks not only of freedom of speech but also of trial by jury instead of trial by accusation.

"Whether it be a criminal prosecution in court or a character prosecution in the Senate, there is little practical distinction when the life of a person has been ruined.

"Those who shout the loudest about Americanism in making character assassinations are all too frequently those who ignore the basic rights of Americanism—the right to criticize, to hold unpopular beliefs, to protest, to think independently.

"The American people are sick and tired of being afraid to speak their minds lest they be politically smeared as 'Communists' or 'Fascists' by their opponents. * * * Our country is being psychologically divided by the confusion and suspicions that are bred in the United States to spread like cancerous tentacles of 'know nothing, suspect everything' attitude. * * *"

James W. Wadsworth Retires

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 6, 1950

Mr. KEATING. Mr. Speaker, the editor of the Rochester (N. Y.) Democrat and Chronicle has, with rare insight, caught the spirit of the true JIM WADSWORTH in editorializing on his announced retirement from Congress. Under leave to extend my remarks, I include this editorial and also an appreciation of his public service by Mr. Arthur Krock of the New York Times:

CONGRESS WON'T BE THE SAME

"JIM WADSWORTH retiring? I can't believe it."

That was the reaction of the average western New Yorker to the startling news that came from Washington Wednesday announcing JAMES W. WADSWORTH'S decision to retire from Congress at the end of his present term.

A congressional election without the name of JAMES W. WADSWORTH on the ballot in the

Forty-first District? A Congress roll call without a calm voice answering "Here" when the name of "WADSWORTH of New York" is reached? It does seem almost unbelievable.

He has been in public life so long that we of western New York have been prone to take him for granted. But in our hearts we were always proud to have such a Representative in Washington.

To the Nation he is a familiar name, an elder statesman, one of the really distinguished figures in the Congress, one of the few who has served in both legislative branches—through two great wars—for a total of 30 productive years.

But to us in the Genesee country he will always be "Young JIM," our neighbor from up the valley, a personality of rare charm, the aristocrat with the democratic ways, the tall, bald, square-shouldered man who speaks so easily without any rhetorical flourishes but with a forthright forcefulness, whose face is creased into a thousand wrinkles when he smiles his ready grin. It is hard to believe that he is in his seventy-third year.

He was born to wealth and position. He was of the landed gentry, of a house that settled in the Genesee Valley in 1790. His father and his grandfather before him served in Congress. He might have been just a playboy squire, riding to hounds over the ancestral acres.

Instead he went in for public service at an early age. His father, James W. Wadsworth, Sr., taught him as a boy the mechanics of farming and of managing the valley estates. He went to Yale in the family tradition but he also played an able first base for the Geneseo town team. He volunteered for service in the Spanish-American War. Once as a youth he risked his life in a Genesee River flood to save some of his father's prize cattle. For 5 years he managed a ranch in Texas and rode the range with the cowboys.

That was after 6 years in the State assembly. He was elected from Livingston County in 1904 when he was only 27 years old. He conducted no front porch campaign. He went out among the voters, as he always has. JIM WADSWORTH greets dirt farmers with the same unaffected geniality with which he meets the leaders of the Nation—and he has known most of them in his time.

He was only a second-year man in Albany when he was chosen speaker of the assembly, the youngest man ever to hold the post. He showed his independence and presided with such tact and ability that he won the praise and the friendship of the opposition.

Representative WADSWORTH'S political career is a familiar story—his election to the United States Senate in 1914, his service as chairman of the Military Affairs Committee for 7 years during which he was author of the World War I Selective Service Act. Then came his defeat by Robert F. Wagner, Democrat, in 1926.

Contributing to that defeat was WADSWORTH'S uncompromising stand against prohibition and his earlier opposition to woman suffrage. He never took the popular side just to win votes. He always had the courage of his convictions. That is a bromidic phrase but it describes JAMES WADSWORTH'S intellectual integrity.

In 1932 he became the nominee of his party for Congress in his home district. Few who served in the august Senate have ever deigned to run for the lower House. It was in the tradition of John Quincy Adams, who served in the House of Representatives after he had been President of the United States. It was a fortunate thing for the Forty-first District—and America—that WADSWORTH had no false pride. Public service has been his life. It is in his blood.

His experience has been invaluable in Washington during as troubled a time as America has ever known. Opponents have branded him a Tory and reactionary because he feared the drift of his country into strange new ideologies. Pacifists have called him a jingo because in time of danger he wanted a strong America. Yet all respected his courage, his sincerity, and his candor.

Since 1905 with the exception of two brief interludes, he has been in the public service. It has been a stormy time. Through it all the gentleman from Geneseo never lost his grin, his temper, or his convictions.

There is something Churchillian about this western New Yorker who has the stoutness of one of the great oaks of the valley he loves so well, the valley where his family has lived for 160 years and where he will spend his declining years.

There is only one JIM WADSWORTH. To the Nation he may be an elder statesman, a figure of history. To Rochester and western New York, the homeland, which recognizes his statesmanship but which also knows him as an engaging personality, a very human individual, somehow he will always be "Young JIM" from up the valley, who used to play first base on the Geneseo town team.

A GREAT PUBLIC FIGURE IS PASSING

(By Arthur Krock)

WASHINGTON, June 1.—The news that Representative JAMES W. WADSWORTH will not stand for reelection in the Forty-first Congressional District of New York calls to mind many a notable parliamentary struggle in which his wisdom, courage, and integrity were devoted to a high patriotic concept which rose above any partisan consideration. So often did Mr. WADSWORTH occupy this uncrowned height in Congress that he came to be recognized as the conscience of the House which, though it might evade, it admired and respected.

But one day in particular emerges from the haze of memory—August 12, 1941. On that day Pétain commanded the beaten French to collaborate fully with Hitler; Berlin announced the defeat of the Soviet armies west of the Dnieper in the Ukraine; and, alarmed by the growing aggressions of Japan, the United States and Great Britain warned the Japanese war party to keep its hands off Thailand.

On that day, with Pearl Harbor less than 4 months away, the House was debating the bill to extend by 18 months the military services of those already taken by the draft. This passed by one vote, 203 to 202. Opposed were 135 Republicans, 65 Democrats, and 4 of the assorted minorities. In favor were 182 Democrats and 21 Republicans. It was to these latter Mr. WADSWORTH made the plea without which, in the opinion of many watchers of the event, the draft extension would have been rejected on the ground that the administration, to win the election of 1940, had misrepresented the draft law as a brief and passing need.

As a young legislator from Livingston County, speaker of the New York Assembly in the first decade of this century, a two-term Senator who was defeated for a third because he steadfastly declined to compromise then unpopular principles, and Representative since 1932, Mr. WADSWORTH made many distinguished public utterances. But probably none will assay as importantly as that of April 12, 1941, in the judgment of history.

THE ARGUMENT

He began by pointing out that, since the whole Army was only slightly more than 1 percent of the population, "it must be the most efficient Army for its size, if we can make it so." Taking as an example the Twenty-seventh Division of the New York National Guard, he showed that subtraction from Army cadres in training of those in selective service who would be returned to civil life by defeat of the pending bill "would wreck them as a team for at least 8 to 10 months." He spoke as an expert on this practical aspect of the issue, and the listening House well knew he rated that status.

Then he turned to the world situation, saying in part:

"Hitler has carried the ball from the beginning of this terrific game. He has gained ground on every play and there are no rules in the game as he plays it, much less a referee. You see his activities today plus the activities of Japan. Against whom was the alliance between Japan and the Axis powers primarily directed? Against the United States, have no doubt about it. And that alliance was made after we passed the selective service law.

"Look at the far-eastern situation. Is it not of more concern to us today than it was a year ago? See what the Japanese are doing. Every sensible man knows that our vital interests are menaced."

THIS IS THE WHOLE QUESTION

Turning to the Republican side of the House, Mr. WADSWORTH described the consequences in Europe and North Africa of the fall of France, forecast what would follow if Russia, then fighting alone, was conquered, and assured his colleagues that, when Hitler felt ready, "the signal will go to Japan." Quoting Mark Sullivan that "America is not moving toward war, war is moving toward America," Mr. WADSWORTH concluded his appeal by saying:

"We are trying to do something from day to day which will discourage anybody from attacking the Western Hemisphere. The fend-off policy accounts for the acquisition of the island bases. So it accounts for the occupation of Iceland and Newfoundland. Would this House vote to retire the Marines from Iceland today? I think not. We do not dare take chances, not for one moment. It is conceded that if legislation of this kind is not passed the defense of the United States will be seriously weakened for many, many months.

"This is the whole question before us, as I see it. My prayer is, Mr. Chairman, that our decision shall be made in the interest of the safety of the United States."

Republicans Show Lack of Organization and Discipline—Now They Deal With a Case of Conscience—"Its Disposition May Not Be Easy," Says W. K. Kelsey

---

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 6, 1950

Mr. SADOWSKI. Mr. Speaker, I wish to submit an article by the highly respected and widely read correspondent, W. K. Kelsey, who writes a daily column for the Detroit News, under the title "The Commentator":

THE COMMENTATOR

(By W. K. Kelsey)

To expect that the "declaration of conscience" read in Senate, Thursday, by Senator MARGARET CHASE SMITH, of Maine, publicly backed by six other Republican Senators, and admired by some others who congratulated her later, will have much effect on the rest of the party in that body is irrational.

Although the declaration was critical of the Democratic leadership, the only reason for making it was the McCARTHY charges and their support by many Senators who hoped they could be made to stick, so that the Republican Party would be given a popular issue in this campaign year; as Mrs. SMITH put it, "in the hope of riding the Republican Party to victory through the selfish exploitation of fear, bigotry, ignorance, and intolerance."

In a following speech, Mrs. SMITH said: "The Nation sorely needs a Republican victory. But I don't want to see the Republican Party ride to a political victory on the Four Horsemen of Calumny, Fear, Ignorance, Bigotry, and Smear."

The declaration illustrates something more than the stirrings of conscience among seven disgusted Senators. It illustrates also a lack of organization and discipline in the opposition party.

To be sure, there is a similar lack in the Democratic Party; but that is no good reason why the Republicans, who ought to be in a position to take advantage of Democratic lack of cohesion, should take such long chances as they did in permitting Senator McCARTHY to proceed as he did.

The McCarthy affair could not have happened in the British Parliament. In the first place, no member of the minority party would have dared make such charges without the full approval of the party leader, who would not have given it without making sure that there was plenty of fire behind the smoke, and that he could afford to throw the full support of the party behind them.

In the second place, such charges, given such support, would force the appointment of an investigating commission to deal with them under strict rules of evidence, with full protection of witnesses, and of the rights of the accused.

TIME TO ENFORCE DISCIPLINE

"It is ironical," said Senator SMITH in her speech, "that we Senators can in debate in the Senate directly or indirectly impute to any American who is not a Senator any conduct or motive unworthy or unbecoming an American—and without that non-Senator American having any legal redress against us—yet if we say the same thing in the Senate about our colleagues we can be stopped on grounds of being out of order.

"I think it is high time that we remembered that we have sworn to uphold and defend the Constitution. I think it is high time that we remembered that the Constitution, as amended, speaks not only of freedom of speech, but also of trial by jury instead of trial by accusation."

It is also high time that political parties crack down on irresponsible Members who jeopardize the interests of the party, to say nothing of those of the Nation. It is always a temptation to discover and make the most of some fault in the opposition, especially when that opposition controls the executive department. But it is extremely bad policy to yield to that temptation without looking ahead and making sure that the attack will find a real joint in the armor.

In the present instance Senator McCARTHY was not only permitted but encouraged to go ahead, although every experienced newspaperman began to laugh when JOE changed the number of his accused Communists and fellow travelers almost day by day before declaring he would "stand or fall" by the case against Owen Lattimore—and then declined to fall.

If the Republican steering committee had taken JOE in hand when he changed his statistics it could have saved the party's prestige. But it didn't, even though it must have known Mr. McCARTHY, and been aware that figs are not produced from thistles. So now the party must deal with a case of conscience. Its disposition may not be easy.

The New War Against the South

REMARKS
OF

HON. BEN H. GUILL

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 6, 1950

Mr. GUILL. Mr. Speaker, the Fair Deal of President Truman's so-called Democratic Party can now officially and permanently be called the "raw deal."

The shameful decision of the United States Supreme Court in the Tidelands case yesterday "legalized" the cold-blooded theft of an estimated $1,000,000,000 by a vicious and totalitarian administration which falsely calls itself democratic. The "raw deal" administration has stooped so low as to pick the pockets of our Texas school children and to break the most solemn word of the United States Government.

Another decision of the Supreme Court struck a blow at the ancient and sacred traditions of the South. It also struck a severe and damaging blow at the entire concept of States' rights as we knew them and as our forefathers knew them.

Mr. Speaker, these decisions, following the infamous veto of the Kerr bill, represent definite aggressive and calculated steps by the "raw deal" administration against the State of Texas. As long as Texans continue to support in office their worst enemies, the Socialists who call themselves Democrats, they can expect to be stabbed in the back repeatedly as a reward for their misplaced loyalty. June 5, 1950, was Black Monday for Texas and the South.

It should be apparent now to every single thinking citizen of this country living below Mason and Dixon's line that the Truman administration has declared war upon the South and intends to carry that war to a brutal and successful conclusion.

Compared to this cold war of 1950, the War Between the States was a clean and honest conflict. The War Between the States was fought in the open by men who are willing to fight and die for principles in which they believed. The cold war against the South of 1950 is one-sided and it is fought with knives in the dark. It is fought by legal ambush and sly administrative practice. It is fought by infiltration, treachery, and deceit. It is fought by nameless men in secret places and there is no mercy, little honesty, and less decency among those who fight it.

For years the representatives of the Truman administration have made little attempt to hide their hostility toward the South. But the people of the South continued to disregard the thunder on the left. They could not believe that the party which they have so loyally supported in the past has been stolen completely away from them and has fallen so low as to become an instrument of totalitarianism. They found it difficult to accept the fact that the machinery of the Democratic Party has been stolen by a gang of self-seeking Socialists.

As a result, before the people of the South became fully aware that the cold war was on—they found they had already lost several vital battles. They found that the forces of totalitarianism were over the border and marching upon them.

In the Elmer W. Henderson case—whereby segregation of Negroes from whites in dining cars was judged by the Supreme Court of the United States to be illegal—a learned brief was submitted for the "raw deal" administration by Philip B. Perlman. Mr. Perlman documents his case against southern traditions with constant citations from official Soviet Russian publications.

Mr. Perlman argues that discrimination in this country caused unfriendly reaction in the foreign press and cites a Russian article by a man named Frantsov to support his claim.

Mr. Speaker, there is something definitely ridiculous about this country's worrying about the reaction of Russia toward our policies of discrimination, when Russia itself is the most brutally discriminatory nation in the world today. There is certainly something sinister in the spectacle of a representative of this country supporting what are wrongly called civil rights with admonitions from Russian authorities representing a nation where there are no rights at all.

As a matter of fact, from among a handful of references to publications cited by Mr. Perlman in his brief which I personally checked this morning, I found works by a Soviet propagandist, a stockholder in the New Masses, a contributor to Soviet Russia Today, several members of the left-wing Lawyers Guild, and signers of the call to the notorious pro-Moscow National Writers Congress.

When the traditions of the southern part of these free United States are held up to scorn by the "raw deal" administration in contrast to the principles of the Soviet Russian Government, we may well pause and consider along what dangerous roads our so-called Democratic leaders are driving us.

Mr. Speaker, almost every major project of the "raw deal" administration has been directly in opposition to the best interests of the South. In every case where the interests of the South conflicted with the interests of the big city machines of the North, the President has decided against the South.

The entire concept of States' rights has been put to scorn and whittled away so that, unless we strike back through the ballot box, States' rights will be as dead as the ancient cities of Greece.

The Kerr bill veto, the Sweatt case, the Henderson case, the McLaurin case, all constitute a roll call of infamy and coercion. If the "raw deal" administration had attempted any such rankly discriminatory and subversive legislation against any section of the country where the two-party system prevails, it would have been defeated at the polls and its minions sent back to the obscurity they so richly deserve.

But up until now the South in general, and Texas in particular, have been played for suckers. The "raw deal" administration has taken it for granted

that the South would continue to vote for the Socialists who call themselves Democratic no matter how much it was abused.

But, Mr. Speaker, sir, if other sections of Texas and the South do not follow the lead of the Panhandle of Texas in refusing to vote "Ja" at every election—we shall find our traditions and our way of life destroyed. We shall find our courthouses and our statehouses operated through directives issued by left-wing agitators here in Washington. We shall see our freedom and our liberty dragged in the mire of socialism.

The gage has now been thrown down. It is up to the people of Texas and the South to pick it up and strike back or else they can resign themselves to the fate of never again being treated with respect, fairness, or consideration by the totalitarians of the Truman "raw deal."

Hall Wants Free Open American Elections

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 6, 1950

Mr. EDWIN ARTHUR HALL. Mr. Speaker, recent Sunday editions of the Binghamton Press tell the real story of the desperate efforts of the hate-HALL elements to make the August 22 primary in New York's Thirty-seventh Congressional District an iron-curtain election.

From now on until the day arrives for filing petitions, the bosses will spend most of their time trying to squeeze out everybody but their tailor-made candidate. Along with sundry, sordid advocates of the Nazi plebiscite, they will pour cold water on the hopes of every free agent in our primary.

Anybody with a grain of self-respect or an ounce of manhood will resent the insulting references to their not having a chance in the primary. I am sure that Messrs. Westfall, Bond, and Morrissey will resent and resent strongly the same belittling tactics directed at them which these political bigwigs have used on your Congressman for a generation.

I say again what I have said several times in this campaign, that I do not believe the newspapers or any moneyed tycoon will be able to scare these men of the people out of a free primary.

From their independent and fearless manner, I am certain the Messrs. Westfall, Bond and Morrissey will not bow to the ridicule, and the weltering abuse which Triple Cities newspapers will heap on them for daring to upset the well-laid plans of certain wealthy advertisers to put a catspaw in Congress from this district.

Frankly, I am indignant over such lewd and lousy tactics.

As an exponent of the popular primary system, I resent having these millionaires interfere with the only opportunity the people of our section will have to choose their Representative.

I accuse the big shots of trying to scare out three rank and file Americans like myself who want to exercise their privilege of running for Congress. I accuse these partisans of the single name ballot of strongarming all other candidates out of this race by dampening their ardor, their enthusiasm, just as they have mine for the past 11 years.

I insist that Messrs. Westfall, Bond and Morrissey have as good a chance as I have or as the cringing creature supported by the political dictators of the southern tier.

In the name of free American elections, I demand the big boys stop trying to keep honest men from running for office. I call upon them to do the patriotic thing and stop throwing cold water on the hopes of the American people.

Urgent Need To Adopt Hoover Commission Reforms

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 6, 1950

Mr. JACKSON of Washington. Mr. Speaker, I am inserting in the RECORD, under leave to extend my remarks, an excellent letter I have received from a Seattle lawyer, Mr. Kenneth A. Cox, who has been working very hard to arouse interest in his community in the work and reports of the Hoover Commission. I consider this one of the finest letters I have received on this subject. In view of the rejection by the Senate of five reorganization plans submitted by the President, I think it particularly appropriate that such a letter, which calls for enactment of all Hoover recommendations, despite the protests of particular interests, be called to the attention of the Congress.

SEATTLE, WASH., *May 23, 1950.*

Congressman HENRY JACKSON,
House Office Building, Washington D. C.

DEAR CONGRESSMAN JACKSON: I have been intending for some time to write to you and some of the other Members of the Washington congressional delegation regarding the recommendations of the Hoover Commission as to the organization of the executive branch of the Federal Government. However, as is so often the case, I kept putting the matter off until recent items in the newspaper forceably reminded me that unless some concerted effort is made, many of the worth-while recommendations of the Commission may come to nothing, either because of inertia or of pressure of special interest groups.

I am a member of the Seattle Junior Chamber of Commerce and for the past year have been serving on its governmental affairs committee. In that capacity, I have been in charge of the local phase of the United States Junior Chamber's Nation-wide "Operation Economy," which was designed to build popular understanding of, and support for, the Commission's recommendations. In addition to this, for the last 2½ months I have been serving as chairman of the Washington State Bar Association's speaker's committee on the Hoover report. In the course of this work I have made approximately 15 talks to groups of all kinds and my friends and associates have made several times that number of appearances. It has been our universal experience that the people before whom we appeared were vitally interested in the Commission's findings and wholeheartedly endorsed, in broad outline at least, the recommendations which the Commission has made. The one possible exception to this, of course, has been the veterans groups. I have appeared before one such group and a friend of mine has addressed two others. It is our feeling that even here among those persons who actually take the trouble to think about the matter, the feeling is that the Commission is right. Certainly I, as a veteran, find nothing in its recommendations as to veterans' affairs which I do not consider to be constructive.

It is my understanding that you and all of the other Members of our congressional delegation have at one time or another gone on record as favoring the Commission's proposals. It is therefore discouraging to read recently of the defeat by the Senate of four of President Truman's reorganization plans which, as far as I have been able to determine from the press, conform essentially to the recommendations of the Commission. Certainly the proposed subordination of the Comptroller of the Currency to the Secretary of the Treasury and the proposals to give increased administrative powers to the chairman of certain of the regulatory commissions seem directly in line with the Commission's recommendations and also seem to me to make excellent sense. Although I realize that the Commission made no very detailed statement regarding the Department of Labor because of the then pending debate over repeal of the Taft-Hartley Act, it nevertheless appears to me that the proposed change in respect to the general counsel of the National Relations Labor Board was in line with the Commission's strong recommendation that in no case should a subordinate ever be given powers completely independent of his superiors.

It therefore concerns me very much that these measures should have been defeated. I can understand the action with regard to Mr. Denham because of the strong emotions which are generally felt as regards the Taft-Hartley Act. However, I can find no explanation for the other three actions except on the ground of personal pressure by interested parties in the agencies themselves. It is obvious, of course, that none of the agencies affected by the Commission's proposal is likely to be willing to have the suggested changes made. However, if we are to get any good from the work of the Commission, it seems to me that those special interests must be submerged in the over-all interests of the country at large. It seems to me, furthermore, that we must take advantage of the work of the Commission, not primarily because of any tax savings it might effect, but because it seems to me that there is real question as to whether our democracy can continue to exist and thrive in the world of today under a government so badly organized and so devoted to out-worn procedures as ours now is. Unless we can effect a rational structure for the executive branch and lay out sensible and efficient procedures to be followed by our executive officials, it seems to me that we cannot expect to deal effectively either with the problems of our domestic economy or of the international cold war. I am sure that there are mistaken recommendations in the Commission's report, and that Congress should give careful scutiny to measures proposed to it as seeking to put the Commission's ideas into effect. However, it seems to me that unless you and our other representatives do something affirmatively to forward the job of reorganization, the work of

the committee will simply gather dust and we will continue to struggle along either until the Government reduces itself to absolute futility or until our Federal budget becomes so large as to impair the health of our general economy.

My investigation into the work of the Hoover Commission has convinced me that it represents a great forward step in the eternal struggle to make our Government actually work for us and that the great bulk of its recommendations should be adopted. I cannot urge you too strongly to do everything in your power to forward the work of the Commission.

Very truly yours,

KENNETH A. COX.

Help for Underdeveloped Nations

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 6, 1950

Mr. CASE of New Jersey. Mr. Speaker, under unanimous consent granted to me today, I insert the following letter written by the Honorable Warren R. Austin, representative of the United States to the United Nations and United States representative in the Security Council, to the Secretary of State:

UNITED STATES REPRESENTATIVE
TO THE UNITED NATIONS,
May 11, 1950.

Hon. DEAN ACHESON,
Secretary of State,
Department of State,
Washington, D. C.

MY DEAR MR. SECRETARY: I find the attached summary of reports from some 800 local discussion groups of the People's Section (American Association for the United Nations) indicative of a growing public opinion in support of a program of technical cooperation for development through the United Nations. I hope it can be given general circulation to officers of the Department and other Government agencies interested in the point 4 program.

I note with particular interest the emphasis on strengthening the United Nations by using it as the instrument for international cooperation in this great effort to help underdeveloped nations help themselves.

These groups express their views after study and discussion of the issue. Therefore, their opinions are considered in the light of the information.

The small outlay of funds called for during the initial stages may obscure the importance of the undertaking and cause people to think of technical assistance as purely technical and of small assistance. It encourages me, as I am sure it will encourage you, to know that organized groups of Americans are probing into this matter and finding out for themselves what great things can be accomplished with so little, through international organization.

Nothing, in my judgment, can be more permanently contributory to international peace and stability than uniting people in a common enterprise. When, through their own international agencies, they act to attack the common enemies of ill health, wasteful administration of Government, poverty-breeding methods of agriculture and industry, they become identified with a positive program which can pave the way for expanded production, stable Government, and a better life for all.

As this job is tackled in large part through the United Nations, not only will we achieve the results we seek in lifting the level of life and trade and self-reliance, but we will be strengthening the institutional life of our world organization.

Sincerely yours,

WARREN R. AUSTIN.

The Late Ronald C. Alford

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 6, 1950

Mr. ADDONIZIO. Mr. Speaker, the residents of West Orange, N. J., mourn the passing of their beloved town clerk, Mr. Ronald C. Alford, who served his community most creditably for many years. West Orange has lost a trusted public servant who will be missed by all. Although I did not have the pleasure of personally knowing Mr. Alford, I was well acquainted with his splendid record and with the esteem in which he was held by his neighbors. Mr. Alford performed his duties throughout the years with unfailing devotion and courtesy, and set an example as a public servant that could well be emulated by all who aspire to public office. The following tribute appeared in the West Orange Chronicle of May 25, 1950, and expresses very well the sentiments of the community:

A SINCERE AND ABLE PUBLIC SERVANT

Ronald C. "Ronie" Alford proved his faith in West Orange's future when he accepted the appointment of town clerk shortly after the commission form of government had been adopted. It wasn't much of a job then as the town had not begun the rapid growth that started later in the twenties. It meant a sacrifice at the time he took it but he never regretted the decision.

Ronie gave to West Orange the type of service that this Nation's forefathers intended for public office when they drew up the historic documents that established democracy in this country. He could no more make a sinecure of it, so popular in many places in these days of political operation, than he could have changed his fundamental character. It was natural and axiomatic with him to put in a hard day's work every day, to give the utmost in service, to cooperate to the fullest extent, and to maintain a cheerful countenance at all times. As town clerk he was to many people the official representative of the town's municipal government and there could not have been a better one. Because of nature of his duties, he had without doubt, more knowledge and information about the town's municipal machinery and its functioning than anyone else in town. His ability was recognized and respected by those who served in municipal capacities outside the town.

It would perhaps not be entirely accurate to say that it would be difficult to find someone of sufficient stature to fill his shoes because Ronie would have been the last to consider his shoes big. His modesty was as apparent as his sincerity. But whoever is selected to succeed him will find that they are very exacting and very conscientious shoes he must fill. And his successor will have little success in eclipsing a memory of a man who dedicated his life to serving his town, sincerely and well.

Lynn, Mass., Centennial

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 5, 1950

Mr. LANE. Mr. Speaker, I wish to include herein my remarks over radio station WLYN on Sunday, June 4, 1950, at which time Lynn, Mass., was honored on its one hundredth year as a city:

Greetings. This is the happy birthday of a city.

Of the 100,000 people who call it home.

Friends and business acquaintances in even greater numbers congratulate you on this proud occasion.

A man's first loyalties are to his God and to his family.

In the ever-widening circle of his experience in life, his community ranks next in his affections. Whether by birth or through adoption, he claims it as his own, stimulated by its past accomplishments, to work for its progress in the future.

To you who live and produce in the place called Lynn, it is the very best city on earth. Others are larger, wealthier, or more famous, but these are nothing compared with the friends and neighbors that are yours here.

A city is more than an individual pattern of streets and homes and factories and stores. It is more than city hall, the newspapers, schools, churches, or the identifying landmarks that give it a unique quality.

Walk down Main Street on a late Sunday morning, after services.

At once you are conscious that something is missing.

The buildings are still there, but the old familiar faces are absent. Most of them are reunited with their families or have left the city on highways that lead to the beaches or the mountains.

Main Street is quiet and almost empty.

Somehow it seems longer and wider than it used to be.

Even the stores seem to be sleeping.

For Main Street is not the same without its people. Almost instinctively you turn down a side street—any side street that will lead you to friends and loved ones. For these are the heart of your city, without which its streets and its buildings would be lifeless.

On an anniversary such as this, we become aware of the network of human associations, reaching back through generations, that give a person nourishing roots in his community.

A traveling salesman has a surface cheerfulness that is necessary to his occupation. It also helps to keep him going until he can get back to the base called home.

The people of Lynn have so much to talk of when they speak of home.

For their roots extend deep into the very beginnings of our Nation—to the year 1629, when a few intrepid pioneers selected this land by the sea as a favored spot on which to build shelters for their families.

These men did not ask guaranties of security, before they ventured into the unknown, for if they did, Lynn would not be the thriving industrial center that it is today.

There was sparked the enterprising spirit that is the true kernel of the American character—a spirit that was strengthened by example as son succeeded father, and the people of this city faced up to the problems that confronted them during the different periods of its growth.

In the early town meetings, every citizen had a chance to speak up on questions of local policy and thereby helped to build that tradition of responsible self-government that stands this community in such good stead today.

Those town meetings, in bringing people together, also made them more neighborly. As the settlement grew up through village and town to the status of a city, its inhabitants never lost this precious human quality. Even with the increasing mechanization and the replacement of home industries by huge factories threatening to smother the individual in the crowd, the people did not succumb to standardization.

In business, government, and labor they maintained close and constant touch with those who were delegated to represent their larger numbers. This active two-way communication has not only preserved but is constantly infusing new life into their democratic processes.

They are not afraid of "bigness" because they have learned to guide it.

Thousands of Lynn folk work in one of the Nation's largest factories without being overwhelmed by its size. Both management and labor are to be complimented for making the adjustments required in this new area of industrial relations, which reflect credit on both. Management represents some. Labor represents others. But all involved are human beings, needing each other.

This ability to work out an understanding of any problem on which human beings may have opposing viewpoints is a development of that spirit of neighborliness with which they solved earlier and simpler issues.

This is a tradition passed on through heritage from the early settlers of this community.

It is being actively practiced today.

It is the reason why the residents of Lynn are proud of their city on its one hundredth birthday as they pause to take stock of past accomplishments and then look forward with confidence to its future.

As a Member of the Congress of the United States, whose privilege it is to represent you in our National Legislature, I have an opportunity to observe many communities; some are declining, others are marking time, but most are advancing.

It is clear to me that your city is blessed with that pioneering vigor which welcomes any challenge that the future may present. Your industrial foundation is that of a growth industry which is ever developing new products and new techniques. This, in turn, is inspired by the skill and faith of every man and woman of Lynn.

You are the city.

As such, may I rejoice with you on this birthday anniversary and predict even greater happiness and prosperity for Lynn, a city distinguished by its friendly people.

Farewell to Ambassador Elath

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 6, 1950

Mr. MULTER. Mr. Speaker, Israel's first Ambassador to the United States, Eliahu Elath, is leaving these friendly shores this week for a brief return to his homeland and subsequent assumption of the very important diplomatic post of Israel Ambassador to the Court of St. James's. He was a great force for good will and for the establishment of the friendliest relations between the United States and Israel. Many of us in both Houses of Congress have come to know him well personally and to appreciate his great admiration for the American people. We wish him godspeed and new successes as a statesman in the years to come.

I desire to place in the RECORD two brief editorials, one from the New York Herald Tribune of June 5, 1950, and the other from the New York Times of June 6, 1950, as follows:

AS MR. ELATH DEPARTS

As Eliahu Elath departs for Israel, before taking up his new post as Israeli Ambassador to Great Britain, he takes with him the consciousness that he has won many friends in America, for himself and for the state he represented here in a crucial stage of its development. First as an emissary of the Jewish Agency for Palestine, then of the Provisional Government of Israel and finally as Ambassador, he knew troubled times, when the destiny of the new nation hung in the balance, and when the shifting tides of great-power policy were uncertain and difficult to gage. But the scholarly Elath, learned in the life and zealous for the cause of Israel, was equal to the heavy responsibilities which rested upon him.

Israel is fortunate to have a man of his charm and capability to represent her in Britain, especially since he is succeeded here by Aubrey Eban, who has proved his mettle and made so many American friends while serving as Israeli delegate to the United Nations. One of the most severe tests of a young state is to choose men of character and ability to speak for it abroad; Mr. Elath and Mr. Eban provide a happy augury for Israel's future.

SPOKESMAN FOR ISRAEL

If the young State of Israel had had a hundred million people to choose from instead of less than a million, it could not have found a more effective ambassador than Eliahu Elath, who left his Washington post yesterday to go to the Court of St. James. Mr. Elath is a scholar, a broad-minded statesman who understands that Jew and Arab must be friends, a diplomat who kept his dignity and built up his influence during 3 years in the United States before the State of Israel was recognized, a democrat who sees the world in broad, human terms. As he has done here, he will surely make friends for Israel in London. Our good wishes go with him. They go, too, to Aubrey Eban, who has been doing excellent work as Israel's delegate to the United Nations and who will now become ambassador in Mr. Elath's place.

A Little Russia

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1950

Mr. HOFFMAN of Michigan. Mr. Speaker, from a constituent of the Fourth Congressional District of Michigan comes a letter which, as I wrote the writer, if one-half true, should be a warning to the farmers.

Inasmuch as a reference of the situation to the local AAA would disclose the writer's identity and if what he writes is true subject him to persecution, there seems to be little, if anything, I can do to help.

The letter reads as follows:

JUNE 5, 1950.

Hon. CLARE E. HOFFMAN,
Washington, D. C.

DEAR FRIEND CLARE: I feel that it is high time that I write to you pleading for you to use every effort at your command to prevent the New Dealers, or Fair Dealers, or any other Communist-dominated element of the Democratic force, to put through the Brannan plan and to refuse any further financial support of the AAA, the Soil Conservation Department, or any other of their organizations that are claiming to help us farmers, and if at all possible I ask for legislation to disband these organizations which are undoubtedly the arch enemy of our American way of life. I did feel a few years ago that after the war was over an investigation would be carried on throughout the country and that numbers of these AAA and follower organizations members would be tried by our civil courts and executed as spies and traitors, but I have long since given up any hope of their getting their just dues.

Some people might think that the above is a rash statement. It is not. It is the truth, and I am going to try and outline some of the persecution that I went through at their hands and I have met other farmers who have been persecuted in similar ways.

Back in 1932, when the New Deal element first came into power, I was about 40 years of age, owned 85 acres of land, had sent or was sending most of my children through high school. I had a family of 10 children. I supplemented my farming by butchering and selling direct to consumers in ——— the livestock that I raised. Although I considered myself a rather poor man financially, I would find myself the victim of the envy of some others in the neighborhood because they were not doing as well as I had. You probably know how such can be.

In 1934, after the death of my mother, I purchased the balance of estate from other heirs, making me 277 acres. I am only reciting these happenings that you may see the why of what followed by AAA. I have found that the AAA followed one pattern whenever possible in the different communities.

First, they chose field workers who were down-and-outers, were on the losing end financially. Then they would pick out some farmer who still had his head above water and would win lots of followers by preaching that he didn't have any right to own so much property, and so forth, and the funny thing was that it worked.

I had to quit the butchering and selling business, not because of sanitary reasons or any local ordinances, but because of the New Deal hog edict. Even the little pigs were killed off. I was forced to quit as a farmer was only allowed to butcher and sell in 1 year about 300 pounds of dressed meat. I went to see the Federal dictator who had charge of this district and he warned me that I would be prosecuted to full extent of the law if I butchered and sold more than that amount. He told me that the liquor bootlegger was a piker compared to my crime.

I quit, as I had already heard of several who had been fined a great deal more than their hogs had sold for. I felt rather bitter about what I considered infringement on my rights. I could see the handwriting on the wall. I refused to sign up to AAA and wrote several articles criticizing the administration that were published in several State papers. For all this I was further persecuted. I was now only engaged in general farming, raised wheat, oats, corn, potatoes, hogs, cattle, and dairy products and chickens to sell. Was that I couldn't raise

potatoes to sell. They cut my wheat acreage to something less than 20 acres. The total acreage of wheat on this farm when I bought this latter part was about 75 acres. That is, they cut me to less than 20 acres on my farm of 277 acres.

I explained to the AAA that I was feeding a large percent of my wheat but they informed me that I could buy wheat to feed. I ignored the allotment of less than 20 acres and planted 30 acres. That summer after harvest I was notified that I was fined several hundred dollars or could pay it in several hundred bushels of wheat. I have forgot the exact amount but I have the papers laid away. I refused to pay up. I was notified to be at ——— on a certain date at the ——— and that farmers would receive their wheat-marketing cards, otherwise I could not feed or sell any of my wheat. I went to this meeting only to see my neighbors given marketing cards and I and a few others like myself refused cards and notified not to feed it either.

I told the AAA bunch to go to hell. I organized a few who were in the same position as myself. Then I joined the ——— which was affiliated with the national organization. They hired William Lemke, of North Dakota, to represent and defend us. (I have here at my desk the newspaper account of his death last Tuesday for which I admit I feel rather sad. I have met him personally. He was a great guy.)

The war was on by now or rather we were in it. I was notified that my fine had been reduced and warned to pay up. I still refused to pay. Finally I was notified that if I would sign a bond they would issue me a marketing card. They finally reduced my bond to $10. I still refused to comply. My son, the only help I had on farm was drafted by Army draft board. I fought it off the best I could. The man who was the head of the AAA office was also the head of the war board who passed on deferments for agricultural purposes. My son was refused deferment for agricultural purposes although the only other help I had was my 11-year-old son.

One day when I was in town a Democrat who was in business, not a farmer, came to me and said they are planning to take your boy off your farm and put him in the Army and it is because of your stand against the AAA and your refusal to sign up a bond on the wheat issue. I told him I know it. He said come with me and I'll sign that bond and they won't take him. At first I refused, but at his urging I finally agreed. At the AAA office I felt rather embarrassed and humiliated when he interceded for me and explained that I had changed, that I would be a good AAA man henceforth, etc., and that he was there to sign my wheat bond. I was told that I must get two bondsmen for the $10 bond. I got one immediately as an old man came in. I received lots of kind smiles from the AAA office personnel for submitting to this which was I suppose expected to make it easier to take. They took my son into the Army anyway.

He was refused deferment. Later a good Democrat friend came to me and told me that if I would write a request to President Roosevelt asking that my son be deferred that the local office would see that it was done. I write all of this that you may see the part that the AAA and local politics were playing with my destiny. I, of course, refused to knuckle down and write to Roosevelt. At my appeal for help I was offered a young man of draft age from an adjoining county who had no experience at farming, but who had been exempted for agricultural purposes. I refused to hire him at his wages. I went it alone except for my 11-year-old son who was in school.

During the war I was continually hampered by the ration board, which office was entwined with the AAA. I was refused gasoline ration to drive to and from any other set of buildings on south end of farm, about a mile apart. I was told that I could walk it. I had livestock there to take care of. Of course, I didn't walk it. I was continually hampered by notices to report at ration boards or they would cut my tractor gas allotment.

One day a man who represented himself as from the State tax department came while I was at south farm buildings doing chores and caring for livestock. He barked out a command for me not to crank my tractor, that I was in wrong with the State of Michigan in filling out a form for gasoline tax refund. I refused to be intimidated, and asked him what was wrong. He said he had five counts against me. I promptly answered each. On some told him to check with the Standard Oil Co. There was nothing wrong. Then he said that he had been talking with my wife, and she had told him that I had been driving my tractor from my house where I lived to south buildings to care for livestock every day. He claimed I didn't have any right on the highway with my tractor. I told him to go to hell.

At that time two other neighbors' tractors were coming down the road. I said why don't you go out and jump on to them fellows? I got rid of him by agreeing to let him take off 25 gallons from any claim that I might have used on tractor on highway. Now, don't think for a minute that there wasn't any connection between this and the AAA. It was all a system of terrorizing me—to break me financially and otherwise. At this point let me tell you about how just recently I was talking with another farmer about AAA.

He was telling me about how his wheat acreage was cut so drastically and how he was fined heavily. How he refused to pay up. How he managed to sell his wheat. How they sent a man after him who represented himself as a State tax man. How this man ordered him not to drive to his farm—the one that was a couple or 3 miles from where he lived—to care for his livestock and to carry on his farmwork. How the ration board would not allow him automobile gas to do so. So he was forced, he told me, to sell about 160 acres of his 300-acre farm. Now I believe you see the connection between the AAA and the ration board, and this man who said he was from the tax department.

My younger son is in partnership farming with me now. This last fall we were given an allotment of only 25 acres for wheat. Yet, last summer we had out and harvested 44 acres. I protested this 25-acre allotment but was refused an increase. We have a lot of part-time farmers who work in town and plant large acreages of wheat. Some of these fellows plant several hundred acres. This is encouraged by the AAA, as it has a tendency to confuse the issue and it does make the surpluses that will force the controls.

Last fall during wheat-planting season a peculiar condition was happening. While we were told that 25 acres was our limit, considerable of these farmers who had been good AAA followers were planting real high above their claimed allotment. At our inquiry they would say that they were not going to abide by the AAA allotment. Well, I finally commenced to understand and told my son that I bet these fellows were in a deal with the AAA and that probably the AAA would get Congress to lift the allotment after they had overplanted and after it was too late for us other fellows to plant.

As you probably know, that was just what was done. Now this spring we have a corn allotment. Ours was set at 18 acres. Last year we raised 30 acres. I did not protest for an increase for in the past no increase has been granted me. I could not get the amount of oats planted that I had planned so am putting it into corn. That will probably put us much over our allotment. I have pondered this question of what to do. We keep livestock and have to have feed. If we do this somehow we will be penalized. If we don't raise the feed then where will we be financially?

Now for the past several years I have been signing up to the AAA. I have to or I wouldn't be allowed to live. But don't misunderstand me. I detest it.

If the Brannan plan is given the authority of law then I and others like myself are just legislated out of life.

My people were pioneers in this country and I own my farm home here but I know that this is a very lengthy letter to ask you to read, but I am fully convinced that there is nothing that is happening behind that nasty iron curtain in Russia but that is being duplicated here under mock democracy.

If the AAA, the power that be, knew that I had written this letter they would arrange to get me somehow, and I know from past experience.

If you wish to use any or all of this, I will give my permission but please do not disclose my identity or the county where it came from so it would be possible for them to trace it.

I will appreciate hearing from you.

One Hundred and Seventy-fifth Anniversary of the Battle of Brooklyn

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 6, 1950

Mr. MULTER. Mr. Speaker, my distinguished colleagues from Brooklyn, Messrs. CELLER, PFEIFER, KEOGH, O'TOOLE, HEFFERNAN, HELLER, and Mrs. KELLY, and I have today introduced bills providing for the issuance of a special postage stamp commemorating the one hundred and seventy-fifth anniversary of the Battle of Brooklyn.

The pages of American history are replete with many heroic episodes attesting to the valor and spirit of sacrifice on the part of the people who fought to establish and maintain the independence of this country. In our efforts to safeguard the freedom and independence of the American people in a world of true peace in our own day, we often go back and refresh our memory about the early days of our nationhood, those crucial and sacrificial days when the fate of the future American Republic was being determined. Those days have always been a source of great inspiration and genuine patriotism to the American people, and they will continue to be so for generations to come.

One of the most inspiring historical events in our Nation's history dates back to the early Revolutionary period, to that eventful year of 1776. We refer to the Battle of Brooklyn—sometimes known also as the Battle of Long Island—which occurred on August 27, 1776, just a few weeks after the Declaration of Independence was formally adopted, heralding the birth of a new and great democracy.

In the Battle of Brooklyn we have the origin of the modern Dunkirk idea; that is, the withdrawal to safety of a large body of troops across a barrier of water under the most adverse military conditions. Gen. George Washington's successful retreat during the Battle of Brooklyn and the subsequent effect of his strategic act must have left such lasting impressions on the British that they never forgot it and, in turn, used it with great success themselves just 10 years ago at Dunkirk in June 1940. Similarly, as Dunkirk helped to save the final victory for Britain in our days, so the Battle of Brooklyn helped to save Washington and his army from being surrounded and captured—a fate which would have sealed the doom of the American Colonies and dashed to earth their hopes for independence.

The Battle of Brooklyn has not been sufficiently and properly evaluated by our historians in the past. It unquestionably ranks with Lexington and Concord and Valley Forge and many other historic battles of that period as an event of major importance. It merits a place of honor in the annals of American history. Although officially the Americans lost that battle and retreated across the East River to Manhattan, it actually proved to be a significant turning point in the war. It slowed the British military effort against the Americans and it kept our forces intact and in a state of high morale. As we look back today upon that event in the perspective of history, the sacrificial spirit of those early Americans heroically defending the revolutionary cause at the old Stone House in Brooklyn stands out as one of the most courageous chapters in our history.

We are approaching a significant anniversary of this notable event which lends itself most fittingly to a commemorative celebration and to paying homage to those valiant martyrs by extending appropriate recognition to their heroic deeds and sacrifices during the Battle of Brooklyn in 1776. On August 27, 1951 we will celebrate the one hundred seventy-fifth anniversary of that historic event.

It was just prior to that battle that General Washington addressed his troops as follows:

> The enemy have now landed on Long Island and the hour is fast approaching on which the honor and success of this army and the safety of our bleeding country depend. Remember, officers and soldiers, that you are freemen fighting for the blessings of liberty—that slavery will be your portion and that of your posterity if you do not acquit yourselves like men.

The people of the Borough of Brooklyn intend to celebrate this anniversary with the proper dedicatory services, wide civic participation, and suitable programs as a manifestation of patriotism in a living democracy.

The bill we are introducing today calls for the issuance by the Post Office Department of a commemorative postage stamp memorializing the Battle of Brooklyn. It will bear a design depicting the battle and will be issued on the anniversary date indicated.

The Test of the Dairyman's Strength

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 6, 1950

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the Chenango County Farmer:

The dairyman of the Thirty-seventh Congressional District will be given three tests in 1950. The test of his strength of fighting spirit, the test of the strength of his vote, and the strength of his loyalty to his Representative in Congress—EDWIN ARTHUR HALL.

It will be remembered that in 1948 Congressman HALL was said to be the main target under Democratic fire for they wished him removed from Congress and no means were to be spared to remove him, and the good work was to be done in Binghamton for his greatest strength was there. It was soon learned that his strength in Binghamton was so great and in the rural districts also, that all the schemes, even the $50 schemes were fruitless.

But the plans and schemes have taken a new turn in 1950. Reinforcements are needed and what better place to look for them than among the dairymen for there could be a net laid for them and him also. It is a great help to some if the farmer can be kept a slave to help pay others' expenses. The Brannan plan was carefully written but it was expected the farmer would object as he had a little experience with dictators during World War II. Then he was told when he must arise, when he should retire, where he could go, where he must not go, what he could do and not do, what crops he could raise, and how much he could raise. But if the farmers objected there was another way; he could be compelled to take it. So the net tightened until the farmers turned to their Representative for help.

Just as expected, Congressman HALL asked that the farmers be allowed to survive by giving them a fair price for their produce. He asked that the dairymen be given a price for milk that would cover the price of production. What was the answer? The price of milk was lowered.

Then again he did the expected. He asked that the price of dairy feed be lowered until the farmer's milk check would pay his feed bill. What happened? The price of dairy feed advanced. He asked that the suffering dairyman in drought-stricken areas of which his district was a part be given help to place them on their feet again. What was the answer? They were told hay would be available at from $35 to $50 per ton. That was the help the dairyman got. And each time he was refused help the net tightened around the dairyman and his Representative. For if the dairyman could be compelled to lose confidence in his Representative the rest would be easy.

Congressman HALL has repeatedly tried to keep the farmer from being caught in some net that has been cast for him. Despite threats it would cost him his seat in Congress he has been loyal to his dairymen. He has fought the manufacturers of oleo. It is true he voted for repeal of all taxes on oleo because manufacturers of butter and even the dairymen asked for a compromise; asked that all taxes be removed and oleo be left uncolored. The manufacturers of oleo accepted the removal of taxes and then asked that they be allowed to color their product yellow. Congressman HALL fought stubbornly to prevent interstate commerce and coloring of oleo but the manufacturers gained victories. But this should not reflect in any way on Congressman HALL's ability. Although the southern Democrats gained victories they swore vengeance on those who fought them.

And has Congressman HALL any other enemies? He has been named as the world's champion on remembering faces and shaking hands. Can it be possible, when in Washington, he has forgotten or purposely declined to shake the hand of John L. Lewis or Joe Stalin? Would he forget and ignore two such prominent men as they and then come back to his own home town and remember every face and shake the hand of each constituent?

The dairymen should give all this careful thought. Their Representative is a candidate for Congress among several other candidates. The Republicans are anxious to keep all the power they have. For that reason the incumbent should be chosen.

The dairymen should remember every time they yield an inch the enemy advances one mile. And if the dairymen surrender their representative, they have surrendered everything.

The dairy industry is a business and no business of any kind is so great it cannot be injured or ruined. Are not the Triple Cities shoe factories already in similar danger?

If the dairy industry is to be saved it must be saved by the dairyman, not by politics. And any who doubt Congressman HALL'S capability, stability, integrity, and loyalty should ask himself the question, "Why are the opposition and manufacturers of oleo so determined to rid Congress of him?" That is all that is needed to prove the worth of Congressman HALL to his party and his dairymen.

EDWIN ARTHUR HALL is not the man to be influenced or bribed. He is not the handyman around Washington, working for his own party only when the opposite party has no use for him. If he was that type he would have no trouble staying in Washington for the other party would see he was kept there.

If the people of Binghamton are planning a strategy, if votes can be pooled to defeat him, the dairyman can use that same strategy and votes can be pooled to elect him. He is representing the Democratic dairymen as well as the Republican. When he fights for one he fights for the other.

The dairymen should forget politics when electing their Representative for it is for their interest to do so. They must fight and fight to win. They should not fight for him one day and be against him the next.

Congressman HALL is flanked on all sides in the Triple Cities by friends who can neither be influenced nor bribed. Their support with the dairymen's should be sufficient for it was said in 1948 his strength in the cities and the strength of the farmers were 50–50.

If the dairy farmers of 1950 have the fighting spirit of their forefathers to fight for their liberty, they will start fighting while the fighting is good and while they have a Representative in Washington to fight with them and for them. If the Republican dairymen value their liberty they will go to the primaries and demand liberty by casting their vote to renominate their Representative, EDWIN ARTHUR HALL. And if the Democratic dairymen have the fighting spirit to answer the challenge hurled at the dairymen and their representative, "Get help if you can," they will answer that challenge with another challenge in November—"Take my Representative from me if you can." (Chenango County Farmer, by Mrs. D. E. Huntley, R. D. No. 1, Greene, N. Y.)

Reserve Components Policy Board Is Hope of ROA

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, May 19, 1950

Mr. SHAFER. Mr. Speaker, under permission to extend my remarks, I include a speech delivered at the annual banquet of the Michigan Reserve Officers Association convention at Battle Creek, Saturday, June 3, 1950:

Mr. Chairman, distinguished guests, members of the ROA and ROAL: I know of no better way to cover the main problems of interest to reservists than to summarize the activities of the new Board set up a year ago, in the office of the Secretary of Defense to handle those problems.

I say that for this reason. The history of the Army and the Air Force, in particular, in regard to their Reserves has not been very good. This is not so true of the Navy and Marine Corps; and I can understand, at least in part, and sympathize with the Army and Air Force in their dealings with some of their problems.

But certainly one reason they have had trouble can be traced to the general-staff system. Here is why. Under that system, all the military—not excluding the Reserves—head up in the Chief of Staff. The civilian Secretary usually knows only as much as the Chief of Staff lets him know. And the Chief of Staff is almost always what in the Navy is known as a "line officer"—a field soldier who is more sensitive to the problems of the standing combat forces than to anything else.

I am not standing in judgment on that. I just say that is the situation. Whether it is good or bad, generally speaking, is another subject that I can't try to cover tonight.

But, taking that as a fact, it leaves the Reserves behind the service eight ball. The Chief knows about and is interested in the Infantry, the armored force, and so on, but when it comes to the civilian Reserves, he can give their needs attention only on a part-time basis.

Now, this situation has produced several bills in Congress to put Reserve matters in the Army and Air Force in the hands of the civilian side of the Departments—to take these matters away from the complete control of the Chief of Staff and General Staff and vest them in a civilian Under Secretary or Assistant Secretary for Reserve Affairs. Your ROA has been interested in that in the past, and it might get active eventually in the Congress if a strong enough case is made for it.

But, in the meantime, a really great step forward has been taken for the Reserves. The Defense Department last year set up what is known as the Civilian Components Policy Board. It is an intrinsic part of Secretary Johnson's office, and, therefore, takes the place of the previous efforts to get these matters away from Chief of Staff control in the Pentagon.

I believe it has the opportunity to accomplish more for the services' Reserves than anything done in recent years for them, and that is why I want to tell you about it tonight. That Board, only a year old, functioning on the same high level as the Joint Chiefs of Staff, the Munitions Board, the Research and Development Board, and the Personnel Policy Board, is, I expect, to affect the military future of every member of our civilian components, active or inactive. And, given close scrutiny and gentle prodding by the Congress, I think its impact on the reserves will be all to the good. (I have to say here that the way some things have gone for Army and Air Force Reserves in the past makes me suspect that any progress by this Board would be bound to be good.)

So now, how does this new Board work. Listen closely to this. It is exceptionally important to each of you here and to Reserves all over the Nation.

This Civilian Components Policy Board makes recommendations direct to the Secretary of Defense on Reserve matters of major policy. In all other Reserve matters—that is, those not of a major policy nature, and there are many of these—the Board has the full delegated power of the Secretary of Defense under the Unification Act. (Judging from our recent experiences in the Congress, I needn't remind you that that power of the Secretary is not inconsiderable. You can see that your new Board is in a position to wield a really big stick if it has to.)

Specifically, though, your Board has this assigned job. It is charged with the plans, policies, and programs of the Army, Navy, and Air Force in the Reserve area. Of course, it is founded on the basic concept that it should function only as a staff agency—a concept supposed to be characteristic of all activities in the Office of the Secretary of Defense, even though that wasn't done recently in respect to closing of military hospitals over the Nation, including Battle Creek here in Michigan. But, insofar as your Board goes, it has done that, and hence has left in the Army, Navy, and Air Force Departments their responsibility for their own Reserve programs.

Now, I want to point out here that your Board is not, by any stretch of the imagination, a rubber-stamp outfit for the Regular services. Twelve of its voting members are themselves members of the civilian components. Two come from the Organized Reserve Corps of the Army, two from the National Guard, two from the Naval Reserve, two from the Marine Corps Reserve, two from the Air Force Reserve and two from the Air National Guard. These are senior officers with many years of service who have been and are active in these affairs in Washington and over the country. Their membership on this Board is a splendid step forward for all Reserves, and I am looking for really substantial results to flow from their efforts.

Now, there are seven other voting members of the Board. They are the chairman, who is Mr. Edwin H. Burgess, and a civilian assistant secretary and a top-ranking officer from each of the three military departments. Each of these members is a man of high executive caliber, thoroughly experienced and qualified for making top-level policies and decisions. For example, Mr. Burgess, the chairman, is vice president and general counsel of the Baltimore & Ohio Railroad. That is certainly high calibre experience. And he only recently succeeded Mr. William T. Faricy, who is president of the Association of American Railroads. Mr. Faricy was the chairman of the Civilian Components Policy Board from its inception until last month. The Board's retiring executive officer, Luke W. Finlay, a brigadier general in the Organized Reserve Corps, a graduate of both West Point and Yale University Law School and World War II executive officer of the Army Transportation Corps, is now returning to his position as counsel for the Standard Oil Corp. of New Jersey. I understand that General Finlay will be succeeded by Rear Adm. I. M. McQuiston of the Naval Reserve, also a very able man. The admiral has been associated with the Naval Air Reserve since World War I and was an original member of the Civilian Components Policy Board.

So that is the composition of your Board in the Pentagon. I have seen few Washington boards as good. It seems to me that it will take a superhuman effort on the part of someone to keep it from doing fine work, and I think you'll agree.

Now, bear in mind that the Board is not a full-time organization. It has convened, I understand, for seven sessions since October of last year. However, it doesn't stand still in between sessions. An executive committee, composed of the three civilian members of the Board and the Chairman, is empowered by the Secretary of Defense to act for the Board when the Board is not in session and action is too urgent to wait for the next session. Also, the Board has a full-time research and planning staff. Like the Board itself, it is a well-balanced group of Regulars, Reservists, and National Guard men, who have been selected from their various military departments. So there is continuity in the executive committee and the research and planning staff despite the part-time nature of the Board.

So much for the Board's make-up. Now, let's get to what it is doing.

I am sure that by far the most important matter before the Board since it was created is the so-called Armed Forces Reserve Act. It has been before the Board since its first meeting in October, which is too long, in my opinion, but I have believed in giving the new Board a reasonable chance before finding too much fault with it. Now, this Armed Forces Reserve Act is a piece of so-called must legislation. It is to come to Congress for enactment in the near future. What it does is to broaden the previous so-called Roper bill—H. R. 2828 of this Congress—so as to apply generally across-the-board to the civilian components of the three services. The Roper bill, as you probably know, was the Navy's intended modernization of the Naval Reserve Act of 1938 and was a magnificent job which now is to benefit all Reserves.

So this is to be a sort of charter for all Reserves. It will provide a base in law for the organization of the civilian components of all the Armed Forces. It was processed some time ago by the Civilian Components Policy Board with the hope that it might be introduced in this Congress and hence would be available for general discussion by Members of the Congress, the civilian components, veterans' organizations, and all individuals concerned. The legislation is to include a section covering matters common to all the services and also a section covering items peculiar to each of the military departments.

To give you an idea of the importance of this measure to each of you, I will hit its high points very briefly.

It has a section covering standard contracts for members of all civilian components on extended active duty. An allowance for uniforms for officers of all the services is established commensurate with the allowance which Naval Reserve officers have received for some time. The so-called common Federal commission bill is included, providing for a common Federal commission for officers of the National Guard and Organized Reserve Corps. Items such as these which are the subject of separate proposed legislation have been included in this bill in order to make it an all-inclusive general basic law for all Reserves.

A section of the Navy title of this bill prescribes that Reservists serving on active duty during any future war or national emergency shall be transferred temporarily to the Regular Navy, Marine Corps, or Coast Guard, as the case may be. The effect of this provision is to place naval reservists while on active duty in the same position as the Regulars.

The legislation does not deal primarily with matters which are the subject of other major laws, such as pay, retirement, and the universal code of military justice, except as those matters have to be mentioned in

connection with certain sections of this bill. Of course, it is not the aim of this bill to change those laws.

Your board has moved two other legislative measures that are of great importance to a well-balanced reserve program. High priority has been properly attached to the reserve training facilities bill, and to a proposed Reserve Officers Training Corps bill. The first of these is just about to come out of the House Armed Services Committee and authorizes the construction, on a joint usage basis, of additional facilities needed for the training of the expanded postwar reserve programs. The second, which is now tied up in the Bureau of the Budget but soon to come up to Congress, modernizes existing ROTC legislation and is extremely important. It would make available to all the services on an across-the-board basis provisions comparable to those now enjoyed by the Navy alone under the Holloway Act, thus bringing about parity among the services in the procurement and training of sorely needed junior officers for the three regular services and their civilian components.

And there is more legislation that has been considered by your board. A military and naval science buildings bill has been proposed. If the Congress passes it, it will authorize the Army, Navy, and Air Force to make grants to certain educational institutions for the purchase, construction, and expansion of military and naval science buildings. These grants of moneys could be made to accredited universities and colleges granting baccalaureate or higher degrees at which ROTC, NROTC, or AFROTC units now exist or may hereafter be established. The grants are set up to be used to defray a portion of the costs of construction of a permanent building, or buildings, or altering, remodeling and enlarging an existing building or buildings, for use as a military or naval science building, or both. The idea is to provide space for instruction in military or naval science including space for Army, Navy, and Air Force personnel, and security and housing for military and naval instructional equipment.

For other legislative items being considered by the board, I will dash these off: Amendments to your retirement law (Public Law 810) to broaden the scope of retirement benefits extended to certain nurse and WAC members of the civilian components; amendments to Public Law 108 providing additional benefits for members of civilian components who suffer disability or death from training injuries; measures which will permit the services to furnish rations in kind to enlisted reserve and National Guard personnel engaging in inactive duty training; expansion of the military amateur radio system program; provisions for active duty status for United States property and disbursing officers, and bills to establish an Armed Forces Reserve medal and Armed Forces Reserve commendation medal.

I mention all of this because it begins to look to me as if the legislative requirements of our Reserve forces are now and will continue in the future to have sympathetic direction from a high level in the Department of Defense, and that is very important to the success of the Reserve programs. But there are other important elements in the development and maintenance of the civilian components besides legislation. One is the very important subject of fiscal matters, and that one is mighty hard to reach, in its planning stages, by the Congress, so the Board can strike a tremendous blow there if it carries out its responsibilities as it is expected to. Based on reviews of budget estimates and studies of the composition of the individual components themselves, the Boafd can make powerful recommendations to the Joint Chiefs of Staff and the Secretary of Defense with respect to the fiscal requirements of the Reserves and the effect of possible budget limitations on a planned state of readiness if such limitations are imposed. This could be the Board's most productive arena, judging from the previous experience of the Reserves with the service dollar.

But to go on about your new Board. Even in its brief operation to date, it has considered a wide diversity of matters other than legislation and money. Some of these items have been completed. Others are still in various stages of study and development. For instance, a study is now being made of the current status within each of the three services of what has thus far been done to implement the recommendations made to former Secretary of Defense Forrestal by an earlier committee on civilian components. You will recognize the report of this committee as the Gray Board Report. It had 90 recommendations. They were intended to determine the type and character of civilian components to be maintained, the missions they should have, the most desirable size and composition, the proper relationship of such components to the several armed services and to one another, the ways in which the desired purposes could be attained with the maximum of harmony, efficiency, and economy, and the elimination of a host of inequities and disparities among the several components. The Board has reported to me that it is going to determine the need for further implementation by the services of these Gray Board recommendations in an effort to arrive at the most satisfactory organization and efficient state of readiness of the civilian component forces.

And here is another interesting development. I think it is a corker. The idea is that the members of all civilian components of the Armed Forces should have equal opportunity to participate in the formulation of policies pertaining to the organization and administration of the civilian component program. To do this the Board is recommending that each of the services develop a plan of local civilian component advisory groups. A successful plan of this sort has been in effect for several years in the Navy. It works this way: Local Naval Reserve units and individual Naval Reservists are invited to submit recommendations and comments on their local programs to a Reserve policy group at their naval district headquarters. The local group screens and consolidates the recommendations and comments for forwarding by the naval district commandant to the statutory Naval Reserve Policy Board, which convenes in Washington. I am enthusiastic over this plan. There is too much of this submission of matters through command channels. This idea is much more desirable from the point of view of the individual, and I think all Reserves will find it a much better means of conveying recommendations to the people in Washington who have the power to decide and act.

How to get enlisted Reserves for the armed services is also being studied. This is being done by an ad hoc committee of the Board. There is serious need for a definite program in this field throughout the services, and it ought to move along now that the Board is getting its teeth into it. The study will also cover such allied problems as the allocation of Reserve units so as to use most efficiently the enlistee potential in the population and prevent competition between civilian component units; and the value and need for an expansion of the junior ROTC or the establishment or expansion of other organized and supervised programs.

A joint advisory panel on ROTC affairs has also been set up. It will make recommendations to your Civilian Components Policy Board concerning over-all ROTC policies and the coordination of the ROTC plans, policies and programs of the three military departments. Civilian educators closely associated with the ROTC throughout the country are being invited to participate with representatives of the military departments in developing these recommendations.

Now, I am sure I don't need to remind you that the Regular establishments form a very small portion of our peak military strength in time of war. This created a need to establish policies for the assignment of all Regular officers to duty with the Reserves at some appropriate point in their careers. It also required some indoctrination of all officers so assigned in the problems of the Reserves and the opportunities afforded by such an assignment. There had to be two purposes in mind in dealing with this. One was to give the professional military men who must be the leaders of our wartime forces intimate familiarity with the understanding of the problems, state of training, and psychological outlook of our citizen soldiers. At the same time we have to provide the Reserves with the skilled guidance and supervision that only the professional military man can give. This brings your Board in the picture again. A set of principles for the guidance of the military departments in the assignment of Regular officers to reserve duty was recommended by the Civilian Components Policy Board and approved by the Secretary of Defense. If these are observed conscientiously over the years, they should have far-reaching benefits to the entire Military Establishment.

Well, I could keep this sort of thing up for a long time. For example, the Board has set up on-site planning boards at all jointly utilized facilities. In this it is supported by 52 National Defense Reserve Facilities Boards located in each State, Territory, the District of Columbia, and Puerto Rico. These were transferred to its jurisdiction when the Reserve Facilities Committee was transferred from the Munitions Board some time ago. It has also reviewed the fiscal year 1950 construction programs and examined current construction costs. Passage of the proposed Reserve Training Facilities bill now in the House will move this along, but in the meantime, varying degrees of joint usage are already under way in more than 700 Reserve training facilities.

The problem of procurement of Reserve pilots is also being taken up. The problem of adequate training of enlisted personnel for all the Reserves is not only being studied but has recently been broadened to include a proposal to use a system of trade school and college scholarships as an inducement to young men of appropriate age to participate in summer training programs with a view to their subsequent recruitment in the Reserves. A program for the cross-training of members of the Civilian Components of one service by appropriate units of other services is in the mill, and the achievement of uniform standards among the services to the greatest possible extent is being sought on all such matters as drill pay, active-duty training, promotion, age-in-grade regulations, allowance of retirement credits, and the like. The Defense Department and with other interested agencies are also trying to develop policies on the proper interrelationship between the Reserve programs and selective service on the one hand and between the Reserves and other claimants for essential manpower on the other.

I realize that this list is long, but I think the progress made thus far is extremely gratifying and you are entitled to know about it. For the first time in history the Reserves of the Armed Forces, through their own Board, are participating on a policy-making level, in decisions affecting all Reserves, and I say that things are looking up in the Pentagon.

For a final word, I will say that the Armed Services Committee has a Special Subcommittee on Civilian Components which is standing by just in case the Board rests

too long on its oars. It may swing into action this fall, at least to keep in close touch and to prod things along a bit, but the main thing is to know that in the Pentagon, and on Capitol Hill too, you now have groups in existence that can carry your battles for you in Washington. Just keep that in mind and let the committee know if things look like they're going wrong. I think we can stoke up the furnaces, get the fires going in a hurry, and really get results.

A Profile of Hon. Jacob K. Javits, of New York

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 6, 1950

Mr. CASE of New Jersey. Mr. Speaker, under unanimous consent granted to me today, I include the following article from the magazine New Yorker concerning our colleague from New York, Hon. JACOB K. JAVITS:

PROFILES—THE GENTLEMAN FROM NEW YORK
(By E. H. Kahn, Jr.)

To a Representative in Congress it seems that the Members of his particular body politic are, individually and collectively, the nicest, most generous, and most deserving people in the world. He spends about half his time looking out for their special interests, and his motto with regard to them is, as a rule, "Service with a smile." JACOB KOPPEL JAVITS, the Republican-Liberal standard bearer, in the House, of the Twenty-first Congressional District of New York, has a fine set of shining white teeth, and, though by nature a rather solemn man, he is often moved to display them in fond welcome upon the approach of a constituent, much in the manner of a maitre d'hotel upon the approach of a steady and well-heeled customer. The demands on JAVITS' patience, endurance, and resourcefulness are, on the whole, infinitely more severe than those a head waiter has to cope with. JAVITS has served 3 years in Congress, and during that stretch has been asked by his flock to handle around 10,000 matters. Should an ex-soldier in the Twenty-first District, which takes in the upper West Side, including the entire northern tip of Manhattan and has a population of nearly a third of a million, feel, as one did not long ago, that the Veterans' Administration was unfair in its decree that he ought to be treated by psychiatric therapy rather than by psychoanalysis, JAVITS is the man with whom the complaint is apt to be lodged. Should a lady be of the opinion that the Bureau of Internal Revenue is demanding of her a dollar and seventeen cents more than she owes on her Federal income tax, or another lady, representing an Elizabethan reading club, be of the opinion that the New York Public Library carries a shamefully inadequate stock of the books favored by her society, JAVITS is the man who is likely to hear about it and be expected to do something about it. He is a public servant of remarkable fortitude and energy, and every few waking hours he does a favor for a constituent—sometimes without knowing about it, since he has a staff of six assistants who dispose of many such problems in his influential name.

JAVITS is so conscientious that he makes sure his constituents are looked after even when he is thousands of miles away from them. In the summer of 1947, while in Europe on a congressional fact-finding expedition, he had a good deal of legislative research to attend to, over a wide area, but nonetheless he took pains during a stopover in Dublin to get in touch with the American consul regarding the issuance of a visa to a cousin of one of his constituents, who was eager to migrate to the Twenty-first District, and upon finding himself in Vienna he took equal pains to expedite the admission to this country of a rabbi, then in a displaced-persons camp, whom a group of constituents wished to import to officiate at their temple. JAVITS scarcely ever fails to react sympathetically to a plea for help from a resident of his district. Recently, a young man in Washington Heights wrote in to say that he thought he was losing his mind, and what did his Congressman propose to do about it? "I am sure you will remain sane," JAVITS replied, and urged the man to feel free to call on him again if he needed further advice.

The gentleman from New York is a dazzling example of a successful progression from rags to riches. His father's monthly cash earnings never exceeded $40 and his political activities were confined to proselytizing for Tammany Hall on the lower East Side; his mother could neither read nor write until she was 55. The fact that the son of this underprivileged couple may now affix an Hon. to his name, is a familiar figure in the Bankers Club, calls John Hay Whitney "Jock," and can, without quivering, pay a check at "21," where he frequently dines when in New York, is an inspiration to many of his constituents, among whom are quite a few refugees from Europe seeking the realization of the American dream. In JAVITS' rapid rise to eminence they see the fulfillment of the aspirations they entertain for their own children, and they would be delighted if their Congressman were to make even more splendid political progress in the future. So would he.

The Congressman's father, Morris Javits, was born in 1862 in Mielnitza, which was then part of Austria and is now part of the Soviet Ukraine, and was entrusted by his parents to a rabbi, in whose steps it was hoped he would follow. Instead, when he was 22, he migrated to the United States and, like so many other newcomers from eastern Europe, went into the clothing industry. He made pants. He had been here 7 years when he met his future wife, Ida Littman. She had been born in Palestine, the child of a farmer's daughter who had married a traveling salesman from Vienna while he was passing through Galilee and had been abandoned by him shortly thereafter. Ida's mother subsequently married a Russian and went off with him to Odessa, leaving the girl in Palestine, where she was obliged to go to work at the age of 6. Ida joined her mother and stepfather in Odessa when she was 16, and 2 years after that, when the stepfather died, mother and daughter came to New York. Ida went into the clothing trade, too. She made neckties. She was married to Morris Javits in 1893, and they had two sons, Benjamin, born the following year, and JACOB, born in 1904 and for most of the time since then known informally as JACK.

Morris Javits was a dreamy type, ill at ease in a materialistic world, and his wife, a practical woman who considered pants-making a precariously seasonal trade, obtained a degree of security for the family by persuading her husband to devote himself instead to superintending three dingy tenements near the corner of Orchard and Stanton Streets. That at any rate meant they could live rent-free. She helped support the family by selling toys and drygoods from a pushcart. There were about twenty adult tenants in each of the tenements over which her husband presided, and the senior Javits, in addition to performing his custodial duties, represented Tammany Hall on the premises. Before every election, he would go to a nearby saloon, and from its proprietor, who controlled political disbursements in that neighborhood, receive a $2 honorarium for each tenant eligible to vote and ostensibly willing to vote Democratic.

In return for his taking the trouble to distribute these incentives, he was allowed by Tammany to perform minor philanthropic functions in its behalf, such as fixing any parking tickets acquired by pushcart peddlers on his corner. JACK attended public school in the neighborhood. By the time he finished the elementary grades, in 1916, his brother had left City College, had set up shop as a collector of bad debts, and was studying law at Fordham in his spare time. During the First World War, the family moved to Brooklyn, where Morris Javits died, after an operation, in 1918. On becoming the head of the family, his older son, for the sake of convenience, moved his mother and brother to Washington Heights. In high school up there, JACK won a prize for scholarship, was elected chairman of the senior class day committee, and was appraised by his fellow students, in their class yearbook, with the phrase "You can't tell from first appearances," a judgment that was certainly prophetic in at least one important respect, for his only appearance on the political scene up to then had been as a youthful and ardent soapbox advocate of socialism.

JACK JAVITS was graduated from high school at 16, and within a few months, having decided to forego a college education, was earning $75 a week as a salesman of printing inks and lithograph stones. In 1922, his brother was admitted to the bar, began to practice law, and turned his bill-collecting business over to him. While chasing debtors, JACK attended New York University Law School on the side, a college degree not then being a prerequisite for such study, and, showing an early aptitude for a legislative career, won the post of anchor man on the debating team. In 1924, he, too, abandoned bill-collecting, and became a clerk in his brother's law office. He continued in that capacity until he had completed his law course.

JACK was admitted to the bar himself in 1927, and joined Benjamin in practice. Their firm, Javits & Javits, came to enjoy considerable success in representing minority stockholders in bankruptcy and reorganization cases, some of which involved millions of dollars in contested funds and, ultimately, a hundred thousand or so in legal fees for the stockholders' counsel. In most instances, JACK was the courtroom man and the desk work was done by Benjamin, who over the years has become noted as an expert in anti-trust matters and has distinguished himself avocationally by helping to draw up the National Industrial Recovery Act, by helping to found a pressure group of stock- and bondholders called the Investors League, and by writing a number of books on high finance, among them a sensationally untimely one, published in 1929, entitled "Make Everybody Rich—Industry's New Goal." He has also been active, in a behind-the-scenes way, in politics, and soon after JACK began practicing law urged him to cultivate a similar interest by joining the National Republican Club. JACK was agreeable. He had been cool toward the Democratic Party ever since, as a child, he had observed his father greasing the neighbors' palms, and he had reached the decision that the Socialist Party espoused too utopian a program to warrant his continued support. He became a fervent disciple of Fiorello LaGuardia, worked hard for him during the 1937 mayoralty campaign, and in 1940, when the Norris-LaGuardia committee was formed to stir up non-Democratic enthusiasm for President Roosevent's third-term campaign, went along with his idol. JAVITS' defection from the Republican ranks on that occasion has since prompted some old-line members of the GOP to take a jaun-

diced, if not downright suspicious, view of him, but nowhere near so jaundiced or suspicious a view as they might have taken if any Republican other than Wendell Willkie had been the candidate.

At a dinner party early in 1941, while JAVITS happened to be in Washington on business, he met an Army general who was deputy to the head of the Chemical Warfare Service. The two got to talking, and the general casually mentioned that the service had been having a tough time arranging for the manufacture of a certain kind of paper filter needed for gas masks. JAVITS was then, and his firm still is, counsel for the National Paper Trade Association, and the next day, seeking to do a favor for his acquaintance of the evening before, he got in touch with an official of one of the many companies affiliated with that organization and obtained his promise to produce the filters at once. The general was astonished at the ease with which this civilian could dispose of a problem that had been stumping the military, and JAVITS was invited forthwith to become a two-day-a-week consultant to the Chemical Warfare Service. It was one of those dollar-a-year jobs. Thanks to the National Paper Trade Association and other prosperous clients of his law firm, JAVITS could afford to take it, and did. He impressed his new associates so profoundly that by November, despite his never having studied either chemistry or warfare, they asked him to become a full-time civilian aide to the chief of the Service. He accepted, and the following March was commissioned a major. By then, he had achieved such stature in military circles that his swearing-in ceremony was attended by five generals. That fall, in an effort to make his knowledge of soldiering somewhat commensurate with his rank, he took 6 weeks of concentrated basic training and proceeded straight from that to the Command and General Staff School, at Fort Leavenworth, Kans., thus becoming possibly the only soldier in American history to make an academic jump roughly the equivalent, in civilian circles, of skipping from kindergarten to the Institute for Advanced Study.

At the end of the war, JAVITS, by then a lieutenant colonel—he is now a colonel in the Chemical Reserve—decided not to devote himself exclusively to the law but to have a fling at politics. Through George Medalie, a friend of his and a prominent Republican of long standing, he became head of the research division at the campaign headquarters of Judge Jonah J. Goldstein, the Republican and Fusion nominee for mayor in 1945. JAVITS' duties consisted mainly of writing speeches, and he wrote a great many, all dealing soberly with significant issues and brimming with research. Goldstein never delivered any of them, having determined to pin his hopes—unsuccessfully, as it turned out—on winning recognition and votes as a gang buster. Nonetheless, the Republican leaders in the city were grateful to JAVITS for his efforts, and, scouting about for a suitable means of showing their appreciation, came up the following summer with the nomination for Congressman from the Twenty-first District. On the face of it, this reward appeared as unsubstantial and unappetizing as an empty ice cream cone, for the Twenty-first was a notoriously non-Republican district. The last previous Republican to be sent to Congress from there had won out in 1920, and then only after three successive defeats. In the 1944 election a Tammany man had swamped his Republican rival by 91,747 votes to 40,718. JAVITS, however, was delighted with the nomination and undismayed about his prospects. He moved at once from a midtown hotel where he had been staying to an apartment at Riverside Drive and One Hundred and Sixteenth Street, on the southern fringe of the Twenty-first, and shortly thereafter to more spacious quarters on the Drive at One Hundred and Fifty-first Street. (A Congressman doesn't have to live in his district, but it is considered expedient for him to do so.) He persuaded the Liberal Party to give him its official nod, too. As that party was then in its formative stage, a petition with 3,000 signatures was required to get JAVITS a Liberal Party line on the voting machines. JAVITS energetically collected a thousand signatures himself.

When JAVITS started his campaign, he was unknown to most of the residents of the Twenty-first District, and the Twenty-first District, even though he had lived in it briefly while in high school, was pretty much unknown to him. The candidate immediately sought to atone at least for his own ignorance by conducting extensive local research, in which he enlisted the services of, among others, Elmo Roper. JAVITS was rewarded with, and made public, such findings as that the Twenty-first contained 50 percent more high-school graduates and 25 percent more college graduates than the average for New York City's 23 other congressional districts, and that within it were 6 homes for the aged, 81 churches, and a hundred delicatessens. JAVITS further revealed, presumably to bolster his prospective constituents' hopes about their life expectancies, that 61 funeral parlors in the district had gone out of business between 1940 and 1946, and that 3,500 births had occurred there in 1945, as against only 100 deaths. (He didn't bother to append a footnote to this last statistic explaining that the Harkness Pavilion, where numerous babies destined to live in other districts are born, is situated in the Twenty-first, but in politics there is rarely time for footnotes.) Crammed with pertinent facts and figures, JAVITS began to make himself a familiar sight, and sound, on upper Broadway and its environs. For a couple of months, he delivered half a dozen speeches a night, often from a white truck with a paralyzingly loud amplifier on it, which became known in the community as the Javits Dream Boat. He also dropped in at some eight hundred local retail establishments, none of them funeral parlors, where he buttonholed from 5 to 50 housewives a visit. Having ascertained that the district was an exceptionally literate one, he spent a mere $25 on cigars but put out $300 for pencils, which had his name inscribed on them and which he gave to anybody who would take one. All in all, the campaign cost around seventy-five hundred dollars (twenty-five hundred of which was JAVITS' own money), including such items as $106.08 for banners, $326.46 for posters, and $35.23 for lollipops that he and his cohorts passed out, principally to nonvoters. JAVITS smiled at, or gently patted the heads of, countless neighborhood children but, according to his recollection of those bustling days, did not kiss a single one. "People don't want you to kiss their babies," he said later. "It is insanitary."

JAVITS got a couple of lucky breaks in 1946. For one thing, the Democrats selected an uninspiring candidate to run against him. For another, the non-JAVITS vote was split when the American Labor Party put up a man of its own. On top of that, JAVITS identified himself, to the disgust of his opponents, as a highly unorthodox kind of Republican, coming out in favor of the Office of Price Administration and against the National Association of Manufacturers, and declining to give more than lukewarm assistance to the concurrent campaign for reelection being waged by Governor Dewey. (JAVITS' relationship with his State's reigning Republican has never been exactly cozy.) It is perhaps not quite true that the emergence of JAVITS in the Twenty-first District was comparable, as one of his more rhapsodic admirers has claimed, to a flower's suddenly blooming in a cesspool, but in any event he won by 6,000 votes over his nearest rival, notwithstanding the fact that, owing to a slip-up on the part of the Board of Elections, the name of the Republican candidate for Congress in the Twenty-second District erroneously appeared in place of JAVITS' on one voting machine in the Twenty-first.

Soon after taking his seat in Congress, in January 1947, JAVITS established himself as a maverick in the Republican herd that then constituted the legislative majority. During the Eightieth Congress, for example, when the Republican leaders in the House advocated easing up on rent controls, JAVITS voted to strengthen them. It pains some of the old-guard Republicans to see a man dressed in their colors behave every now and then, as JAVITS does, like one of the opposition. "Why are you always against us?" a Republican legislator once asked him sorrowfully at a party caucus. Actually, JAVITS is not always against the Republicans, but when he is with them, it is often only to vote on routine legislation. In the Eightieth Congress, he sided with the majority of his fellow-Republicans about 60 percent of the time; in the Eighty-first he has been with them only 25 percent of the time—by far the most heretical record of any of the Republican delegation from New York State. Tris Coffin, a Washington correspondent, has referred to him as "the cross of the GOP," and a member of the Democratic bloc in the House said cheerfully, not long ago, "We thank God for JAVITS, because in a crucial situation we can almost always count on him for another vote." JAVITS professes to be hurt both by the Democrats' thus taking his vote for granted and by the Republicans' viewing him as a distant and eccentric cousin. He considers himself a perfectly bona fide Republican, in the tradition of Theodore Roosevelt, Fiorello LaGuardia, and, regardless of JAVIT's apostasy in 1940, Wendell Willkie.

JAVITS is not the kind of legislator who gets along easily with clubhouse politicians. He prefers dry Martinis to straight bourbon and has spoken up on the floor of the House in favor of art, throwing in learned references to such esoteric figures as Rembrandt and Grandma Moses. The clubhouse boys, while respecting his possession of the basic political asset, the ability to win elections, are leery of such carryings-on and of the intensity of his preoccupation with serious issues. They cannot comprehend a man who, 3 years before the scheduled end of the European recovery program, will make, as JAVITS did last year, a 20-minute speech in Congress outlining a plan he has conceived all by himself for a post-ERP plan. "Jack don't fall into the category of what the mob calls the regular-guy category," one high-placed old-time Republican politician in New York recently said. "He's too polished and dignified. Why, I went to a party at his house once and he had artists and scientists there—people like that." JAVITS hopes to stick with politics, and since being a Representative is an uncertain occupation—involving running for office every 2 years—he would like to extend his theater of operations. He had hopes of doing so by becoming the Fusion candidate for mayor last year. When Newbold Morris got the designation instead, JAVITS sportingly agreed to serve as chairman of his campaign committee, undoubtedly figuring that the position would help him to get better acquainted with the mob and perhaps even in time to be accepted as a regular guy.

In 1948, running for reelection to Congress, again with both Republican and Liberal blessing, JAVITS had a harder time retaining his seat than he had had getting it. The Democrats, recalling how badly they had fared 2 years earlier in a three-cornered race, joined the American Labor Party in putting up Paul O'Dwyer, who not only proved to be a forceful candidate in his own right but had the advantage of

being the Mayor's brother. To meet the challenge of this formidable adversary, JAVITS campaigned even more earnestly than he had in 1946. He had innumerable persuasive brochures printed, among them one advising voters that the difference between a JAVITS defeat and a JAVITS victory would be the difference between a $50 grocery bill and a $10 one, as well as the difference between a tepee in Central Park and a home with a wood-burning fireplace and a footstool. He went to such trouble to make a special appeal to every conceivable voting group that he even imported a testimonial from George Mardikian, a San Francisco restaurant man with high standing in Armenian-American circles, and had copies of it printed in Armenian for distribution among the few dozen voters in the Twenty-first District who could read that language. For voters whose reading was confined to comic books, JAVITS got one up. The climax showed its hero, Congressman JAVITS, bravely disarming and soothing an enraged veteran who, on the brink of being tossed out of his home, had threatened to shoot a marshal trying to enforce the eviction order and was holding the entire neighborhood at bay. (The incident related in the comic book was not based on fact, but, as one of Javits' campaign workers noted afterward, what incidents in comic books are?) JAVITS' opposition aimed a barrage of equally spirited literature at him. The American Labor Party was particularly active, claiming that he was a crony of Governor Dewey's, stressing his having hobnobbed with bankers, and calling him "a Big Business Representative, a demagogue who poses as a liberal to deceive an independent, progressive community." The real JAVITS, withstanding this stream of ammunition as stanchly as the comic-book JAVITS had risked the fire of the distraught veteran, squeezed out a victory over O'Dwyer by less than 2,000 votes.

What with elections to the House coming up every 2 years, its Members who hope to stay in it generally make a point of keeping themselves, or their names, on display as much as possible in their home districts. JAVITS worries so much about his legislative responsibilities (he has admitted to having once spent a sleepless night brooding about how he should vote the next day on a single amendment) that he isn't able to participate personally as much as he would like to in community affairs in northern Manhattan, but he is omnipresent there in spirit. In his name, for instance, residents of the the Twenty-first are offered free advice on rent problems by a dozen politically minded lawyers who take turns giving counsel at five clubhouses—four Republican and one Liberal—in the Twenty-first, a service that nearly 5,000 of JAVITS' constituents have availed themselves of. His name, furthermore, receives wide institutional circulation. He is a trustee of the Jewish Memorial Hospital, a director of the Manhattan Civic Club, an honorary director of the Inwood Community Center, an overseer of the Jewish Theological Seminary, an honorary adviser of the Gold Star Window Committee of the Temple of the Covenant, and a member of the advisory board of Aufbau, a German-English weekly that has some 20,000 readers in the district and in whose advertising columns he has had himself extolled during his campaigns as "dein Kandidat." His most enterprising scheme for keeping himself firmly established in the consciousness of his constituents has been to send a multigraphed letter twice annually to every one of the 90,000 heads of families in the district. In anticipation of this semiannual event, JAVITS makes a long speech on the floor of the House, summarizing his legislative accomplishments during the previous half year. Then, after the speech has appeared in the CONGRESSIONAL RECORD, he buys reprints of it, to send out with his letter, at the bargain rate of a third of a cent apiece. Even so, and even though he enjoys the use of the congressional frank and therefore doesn't have to pay postage on this sort of correspondence, it costs him nearly $2,000—mostly for having envelopes addressed—every time he thus unburdens himself.

JAVITS always closes his reports home by urging his constituents not to hesitate to call on him or write to him any time they are so minded. Many of them don't have to be urged. He receives between 50 and 100 letters daily, and is extremely careful about acknowledging, or having some member of his staff acknowledge, all of them, except those written by crackpots and nonconstituents. As a lawmaker of a Nation whose law is often word in distant lands, he receives in his mail a regular sprinkling of communications from Egypt, Argentina, Ireland, Turkey, Yugoslavia, Korea, Bulgaria, Denmark, and other regions outside the Twenty-first Congressional District. He is also bombarded with ponderous tomes bearing the imprimatur of such domestic groups as the National Grain Trade Council, the American Near East Society, and the Chiefs' Council of the Tonawanda Band of the Seneca Indians. Many organizations with axes to grind put all Congressmen on their mailing lists and keep them there the year around; others seek out the legislative eye, or ear, only when working toward some particular end. On the whole, JAVITS has been less pestered by spokesmen for special-interest groups than Congressmen are often thought to be. "No lobbyist ever offered to take me to dinner, or to the theater, or get me a girl, or anything," he said the other day. "I guess I have the reputation of being unapproachable and pretty busy, and well enough off to buy my own dinner. When I first came to Washington, the lobbyists ignored me because I was considered too unimportant to be worth cultivating. Now that I am worth the effort, the people know where I stand on things, practically the only lobbyists who don't pass me up are those who represent idealistic causes, and they can't afford to take me to dinner. I usually end up by having to take them to dinner."

JAVITS is habitually polite to all representatives of groups who, whether over the dinner table or merely in an exchange of correspondence, manage to engage his attention, since he is well aware how foolish it would be for a man in his position needlessly to antagonize the advocates of any point of view held by a plural number of voters. He is polite even to nonvoters. A while ago, along with his colleagues, he was subjected to a slew of communications from residents of the District of Columbia who, whipped into action by the Washington Times-Herald, were urging the defeat of legislation providing that stray dogs in that city might be taken from the municipal pound and used in medical research. JAVITS, who has a high regard for medical research, would undoubtedly have been on the affirmative side of the matter if it had come to a vote, which it didn't, but he saw no point in putting himself on record any sooner than he had to, and in reply to the dog-lovers he sent out an artfully equivocal form letter that read, "Dear Friend: Thank you for your communication with respect to humaneness to our good friend, the dog. You may be sure that I will have your views very much in mind as the bills affecting the subject come before us here."

Only a fraction of JAVITS' mail from home contains expressions of sentiment on national issues. Most of it consists of appeals for help from people who, finding themselves in real or fancied difficulties, have hit upon the notion of writing to their Congressman about them. A sampling of JAVITS' correspondence a while back unearthed a letter from a man who wanted the Government to pay him $15,000 compensation for the oversight of an Army surgeon who had left a sponge in his stomach during an operation; one from a widower who wanted to find out if his wife had owned any war bonds that he didn't know about; one from a laborer who had worked on the Panama Canal from 1904 to 1920 and wanted to collect some money he thought he had coming to him through a retroactive increase in pay authorized by a 1944 act of Congress; one from a manufacturer of concrete window frames who wanted the Federal Housing Administration to show an interest in his product; one from a mail carrier whose feet hurt and who wanted a transfer to the more sedentary position of postal clerk; one from an applicant for a civil-service rating who wanted an investigation made of the fact that he had been allowed only an hour and a half to take a 2-hour exam; and one from a gentleman who wanted a Spanish-American War pension for himself and, for his three sons a commission in the Regular Army, an appointment to the Naval Academy, and a page's job in the House. Even if JAVITS had been eager to assist the prospective pageboy, he couldn't have done much about it. As far as patronage is concerned, his personal pickings have been very slim. A Republican Congressman, and especially a junior one, is unlikely these days to get more than a whiff of the pork barrel, much less to have a chance to dip deep into it. Aside from the six Government-paid posts on his own staff, JAVITS has had only a couple of plums to dispense, neither of them notably juicy. Both were $2,400-a-year jobs—a guard's and an elevator operator's—on the House staff.

Constituents who want JAVITS to do something for them frequently preface their requests with some such generality as "Since I know that you have but to wave a wand to have things happen, I wonder if you—" The assumption is false. In only about 25 percent of the cases in which JAVITS is invited to wave a wand is he able to do anything like what he has been asked to do, a circumstance that is carefully taken account of in the conduct of his office. Not long ago, in the course of transferring a young lady from his personal staff to a job in his law firm, he explained to her apologetically that he was shifting her not because she lacked industry or efficiency but simply because she lacked sufficient warmth for the job; it was imperative for a man in his position, he went on, to have assistants who could give comfort and sympathy to the 75 percent of his constituents for whom no more substantial service could be rendered. Her successor is a young lady whose "Sorry, no dice" is as gentle and soothing as a lullaby.

Despite his inability to make the dreams of 75 percent of his constituents come true, JAVITS is diligent about going through the motions of pleading their causes, however lost. When the Federal Government is involved, he or one of his staff dutifully gets in touch with the agency concerned, and since all appropriations bills originate in the House, the Congressman's avowal of interest almost always results in swift, though seldom favorable, action. If it is a New York State matter—as in the case of a man who complained that his son had been discriminated against in an examination for State prison guards, or in the case of a deposed notary public who was anxious to have his commission reinstated—JAVITS usually turns it over to a State assemblyman from his district with whom he is on cordial terms, and who, of course, gets to vote on appropriations for State agencies. Then there are constituents who want nothing in particular of the Federal or the State Government but, feeling that a congressional blessing is useful anywhere, beseech JAVITS to furnish them with letters of recommenda-

tion for jobs in private industry or with character references to supplement their children's applications for admission to colleges. And, finally, there are those who ask for tickets to the Army-Navy football game, to which, they have heard correctly, JAVITS is allotted 16 seats a year, 8 on each side of the field. JAVITS gets so many requests for these from powerful political associates—to say nothing of ordinary constituents, who control only a single vote—that since becoming a Congressman he has attended no Army-Navy game himself.

For all services rendered, and comfort and sympathy bestowed, JAVITS expects no special thanks from his constituents, except, perhaps, votes the next time he may need them. Now and then, however, a constituent who knows that JAVITS is still a partner, though a largely inactive one, in Javits & Javits offers to throw a bit of business his way. JAVITS is at liberty to accept such a token of gratitude unless it is litigation involving the Federal Government, in which he may refer his would-be benefactor to someone else in the firm but may not touch the case himself. Just as his political life affects his professional life, so does it affect his home life. His wife cannot switch from one neighborhood grocer to another, for instance, without explaining at great and mollifying length her reason for making the change; grocers, after all, are voters.

JAVITS has been married twice, the first time, in 1933, to a daughter of one of the Ringling brothers. They were divorced 3 years afterward. In 1947, he married Marion Ann Borris, a young lady 20 years his junior. They have two children, a boy and a girl. The boy, named Joshua, after the late Rabbi Joshua Loth Liebman, who officiated at the Javitses' wedding, was born the day before the current session of Congress convened. The birth of the girl, named Joy, occurred in September 1948, on a day, as it happened, when JAVITS had scheduled a political tea at his home for fifty ladies from his district who were working to get him reelected. Mr. Javits, exhibiting in fine measure the patience required of the wives of Congressmen, played hostess most of the afternoon and had her baby that night. The Javitses met at Fusion Campaign Headquarters in New York in the fall of 1945. The then Miss Borris, a native of Detroit who wanted to be an actress, had taken a campaign job during a lull in her theatrical career. They were married 2 years later, in spite of the fact that one night, early in 1947, when JAVITS had asked Miss Borris out to dinner she had to compete for his attention with a delegation of Greeks who were trying to persuade him to plump for increased aid to their country.

The Javitses have two homes—a three-room apartment in Washington, on the edge of Georgetown, and a seven-room apartment in New York, at 450 Riverside Drive. Their home here is just a few blocks west of that of JAVITS' most illustrious constituent, Dwight D. Eisenhower. JAVITS is delighted to be the general's representative. When Eisenhower ascended to the throne of Columbia University and to residence on Morningside Drive, the Congressman took note of the honor that had been conferred on his district by saying on the floor of the House, "We will try to make him comfortable in the Twenty-first and we will try to make him very happy. The General's view of the Hudson River and the Palisades, which is truly magnificent as seen from our district, will, we believe, make him feel that New York can be very beautiful, homelike, and a real rest from the labors of war while he undertakes the arts of peace." A friend who had read this speech of welcome visited JAVITS at home and, after enjoying the magnificent view of the Hudson and the Palisades from his window, voiced his doubt that Eisenhower could see either of them from Morningside Drive. "Don't quibble," said JAVITS. "The General can see them from his office anyway." The friend, a real quibbler, later encountered one of Eisenhower's aides and asked about the view of the Hudson and the Palisades from the office. "Can't see either one from there," said the aide. "There are too damn many buildings in the way."

Every Saturday, barring acts of God or Congress, JAVITS holds open court for his constituents in his law offices, to 630 Fifth Avenue, in Rockefeller Center. Congressmen are granted free office space, when it is available, in Federal buildings within their districts, and may take advantage of their prerogative, but the only eligible buildings in the Twenty-first are a couple of overcrowded post offices. JAVITS estimates that it would cost him at least $5,000 a year to maintain an office in his district, and since the law office is already set up, he uses that. On a normal Saturday, he may have around 20 appointments with constituents, and, inasmuch as they often show up in delegations, may receive as many as 50 or a hundred of them. It is a fairly simple matter for any constituent, or group of constituents, to get an appointment with him; few businessmen are as readily accessible to customers as most Congressmen are to voters from their districts.

One recent Saturday, the first of JAVITS' callers was a colored woman employed by a Federal agency, who informed him that her supervisor, in making recommendations for promotions, had been discriminating against her for 8 years because she was a Negro. JAVITS said he would have an investigation instituted at once. Then came a Puerto Rican, who hoped JAVITS could arrange to have a disability pension he was drawing as a result of the Second World War paid to him in a lump sum, rather than in the monthly installments he had been getting, so that he could start a small business. JAVITS said that he would inquire into the possibilities but that he was doubtful. Then came a naturalized German Jew, who carried on alternately and interminably about the revivification of nazism in Germany and a plan he had for mixing alcohol and gasoline to take the place of fuel oil. JAVITS listened to him for 20 minutes, and finally said, "I understand, I understand, but what do you want me to do?" It turned out the man didn't have anything specific in mind; he just wanted to talk to somebody. Then came two men who were planning to make a nonpartisan survey of the state of civil rights in a portion of the West Side of Manhattan and hoped JAVITS would be a cochairman, along with Representative FRANKLIN D. ROOSEVELT, Jr., whose district, the Twentieth, was also involved. JAVITS said he'd be glad to, and asked what ground they proposed to survey. From Fifty-ninth Street to One Hundred and Twenty-fifth, they told him, and JAVITS possibly having in mind the fact that the only part of his district to be covered would be a stretch from One Hundred and Twenty-fifth down to One Hundred and Fourteenth Street, urged them to extend their northern limit to One Hundred and Thirty-fifth. "You wouldn't want to cut Manhattanville in half, would you?" he asked sternly. They agreed that that would be an ungallant thing to do, and departed. Then came a businessman, who during the Second World War had lost a consignment of brush bristles in Switzerland. He said the Swiss Government had confiscated them and had paid him only a fraction of their worth. As a German refugee to this country and technically an enemy alien he had been helpless at the time, but now he was a naturalized American citizen, and would JAVITS please prevail upon the State Department to intercede with the Swiss, so he could be paid in full?

"I'll do what I can," JAVITS told him. "But you must remember that I can't force the Federal Government to do anything for you. I'm only a small part of the Government. All I can do is use my influence."

"That would be fine," said his visitor. "And I can't begin to tell you how much I appreciate your listening to my private troubles. I'm sorry to have taken up so much of your valuable time."

"Don't be silly," said JAVITS. "That's a Congressman's job. That's my duty."

Pioneers Are in Demand

EXTENSION OF REMARKS
OF
HON. ALBERT THOMAS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 6, 1950

Mr. THOMAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Glenn H. McCarthy, of Texas, at the University of Wisconsin:

Mr. Chairman, distinguished guests, members of the Wisconsin Men's Association, ladies and gentlemen, I understand this occasion is to honor the men of Wisconsin who have made some contribution to their university community. I congratulate both this association and the men so honored. I feel humble in the midst of such a magnificent group. Yet I am without words to adequately express my pride in being selected for this address.

When I was invited to come to Wisconsin for this occasion, I forsaw another opportunity for a bit of Texas bragging. The more I learned of your State and this great university, however, the more convinced I became that such an attempt would be ridiculous. In fact, you have turned the tables on me. After my visit here today I intend to go home and do some Wisconsin bragging.

Down in Texas we are rather proud when we hear patriots refer to our State as the last stronghold of democracy. Yet it leaves us with a feeling of responsibility and loneliness. Looking over this city, this university, and this wonderful audience, I feel able to report back to the great Republic of Texas that we have at least one ally in Wisconsin, in our determination to fight against foreign isms.

I trust you have heard that we McCarthy's, be we Democrats or Republicans, hold little brief for things un-American.

When your chairman invited me to speak, he told my public relations man it was because I was a fighter. Until then I had hoped that that part of my reputation had been localized to Houston, or at least Texas.

I must admit that my armor is a bit soaked with foreign oil imports now and they tried to slow down the fight in me. But in the process I have picked up a few new and fancy techniques.

Seriously, ladies and gentlemen, there is an insidious story going around this country today. It is the myth that opportunity is a thing of the past—that the last frontier has been reached. As an American, I resent it.

That claim is the most absurd lie in this world of lies we live in today. The truth is that never in the history of mankind has there been more opportunity. A hundred frontiers exist today where one existed at the turn of the century. Opportunity beckons every individual who is an individual. It cries for men who are men. Once men had to seek opportunity. Today opportunity seeks men.

Pioneers are in demand. Men willing to put forth blood, sweat, and tears are scarce. The trouble is that men are blind to the real facts. They haven't the sight to see them. They are listening to the siren call of paternalism and the impractical promises of socialism. They are spending their energies looking for something for nothing, mostly from their government. They forget that no government ever gave anything to its people that it didn't first take away from the people.

As in the pioneer days of this Nation, men need courage, imagination, hard work, and brains to make the most of the opportunity that is here. There must be a revival of the spirit of the pioneer. With that there is no limit to the progress we can make.

For man to follow the progress available to him he must be of an inventive, challenging, inquiring mind. Today men listen to propaganda from every side and never once question it. No pioneer ever did the normal things. He kicked out of the routine and plunged ahead on his own.

The pioneering spirit is still around. You see it in men fighting for an education. It is recorded in the success stories of the day. Those who want opportunity bad enough to make the necessary sacrifices will find it in America.

The political philosophy laid down by the founding fathers of America unleashed the creative energies of millions of men and women. Under the Old World method there was no freedom of thought or action. That is still true in most of the world outside of the United States today.

Americans have more of this world's goods than all of the rest of the 2,000,000,000 people on earth today. With a scant 7 percent of the world population we have created more wealth than the others combined because we are free to act as individuals.

The answer to this is that man, in America, has been given the incentive to progress. Incentive is the father of initiative. Incentive to live in peace, to live as free men and women, to worship as we choose, and to profit from our individual efforts. These are the things that give America the drive that has led us to the leadership of the world.

Ladies and gentlemen, what I am about to say tonight may seem strange to you. But I suppose that you expected a strange man in a strange country to bring you a new message.

I have spoken of opportunity. I believe it presupposes certain responsibilities, one of which is to defend it. I see a danger to our Nation today. It is a danger not only to the initiative and the opportunity we enjoy as Americans, it is a threat to the entire domestic economy of the United States.

You live in a part of the country where there is no oil industry, or at least no oil production. You cannot be expected to recognize the menace of foreign oil imports at a time when exports have been drastically reduced.

It will be difficult for you to understand my contention that the American economy is basically an oil economy, unless I explain myself.

I have spoken of the tremendous progress this country has made in less than 200 years. Let me remind you that the greater part of the industrial progress of this country has been made in the last 50 years. It is my contention that without the oil industry that would have been unlikely. We are living in the automobile age and the air age. Without our modern oil industry, brought about by independent wildcatters, there would have been no such ages. Spindle Top, a salt dome along the Gulf coast of Texas, gave birth to the modern oil industry. It would have been either there or somewhere else. It had to come. But it took American initiative and incentive to bring it about. That discovery not only made the automobile possible. It made it necessary. Prior to Spindle Top, the oil industry was merely an illumination and lubrication business.

With that discovery, man's imagination in this country was fired anew. In its wake came hundreds of new oil discoveries, most of them by wildcatters. In its wake came new demands on the steel industry, the transportation industry, and the automobile industry was born. New interest in aviation was inspired. New energies were unleashed under our freedom. Here was created an industry that America could call its own—men of vision and courage, unafraid of hard work, developed a know-how that until today no other nation on earth possesses. That know-how is how we search for, drill, and produce oil wells. It is our own American industry. The spirit of that industry has permeated every other industry in this land today. Petroleum has aided magnificently in winning two world wars. It is the greatest bulwark we have standing between us and the threat of world communism today.

Yet, at this very hour six oil companies out of more than 35,000 operating in this country are pursuing a policy which threatens the life of the entire domestic oil industry, if not our national economy itself.

Those six oil companies are importing almost a million barrels of foreign petroleum and petroleum products into this country every day.

Independent producers of oil find most of the new reserves. Without new reserves America would some day be confronted with a serious oil shortage. With independents active, none of us will ever see the day when this country is without oil for peace or war. Wildcatters keep searching when the major executives decide it is too risky. They rush in where angels fear to tread. For every Wildcatters keep searching when the major dry holes. They are like the slot machine players. You hear of only those who hit the jackpots. Those who feed the kitty without any return are anonymous. Even the jackpot winners usually sit around and put back all of their winnings, plus what they came with. It is the occasional wise player who walks away with a little profit. Carrying the comparison a little further, when the odds are set highest, the play is the hottest. Reduce the odds and the play cools off. Eliminate the chance to win and only the idlers seeking amusement stay around.

No major oil company finds much new oil in this country. Yet this country constantly depends on new discoveries. It is necessary for the domestic oil industry to remain strong, virile, and prosperous if the independent is not to be destroyed.

My objection to this foreign import policy is that we are importing 26 percent more oil than we imported in 1948, while we are exporting 23 percent less than we exported the same year. While I have no objection to normal imports, I think they should be balanced with exports. I am not urging legislation to restrict imports, I am hoping the President of the United States will call these six or seven company heads to his office and appeal to their patriotism and their business statesmanship.

Two years ago the Commerce Department had the power to curtail exports 20 percent without legislation. Today we can curtail imports without legislation. Legislation will come as surely as the importers continue their unprincipled practice. A practice which benefits 6 or 7 out of 35,000 operators in this country.

And that practice is not hurting the domestic oil industry alone. The coal miners and operators, the railway workers and railroads which transport our oil and coal also suffer. American labor in all fields has suffered because of this selfish, unwise policy. Because of foreign oil imports alone, one coal mine in Pennsylvania closed the other day throwing 1,200 miners out of work permanently.

It is not often that I am prone to single out any one man or any one department of our Government, but in this case I will. I do so because in the Interior Department the independent oilman seems to have a sympathetic friend. And in the Senate of the United States, as well as the House of Representatives, he has many champions. But I would like to answer a few remarks made recently by the Assistant Secretary of State for Economic Affairs.

This State Department spokesman, Mr. Willard L. Thorp, claimed that he was stating the administration's policy on foreign oil imports. It is my understanding, however, that he might not have reflected exactly that. Although he pointedly denied it in advance in his article, he demonstrated very little regard for the domestic oil industry. He did admit his interest in foreign oil. Your Senator McCARTHY says the State Department is full of subversives. I'm not in a position to argue that point. I will say that it is shot through with ignorance of our national economy, and I think that is as bad.

I have contended that war with Russia is inevitable because democracy and communism cannot live under the same sun. The Communists refuse to let us live in peace. I believe that as soon as we have developed oil along the Persian Gulf sufficiently to power the Russian planes and tanks, along with that oil they already have, we will see the outbreak of war. Mr. Thorp gives me a new fear. I gather from his statement that war might even come over a fight for the $18,000,000,000 of American money invested in that area, as well as the $260,000,000,000 in potential profits. It is bad enough for a peace-loving country to be forced into a war to defend itself against aggression and to protect our way of life. It is a much worse thing to be forced into a war to defend foreign investments that should never have been made and billions in profits that will accrue to six or seven major oil corporations.

I am not suggesting that it happened, but merely hoping that there has been no commitment on the part of our State Department to protect those investments and profits. Mr. Thorp had a lot to say about the thousands of stockholders in the major importing companies. He thinks they are entitled to the profits to be gathered there. What will happen to their profits here?

I wonder if he was around when the Mexican Government arbitrarily expropriated the properties of American oil companies back in the middle thirties. That could happen in the Arabian area.

He was very careful to point out how much these oil companies were promoting the American way of life and free enterprise—more so, he said, than by any governmental actions. I know little of governmental actions in foreign countries. I do know these companies engage in the exploitation of foreign property by hiring natives at un-American slave wages. They make deals for land with the kings instead of common landowners. They pay tax pittances, if any at all, that are of no benefit to ordinary citizens. They produce wells at the frightful rate of 10,000 to 15,000 barrels a day. Then they bring their ill-gotten product back here to destroy a decent, economy-building industry like the American domestic oil industry. That may be the democratic way and free enterprise Mr. Thorp knows. It isn't the way I know them.

This State Department official contends that increased oil imports offer no threat to our domestic economy. I hold that the supplanting of domestic oil with foreign oil is not only hurting the domestic economy but that it threatens the life of the domestic oil-producing industry, which is

of prime importance in peace and vital to our freedom in war. Any serious weakening, actual or threatened, to an industry so vitally essential as the oil-producing industry is a matter acutely affecting our national security and our expanding peacetime economy.

What conclusion is to be drawn from these statements that the State Department backs a policy of continued heavy imports by these big companies? Either the Department is pursuing its policy regardless of the harmful effect of this domestic industry and the interests of our Nation, or that it has blinded itself to these effects.

Foreign oil, Mr. Thorp wrote, can be a great benefit to us in the next war. How? That is the question any man with common sense is bound to ask. I doubt that we could get the oil out of the wells in Venezuela But it is a definite fact, beyond the slightest question, that Russia would take over the Persian Gulf fields in the first hours of war. No military mind in the world questions this fact.

Had this Nation been dependent on foreign oil in the last two wars it would have lost both of them. It will be more dependent on domestic oil in the next war. Because of the submarine warfare in World War II, let me remind you that our tankers could not move safely from Gulf of Mexico ports to the eastern seaboard. We were forced to build a tremendous pipeline, known as the Big Inch, to transport 80 percent of our oil to points in the East. As the war ended it had become recognized that a pipeline to the west coast was equally essential.

Earlier I spoke of opportunity. I think there should be plenty for men with integrity, brains, and loyalty in our State Department.

Is oil a wartime essential to our national security? Who doesn't recall Patton's armies in the Battle of the Bulge when tanks and all motorized equipment was grounded for days while men fought for their lives? How short is the memory of the gentlemen of the State Department? In whom are they interested?

Before you get the idea that I am attacking others for what I would do myself had I the opportunity, I'd like to make one thing clear. I have had foreign oil opportunities. I have had them in the Middle East, in Mexico, in Canada, in Venezuela, and in the Argentine. This is a matter of principle with me. I avoided those offers for the very reason I am opposing foreign development with American dollars and American know-how today.

There may be a day when it will be reasonable for us to venture into foreign fields but that day is not on the horizon at present. It will be the day when we know we have heard the last roar of belligerent guns, and the day when we know such oil is necessary to preserve democracy and our free enterprise.

Ladies and gentlemen, tonight we seek pioneers, pioneers in the shaping of American public opinion. I have said there are new opportunities and new frontiers. You will find the new frontiers at the four corners of the earth where our fighting men have gone in search of peace. They went forth to bring the fruits of our inventive and manufacturing genius to all mankind. They went out to defend our way of life on the one hand and on the other to create new frontiers of thought.

Today we see the iron curtain moving closer and closer to us. We know we have yet another fight on our hands. We hope the world can be made safe for democracy.

There must be an aroused and indignant public opinion. It is my purpose tonight to awaken you ladies and gentlemen and make you aroused and indignant.

I implore you to use your God-given rights as free men and women and give thought to the important problems of the day.

I thank you.

Unemployment Among Middle-Aged Workers

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 6, 1950

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

Congressman DANIEL J. FLOOD today in a statement to the Ways and Means Committee of the House of Representatives, considering the problems of unemployment with relation to the Social Security Act, stated:

"Mr. Chairman, one of the most serious problems within the over-all problem of unemployment is the amount of unemployment among the middle-aged workers who are considered 'bad pension risks.'

"This is not only a problem for private business but it is a problem demanding the alert and detailed attention of the various governmental agencies concerned with this type of economic difficulty. I feel that it is an extremely important and very delicate sociological problem which should not be associated with any unsound or destructive economic scheme attempting to repair a wheel within a wheel.

"I sit in my office in Wilkes-Barre every day that I am home and listen to the pleas of hundreds of able-bodied men without work. I feel that I am qualified especially to speak on this subject, Mr. Chairman, because of the fact that I represent a district which is one of the most acutely distressed areas in the Nation, insofar as male unemployment is concerned, of all ages.

"My interviews with these groups of men have brought to my attention the tragic case of the jobless man of 45, who is too young to retire, and too old to find a job.

"This may be a strange sermon for me to preach in view of the fact that in my district it is almost impossible to find a job for anybody, but I shall give this committee the benefit of my considerable experience with men of all age groups in their quest for employment.

"Certainly, the executives of the modern American business world should revamp and reexamine their hiring and firing policies and preach the gospel of intelligence into the ears of their personnel people. Today there is being built up a new scrap pile of human beings and this is a disgraceful and unnecessary economic waste.

"There is no doubt that advancing age is a handicap to any man looking for a job. And in these days of rapidly developing pension plans the middle-aged job seeker is looked upon as a bad pension risk largely because the bookkeeping people in the actuary's office are ready to complain that his age messes up their scheme in a plant where employees retire at a given age.

"I think the time is right for American business to tackle the problem itself to see whether or not the problem can be solved by American business ingenuity, but this much must follow, Mr. Chairman, that if American business refuses or fails on this matter, then the Government, whether you like it or not, must step in and see if a solution is possible.

"A new slogan should be injected into the whole field of employer-employee relationship; that is, that a man's age must not be held against him. Modern business thinking and employment rules should be examined to conform with the known physical and economic facts, that in this year of our Lord 1950 the middle-aged man is not ready for the scrap heap, physically or mentally.

"This will not prevent the hiring of younger men and should in no way interfere with such a program. With the increase of our population and the development of our economy generally, ways and means must be found for the development of American industry to absorb the abilities and experience of every man who wants to work."

Ireland Must Be United

EXTENSION OF REMARKS

OF

HON. ISIDORE DOLLINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 6, 1950

Mr. DOLLINGER. Mr. Speaker under leave granted me, I am including my statement that Ireland must be united, which is part of the record of proceedings before the Foreign Affairs Committee. My statement follows:

Mr. Chairman, I am pleased to have this opportunity to speak against the present partition of Ireland, and to ask that your committee give favorable consideration to the legislation now before you. I introduced House Resolution 529, which was referred to you. However, I am interested in the final result, and am in favor of any measure which would assist the people of Ireland to establish their complete independence.

We know that during the First World War, Great Britain gave a guaranty to Ireland that immediately after the war the people of Ireland could have a free election. When the election was held in 1918—the people in Ireland voted 4 to 1 for complete independence. Thereafter, England by threats and force, did all she could to cause the people to rescind their vote. When these attempts proved futile, she brazenly broke her promise and kept a stranglehold on the six northeastern counties—allowing Ireland to keep 26 counties in southern Ireland. For this breach of faith, there is no excuse.

The Irish people today are asking that a free election be held in all of Ireland to determine whether or not it shall be one united country. Ireland's right to take her place as an undivided nation in the world's family of nations is denied her because of England's tyranny and oppression. Ireland must be given the opportunity to settle, by a majority vote of her people, how she wishes to be governed. She must be given a chance to free herself from the rule of any foreign power.

We cannot forget the contributions of the Irish to our own Nation in its fight for freedom and democracy. They gave of their lives and efforts in our struggle for independence—and they have never failed to carry their share of the burdens of any nation when democracy was at stake. We owe it to the people of Ireland to assure them that we believe in independence for them too—and that we sincerely believe they should be allowed to govern themselves. We will prove our sincerity when we demand that the partition of Ireland must be removed. There is no question that a free plebiscite would result in a united Ireland. Then, Ireland would be enabled to join the Atlantic Pact, which in turn would be an advantage to Ireland, Great Britain, and the United States, from the standpoint of defense.

I urge your committee to help us fulfill our duty to Ireland, and to report favorably the necessary measure looking toward the end of Ireland's partition and aiding unification.

Labor Sees the Danger

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 6, 1950

Mr. DONDERO. Mr. Speaker, under leave granted by the House to extend my remarks in the CONGRESSIONAL RECORD, I include therein a statement or release by the International Brotherhood of Electrical Workers on the question of public power.

This organization realizes that if Government takes the place of private industry and private investment that their interests will be jeopardized. This organization of workers has taken the same position that I have maintained through the years and since my service in Congress in regard to public power.

Government controls the rivers and their potential power. For this reason, it is proper that the Federal Government should build the power dams or any other dam by which electric energy is generated as a byproduct.

My opposition has been and is now to the transmission and disposition of such power in direct competition with private investment and private enterprise, in many instances already serving the areas affected.

If the philosophy of public ownership is so desirable and is carried to other activities, we shall soon have a Government patterned after the Russian idea. I am bitterly opposed to it and every loyal American should be opposed to such a principle.

The statement included herewith should be read by every Member of Congress. It reflects sound American principles.

THE INTERNATIONAL EXECUTIVE COUNCIL OF THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS ENDORSES THE ACTION AND POLICY OF INTERNATIONAL PRESIDENT D. W. TRACY IN OPPOSING PUBLIC OWNERSHIP TREND IN THE ELECTRIC LIGHT AND POWER INDUSTRY

In the interests of the commonweal there is no more pressing need than provision for flood control, irrigation, navigation, and the prevention of soil erosion.

By reason of geography and the topography of the land such provision and prevention is necessarily and inescapably within the realm of Federal obligation.

In the fulfillment of such obligation our Federal Government properly conceived the idea of utilizing hydro power for the purpose of generating electricity as a byproduct of soil conservation and irrigation. The International Brotherhood of Electrical Workers, AFL, heartily endorsed and diligently supported the idea.

However, in the interval since the inauguration of this program there have been developed and instituted procedures engendered by a false concept of the fundamentals of Americanism.

The Rural Electrification Administration was brought into being for the purpose of facilitating the transmission of electricity into rural sections. Under the Government power program, however, the facilitating intent has been substituted for by a plan involving what could well be and assumes all the aspects of the first step in the evolution of governmental ownership of the generation, transmission, and sale of electricity to the individual consumers. Under this program the operations of the Rural Electrification Administration combined with the functioning of the Bureau of Reclamation, Department of the Interior, and the Army engineers, have extended the scope of the program to a point that threatens peril to legitimate free enterprise.

The scope of the program now embraces the generation of electricity by power other than that procured through irrigation and flood control, steam as an instance; the distribution of electric power and the sale of electric power in direct competition with privately owned electric utility companies.

The Rural Electrification Administration, through its financing of cooperatives, has proceeded to the extent of using public moneys supplied by the taxpayers for the building of electric transmission lines parallel to existing privately owned distribution systems. The progress of this procedure is such as to clearly indicate complete duplication of transmission facilities in competition that can only lead to extermination of private utility companies. Such complete extermination has been accomplished in the State of Tennessee and is rapidly approaching completion in the State of South Carolina and is making rapid progress in the State of Nebraska.

In pursuing the above policy the Rural Electrification Administration has lowered the quality of work standards and ignored the rights of electrical workers to bargain collectively.

The resulting situation is anomalous indeed. In the first instance while the fundamental policies of the Federal Government champion the rights of labor to organize and bargain collectively, the Administration of the Rural Electrification completely ignores these rights of labor. In the second instance one branch of Government is engaged in the prosecution of trusts and combines on the premise that the operation of such trusts is inimical to the common weal. At the same time a department of the Government is nurturing a governmental monopoly of the generation, distribution, and sale of the greatest power man has mastered for industrial production, home necessities, and public convenience.

The International Brotherhood of Electrical Workers does not raise its voice on the subject of public power in behalf of private companies or their management. We have met the abuses of power by these companies in the past and have achieved substantial correction. Today 90 percent of the workers in the privately owned electric light and power industry are covered by union contracts and the IBEW itself represents more than 75 percent of the organized employees in this industry.

The International Brotherhood of Electrical Workers raises its voice on the subject of public power at this time in the interest of organized labor in the electric light and power industry. The subtle transformation of the Government program from the proper purposes of providing power as a byproduct of the initial program and of furnishing a "yardstick" for private utilities has reached the stage where it threatens free enterprise in this industry. We support free enterprise not only in our capacity as citizens of the United States but also in our capacity as representatives of organized labor. The increase in the area of Government and quasi-Government ownership operation in utilities necessarily carries with it a decrease in the area of freedom for labor as well as other groups.

Labor cherishes its right to bargain collectively for wages, hours, and working conditions. It fights the abrogation of such rights whether in the form of antilabor laws or in the more complicated form of transferring their status to employees of the Government without any rights to bargain collectively or otherwise exercise their economic strength.

The International Brotherhood of Electrical Workers has had drastic experience with the effect on its interests resulting from the transfer of utilities from private to public or quasi-public ownership.

In a recent case where the ownership of a utility was transferred to a municipality the IBEW was deprived of collective bargaining rights by an order of the court even though the majority of voters of the municipality had enacted an ordinance requiring their officials to bargain with the union.

Labor does not choose to have its welfare determined by the administrative orders of Government officials no matter how well-intentioned they may purport to be.

Under fascism, nazism, and communism the people work for the State. Under the policies inaugurated by the Rural Electrification Administration those employed on electrical properties work for the Government under the guise of cooperatives. It is a distinction without a difference.

That the International Brotherhood of Electrical Workers has been cognizant of these developments for some time was indicated by its expressed concern in 1948, when its international president, D. W. Tracy, in an address before the members of the Edison Electric Institute, in the course of his remarks said:

"I would not be talking heart to heart in a manner consistent with my expressed desire in my earlier remarks if I did not say: we need and must have more democracy in Government and more democracy in business with less Government interference in business and in labor. In an effort to prevent possible misunderstanding of my statement I emphasize the fact that the International Brotherhood of Electrical Workers endorses, advocates, and defends the profit system. Call it capitalism if you will but the fact remains the system is an element of Americanism because it is the economic system of our land and has contributed to the higher standard of living in this country which at once becomes the envy and the hope of common people in foreign lands."

The international executive council of the International Brotherhood of Electrical Workers today endorsed the action of International President Tracy and unanimously subscribed to this public release in defense of freedom of labor, in defense of freedom of legitimate enterprise, and in defense of freedom of cooperation between both to the benefit of the commonweal through safeguarding the elements of Americanism, against assault, by authoritarian or State power on the liberties that have identified America as the country where labor has an effective voice in the establishment of conditions of its employment.

Jefferson Davis

EXTENSION OF REMARKS
OF
HON. J. HARDIN PETERSON
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 6, 1950

Mr. PETERSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered before United Daughters of the Confederacy by Congressman ARTHUR WINSTEAD, United States Capitol, Statuary Hall, Saturday, June 3, 1950:

Madame Chairman, members of the United Daughters of the Confederacy, ladies and

gentlemen, our meeting here today is prompted by our desire to pay tribute to a great American, a citizen of Mississippi and the South and a leading figure of all time in this great Republic. Jefferson Davis, the first, last, and only president of the Confederacy, was no doubt misunderstood and criticized more by those who did not know the facts, or who cared nothing for the facts, than probably any other American. There were those who held Jefferson Davis responsible for the secession of the Southern States and also for the War Between the States, but the record does not so reveal. The record shows that he fought for the right of the States to secede under the Constitution, but never advocated that they do so. The record also shows that after the Southern States did secede he remained loyal to them because of his belief that they were acting according to their constitutional rights.

In an address delivered by Bishop A. Galloway at the University of Mississippi, June 3, 1908, he had this to say: "Mr. Davis had his limitations, and was not without his measure of human faults and frailties; but he also had extraordinary gifts and radiant virtues and a brilliant genius that rank him among the mightiest men of the centuries. He made mistakes, because he was mortal, and he excited antagonisms because his convictions were stronger than his tactful graces; but no one who knew him, and no dispassionate student of his history, ever doubted the sincerity of his great soul or the absolute integrity of his imperial purpose. Let us, on his anniversary day, learn some patriotic lessons from the life history of this greatest Mississippian. Jefferson Davis began his life well. He had a clean boyhood, with no tendency to vice or immorality. That was the universal testimony of neighbors, teachers, and fellow students. He grew up a stranger to deceit and a lover of the truth. He formed no evil habits that he had to correct, and forged upon himself no chains that he had to break. His nature was as transparent as the light that shone about him; his heart as open as the soft skies that bent in benediction over his country home; and his temper as sweet and cheery as the limpid stream that made music in its flow through the neighboring fields and forests."

Jefferson Davis had an accomplished war record in the defense of the United States. He served in many and varied capacities. As a Member of the Senate, in the opinion of many, he served at a time when no doubt the Senate was composed of more outstanding and able Senators than at any other time. With such men as John C. Calhoun, Daniel Webster, Henry Clay, Stephen A. Douglas, and many others, he was described at that time as "eloquent among the most eloquent in debate," and worthy to be the premier at any council table of American statesmen. The historian Prescott pronounced him "the most accomplished" Member of the body. Senator Henry Wilson of Massachusetts afterward spoke of him as "the clear-headed, practical, dominating Davis."

Jefferson Davis was sincerely and unfalteringly devoted to the doctrine of State sovereignty and all the practical questions which grew out of this doctrine. He held steadfastly to the fundamental fact that the Union was composed of separate, independent, sovereign States, and that all Federal power was delegated, specifically limited, and clearly defined. He never lost sight of the fact that the Articles of Confederation declared that "each State retain its sovereignty, freedom and independence, and every power, jurisdiction and right, which is not by this Confederation expressly delegated to the United States in Congress assembled," and that this principle was transferred intact to the Constitution itself. Jefferson Davis stood on the doctrine that one function of sovereignty was the right to withdraw from a compact, if occasion demanded. Quoting again from Bishop Galloway: "Jefferson Davis' farewell to the United States Senate, in which he had so long towered as a commanding figure, and where he had rendered his country such distinguished service, was one of the most dramatic and memorable scenes in the life of that historic Chamber. Mississippi, by solemn ordinance, and in the exercise of her sovereign right, had severed her relation with the Union, and he, as her representative, must make official announcement of the fact, surrender his high commission, and return home to await the further orders of his devoted people. It was a supreme—a fateful hour—in our country's history. The hush of death fell upon the Chamber when Jefferson Davis arose. The trusted leader, and authoritative voice of the South, was about to speak, and an anxious Nation was eager to hear. Every Senator was in his seat, Members of the House stood in every available place, and the galleries were thronged with those whose faces expressed the alternating hopes and fears of their patriotic hearts. The fate of a Nation seemed to hang upon that awful hour.

"Pale, sad of countenance, weak in body from patriotic grief and loss of sleep, evidently under the strain of sacred, suppressed emotion, and yet with the calmness of fixed determination and settled conviction, the majestic Senator of Mississippi stood hesitant for a moment in painful silence. The natural melancholy in his face had a deeper tinge as if the shadow of his country's sorrow had been cast upon it. His good wife, who witnessed the fateful scene and felt the oppressive burden that almost crushed the brave heart of her great husband, said that had he been bending over his bleeding father, needlessly slain by his countrymen, he could not have been more pathetic and inconsolable. At first there was a slight tremor in his speech, but as he proceeded his voice recovered its full, flutelike tones and rang through the Chamber with its oldtime clearness and confident strength. But there was no note of defiance, and he spoke no word of bitterness or reproach. He was listened to in profound silence. Hearts were too sad for words and hands too heavy for applause. Many eyes, unused to weeping, were dimmed with tears. And when he closed with these solemn words, there was a sense of unutterable sorrow in the entire assembly. 'Mr. President and Senators, having made the announcement which the occasion seemed to me to require, it only remains for me to bid you a final adieu.' "

Jefferson Davis returned to his home in Mississippi. He did not seek nor desire the leadership of the Confederacy, which was thrust upon him by unanimous vote, and from which the people who knew of his great and outstanding abilities and who trusted his leadership, refused to release him. He, therefore, felt constrained to accept the Presidency and the responsibilities of the office. The South felt that peace with two governments was better than a union of discordant States. Horace Greeley himself said: "If the cotton States shall decide that they can do better out of the Union than in it, we insist on letting them go in peace."

Aware of the possibility for war, the Southern States seceded without the least preparation for it. There were no guns, no establishments for their manufacture or repair, no soldiers or vessels had been provided in preparation for war, either offensive or defensive. The South's desire was to live in peace and friendship with their late confederates, and did all they possibly could to accomplish this end. We all know now that many sincere and outstanding leaders in our Nation, from both the North and South, earnestly sought some method by which their differences might be recognized and settled without conflict. Yet, because of agitators, radicals, and propaganda by unscrupulous persons, the dreadful conflict resulted. It was only when the Federal Fleet set out for Fort Sumter that the realization came to the South that war was upon them. We can all see now that had the truth been known and understood as to the intent and purpose of such leaders as Jefferson Davis, and other southern leaders, as well as some of the northern leaders who sought a peaceful solution, this tragic war would never have occurred.

Thus today every true American, from both North and South, should appreciate this great United States of ours and our form of Government, which we must retain. The southern boys have volunteered for service in the two wars of this generation as freely, if not more so, than have the boys in any section of the country. They have bravely fought in defense of the flag of the United States of America and for the protection of peace-loving people everywhere. Today, with the cold war raging, with communism spreading in every area of the world, with some in our own midst, it behooves each of us to be tolerant and understanding of each other's problems and to keep a united America. With atomic bombs, the possibility of H-bombs, and other modern methods of warfare, it is absolutely essential that we keep ourselves united and strong. It is sad indeed that in these crucial times we have some people who would stir up racial strife and prejudice and hatreds and divide our people in order to perpetuate themselves politically and for other selfish purposes. Many of us today believe in State sovereignty, in the constitutional processes of government, and that States can better regulate their own problems, in many cases, than can the Federal Government. We believe it essential that these principles be retained if our Nation is to stand.

We have understanding, appreciation, and cooperation in the Southern States today. We recognize our differences and our problems and we believe in solving such differences and problems in a peaceful and honorable way. We find agitators today as we found them in previous years, who would divide and conquer, who would stir up strife and turmoil. There are those who advocate the so-called civil rights program, including FEPC, with the might of the Federal Government to be used to enforce social change. Surely we oppose the efforts of these agitators who are trying to stir up trouble in our section of the country where we have lived peacefully as two races for these many years. There is not much difference in the opinions of honest people in the North and South who want to promote the welfare of all our people, work toward a better understanding and improve the economic conditions of the Negro in both sections. However, there are those of us who believe firmly that these problems can better be solved by local people, rather than by Federal legislation—much of which we of the Southern States believe to be unconstitutional.

It is indeed strange that the great mass of those who advocate such legislation as FEPC, and other measures directed toward the South, come from sections of the country where there is more discrimination than is practiced in the South. Sections, other than the South, have more subversive groups, more Communists, more agitators, more racial prejudice and discrimination than there is anywhere in the South. The South was one of the most poverty-stricken areas, after the War Between the States, that could be found anywhere, yet there has never been any place of communism in the South. We had no Marshall plan, we had no ECA, we had no financial support from the Federal Government, but in many cases we had Federal interference. Our forefathers had a will to do and a willingness to work and so built a great segment of this Nation. With brave hearts they worked. Men and

women, with common understanding and mutual agreement, labored together for the betterment of all the people. We feel that they worked well in spite of few tools with which to work, with little or no capital. These fine people of our beloved Southland have through the years developed a splendid area, an area of industrial progress and agricultural advancement. In the last 20 years we have made more progress than any section of the Nation.

Today, at a time when much of the Nation's energies and efforts are being used to hold back communism abroad and to weed communism out of Government at home, we do not have to worry about communism in the South.

Today, as in the days of Jefferson Davis, we are faced with problems caused by those who would destroy constitutional processes. We would not have armed conflict, but by every peaceful and constitutional means at hand, those of us in Congress, those in every walk of life must band ourselves together to oppose those who would destroy local self-government, those who would create an all-powerful national state, which, through the use of Federal force, would control the individual, destroy his initiative. Though such movements are offered in the name of liberty, it is the same thing that has led to the dictatorships abroad and would eventually destroy our great Nation at home. Many of us are making the fight against such programs. We are striving in every way to protect local self-government. We believe that if the American people can be made aware of these dangers, these problems can be solved and free people will continue to run their own affairs. Today, as we honor the great American, Jefferson Davis, and the many others who had a part in giving us in the South so great a heritage, may we reaffirm our faith in our beloved Southland and pledge anew allegiance to the principles upon which this, the greatest Nation on earth, was founded.

As Jefferson Davis said in the only book he ever wrote of that tragic period of our history: "It is needful that the truth, the whole truth, should be known so that crimination and recrimination may forever cease, and then on a basis of fraternity and faithful regard for the rights of the States there may be written on the arch of the Union 'Esto perpetua.'"

Anthracite Research Laboratory

REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 6, 1950

Mr. FLOOD. Mr. Speaker, as part of my program in the interest of the great anthracite coal industry and the vital area in which it is located, as well as in the interest of the general national welfare and security, I have, this day, introduced a bill to provide for the establishment and operation of an anthracite research laboratory at Wilkes-Barre, Pa.

This is the third in a series of bills I think necessary for the immediate aid, and for a long-range plan, to render assistance to a major segment of the Nation's economic life. The first of these bills was for the construction of an office building, garage and storage center at Wilkes-Barre, Pa.; for the field headquarters, in the anthracite area, of the Bureau of Mines of the Department of the Interior. The second bill in the program was introduced by me last week, and that was for the Government purchase and stockpiling of anthracite coal to guarantee production and employment. And now I present to the House this bill, which looks to the future and calls for a full-scale, all-out, effort on the part of the Government, science and the industry itself, to preserve and develop further, this great mineral gift which Almighty God, in his bounty to America, placed in the hills and valleys of Pennsylvania.

Mr. Speaker, I have insisted from the floor of this House, time and time again, that the Federal Government has a great burden of responsibility to the anthracite industry. Two weeks ago, in support of my plan for stockpiling, I said:

> To a great extent the major part of the economy of the Northeastern United States is dependent upon the mining of anthracite in the anthracite coal fields of Pennsylvania.

The problems of this vast mining industry are not alone those of the day-to-day production and marketing, but must include those of preservation, readjustments, improvements, new uses for anthracite—and we find that these factors call for legislative assistance.

It will be suggested that there is a newly built anthracite laboratory soon to be opened in the lower coal fields of Pennsylvania. For this gesture from the Government we are grateful. But make no mistake about it, this so-called laboratory is a mere gesture in the face of the magnitude of the economic problem which faces the Nation in this urgent drive to succor this basic fuel industry. In a small and limited way and within the narrow scope of its purpose, the recently built laboratory will render a distinct and welcome service.

But keeping in mind the vast potential to the national welfare inherent in the hard coal economy—mineral, manpower, financial, and defense—the present laboratory is a teakettle. The full brilliance, imagination, and skill of American science; the unlimited storehouse of American know-how must have the cooperation, encouragement, and substantial financial aid of the Government itself. The combination of these elements properly housed will, as always, do their full share in contributing to this phase of the over-all plan to revive and develop and enlarge the scope of anthracite in America's future abundance.

This is a major problem and calls for major action.

We must profit by the now well-known adage "Too little and too late."

The site designated in the bill is Wilkes-Barre, Pa., in the very heart of the anthracite-coal fields. Twice as many hard-coal miners—35,000—work in this locality as in any other part of the hard-coal fields—nearly half the total of the men still employed in anthracite-coal mining. The Anthracite Coal Institute is located in Wilkes-Barre. This body represents over 80 percent of the anthracite producers in the country. The main offices of the Glen Alden Coal Co. is in Wilkes-Barre. This company is the biggest single producer of anthracite in the world. The producers are eager to extend full cooperation of their skills, experience, mines, and so forth. Labor is anxious that this laboratory be built; that this work be under way at once. The 1,000,000 people who depend on the industry in this limited area, where the hard coal is found, look hopefully for this kind of practical help.

We do not want a dole. We do not want the United States Treasury to put a permanent prop under the anthracite. But we are in trouble, we do need emergency, temporary help and we ask for this great laboratory as assurance that we can work our way out of this problem into a brave new future for our area and our country as well as our families, our businesses, our self-respect, and our peace of mind and heart. We abhor communism. You will find none of this evil in the hard-coal country—did you ever stop to think of that? We do not want Government censorship or dictatorship—we do not want socialism—but we do want Uncle Sam to help us out of a tight spot and to help us see the right road for us to follow into the years ahead.

Research in anthracite—the development of assistance in matters pertaining to new and more effective methods of using anthracite, new fuel uses, nonfuel uses of anthracite—all of these things call for a complete and unreserved effort. This will not permit, not now, any halfway measures, a gesture here, a meeting there, a suggestion, an idea, good, bad, indifferent. No longer can we meet this issue halfheartedly.

Mr. Speaker, this is a desperate cause. This is no boys' game. We need a laboratory, not a coffee pot.

The facilities of Wilkes College and King's College, both institutions of high learning and repute, will be at hand with all the other advantages so necessary and peculiar in need to the purposes I envisage in the operation of this wonderful scientific giant.

Think what added courage this will give to the strong hearts of the hard coal peoples.

We are being assailed on all sides by competitive fuels. We do not protest mere competition, but when our competitors receive preferment we seek equal rights. Even now, with the limited effort the economic status of the industry will permit, a new world is opening for the use of anthracite. In addition to sponsoring research work on improved equipment for utilizing anthracite as a heating fuel, research will bring to the public a long list of nonfuel uses of anthracite. Some of the present new fuel uses of anthracite are graphically shown as acid-resisting vats, and so forth; activated carbon; battery plates; black concrete roads; carbon brushes; carbon electrodes; carbon refractories; carbon structural forms; carburizer; cement kilns; desludging agent in oil refining; diaphragm plates; electric furnace resisters; filter medium; flashlight batteries; foundry cupolas; foundry facing; heat transfer tubes; manufacture of briquets; manufacture of chemicals; manufacture of coke; manufacture of graphite; manufacture of producer gas; paper mill digester blocks; paint, pig-

ment; reduction of ores; sintering of ores; telephone granular carbon.

Figures are not available at the present time which would give in detail the size of the total anthracite nonfuel market. However, listed below are authoritative figures on the approximate annual tonnage involved in the major applications:

Cupola fuel	100,000
Filtering	7,000
Foundry facing	3,000
Manufacture of briquettes	926,000
Manufacture of chemicals	1,000
Gas producers	645,000
Manufacture of coke	256,000
Manufacture of electrodes	17,000
Ore sintering	257,000
Special uses	121,000
Total	2,333,000

The building of this great laboratory and the execution of this program embraces the whole broad vision of economics and technology. These things have been talked about for years. The various Government agencies have lamented the need for a plan, a program of action. Well, Mr. Speaker, here it is. I want to see all of these well-wishing Government departments get behind it.

The use of an abundant supply of energy-resource material has made the United States of America the great world power that it is today. I have, as I have mentioned, legislation now in the House dealing with the immediate fuel-production problems and the guaranty of the continued fuel supply if national defense measures ever curtail the use of oil and gas for such purposes, especially domestic heating.

A major readjustment in the fuel-energy economy of the country has been taking place during the past several decades. This proposed laboratory will devote a phase of its work to this important field.

New markets beyond the realm of the traditional fuel use must be discovered for anthracite. The potential has no boundary. We cannot afford to neglect to explore this territory further when such little experiment, as now accomplished, promises such rich opportunities.

Improved metallurgical processes and scarcities of important mineral resources all demand this great and dramatic effort.

Do not forget that anthracite coal was the original fuel in the open hearth furnaces in the production of steel. The return of anthracite to this vital use alone would justify this proposed laboratory and operating fund of $10,000,000. The fantastic discoveries of iron ore in South America will place this raw material for steel, when it arrives on our Atlantic seaboard, just a few miles from the anthracite coal fields of Pennsylvania. Imagine this boon to our economy, the harnessing of hard coal open hearth steel production units to the unlimited Venezuelan iron ore deposits in the coal fields of Pennsylvania! Such a venture in itself would justify a sum ten times $10,000,000—if only for the experiment—and yet we know it is a practical and economic and desirable fact, including the fact of geography. Liquid fuel from hard coal; gaseous uses from hard coal; here are other avenues down which experimentation must go—and at once.

No panacea for anthracite industrial ills exists or can be concocted. At once voices will rise against this proposal. "It's too late" some will say. Other "Gloomy Gus" cries will be heard. "Not worth the money" and "Coal is finished." We have no time for these "Sad Sacks." We are going places and we are in a hurry!

Mr. Speaker, anthracite being a fuel and a source of important basic materials entering into the industrial pattern of the country should be a relatively simple product to link successfully into the present and future national economy. Experience and research, but of necessity on the large scale required by this bill, should join to define and later enlarge the areas of opportunity for the industry.

There remains two further pieces of legislation in my program of short- and long-range aid to the anthracite industry and northeastern Pennsylvania. These bills will include provision for the benefit of areas suffering from chronic unemployment and a plan to develop the many phases of the general economy of the area and surrounding and adjacent areas. These steps will come in due course—as for now—the $10,000,000 anthracite laboratory program.

Mr. Speaker, to prevent the loss to the national economy of this vital natural resource and economic disaster to millions of our citizens and to promote the general welfare, I have introduced this bill.

Point 4 Program

EXTENSION OF REMARKS

OF

HON. JAY LeFEVRE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 6, 1950

Mr. LEFEVRE. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include an editorial taken from today's New York Times. Mr. Speaker, the President signed the bill yesterday for over $3,000,000,000 to continue the ECA program. I voted for this bill when it was before the House believing that we should finish the job we started in helping the European countries to become self-sufficient again. Having seen the damages brought on by the war in 1945, in many parts of Europe, I felt that we really had a moral obligation to give assistance to these countries.

I did not believe that the point 4 program should have been attached to the ECA bill. In approving of this feature, we are embarking on a new venture which it seemed to me deserved much further study. No one can deny that the objective of the point 4 program is a very worthy one. We all would like to see every nation in the world further developed and given a higher standard of living. My fear is that we are reaching out a little too far at a time when a good many countries are depending upon the solvency and strength of the United States. We know that $35,000,000, the amount in the ECA bill to carry out the point 4 program, is only a drop in the bucket. This is the first step.

The Committee on Ways and Means have worked long and hard in an effort to bring out a new tax bill. From all corners of our country we have been urged to reduce the emergency excise taxes. The committee has approved of some reductions but in an effort to satisfy the President to increase other taxes in order to offset the reduction in excise taxes, the committee has run into many snags. To my way of thinking, some of the suggestions have been very unfair. How could they approve of an increase in the taxing of surpluses of savings banks and building and loan associations and at the same time refuse to tax other mutual associations who are in competition with private enterprise. Yesterday a member of the committee brought to our attention a bill before the committee asking the American taxpayers to appropriate $85,000,000 to build roads in four countries or provinces which I doubt whether any of us had even heard of. Mr. Speaker, this is going too far. We must have unity among our own people and we certainly cannot get that by further burdening our taxpayers. We must give some real consideration to the welfare of our own industries so they in turn can give full employment to our own large segment of labor which needs protection in many lines at this time.

POINT 4 BEGINS

In signing the act authorizing the expenditure of $3,120,550,000 for foreign economic assistance during the coming fiscal year, President Truman emphasized yesterday that the major new step forward in it is represented by one of its smallest items—the $35,000,000 for the point 4 program. This is the bold new program for the development of underdeveloped areas proposed by Mr. Truman in his inaugural address more than 16 months ago, to provide a start for a great international cooperative enterprise for the achievement of a world of peace, plenty, and freedom. Because of the political circumstances under which it was launched it has only recently been approved by Congress over stubborn opposition. But now it is incorporated into law; Capus M. Waynick, Ambassador to Nicaragua, has been named as preliminary director of it, and assuming that the authorization will be followed by actual appropriation of the funds, the program is at last on its way.

Other programs in the economic aid act carry far larger authorizations. But these programs are temporary, designed to overcome the immediate ravages and dislocations of the war. The point 4 program is a long-range program designed not only to maintain the gains achieved by the other programs but also to provide an instrument for expanding world economy on the basis of private initiative and free enterprise as the best means of promoting democracy and freedom. In that sense it may be regarded, like the equally long-range North Atlantic Pact, as another potentially tremendous contribution to the defense of the free world against Russo-Communist imperialism.

The first steps contemplated under this program call for technical assistance to underdeveloped areas on an organized and

sustained basis in cooperation with the United Nations, individual governments, and private organizations already engaged in this work. But, as Mr. Truman again emphasizes, and as the United Nations subcommission on economic development agrees, the main support of the program will have to come from private capital invested on a business basis which will relieve governments of the burdens of the present recovery programs. This demands a new approach to the problem of foreign investment.

On the one hand, as the United Nations subcommission urges, underdeveloped countries, protected from colonial exploitation, will have to create an atmosphere congenial to such investments in order to attract private capital. On the other hand, private capital will have to forego excessive profits previously justified by political instability in the investment areas. The proposed partial Government guaranties for private capital against confiscation or freezing of profits, and specific treaties protecting such investments, are among the ways to achieve these ends. But in the long run the success of the program will depend on good faith and energy on both sides.

Censorship in Radio

EXTENSION OF REMARKS

OF

HON. STEPHEN M. YOUNG

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 6, 1950

Mr. YOUNG. Mr. Speaker, the attention of the Members of this House has previously been drawn to the proceedings of the Federal Communications Commission against radio stations KMPC, of Los Angeles; WGAR, of Cleveland; and WJR, of Detroit. Quite recently my distinguished colleague from New York, Congressman TAURIELLO, in an address on this floor, challenged the propriety of the Federal Communications Commission's using—as one of its star witnesses—a man by the name of Clete Roberts who, while on the witness stand, had the effrontery to classify all southern Italians as "not being worth a tinker's damn." At this point I want to wholeheartedly agree with my colleague in challenging the credibility of such a witness as Roberts, and I also want to compliment him for his staunch support of all individuals in this country of southern Italian extraction. No one can look into the faces of little Italian children and meet daily with Italians for more than 2 years without forming a high opinion of and strong affection for Italian people.

I served in a humble capacity with the Fifth Army in Italy throughout the bitter war years. I was in every part of Italy from Salerno to the Swiss border and in the great offensives of the Fifth Army and on the Anzio-Nettuno beachhead. I was in constant contact with the Italian people. I repudiate from my very soul as slanderous and untruthful the statement of this witness, Roberts.

Over and above the fact that when Congress created the Federal Communications Commission and gave it certain authority over radio and other methods of communication and wrote into the act a definite ban against any form of censorship—over and above this all-important fact—I am interested in this matter because there seems to be a definite plan on the part of certain Republican leaders to make this case a partisan issue. I have before me speeches which have been made on the floor of the Senate by such Republican leaders as the Senator from New Hampshire [Mr. BRIDGES], and the junior Senator from Michigan [Mr. FERGUSON]. These speeches clearly indicate to me that they are using this particular case as means of building up material for the coming November elections. I have every reason to believe that other Republican Senators will be speaking out in connection with this particular case.

The purpose of my remarks today, therefore, is to serve notice that I am opposed to any form of censorship with regard to any phase of our communications systems. I do not believe that the Republicans can succeed in taking credit for the preservation of this basic factor in our democracy, and I suggest that the Democratic Party could well take cognizance of what I believe is a well-advanced plan on the part of the Republicans to use the present case as political propaganda.

I have made it a point to look into this case and unhesitatingly state that if it is the plan of the Federal Communications Commission to penalize the owner of these stations because of his personal views, then the Federal Communications Commission is going far beyond any authority vested in it by Congress.

Freedom of speech, freedom of the press, and freedom of the air waves are basic privileges which have made this democracy of ours the great Nation it is. I can hope that the Federal Communications Commission will keep this in mind. It might be well, Mr. Speaker, if this particular case were looked into by Republicans and Democrats alike. I have here an editorial of the Washington Post under date of April 11 in connection with this matter and I add this editorial to my remarks as it deals with some very vital questions which have arisen as a result of this case against these three radio stations:

SHADOW OF THE CENSOR

A hearing of great importance to the radio industry and the public has recessed in California. It involves charges of bias and news-slanting against George A. Richards, the owner of KMPC in Los Angeles and two other powerful radio stations. Three former employees of Mr. Richards charge that he ordered them to distort and color the news so as to discredit some individuals and groups and to reflect credit upon others. Since the Federal Communications Commission has no powers of censorship, the issue boils down to whether or not the licensee is a fit person to operate radio facilities subject to regulation in the public interest.

Of course, no broadcaster is free to operate his station, using public facilities, solely as he may see fit. In the broad sense of the word he must serve the public interest or give way to someone else who can. But the public interest thus to be served necessarily has a very broad meaning. The FCC is not at liberty to put a broadcaster off the air because it may disagree with his viewpoint or because he may fall short of perfection in the management of his broadcasts. The history of broadcasting in this country shows relatively few abuses of the freedom that Congress has granted to the licensees in shaping their own programs. That record is not such as to warrant the disciplining of broadcasters by the back-door method of finding them unfit persons to operate a radio station, unless their activities fall hopelessly below the minimum standards of public service.

If the Silver Shirts, the Communist Party, the Ku Klux Klan, or a gang of outlaws were operating a broadcasting station to further their own interests, there would be no question about the necessity of withdrawing their license. But these are extreme cases. It would be a very different matter for the FCC to undertake to discipline a broadcaster because of the manner in which he "played" the news. If Mr. Richards should be put off the air for trying to slant the news against the persons and groups that are anathema to him, where would such a policy end? To be consistent the Commission would then have to withdraw the licenses of stations slanting the news against other political figures and organizations. We do not believe that the Commission has any standards that would be a safe guide in such a venture, and if it did the enforcement of such a policy would go seriously against the grain of our traditions.

Every decision as to what shall go on the air and how it shall be "played" is likely to be influenced by the broadcaster's or the newscaster's prejudices. The best radio stations and the best newspapers hold these prejudices in check struggling for fair and unbiased presentation of the facts. But it is common knowledge that slanted newspapers flourish, presumably because the people wish to read them. Would it be feasible for the Commission to put off the air a broadcaster catering to prejudices that were common with big metropolitan dailies in the same city? To be sure, the number of broadcasting channels is limited, but so are the opportunities for publication of a daily newspaper. We doubt that the FCC can apply stricter policies in the regulation of broadcasting than the press generally applies without taking upon itself an unmanageable problem of censorship. The public interest demands a wide range of freedom on the air as well as in the press. The danger of the FCC embarking on a policy of censorship seems to us much greater than the occasional abuse of freedom by licensees whose prejudices color their judgment.

Arming of the Arab States

EXTENSION OF REMARKS

OF

HON. HUGH J. ADDONIZIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 6, 1950

Mr. ADDONIZIO. Mr. Speaker, one of the most important problems confronting world peace today is the situation in the Near East with respect to the sale of arms to the Arab states by Great Britain.

The news last week that the free powers have accepted a joint responsibility for the maintenance of peace in the Near East is truly welcome. Their determination to put a stop to the arms race engendered by British shipments of heavy arms to certain of the Arab states will depend upon the determination with which these assurances are administered.

Certainly the large number of Members of the Congress who urged upon Secretary Acheson the three-power dis-

cussion which has apparently resulted in this agreement will continue their interest and deep concern with the result of this development and will cooperate in seeing that it brings the assurance of peace.

This illustrates once again, I think, the lesson we have learned since World War II—winning and maintaining the peace is a daily job—it must be worked at just as hard, if not harder, than winning a war.

Under leave to extend my remarks in the RECORD, I herewith include an address made on this important subject on May 24, by my colleague, the Honorable ANTHONY F. TAURIELLO, Member of Congress from New York:

ADDRESS OF HON. ANTHONY F. TAURIELLO, MEMBER OF CONGRESS, BEFORE MASS MEETING TO PROTEST ARMING OF THE ARAB STATES BY GREAT BRITAIN, MADISON SQUARE PARK, NEW YORK CITY, WEDNESDAY, MAY 24, 1950

I am happy to be here this afternoon to discuss with you a matter which has been troubling me for some time. I have long taken an interest in the struggle for the establishment of the Jewish state and I have followed with keen interest the growth and development of Israel in the last 2 years.

To me, the situation today in the Near East is very disturbing. The fact that England is rearming the Arab states on an unprecedented scale, particularly Egypt, whom she is supplying with jet planes, cannons, tanks, and other heavy military equipment is, in itself, a very grave situation. It is even more disturbing when we realize that our own State Department is giving its approval to this British action and is thereby encouraging future trouble in the Middle East.

It is for these reasons that I took the leadership in approaching my colleagues in Congress to organize concerted and bipartisan action to bring to the attention of Secretary of State Acheson the dangerous policy which he is following in the collaboration with Mr. Bevin.

On March 28, a group of 32 Congressmen, headed by me, met with Mr. Acheson in his office and we spoke to him very frankly and bluntly about this situation.

When the time approached for Mr. Acheson's departure for Europe to attend the Foreign Ministers Conference, we submitted to him a statement signed by 51 Members of Congress in which we again indicated to him our views and objections.

Yes, my friends, he sent us a reply just before he left Washington, but I don't mind telling you that to me Mr. Acheson's reply was painfully disappointing. It is simply a repetition of the allegations of the State Department during the last 3 months. There is no need for me to go into a detailed analysis here. Mr. Acheson says, and I quote: "There has been no indication that the United Kingdom is diverting any undue proportion of its resources into military production." I say to you, my friends, that this statement, to put it mildly, is misleading. The amount of arms and the kind of arms which England is diverting to the Arabs may not represent an undue proportion of England's resources, but it certainly is out of proportion to the needs of the Arab states for their internal defense. Egypt and the other Arab states do not need jet planes and cannons for internal defense against their own people; these arms are intended for a purpose, and for one purpose only, for aggressive action against Israel in a war of revenge.

Mr. Acheson prefers to close his eyes to the fact that there is an inconsistency between his words and his deeds. The right hand does not know what the left hand is doing. He fails to realize that there is a conflict between the declared policy of the United States regarding peace in the Near East and the policy of our State Department which approves the shipment of offensive arms by England to the Arab states. I said that in my public statements, I am saying it here today, and I shall keep repeating that the State Department's approval of Britain's arming of the Arabs is contrary to the established American policy and is an incitement to a renewal of war against Israel.

All our efforts to bring to the realization of the State Department the serious situation and the dangerous path upon which it is treading have been answered with pious and meaningless words by Mr. Acheson. These words are being nullified every day as every delivery of arms reaches the Near East. These words are a mockery of our policy of professed friendship toward Israel. In fact, they are cruel toward the infant State of Israel because its very life is being threatened by this overwhelming supply of arms to the Arab states by England, with the blessings of our State Department. I believe it is high time for us, as Americans, to insist that Mr. Acheson bring his action in line with the true American policy toward Israel—a policy of peace and not of war.

The United States, which was the first country to extend recognition to Israel, owes a moral duty to the inhabitants of the Jewish state and certainly to the 400,000 DP's and other homeless Jews who came there in the last 2 years with the encouragement and financial support from this country. I say to you today that it is our moral obligation not to expose these people once again to slaughter; they have suffered enough already.

We are told that the rearmament of the Arabs is also dictated by the concept of security of the Middle East against a possible attack by a third power. If that be so, then I ask: Why should not Israel be included in that program? Why is not Israel entitled to the opportunity of military preparedness against a possible assault by the Arab countries in view of their constant threat? To me, the policy of arming the Arabs and at the same time refusing to supply arms to Israel, is a policy of discrimination against Israel and favoritism toward the Arab states. The fair-minded people of this country will never acquiesce to such a policy of discrimination and they will never condone Mr. Bevin's anti-Israel policies by placing the people of Israel at the mercy of fanatical Arab leaders. The rearming of the Arabs and at the same time the denial of arms to Israel is not the way to peace—it is the way to chaos and war.

Israel is an outpost of democracy in the Middle East which is shaped in the image of our own American democracy. It is guided by American ideals of freedom, equality, justice, and liberty for all, regardless of race or creed or national origin. The United State needs Israel as an outpost of democracy as much as Israel needs us. It was all this that prompted me to take an interest in this problem and to try to persuade our State Department to avert a renewal of the war in the Near East before it is too late. Let Mr. Acheson beware of Mr. Bevin's anti-Israel psychosis and not encourage the efforts of the Arab leaders who are eager for new bloodshed.

I promise you here today that I shall continue these efforts; I shall continue my endeavors to make the State Department realize that it is following a dangerous policy. I shall continue to do everything in my power until a permanent and lasting peace is established between Israel and the Arab states.

A final word: Thank God we live in a democracy—the American democracy. Through the force of enlightened American public opinion we shall compel the Department of State to listen and to act. The right hand shall know what the left hand is doing. Let this message go forth from this magnificent gathering:

America will never desert Israel, as Israel never deserted America. Israel did not fail us. We shall not fail Israel.

Pertinent Comment

EXTENSION OF REMARKS

OF

HON. J. CALEB BOGGS

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 6, 1950

Mr. BOGGS of Delaware. Mr. Speaker, there is published each week in Wilmington, Del., one of the finest, if in fact not the best, labor newspapers in this country. The newspaper to which I refer is the Labor Herald.

In solid substantiation of my statements about this outstanding newspaper is the fact that the Labor Herald received national recognition in November 1949 when it was selected for one of the top awards of the Freedoms Foundation.

The editor of the Labor Herald is Mr. Frank Saylor, who writes for each issue a column entitled "Pertinent Comment." In this column Editor Saylor expresses his views on national as well as local affairs. Mr. Saylor expresses his views with thoroughgoing honesty, independence and patriotism. Consequently, his incisive appraisals of matters of public interest are thought-provoked and merit the earnest attention and consideration of all of us.

Mr. Speaker, I am fully confident that you and the other Members of this body will be in full accord with my previous statements when you read Mr. Saylor's latest column which appeared in the Labor Herald of June 3, 1950, which I am including below as a part of my remarks.

Mr. Saylor's column follows:

PERTINENT COMMENT ON MATTERS OF LOCAL AND NATIONAL INTEREST

(By Frank Saylor)

Attention is directed to the news article in columns six and seven which expresses the apprehensions of the executive council of the International Brotherhood of Electrical Workers of the trend toward the socialization of the electrical industry. Apparently there is a growing realization, here and abroad, that a joker accompanies many a package of so-called social gains. The electricians have found that they can't deal with the Government as an employer as they did with privately owned utilities; in fact, it's possible that collective bargaining can be completely eliminated and working conditions arrived at on a take-it-or-leave-it basis. It's only been 3 years ago that President Truman who for purely political purposes gags at the Taft-Hartley law proposed to draft the railroad labor force into the Army to break a strike.

There are still some old-line unionists who didn't fall for the idea of the Government leaning over backward to favor labor in what was essentially a vote-getting gesture rather than a manifestation of sympathy for men who work for wages. Incidents such as the threat of forced railway labor and refusal of the REA to bargain with the IBEW show how the wind's blowing. Few Americans can conceive the possibility of a society made dependent upon Government, tasting in the

end involuntary servitude. For that matter neither could the people of England. When the Socialists took over in England they announced that they would, for the first time, demonstrate a planned society without forced labor. It took less than 2 years before they had to resort to forced labor, euphemistically calling the order a control-of-engagement order. It was to be temporary, for the emergency only, and was limited to 14 months. Before its life expired, the time limit was extended for an additional year. Last year it was extended again, and is still in force. It is true that the order hasn't been widely resorted to, but there it is, a power in the hands of the government against that government's pledge to reconcile planning with freedom.

First to awaken to the dangers of a society dependent upon Government was business, big and small. However, for some strange reason, the objections of business and associations of businessmen to economic panaceas was presumed to be prima facie evidence that fat cats were being gored and labor and so-called liberals continued their support of the planners. That the opposition of business to economic experimentation which persistently came a cropper should operate to inspire a counterreaction attests the extent of the infiltration of Marxist thought and its concept of class antagonism.

It has only been lately that labor has become aware of the insidiousness of the Government invasion into the field of labor legislation. When labor asked for and got enforced collective bargaining, first in the Wagner Act and later in the Taft-Hartley law, it yielded its own freedom as the railroaders, the coal miners, and the electricians have come to realize.

Right now there is a movement afoot for Government to come to the aid of small business. If this aid realistically went about aiding small business by reducing taxes, much could be said for it. But no, the proposal is to extend Government credit and if that credit is accepted, those who accept it surrender control of their business.

Another movement proposes legislation granting Federal aid for the public-school systems of the States. Some years ago it was believed that Federal aid would come to the rescue of the so-called poorer States by providing assistance when the need is greater than the State can bear. Since then there has been such growing centralization of power in the Federal Government, and disregard of the rights of the States and local authorities by the national administration that thinking educators have arrived at the conviction that Federal aid cannot be accepted for public schools without ultimately losing control of them to the Federal Government.

Gov. J. Strom Thurmond, of South Carolina, is apprehensive of Federal aid to schools and decided that South Carolina can best take care of its own education. Says he:

"We are already improving our school program, and the control of that program should be retained in our communities and in the State, where our taxes can be made to yield their maximum returns. Will we gain by sending our educational dollars to Washington, to be put through the Federal shrinking machine?

"The vital issue confronting us is whether we can maintain a locally supported and locally controlled public-school system. This Nation has grown great because of our free public schools. They are the bulwark of our liberty and the backbone of our democracy."

The point to it all is that there is a persistent drive toward bureaucratic dictatorship with men enslaving themselves by bargaining with government for favors at the expense of their freedom. There are heartening indications of a growing awareness of the trend. Best of all the awareness is not political. The trend cuts across party lines and is no longer the exclusive property of the Democratic Party which traded so successfully upon it for a score of years. Labor, business, and educators are beginning to sense that once there are Federal concessions, there is a yielding of freedom, a surrender of control, and, in the recognition of racial groups in law, a possibility of being discriminated against by law.

First we had Secretary Acheson declaring that he would not turn his back on Alger Hiss, twice-convicted perjurer, and now it's Judy Coplon, radiant in her wedding gown and awaiting sentence as a spy. Years ago guilt in such instances would have been the end of the road for Americans, and their names would have gone down in history for infamy. So far gone are our sense of values today that convictions for perjury and espionage, rather than being marks of infamy, might well be considered the prelude to a happier life. Patriotism? Why, patriotism is the refuge of scoundrels. Nationalism? In it is the poison that causes war. According to such lights, to transmit confidential information to another nation is but ignoring narrow, arbitrary nationalistic barriers and as for being a yankee doodle dandy, that's passé. Who knows but what in some future day, the way things are going, Hiss and Coplon will be put down in history as the prototypes of advanced world citizenry which is unhampered by outdated copybook morality?

Aliceville, Ala., Seeking New Industries, Has Many Advantages To Offer

EXTENSION OF REMARKS

OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1950

Mr. ELLIOTT. Mr. Speaker, the town of Aliceville, in Pickens County, Ala., in the district which I have the honor to represent here, is a growing, public-spirited, neighborly and progressive town.

Though situated in one of the best agricultural sections of Alabama, it realizes the desirability of industrial growth and expansion, which together with its fine agricultural and cattle potential, will give it an economic balance that will raise the incomes of all its people.

I said Aliceville was a growing town. Its population has doubled since 1940.

I said Aliceville was a public-spirited town. This has been demonstrated a hundred times within the past few years in the manner in which its townspeople get together to put over a particular program or civic objective. The town is well kept, and its new buildings—and there are many of them—reflect the pride which their owners have in their town.

Aliceville is a neighborly town. Its people get along well together. Both races of its people live in harmony and understanding. Its people and civic organizations work together to promote its growth.

Aliceville is progressive. Its new buildings, its new businesses and industries all radiate a pride in its future. Soon it will have a new hospital toward the building of which the Federal Government will contribute two-thirds the cost, under the provisions of the Hill-Burton Hospital Construction Act of 1949. It has a housing project, a swimming pool, a recreation building. Under construction is a $25,000 cattle sales barn, a $100,000 fertilizer plant, a new modern picture show building.

Aliceville has a wonderful transportation system, two railroads, several paved highways, and is located near the Tombigbee River which in the interest of national defense must be developed at an early date. The proposed connection of the Tombigbee and Tennessee Rivers will give Aliceville water, rail, and highway transportation.

It has many natural advantages, fine people, good climate, high annual rainfall, is surrounded by good farming and cattle lands, and an abundance of pine timber. Its transportation system gives it a superior connection with the growing markets of the Southeast. It has an adequate supply of both white and colored labor for several new industrial enterprises.

As a part of my remarks I include an article from the Aliceville Informer, published at Aliceville, Ala., in its May 24, 1950, issue styled "Aliceville as an industrial site," written by Mr. G. N. Downer and his daughter, Miss Betty Downer:

ALICEVILLE AS AN INDUSTRIAL SITE

In connection with the coming Alabama Industry Days, G. N. Downer, with the help of his daughter Betty, has prepared the following historical factual statement on our town:

LOCATION

Aliceville is located in the southwestern part of Pickens County, which is in the western part of Alabama, about 8 miles east of the Mississippi State line and about 100 miles west of Birmingham, 165 miles northwest of Montgomery, 35 miles southeast of Columbus, Miss., 86 miles north of Meridian, Miss.

CLIMATE

Aliceville has a temperate climate. The summers are long and warm, but the temperature seldom rises above 100° F. The winter temperatures rarely fall below freezing and then only for a day or two at the time. The average temperature for the winter months is about 47°, for the spring 64°, for the summer 79°. Rainfall is about 50 inches, well distributed. The average growing season is about 230 days.

POPULATION

The population of Aliceville in 1910 was 640; in 1920 was 940; in 1930 was 1,066; in 1940 was 1,476. The census for 1950 has just been taken and we understand that it will run approximately 3,200 to 3,500 people.

Most of the original settlers came from South Carolina, but many were from Tennessee, Georgia, North Carolina, and Virginia. For the most part, the present population is descended from these, but a few people from the North and East have come during recent years in connection with lumber and other industries.

OCCUPATIONS

The main occupations of the people of the community are, in importance: Agriculture, cattle, forestry, building industry, saw and planing mills, cotton mills, railroads, wholesale and retail trade, professional service, and domestic and personal service.

There is an abundance of labor available in this territory, some of which is skilled.

The Alabama Mills has a plant in Aliceville employing about 450 people. There are several large lumber companies and a large stave mill. Three cotton gins, seven large warehouses, a Coca-Cola bottling plant, sand

and gravel business, a machine shop, cold storage and we have under construction a $25,000 cattle sales barn and a $100,000 fertilizer plant. We have also, several first-class garages and repair shops. We have a very modern funeral home locally owned.

We are especially proud of the fact that in the business district of Aliceville, we haven't a wooden building, all of them being masonry constructed. There is under construction now a modern picture-show building equal to any in west Alabama.

INDUSTRIAL SITES AND BUILDINGS

The town secured from the Federal Government the old prisoner-of-war camp, together with the waterworks and sewage system. This site has 132 acres of land with streets, sidewalks, railroad sidings, electrical installations and is adjacent to highway and railroad. This property is available to any industry wishing to locate here. Located on this property at the present time is a $25,000 recreational building and a $25,000 swimming pool which is city owned and operated.

COMMERCIAL

Aliceville has one bank, the Aliceville Bank and Trust Co., with total resources of about $2,500,000. Business failures are unknown in our town and there are many high class merchandise establishments.

MUNICIPAL

The government of Aliceville is conducted by a mayor and five councilmen. The city has about 10 miles of paving and about 6 miles of sewage.

The water supply of Aliceville comes from a system of deep wells, electric pumps and elevated standpipe with 563,000-gallon capacity. Gravity pressure is 68 pounds.

Adequate fire protection is provided for a small town with a modern fire truck manned by a paid fire department. The city is adequately policed by a chief of police day and night.

The city maintains a splendid school system presided over by a superintendent and 21 teachers. The junior and senior high have a registration of about 275 students with 10 teachers, and elementary school has an enrollment of 339 students with 11 teachers. Aliceville schools are fully accredited and zealously maintain this high scholastic standing. It has all modern equipment including a gymnasium, lunchroom, lighted athletic field, vocational department and a good band and music department.

The religious life of Aliceville is cared for by seven congregations. Most of these are modern brick buildings.

We have a Rotary Club and chamber of commerce.

Pickens County maintains a full time standard health unit. We think one of the best in the State.

TELEPHONES

The telephone system is owned by the Alabama Telephone Co., which is in close connection with the Southern Bell Telephone System.

TAXES

Pickens County has a reasonable tax rate—total State, county, and city being $3.10 per hundred, and assessments are reasonable and fair. The indebtedness of Pickens County is very small, due to efficient management of its county officials. After February 1951, Pickens County will be clear of debt, as we now have Federal bonds to liquidate all outstanding bonds on that date.

POWER

Light and power are furnished by Alabama Power Co. They have in the last few years built a high-powered line, replacing the old line. They maintain an office and maintenance crew in Aliceville and give excellent service.

TRANSPORTATION

Aliceville is well situated in regard to transportation. There are two railroads through Aliceville. The S. L. & S. F., which connects Pensacola to the great Middle West via Memphis, Tenn., and the A. T. & N., which was recently purchased by the S. L. & S. F. and was reconditioned at a cost of $3,000,000, connects the G. M. & O. at Reform and terminates at the Alabama State docks in Mobile, giving us two deep-water ports.

In addition to the railroad facilities, we have several motor freight lines. We have a network of paved highways. There are few towns with facilities as great as Aliceville's transportation.

LABOR

Aliceville has never had any labor trouble whatsoever, and is not threatened by any. Our local labor is of a higher type than much imported labor which is found in many other places. This is one of the biggest factors in the industrial development of our town.

SUMMARY

We need several small industries and our town is well situated for their development. We have good native-born American people, good church and school facilities, and an unusually strong bank for a small town. Health conditions are above the average. We have an abundance of good drinking water and a modern sewerage system.

Our local industries at the present time represent approximately a million-dollar capital investment employing 600 people with an anual payroll of $2,685,000.

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 6, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the forty-third article by Mr. Frank C. Waldrop on the infiltration of communism in our country:

BIGGEST STORY

(By Frank C. Waldrop)

For 5 cents you can get the official story entitled "Establishment of Diplomatic Relations With the Union of Soviet Socialist Republics." Just apply to the Superintendent of Documents, Washington, D. C.

This is absolutely indispensable material for anybody who wants to see what a fool Stalin made of Roosevelt from the very start of their many dealings.

And since it is official, unqualified, and consists of the actual state papers exchanged between Messrs. Roosevelt, Hull and other high dignitaries with their opposites in Russia, nobody can argue very strongly that the facts are otherwise.

These state papers will be reviewed here in summary. But first, some evidence on the climate of public sentiment and the propaganda of the hour, as the issue of recognition was coming to its climax in 1933.

The big talk of the day was that recognition would open up "vast" business operations between the United States swamped in a surplus of goods, and famine-haggard Russia.

As soon as Mr. Roosevelt was in office the talk got more positive than ever. Speaker of the House Rainey gave off a statement that is a fair sample.

He declared the United States was losing at "least $500,000,000 a year" in trade with Russia by delaying recognition.

He said that he could vouch for that personally, after having been to Russia on an inspection trip with the House Ways and Means Committee.

He said that he found the Russian people "happy and contented and hard working."

Not long after that, Jesse Jones announced that the Reconstruction Finance Corporation would grant a loan for the Soviet to buy cotton.

Several "inside" columnists began to expound the advantages of putting $1,000,000,000—that is one billion dollars—in credit at the disposal of the Soviet, who were declared most reliable credit risks.

"They always pay their bills," was the slogan.

And Mr. Raymond Moley, the white knight of the hour, was reported as having the specific Presidential assignment to talk over recognition in close detail when he should arrive in London for the famous economic conference that was supposed to rebuild world trade.

Little attention was paid to the facts. In Russia, the people that Speaker Rainey described so falsely as "happy and contented" were actually suffering the ravages of famine.

This was the period in which Stalin was at the worst of his attack on the farmers.

The small landholders, familiar to the world as kulaks, were being kicked off their property and sent to Siberia. Russia was teetering on the edge of collapse and full revolt.

At Geneva, preceding the London economic conference, there was a disarmament conference. And there, too, the drumfire of propaganda was that the United States of America would find in Russia an enormous new market for our surplus goods.

The American business community was bewitched with this fascinating prospect. But what were the facts?

In fact, what little dealing foreign business had conducted with Stalin was already crashing, right and left. I have recounted earlier how Mr. Averell Harriman and some friends had their shirts ripped up the back in undertaking a gold exploration and mining concession in Siberia. That was in 1927–28.

But allowing for the shortness of memory and the eternal gullibility of Wall Street bankers who cannot believe it when a man says he means to destroy them both in their work and personally in their lives—so vain can they become—consider a more current case.

In 1933, to smash the last vestige of foreigners' standing with the Russians, Stalin ordered the arrest and trial of six British engineers working under a contract the Soviets had with the Vickers Co., a sort of combination General Electric and United States Steel.

At the very moment Mr. Roosevelt was rushing headlong into Stalin's trap, the British were in the midst of a terrific, open quarrel.

The British diplomats had always been impressed with the firm intentions of Lenin, Trotsky, Stalin & Co., to cause a world revolution as they had said publicly and repeatedly.

But pressure for trade, after 1918, had evolved from a mere commercial agreement to an exchange of ambassadors.

Now, in 1933, the British started withdrawing.

Their first act was to cancel all trade relations, using the attack on the Vickers engineers as a basis. The road was then open from there to a complete end to diplomatic relations.

They overlooked Roosevelt.

Fuel Oil in New England

EXTENSION OF REMARKS
OF

HON. CHRISTIAN A. HERTER

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 6, 1950

Mr. HERTER. Mr. Speaker, the following testimony given by Mr. Eugene Holman, president of the Standard Oil Co.—New Jersey—before the Oil Imports Subcommittee of the Select Committee on Small Business of the House of Representatives is of particular interest to the New England area, where the continued importation of certain types of oils is of great importance to industry, to the householder, and to the merchant fleet:

FACTS ON THE IMPORTATION OF OIL INTO THE UNITED STATES AND THE POLICY OF STANDARD OIL CO. (NEW JERSEY) ON OIL IMPORTS

ABUNDANT SUPPLIES OF FUEL ENERGY MEAN HIGH LIVING STANDARDS

Modern production and transportation rest largely on a foundation of fuel. The burning of fuel in machines to augment the energy obtained from manpower and animal power can increase enormously the output of goods and their availability to consumers. The per capita consumption of fuel is an index of a nation's standard of living.

The United States uses energy at an annual rate of 234,000,000 British thermal units per capita. (As used here, the term refers to energy obtained from coal, petroleum, natural gas, and hydroelectric power.) Although this country has but 6 percent of the world's population, it accounts for 45 percent of world use of energy. All other nations combined consume, on the average, only one-tenth as much per capita.

The only nation that even approaches our country in use of energy is Canada, whose per capita consumption is about 85 percent of ours. The European recovery plan nations use about 25 percent as much as we do on a per capita basis; Russia, 18 percent; Asia, 2 percent.

By employing 10 times as much energy per person as the average for the rest of the world, the United States produces 2 to 4 times as much goods per labor-hour as even the most highly industrialized nations of Europe.

In the United States the use of energy has increased about a hundredfold during the past century, and national income has been multiplied by almost the same amount over the same period.

DIFFERENT FUELS MAKE VARYING CONTRIBUTIONS TO ENERGY SUPPLY

The principal sources of fuel energy in the United States are coal, oil, and natural gas. The production, processing, and distribution of these fuels are carried on by thousands of business firms. These firms compete for business in the particular industry in which they are engaged—that is, in the coal industry, in oil, or in gas. But, in addition to such competition, there is competition between fuels in the over-all energy market.

Over the years the proportion of total energy supplied by the three fuels has varied, reflecting changing conditions of availability, competitive vigor, convenience, new uses and efficiencies developed through research, price differentials, and other factors.

A century ago, for example, the entire fuel supply of the United States consisted of coal and wood. Then, in 1859, the first oil well was drilled in Pennsylvania, and petroleum began adding to the Nation's fuel supply.

In the early period of the oil industry, petroleum was chiefly useful as a source of kerosene for lighting, displacing whale oil almost entirely for use in lamps. Kerosene lighting was, in turn, largely displaced by electric lighting, and the oil industry had to find new markets.

With the coming of the automobile, a major shift developed in the oil industry. Oilmen, who had earlier made as much kerosene as possible from their crude and had regarded gasoline as a bothersome byproduct, now tried to reduce yields of kerosene and to increase the yields of gasoline. Automotive fuel became the principal product of the oil industry, and methods were sought and found to obtain more gasoline from crude oil than is naturally in it. Thus, although a profound change had occurred in the pattern of the Nation's fuel needs, adaptability and research enabled the oil industry to keep on growing.

More recently, further evolution of the fuel market has seen petroleum become outstandingly useful as a source of fuel for heating, for driving locomotives and ships, and for generating industrial power. And such evolution has not stopped. Today, natural gas is becoming increasingly important as an addition to total fuel supplies. In the future, atomic power, and heat from the earth and from the sun, may well make their contributions. It is clear, then, that the business of supplying energy is not a static one, and, as there have been shifts in it in the past, there are shifts taking place now and there will undoubtedly be more in the future. By bringing greater conveniences to consumers and by increasing the total of energy available to the Nation, such shifts have spelled progress for America.

OIL PROVIDES A GREAT ADDITION TO THE NATION'S FUEL ENERGY

In the gasoline business companies within the oil industry compete with one another. There is little or no competition for gasoline from nonpetroleum fuels because there is no substitute for liquid fuel in most kinds of small- and medium-sized mobile equipment.

However, in the fields of space heating, marine and railroad transportation, generation of electricity, and factory power, suppliers of petroleum fuels compete not only among themselves but also with suppliers of other fuels. In these fields petroleum has been able to win and hold high consumer acceptance. Among factors that have built acceptance are oil's efficiency, cleanliness, and convenience, as represented by high heat content in relation to bulk, absence of ash, automatic feeding into combustion chambers, and ease of controlling the fuel flow in consuming equipment.

The great importance of petroleum to the Nation's supply of energy is indicated by the fact that use of oil in the United States has gone up 60 percent since 1940. This does not mean that oil has displaced an equivalent amount of other fuels over that period. On the contrary, the increase in the use of oil has represented an addition to the total amount of energy available to the Nation.

In 1940 the energy used in the United States amounted to 24,200,000,000,000 B. t. u.'s. It was obtained from 487,000,000 tons of coal, 1,300,000,000 barrels of oil, 2,600,000,000,000 cubic feet of natural gas, and 54,000,000,000 kilowatt-hours of hydroelectric power.

In 1949 energy used in the United States had risen to 32,100,000,000,000 B. t. u.'s, obtained from 468,000,000 tons of coal, 2,100,000,000 barrels of oil, 5,500,000,000,000 cubic feet of natural gas, and 96,500,000,000 kilowatt-hours of hydroelectric power.

Thus it can be seen that, while coal made approximately the same contribution to the Nation's energy supplies in 1949 as in 1940, the total energy available to the Nation was materially higher in 1949 because of additions from other sources. On the basis of heating value, oil supplied almost half of the increment. The amounts of energy used in the United States from 1940 to 1949 are shown, by sources, in chart 1.

OIL IS A MAJOR AMERICAN INDUSTRY

The production of oil from domestic resources, its conversion into useful products, and the distribution of the products to millions of consumers constitute one of the largest and most important of all American industries. The great development of petroleum resources in this Nation has been a fundamental factor in the remarkable growth of our country and in its security. The strength and welfare of the Nation will continue to depend importantly on a successful and strong domestic oil industry.

The industry makes its contribution to the energy supply of the United States principally from oil deposits it has discovered and developed within this country. In addition to the oil it produces from domestic fields, however, the industry provides energy for the Nation through imports. Oil has been brought into our country in varying amounts for a long time; 35 years ago the United States was importing some 18,000,000 barrels a year.

The oil industry also exports, and has done so for many years. In fact, American oil exports began within 2 years after the drilling of the Drake well at Titusville in 1859.

Oil, for a number of reasons, is brought into the country at the same time that other oil is being shipped out. For example, imports are useful in providing types and quantities of oil that are not readily available from domestic sources when needed.

And oil is exported because many foreign nations that require substantial volumes of it have little or no petroleum production or refining facilities of their own and turn to the United States to buy special-purpose crudes or, more importantly, finished products.

AMERICANS HAVE LARGE OIL INVESTMENTS ABROAD

In the early years of the industry, American oil was usually sold to consumers in foreign countries through third parties. In the 1880's American oil companies began setting up facilities for carrying on direct marketing operations of their own. American refining activity abroad began about this same time but remained relatively unimportant until after World War I.

Foreign crude oil production by Americans began around the turn of the present century—first in Mexico and, a little later, in Rumania. By the time of our country's entrance into World War I there was American production also in Peru and, on a very small scale, in the Netherlands East Indies. Participation in foreign production increased markedly during and immediately after the First World War, and direct investments by American citizens in petroleum properties abroad had passed the $1,000,000,000 figure by 1930. Very large additions to such investments have been made recently, and the total stands today at more than $3,000,000,000. Americans have oil-producing properties in 20 countries in both hemispheres, and almost half the proved oil reserves outside the United States are owned by American companies.

Investments by Americans in petroleum properties abroad have been and are of great value both to the United States and to the world. In many countries operations of American oil companies have been a powerful factor in raising living standards. Employment, vocational training, general education, modern housing, and health facilities have been provided for the nationals, who have been able to earn the means for purchasing material comforts they never knew before. Opportunities have been created for

the establishment of many new businesses, and the whole economy has been quickened. Revenues flowing to the governments in the form of royalties and taxes have provided means for building roads, harbors, homes, hospitals, and schools.

OVERSEAS OIL OPERATIONS BENEFIT OUR NATION IN WAR AND PEACE

Oil deposits outside the United States, developed by Americans, have been highly important to the defense of the free world in two wars. In World War I the widespread use of oil-burning ships created a tremendous demand for heavy fuel oil. Mexican crudes were particularly suited to the production of this grade of fuel, and large quantities were imported into the United States. It may be noted here parenthetically that, when the fighting ended in 1918, world use of oil continued to rise, and Mexico became the leading oil-exporting nation. A large part of Mexican production was brought into the United States to offset deficiencies in domestic supplies, and in the 3 years 1920–22, for the first time in its history, the United States imported more oil than it exported.

In World War II our domestic supplies of oil for industry and for the Allied armed forces were supplemented to an important extent by oil from Venezuela, and, in the later stages of the conflict, oil from the Middle East was of great importance in fueling operations in the Pacific. Without Caribbean and Middle East oil sources to draw on, the military requirements of the United States and its allies for oil could not have been met in the amounts and at the times demanded.

American oil activities abroad have benefited our country no less in times of peace. Profits to American companies from overseas operations create tax revenue for the United States Treasury and produce dividend income for hundreds of thousands of American families. The purchase in this country of drilling machinery, casing, line pipe, and other equipment for the development of foreign properties brings millions of dollars of business to American firms and provides employment here. As previously undeveloped countries achieve higher productivity and better living standards, they become better markets for American goods, better customers of the American exporter, manufacturer, workman, and farmer. And the money that foreign countries earn from development of their oil resources furnishes them with means to pay for American goods without relying on loans or grants of funds from American taxpayers.

Foreign trade is often thought of solely in terms of selling American-produced goods abroad or of buying foreign-produced goods here. However, a major part of the foreign trade of American oil companies does not follow that pattern. Most often it consists of producing oil in one country abroad, perhaps refining it in another, and selling it in still a third. Thus, the oil involved in such commerce never touches our shores. It does, however, contribute to the economic well-being of foreign countries and of our own country.

THE ROLE OF OIL IMPORTS IN UNITED STATES FUEL SUPPLY

Although most of the oil produced by American companies abroad is also used abroad, some of it is imported into the United States to supplement our own supplies. And the effect of the importation of oil on the domestic oil industry has long been a subject of discussion and debate. It is a question which can properly be considered only against a background of the industry's nature.

The oil business is one in which volumes have followed a generally rising trend. Consumer use of its products has risen year after year with few exceptions. To keep pace, the production of crude oil has also increased.

As is inevitable in a natural resource industry, however, the growth of oil demand and the growth of crude oil supply do not follow exactly parallel courses. Discovery of new oil to replace that which is used occurs at an irregular rate. At times, the constant search for oil will lead to a major discovery, as in east Texas in 1930. Such an event may be followed by a number of years when, although exploration is continued energetically, no important new discovery is made. Then, sooner or later, the unremitting search is rewarded by some new major find, such as occurred in Scurry County, Tex., in 1948.

Meanwhile, fluctuations of consumption—influenced by weather, industrial activity, military needs, or other factors—may not coincide with the times of peak additions to reserves. As a result of these circumstances, there have been periods in the United States when rising demand for oil has pressed hard upon domestic supplies. When this does happen, as it did in the winter of 1947–48, the availability of oil from American properties abroad has been of the greatest importance to the Nation.

On the other hand, there have been periods when productive capacity has been expanded at a somewhat more rapid rate than demand has risen. It is at such times that apprehension is expressed about imports and that proposals are made for restricting the volumes of oil brought into the United States from overseas.

Such a situation exists at present. Today, some domestic oil producers feel that their business is being hurt by imports, and they strongly assert this position publicly. Similar assertions come from coal interests, which contend that oil imports are injuring the coal industry by taking part of the over-all fuel market it would otherwise supply.

These arguments have been carried to agencies of Government, with pleas that administrative action be taken to restrict oil imports, and to the Congress, where various legislative proposals have been introduced that would restrict such imports either by imposition of quotas or by raising tariff rates to a level that would amount to virtual embargo.

Because proposals of this kind bear directly on the vital subject of the Nation's energy supply, they merit the most serious study and most careful examination of the premises on which they rest.

DOMESTIC OIL PRODUCTION HAS FOLLOWED A LONG-TERM UPWARD TREND

Domestic production of oil decreased in 1949 from the level of the preceding year. However, this decrease followed a period in which the industry had set new highs of production for six consecutive years.

At a level of 5,042,000 barrels per day, domestic oil production in 1949 was higher than in any other year of the industry's entire 91-year history, except for 1947 and 1948. It was 918,000 barrels per day, or 22 percent, higher than the average for the 6-year war period, 1940–45. It was 1,836,000 barrels per day, or 57 percent, higher than the average for the 5-year prewar period, 1935–39.

Production of coal declined in 1948 from the all-time peak reached the year before, and slipped again in 1949 to the lowest level since 1939.

Meanwhile, imports of oil, taking crude and products together, have increased yearly since 1942.

The decreases in domestic oil and coal production have been attributed by some almost entirely to larger oil imports. The facts do not support this view. Other factors are obviously involved.

Oil imports have been rising for the past 7 years. But domestic oil production also rose during six of those years and reached an all-time record in 1948. The relation of the two movements is shown in chart 2. Over other periods, too, domestic production has grown at the same time that imports were increasing.

To cite specific figures, imports were higher by 413,000 barrels per day in 1949 than in 1940, yet domestic production was higher by 1,345,000 barrels per day in the later year than in the earlier one. Or, taking the postwar period, imports were 265,000 barrels per day higher in 1949 than in 1946, yet domestic production was up 291,000 barrels per day.

One indication of the vigor and prosperity of the producing end of the oil industry is the number of new wells drilled. Chart 3 shows the number of wells drilled by oilmen in the United States since 1940. It will be seen that, on the basis of this criterion, the domestic industry's vigor was not diminished in 1949. In the first quarter of 1950, 9,126 new wells were drilled as compared with 8,346 in the first quarter of 1949.

Further, proved reserves of crude oil and natural gas liquids in the United States are at the highest level they have ever reached, having been increased by over 1,500,000 barrels during 1949 alone. Numbers of drilling permits issued, exploration activity as measured by numbers of seismographic and geophysical crews in the field, and many other evidences all point to a high level of strength and health for the domestic oil industry.

DRAFTS ON INVENTORIES AND LOWER EXPORT DEMAND AFFECTED 1949 OUTPUT

There are several reasons for the decrease in domestic oil production in 1949 as compared with 1948. One is that, in 1948, oil in storage was being added to at a rate of 293,000 barrels per day, whereas, in 1949, stocks were being drawn down at a rate of 8,000 barrels per day.

During 1948 the oil industry was exerting itself to correct a condition of tight supply that had existed in the early part of that year and in 1947. It will be recalled that in the winter of 1947–48 the American public and the Government were seriously concerned about the Nation's oil supply. Almost daily, newspaper headlines proclaimed their anxiety. Some persons even thought the country was facing a permanent dearth of petroleum and would have to start immediately to make synthetic liquid fuel on a large scale.

Faced with this sudden demand upon it, the oil industry made a tremendous effort to find new oil fields, drill more wells, and expand the great complex of equipment required to refine oil and get it to people. The industry succeeded well in this task. Once again it showed that alarmist predictions about it were ill-founded. It expanded its productive capacity to heights never reached before and began to rebuild inventories of crude and products which had been heavily drawn down to meet the public's need.

With inventories replenished to overflowing, some cut-back below maximum productive capacity was inevitable in 1949. It would have occurred whether oil was imported or not.

The decrease in 1949 from 1948's all-time peak in domestic oil production is further accounted for by a decline in oil exports. Quantities of crude oil and products shipped out of the United States have gone down from 568,000 barrels per day in 1944, the peak export year, to 328,000 barrels per day in 1949. Loss in export demand from 1948 to 1949 amounted to 40,000 barrels per day.

This decline has been due to the fact that parts of the world which used to depend heavily on the United States for crude oil and oil products now have other sources of supply. In the reconstruction of European countries, and in the increasing industrialization of others, refinery installations have been newly erected or have been expanded,

so that these countries are now able themselves to fill more of their needs for finished oil products.

More importantly, the discovery and development of vast oil deposits in other parts of the world—notably the Middle East—have made it practical for many nations to look to those areas for petroleum supplies rather than to the United States. Chart 4 shows graphically how areas such as western Europe, which obtained large amounts of oil from the United States before the war, are now drawing much of their supplies from the Middle East.

HEAVY FUEL OIL ACCOUNTS FOR A LARGE PART OF IMPORT TOTAL

A substantial part of oil imports into this country is of heavy residual fuel. The relation of such imports to the domestic oil industry is entirely different from the relation of other types of oil imports to the domestic industry.

Imports of heavy residual oil provide a means for economically supplying a desired fuel to consumers in certain parts of the country. If these imports were reduced or cut off, output of domestic crude oil would not increase by an equivalent amount because of the economics of production of heavy fuel oil, the uses to which it is put, and the places where it is used.

Heavy fuel oil is the residue left over after lighter products such as gasoline and kerosene are distilled from crude petroleum. Since the lighter products normally have higher market value, the domestic refiner historically has sought to maximize their production and to minimize the residue of heavy fuel oil. He does not seek to make heavy fuel oil but obtains it as a byproduct of his operations.

Heavy fuel oil is used principally to power ships and to burn under boilers in factories and in central generating stations. In the eastern seaboard States, with their great ports and highly industrialized sections, there is far greater demand for this oil than can be supplied as byproduct from domestic refineries normally serving the area. It is to meet the eastern seaboard demand that residual imports are brought into this country. Geographical distribution of demand for residual fuel in 1949, and the part supplied by residual imports, is shown by chart 5.

It will be seen from the chart that the great bulk of all the residual fuel consumed in this country comes from domestic sources. This has been the case for many years. Even in the areas of heavy consumption along the eastern seaboard and Gulf coast, domestic refineries supplied an average of 80 percent of all the residual fuel used in the years 1946–49.

The balance of the demand for heavy fuel oil (some 15 to 20 percent of the total in recent years) has long been met by importing fuel oil or heavy-fuel-oil crudes. The total demand cannot be met from domestic sources today simply because heavy fuel oil cannot be made economically from domestic crude except on a byproduct basis. If more crude oil were run through domestic refineries to meet the total demand for heavy fuel oil on a byproduct basis, the production of lighter products would greatly exceed demand for them.

And enlarging output of domestic residual fuel oil other than as byproduct would mean the deliberate down-grading of crude oil into fuel oil, the value of which is usually well below that of crude oil because its market price gravitates to a point where it will compete with coal.

Since there is no economical way of meeting, from domestic sources, the full demand of American consumers for heavy fuel oil, the importation of heavy fuel oil has furnished the means for taking care of the marginal 15 to 20 percent of fuel oil demand.

The use of residual fuel oil has followed a rising trend over the past two decades, although it has declined slightly in the past 2 years. Meanwhile, yields of residual fuel at domestic refineries have tended to shrink because improvements in refining technique have made it possible to obtain larger proportions of more valuable products from the crude oil processed. These circumstances further underline the necessity of imports if the full demand for residual fuel is to be satisfied.

If such imports were cut off or severely reduced, the total demand for fuel oil could not be met except by the highly uneconomical means just explained. Under such circumstances there seems little doubt that the cost of fuel oil to consumers would increase sharply and that the total fuel-oil market demand would shrink materially.

DECLINE IN COAL OUTPUT DUE TO MANY CAUSES

Beginning with the outbreak of war in Europe in 1939, the bituminous coal industry reached successively higher levels of production in every year through 1944. (Bituminous coal accounts for over 90 percent of the coal produced in the United States and for virtually all the coal consumed by American industry.) There were declines in 1945 and 1946, although production was still well above the prewar level. Then in 1947 the industry reached an all-time high figure of 630,000,000 tons. The following year output was 599,000,000 tons (still well over prewar production), but in 1949 a severe decline took place—to 434,000,000 tons, a drop of 27 percent. This decrease coincided with drastically reduced activities in the mines due to strikes and to a 3-day week over a considerable period. In 1949 an estimated 28,000,000 fewer man-days were worked in the bituminous coal mines than in the year before. Coal output is shown in chart 6.

Some people believe that the decrease in use of coal has been caused by imports of oil. Statistics, however, do not show this to be the case. They show, on the contrary, that, while coal has lost some business to oil, a very small fraction has been due to oil imports.

For example, petroleum in the form of gasoline for automobiles and planes, fuel for jet planes, diesel fuel for buses and tractors, lubricating oil, and many other products does not compete with coal at all.

As Diesel fuel for locomotives and marine use and as home-heating oil, petroleum has partly displaced coal because of oil's greater efficiency and convenience for these uses. It should be noted, however, that virtually all the Diesel fuel and home-heating oil used in this country come not from imports but from domestic crude.

In the form of heavy residual fuel, petroleum also competes with coal, largely on a cost basis, as a source of factory power and for generation of electricity.

It is pertinent to examine figures for coal consumption both in the categories where it competes with middle distillate fuels (Diesel and home heating oils) and where it competes with heavy residual fuel.

In 1948, 101,000,000 tons of coal were burned in American locomotives as against 68,000,000 tons in 1949. This represented a decline of 33 percent, the largest percentage loss for the coal industry in any category. At the same time, use of residual fuel burned under boilers of steam locomotives also showed a decline—in the order of 30 percent.

The figures thus indicate that both coal and residual fuel oil are being replaced for locomotives by increasing dieselization of railroads. Dieselization is a development of technical progress being carried forward by the railroads of the Nation. The fact that only about 430 steam locomotives have been built since the war while more than 8,000 Diesel units have been built is due to the efficiency of Diesel propulsion as compared with steam propulsion and to the operating economies which Diesels permit.

In the home heating field, although oil and gas are taking care of most of the additions to the total number of houses in the Nation, coal use has remained fairly stable.

The greatest volume loss by the coal industry in 1949 as compared with 1948 was for industrial uses other than electric power utilities and railroads. The decline here was from 247,000,000 to 191,000,000 tons. For the same period, use of residual fuel in industry outside of electric power utilities and railroads increased from 200,000,000 barrels to a little more than 206,000,000. The increased quantity of heavy fuel oil so used was equivalent in heating value to 1,500,000 tons of coal, as against coal's loss of business in this category of 58,000,000 tons. The difference was undoubtedly due to lower manufacturing activity in the Nation (perhaps as much a result as a cause of reduced coal production), and to some replacement of coal by natural gas.

Use of natural gas, it may be pointed out, has been growing at a rapid rate. Reserves of this energy source have been greatly increased in recent years. Under circumstances favorable for its development and for its transmission to consumers, use of gas can be expected to grow. It will thus offer sharper competition for both coal and oil.

In the public-utility field use of coal for power generation declined from 96,000,000 tons in 1948 to 81,000,000 in 1949. At the same time use of residual fuel by utilities rose from 37,000,000 barrels to 60,000,000. The increase of 23,000,000 barrels of fuel oil was equivalent in heating value to somewhat less than half the outlet that coal lost in this field. The fact that public utilities turned to oil in 1949 to supply a larger part of their fuel requirements was due, beyond any doubt, to their inability to get coal because of strikes or to their anxiety that they would be jeopardizing service to their customers if they could not have an assured fuel supply.

Although coal lost about 18 percent of its outlet in the field of marine fuel in 1949, this was not large in volume. Coal has lost outlet for this use over a considerable period, concentrated chiefly in the years 1910–20. Because of the greater efficiency of oil for ships, it is highly improbable coal could regain this market even if imports of heavy fuel oil were entirely eliminated. It is almost inconceivable, for example, that our Navy would ever go back to using coal. The same is true of the merchant marine.

Coal lost 18,000,000 tons of export outlet in 1949, reflecting rehabilitation abroad and expanding output of foreign mines. The reduction in coal consumption in 1949 against 1948, by classes of use, is illustrated in chart 7.

In 1949, the year in which coal experienced its severe loss of business, the increase in imports of residual fuel over the year before was equivalent in heating value to about 5,000,000 tons of coal, or slightly over 1 percent of the production of coal for that year.

It seems likely that the problems which the coal industry is experiencing stem not from oil imports but from a changing pattern of the over-all energy market as served by coal, oil, and natural gas.

These problems can best be understood by looking at the facts squarely; they will not be solved by attributing effects to the wrong causes.

FOREIGN PRODUCTION OF STANDARD OIL CO. (NEW JERSEY) DEVELOPED TO MEET NEEDS

As a company which plays a substantial part in providing oil for the American economy, and as one which has oil-producing interests both in the United States and

abroad, Standard Oil Co. (New Jersey) gives constant study to the volume and type of oil imports and to their relation to the domestic industry.

Jersey Standard was established as an American company and has its roots in this country. Of its 215,000 stockholders, some 209,000 are American citizens.

The company has been an important element in the domestic oil industry for more than 50 years, and its career has covered a large span of the oil industry's history. It has shared in the development of the domestic industry—and has contributed to that development. Today its affiliates in the United States produce crude oil in 18 States and market in 27 States and the District of Columbia.

Jersey began in its earliest days to extend American business overseas by the export of refined products. The company's first fixed investments outside the United States were virtually all in marketing properties.

Jersey's first producing interest abroad was in Rumania. In 1914 the company obtained an interest in a Peruvian property and began to expand its output. In Mexico a Jersey refinery helped provide heavy fuel oil to power allied navies and United States war industry during the First World War, and in 1918 an interest was acquired in a Mexican producing property.

World War I made heavy demands on the oil resources of the United States, and fears of a shortage in this country were voiced in the immediate postwar period. The war had also shown dramatically the importance of oil to a nation's military strength. In the years following the war, the United States Government urged American oil companies, as a matter of national policy, to make intensive effort to develop oil sources abroad.

A Jersey affiliate obtained a concession in Colombia in 1920. A year later the company began exploration in Venezuela, and in 1928 and again in 1932 it added to its interests there and developed large-scale production. After long negotiations Jersey and four other American companies in 1928 obtained a minority interest in the Iraq Petroleum Co., which had little production at the time but held concessions on what was thought to be promising oil territory in the Middle East. (Later withdrawals left the American interest in Iraq Petroleum Co. shared by Jersey and one other company.) In 1948 Jersey made a $75,000,000 investment in Arabian American Oil Co., providing additional capital for the development of an area on which two other American oil companies had obtained a concession just before World War II.

The history of crude imports into the United States by Jersey affiliates has been, briefly, this: In 1921 the affiliates were importing an average of 98,000 barrels per day of crude oils. They imported an average of 49,000 barrels per day of crudes during the 20-year period before World War II. In 1947 the average was 87,000 barrels per day. Beginning in 1948, imports of crude were stepped up as rapidly as possible to meet a serious, though temporary, oil shortage that confronted most of the country.

Then, when it became apparent in December, 1948, that domestic crude oil was again coming into good supply, Jersey Standard's affiliates began to cut crude oil imports as rapidly as possible. They made successive reductions in crude imports from 160,000 barrels a day in January, 1949, to 75,000 barrels a day in February, 1950. Their crude imports for the first quarter of 1950 averaged about 75,000 barrels a day, compared to an average of 127,000 barrels a day for the first quarter of 1949. The average rate of crude imports for the first quarter of 1950 is less than that in any of the years 1947, 1948, or 1949.

The company's crude oil imports have been primarily of crudes to make heavy fuel oil or of types not readily or economically available in the United States and needed to make such products as special lubricating oils, waxes, and asphalts.

JERSEY'S IMPORTS CONSIST PRINCIPALLY OF HEAVY FUEL OIL

Jersey's foreign production was not originally acquired to supply oil primarily for use within the United States. The company's programing with respect to production of crude oil overseas has always been on the premise that such oil would find its chief outlet through the company's marketing facilities overseas. Jersey also regards its foreign oil production, however, as useful to our own Nation in supplementing domestic supplies of fuel. This is no recent or novel position for the company. Its import program has already attained substantial dimensions as early as World War I when its Mexican properties were among those called upon to help supply heavy fuel oil for naval and industrial use.

Ever since then the principal product imported by Jersey has continued to be heavy fuel oil. The company has many customers for this product in the industrialized east coast area of our country. And only on rare occasions has the company been able to obtain enough heavy fuel from domestic sources to supply those customers. In order to assure them a regular supply, therefore, it has supplemented the heavy fuel available to it domestically by importing from Caribbean sources.

A breakdown of Jersey's imports by types, and the proportion of the company's imports to total oil imports, is shown in chart 8.

A HEALTHY DOMESTIC OIL INDUSTRY IS VITAL TO JERSEY

Standard Oil Co. (New Jersey) has a very lively motive for not wanting oil imports to impair the domestic oil industry—Jersey is itself a part of the domestic industry. The company has large investments in this country. In 1948, its affiliates had a net crude oil production from domestic fields of 428,000 barrels per day and, in 1949, 337,000 barrels per day. Last year the affiliates' net purchases from others averaged 276,000 barrels of domestic crude oil daily. Jersey's domestic affiliates had refinery runs of 622,000 barrels per day in 1949, and their product sales amounted to 767,000 barrels daily.

It is obvious that with stakes of this size in the domestic oil industry Jersey's own welfare is inseparably linked with the welfare of that industry as a whole. Simply as a matter of common sense, the company would not conduct its affairs in such a way as to damage the long-term value of its investment and business.

VIEWS OF STANDARD OIL CO. (NEW JERSEY)

Views of Standard Oil Co. (New Jersey) on the subjects of American development of oil resources abroad, its own overseas oil production, and imports—views which have been arrived at after careful study and after consideration of the facts contained in the foregoing pages—may be summarized as follows:

1. Abundant supplies of fuel are essential to our country's industrial strength and to high living standards for its people.

2. Since the United States depends on domestic sources for the great proportion of its energy needs, it is of major importance to have strong and dynamic companies engaged in all domestic fuel industries. But no action should be taken which would unnecessarily burden American consumers simply to shield one segment of the fuel industry from competition or normal economic evolution.

3. Imported oil, which has long supplemented domestic sources, has an important part to play in the total supplies of energy available to the Nation. The economy of the United States, more than that of any other nation, has been built on abundant supplies of oil. With 21 percent of the world's estimated proved reserves located within its own borders, the United States currently produces 56 percent of the world output of oil and natural gas liquids, and accounts for some 60 percent of world use. The United States is in no danger of running out of oil; it has large reserves already discovered, and large additional reserves will almost certainly be discovered in the future. Supplementation of these domestic resources through imports, however, would appear to be clearly in the interest of the national economy and of conservation.

4. Any attempt to erect an oil-tight dike around the Nation and to bar the American consumer from access to oil from abroad would not serve the interests of consumers nor the country's economy as a whole. Conversely, the best interests of the United States would not be served by a "flood" of imported oil, even if such a flood were physically and financially possible, since such an occurrence would disrupt domestic energy industries to the long-run disadvantage of the Nation.

5. Jersey Standard subscribes to the statement on oil policy, including the sections on imports, adopted by the National Petroleum Council. (The National Petroleum Council is a group, widely representative of the industry, appointed by the Secretary of the Interior to advise the Department of the Interior on matters which the Department submits to it for consideration. On July 3, 1948, the Secretary asked the Council for advice concerning United States petroleum policy, and on January 13, 1949, the Council unanimously approved and transmitted to the Secretary a report titled, "A National Oil Policy for the United States.") Accordingly, we believe that imports of crude and products into the United States should always be considered in relation to their effect upon the long-range preservation of the national security, the welfare of the American consumer and the domestic industry, and the sound growth of international trade.

6. American oil operations in other countries make important contributions to the economies of those countries, helping them to build up their living standards and to earn the means to purchase American goods. The American economy is part of the world economy. The development of natural resources, as represented by American oil operations abroad, enhances world trade and, therefore, is in the interest of our own Nation. Oil operations constitute an important bond and point of contact between America and nations whose friendship is an asset to us. It follows that every effort should be made to avoid acts which would jeopardize the economies of such nations.

7. Sources of foreign oil would be of vital importance to the armed forces of the United States in the event of war. Avoidance of war is to be wholeheartedly hoped and worked for. Nevertheless, our country would be courting disaster to be unprepared for emergency. In the event of emergency our forces and those of our allies might well be deployed in parts of the world where they could be more readily supplied with fuel from sources outside the United States than from within it.

8. The domestic oil industry now has a margin of efficient capacity over current production which is somewhat less than the margin that existed when the United States entered World War II. Some margin of productive capacity is obviously desirable.

9. Legislation or Executive orders which imposed a rigid formula on the rate, or which increased the price at which oil enters this country, would limit flexibility in meeting variations in domestic demand, jeopardize relations with friendly nations, and lessen the incentive for Americans to enlarge foreign investments. Any such action would be

a backward step in American aspirations toward freer and larger world trade. Moreover, any such action would foreshadow still further Government controls and a stultifying of the initiative and independence that have made the American oil industry a leader in inventiveness and technical progress.

10. We expect domestic demand for petroleum products to rise so that there will be increased crude requirements. However, we do not expect crude-oil imports by our affiliates during 1950 to increase above the average which has been maintained since early this year. Over the long term we believe that the continuing growth of America and the rise of living standards will call for the use of increasing amounts of fuel energy. We believe that rising fuel requirements will call for an expanding production of domestic oil, and may call for expanding volumes of imports as well. We do not believe these two things are incompatible nor that domestic production and oil imports must follow opposite trends. On the contrary, we believe the two can follow largely parallel courses, as they generally have in the past.

11. The factors applying to crude-oil imports differ greatly from the factors governing residual fuel imports. In considering oil import statistics, most people lump figures on crude oil and fuel oil together. This practice can be misleading, and a distinction should be made between crude oil and products in reporting and considering the statistics and in trying to draw conclusions from them.

12. Standard Oil Co. (New Jersey) acquired its foreign sources of oil primarily for the supply of foreign markets. These sources are also an important contribution to the building of world trade and—particularly important today—a means of helping friendly nations to achieve better balances in their international commerce without expense to the American taxpayer. They are sources of special crude oils the company may not be able to obtain domestically when needed. They are protection to American consumers against shortages in the face of possible sudden short-term peaks in demand resulting from abnormal weather or other factors. They are supplementary sources of supply insuring the country against any possible long-term inadequacy of domestic supply. Finally, they are supplies and facilities available to our country in the event of emergency.

As a matter of policy, Jersey Standard is following these principles:

(a) With domestic crude in good supply, the company's imports of crude oil are being kept to a minimum consistent with the maintenance of its foreign sources of oil for the purposes listed immediately above.

(b) The company plans to import residual fuel oil to the extent that the domestic supply economically available to it is not sufficient to meet demands of its customers.

(c) The company will do its best to maintain its properties overseas for the purposes listed in the paragraph numbered 12 above and as sound investments for its 215,000 stockholders.

A Book Review on Beards

EXTENSION OF REMARKS
OF
HON. JAMES J. HEFFERNAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 6, 1950

Mr. HEFFERNAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include therein a book review on beards which appears in the current issue of the Explorers Journal, published by the Explorers Club, New York, and edited by Commander Wendell Phillips Dodge, well-known explorer and editor:

BEARDS, THEIR SOCIAL STANDING, RELIGIOUS INVOLVEMENT, DECORATIVE FOSSIBILITIES, AND VALUE IN OFFENSE AND DEFENSE THROUGH THE AGES

EXPLORING JOWL JUNGLES

As most early explorers were adorned with beards of various descriptions which they carried to the then unexplored regions of the earth, to say nothing of present-day explorers who are members of the Explorers Club and might be called pogonotropists without limiting themselves to eating horseflesh, or hippophagists, eaters of horseflesh who wear beards, the author of Beards makes too much of this play on horsey words in such a book. He might have been closer to nature had he really entered the jowl jungles by going on a beard expedition to the East Indian archipelago and the peninsular mainland for the long-armed, closely approaching man Hylobates, of the family Simidiae, subfamily Hylobatinae. Of a blackish color, they are marked with white on the face and hands, and their beards resemble that of Horace Greeley, who advised "Go west, young man." To Reginald Reynolds I would say, "Book passage on a P. & O. ship for the Far East and keep on going to Sumatra, to Assam—and, for the best-known bewhiskered gibbons, to Tenasserim." I doubt, however, if these hylobates are either pogonotropists or hippophagists. But, then, it's been a long time since I've read the Origin of the Species and traced the beginning of men's beards to gibbons.

In any event, overlooking the aimless wanderings of Mr. Reginald Reynolds in and out of the book racks of the British Museum, here is a book written expressly for the more adventurous of our members.

Despite his meanderings through a mirrored maze of thesis sort of research, the author of Beards really has done a painstaking and rather thorough job about this most provocative subject down through the ages. Wearers of beards, and by all means others, will find out more than meets the eye, as one Will Shakespeare had a way of putting it. And so, when the chairman of the club's library committee, our onetime, for a time, be-whiskered "Dan" Streeter asked me if I would review this book, how could I do other than say yes? I suppose, between us, his picking on me had nothing whatever to do with my own baby gibbonish facial fringe. Nevertheless, "Dan" Streeter slyly sent along a list of club members he could think of off-hand who either wear beards, or have indulged in the luxury at one time or another. If he, or I, have missed any member of the Explorers Club who either now wears a beard, or has done so on expeditions, or what have you, we are sorry. So, just write in and tell us about it, won't you?

The chairman of the club's library committee sent me a kind of graph, headed "Full Beards," "Part Beards," "Goatee," and "Mustache." And woe unto you, "Dan" Streeter, for putting me under the heading, "Goatee." I protest, for I wear what is known as the "Imperial." I used to wear a sort of "Vandyke," only my whiskers were untrue to him—or to me, for except when I let 'em grow wild all over my face, and looked more Russian than the Russians, the best I was able to raise was an "Imperial." Of course, I do have a "goatee," as does every wearer of a beard. But, a goatee is no beard, nevertheless.

To stop digressing, and get back to "Dan" Streeter's beard graph of Explorers Club members, here's the way it shows up:

Full beards: Gen. A. W. Greeley, Peter Freuchen, A. R. Crawford, Dr. Otto Schmidt, our late wearer of the beard beautiful, Dr. William H. Jackson; Amos Bonsall, Ernest Ingersoll, James A. Ford.

Part beards: Burton Holmes, Rudolph Kersting, Prince Albert, of Monaco; Dr. Otto Nordenskjold, Frederick W. Stokes.

Goatee: ("Dan" Streeter headed the list with this reviewer's name, but its libelous) the late late Dr. Franklin P. Lynch, Ernest Ingersoll, Nelson, Ernest Thompson Seton, Daniel D. Streeter (for two short periods in the long, long ago), Sir Hubert Wilkins (again, Sir Hubert has worn a real and beautiful beard, which is far, far more than a mere goatee), Daniel Carter Beard (he also, wore a real beard that covered up his goatee, which any self-respecting beard should do); our late good old captain Edwin Willard Deming, Sir Wilfred T. Grenfell, Albert Operti, Henry B Kane, Dr. Antonio Carlos Simoens da Silva.

Mustache: Rear Adm. Robert E. Peary, Dr. Fridtjof Nansen, Gen. David L. Brainard, Dr. William Beebe, Lawrence I. Grinnell, Henry Fairfield Osborn, Sir Harry Johnston, Frederick S. Dellenbaugh, Dr. Frank M. Chapman, Matthew A. Henson, Dr. Sven Hedin, Sir Douglas Mawson, Col. Theodore Roosevelt, ex-President of the United States, Frank D. Millett, the Chief of Clannfhearghuis of Strachur, Lowell Thomas, Henry F. Evans, Frederick A. Ober, E. O. Hovey, and others.

I would add, too, the name of Capt. Sergius M Riis, who wore a rough-and-ready Volga boatman kind of beard during his action service in the Red Army of Trotsky during the Red revolution, while he was officially dead in the files of the Navy Department in Washington, D. C. Riis' beard at that time made our genial Peter Freuchen's a tame affair, indeed. Then there is Capt. Hassoldt (Bill) Davis, who wouldn't dream of beating about the jungle bush without a cheek-and-chin bush of his own, and always emerges from the deep jungle bearded like a king.

And now, to get on with the review of this book of Beards. The author, himself, reverts to beards with an observation of E. B. Shuldham, M. D., in his monograph on Clergyman's Sore Throat (London, 1878), remarking that "the beard is an accident of sex, nay it is an accident of individual capacity for hair growing, but nature has been generous enough to give all her children a nose." Proceeding to Lactantius as an authority on the virtues of the beard, he held that the beard added to the dignity of the mature body, adding that it contributed to the differentiation of the sexes. He found it also an ornament of virility and strength.

Asking "had Adam a Beard?" the author dug up "that the father of the human race had a beard from the first instant of his creation, and that all men before the Deluge also had them," citing Giuseppe Valeriano de Vanetti's Barbalogia "and then some" in the somewhat longish title in 1759 as proof.

Reginald Reynolds spared himself no end of delving into the, shall we say, lore of the beard, and came forth with many interesting items, among them that of a certain learned scholar who said that long hair "is symbolic of the multitude of sins, hence clerics are directed to shave their beards; for cutting of the hair of the beard, which is said to be nourished by the superfluous humcurs of the stomach." (Guillaume Durantis, Rationale, 1459.)

"Shall we join the Ladies?" hardly heard any more with the passing of genteel living and of the old-fashioned but comfortable

dining room, where the men would remain to smoke after dinner, the while the ladies retired to powder their noses, when it was about time to proceed to the drawing room, leads one to the author's question, "Why women have no beards." Quoting a certain Mr. T. S. Gowing, who wrote a small book on "The Philosophy of Beards," Mr. Reynolds lets Mr. Gowing state his case:

"* * * Woman was made a helpmeet for man, and it was designed that man should, in return, protect her to the utmost of his power from those external circumstances which it is his duty to encounter."

Always willing to give both sides of the question, the author of the book, Beards, says that a learned French doctor, Jean Rioland the younger, "was dissatisfied with the explanation that beards are given to us for protection precisely for this reason, that women most need such protection and are not provided with it. To him I must ascribe yet another explanation, that nature intended the beard as a warning of puberty in order that sexual segregation may take place when lanugo begins to sprout."

Mr. Reynolds sets forth that the painter Liotard is said to have lost the love of his wife when he removed the beard in which he had wooed and won her. Proceeding to "examine the earliest chins of which we have any record," the author states that the first beards were false. He refers to the custom of the early Egyptians tieing false beards, sometimes made of metal, to their chins for ceremonial occasions. Even the Queens of Egypt came eventually to wear such beards, their's being of gold, like the beards of the Pharaohs.

"But when we turn to Assyria and Babylon," says the author of this highly informative and intensely interesting book called Beards, "there is lyrical matter in the ornamental variety to be observed, chiseled in sculpture by artists who, with light hand, traced the parallel waves of royal and military whiskers. Here, indeed, we may find the first bona fide beards; for if those of Egypt were false, those of China, were they never so ancient, could not have been compared with such magnificent growths."

How many of you readers of the Explorers Journal have ever seen an American Indian with a beard? Well, the author of the book we are considering tells of the shaving of half the beards—which, by the way, I used to live in almost mortal fear would happen to mine while asleep, shipmates and others often threatening to do the job. It seems, from the book, that Capt. John Smith told of the Red Indians of Virginia shaving half their beards. It is to be presumed they had their squaws do so, using two sharp-edged sea-shells for a razor. If any of you would like to see a woodcut illustration showing an American Indian with a half beard delve into John Bulwer's Anthropometamorphosis (1653).

That little chore accomplished, turn to the frontispiece of Saxton's Atlas of England and Wales (1579). This should be of decided interest to all explorers, for it shows the allegorical figures of Geography and Astronomy with vast bushy beards. Another such beard was used by its wearer, Gaspard de Coligny, a Huguenot admiral as a parking-place for his toothpicks when not in use.

Our author certainly did a lot of arm-chair exploring of the human beard, having something to say, also, on the "Discovery of the New World and the Old Beard." But then, as one beard to another, also to a half beard—oh, well, to all who read this, I do solemnly recommend your picking up a copy of Reginald Reynolds' Beards. Then, if you don't like at least 5 percent of what you find in it, you are at liberty to "beard the lion in his den," this reviewer being a Leo and a beardist.

Establishing and Operating the Greenville (S. C.) Farmers' Wholesale Market

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 6, 1950

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I submit herewith a brochure on the establishment and operations of the Greenville (S. C.) Farmers' Wholesale Market.

This amazing establishment, with its outstanding results in so short a time, has been largely the work of the marketing commission assisted by its able secretary, a marketing specialist under the Clemson College extension service.

We are justly proud of achievements in this important field thus far and feel that the knowledge thus gained will be helpful to other communities. Secretary Martin is now in Washington at the request of Chairman COOLEY, of the House Committee on Agriculture, to testify on the problems of marketing.

ESTABLISHING AND OPERATING THE GREENVILLE (S. C.) FARMERS WHOLESALE MARKET

(By Robert H. Martin, secretary, Greenville County Marketing Commission, marketing specialist, Clemson Extension Service)

Three years ago public officials felt that a modern marketing facility was needed in Greenville. Over 100,000 persons lived within a radius of 2½ miles. Within a 50-mile radius 700,000 persons made their living in the cities and on the farm. The city area is surrounded by fertile farm land. The Marketing Facilities Branch of the United States Department of Agriculture reported in its survey here that annually the Greenville trade area (a 10-mile radius) was consuming about 27,500 tons or 2,200 equivalent carloads of fresh fruits and vegetables. Eggs consumed annually in the trade area is about 200 equivalent carloads and 150 carloads of dressed poultry. In 1944 farmers of the vicinity of Greenville harvested for sale about 8,600 acres of vegetables. We are within 30 miles of the largest peach growing county in the world.

These facts and the fact that our only marketing place was a wide street where truckers, farmers, and grocers gathered early in the morning and made many of us feel the need for a facility that would cut handling costs from the farm to consumer.

We tried to interest our three banks in financing such a facility. They were not interested in the project and did not want to take a chance on its success.

The members of the Greenville County legislative delegation became interested in establishing a public wholesale market here. They bought 27 acres of land, passed an act appropriating $100,000 and authorizing the borrowing of another $100,000 by the Greenville County Marketing Commission to set up the new market. The act made the loan of $100,000 a full faith and credit of the taxing power of Greenville County, the bankers were anxious to loan the $100,000 at 3-percent interest and all three participated.

It appears that we have a perfect example of the need for legislation such as is contained in the bill H. R. 8320. Without the insuring of our loan by the county, it would have been impossible to have expanded our market after only three months of operation. We see the need of other facilities, but all funds are spent. Our loan is for a 10-year period; however, it should be for a 40-year period as is provided in H. R. 8320.

Thinking that the committee might be interested in pictures of the modern marketing facilities and what the cost, I have prepared this information on the pages to follow.

Also, I felt that the committee would like to know of the income and expenses of operating a marketing facility. This is shown on a chart following the pictures. This shows the market's first year of operation and with the expansion program completed, the net profit should be greater in the years to follow.

Putsch That Failed

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 6, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Minneapolis Morning Tribune of Wednesday, May 31, 1950. The real lesson from the Berlin episode of Sunday, May 28 is that the Communist putsch was not tried when its organizers knew in advance they faced firm resistance. Thus far this has been the unvarying pattern of Soviet behavior, which should give powerful guidance to our conduct in the future wherever Communist aggression is threatened:

PUTSCH THAT FAILED

The world can breathe a little easier now that the Whitsunday demonstration by east German Communists has come and gone. There was no violence, although Communist leaders had openly hinted the affair might develop into a spontaneous bid to drive the western powers out of Berlin.

That no putsch was attempted was probably due to the elaborate preparations made by the west to preserve order by force if necessary. These preparations were as well advertised as the demonstration itself and they had the full support of non-Communists in western Germany.

Clearly the Soviet master minds behind the demonstration were not ready to provoke an incident that might turn the cold war into a hot one.

Still, propaganda forays like this to test the psychological defenses of the West do not make the task of peacemakers any easier. They give the lie to the soothing words of Soviet leaders who, according to Trygve Lie, just back from a 90-minute conference with Stalin himself, say they want nothing but "peace, peace, and peace."

There was no bloodshed in Berlin Sunday. But there were plenty of insults directed against the West. The marching bands, the disciplined young people, who performed like radio-controlled robots, and the ominous appearance of the east German "people's police" force suggested nothing that might promote understanding between East and West.

As we have come to know the tactics and strategy of cold war, the demonstration must be put down as a hostile act against the

West. Allied occupation officials in Germany are certain that others may be expected as long as the divided occupation of Berlin continues.

The United Nations secretary-general has talked with President Truman and Secretary of State Acheson about trying to persuade Russia to end its boycott of the United Nations. Presumably he discussed Stalin's reaction to the Lie peace mission and relayed the Soviet dictator's "terms" for returning to the security council. Peace-loving peoples the world over pray that something concrete may emerge from these talks that would indicate peace is attainable. Unfortunately, there are more grounds for pessimism than for hope.

The schism between East and West remains wide and deep. As Dr. Charles Malik of Lebanon said in his classic discussion of "War and Peace" before the UN General Assembly last fall, we will have peace only when the non-Communist world feels at ease with Communists. But he added that this can never happen so long as the West "knows that the Communists wait only for the day of its damnation."

Mr. Truman would be naive indeed to commit this country to a Stalin-approved peace formula without first insisting that the Soviet Union show by acts and deeds that it is ready to abandon its bid to rule the world. The American people have every right to be suspicious of Soviet promises so long as they must be judged by what happened in Berlin Sunday.

The Responsibilities of Organized Industry in Our Expanding Economy

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 7, 1950

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a panel presentation before the 1950 spring meeting of the American Trade Association Executives in Washington, D. C., by Robert E. Harper, moderator, managing director, National Business Publications, Inc.; Hon. Frank Buchanan, chairman, House Select Committee on Lobbying Activities; Hon. James M. Mead, commissioner, Federal Trade Commission; H. B. McCoy, director, Office of Domestic Commerce, United States Department of Commerce, and Alexander Kirk, assistant director, International Trade Promotion Division, Economic Cooperation Administration:

THE RESPONSIBILITIES OF ORGANIZED INDUSTRY IN OUR EXPANDING ECONOMY

Mr. HARPER. Mr. Vice President, ladies and gentlemen, distinguished guests and fellow members, I have already been privileged aplenty in being permitted to perform as your program chairman for this edition of our spring get-together.

Now, it is my added high honor to serve as the moderator of this panel of personalities who are tops as far as talent goes, and who are on top of four of the most significant responsibilities of our times.

We read the headlines today and every day, and we find ample cause to wonder just what are the responsibilities of organized industry in our expanding economy? Headlines that startle our most vivid imagination; that play havoc with our choicest conviction; that quicken our gravest concern for the future. Headlines such as these: "Scientists say first atom-fuel motor to be built next year"; "Political punishment of business charged"; "Rise in United States imports forecast during 1951–52"; "John Bull's dollar-getting experts lend their acumen to south Asia"; "United States said to be facing chronic unemployment due to Government's economic policies."

Headlines about happenings that are part and parcel of our expanding economy * * * happenings that create issues and cause conflicts regarding our responsibilities.

Your moderator, for whatever his opinion may be worth in these deliberations, is inclined to believe that nothing is going to be settled in the sense in which things were once supposed to be settled, for the simple reason that knowledge will probably continue to increase and will inevitably alter the world with which we have to make terms.

But, it is for the purpose of expert opinion that this foursome is brought together with you today * * * so, I am only wasting time, by not letting my panel get at the subject at hand—"The responsibilities of organized industry in our expanding economy."

We shall follow this procedure. I shall introduce each panel member separately and he shall speak on the subject briefly without interruption. Following the presentation by the fourth and last member of the panel, I shall throw the session into an open forum and, as you see, some of the members of this audience have provided me with enough questions to keep us lively the remainder of the day.

Now, then, first to address you is a native of McKeesport, Pa., and a graduate of the University of Pittsburgh, plus postgraduate work in economics at Columbia. The first and only Democratic mayor of his home town, he was elected No. 1 citizen in 1941 and served until 1946. Prior to 1941, he had been an educator and business consultant. First elected to represent the Thirty-third District of Pennsylvania to fill an unexpired term in May 1946 and reelected in November 1946 to the Eightieth Congress, and again in November 1948 to the Eighty-first Congress—he is a member of the House Committee on Banking and Currency, the Joint Committee on the Economic Report, and the House District Committee. He is married and is the father of not two but twin daughters.

Ladies and gentlemen, I am proud to present to you the distinguished chairman of the House Select Committee on Lobbying Activities—the Honorable FRANK BUCHANAN, Congressman, the floor is yours.

Mr. BUCHANAN. I appreciate the invitation to discuss the responsibilities or organized industry with the leadership of America's top trade associations. We all talk so much and think so much about our rights and privileges and immunities under a free form of government and under a free-enterprise system that it is refreshing and stimulating, and important, to discuss once in a while this concept on the other side of that coin, that is, the responsibilities which go with our free political life and our free-enterprise system.

As representatives of the great trade associations, you no doubt have many important problems before you, of a technical or specialized nature. You are to be congratulated then for going out of your way, and inviting Government officials and Members of Congress to come in and point warning fingers at you about your responsibilities to the economy and to the general public.

You leaders of America's trade associations have already exhibited a fine sense of responsibility which is to be commended, and whether you get much guidance or not from this panel, you can't be blamed for not having made the effort.

The first piece of meddling advice I'd like to give today is a little impertinent, perhaps, but I'd like to suggest that instead of restricting this discussion to the subject "Responsibilities of an Organized Industry in an Expanding Economy," we change "in" to "for," making it the "Responsibilities of Organized Industry for an Expanding Economy."

We have gone through the equivalent of a new industrial revolution in America in the past 10 years under the stress of war—hot and cold. During the good part of that period, industry had heavy responsibilities—terrific responsibilities—which were shouldered in the cause of total war. Many of those responsibilities were taken on voluntarily, others were imposed by Government.

In the years since the end of the shooting war, most of the Government-imposed responsibilities have been removed. Industry is getting back to making its own decisions again. We have been beset with fears of inflation. We have had some scares about recession and collapse. There were always plenty of optimists around to tell us everything was going to be all right, but most of us as individuals and as citizens had our doubts and fears about who was going to get hurt.

There is no doubt now that we came through those boom years of 1947–48–49 better off than most of us had ever dared hope. Economically 1949 was not as big a year as 1948, and in fact, to some the drop was significant enough to appear as a full-blown recession, and yet 1949 was about the best year we'd ever had in total economic well-being at any time in our history, other than 1948.

There was a good amount of business sense and statesmanship demonstrated in 1949, particularly in the early half when prices and profits started down. The fear reaction, the panic reaction, always incipient in a situation like that, did not develop. There were many balancing mechanisms in our economy today which were not present 20 years ago.

This stability in our economy has been the end result of recovery and reform measures adopted over the past 15 years. But essentially, I think a good part of the credit for bringing us through 1949 in good shape was business responsibility. There were not the wholesale wage slashes and cut-backs and inventory depletions which accompanied previous dips in the economy.

We have today a dynamic and expanding economy. Now, when I said earlier that I thought we should discuss the responsibilities of organized industry for an expanding economy and not merely in one, I had in mind the conviction that in the days and years ahead—if we can keep the world from falling apart at the seams, then industry has the greatest responsibility for achieving a continuing full employment economy.

Business leadership and business statesmanship are needed more today than ever before. Business must lead and lead toward the right goals in America and our world of today or forever after take the consequences.

Democracy is a flexible thing, and freedom-loving Americans in a democracy have learned to accept change. Extremism from any side does not appeal to our people. Free enterprise, a bit chastened and somewhat reformed, came through the great depression of 20 years ago still free, and we have come through the greatest war in history with not less freedoms than before but actually with more.

In past eras economic and financial mayhem has been committed in the name of free enterprise, but wise business leaders have seen these fallacies and want no more of it.

And so, antitrust laws that restrict the freedom of businesses; labor laws that restrain unbridled freedoms of both labor and management must come about. Brakes must be applied to labor management and government when balance end equilibrium are threatened.

We have come a long way in recent years toward these goals of industrial progress.

Government meddling helped to bring about some of these improvements. Many of the reforms imposed by Government were bitterly fought at the time as too severe, but I believe, and like to think, that the fair-minded businessmen who worried through these years of reform will acknowledge that the reforms were made necessary by the failures of large segments of American industry to shoulder responsibilities which were properly and rightfully theirs, responsibilities for treating workers as human beings, for exercising a social consciousness as a necessary part of the profit motive in a free nation of free people.

It is significant to me that no matter how deep our economic distress ever became in America, there was never—any time—and I even include the deepest darkest days of the depression of the thirties when any substantial, responsible area of the American electorate seriously challenged the place of the profit motive in our economic system. There have been times, frequent times, when many Americans were disturbed—and properly so—over the excesses of profit-taking but no political party which advocated the elimination or even the sharp curtailment of the profit motive ever received more than a paltry fraction of extremist votes. And I don't think the credit for that can properly go to those few die-hards of an obsolete reaction who screamed "communism" at every moderate reform in our economic structure; it should go, instead, to the inherent fair-mindedness and common sense of the American people.

If we can assume then, that most Americans sincerely and genuinely believe in the profit system and a free enterprise system—and I frankly believe that is a fair assumption—the responsibility of organized industry today in—or for—an expanding economy rests on a continuous demonstration of faith in America and in the good sense of her people. That faith has been demonstrated and upheld as valid many times in the past decade when our very existence as a nation of free men was at stake. It has been demonstrated frequently in the last few years, too, when there was not the emotional stimulus of war for our very lives to bolster our determination.

The war taught us amazing new techniques for vast productive miracles. After the war, industry went ahead confidently to exploit those techniques. Technological progress had zoomed during the war; after the war, business, under the spur of profit expectancies, used those techniques with confidence in the stability of America's absorptive capacity. Plants were expanded dramatically. Colossal investments in new plant and new enterprises were taken. The risks have proven, in most cases, to be good.

Television, an experimental plaything as far as most of us were concerned 10 years ago, crashed on the postwar scene with the impact of an industrial giant. Plastics, electronics, gadgets of all sorts rushed to new markets.

The result was a steadily expanding economy, a steadily expanding working force, an unbelievable 60,000,000 jobs and an accelerated national income which 10 years ago we would have thought fantastic.

We have been concerned in the past about attaining full employment. The goals we set then have been exceeded and will continue to expand in the future.

We are going to keep expanding our economy and our job opportunities for the good and simple and necessary reason that—if we are to continue to maintain dynamic capitalism—we've just got to add job opportunities. We haven't been creating them fast enough. Our labor force has been increasing faster than employment opportunities. And so we have this specter of increasing unemployment at a time when employment should be on the increase. This is critical.

It has been said that the way to make more employment is to make more employers. Employers are made, of course, by providing incentive, by providing investment funds, and by providing markets and profit possibilities.

Despite the anguish over taxes, incentive is very much present in the American economy, as expanding productive facilities attest to. Much of the investment money for this expansion is coming from profits. Funds for new businesses and new enterprises are not available from new investment sources. They must be provided from somewhere. The investment markets have not been made generally attractive to the small investor. Big financial institutions with available capital are often restricted by law in their freedom to invest.

Just what is the answer to this dilemma?

Either investment must come from private sources or increased demands on Government will be made by small-business men seeking capital to start new enterprises.

We have seen it in housing finance, and the RFC is openly besieged for loans for new businesses.

Government has the responsibility—and you of business are just as insistent as any other group that it shoulder that responsibility—for keeping us secure in our freedom, secure from invasion or attack, secure from depression and collapse. Government is not some impersonal thing, it is people. It is you and me. We all want the same things for our country and in war we pull together with unified determination. We group together in common defense against a visible enemy. We curtail our human greeds and our human selfishness.

Peace—even this halfway peace which is armed truce—doesn't evoke the same unity. We all want the same safety and security for America but, humanly, we want the biggest slice of the pie we can get. We don't figure a little extra cut of that pie is going to really hurt anybody, until we find everybody grabbing off a little bit more than he should—or trying to grab—and the first thing we know, the pie just doesn't go around. Somebody gets left out.

In a nation of full and equal citizens, we can't go letting too many get left out of jobs, opportunities, housing, education and other wants and necessities. We best look out for our own interests by looking out for each others'. In a free enterprise economy, in a free political society, our first responsibilities are to our fellow citizens and to our communities and to our nation. If we carry out these responsibilities, our Nation and our economy will continue to remain strong.

When there are jobs for all of our people, when the door of opportunity continues to remain open, then we need have no fears as to our Nation's future.

To keep our system operating successfully, we must continue to expand. There are a lot of young people coming out of our schools and colleges in the next few months and to many of them free enterprise is just an abstract phrase.

Can we make it a reality?

This is our basic responsibility.

It is fundamental; it presents a never-ending challenge.

Mr. HARPER. Thank you, Mr. Chairman, for a masterful job of getting us off on the right foot, down the right road, toward the right goal.

Our next speaker needs no introduction to any Washington audience nor, for that matter, to Americans everywhere. Born at Mount Morris, N. Y., he rose from water boy on a railroad to tender of switch lamps and maintenance of way man. Seeking knowledge in the law, he took employment on the Capitol Police Force, so he could study at night, soon followed by his election to his home-town County Board of Supervisors. In 1914, his fellow-workers saw fit to name him president of his local railroad union. From 1915 to 1918, he served as a member of the New York State Assembly. He did his job faithfully and his friends and constituents recognized his ability, sending him to the United States House of Representatives in 1919, where he served 10 terms. Then he stepped into the shoes of a United States Senator, where I first had the pleasure of knowing him as Chairman of the Senate Committee on Post Office and Post Roads. During the war, he was Chairman of the Senate Special Committee to investigate the national defense program, having succeeded to that post when his colleague, Harry S. Truman, resigned to become Vice-President.

Senator, I am happy to have the honor of presenting you to my fellow trade association executives as the Hon James M. Mead, Commissioner, Federal Trade Commission.

Mr. MEAD. It is a pleasure to meet today with you men who are taking such an important part in the development of an economy which is producing living standards undreamed of in the previous history of the world. We have but recently come through a world war with its attendant waste of human values and property values. This country has not only withstood the shock of that waste and gone forward to new economic heights but has also shouldered the burdens of a substantial portion of the free peoples of the world. History presents no counterpart of this situation. Never before has a nation, proceeding without thought of conquest or domination, made such a voluntary contribution toward the preservation of right principles among its fellow nations. The decisions which have brought about this unprecedented atmosphere of cooperation among freedom-loving people were born of great courage, vision, and idealism. It has been possible to make them effective, however, only because our economy at home was sound. It was built upon a sound foundation, and it was possible, therefore, to expand it rapidly enough to meet both domestic and foreign needs. You men who are responsible for the efficient operation of trade associations have contributed your full share to the building of that economy.

Since coming with the Federal Trade Commission, I have been questioned concerning the attitude of that Commission toward trade associations and also as to whether I personally favored or opposed trade association activity. As a matter of fact very recently a sentence was selected from an opinion of mine dismissing a complaint and was construed in a manner to indicate that I entertained some personal opposition to trade associations. I think the opinion in that case shows very clearly that I have no such thought in mind. I was merely pointing out the absence of media of any kind through which agreements or understandings might have been reached or enforced in that particular case. It is undisputed that in the past some trade associations have served in that capacity. Certainly I had no intention then or now of condemning trade associations in general or of detracting in any way from the spendid work that the great majority of those associations are performing. Please be assured, therefore, that I hold firmly to the belief that no suggestion of wrongdoing arises from joint action taken in an effort to solve mutual problems or to improve the well-being of any group so long as those who participate do

not act in such a manner as to injure those who do not participate, including competitors, supplies, and customers. This kind of joint effort in my opinion is the proper field for trade associations. I have not been empowered to speak for my colleagues, but I believe that represents their thinking as well as my own. Conversely, however, when a group seeks to improve its lot at the expense of others, then those others need protection. That briefly is the theory underlying the laws that prohibit agreements in restraint of trade.

When any group through its trade associations or otherwise looks for easy solutions to its problems by methods that hurt others, such as fixing prices, excluding competitors from the market, restricting production, preventing innovations, etc., it is performing a disservice to its industry and to the economy as a whole. It not only directly damages the public interest but also diverts attention from the harder, more inventive, and more useful devices which would benefit the position of the participating group without hurting others.

It is obvious that there are many activities which may be handled through trade associations with regard to which the likelihood of resultant unlawful restraints upon competition would be either nonexistent, or most remote. Some that come to mind in this field would be legislative and informational services, research activities, studies dealing with employee relations, overseas markets, etc. Another broad field in this category is the developing of meaningful trade terminology with reference to commodities and characteristics of commodities for which there are no precise words or concerning which the interpretation of language differs substantially. The Federal Trade Commission and trade groups have collaborated in working out the definitions of such terms as "preshrunk," "gold-filled," "shock resistant," and the like. Such cooperation creates the possibility of making accurate representations in the place of hazy or inaccurate ones. This enables both industry and the Commission to assist in protecting honest businessmen and consumers alike from the effects of misrepresentation. The Commission's rayon rules present a good example of that kind of work.

As contrasted with joint activities of this type, there are the practices which almost inevitably involve unlawful trade restraints. These, of course, would include all forms of price fixing and price manipulation. Incidentally in that connection, I fear that at times there is a tendency to believe that unless the practice results in the actual fixing of a price, it may not be unlawful. I would like, therefore, to quote briefly from the Supreme Court's decision in the Socony-Vacuum Oil Co. case in 1940:

"Any combination which tampers with price structures is engaged in an unlawful activity. Even though the members of the price-fixing group were in no position to control the market, to the extent that they raised, lowered, or stabilized prices, they would be directly interfering with the free play of market forces. The act places all such schemes beyond the pale and protects that vital part of our economy against any degree of interference. Congress has not left with us the determination of whether or not particular price-fixing schemes are wise or unwise, healthy or destructive. It has not permitted the age-old cry of ruinous competition and competitive evils to be a defense to price-fixing conspiracies. It has no more allowed genuine or fancied competitive abuses as a legal justification for such schemes than it has the good intentions of the members of the combination. If such a shift is to be made, it must be done by the Congress. Certainly Congress has not left us with any such choice."

Between the two extreme types of practices, those where unlawful results are unlikely to be found and those which cannot be engaged in without producing unlawful results, there is a great variety of practices whose legality must be tested against the results which they produce. For the most part they are capable of being used without harming others. Experience has also shown that they are equally capable of being used in such a way as to harm others. For this reason the Commission can neither unqualifiedly condemn nor unqualifiedly approve trade-association activities involving such practices.

In the Temporary National Economic Committee Monograph No. 21, and, incidentally, I was a member of that Committee, the section on trade associations as a means of monopolizing the market has subheadings which deal with cost accounting, statistical activities, price-reporting systems, standardization, credit bureaus, and patent pools. Under these subheadings cases are referred to in which each of these classes of activities was used as a device to restrain trade. Yet any one of these activities may be innocently used by other associations under other circumstances. It is unfair to conclude from this that the law is capricious or uncertain or that it exposes association managers to undue risks.

Those who participate in a plan are the only ones who really know what its purpose is or in what way it is to be carried out. Likewise, they are in the most favorable position to know in considerable detail just what consequences it has had. If it is actually injuring others, there seldom is doubt in their minds as to this point. Moreover, those who develop a program of lawful, constructive activities are in the most favorable position to prevent it from becoming combined with illegal activities. The responsibility properly rests on them to avoid the illegal purpose and not upon the Government to forbid practices absolutely even though they are sometimes innocent, or to condemn practices absolutely even though they are sometimes the instrument of an unlawful scheme. The law-enforcement agencies constantly encounter cases in which there is documentary evidence of an intent to violate the law and to cloak the violation with innocent activities, or with a profession of ignorance about the proper interpretation of the law and about the consequences of the illegal acts. For this reason these agencies are understandably skeptical of associations that have able legal counsel, and whose membership consists of enterprises most of which have able legal counsel, who profess to be apprehensive and uncertain about what they may legally do.

It seems to me that if trade associations are to serve the needs of industry and at the same time remain within the established legal boundaries, the first requirement is that their managers believe sincerely in the preservation of the competitive free-enterprise system. Recently there was called to my attention statements contained in speeches delivered several years ago by trade association managers, whom I am advised have achieved considerable prominence in that field. The following is quoted from one of those speeches:

"Under the system of unrestricted competition honestly carried out, prices are always either too high or too low. * * * As a matter of fact we have never been able to try out the system of unrestricted competition honestly because, notwithstanding the antitrust laws, men have been forced through motives of self-preservation to work together in various ways to control prices and to avoid the ultimate risks of a system under which they were supposed to operate. * * *

"If I were in a position to write the ticket for industry in this country, I should give each industry the right to name the prices at which its products should be sold and I should enforce these price determinations through due process of law."

I hope and believe that the philosophy expressed in this quotation is far less prevalent today than it may have been when the speech was made. For certainly there would be troubled waters ahead for any association whose course was charted by such a compass.

When I was invited to appear here this afternoon, I naturally sought out some current literature on the subject of trade associations with a view to informing myself as to the problems with which you might be most concerned. From this I gained the impression that the problems were of recent origin—or in any event had been greatly aggravated by recent activities of the enforcement agencies of the Government. It further appeared that those agencies were taking progressively stricter action against cooperative activities in industry. When I sought to test the character of current actions against those taken in similar situations a generation ago, however, the facts failed to support the contentions made in this regard in some current trade journals and magazines. So let us check the record. I found, for example, that the Federal Trade Commission in its very first proceeding involving the activities of a trade association, Docket 17, Bureau of Statistics of the Book Paper Manufacturers (1917), after finding that the association and its members had been engaged in a cooperative plan to enhance and maintain prices of book paper through the association, ordered the various members to "forever cease and desist from continuing their respective memberships in the said Bureau of Statistics of the Book Paper Manufacturers, or from reorganizing the said bureau, and shall not create or join or become members of any such bureau or similar organization having for its purpose the objects, or any of them, charged in the complaint."

They went further than that for in that same case the secretary of the association was ordered to "forever cease and desist from continuing said Bureau of Statistics of the Book Paper Manufacturers, or from reorganizing such bureau, or from creating, managing, conducting, working for or becoming connected in any capacity with any other bureau or similar organization having for its purpose the objects charged in the complaint as having been the objects of said Bureau of Statistics, or similar objects, and from being connected with or assisting in any concerted movement to enhance prices of book-print paper, or maintain such enhanced prices, or to bring about substantial uniformity of such prices, or from aiding and assisting in any capacity in effecting or maintaining such enhancement, or such uniformity of prices through the medium of telephone communications, or by correspondence, or by personal meetings, or through other communications or in any other manner whatsoever."

Nearly 30 years later the Commission had occasion to issue another order to cease and desist in the book-paper industry, this time against the various manufacturers and the Book Paper Manufacturers' Association, covering a somewhat similar cooperative price-fixing effort. In this latter case, however, the Commission merely required the members of the association to cease and desist from exchanging through the association or any other agency certain current and future price information.

Another case in point on this subject is *American Column & Lumber Co.* (257 U. S. 377, decided in 1921). In that case the Department of Justice had charged that a trade association and its members had violated section 1 of the Sherman Act through the exchange of price and statistical information. In upholding the charge the Court stated:

"Genuine competitors do not make daily, weekly, and monthly reports of the minutest details of their business to their rivals, as

the defendants did; * * * and they do not submit the details of their business to the analysis of an expert, jointly employed, and obtain from him a 'harmonized' estimate of the market as it is and as, in his specially and confidentially informed judgment, it promises to be" (p. 410).

The Federal Trade Commission, in its report on "Open-Price Trade Associations" (S. Doc. No. 226, Feb. 11, 1929), stated:

"The circulation of price and statistical information in a form to identify the results for individual members is so unnecessary to the general statistical work of associations and so susceptible of abuse that it might explicitly be declared illegal irrespective of intent. The impropriety of the practice of members of an association giving information as to 'minutest details of their business to their rivals' in what purported to be statistical reports was adverted to by the Supreme Court in the Hardwood case."

The Commission added, however, that:

"With the development of rules of trade practice, on the initiative of the associations and with the cooperation of this Commission, it is reasonable to suppose that the marketing of goods will become more and more an open and aboveboard affair and that much of the machinery needed to find out what competitors are doing may be dispensed with. What is needed in its stead is more comprehensive trade statistics."

In the disposition of its legal cases the Commission has not found it necessary to issue orders requiring trade associations to cease all exchange of price and statistical information. It has been careful to limit the provisions of its orders so as to prohibit only those systems and programs of exchanging and disseminating price and statistical information found as a matter of fact to have trade-restraining effects in the particular case before the Commission for its consideration. It is clear that the position of the Federal Trade Commission in condemning activities of trade associations falls far short of the oft-quoted position of Adam Smith. Furthermore, it is clear that in terminating unlawful activities the Commission has not found it necessary in recent cases to employ fully the drastic remedies suggested in the Supreme Court decision from which I have just quoted.

I can only conclude from a comparison of the Commission's current actions against trade associations with those taken a generation ago and with earlier court decisions that the Commission's current position shows no antagonism on its part against the lawful activities of trade associations. It has not relaxed its vigilance insofar as unlawful practices are concerned, but obviously it has sought to put out the fires without destroying the structure. It can never be tolerant of illegal activities because the Congress has created it for the purpose of eliminating all practices that fall within that category. I hold firmly to the belief that trade associations have by no means exhausted the possibilities of developing lawful activities of great benefit to their groups and to the whole economy. We shall be pleased to explore with you the problems in this field and to render every possible assistance consistent with the protection of the public interest that has been intrusted to us by the Congress.

Mr. HARPER. Thank you, Senator, for giving us one of your always exacting interpretations. You have sharpened our thinking and I know that you have stimulated a number of questions for our forum to follow.

The third member of our panel was born in Richland, Ind., attended Purdue University, and was graduated from George Washington University with an A. B. in economics. He entered the Department of Commerce in January 1920 and was assigned to the Bureau of the Census, transferring to the United States Treasury the following December. He returned to Commerce in July 1928 as a member of the Specialties Division of the Bureau of Foreign and Domestic Commerce, becoming Chief of the Division in 1938. In October 1942, with a reorganized Bureau, he was appointed Chief of the Industrial Economy Division. When the Office of International Trade was organized in 1945, he was named Chief of the Commodities Branch, remaining with the OIT until he was appointed Deputy Director of the Office of Domestic Commerce under the late Gen. Albert J. Browning. When General Browning resigned to become a vice president of the Ford Motor Co., our next speaker took over as Acting Director, being appointed Director in August 1946.

Fellow member and guests, I give you, at this point, an old friend of trade association executives, but one who always has a new and meaningful message for such representatives of business and industry as we. The Director of the Office of Domestic Commerce of the United States Department of Commerce, Mr. H. B. McCoy.

Mr. MCCOY. Americans have the reputation of being a Nation of joiners. In no other country do its citizens organize for group effort as much as in the United States. This is a natural consequence of a large population with a high standard of living and the many diverse activities of business, recreation, and social which are part of our modern life. Business alone spends many millions of dollars annually in activities which are carried on through business organizations.

For many years, the Department of Commerce has compiled various kinds of information on organized industry. In fact, keeping abreast of trade association developments in this country is probably the single oldest activity of the Department of Commerce during its almost 50 years of existence. According to our latest survey of nonprofit organized business groups, there are now more than 16,000 national and local organizations of businessmen. This huge body of organized business activity is probably several times the number of such groups that were in existence when I began my service with the Department of Commerce 30 years ago. In addition to the 16,000 trade groups, we have a record of more than 10,000 local luncheon clubs of business and professional men.

There are now 1,500 trade associations of national scope (manufacturers, retailers, wholesalers, service industries, and the like) and 2,500 regional or State groups, plus 8,000 purely local associations. In general, these organized business groups are dedicated to the welfare of their particular industry or trade and they carry on a large variety of functions and activities to achieve their objectives. Of the 12,000 purely trade associations, 2,000 are of manufacturers, 5,000 are of retailers (or of wholesalers) and another 5,000 are of business service firms (including those in construction, mining, and other miscellaneous activities).

The other major type of organized business is the chamber of commerce, of which there are about 4,000. Quite obviously, this type of organized business effort is devoted to the general welfare and the problems of a particular city or area. Chambers of commerce are generally regarded as purely promotional organizations, but they do carry on a great many activities that are not of direct promotional character.

The large number of organized business groups is probably not excessive by any reasonable standard in relation to our total business population. While the growth of organized industry groups has been rapid during the last quarter century, we have also had a large increase in our business population. According to statistics developed by the Department of Commerce, there was an average of 3,900,000 business firms in operation during 1949, which was slightly below the number in 1948, but was 600,000 more than those in operation 10 years before, in 1939. Parenthetically, this mass of 600,000 business establishments is in the main composed of small business firms. This large increase, mostly in the small-business area, does not bear out statements made during the past two or three postwar years that hundreds of thousands of small businesses have disappeared due to absorption by larger firms.

We do not, as yet, have complete statistics on the size distribution of businesses for the most recent years for comparison with data collected and tabulated by the Department of Commerce for the year 1939. During that year when the business population was 3,300,000, nearly half of all business enterprises had no paid employees; 37 percent had only 1 to 3 employees; 14 percent had from 14 to 19 employees; 3 percent had from 20 to 99 employees; and only 1 percent employed 100 or more. There is a considerable variance, however, in the size distribution among the major types of business. According to estimates of our Office of Business Economics, the following size distribution is indicated for manufacturing (approximately 200,000 enterprises): 15 percent had no employees; 32 percent had from 1 to 3 employees; 29 percent had from 4 to 19 employees; 17 percent had from 20 to 99; and about 7 percent had 100 or more.

It is thus evident that the preponderant number of smaller business enterprises are found in the distributive and service industries, but, even so, the manufacturing industries are largely small businesses.

We estimate that the 1,500 trade associations of Nation-wide importance have a gross membership of 1,000,000 business firms. An additional large membership is accounted for in the regional and local trade groups, including, of course, chambers of commerce. Actually, business organizations are active in about 4,000 cities and towns. However, in the discussion this afternoon we are largely concerned with organized industry groups which are national in scope and character. If our estimates are reasonably accurate, probably not over one-fourth of our business establishments belong to an organized industry group of this kind. Even if the roughly 40 percent of all business establishments, which are individual proprietorships, are eliminated as having no potential membership possibility, there is still apparently a very large number of small businesses which do not have affiliations with the principal organized business groups of national character. The questions might be asked, does this indicate that the typical organized industry group has no particular attraction for a large number of small businesses, or that the organized groups have made no effort to increase their membership among small-business firms? Personally, I do not know which is the correct answer, although I suspect that a highly qualified affirmative answer might be given to both questions.

The Department of Commerce has for many years been a supporter of organized business effort when the objectives of such organizations are to promote the general welfare of consumers and the owners and employees of the businesses. Where business organizations achieve such objectives that are being operated in the general public interest and are thus entitled to general public approval.

It is hardly necessary before this audience to discuss the various and well-established functions and activities of trade associations. Some time ago the Department made an analysis of the extensive range of services that trade associations gave to their employees. Just recently, we made available a report enumerating 75 of the more common and popular trade association activities which we hope will be useful to all organized business groups which are concerned

with appraising and improving their services to members.

Trade association activities, like everything else, are expensive undertakings. Although the number of trade associations and the scope of their operations are impressive, the great majority of these groups have small budgets and small staffs. As Jay Judkins points out in his "National Associations of the United States," of the 1,500 associations which endeavor to serve the major industries and trades of the Nation, only 210 have a staff of 15 or more; 330 have a staff of 6 to 14 employees; while 970, or about two-thirds of all of them, have an average of only three employees each. Thus, in discussing what trade associations might do to aid small business, it must be kept in mind the limitations of activities the members put on these groups through financial contributions to their operations.

An expanding economy, such as ours, requires large business investments, both in new and existing enterprises. We must provide each year employment for over a million new workers that are added to our labor force. As I have indicated previously, we now have about 600,000 more business firms than we had in 1939 which is a direct corollary to the expansion of our business activity during the past 10 years. Although we have no facts or figures on which to base a judgment, I believe that a very large share of these new enterprises are owned and operated by individuals having limited business experience. As everyone is well aware, new businesses are undertaken by people without any business experience; other businesses are established by those who have previously been employed in a certain line of business, have gained some experience in some phase of it and then strike out on their own. Due to the high level of business activity, particularly the 3 years immediately after the end of the war, small businesses prospered. As competitive conditions returned to a more normal situation, the capabilities of small-business management is being tested. It is this fact, it seems to me, that offers the greatest opportunity for organized industry to be of real service to the country in assisting small businesses which deserve help and thus help in maintaining our business expansion.

Most of the authoritative studies that have been made of the problems of small business generally emphasize two major factors that are of the greatest importance in the organization and operation of small enterprises. These are the availability of adequate financing and capable management. Organized industry cannot be of very much assistance in connection with the financing of small business. By and large, most small businesses must be initially financed by the resources of the owner and with the help from relatives and friends. It is in the field of management that organized industry can be of greatest help to small business. Under the designation of management, I refer to all types of operations in which business decisions must be made, such as purchasing, production, and marketing.

It is not feasible within the time limits this afternoon for me to discuss in detail the widely varied activities of trade associations which are now and may in the future aid small business. Some of the best examples are readily available as public information. One of the best sources is the ATAE awards program, which was inaugurated in 1929. We have recently prepared a summary of the entire series of contests. The summary is being forwarded to the ATAE Advisory Committee for suggestions and comments before it is put into final form. This summarization, entitled "Outstanding Services of Trade Associations, 1930–1949," is available on the exhibit table in this room. A review of the 124 submittals which have been made since the inauguration of the said program reveals numerous projects and programs of trade associations which have been beneficial to small business. Some of them were designed specifically for this purpose.

Of the many kinds of things that organized business can do to help small business, I should like to discuss two which I think are of outstanding importance. These relate first to technical research, largely in the manufacturing industries, and second to merchandising and sales promotion which are common problems to practically all small businesses. The most often mentioned disadvantage of small business is that of technical research. Large companies can afford to maintain research laboratories to improve their products, develop new products, and increase productive efficiency. Small business is at a particular disadvantage in this field. However, there has been definite development in the last few years for trade associations to finance technical research, the benefits of such research is available to all members, large, medium, and small. As a matter of fact, the results of such research are frequently made available to nonmembers. In order that small business may compete with one another and with big business, it must have access to technical information and guidance at costs which small business can afford. In some fields of production and processing technological progress is very rapid. An outstanding example is the chemical industry. New production and new processes developed in the laboratories find their way quickly into commercial production. Small business can be at a serious disadvantage unless it has access to these developments as promptly as possible. This is a very fruitful field in which organized groups can provide an outstanding service to small business and to the public generally.

Hundreds of thousands of business inquiries are received each year by the Department of Commerce both here in Washington and through our 42 field offices. For the last year, these inquiries have increased and have been characterized by an increasing proportion being devoted to marketing and sales promotion. It is in this field that the small business needs stimulating ideas, information on markets and market statistics, and advice and guidance on sound and productive sales promotion methods. This seems to me again to be an extremely useful function for organized industry to assist the smaller business community. Not so long ago, it was common practice among business not to reveal successful merchandising and sales promotion ideas and methods. About 20 years ago, I became quite familiar with the activities of a trade association in a rather important industry. The trade association meetings were largely social affairs. It had few members from small businesses and the reason was obvious; the activities of the trade association provided nothing of value to a small business and I suspect not a great deal of value to the other members. Today, that trade association has several very important activities which are useful to all members, including small business. The membership of small business in this association is now very substantial. It attracted the smaller members because it has provided statistical services, marketing information, advice on the selection and training of salesmen and other similar subjects which the smaller businesses could apply directly to their operations.

I believe that trade associations are generally aware of their public responsibilities. A number of trade association executives feel that their organizations are on trial and that they must not only continue to justify their existence to their members but also to carry on their work in such a way as to merit public recognition of their value to our society. That trade associations are giving increased attention to the responsibilities they have to aid smaller businesses is, I believe, sound judgment on their part. The emphasis on small business is not merely an attempt to single out one segment of our business life for special or preferential attention. Small business asks for no special preferences or favors; it does ask for fair treatment and an equalization of its fundamental disabilities as compared with big business. By serving small business, organized industry groups will serve all business.

Mr. HARPER. Thank you, Mr. McCoy, and you likewise have stirred our thoughts about such basic elements as small business and I know that there'll be questions in the hopper for you.

The final participant in this panel presentation was born in Chicago, holds a bachelor of arts degree from Harvard and spent a short time in the Army in the First World War. From 1921 to 1942, he was in the investment banking business in Chicago and, in 1942, he joined the war effort as a civilian at Wright Field in Dayton, Ohio, in the renegotiation of war contracts and subcontracts, continuing in that work, both in and out of uniform, until February 1949. During the last 2 years of his renegotiation endeavor, he was a member of the Army Price Adjustment Board which had charge of all renegotiation activities for the Army and the Air Force. In March 1949, he came to the Economic Cooperation Administration and was attached to the office of his old friend and fellow townsman, Wayne C. Taylor. With the formation of that agency's International Trade Promotion Division, our next speaker became its Assistant Director.

Ladies and gentlemen, here is a man with a message of merit about a responsibility that must be reckoned with, regardless of the pros and cons, and the man's name is Alexander Kirk.

Mr. KIRK. I understand the topic under discussion here today is the Responsibilities of Organized Industry in Our Expanding Economy. This is a very large field to attempt to cover. I would therefore like to take the liberty of expressing my views and those of ECA on one highly important aspect of this general topic, one which we feel is probably the most important economic problem confronting the free nations of the world today. This is the responsibility of organized industry in bringing about a balance of payments between the United States and the nations of western Europe at a high level of international trade for the over-all good of our domestic economy, for the sake of keeping our allies out of the hands of communism and for the prevention of a third world war. This will mean, of course, that if American industry chooses to assume this responsibility, it will not only accept without protest a greater flow of imports from western Europe, but it will do everything it can to encourage and help the distribution of imported merchandise in this country.

Now, even if we were all as dumb in ECA as our critics would like to have you believe, none of us is so dumb that we do not recognize that this is a highly controversial subject. There are very many sincere and intelligent people, in addition to those who have special axes to grind, who believe that all this talk about increasing imports and balancing payments is a lot of bureaucratic nonsense. They foresee that this policy, instead of being of benefit to our national economy, will result in the ruin of many of our domestic producers and the throwing out of work of millions of Americans. Now I grant that if the United States Government should suddenly remove all barriers to the importation of foreign goods and at the same time the nations of western Europe should achieve the miracle of persuading their manufacturers to concentrate all their efforts on exporting goods to this country, our domestic producers in some lines might be in for a very bad time. Even under these impossible cir-

cumstances, however, I believe that American industry, especially those engaged in mass production, would be able to compete very favorably with anything our friends across the Atlantic had to offer. But ECA is not advocating that our domestic market be flooded with a vast amount of goods produced by cheap foreign labor. All we want to do is to increase imports to the extent that is necessary to achieve an international balance of trade so that our allies can purchase from us with dollars what they have to have. As Mr. Hoffman has stated again and again, the increase in imports which is necessary to bring about this balance is negligible in comparison with our national production of over $240,000,000,000.

Some industries may be hurt in varying degrees if imports are increased only moderately. That is probably true. But if we don't increase imports and the nations of western Europe have no dollars to spend in this country when Marshall-plan aid is over in 1952, our export trade will decline to a mere trickle. Inasmuch as so many of our industries depend on a healthy export market for the difference between profit and loss, the disappearance of that export market in 1952 would, in our opinion, have a disastrous effect on our domestic economy. There would not even be an export market for such basic commodities as our wheat, cotton, and tobacco, which we have always, as you know, exported in vast quantities to Europe.

There is one general argument against our program advanced by some of our better-organized opponents which has always struck me as particularly fallacious. This is that our export trade is in the hands of a few large industries and that the average American business—particularly small business—has no stake in international trade. Therefore, the program to increase imports in order to maintain exports hurts the average American business and helps only the favored few. In the first place, I am not prepared to admit that our export business is entirely in the hands of a few large corporations. I do not think it is, although I have not seen the figures. But, for the sake of argument, let us assume that it is. We are all well aware of the tremendous system of subcontracting which exists in our industrial system. It was large before the war and it received a tremendous impetus during the war. Practically all of our large producing corporations subcontract to a greater or lesser degree components of their finished products. A sharp curtailment in our export trade would, therefore, not only affect the direct exporter but business generally, large and small, from Maine to California.

Whether we like it or not, this problem of the dollar gap exists. The question is, What are we going to do about it? It is not a new problem and has existed since the outbreak of the First World War in Europe in 1914, at which time the United States changed from a debtor to a creditor nation. Unfortunately, however, the viewpoint of many of our governmental, industry, and labor leaders has not changed from that of the period before 1914. I was brought up in a high-protectionist school myself. I can remember only too well when I was a boy in the early 1900's my father getting purple in the face with rage at the very suggestion that we should buy more imported articles.

Many of you may have seen the report of the ECA-Commerce mission, or, as it is commonly known, the Taylor report, which was published last October. This was the result of an intensive study, both here and abroad, undertaken at Mr. Hoffman's request by Wayne Taylor and a group of international trade experts from the Department of Commerce and private industry. This report points up the problem of the dollar gap and states that from 1914 to 1939 the United States exported $101,000,000,000 more than it imported. As none of our exporters sell their goods abroad for marbles, this tremendous so-called favorable balance of trade had to be financed in some way. It was found that the United States Government, either through direct grants or loans, had contributed $68,000,000,000 of this total amount. In other words, we have been unconsciously subsidizing our export trade over the past 35 years at the American taxpayer's expense to the tune of $63,000,000,000.

The report goes on to say that the problem can be solved and offers four alternative courses of action. The first is to continue advancing dollars to the governments of western Europe indefinitely. In our judgment this is no solution and is undesirable, to say the least.

The second is to let nature take its course and permit our exports to fall to the level of our imports after 1952. This would mean closing the dollar gap at a very low level of international trade. This is by far the easiest way to solve the problem, but the consequences would, in our judgment, be disastrous. The nations of western Europe would not have the dollars to buy what they have to have from us to maintain any sort of decent standard of living. Communism, which feeds on human misery, would sooner or later take them over and the Western Hemisphere would stand alone against the forces of world communism. If all of us as taxpayers complain today of our tax bills, I would hate to contemplate the taxes we would face under such circumstances for defense or for war. Furthermore, as I have already stated, our export trade would go to hell in a basket which in itself could well be the cause of a major depression in the United States. This is what our dear friends in Moscow so avidly desire.

The third alternative is to increase the investment of private American equity capital in western Europe and its overseas dependent territories. We consider this highly commendable. It is, however, a long-range program and could not possibly, by itself, close the gap between now and 1952. I have learned through long experience that American businessmen have the peculiar habit of acting like businessmen, and certainly under world conditions as they exist today, there are no great incentives to risking capital in far-away places. We are hopeful, of course, that this situation will change for the better.

The fourth alternative, and the one which ECA is recommending, is the increase of direct imports from the participating nations into the United States. The International Trade Promotion Division has been formed in ECA to do what it can to implement this recommendation. We realize only too well, however, that we and the Government as a whole can merely scratch the surface of this problem and only help point the way. The real job on this side of the water has to be done by American industry and American labor working together.

That is why we consider that organized American industry and labor have the major responsibility for the success or failure of this program. If you choose to accept it and meet this challenge of the cold war in the same gallant spirit you did in the shooting war, then, and only then, will the United States and its allies be safe from the inroads of communism.

We have a saying in ECA which I am sorry to say is not original with us. We picked it up somewhere. I think it sums up the situation rather neatly: "If you want to exhale, you have to inhale. Otherwise you die."

Thank you very much.

Mr. HARPER. Thank you, Mr. Kirk, and you have indeed made a major contribution to these proceedings. In fact, there is so much interest in your area of operation that it has prompted numerous questions for this occasion, and you might as well launch our question-and-answer period with this one.

(There followed a full hour question-and-answer period.)

Ladies and gentlemen, as much as I dislike to ring the bell, the time has come to bring this session to a close. May I, therefore, say to the members of my panel that your audience and I think that you have handled a tremendous assignment with the greatest of ease; that we are much in your debt for the great store of knowledge that you have so graciously imparted for our benefit; that we think you're swell for taking time out on a precious Saturday afternoon to come to our meeting; that, if you hadn't come and participated so wholeheartedly, it wouldn't have been the success that it is. May I say to the audience that my panel and I think that you are quite a collection of intelligent people and that, if you hadn't been here, participating as you did, it wouldn't have been worth while for us to be here either.

May it truly be that we have learned to know each other better, and I am confident that we have at least improved our thinking considerably concerning "The Responsibilities of Organized Industry in Our Expanding Economy." Mr. Vice President, we reluctantly give the meeting back to you.

Depreciated Savings

EXTENSION OF REMARKS

OF

HON. HAROLD H. VELDE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 7, 1950

Mr. VELDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Peoria Journal of June 4, 1950, entitled "Depreciated Savings":

DEPRECIATED SAVINGS

The Government of the United States currently is embarking on a campaign to sell United States savings bonds. Purchase of such bonds is just as patriotic and desirable as it was during the war years when everyone rushed to lend their dollars to Uncle Sam. Savings bonds still are one of the finest investments that an American can make and the forthcoming campaign deserves the whole-hearted support of all Americans.

A government selling bonds to its citizens, however, if it is to continue to deserve their support has a high obligation to insure the investors that they will be getting their money back and a fair return to boot.

A dramatic warning concerning the fate of invested dollars has been voiced to its customers by the biggest financial institution in the Pacific Northwest, the Washington Mutual Savings Bank of Seattle.

In big advertisements, the bank reminds its customers that the savings they put away represent things that they are doing without today so that they can have the things they need and want tomorrow. It asserts:

"You have a right to expect that your saved dollars will be worth a dollar when you spend them. They won't be worth a dollar when you spend them if our Government keeps on spending more than it takes in. If you spent more than you earned, consistently, you'd have to face the consequence. Government can't do otherwise.

"Continued overspending causes inflation. Where dollars no longer are based on real values they no longer buy a dollar's worth when you spend them. That makes every dollar you earn and save worth less."

The bank has some further advice:

"But you can do something to keep your dollars worth a dollar, to make your saved dollars as valuable tomorrow as they are today Every savings bond purchaser, every savings account holder, everyone who owns insurance or draws a pension has a special reason for speaking out against Government overspending. If enough of us let our Congressmen know we want it stopped they can put on the brakes. Tell them. Speak up in meetings. Write letters about it. If all of us work to stop this overspending, if all of us demand it, it can and will be stopped."

Every citizen of the United States who has savings of any kind is affected by the depreciation of those savings brought about by inflation. If the dollars you save today are worth only 59 cents tomorrow when you are forced to use them you may wind up in serious trouble. It is most important to every person who has savings that the Government put an end to its inflationary economic policies.

Report of the American Legion Foreign Relations Commission

EXTENSION OF REMARKS
OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 7, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks a report by the American Legion Foreign Relations Commission at the request of Mr. Miles D. Kennedy, legislative director. Several of the recommendations made by the commission are not consistent with my own thinking and hence this extension constitutes no personal endorsement of resolutions:

REPORT OF THE FOREIGN RELATIONS COMMISSION TO THE NATIONAL EXECUTIVE COMMITTEE, INDIANAPOLIS, IND., MAY 3, 4, AND 5, 1950

Eleven members of your National Commission on Foreign Relations met in Washington, D. C., on May 1 and 2, 1950, and on May 3 and 4 the executive section of four members of this same commission met in Indianapolis.

It was the unanimous opinion of all members that a complete statement as to the foreign policy of the American Legion should be presented to the national executive committee at this time. This decision was prompted by the urgency of the international situation and the need for greater dissemination of information concerning our foreign policy to the membership of the Legion and to the American public.

We have such a policy for your consideration today. We urge you to hear it out, for in the terrible conflicts now raging in the world today, our salvation lies in the strength and soundness of the muscles and minds of the American people. To act wisely we must know the issues. To keep continuity in our thinking and actions we must have a fair and understandable policy—a policy that applies alike to all nations and peoples. Continuity, constancy, and vigor are essential, and their foundation is knowledge.

The foreign policy of the American Legion is primarily dedicated to the preservation of freedom, freedom of the individual, and of human liberties.

The menace in the world today is the spread of Soviet communism, whose aims are the destruction of human liberties and eventual world conquest. Therefore, the foreign policy of the American Legion is to fight communism everywhere.

Instead of condemning the mistakes and inadequacies of the past let us now unite our efforts and actions toward the one goal of destroying the threat of world dominion by our real enemy—Soviet Russia.

No longer should we contain communism in one part of the world, then ignore its continued and successful advance in another part. No longer will we tolerate trade or diplomatic expediences which save us pennies today, but which will cost us dollars tomorrow. Our foreign policy must be consistently dedicated to the principle that the greatest contribution that can be made by the United Sates to a peaceful world is the preservation of freedom for those who will be free—and through our moral, military, and economic strength, the destruction and complete elimination of false and untruthful philosophies and ideologies which are loose in the world today.

We retain our faith in the United Nations. We believe that it can be made an effective world authority which can prevent aggression if the Charter is amended immediately as suggested by the American Legion in November of 1946 to accomplish the following:

1. Removal of the veto power in the two specific instances of matters pertaining to aggression and preparation for aggression.

2. The adoption of the United States proposals for the international control of atomic energy and the establishment of arms quotas, both to be guaranteed through a system of positive international inspection.

3. Establishment of an effective tyranny-proof international police force. This force would consist of two parts, an independent active force to be under the direct control of the Security Council and a reserve force made up of the national contingents of the major powers capable of backing up the active forces when necessary. The result would be that the United Nations, through an effective police force, could enforce its decisions, prevent aggression and the preparation of aggression, and so maintain the peace.

We believe that the American Legion plan for strengthening the United Nations provides the essential basic requirements of, and the first steps toward, true world-wide enforcement of law and order, which is the immediate necessity.

The American Legion is opposed to any form of World Federation or World Government at this time.

In 1948 the American Legion recommended a mutual self-defense pact composed of the nations of the North Atlantic area. Our suggestion was made fully a year before the North Atlantic Pact was approved by Congress.

As a result of the North Atlantic Pact the nations of western Europe, Canada, and the United States are militarily stronger than at any time since World War II. Arms and essential materials are now flowing and must continue to flow to our allies in this area so that the North Atlantic Pact countries will have the necessary equipment and trained troops to make a formidable stand against any aggressor.

We now urge the countries of the North Atlantic Pact to join forces within the United Nations to insist on the amendment of the United Nations Charter to accomplish the objectives of the American Legion Plan as stated above. In this way the democratic nations of the west would thereby declare to the world their intention of making the United Nations an effective authority for peace.

We further urge these same democracies which sponsored the North Atlantic Pact to send delegates to a convention to be held soon in the United States to explore the possibilities of the establishment, within the framework of the United Nations, of an association for closer political cooperation among freedom-loving democracies.

To preserve faith of others in our system of freedoms we must continue to help those war-torn nations and people of the world, who will first help themselves, to rebuild their countries and to regain their basic liberties. We therefore urge continuation of the European recovery program as provided for in the present Economic Cooperation Act. We believe that this program has been administered to the benefit of the American people and that it has accomplished its purpose of rehabilitating the economies of western Europe and has contained Communist expansion in this area. We urge all possible economies in the administration of ECA, so that our own economy will not be jeopardized. We heartily endorse a proposal that a study by a commission be made sufficiently prior to June 1952 so that appropriate recommendations can be made to the Congress and the American people as to what steps, if any, might be necessary after that time to continue economic help to the countries of Europe who have joined forces with us in our fight for freedom.

World trade is important to the peace of the world and to the economic well-being of the United States and our allies. We approve the statement of principles outlined in the Habana Charter for the establishment of the International Trade Organization as an agency of the United Nations and believe it would be to the advantage of the United States to ratify the establishment of this organization.

We should encourage economic, educational, and spiritual development in western Germany. This area will again be a critical spot in Europe's development. But Americans must be realistic in their aid and ever watchful in their assistance in eliminating military power in Germany. We must not abandon these people to the Russians, but equally we must avoid the historic danger of strengthening them to a point where they will again menace their neighbors whom they overran in two World Wars.

We should support in every way possible the religious minorities in the satellite countries in Europe that are trying to hold the last citadel of freedom in their countries—the right to worship God as they please. These people have seen the state subjugate the church, and then try to abolish the church. We must support them in their fight to regain freedom of worship.

Some central European problems cannot be solved until the final settlement of the Austrian peace treaty. Many important issues are at stake. Confidence in western Europe and American will be greatly aided by our insistence that the treaty be concluded as soon as possible.

Americans can view with pride the accomplishments of our helpfulness and aid in the eastern Mediterranean area. Greece would not have a democratic form of Government today if it had not been for the bipartisan support of the Truman Doctrine of 1947—which stated that Communist aggression should advance no further in Europe without the United States, through the United Nations, taking notice of, and doing something about, such aggression. America fought Communist aggression in this area, for we wanted the people of the Near East to have a chance to mold a destiny of their choice—and not one dictated to them by Moscow.

We must continue to effectively and affirmatively enlighten the people of Europe and Asia to the truth of the American way of life in the advantages, both material and spiritual, to be gained by free people operating under democratic processes—where the individual is served by the State without being dependent upon it. Containment of Soviet aggression is not enough. We must go forward to the destruction of the aggressive

power of the Soviet police state. Massive propaganda projects must be launched to take the truth to all corners of the world so that all peoples will have an understanding of the basic issues in this great struggle for freedom's survival.

We believe that good results in this direction have been obtained by the Office of International Information and the United States Information Service. We urge that these two agencies and others operating under the guidance of our State Department continue to take the truth to the far corners of the world. We urge Congress to allot sufficient funds to carry out this important phase of winning the cold war.

The American Legion urges opposition to the expansion of communism in Asia. We propose that our Government extend every reasonable assistance to foster all influences favorable to democracy. We oppose recognition of Communist China.

At the 1949 Philadelphia convention we urged that our support should be made available to any patriotic groups or organizations of Chinese whose principles and stability are worthy of our confidence and who will vigorously fight communism and outside aggressors to preserve the basic rights and liberties of a free China.

We again say we reject defeatism and abandonment of this area to Communist aggressors. The immediate threat is at Formosa and in the Philippines. We abhor the idea of abandoning the free and independent government of Formosa. If we are opposed to Communist aggression, and if we are the world's last and greatest protector of human liberties, then certainly we cannot abandon Formosa at such a crucial moment. If we do so, then we are merely borrowing a temporary period of peace until we are forced to face the same issue in another place, which will be just a bit closer to the heart of our national defense structure.

We believe it is imperative that our Department of Defense appraise the defendability of Formosa at once, with the thought that Formosa be preserved, with our help, as a bastion of freedom and a base for military operations against the Communist aggressors on the mainland of Asia.

We should also aid the Philippine Government, in every possible way, to resist the infiltration of Communist aggressors and to maintain a free, democratic government.

Because the North Atlantic Pact has been of such immense value and protection to the countries involved and because a similar regional alliance might be a deterrent to Communist expansion in the Pacific and far-eastern areas, we again urge our Government to lend its aid in forming a regional alliance under article 51 of the United Nations Charter, composed of those countries of the Pacific and far eastern areas, who, through self-help and mutual aid, desire to guarantee their mutual defense and to preserve individual liberties.

The President's point 4 program recommends that Congress provide funds to finance technical, scientific, and managerial knowledge to underdeveloped areas of the world, and also, limited financial assistance for the creation of productive enterprises. The President has requested $45,000,000 to finance the program for the first year.

This plan suggests assistance in many fields and emphasizes technical projects in health, industry, labor, agriculture, and scientific research with respect to natural resources in underdeveloped countries showing particular need. The wise and careful administration of such a program bears great possibilities for the development of international understanding and cooperation, and would contribute considerably to the enlargement of world trade.

The American Legion approves, in principle, the President's point 4 program. We urge the full cooperation of our Government with private enterprise in the development of such a program.

The foregoing should constitute the foreign policy of the United States as visualized by our Commission at this time. The best evaluation of any foreign policy is whether or not it can keep the peace. We know that we cannot have peace by just wishing for it or by negotiating a temporary breathing spell with the Politburo.

We will have peace only after we have accepted and absorbed the fact that we in America must offer the leadership necessary to win this great global conflict of ideas. We must fight the insidious menace of communism and totalitarian aggression with all our might and resources. We must gather to us, as allies, all people who will be free—all who are willing to join with us in this final battle for liberty, justice, and democracy.

And when successful—as we will certainly be—our peace will be built upon the rock of self-reliance of all free people, good will, and international law, internationally enforced. Only then can we openly admit to ourselves and to each other that we have found true peace and real security.

All this is possible if we, as individuals, accept the responsibility to do our share to protect our own liberties. With our trust in God we shall find divine guidance along the rough road that lies ahead. This call for God's help is not to lull the peace-seeking into weakness and compromise. Only in strength of character and arms and purpose, based on Christian principles of justice and righteousness, will America be able to offer proper leadership to peace-hungry citizens of the world who starve for God's most cherished gift—human dignity.

FOREIGN RELATIONS COMMISSION,
WILLIAM VERITY, *Ohio, Chairman.*
CHARLES GONSER,
Washington, Vice Chairman.
LEON HAPPELL,
California, Vice Chairman.
ROGERS KELLEY,
Texas, Vice Chairman.

The New England Shoe and Leather Industry Hurt by Tariff Reductions

REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 7, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, the situation regarding imports, while it affects us particularly in New England, also affects other sections of the country and makes me urge passage of the resolution which I introduced (H. Res. 564) which would provide that a committee of five Members of the House of Representatives be sent to Torquay, England, to sit in and advise those who are deciding what the tariff shall be under the reciprocal trade agreements.

I think it is extremely important that we send our Members over there; other countries have sent observers and advisers. The United States today, in my opinion, has the most to lose by the lowering of the tariffs. Some of our industries in New England will have to go out of business, Mr. Speaker, if aid is not given.

As part of my remarks, I include a letter I received from the New England Shoe and Leather Association, dated June 2 of this year, and a letter dated June 6, 1950, which I received from the Acting Commissioner of Customs, concerning dumping of shoes from Czechoslovakia:

NEW ENGLAND SHOE AND
LEATHER ASSOCIATION,
Boston, Mass., June 2, 1950.

Hon. EDITH NOURSE ROGERS,
House Office Building,
Washington, D. C.

DEAR CONGRESSWOMAN ROGERS: In behalf of our association and members in the shoe, leather and allied trades, we commend you for your forthright action, with other New England Representatives, in writing Secretary of State Dean Acheson requesting that present uncertainties of manufacturers as to future tariff reductions which might be approved by the Committee for Reciprocity Information be alleviated.

We also wish to bring to your personal attention the position of our association with respect to proposed reductions in shoe and leather tariff duties. In the case of shoes, although many items are included for reductions in rates, none of these types are in serious competition with domestic production and retail sales, and our association, therefore, does not plan to enter any opposition. The types of shoes currently being imported, namely women's cemented and men's welt shoes, are not included in the lists for tariff reductions.

However, in the case of leather items, our association strongly endorses the position of the Tanners' Council of America against any further reductions in United States tariff rates. Our association takes the position that the shoe as well as the leather branch of our industry has been injured by discriminatory and unfair trade practices abroad. Cuts in the low United States leather tariffs will not help foreign trade and will only encourage the restrictive foreign controls and obstacles that have prevented New England tanners from getting foreign raw material.

Our association has today advised the Committee for Reciprocity Information of its opposition to any further reductions in United States tariff duties on leathers. Your support of this industry position, in behalf of your constituents, will be greatly appreciated by our officers and members.

Very sincerely yours,
MAXWELL FIELD,
Executive Vice President.

TREASURY DEPARTMENT,
BUREAU OF CUSTOMS,
Washington, June 6, 1950

Hon. EDITH NOURSE ROGERS,
House Office Building,
Washington, D. C.

MY DEAR MRS. ROGERS: Reference is made to your letter dated March 29, 1950, transmitting a letter from the New England Shoe and Leather Association, requesting that an investigation be conducted of the possible dumping, under the Antidumping Act, 1921, of shoes from Czechoslovakia.

The Bureau has ordered various investigations with respect to Czechoslovakian-made women's shoes to determine whether the provisions of the Antidumping Act, 1921, should be invoked.

In view of the facts developed, the settlement of customs duties on women's shoes from Czechoslovakia is being suspended, and such shoes are being released to importers only if they post special bonds to protect the revenue pending a determination of whether

any special dumping duties are assessable on such shoes under the law.

As numerous letters have been received by the Bureau directly from the New England Shoe and Leather Association, that organization has been furnished the above information directly by the Bureau.

Very truly yours,

D. B. STRUBINGER,
Acting Commissioner of Customs.

Ohio Canned Foods

REMARKS
OF
HON. JOHN McSWEENEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 7, 1950

Mr. McSWEENEY. Mr. Speaker, each of us has a distinct pride in his own State. At this time I would like to call the attention of the House to the fact that Ohio, among its diversified industries, has a great canning industry, which is doing everything to provide better and finer foods for our people. Thursday some of my fellow citizens of Ohio are here to help in the dedication of a building which is devoted almost entirely to the study of means for the improvement of foods and the betterment of canning processes for our people. In these times of high food production improved canning methods are very essential in order to cut down waste and at the same time retain not only the nutritious value of the food but also its full natural flavor. To prove that we do have very fine foods the Ohio canners have donated two delicious products, tomatoes and sauerkraut, which will be served tomorrow. We are asking you to participate at your luncheon with us in having some Ohio prepared canned foods. So I, as a Representative from Ohio, urge you please not to forget that on the menu tomorrow there will be something from Ohio for you at your luncheon. It is a gift from the canners of Ohio.

OHIO CANNED FOODS

OHIO CANNED FOOD ON CAPITOL MENU DAY, JUNE 8, 1950

A brief history of the canning industry in Ohio follows:

More than 100 canning plants are operated in Ohio, and upward of 50 different canned vegetable, fruit, and specialty products, from applesauce to turtle soup, are produced by these canneries with an annual pack close to 5,000,000 cases valued at over $15,000,000.

Canning plants have sometimes been described as large community kitchens where growers of perishable crops find a ready cash market for their crops, and local housewives and other workers find seasonal employment. Ohio farmers produce for processing almost a half million tons of vegetables and fruits from over 75,000 acres, and for which the canners pay about $8,000,000 annually. And some 15,000 in-plant workers and 10,000 field workers are paid wages of from $5,000,000 to $6,000,000 each year by the canners of Ohio.

Not only does Ohio produce a large quantity of canned foods, but the quality, too, is outstanding. Ohio's tomatoes and tomato products are among the very best, as is its sweet corn, its sauerkraut, and its pickles. Proof of the exceptional quality to be found here is that many of the world's leading food processing companies maintain large processing plants in Ohio.

THE OHIO CANNERS ASSOCIATION

The association was organized 43 years ago at a meeting in Columbus, Ohio, July 18, 1907, called for that purpose by Frank E. Gorrell, the then secretary of the National Canners Association. During the intervening years, the association has grown from very modest beginnings into an organization comprised of more than 70 members, large and small, including all but a very few of the canning establishments located in the State.

THE NATIONAL CANNERS ASSOCIATION

It is of special significance that on June 8, 1950, several Ohio canners will be in Washington to witness and take part in the dedication ceremonies of the new $1,000,000 research and administration building of the National Canners Association. This building is the culmination of many years of planning and study by the canners of the Nation, and was built to fulfill the needs of this industry for continued research to better supply the people of this country with wholesome, nutritious, economical foods, conveniently packaged, and readily available.

OHIO CANNED FOOD ON CAPITOL MENU

Ohio canners are pleased to give Senators and Representatives from all sections of the United States the opportunity to enjoy the fine quality of Ohio's canned foods. Therefore, they have supplied the tomatoes and sauerkraut that are being served Thursday, June 8, in both the Senate and House Restaurants.

Liberty or License, by Lloyd T. Binford, Chairman, Board of Censors, City of Memphis, Tenn.

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, June 5, 1950

Mr. RANKIN. Mr. Speaker, if we do not protect our children from the evil influences which the Communists and their fellow travelers are trying to spread before their eyes and drum into their ears, then we may expect to see our country dragged down to destruction.

An article appeared in Collier's magazine on May 6, 1950, entitled, "You Can't See That Movie," in reply to which Hon. Lloyd T. Binford, chairman of the board of censors of the city of Memphis, Tenn., in a letter to that magazine on May 30, 1950, said:

MAY 30, 1950.

The EDITOR, COLLIER'S MAGAZINE,
New York, N. Y.

DEAR SIR: In the article in your issue of May 6, You Can't See That Movie, Mr. Velie assumes, without citing his authority, that censorship is an infringement on the rights and privileges of a discerning public regardless of any State or city ordinance which created such censor board.

The Mempis Board of Censors is not a volitient council but a judicial body authorized by a special act of the General Assembly of the State of Tennessee, under which the city of Memphis enacted an ordinance prohibiting "immoral, lewd, or lascivious pictures" or "pictures which are inimical to public safety, health, morals, or welfare." The ordinance provides that the chairman and two members of said board shall be the judges, with one vote each, who shall fulfill their oaths of office by banning all movies or acts which violate the laws of the city of Memphis.

The functior of the Memphis Censor Board has been to carry out the purpose and spirit of the city ordinance. The members of the board, individually and as a board, have consistently endeavored to be just in their interpretation of the city ordinance, so as to give to the public desirable and acceptable entertainment.

The board has never censored a picture because of Negro actors, and have certainly never censored an all-Negro cast, but it has censored pictures where Negroes take roles which are not consistent with our policy of segregation in the South.

Rochester starred here recently in an all-Negro stage play and with Lena Horne in Cabin in the Sky. Lena Horne starred also in Stormy Weather at Loew's State Theater.

In the movie Curley the censor was not due to Negro and white children playing together but because the Negro was in a white school—a condition that does not exist in the South.

The board censors pictures in which outlaws such as Dillinger, the Daltons, and James brothers are glamorized, because children are apt to make heroes of them.

Your magazine article does not attempt to defend Duel in the Sun and numerous other immoral, lewd, and lascivious pictures banned by this board. Anent its invectives on typewriters, hair-do, office, and octogenarians, I might remind your writer that some of the most brilliant minds at present and in the past history of America and England or, in fact, the world, are or were octogenarians.

The chairman is duly sensible to the scorn and ridicule of his devotion to those timely virtues of morality and decency, which accounts for his aversion to exhibitions and performances which are profanely vulgar, immoral, or obscene, regardless of the distinguished dramatic ability of the performers, and he cannot agree with those who regard such as desirable entertainment or a credit to dramatic art, and sincerely regrets that he does not merit the accusation of being puritanic, accepting Webster's definition of such. But this may be a matter of no concern to those who apparently believe there should be no laws requiring decency and morality in public entertainment.

I am enclosing an article entitled "Liberty or License," which sets forth my ideas on censorship. You are free to use any or all parts of this if you so desire.

Yours very truly,

LLOYD T. BINFORD,
Chairman, Memphis Board of Censors.

With the foregoing letter Mr. Binford enclosed a copy of his article entitled "Liberty or License," which every patriotic American, and especially every Christian American, ought to read. I am inserting it at this point.

The article referred to follows:

LIBERTY OR LICENSE

(By Lloyd T. Binford, chairman, Memphis Board of Censors)

Is censorship liberty or license; an infringement upon the rights and privileges of a discerning public, or a lawful restriction of public exhibitions and performances which are immoral, lewd, or lascivious, or those based upon stories of adultery and murder, or which glamorize gangsters and their way of life?

Edmund Burke, the great English statesman and philosopher, declared: "Men are qualified for civil liberties in exact proportions to their disposition to put chains on their own appetites; in proportion as their soundness and sobriety of understanding is above their vanity and presumption; in proportion as they are more disposed to listen to the counsels of the wise and good, in pref-

erence to the flattery of knaves. Society cannot exist unless a controlling power upon the will and appetite is placed somewhere; and the less of it there is within, the more there must be of it without. It is ordained in the eternal constitution of things, that men of intemperate habits cannot be free. Their passions forge their fetters."

Many of the leaders of the motion-picture industry of Hollywood have proved themselves incapable or unwilling of putting chains on their own appetites. They have shown themselves to be lacking in soundness and sobriety of understanding. They steadily have become more vain and presumptuous, and they have scorned the counsels of the wise and the good—the clergy, the educators, the social- and civic-minded citizens.

So, instead of constantly whining about laws adopted to curb their destructive, malicious activities and making personal attacks on those selected by the people to censor their productions, they would do well to examine themselves, then curb their own passions which have, and which are, forging their fetters.

All good Americans believe in liberty, but when individuals or groups confuse liberty and license, as the leaders of Hollywood have done, then do all good Americans believe that laws should be passed, or arrangements be made, to curb the activities of such individuals or groups.

Liberty is privilege. License is abuse of privilege. Liberty is freedom from domination. License is a reckless doing of all that caprice or passion may choose to do. Liberty is a sweet power of personal choice. License is a nasty disregard of propriety.

There are those who control the Hollywood motion-picture industry and have abused privilege. They have shown a nasty disregard for propriety. More—because of their rapacity for money and power, they have commercialized vice, they have publicized perversion, and they have glamorized crime and immorality—degeneracy in all of its ugly forms—until more and more empty seats in the theaters are more vividly revealing the indignation of those upon whom they, for far, far too long a time, have been inflicting their indecencies.

Which is it to be for the gentlemen of Hollywood: liberty or license?

Are they going to control their own, evidently abnormal appetites? Are they going to down their own vanity and presumptuousness? Are they going to refrain from disregarding propriety, listen to the counsels of at least some of the wise and good, and enjoy freedom from domination, the sweet power of personal choice and the steady clicking of the vending machines in the box offices of the theaters? Or are they going to ignore the handwriting on the wall, continue to permit their passions to rule their minds and have more and more legal restrictions placed on their industry, more and more censorship imposed on their productions, with the public staying away from their theaters in ever-increasing numbers?

The decision in this matter is not up to lawmakers. It is not up to censors. It is not up to citizens. In the long run, it is up to the Hollywood producers, themselves; for those who really desire to enjoy self-government, must first learn to govern self.

The great American banking system operates under controls. Censorship in action? Yes. The medical profession has its legal curbs, as well as its own intermedical code of honor—the hippocratic oath. Censorship in action? Of course. The legal fraternity is subject to strict rules and ethics of behavior. Censorship in action? Certainly. The great American free press is prohibited from printing and distributing libelous, salacious, or obscene matter. Censorship in action? By all means. The Federal Communications Commission maintains strict vigilance over the business of broadcasting. Censorship in action? Every bit of it. Why, then, should not this powerful motion-picture industry, the mighty influence of which is felt all around the earth, be subjected to checks in the good, old American way?

Why do leaders of this financial octopus, this immense propaganda machine, wail so loudly when the suggestion is made that they clean house, get rid and stay rid of the Communists, and the marijuana addicts, and drunks, and libertines, and others of such ilk, and discontinue producing films which give the people of other lands a warped picture of our land and distort the sense of values and corrupt the impressive minds of the youth of all lands?

Is there some mysterious reason why leaders of Hollywood should be permitted to ignore our American laws, our American principles, our American traditions, and disregard the proprieties of our many millions of Christian citizens? If there is, it is time we found out about it.

Is not moral turpitude just as odoriferous in Hollywood as it is anywhere on earth? Is it not more far-reaching in its effect on others, due to the wide publicity given it by box-office-conscious advertising men, and money-hungry studio executives who labor under the false impression that maggots can successfully be used, forever, as magnets?

Is it not significant that groups have been formed all over this country, as well as in many foreign countries, to combat the evils of Hollywood, including representatives from such organizations as the Catholic Legion of Decency, the preview divisions of many churches, the Parent-Teachers Association, the Professional Women's Clubs, the University Women's Clubs, the Y. W. C. A., the D. A. R., and many other constructive groups?

Is it too much to ask that historical pictures be historically correct?

Is it too much to ask that no finger of derision be pointed at any religion?

Is it too much to ask that no stones be cast at such things as moderation, temperance, fidelity, and other virtues?

Is it too much to request that no disrespect of law and order and of our American form of government be shown?

Is it too much to expect of the big brains of Hollywood that they show at least a glimmer of understanding of sectional and controversial problems, then portray them fairly and honestly?

Is it too much to demand that such subjects as marriage and family life be treated with due dignity in order that their bonds may be respected and strengthened?

Is it too much to demand that fatherhood, motherhood, citizenship and patriotism be held in the high esteem such things should warrant?

Many of the policy-makers of Hollywood look down upon the millions who view their pictures as uneducated morons with the undeveloped mentalities of early teen-agers. But millions of us who were not able, when young, to go to college, have learned in the tough school of experience that one doesn't have to possess a doctor of philosophy to be a wise dad. Nor does it take a master of arts to be an excellent mom. And we know the difference between right and wrong, good and evil, liberty and license, things about which many of the leaders of Hollywood's motion picture industry seem to be tragically confused.

On May 3, 1950, at Santa Cruz, Calif., Dr. C. C. Trillingham, superintendent of the Los Angeles County Schools, speaking before the opening session of the annual convention of the California Congress of Parents and Teachers, had this to say: "Decent citizens and their children have been, for entirely too long, the victims of those who, operating under the guise of freedom and democracy, have been permitted to sell anything, print anything, show anything, the result is increased lawlessness."

Dr. Trillingham declared that "suggestive and salacious literature, movies, the radio and television shows that portray crime and violence, and debase family life, are evils that threaten children and youth" and he further spoke of those "unwholesome influences" at the risk of being termed a long hair.

A committee of child welfare of the League of Nations analyzed 250 Hollywood-made films and found them—97 murders, 51 cases of adultery, 19 seductions, 22 abductions, 45 suicides; of the characters in these 250 Hollywood-made films, there were 176 thieves, 25 prostitutes, and 35 drunkards.

Censorship is the guardian of children.

Censorship is the officer of the law who protects those endangered by unfortunates gone berserk.

Censorship is the health officer to arrest and control contagion.

Censorship is the conscience of the people, operating in America's constructive system of checks and balances, to check the spreading of lust and licentiousness, destroyers of homes and nations as well as individuals.

If the motion picture industrialists wish to avoid annoyance from lawmakers, censors, and citizens alike, they should discontinue the production of pictures that annoy all who believe in decency and are opposed to degradation. It is up to them to make a choice.

Which is it to be, gentlemen, liberty or license?

Maintenance of Peace in the Near East

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 7, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and statements:

THE WHITE HOUSE,
Washington, June 1, 1950.

Hon. EDITH NOURSE ROGERS,
House of Representatives,
Washington, D. C.

DEAR MRS. ROGERS: The President has rereceived your letter of May 22, enclosing copies of telegrams addressed to you by Mr. James Cantor, president of Lowell United Jewish Appeal, Lowell, Mass., and Mr. Edward Ziskind, president of the Lowell Hebrew Community Center, Lowell, Mass.

By direction of the President, I am sending you herewith, with the thought that you may wish to pass them on to your constituents, the enclosed copies of a joint declaration by the Governments of the United States, the United Kingdom, and France, as well as copies of a statement by the President.

Very sincerely yours,
MATTHEW J. CONNELLY,
Secretary to the President.

STATEMENT BY THE PRESIDENT

During the recent meeting in London, the Foreign Ministers of the United States, the United Kingdom, and France had an opportunity to review the security and armaments situation in the Near East and to consider what action their Governments might take to provide greater stability in the area. As a result of this consultation, a three-power declaration is being issued. This is another of the many valuable results of the London meeting.

The participation of the United States Government in the declaration emphasizes

this country's desire to promote the maintenance of peace in the Near East. It is the belief of the United States Government that the declaration will stimulate, in the Arab States and Israel, increased confidence in future security, thus accelerating the progress now being made in the Near East and contributing toward the well-being of the peoples there.

JOINT DECLARATION BY THE GOVERNMENTS OF THE UNITED STATES, THE UNITED KINGDOM, AND FRANCE

The Governments of the United Kingdom, France and the United States today issued the following Joint Declaration:

"The Governments of the United Kingdom, France, and the United States, having had occasion during the recent Foreign Ministers' meeting in London to review certain questions affecting the peace and stability of the Arab states and of Israel, and particularly that of the supply of arms and war material to these states, have resolved to make the following statements:

"1. The three Governments recognized that the Arab states and Israel all need to maintain a certain level of armed forces for the purposes of assuring their internal security and their legitimate self-defense and to permit them to play their part in the defense of the area as a whole. All applications for arms or war material for these countries will be considered in the light of these principles. In this connection the three governments wish to recall and reaffirm the terms of the statements made by their representatives on the Security Council on August 4, 1949, in which they declared their opposition to the development of an arms race between the Arab states and Israel.

"2. The three governments declare that assurances have been received from all the states in question, to which they permit arms to be supplied from their countries, that the purchasing state does not intend to undertake any act of aggression against any other state. Similar assurances will be requested from any other state in the area to which they permit arms to be supplied in the future.

"3. The three governments take this opportunity of declaring their deep interest in and their desire to promote the establishment and maintenance of peace and stability in the area and their unalterable opposition to the use of force or threat of force between any of the states in that area. The three governments, should they find that any of these states was preparing to violate frontiers or armistice lines, would, consistently with their obligations as members of the United Nations, immediately take action, both within and outside the United Nations, to prevent such violation."

Nothing But Victories

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 7, 1950

Mr. HAYS of Ohio. Mr. Speaker, I am including in the extension of my remarks an editorial from the Christian Science Monitor for Tuesday, June 6, which I think is an outstanding expression of the concept of American philosophy:

NOTHING BUT VICTORIES

Too many Americans are acting as if they were afraid of their shadows. One would never suspect they were the sons of pilgrims and pioneers. At a time when the United States has become the most powerful Nation in history millions of its citizens are thinking defensively. They appear obsessed with security—seeking it almost wholly in material measures, military and economic. In this atmosphere General Marshall's exhortation to fear no "contest of ideas" is welcome.

In these times of cold-war tension it is easy to oversimplify the basic struggle in the world. On the diplomatic front it is visibly a power contest between the Soviet and the United States. But that is only the narrowest aspect. There is a larger contest between the ideas of tyranny and freedom. And beyond that is an even more basic struggle between atheism and religion, between material and spiritual concepts of man. General Marshall was endeavoring to widen our view of the task in hand when he said that the world's great need is for spiritual regeneration.

The temptation continually is to use material means to combat ideas. In the present stage of mankind's thinking, self-defense requires physical preparedness. But this distinguished soldier was urging Americans not to place complete dependence on military and material power. He reminded them that in any contest of ideas, honesty, freedom, equality under law, tolerance and justice will win.

It would be helpful to remember that these ideas have proved revolutionary time and time again. It would be useful to recall that America has long been an arsenal of inspiration. And what the world needs far more than it needs American money, machines, or atomic bombs is fresh inspiration. It can get inspiration from America only if Americans get back to first principles and trust the ideas that have been the Nation's foundation stones. Too much of the world sees political corruption, crime, vulgar movies, racial discrimination, industrial strife, and boastful, intolerant nationalism as America's chief products.

These, too, are subversives. General Marshall pointed out that communism is only one of the ferments in the world which are challenging Americans today. He appealed for a wider regard for oppressed peoples and new visions which will kindle the imagination. That compassion and those visions will find their firmest base in religion's inspiration.

Let Americans trust the dynamic power of free ideas. Let them recall Wendell Phillips' assurance:

"Whether in chains or in laurels,
Liberty knows nothing but victories."

Of course, that confidence comes from spiritual concepts of liberty. Today the religious fundamentals for those concepts are more widely available than ever. Knowing that, who can doubt that the future lies with those who embrace and practice the ideas of freedom and brotherhood? These grow from what Longfellow called the larger thought of God.

A Wrong Foreign Policy in China and the Far East

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 7, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks a paper given by Mr. William Albert Harbison before the White Plains, N. Y., Chamber of Commerce, on April 20, 1950. I commend it to all Members who are interested in what our foreign policy has been in China and the Far East:

OUR FOREIGN POLICY WITH REFERENCE TO CHINA AND THE FAR EAST

Very gravely we are situated today with a state of affairs more serious than confronted America prior to the Second World War.

There are many educators and persons in high places, politically speaking, who today stand for appeasement, taking matters philosophically and going so far as to think that after all the Communists have something substantial to add to present-day civilization and that we should not be too much concerned about the apparent aggression of the one political totalitarian power about which very much of world thought is now concentrated.

We do have our Lattimores, our Services, our Leighton Stewarts, our former Joe Stilwells, our Henry Wallaces, and others of the same type as Philip Jessup, who at the recent conference at Bangkok advised his hearers that they had nothing to fear in communism. Jessup's apparent meaning was not that there was no danger of the infiltration or invasion by China or Russia of Indonesia and Indochina but that even should it occur there should be no fear of communism itself.

Perhaps from the standpoint of those who have not the evangelical faith as a basis of their convictions, whether Protestant or Catholic, there is some ground for their position.

However, we are speaking from the standpoint of an American citizen who thinks of his country with institutions founded largely on a fundamental Christian basis, whether Roman Catholic or Protestant. We think in terms of the categorical and ontological difference between the heart of communism and the heart of the Christian faith. We think in terms of products and byproducts that emanate from these two fundamentally different positions.

If the Government of communistic Soviet Russia was something else than a totalitarian regime and if Marxian communism was not in its essence the inspiring basis of totalitarian aggression in the carrying out of its pattern of life, the western nations would not have the same cause for concern.

It is well known by all parties today, however, that we are dealing with just such a totalitarian enemy to Christian civilization. For over 100 years the representatives of the Christian faith, whether Protestant or Catholic, from Great Britain and the United States have carried on in China and in the Far East. As a corollary to the work and propagation of the Bible and Christian faith by these representatives Gen. Chiang Kai-shek and the Kuomintang in China promulgated a constitution for the Chinese people in 1946 that went far beyond the expectations of the Communists in the northern part of the country. The Communists accepted the plan but when they discovered, under it, they would have to give up their military control in northern China they resumed hostilities against the Nationalist Government.

In final answer to the smear campaign carried on by the leftists in America and abroad against Chiang Kai-shek and the Kuomintang, it can be said, without refutation, that there was free access to all parts of China, under the Nationalist regime, for representatives of the American and British Bible Societies, the Pocket Testament League, the American and British Leprosy Missions and the missionaries of both the Roman Catholic and Protestant Churches, whereas within any territory controlled by the Communists such representatives were threatened, imprisoned, and put to death.

The United States has had an over-all foreign policy eminently portrayed by such outstanding Secretaries of State as Hay,

Stimson, Root, Hull, and Presidents Theodore Roosevelt and Woodrow Wilson. Republicans and Democrats alike they stood for the open door in China and for the integrity of that great country.

At the close of the Boxer Rebellion in China, brilliantly exemplifying American policy, Secretary Hay alone among the four nations involved refused to accept payment for the lives of our nationals. He accepted $900,000 in property damage but turned back $11,000,000 of indemnity funds with the statement that it was impossible for China to pay for the lives of our citizens—they were invaluable.

China on her part accepted the returned money as an act of friendship and with the proceeds until the money was exhausted sent her students over to the United States to be educated in our Christian colleges and State universities.

Secretary Stimson, before the first invasion of Manchuria by the Japanese, endeavored to get Great Britain to unite with us in opposing Japan's entering Manchuria. Unfortunately England, enjoying a lucrative commercial treaty with Japan, refused to join hands with the United States and Secretary Stimson did not feel justified with the weak condition of our own Army and Navy at that time in risking, single-handed, war with Japan.

Unfortunately during the Franklin Roosevelt administration our country went so far in its leanings and sympathies toward communism, with special reference to its leadership, that the representatives of our country in China were almost all those who favored the communistic regime as opposed to the Kuomintang and Gen. Chiang Kai-shek.

It was entirely possible had the leadership been different and had the United States unequivocally backed the Nationalist Government with financial support during the past 3 or 4 years under the administration of a strong military staff and civilian committee cooperating with Gen. Chiang Kai-shek and the Kuomintang, Manchuria could have been held, the industrial center and source of raw materials for all its industry, and all China could have been retained under what would have eventually become representative government in that great country.

Many warning voices and the advice of such leaders as General MacArthur, General Chennault, General Wedemeyer, Congressman Judd, long a missionary in China, Ambassador Bullitt, Admiral Radford, and others advocated the policy above outlined, but were not in a position to put it into effect because of the then leadership in Washington and the type of representatives sent out from there to China and the Far East.

Through the failure of the United States, to all intents and purposes, China has been lost to a totalitarian regime under the direct dominance of Soviet Russia. That dominance is clearly depicted in the disclosure in the March issue of the Atlantic Monthly made by Nora Waln in the article on Young China at the Crossroads. In this article is a reported disclosure of the Harbin secret agreement concerning Manchuria made between Soviet Russia and the Chinese Communists.

The forced confession by physical duress of an innocent employee of our Embassy in Hungary and the still more recent shooting down of an unarmed plane of the United States over the Baltic are only up to date accumulating evidence of the outlaw character of the government that we are dealing with in Soviet Russia.

The British Intelligence Digest published by Kenneth de Courcy in London, Toronto, and New York in its April 1950 issue calls attention to the fact that what the Christian church of all creeds and interpretations has been predicting for 2,000 years as to the end of the present dispensation, scientists themselves are now stating. Einstein's warning, although discounted by de Courcy, is that the human race may wipe itself out with the hydrogen bomb.

At length the present administration through its Secretary of State has turned far away from its previous attitude as depicted above in China and speaks out for a total diplomacy and the reply of Dean Acheson to the dastardly shooting down of 10 Americans in an unarmed plane would appear to indicate that today we have the beginnings of a bipartisan and unequivocal approach to our foreign policy.

Surely past history indicates that we should not recognize Communist China nor permit its entrance to the United Nations and the displacement of the Chinese Nationalists there.

Under total diplomacy past history would further emphasize the strategic importance of giving every support including military aid to Gen. Chiang Kai-shek in his last stand on Formosa and his backing of guerrilla warfare against the enslavement of Chinese citizens in China proper.

There is every logical reason why the western nations should say thus far and no farther to totalitarian aggression and, without declaring war, stop with force, and push back all such aggression.

Total diplomacy will logically include immediate demands for release of all Americans behind the iron curtain in either Russia or China or their satellites and the necessary steps taken to accomplish this whether by force or otherwise, all with a benign purpose and without a declaration of war.

Total diplomacy will ultimately require severing diplomatic relationship with Soviet Russia and the recognition of all Communist totalitarian powers as anti-God and outlaw governments.

Department of Agriculture's Highest Award Goes to Woman for First Time

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 7, 1950

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article on Miss Lucy Maclay Alexander, formerly of Belleville, Ill., in my congressional district which appeared in the May 31, 1950 issue of Pathfinder. Miss Alexander on May 25, 1950, received from the United States Department of Agriculture its Distinguished Service Award—the highest of its annual employee citations and the first to be awarded to a woman. A brother of Miss Alexander, Mr. Robert P. Alexander, resides in Belleville at 615 South Jackson Street:

THE LADY KNOWS MEAT

Little, precise, gray-haired Lucy Maclay Alexander has cooked or supervised the cooking of what would add up to a mountain of meat—some 2,900 cuts of beef, 3,800 cuts of lamb, 1,700 cuts of pork, 900 turkeys and 300 chickens.

Because of this enormous cooking project, women all over the Nation today are cooking their family's meat according to detailed, scientifically evolved recipes that didn't exist 15 years ago. And for her contribution to it Miss Alexander this week received from the United States Department of Agriculture its Distinguished Service Award—the highest of its annual employee citations and the first to be awarded to a woman.

Miss Alexander, who grew up on an Illinois farm, came as a chemist to USDA 31 years ago. Then in 1926 she was transferred to the Department's home economics research laboratories. There she started work on the how-to-produce-better-meat investigation in which three United States Department of Agriculture bureaus, 25 State experiment stations, and the National Livestock and Meat Board have participated.

FALSE DOCTRINE

Properly to judge the meat samples which came to the Bureau in Washington and to the 25 stations, it was necessary first to develop standardized cooking and testing methods. By the time, seven years later, when these standards were published, the long-established idea that meats had to be seared to hold in their juices was well exploded. Work by Miss Alexander and other home economists had proved that cooking meats at low to moderate, instead of high temperatures, keeps protein tender, lessens shrinkage and holds in juices. Cooking teachers accordingly began to change their tune. Cookbooks started giving temperature and time directions for cooking meats based on the type, cut, weight and degree of doneness desired.

Miss Alexander and her staff themselves wrote seven recipe leaflets, the latest of which, Meat for Thrifty Meals (1942) has been ordered by more than a million people. All of the recipes in this leaflet call for low, constant temperatures. Though this method is convenient and saves fuel, it isn't always better for all cuts of meat than one which combines high and low termperatures. When Miss Alexander does a roast at home in her Washington, D. C., apartment, she starts it with a sear. "You can have a sear and slow finish function at a low average temperature," she says.

HOW MUCH GRAVY?

Her tests have shown that a 12¼-pound rib roast, placed on a rack in an open pan, will shrink, after roasting five hours at a constant temperature of 250° F. to 10¾ pounds. Roasted four hours, with a 20-minute start at 500° and a quick switch to 300° for the finish, it will cook down a half-pound more, to 10¼ pounds. The first method produces a half-pound of pan drippings, the second, a pound—not a serious loss if the cook wants a lot of gravy and prefers a richer brown on her roast.

BUSMAN'S HOLIDAY

Currently Miss Alexander and her staff at the Beltsville, Md., labs are doing only "desk cooking"—paper work with some of their accumulated research data. Even this keeps her so busy that she doesn't have much time for kitchen cooking at home. "Why," she says, "baking a cake would be a luxury." Fortunately, her own favorite meat dish is one that can be turned out in a hurry. It's not a fancy one. To meat expert Lucy Alexander nothing tastes better than gound beef with cream gravy.

Know Your Waterways

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1950

Mr. LARCADE. Mr. Speaker, under authority to extend my remarks in the Appendix of the RECORD, I wish to submit an article from the Washington Post,

of even date, by the Marine News, New York, as follows:

KNOW YOUR WATERWAYS—SHIP TO RAIL—RAIL TO SHIP

Except for the low cost of water transportation, it would be impossible for railroads to obtain the volume of traffic that they do on combined water and rail or rail and water tonnage. In many cases the cost of such tonnage, if handled solely by railways, would be excessive or prohibitive. An example is the millions of tons of coal carried annually by rail to ports on the Great Lakes and the East coast for transshipment by water. A large part of this tonnage is again handled by railways after its movements by water. And whence comes most of the vast tonnage carried by railways from coastal and inland ports into the near and far interior of the Nation? It comes from vessels using the splendid system of harbors and waterways—coastal, Great Lakes, and inland—prepared by the Federal Government. Certain tonnage is naturally the business of railroads or trucks. Other tonnage is naturally the business of waterways and can be so transported with great benefits to consumers at costs no other system can approach.

Trouble-Shooter Diplomat

EXTENSION OF REMARKS
OF
HON. LOUIS B. HELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 7, 1950

Mr. HELLER. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following article from the New York Times magazine section for June 4, 1950:

TROUBLE-SHOOTER DIPLOMAT

(By Gertrude Samuels)

WASHINGTON.—One of the great figures in Israel's diplomacy—a new art for one of the world's newest democracies—is a scholarly man who is now emerging as his country's No. 1 diplomatic trouble shooter. He is Eliahu Elath, the new Israel Minister to the Court of St. James.

Step by step since long before Israel was a state, Mr. Elath has been used to make Israel's story and hopes understood in strategic areas of the world. For years he fought—sometimes single-handed—for understanding with the Arabs in typically direct fashion—by living with them in the desert, studying with their leaders, building friendships. Always he was moved on to where trouble was brewing and leadership counted. With understanding and sound relations in Washington of prime importance, he was sent here after the war. Besides dealing with the State Department, he represented Israel at the San Francisco Conference—for which the Jews had no credentials—and fought her battle for recognition in the United Nations.

Two years ago he became Israel's first Ambassador to the United States. Tomorrow he flies to London, which recently accorded Israel full recognition and has thus become a new focus of diplomatic effort because of Britain's role and influence in the Middle East. If and when India recognizes Israel, he is expected to move on to that post, because of its strategic importance for Israel's security.

It seems likely that London will find him—as this capital has found him—unique both as a diplomat and as a person. The three-story house at 2210 Massachusetts Avenue where he set up his embassy 2 years ago is so modest as to be easily overlooked among the pretentious facades of Embassy Row. Its pleasant reception room with its simple blue furnishings and Star of David flag made visitors vaguely aware of contrasts between this bit of sovereign soil and the formality of the city without. Hebrew and English mingled in telephone conversations. Young men and women on their way to second- and third-floor offices and archives called each other by first names, an Israeli custom. A youth in his twenties wore a leather glove over his right "hand."

On the second floor where Mr. Elath had his own sparsely furnished office—decorated with pictures of President Weizmann and shelves of books on Islam, American politics and philosophy—one soon realized that the openness, warmth, and informality of the embassy must stem from Mr. Elath himself. It is now exactly 25 years since he went to Palestine as a student and laborer, having fled from Russia for illegal Zionist activities. And visiting and interviewing him, you come to know a man of so many dimensions, so much faith in human relationships, and, above all, so much humility amid his success that you are forcibly reminded of other typical Israelis like Ben-Gurion and Lubianiker, who also rose from the ranks to fight for an idea—and win a state.

The paradoxical thing about Mr. Elath (pronounced aye-lot') is that for all his informality he looks like a diplomat. He is a tall, strikingly handsome man in his late forties, who dresses conservatively (unlike the starchless Ben-Gurion). His hair is silvering at the temples. His green eyes are meditative or restless as he speaks in Eastern European accents, with the savoir-faire of the scholar, puting fact beside fact with quiet precision.

And as you observe his dealings with people, you are conscious of a deep sensitiveness that makes him—sociologist, teacher, journalist, diplomat—acutely responsive to the challenges of his mission. There is, in his direct manner, the hard realism of all who have been part of Israel's struggle and who view the road ahead without illusions. But there is also frank nostalgia when he talks of the objective closest to his heart—peace with Israel's Arab neighbors. He has lived among the Arabs, knows them intimately and counts many as his friends, in the Middle East, in Washington, and in London.

Perhaps better than any other Israeli diplomat, Mr. Elath symbolizes his country's hopes. He was made to order for Washington. It is a lobbying city and he has a special genius for infighting—for getting the facts across systematically to individuals who count; for reaching, when the going is tough, the right people at the right moment. Besides, he has spent half his life studying the Arabs and tells you bluntly that the future of Israel depends on the destiny of the whole Middle East.

"Our victory," he says, "was more than the victory of 650,000 over 40,000,000—more than a military achievement. It was the great victory of an idea—the readiness of self-sacrifice to the ideal that there is justice. There are few accidents in world history, and it isn't an accident that the Jewish State was established. It was, let us say, a reward for the 650,000 because 6,000,000 Jews had perished in the Hitler epoch. It was a reward to show that the sacrifice of the Jews of Israel was not in vain.

"Israel," he continues, "must and will contribute to humanity and to its neighbors. It must be a democratic example for other nations to follow. Development schemes such as the Jordan Valley Authority will benefit the whole Middle East.

"For although we have been almost destroyed by them, there is no bitterness in our hearts toward our neighbors," he says. "We need peace because of our immigrants—we must absorb them, give them homes, develop their skills, put all of our modern scientific achievements to industrial use, turn all our energies to development.

"And we want peace because I believe, with my thinking Arab friends—and we are not sentimental or mystical—that we will all perish if the whole of the Middle East does not raise its standards of living. The danger to us is not so much from a second round (though we don't underestimate the danger from their potentates) as with our remaining a flourishing oasis in a decaying society."

There are few Arab leaders in Washington whom Elath didn't know as fellow alumni of American University in Beirut, or as fellow journalists or as fellow statesmen in the Middle East. Bonds with his Arab friends have not been severed by political differences. He knows that their hopes are Israel's hopes: that political democracy can become a reality in the Arab countries only through improvement of social and economic conditions for the sick and illiterate masses; that education now limited to the few must reach the remotest villages in this transition from the camel to the atomic age; that instead of fighting Jews, they must turn their energies to fighting disease and starvation.

And he quietly adds:

"We don't expect understanding and peace to come overnight. The Arab Goliath is angry with the Israeli David. But I believe in the cooperation of the Arabs—and if I didn't sincerely believe this, I wouldn't believe that Israel has a chance in the Middle East."

To understand Mr. Elath's objectives, you have to see him within the context of his country's needs and dreams; you have to understand the philosophy which he brought to Washington before Israel was born, for that seemingly hopeless struggle to get traditionalists in this Government to reconsider their thinking about Palestine.

He was born Eliahu Epstein (he adopted the Hebrew name Elath recently) in the Ukraine in 1903 and fled illegally to Palestine in 1924 after spending a year in jail for Zionist activities. Many friends of that generation "are still in Siberia." The young Epstein dug ditches, worked on Royal Air Force installations, tilled the soil of a new kibbutz. Suddenly, "a new world opened for me." On installations being built at the Jordan-Saudi Arabia border he came in touch with Arabs.

As he watched with wonder and excitement, "the Bible became a Baedeker"—centuries-old customs were still practiced. And he decided to stay on, to study their way of life, in particular that of the nomads or Bedouins, "because I realized that we'd have to know the Arabs for our own security, not only as politicians but as people." When a new school of Oriental studies was opened at Hebrew University, he enrolled on his certificate from the University of Kiev, to specialize in Arab affairs. Here he met and married his wife, Zahava, who was also a student.

From Judah Magnes, president of the university, he received his "greatest inspiration and encouragement" to go to live among the Arabs and study there, rather than at Oxford or the German universities, as was the custom. On a scholarship, he went to Syria and for 8 months he made his life with the Bedouins now living in their tents, now wandering with them in the wild desert, accepted as one of them, learning their language.

When later, he continued has studies on a Rockefeller Foundation fellowship at the American University in Beirut, he was the only Jew in a class of 20 Arabs (many of whom today hold diplomatic posts). He traveled to the hinterlands again, dressed as an Arab in desert robes and keffiyeh, aspiring "to do everything to build bridges instead of walls with our Arab neighbors." From those

and earlier nomadic wanderings came numerous studies and two books The Bedouins, Their Life and Customs, and The Population of Transjordan.

From 1934, when he joined the Middle East Division of the Jewish Agency, until 1945, Mr. Elath spent half of his time traveling in Iran, Iraq, Syria, Arabia, Egypt—systematically meeting their leaders, learning their attitude toward Zionism. The most critical and dangerous part of his career began 5 years ago—in Washington.

Alone, and with no status, Mr. Elath came as an observer to the San Francisco Conference and as director of the Jewish Agency office. He found himself "more isolated than in the Syrian desert." It was difficult "just to obtain the noblesse oblige of officials." He met people in the State Department who were actively hostile, conditioned by political and economic ties in the Middle East; people who opposed Zionism or who were ignorant about Palestine; people whose way of thinking was so fixed that they disliked change and, anyway, "never got out of line." Knowing these things was "my greatest asset because it gave me no illusions." He set about, not to quarrel with his critics but to educate; if not to change their attitudes, at least to improve them.

Thus, as his friends recount, Mr. Elath came to be known as definitely partisan, but as one who never lied or exaggerated. He might be "wrong" from where they stood; he was never wrong on facts. Doggedly, systematically, he showed them his people's shortcomings and mistakes—and also his people's logic. He showed them where terrorism was against their cause and worse for the Jews than the Arabs. He made it clear that "we were not against the British but against the policy of the British Government, for had not the same generation that produced Bevin also produced Balfour and other great men like Cecil, Lloyd George, Churchill?"

Above all, he clarified the Arab picture. He explained that the Jews' return to the Middle East was a political renaissance—that they were not the enfants terribles of that part of the world, that they were not there to help themselves alone, or even as missionaries, but really to integrate themselves with the Middle East, combining their eastern origins with western elements; that whatever the Jewish numbers, they would always remain a minority in the Middle East, and so would understandably seek relationships with their Arab neighbors.

The past 2 years have brought the most dramatic fulfillment of Mr. Elath's work and hopes. The first milestone came on May 14, 1948, when the Jews proclaimed their state in Tel Aviv. And the story of American recognition is now a classic. The White House called minutes after Tel Aviv's announcement to ask whether Mr. Elath was prepared to accept recognition for his Government. Mr. Elath promptly said he was—though he had no time to refer to his home Government for approval, nor did he even know its name. He rapidly wrote the letter of acceptance in the name of the "Jewish state," suddenly heard what it was to be called over the radio, rewrote it to read "State of Israel."

A second milestone came with America's $100,000,000 loan to the infant state—"because material support means political support and stronger confidence in us." The third milestone was American support for Israel's admission to the United Nations. One of Mr. Elath's most cherished papers is a handwritten note from a representative of an Arab state:

"Mr. Epstein (Elath), I welcome you, my friend. I hope you will take part in our debates."

Greatest among the factors that Mr. Elath credits for these successes is the support of Americans of all faiths, who saw parallels with their own fight for independence, for survival and the building of a democracy.

His associates in London will find that Mr. Elath follows a rigorous schedule. A voracious reader, his working day in Washington began at home with American and foreign newspapers. He reached the embassy by 9 o'clock, put through telephone or teletype calls to Israeli representatives in New York, Los Angeles, Lake Success, and sent telegraphic dispatches to his home Government. On a typical day he would receive the press, other ambassadors and Aubrey Eban, Israeli's delegate to the UN and successor to Mr. Elath as Ambassador to Washington.

He would lunch with Methodist clergymen and talk off-the-cuff for an hour on the creation and goals of his country (while they took copious notes). Then he would go over to the State Department for a conference with Middle East experts. Next there would be staff meetings of first secretaries and the commercial and military attachés (stepped up recently by concern over arms shipments to Arab countries). His dispatches are said to have been brilliantly knowledgeable (and, as his American-born secretary adds patiently, "they kept us late").

On his way home to his apartment at the Shoreham Hotel, he would make a hurried stop to buy records of some Bach sonatas. For dinner, he and Mrs. Elath, a vivacious woman who studies sculpting, might entertain another Ambassador and his wife.

For all his popularity in Washington, Mr. Elath gave the impression of a lonely, restless person. He dislikes the pomp and crowds of semiofficial cocktail gatherings (there is little of this in modern Israel), and chafes against formal social walls which shut out lower-echelon diplomats whom he also longs to know. His tastes are simple—he turned down a $50,000 gift from the Washington Jewish community for an embassy, in favor of giving the money to the United Jewish Appeal for new immigrants.

Just as Mr. Elath was a unique figure in Washington, so his staff, which numbers 39, contrasted sharply with that of older embassies. The Israeli diplomats are mostly young and have seen service with the British and Israel defense armies. But the business of running a new embassy without adequately trained personnel often posed problems. The difficulty had been to find people trained in delicate diplomatic work, with broad knowledge of the whole of the Middle East as well as the American mentality. As he put it, "It's not Madison Square Garden which makes public opinion but the hard work of knowing individual people who count."

The feeling has been that Israel is sending out too many untrained people from the kibbutzim (collectives), or strong chauvinists with the old feelings of intrigue. One solution, some feel, is to pick a legation like Rome where candidates for the foreign service may receive pilot training before being sent on to such major powers as the United States. Devotion and zeal, they say, are fine, but they don't make up for the lack of trained diplomatic technicians.

The road ahead for Mr. Elath in this third year of Israel's independence is full of the challenge he thrives on—the test of full understanding with Britain, the critical problems of Jerusalem, of Israel's economic struggle, and, above all, the quest for a real peace. Ask him the outcome on these tests, and he'll tell you: "We're not out of the woods. But our program is strong and just. Since we cannot afford the luxury of being pessimistic about the Arabs, we can continue to strive for their understanding and cooperation. These differences will be straightened out."

Seeing how the moving finger has already written, it all seems possible.

Commencement Address by Ambassador Henri Bonnet at Florida State University

---

EXTENSION OF REMARKS

OF

HON. SPESSARD L. HOLLAND

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 7, 1950

Mr. HOLLAND. Mr. President, on Monday, June 5, at Tallahassee, Fla., His Excellency, Henri Bonnet, Ambassador of the French Republic, delivered a highly interesting, eloquent, and inspiring speech at the graduation exercises of the Florida State University.

In view of the traditional and long-standing friendship existing between the French people and the people of the United States and the fact that the distinguished ambassador included in his scholarly address several highly important observations on current world problems, particularly those referring to western Europe and to the recent significant proposals of the French Foreign Minister to create a pool of the heavy industries of France and of Germany, I ask unanimous consent that the address of Ambassador Bonnet may be inserted in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I fully appreciate the privilege of being today the guest of Florida State University and of addressing such a distinguished gathering of professors and students at the end of a year of fruitful work, and on the eve of a holiday, which, I hope, will be for all of you most restful and propitious to the fulfillment of the wishes and projects you may have formed during months of study. It is also a great joy for me to pay a visit to this wonderful State upon which nature has bestowed her most glorious gifts, both of resources and beauties, and which, in the early days of the European settlements, Jean Ribaut, from Dieppe, France, one of the first pioneers, called "the fairest, fruitfullest, and pleasantest of all the world." It is a source of pride to all Frenchmen that their countrymen were among the first to open that rich and lovely part of the United States to European civilization, and that the names of Laudonniere and Ribaut are forever associated with the history of Florida where, with their heroic Huguenot followers, they toiled, suffered, and died, thus writing one of the most inspiring pages of that epic which is the founding of the United States of America.

What a great lesson of courage and faith—upon which we must still meditate today—was bequeathed to us by those early settlers in their struggle against man and nature. They had come to the shores of America animated by their deep love for freedom of thought and religion, and at the same time, by a noble spirit of adventure, anxious to open new lands to western culture and spread their faith to the New World. They were motivated also by an unshakable confidence in the future and in the unlimited possibilities offered by this land to human valor and ingenuity. Their destiny symbolizes the whole history of mankind, ever advancing along the paths of progress, and despite destructions and tragedies, realizing new achievements, thus ultimately adding to the wealth of human victories over all kinds of adverse forces and creating a world

which science, art, and research are enriching still with their many accomplishments and brilliant promises for the future.

What a great lesson of tolerance and cooperation is also to be found here; how much faster and smoother would be the pace of progress were we wise enough to put aside the misunderstandings, quarrels, and feuds which stained with blood the early days of the pioneers on these shores as well as the whole history of mankind. We now live in an era in which the necessity of cooperation in every field of human endeavor is more than ever to be stressed. A striking evidence of this need can be found in your daily studies at this beautiful university. The days have long passed when the mind could almost entirely master the field of human knowledge. This does not mean, obviously, that the youths of today should not be given a solid and extensive foundation of learning before specializing in their chosen branches of activity, in order to enable them to play their parts intelligently in the life of modern society. That is the way to prepare youth to exercise that most enviable privilege of a useful citizen—independence of judgment; that is to say, the ability to think for himself without accepting biased or false ideas. But there is nowadays no branch of study or research which does not depend to a large extent on the work being accomplished in related fields; it is not only through the work of the past generations that the scholar of this day builds up his store of knowledge, but also through the inventions, achievements, and discoveries of his colleagues, those active in other domains as well as in his own. It is a fact that today no problem can be solved, no construction work accomplished, without a close cooperation among men engaged in the most diversified activities.

Indeed, cooperation should be the motto of the world today, and I believe that the ideal of understanding, of mutual cooperation, of combined effort toward a common high goal is more urgently needed in the domain of international relations than anywhere else. Here again we might recall the lessons given to us by the pioneers; unlimited possibilities and shining promises are offered to a world where new victories over the unknown are constantly being won; and yet, at the same time, we are all of us conscious of the terrible impending dangers, of the destruction and devastation which might once again spread over the globe and sweep away, as would a tidal wave, most of the wonders accumulated in our lands through years of patient efforts. We must gird ourselves against such a threat, and, in a common and tenacious endeavor, build up a durable peace.

As you are about to enjoy a well-deserved vacation, I should hate to be unable to give you a word of hope and of confidence. True, there are dangers, but I remain convinced that we can still preserve peace for the coming generations. Unfortunately, there is no magic formula enabling us to reach this objective which, undoubtedly, corresponds to the longing of millions and millions of the people on earth. The hopes which all of us, after the terrible ordeal of the last war, had placed in international cooperation, have not been fulfilled. A deep distrust and a sharp division have developed in our contemporary world; we had hoped to ensure peace by common agreement, by the establishment of a collective security, by the outlawing of war; this remains our goal—the goal of the United Nations. But, meanwhile, we have had to resort to the older system of armed peace, of the prevention of war by the creation of a superior force to deter any possible aggression.

At this point, fortunately, one finds a ray of hope. If we are not in a position to build at once a United Nations endowed with decisive powers, if we cannot ensure now the undisputed reign of international law, giving universal foundations to collective security, we can, at least, and must, act efficiently and promptly in a more limited sphere, strongly organizing our Western World, as a means of maintaining universal peace. Our hope rests on the successfully growing cooperation among the democratic peoples who dwell on the shores of the Atlantic Ocean—a powerful association of nations, rich in their civilization and their natural resources, possessing the same faith in freedom, the same respect for the dignity of man, the same love for peaceful progress, all of them firmly determined to fight if necessary for the preservation of the liberties inherited from their forefathers, but all of them convinced also that they must strive in every way possible to bring about honorably the blessings of world peace.

That cooperation among the peoples of the Western World was still further strengthened recently on the occasion of the inter-allied meetings held in London. You will allow me to say a few words here on one of the most promising developments of this last period, one which, it is true, directly concerns my country, but which also is most important to the future of the world. You have sometimes heard doubts expressed on the ability of old Europe to unite. One of the proclaimed purposes of the Marshall plan was to help the old Continent to link its various peoples more closely, both economically and politically. I believe that it is not an overstatement to say that one of the most serious obstacles to inter-European cooperation will be removed when the recent dramatic proposal of my Government for an industrial union between France and Germany is implemented, as I am fully confident it will be.

We in Europe did not do soon enough what, at the end of the eighteenth century, your founding fathers did when they decided to federate their Thirteen Colonies. In the meantime the industrial revolution of the nineteenth century took place, adding terrific economic difficulties to the political reasons which prevented a federation of Europe—a lengthy heritage of wars, rivalries, ambitions, and deep-seated feuds. It is not an easier task to remove custom barriers from around nations of forty to fifty million inhabitants than it would be to suppress them here in your prosperous United States, but there is not the slightest doubt in my mind that something must be done in that direction that Europe must become a big market open to a broader and more fruitful competition, nor is there any doubt that there is a popular longing in the Old World for such an achievement. The problem is, How to begin? I think a solution was offered a few days ago by the French Foreign Minister when he proposed to create a pool of the heavy industries of France and of Germany. I do not need to stress the political consequences of such a bold act. In the terms of the decision of the French Cabinet, "it would make war not only unthinkable but materially impossible" between two nations who have been enemies for a thousand years. It required a great deal of courage on the part of the French Government to make such a decision when, in the last decade, our country had once again been invaded and bled white, and during four long and dark years, ruthlessly oppressed by the Nazis.

What I especially want to emphasize today is that a new principle is involved in the proposed agreement which may lead to entirely different and promising developments in Europe—a principle which would amount, when applied, to the curtailment of the sovereignty of the participating nations in the vital field of their economic lives. The purpose of this agreement is to put the coal and steel industries of Germany, France, and of other countries of western Europe, should they desire to join us, as we hope they will, under a common high authority composed of independent and well-qualified personalities, appointed by the member governments and endowed with real powers of decision for the development and modernization of production, the broadening of markets, the expansion of exports, and the improvement of the standard of living of the industrial workers in the participating countries. The powers of the high authority would be defined by a treaty to be ratified by the Parliaments of France, Germany, and any other nation becoming a member of this new association, and after those ratifications have been obtained the decisions of the high authority would be binding on all the participants in this enterprise. It would be the first step toward a federation of Europe; it might very well change the entire course of history for the old continent.

It is worth noting that such an organization would differ vastly from the cartels which have, from time to time, been formed to prevent competition within a given industry; first, because the new arrangements would be both public and subject to public control instead of being based on secret agreements. Second, because the proposed industrial union would be supervised by independent appointees, defending the interests of all, instead of being administered by the representatives of vested interests. Finally, because the objective of this project would be to ensure the merging of markets, the expansion of production and of competition in the international field, instead of exploiting exclusively national markets protected by restrictive practices.

These developments aim at the reinforcement of the Atlantic community because, internationally as well as nationally, the strength of a society rests on the vigor of its component parts. On one side of the ocean, there is the most powerful nation of our contemporary world, the United States of America; on the other side, we must recreate gradually a group of nations closely united and fully able to develop their immense potentialities. Only thus will we be in a position to build together a stronghold of peace.

I am happy to add, as a tribute to the policy followed by your Government and by your Congress, that the bold decisions now in the making could not have been taken without the help so generously given by the United States through the Marshall plan, enabling the countries of western Europe to rebuild their economic systems and renewing in them the confidence so indispensable to the planning of a better future. There can be no better proof of, nor more promising a reward for, the farsightedness of the policy of the United States toward her old and faithful allies of the Western World.

Less than 3 months ago, I was in France, and I can assure you that the wonderful contribution of the American people to the recovery of my country is deeply and fully appreciated by the hard-working French citizens. You may also be assured that the community of ideals shared by the founders of our two Republics remain intact, and that the youth of France has the same aspirations and the same enthusiasm which it has often been my privilege to see and admire in the youth of America.

Let me express the sincere wish that many of you, and I would like to say all of you, will visit Paris and France in the not-too-distant future, and that as many French students as possible will be able to come here to see with their own eyes the great achievements of the American people, so that the close and lasting friendship between the United States and France will not only endure, but become more and more a dear and living reality for our two nations.

Against Recognition of Red China

REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 7, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, I hope that our Government will resist every effort that is being made to recognize the Chinese Communist government in the United Nations. On last Friday the Gallup poll reported that public sentiment is more than 2 to 1 against recognizing Red China. If we really want to contain communism here is a good place to start. Notwithstanding the report we have to date that both England and France are for recognition, let us take a different course and act in accordance with the sentiment of the people of this country.

As part of my remarks I include the following Gallup poll:

PUBLIC SENTIMENT MORE THAN 2 TO 1 AGAINST RECOGNIZING RED CHINA—VOTERS IN SURVEY LAND IDEA OF BIPARTISAN POLICY, BUT SAY WE DO NOT HAVE SUCH POLICY NOW

(By George Gallup, director, American Institute of Public Opinion)

PRINCETON, N. J., June 1.—Although Britain's Foreign Minister Ernest Bevin is urging that Red China be given a seat on the UN, American attitudes toward the Chinese Communist regime are just as hostile as ever.

The latest survey by the American Institute of Public Opinion finds, for instance, that diplomatic recognition of the Chinese Reds by the American Government is opposed by a vote of more than 2 to 1.

The question of the relationship of western democracies to the Chinese Communist regime is the basis of the current impasse in the United Nations. Refusal to seat the Red delegation has caused Russia to boycott the major functions of the UN, bringing much of its work to a standstill.

While Britain has been friendly to the Red regime, Washington has remained adamant in refusing to extend diplomatic recognition to the Peiping Government.

To determine whether American public sentiment had changed any toward the Chinese regime, the Institute put the question of recognition before a representative cross-section of the voting population after testing people's knowledge of developments in China.

It was found that approximately two voters out of every three (65 percent) had a correct idea of how China is governed. (All of the China mainland is governed by a Communist regime. The island of Formosa is governed by the Nationalists.)

The second question was: "Do you think the United States should recognize the new government in China—that is, do you think we should send an ambassador and have dealings with this government in China?"

The vote:	*Percent*
Favor recognition	16
Opposed	40
No opinion	9
Total	65
Not familiar with China situation	35
Grand total	100

A similar survey in November 1949 showed a ratio of 20 percent for recognition, 42 percent against.

VIEWS ON BIPARTISAN POLICY

The administration's China policy has been singled out for attack by a great many Republican leaders. They argue that we might have been able to prevent the fall of China into Communist hands if we had followed a different policy, and that if Republicans had been consulted by the administration in dealing with the problem of China the outcome might have been different.

Actually, some Republicans contend we have a bipartisan foreign policy in name only. They say that it consists mainly in inviting Republican leaders to approve policies that have already been determined upon by the administration.

So far as the general public is concerned, the term "bipartisan foreign policy" is little known. Only one voter in every four knows what the phrase means or refers to.

This "informed" group of voters say almost unanimously that a bipartisan foreign policy is a good idea, but most of them declare that we do not have such a policy now. Republicans, especially, claim that we do not.

Here are the findings in the Institute survey: "When you hear or read about the term 'bipartisan foreign policy,' what does that mean to you?"

	Percent
Generally correct answers	26
Don't know and incorrect	74

The term refers to joint determination by Republican and Democratic leaders of our actions and policies in dealing with other countries.

The 26 percent familiar with the term were asked: "Do you think it is a good idea or a poor idea to have a bipartisan foreign policy?"

The vote:

	Percent
Good idea	21
Fair or poor	3
Don't know	2
Total	26

"Would you say that we now have a bipartisan foreign policy, or not?"

Here is the over-all vote and the vote by parties:

	Republicans	Democrats	All voters
	Percent	*Percent*	*Percent*
Yes; we do	10	9	9
No; we do not	21	9	14
Don't know	3	3	3
Subtotal	34	21	26
Not familiar with term	66	79	74
Total	100	100	100

United States Foreign Policy

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 7, 1950

Mr. REES. Mr. Speaker, on May 23, the Honorable Alf M. Landon, of Kansas, delivered an impressive and informative address at the convocation of the College of Emporia in Emporia, Kans., on the subject, United States Foreign Policy.

Mr. Landon, as you know, is a former Governor of the State of Kansas, and was the candidate for the Presidency on the Republican ticket in 1936.

Mr. Landon has given a great deal of consideration and study to our international problems. His views on the United States foreign policy are worthy of the careful consideration of the Members of this House, as well as the public at large.

UNITED STATES FOREIGN POLICY

Before embarking on his nonpolitical excursion to the Northwest, President Truman told the American people that the international situation was improving. That remarkable statement followed close on the heels of General Bradley's words that the world crisis had worsened in the past few months.

The cold facts support General Bradley. For that reason I cannot succumb to the easy temptation to speak only what people may like to hear. If our great Nation is to survive we must face up to uncomfortable facts. The plain truth of the matter is that we are drifting toward disaster and unless we radically change our course we may soon find ourselves over an abyss.

The Soviet possession of the atomic bomb has completely altered our struggle for survival. Today our situation is extreme. Within the next few years it can become hopeless. Atomic scientist Harold C. Urey has warned that the next 2 years could—and probably will—see the atomic lead of the United States effectively wiped out.

Perhaps that ominous prediction inspired Secretary of State Acheson to set 1954 as essential completion date for the Atlantic pact military defenses.

If the Soviets attain atomic equality and retain their present overwhelming superiority on land and their comfortable margin of superiority in tactical air power they will be able to play with us like a cat with a mouse. The march of events for the past 5 years is making nonsense of most of the American plans to contain Soviet aggression.

Once the American people see our situation in proper perspective they can be depended on to deal with it effectively. In the race for survival it is later than we dare think.

We won World War II at tremendous cost, and lost the peace. The foundations of American security will be undermined in the months which lie ahead unless frank leadership requires our people to pay a still heavier price for their own survival.

I need not dwell long on the facts of Soviet aggression. Soviet leaders have made it quite clear that they seek the complete destruction of the non-Communist world. Whenever possible they have adhered to these aims in practice. Communist philosophy has always rejected all previous standards of international conduct. Trickery has been exalted to the number one principle in Soviet foreign affairs. To the Kremlin no real distinction exists between war and peace except in the emphasis placed on military or political and psychological pressures.

Since VJ-day the Soviet Union has conquered a greater empire than that won by Hitler and the Japanese at the height of their military aggression. The Soviet Union stands today as a more completely military state than Nazi Germany or ancient Sparta. Communist gains in Europe and Asia are as real as if they had been won in pitched battles against the West.

Nothing breeds success like success. The Soviets are becoming confident if not downright cocky. Malenkov, ranking man in the Politburo—possibly being groomed for Stalin's successor—reflected this attitude when he recently stated "With the victory of the Chinese people, the people's democracies of Europe and Asia together with the Soviet

socialist power embrace a population of approximately 800,000,000."

There is not one single action taken by the Soviet Union since the end of the war consistent with the aims of permanent peace.

In the face of this threat the policies adopted by our Government have been confused, faltering and invariable late. We have been slow to recognize the danger and slower in reacting to it. We have tried to preserve our peace by refusing to stand by our principles. One of the factors of the present crisis has been American indecision and vacillation in high places.

On the credit side the Administration belatedly rejected the trend of appeasement so much in vogue in Washington when Churchill made his electrifying speech at Fulton, Mo., in 1946. But meanwhile we have lost the great nation of China to our cause and we have not even begun to advance against the forces of tyranny.

Expansion engenders expansion. The frontiers of communism have been advancing while those of freedom have been receding. As the free world is being compressed into a smaller and smaller area by the malignant growth of communism, the number of choices open to us become fewer.

The appalling tragedy of the present situation stems, in part, from the reluctance of our leaders to make these choices because they believe them unpopular with the people. My trust in the character of the American people is greater than that. To save our skins the false sense of security—created by groundless official assurances must be dispelled.

Let us look at the record. Despite our tremendous efforts to restore peace and prosperity to a war-torn world the underlying tension created by Soviet aggression continues unabated. Despite our efforts to contain communism, the Soviet empire is relatively stronger today than at any time in the past. Despite our tardy efforts to restore our military strength the balance of military power is tipping toward the Kremlin. It will continue to do so unless we immediately mobilize our resources on a scale far beyond that contemplated by the administration.

The inadequacy of American foreign policy can be seen on any map. It was also revealed by the insolent Soviet action in shooting down the American plane in the Baltic with the loss of 10 American lives.

It is an ironic fact that the United States at the peak of her power stands almost at bay before the assaults of a nation inferior to us spiritually, politically, and industrially. The only fair way to judge a policy is by the results it obtains. The conduct of American policy since the end of the war is a tragic failure by this standard.

The primary weakness of our policy lies in the fact that it has never aimed at a clear cut, positive objective. It is absolutely essential to know where you're going in order to make any progress. The only aims ever announced for our policy have been those of containment and resistance. Except in a few areas, such as Greece, we have been on the political defensive. Even the Atlantic Pact, the most positive step undertaken by the administration, is essentially defensive in character. It is time to move forward, for if we continue to hold only to negative objectives we will lose even them.

In war whether hot or cold the side which stays permantly on the defensive will lose. Moreover, even our negative policy of containment has been applied inconsistently. I for one cannot view our loss of China as a triumph of American diplomacy. Whatever the true causes of this debacle may be the American position in the Far East has been weakened. The present rulers of China once described as agrarian reformers by State Department policymakers are tied to Moscow with a rod of iron. This defeat—one of the most far reaching in modern times—took place while our announced policy was to contain Communist aggression.

It is only fair to say, however, that things might be worse. Wallace and the appeasement he championed was given his walking papers. We have made the great decision to stop the retreat in Europe, and finally in Asia. But we have not yet taken the offensive, we have not yet seized the initiative. Moscow has called the main plays in world politics since 1945. I look forward to the day when decisions made in Washington will give the evil men in the Kremlin as many sleepless nights as their schemes have brought to millions of free men the world over.

This time of crisis calls for radical new decisions in our foreign policy. We need a brand of American leadership worthy of the name. The time we have to act in is very limited. It can be made to work for us if we strike out this moment on a new course. Unless we adopt a bold, new political program the Soviet Union will inevitably draw ahead.

We read the history of the Roman Empire today because their political leaders were more courageous and had greater vision than the leaders of Carthage.

Whether the future historians will write of our heroes and principles of freedom or of our national destruction depends on the type of leadership we receive during these crucial years before the Soviets can match our atomic stockpile.

Political objectives must be down to earth if they are going to influence action. The Soviets have never been squeamish in setting forth their avowed policy. "One or the other must conquer" has been the motto of the Kremlin. Since it is obvious that none of our spiritual beliefs, none of the principles which have inspired our Nation since its foundation could survive the Communist conquest, the first objective of American foreign policy must be equally as bold, equally direct. In plain words, our primary objective must be the separation of the world-wide Communist Party from power.

I do not suggest the elimination of the Communist Party will solve all the ills of the world, but I do assert that a just peace is impossible as long as the Soviet Union is ruled by the Communist Party.

The only way to clear an area of rattlesnakes is to destroy their nests. The main nest of the Communists is in the Kremlin. As long as we continue to tackle communism only in places remote from the center, such as Greece or China or Iran, we can only gain indecisive results at the expense of great effort. We have poured millions of dollars into Greece yet we have not solved the problem of communism there. It is obvious to anyone that the Communist campaign to conquer Greece will be renewed whenever it suits the Communist purpose to resume operations toward the Dardanelles. Our air lift to save Berlin from Communist domination also cost hundreds of millions of dollars. Yet today Berlin is no more secure than when the Soviets again permitted us to send food overland into this beleaguered city.

Lacking a real objective the few victories we have won in the cold war have achieved limited results entirely out of proportion to their vast costs. The Soviets on the other hand have really lost nothing by these abortive forays.

I want to make it quite clear that our objective should be the destruction of the organism of the Communist Party and not the people it enslaves. Rather, we must declare all people who are laboring under the yoke of that monstrous tyranny to be our allies. The Russian people themselves must be encouraged to join us in the battle for freedom.

I submit that in the world of today we Americans are the real revolutionaries. Our wisest course is to push our revolutionary ideas of political and economic freedom under the rule of law to the farthest corner of the earth.

Just as our country could not exist half slave and half free, the world itself cannot endure divided as it is today. The time for making deals with Moscow has ended. Let those who say that a genuine peace can exist as long as the Communist leaders rule the Kremlin come forth and state the basis for their pipe dream.

Modern technology has made the world one. That peace can be established as long as a permanent political schism exists between east and west is out of the question. Let us be as courageous as the Communist and recognize the life and death nature of the struggle.

Once we establish the destruction of Communist power as our primary objective we can end the drift which still characterizes the conduct of our affairs. Practical political offensive campaigns can then be undertaken.

First, we must end our cowardly acquiescence to the status quo existing behind the iron curtain. We must publicly proclaim our sympathies with millions suffering from the iron heel of communism in Poland, Czechoslovakia, Bulgaria, Hungary, Rumania, and the smaller countries of eastern Europe. We must hold open to them the hope of eventual liberation just as we did to the people of Europe when they were subjected to Nazi tyranny, and to the people of China and the Philippines when they lived under Japanese militarism. These people enslaved by Communism must be told that the dawn of liberty will follow their night.

That campaign is essential to all of our existing programs for unless the Soviets are forced to withdraw to their 1939 borders, there is no chance whatsoever of European recovery succeeding. The iron curtain stands as a barrier to the natural flow of trade between eastern and western Europe on which Europe's healthy economic life depends.

European recovery also requires European unity. Perhaps the most heartening omen on the entire world scene is the recent French offer to integrate their economy with that of Germany. Political and economic unity are inseparable and this concrete and enlightened action on the part of the French holds seeds of great promise. European unity has been one of the constructive aims of our foreign policy but one that has not been prosecuted with all the skill and influence we possess.

Much of our European aid program has been conducted like a vast international WPA. It has not furthered practical steps toward European unity. As the arsenal of democracy during World War II we properly insisted that our military equipment be used to gain the common objectives against the enemy. We are the arsenal of freedom in the cold war and in the interest of our European friends we must exercise our right to promote European unity with every ship filled with American goods or arms. I believe Europeans will welcome this type of leadership.

German unity must be one of our goals within the larger framework of a European order. Rather than trying to suppress this basic instinct of the German people we must encourage it.

The iron curtain cuts squarely across Germany. At Yalta the Soviets detached large areas from Germany as part of a clever, long-ranged political swindle. This maneuver, which has become increasingly obvious, is to hold out the bait of these stolen territories as inducement for German unity within the Communist orbit. We must defeat this scheme. Germany is a vital member of the

West and must become unified as a western nation and not as a Communist satellite. The unification of Germany as a member of the Atlantic community will crack the iron curtain at its weakest point. It will do more than any other single thing to destroy the base of Communist power.

Our natural preoccupation with Europe must not make us forget the vast problems of Asia. We have a policy for China—announced over 50 years ago by Secretary of State John Hay—the open-door policy. That policy was our guide in World War II, when much of China was overrun by the Japanese, and must continue to be ours during the cold war, when all of China has been enslaved by the Communist puppets of Moscow.

Nor can we forget Japan. Under present policies Japan will be supported by an American dole for generations to come. A program must be found to harness the skill and industry of the Japanese people so that they can support themselves and contribute to the mutual well-being of the millions of people in Asia and the Oceanic Islands.

Each specific step I have advocated is a positive part of the over-all offensive to destroy the Communist power. Success achieved on any front will help crack the iron curtain and force the Communist power to disgorge its conquests. We cannot allow the Communists time to consolidate their gains to prepare new springboards for further advances. Nor can we suffer the world-wide appendages of the Kremlin—the Communist Parties of France, of Italy, of Japan, of Latin-America, and even of the United States—to sabotage our offensive. We must cut the spinal cord of these fifth columns by severing their connection with Moscow. We must initiate a world-wide campaign to smash the apparatus by which the professional agents of Moscow sow the seeds of treason and disunity through the camp of the free world.

Let us not permit necessity for this essential campaign to be obscured by false cries for civil liberty, by maudlin totalitarian liberals. Treason is not one of the civil liberties defined by our Constitution. I can see no harm in any native Communist Party, but only the greatest peril in Moscow-directed fifth columns.

The United Nations must become our battleground for freedom. When the aims of the Charter of the United Nations are realized the cold war will be ended. When the aims of the United Nations are practiced in eastern Europe the iron curtain will melt away. The United Nations is a ready-made instrument through which the free peoples of the world can press their offensive for peace and survival.

Perhaps the Soviet Union will not choose to remain in a revitalized United Nations. Today their participation in the United Nations is extremely limited. Of the 34 separate bodies, commissions, or agencies of the United Nations the Soviet Union has never joined or is boycotting 22. We can no longer permit Soviet obstructionism to block the real work the UN can accomplish.

I realize that the measures I advocate to you today are far in advance of those officially sponsored by the administration, but the crisis we face will not be solved either by halfway policies or procrastination.

A freedom offensive does not imply war. There are many means at our disposal to force back the frontiers of communism short of war. We have great power and joined with our friends we must use this power to destroy tyranny.

The dangers of a strong policy are infinitely less than those of a weak one. Suppose, for example, we remain on the political defensive and continue to spend $20,000,000,000 annually in national defense and foreign aid? Twenty years from now, after spending four hundred billions on a fruitless policy, we will be worse off than we are today—and the Soviet Union will be immeasurably stronger.

A unified command under the Atlantic Pact means little unless the democracies of western Europe are prepared to back it up with the integration of their economics as well as military measures. There is, of course, the risk that an offensive policy will provide the men in the Kremlin to strike before their base system is utterly destroyed by the forces of freedom. This risk we must courageously accept as the lesser of two evils.

There is a stronger chance that an accelerated offensive policy will generate sufficient power for the western democracies to prevent world war III. Consequently, I can see no better path toward peace than to energetically push forward the frontiers of freedom. The shackles of tyranny will be our fate if we blindly refuse to make this choice in time.

The time is now.

Fifty-fifth Anniversary of Jewish War Veterans

EXTENSION OF REMARKS

OF

HON. OWEN BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Wednesday, June 7, 1950

Mr. BREWSTER. Mr. President, recently the Jewish War Veterans of the United States celebrated their fifty-fifth anniversary at a dinner in New York, at which occasion they honored Mr. Louis B. Mayer, one of America's great civic leaders, by awarding him the gold medal of merit in recognition of his distinguished service in behalf of world understanding of America and the American way of life. I was present at the dinner and noted the enthusiasm with which Mr. Mayer's address was received by a large audience of distinguished Americans, and I ask unanimous consent to have Mr. Louis B. Mayer's address inserted in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Your Eminence Cardinal Spellman, Mr. Toastmaster, Mr. National Commander, distinguished guests, officers and men of the Jewish War Veterans of the United States, ladies and gentlemen, to say that I am deeply touched is entirely inadequate to express what is in my heart. I have been most fortunate in having been honored before. But never have I experienced such depth of emotion as in this moment. I shall treasure it always, be inspired to be worthy of this trust, that I may truly live in the reflection of the high American ideals you cherish.

General Klein, a veteran of two wars, has been generous with his praise. I have known this dynamic man for many years. I have learned to admire him for his devotion to his country and his untiring efforts to the cause of the Jewish War Veterans.

He was a combat soldier in the recent war. He earned his promotions and medals on the field of battle from General Douglas MacArthur, one of the world's greatest soldier-statesmen.

I am proud to call Julius Klein my friend.

Eric Johnston, the brilliant head of our motion picture industry, has been very kind in his remarks. I know he shares the gratitude that overwhelms me; that these men and women, representing true greatness in the church, statesmanship, education, the military, all fields of endeavor, of all faiths and creeds, are gathered here for this occasion. And I cannot help but wonder what the foes of our democracy would say if they could look upon this banquet, in one of the world's most magnificent hotels—owned by a man who started as a bellboy—and honoring a son of immigrant parents.

Where else on this earth, except in a nation of free people, could this happen?

His Eminence Cardinal Spellman is not only a great churchman, but one of the kindliest men I have ever known. His friendship is a priceless gift. Your presence here this evening, Your Eminence, is an inspiration.

I have always felt that being an American is a privilege. If I have served my country in any measure, I am grateful, indeed, for the opportunity to have done so. But whatever contribution of citizenship I may have accomplished could only be very small before the towering patriotism and sacrifice symbolized here this evening by these fine men who fought the fight of freedom on the battlefronts of our wars.

The badge of Americanism you have pinned upon me is more precious than any honor I have ever known. I am sure I shall achieve none greater. It is an emblem not lightly worn. I pray that I may wear it well. For these are times of challenge. The freedoms for which you, your fathers, grandfathers, yes, and great-grandfathers, fought are perilled.

Yes; I meant great-grandfathers. They were the early Jewish immigrants who founded your organization. They fought in the Civil War, 10,000 of them, 7 winning the Congressional Medal of Honor.

They had come from despotic nations in Europe, and for them the freedoms of America had a very special meaning. Their experiences in countries from which they had fled made this a sweet land of liberty, indeed. They needed no warning against complacent acceptance of the rights and human dignity enjoyed under our democracy. They knew they were worth fighting for.

More than 50 years ago they founded the Jewish War Veterans organization, these refugees from European tyranny, as a symbol of the readiness of Americans of their faith to defend with their lives the doctrines of spiritual, political, and social freedom upon which our Nation was conceived.

They wanted, too, to see the ideals for which they had fought, preserved, and handed down to generations to come, that there might be carried forward in peace the unity of brotherhood they had enjoyed in time of their Nation's need.

How proud they would be if they could behold these sons of their sons who are gathered here tonight, and who have served so well in the fulfillment of this heritage of patriotic devotion.

And long before these founders of your fine organization, there were others who had borne arms for freedom. They were with DeKalb and Pulaski in 1776, at Brandywine and Valley Forge. They shed their blood with their Christian comrades, that this Nation of freemen might be born. They fought on the high seas in 1812, joined Sam Houston at the Alamo, and charged San Juan Hill with Roosevelt's Rough Riders. They were there not because they were Jews. But because they were Americans.

Those not fortunate enough to reach our friendly shores remained behind to defy the brutality of dictatorships and to eventually set up their own independent and sovereign state. Those brave men transformed a dismal desert into a living paradise and they are even now establishing a close kinship between our democracy—the oldest in existence—and the state of Israel—the youngest.

America has always paid tribute to the oppressed who by their own initiative and gallantry gained their independence and because we are pioneers, we acclaim the pioneers of Israel.

Today the Jewish war veterans carry on the tradition of their founding fathers. Again they stand ready to defend, at any cost, this heritage of freedom—to repel those forces who would change our system of government, and substitute, in it place, a philosophy opposed to every human dignity and liberty we enjoy.

You cannot believe in God and be a Communist—because communism is synonymous with atheism. You cannot be a Communist and call yourself an American—because communism calls for the overthrow of that which is the envy of the world—and that is America.

The Jewish war veterans—most of whom are also members of the American Legion, Veterans of Foreign Wars. Disabled American Veterans, and other patriotic organizations—are committed to wage a total effort against these influences in America, and to here present a solid front against those who would undermine our national security through racial, religious, and social tensions.

Russia makes much capital on the exploited myth of discrimination and prejudice against minority groups in America. But I am quite certain there could exist no organization behind the iron curtain that even remotely resembles the Jewish War Veterans. Here in its membership we find employer and worker; manufacturer and union craftsman, Republican and Democrat, united with a singleness of thought and deed.

This they would take away from you. Oh, the American way of life. It is soft, decadent, capitalistic, greedy.

Well, if they have something better to offer, why don't they let us see it? In fact, if they had something just as good, they would have no trouble selling it to their own people. We know, however, that they have failed there too, for the existence of a secret police, is proof enough their own people want no part of their so-called paradise.

I always understood successful merchandising depends upon how attractively you display your wares to the customer. Now, if what Russia wants us to buy is so new and wonderful, so much better than anything we have now, why doesn't she raise the curtain and let us see this superior brand?

"America is rich only for the rich," they shout. Certainly, America is rich. We only pray she may continue to so prosper.

But is America only for the rich?

There are in the United States today, I am told, some 50,000,000 automobiles. Are they being driven only by the wealthy?

Across the vast breadth of our land are spread great communities. Here in these homes swell the heart of America. Its family life. More than 40,000,000 of them. Forty million privately owned homes. I wonder, are they all millionaires?

In our colleges, the institutions of high education, are 2,500,000 students, American boys and girls, studying to be scientists, clergymen, teachers, doctors, engineers, lawyers, merchants. Are they only from well-to-do families?

Savings accounts, I am told, have reached an all-time high, some two hundred and twenty billion—in bank deposits, Government bonds, savings and loan associations.

Is this exclusively the hoardings of capitalistic giants?

No, my friends, the savings of the American worker.

And further, they have another $100,000,000,000 in insurance policies and pension reserves.

Yes, if I were Joe Stalin I think I'd keep the iron curtain closed, too.

Several years ago, I recall, Russia pounced upon some newsreels showing an unfortunate incident in Detroit. They exploited it frantically to show the people under Communist domination what a terrible place America was. But the whole effect of propaganda was lost when the Russian audience discovered that everybody in the newsreel was wearing shoes. They couldn't believe their eyes. People flocked to see the film, not for the riots, but to see how even all Americans had shoes to wear. They yanked the film. But fast.

Small wonder that American motion pictures are barred from Russia. They don't dare let their people see them. How could the commissars of propaganda explain the thousands of workers' automobiles outside our factories, or the homes of our workers, the smiling faces, the happy children, the clothes, the abundant food, the many commonplace evidences of prosperity and happiness being enjoyed under the American way of life?

The American motion picture has much to be proud of in its record of achievements. It reflects the fundamental concepts of the democratic freedom that gave it birth. It could have flourished only under our system of free enterprise. If I have been able to render a patriotic service, as you have honored me tonight, it is because I have been privileged to be a part of an industry dedicated to these American ideals.

Today, as our Nation engages in an unselfish struggle for world peace, the motion-picture industry stands ready, as always, to serve. As veterans, I am sure you know how important our films were in the factor of morale and training during the war.

Motion pictures went with you, brought a reminder of home to you, in the training camps, front lines, tents, caves, ships, any place a projector could be set up. And motion-picture personalities came to you in person, too. To Africa, France, England, into the jungles of New Guinea, that bit of entertainment might be yours for an hour or two, that you might see a familiar face and hear a familiar voice.

Some 4,000 film personalities and entertainers served in this fox-hole circuit, organized by the Hollywood Victory Committee. They made nearly 50,000 personal appearances, traveled 4,000,000 miles by ship, plane, jeep, and foot to reach you. Besides that, they have made 20,000 appearances at hospitals in this country to visit your comrades.

We gave our films, thousands of prints, that our fighting men might be entertained.

There were training films for the Armed Forces, documentary films for home and foreign consumption, for war effort incentive, to fortify the determination for victory, to strengthen the ties with our allies.

And most important of all was the contribution of thousands of our men and women of the motion-picture industry who served so gallantly in all branches of the Armed Forces.

The spirit of Americanism with which the motion-picture industry pledged its efforts to help win the war continues today in like contributions toward winning the peace. Such fine films as Thirty Seconds Over Tokyo, Bataan, Wake Island, Joe Smith—American, They Were Expendable, and The Story of Dr. Wassell have been followed by such pictures as Battleground, Command Decision, Iwo Jima, Task Force, and Twelve O'Clock High in rededication of America's will to live in a world of peace.

I don't blame Stalin for not showing our pictures in Russia. He couldn't hold a population of 180,000,000 in enslavement without keeping them in ignorance of conditions in America. The curtain of darkness was dropped not only to shield our eyes from the truth about Russia, but to hide from Russian eyes the truth about America. When the day comes, and that day must surely come, that the light of truth penetrates that curtain, Mr. Stalin will have his hands very full indeed.

Truth, my friends, is the most powerful weapon on earth. Thank God, we have it on our side.

The Communists say we are not perfect. We're not. Nothing is, this side of Heaven. But show me any country that can anywhere match our record of accomplishment for improvement of living and working standards, certainly the highest in the world; the great strides we have made in wiping out poverty, increasing the opportunities under free enterprise, advancements in education, health, welfare, all the things that contribute to the happiness, well-being, and independence of the individual.

Show me something better than this, Mr. Stalin, and I'll become your No. 1 Communist.

By nature we are a kind people, gentle, peace loving. We fight wars, but only when we have to. We are anything but militaristic. We have never had any aspirations of conquest. We gave Cuba her freedom as she was able to enjoy her independence. We did the same with the Philippines. We have never wanted anything from anybody. We want nothing now. Most of all, we don't want anything from Russia. We don't even want to change her ideology. If she wants communism, that's perfectly all right with me. But why should she want us to change our way of life, and to embrace a philosophy completely opposed to everything we hold so dear?

The natural complacency of the American people is often mistaken. Some years ago I was concerned over the apathy of our people toward voting. I complained about it to my dear friend, William Randolph Hearst, told him that the people weren't paying enough attention to the best interests of their country.

Mr. Hearst replied, "Son, let me tell you what I have discovered through the years. I admit there are periods in which our people coast along, cease to think, enjoy happy times. Then something very important happens, and they begin to think, and when they begin to think, Louis, don't worry; they always think it through."

I hope, I pray, we will not need another Pearl Harbor to arouse us to think. We have been hearing of a cold war so long it is now an accepted condition. Our Secretary of State talks of total diplomacy. Our military leaders warn there is no defense except the power and ability to overwhelm and destroy our enemy. Some say we can lose the next war without firing a shot. Our atom bomb is small comfort now. Yet we keep our doors wide open. Russians come and go pretty much as they please. They are entirely free to do anything in this country you and I can do, with the single exception of voting.

But my real quarrel is with those who call themselves American Communists. They're not Russian Communists.

Oh, no. These are different. They are Americans. American Communists. A very special brand. A rose by any other name, the poets say, smells just as sweet. But all Communists have the same odor to me, regardless of label.

If communism creates such a paradise in Russia, I just can't understand why these crackpots stay here. Why don't they go to this paradise of communism and enjoy all the happiness to be found there, and just leave us here to suffer in our misery?

Surely we need no further evidence than the happenings of the past year to convince us that the danger is very real. Our well of freedom has been contaminated.

We cannot and must not shut our eyes to the fact that there are subversive elements in our country. But we must also bear in mind that we live in a democracy where the law takes its natural and democratic course.

I am certain the Federal Bureau of Investigation under the able leadership of J. Edgar Hoover, is well able to ferret them out—the Department of Justice under the guidance of Attorney General J. Howard McGrath is well able to prosecute them and our courts can be depended upon to mete out justice.

Some of our complacent friends assure us that nothing really serious is going to happen, that the world is just experiencing growing pains, another way of saying a bloodless revolution, and that out of it will emerge philosophies of liberal thought, but far from communism. Just don't worry. Everything will be all right. Don't be old-fashioned. Don't be a reactionary.

Socialism is said to be far short of communism. Socialism? They tried it in Australia and New Zealand. Socialism was won by an overwhelming vote and then lost by an overwhelming vote. You are aware of the results of the recent elections in England, results which indicate that socialism is not well thought of as it used to be. As a former Canadian I have always held the British nation in great respect, a Rock of Gibraltar among the great nations of the world. Certainly, there are no more courageous and sacrificing people on earth. But as that fine American, Al Smith, would say, "Let us look at the record." I am afraid the record of this experiment in socialism is not a happy one.

After World War I, England not only recovered from her economic wounds, but managed to also help some of her sister nations to get back on their feet as well. But today under her socialistic regime, the record shows a far different story. Why?

Little Holland, Belgium, even Finland with her problem of geographic location, are rapidly regaining their economic footing. But mighty Britain is not. It is certainly not for us to say how England should or should not govern herself. That is for the people of England to say for themselves. The spirit of the English people is unconquerable. The Battle of Britain proves that. The recent elections are very significant. What Mr. Hearst said about American people applies to all people who are free to think.

No, socialism is no longer an experiment. Destroy the incentive of a man and you destroy his productivity. Destroy his productivity and you destroy the nation.

America, my friends, has become the custodian of freedom, human dignity, economic security. It must remain so, at any cost. We must be strong, prepared, that no nation may dare attack. And, as long as we stand for ideals based upon the Ten Commandments, we have nothing to fear. God was with us when we fought against dictators. He will be with us in any war against pagan aggression.

Never, in all civilization, has the world so needed God as now. Far too many of us, I am afraid, have taken him for granted, perhaps forsaken his paths of righteousness. But today, in the face of the perils that confront us, there is a great rush back to God, in the churches, tabernacles, synagogues, seeking the guidance that only He can give to us, to lighten our hearts, to give us hope, and strength for the road ahead.

We must have faith, my friends. It is our greatest armor, our mightiest sword. Faith to believe in our fellowman, in our country, and in our God.

Our battles are not yet won. The freedom for which you so gallantly fought is endangered. I charge you, veterans of our wars, with maintaining this freedom, that our rich heritage shall not perish; that the blood of your comrades shall not have been shed in vain. God grant you will continue to be vigilant; that our torch of liberty may be held even higher, and shine even brighter in the hearts of free men in the world of peace.

I thank you.

Commencement Address by David E. Finley at University of South Carolina

EXTENSION OF REMARKS
OF
HON. BURNET R. MAYBANK
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 7, 1950

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Honorable David E. Finley, director of the National Gallery of Art, at the commencement exercises at the University of South Carolina, on June 5, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I feel greatly honored that my own university should wish to confer an honorary degree upon me and should ask me to address this graduating class. No honor means so much to us as the approval of our own people, and though I have lived outside the State for 40 years, South Carolina is still home to me, as it is to all loyal South Carolinians, and all South Carolinians that I have ever known or wish to know are loyal.

"Home," says T. S. Eliot, "is where one starts from." And he adds, rather disconcertingly: "As we get older the world becomes stranger, the pattern more complicated of dead and living." And so, as I look around me today and see not only the members of the graduating class of 1950 but also many of those who graduated with me in the class of 1910, I cannot avoid contrasting the outlook on life which we had 40 years ago with that which you have today, as you try to make plans for the good life that you hope to enjoy in the years ahead.

My own generation has been a transition one, during which we seem to have passed from a world of more or less stable values and fixed standards of morals and behavior, both personal and international, into a world where nothing appears to be stable and the old sense of security has disappeared.

When I was at this university from 1906 to 1910, men thought they could predict with some degree of certainty what would be the conditions of life for themselves and their children within, at least, the foreseeable future. But now no intelligent man or woman can feel a complete sense of security about many of the things most vital to us which we formerly took for granted—I mean fundamental things, such as life, liberty, and the pursuit of happiness. Nor do I mean to infer that the only threat to our liberties arises from totalitarian governments, real and menacing as that threat most certainly is. We also carry the seeds of destruction within ourselves, when we show a willingness to abdicate our standards of morality or to regiment ourselves so that the individual becomes merged in the mass, as there has been a tendency to do in recent years, even in this fortunate country of ours.

The dangers to our way of life that confront us today did not arise suddenly nor are they primarily the results of the two World Wars through which we have passed, devastating as those wars have been. It is true that these wars brought about a demoralization of Europe and a dislocation of economic relationships throughout that vast continent and its tributaries in Asia and Africa, so that in Europe a vacuum in power has been created, with the centers of power shifting to America and Russia. Furthermore, as a result of the unprecedented increase in population in Europe during the last 150 years, the abundance of things that were available during the nineteenth century to satisfy Europe's material wants has disappeared, giving rise to great uncertainty as to the future until new trade routes and other national alignments shall have become established. All of this, because of our close affinity with Europe, has posed problems for us in America, which are neither easy of solution nor can they be brushed aside, as we were able to do in the happier and more carefree days before 1914, when England kept the world more or less stabilized.

In all the welter and confusion, however, we must not lose sight of the fact that even if the two World Wars had never happened and the new alinements I speak of had come gradually and less painfully we would still face problems of the greatest magnitude in adjusting ourselves to changes in our way of life that have been forced upon us as a result of inventions and discoveries during the first half of the twentieth century. Our mode of living has been almost completely changed within the lifetime of many of those here present by new means of transportation, such as motorcars and airplanes; new methods of communication, such as the radio, television, and the movies; and a system of Nation-wide production and distribution that has reached unprecedented development in this country in the last 50 years. On top of these and other inventions and discoveries which have so altered the manner and tempo of our daily lives, we, like Europe, have had the stress and dislocations of two World Wars from which we have emerged triumphant but shaken both in body and spirit.

These are serious problems, but we know they are capable of solution if faced with courage and intelligence, as I am sure they will be, not only by my generation but by you, the coming generation, as you take over your responsibilities for the welfare and safety of this great country of ours.

Such problems would be difficult of solution at any time and under the most ideal conditions of peace and order in the world at large. But they are made far more difficult by reason of the fact that we must at the same time face and overcome, or at least neutralize, the greatest threat to our freedom and security that has arisen since western Christendom was saved from the Asiatic hordes on the plains of Vienna in 1683. The concept of the free state versus the police state, with all that is implied in the survival of our religious, cultural, and political freedom, is now at issue; and a decision is being forced upon us by powerful and ruthless men who would destroy our way of life if they could. It is the old conflict between Athens and Sparta—does the state exist for the individual or the individual for the state?

Our great American experiment is one of freedom with diversity, and it has produced a system of government and society that does not allow men to be forced into a uniform pattern or to be told what to think and what to create on the intellectual and spiritual level. So long as that system is preserved intact, we shall be safe. And while it is necessary to be on our guard against the infiltration of totalitarian doctrines, there is no reason to fear that such an alien and materialistic philosophy will ever become established here.

In a great and powerful country, with a Christian civilization such as ours, the kind of doctrines to which I have just referred could be imposed only by force, as is now being done in some of the oldest and proudest nations of eastern Europe, such as Czechoslovakia, where the traditions of civil and religious liberty are as old and revered as in our own country. America has always been able to defend herself from outside enemies; and no one who knows the strength

and vast resources of this country need fear for her ultimate safety or her ability to repel any attempt to impose an alien rule on us by force. Self-defense may be costly, but freedom is worth any price and your generation, no less than my own, does not need to be convinced of that fact. A strong nation, equipped to defend itself and aware of dangers that threaten it, is less likely to be attacked than one living in a fool's paradise, as we have come to realize after the bitter experience of two long and costly World Wars.

These dangers that I have spoken of are largely physical dangers and they can be met and overcome by physical means, if such means are employed with courage and energy. But there are other dangers more insidious and, in the end, more devastating against which courage and energy alone will not prevail. Eternal vigilance is the price of liberty and nothing can save us from eventually losing that liberty if ignorance and apathy should become national characteristics. If we are to be saved, a high degree of intelligence is needed and an informed public opinion, based upon an understanding of the facts. For, in a modern democracy such as ours, the final decision must be made by the average man, who in the mass constitutes the ruling power and who, in the end, must pay the price for wrong decisions.

And yet, today the average man is forced to make decisions about the most complicated questions of government, economics, sociology, and international relations, as to which he cannot properly inform himself without a clearer understanding of cause and effect than is possible under our present system of education. The tragedy of our times is that our progress in the conquest of matter has far outstripped our moral development. We have eaten of the tree of knowledge, of good and evil, and are only too aware of our moral deficiencies which have been brought into sharper focus by the startling inventions and discoveries of recent years. As a result, we find ourselves involved in one of the great crises in history, when humanity is seeking new paths through the dangers and the potential blessings of the atomic age—an age when man has discovered new forces with unlimited possibilities for good and evil, but distrusts his capacity, as did the original Adam, to control them.

More than 25 years ago, the well-known Spanish philosopher, José Ortega y Gasset, told us: "Our age is characterized by the strange presumption that it is 'superior' to all past time; more than that, by its leaving out of consideration all that is past, by recognizing no classical or normative epochs, by looking on itself as a new life superior to all previous forms and irreducible to them. We live at a time when a man believes himself fabulously capable of creation, but he does not know what to create. Lord of all things, he is not lord of himself. He feels lost amid his own abundance. With more means at his disposal, more knowledge, more technique than ever, it turns out that the world today goes the same way as the worst of worlds that have been; it simply drifts." "Hence," says Ortega y Gasset, "the strange combination of a sense of power and a sense of insecurity which has taken up its abode in the soul of modern man."

The Spanish philosopher has diagnosed our disease. But neither he nor anyone else has yet offered us a cure. And, indeed, there is no quick and easy cure, for the disease that afflicts us is deep-seated and will take a long time and great patience to eradicate. We are suffering from an incapacity to deal with the problems of our own lives and to find some solution for those problems as they affect us both in the mass and as individuals. Our incapacity is due in part to inertia, but in a much greater degree to ignorance on our part as to the cause and effect of the forces we must control; and that ignorance is due to lack of education on the moral and intellectual, rather than the technical, level.

We are far from ignorant in technical matters. In fact, the world has never seen a great nations, such as ours, so proficient and so highly organized on the technical level. We are the envy of the whole world in that respect. The American know-how, as it is called, is the goal toward which men are striving in England no less than in the remote and backward corners of Asia and Africa. Throughout the world there is a profound respect for the man who knows, especially in pure and applied science and in technological matters. In our own country we have elevated the specialist to a position in the community which, as a rule, he is not qualified to fill. Because he knows a great deal about his own special subject, we expect him to speak with authority in other fields, in which he may be quite as ignorant as ourselves.

The fault is largely in our system of education. The trend in recent years in this country has been to emphasize technological or vocational training, especially in the sciences, with the result that man is becoming specialized, knowing only his own subject. On all other subjects his critical faculties are becoming dulled and he is being conditioned to depend for cultural nourishment on the movies, the popular magazines, television, and all the other means of mass communication. Insofar as young people are concerned, their taste in their early years is being largely formed by what they see and hear at the movies or over the radio or read in the comic books, as they are called.

Even a subject so important to sound citizenship as American history is given a minor place in our educational system. A Nationwide study by the New York Times has disclosed that at present only a little more than a third of our institutions of higher learning make United States history a required course for all undergraduates, while less than one-third of our colleges ask a year of American history as a requirement for admission. The gravity of the situation is recognized by most educators, and conditions, I am happy to say, are improving but very slowly.

The same situation exists in the field of the arts. Comparatively few colleges and universities have adequate courses in art or the history of art and still consider these subjects of minor importance as compared, for instance, with science. Fortunately we have in all parts of this country museums which are in a position to contribute to the education as well as the pleasure of the American people. There are great museums in many of our larger cities, as well as the National Gallery in Washington, which are equipped to offer you an opportunity to become familiar with many of the greatest works in the field of art. Likewise in Columbia you have a newly established museum which, with your art department in this university, can make a valuable contribution toward equipping you to enjoy many of the best things that life can offer you.

You must, after all, live the whole of your own life in your own company, so be sure that you have within yourself resources that will save you from too much boredom. Art and literature offer you, at the very least, an escape from the boredom of modern life, when our daily lives must so largely conform to the routine of the machine age and to the established patterns of mass production and distribution, even in the field of entertainment.

You and others like you, who are receiving degrees from colleges and universitics throughout this country, comprise in many respects the elite of our modern democratic civilization. You are at least equipped with a knowledge of certain facts and have had an opportunity to learn to think, which is an achievement of the greatest magnitude and, if acquired, will prove invaluable to you in the years to come. But I am sure that in your case, as in my own when I graduated from this university 40 years ago, there is a clear realization of the fact that your real education has just begun and that you must now learn how to achieve the aims you have set for yourselves in life.

No one has stated this more clearly than that great thinker and teacher, Dr. Werner Jaeger, who tells us: "Education is not the cultivation of certain abilities; it is not the communication of certain branches of knowledge, at least all that is significant only as a means and a stage in the process of education. The real essence of education is that it enables men to reach the true aim of their lives. This effort cannot be restricted to the few years of what is called higher education. Either it takes a whole lifetime to reach its aim, or its aim can never be reached."

What Dr. Jaeger has said of the individual is true also of the whole body of citizens in a self-governing society, such as ours. The central problem of our lives today is the same that other civilizations have faced and failed to solve in the past. How can we educate the whole people to govern themselves in relation to each other and to the world at large? The age-old question asked by Socrates still waits for an answer: "Is education (in more than a technical sense) really possible?"

Somehow we must answer that question in the affirmative, if America is to avoid the fate of the Greek city-state. For America, though continental in extent, has now become a city-state in the sense that all the people comprise one community, interdependent on each other and equipped with a system of communication that keeps us informed of current happenings and ideas to an extent not possible even in Athens in the centuries preceding her fall.

The Greeks were well aware that education was necessary for a self-governing society. They recognized, too, the importance of medicine for its social and cultural values, though they were more concerned with the maintenance of health than the treatment of disease. Demosthenes did his best to reeducate the Athenian democracy before it was too late. But, in the end, after the heroic and successful fight against the Persians, the city-state passed away, due largely to the inability of the average man and woman to understand and live up to their former greatness. They were faced with the grim necessity not only to fight Philip and his Macedonians but to obtain, by self-education, a world outlook which would equip them to deal with world issues and so to preserve the great civilization which they and their ancestors had created. Greece failed to obtain that outlook and as a world force disappeared, though Hellenism lived on, dispersed throughout the world, to become later a vitalizing element in the western civilization of which we are a part.

We, in America, are the heirs of the Mediterranean world; and to Israel and Greece and Rome, as later to England and France, we owe much that is best in our culture and our ideas of freedom. But we are not only a religious and idealistic people; we are also a very practical one. And so we must find an answer to the challenge America faces today: How shall we preserve our liberty and our idealism in a world that is fast becoming regimented and apparently concerned mostly with materialistic ends?

If we can succeed in saving ourselves and our own civilization, we shall no doubt achieve even greater things. Indeed, the impact of ideas from America and western Europe upon Russia may eventually transform the outlook of that vast country, with its large and vigorous population, as Greek humanism transformed Rome and, merging with the Christian concept of life, gave us our western civilization.

That is the challenge and the opportunity that is offered to you in the last half of the twentieth century. You have the possibility of seeing the world as it will be 40 or 50 years from now. It may be a world in which

atomic energy has been reduced to a humble and useful role in serving humanity, as electricity does today. It may also be a world in which wars and the threat of annihilation are things of the past, because your generation faced these dangers with courage and intelligence and so found a way out of the spiritual morass in which we now seem to be floundering.

I believe that you will find the answer to some and, perhaps, all of these problems and for that reason I rather envy you in graduating today. For, I feel certain that, whether you know it or not, you have a glorious past still ahead of you.

Hydroelectric Development in New England

EXTENSION OF REMARKS
OF
HON. HENRY CABOT LODGE, JR.
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Wednesday, June 7, 1950

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The $64 Question," published in the Boston (Mass.) Record of May 24, 1950, and an editorial entitled "Out in Cold," published in the Boston (Mass.) American of May 25, 1950, relating to river development in New England.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Boston (Mass.) Record of May 24, 1950]

THE $64 QUESTION

President Truman has in effect reminded members of the New England congressional delegation that they got almost nothing for their own communities in the recently-enacted $1,720,000,000 rivers and harbors bill although they have saddled their communities with the expense of dams, power plants, and other improvements for the South, West, and Middle West.

And in this instance Mr. Truman is entirely right.

With the exception of the survey of the Merrimack and Connecticut Rivers, which Senator LODGE demanded and almost did not receive, New England is literally left out in the cold. Not a cent to save cities like Lawrence, Lowell, and Manchester with their woefully obsolete and inadequate power installations. Not a cent for Passamaquoddy, the biggest and most valuable tidal power site in the world. Not a cent for Enfield Rapids on the Connecticut line, which the Army engineers have called "one of the Nation's finest and most desirable power sources."

There still is time for our Senators and Congressmen to exert themselves in behalf of their constituents and to bring home the hyd.oelectric power "bacon."

But will they risk antagonizing the selfish interests which have blocked the development of New England rivers for a full generation?

That's the $64 question.

[From the Boston (Mass.) American of May 25, 1950]

OUT IN COLD

Senator LODGE, a Republican, has the distinction of being the only member of the New England congressional delegation to score in the recently enacted $1,720,000,000 rivers and harbors bill.

He persuaded the Democratically controlled Congress to authorize a survey of the hydroelectric potentialities of the Connecticut and Merrimack Rivers and their tributaries.

The other New England Senators and Congressmen got nothing, probably because most of them asked for nothing.

This obviously angered President Truman, and he registered his indignation this week in a stinging message to the House of Representatives, in which he deplored the fact that New England was left out in the cold and implied that the Democrats from the area, who had repeatedly recorded themselves as favoring the development of water-power resources, had taken a political powder when southerners, westerners, and midwesterners were getting multi-million-dollar appropriations for their constituents.

Of course, the present session of Congress has several weeks to go, and the New England Democrats, irked by Senator LODGE's victory, may exert themselves before they come home to start their reelection fights.

But the odds are against their accomplishing anything worth while.

The South, West, and Midwest already have the hydroelectric gravy, and New England, as usual, is allowed to foot the bill.

Louis Johnson: Bulldog of United States Defense

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1950

Mr. HOLIFIELD. Mr. Speaker, under permission to extend my remarks in the RECORD, I would like to include an interesting article on our Secretary of Defense, Louis Johnson, written by the well-known Washington reporter Tris Coffin, and appearing in the June 1950 Coronet magazine:

LOUIS JOHNSON: BULLDOG OF UNITED STATES DEFENSE—HIS IS THE UNENVIABLE JOB OF SAFEGUARDING AMERICA AGAINST A SUDDEN ENEMY ATTACK

(By Tris Coffin)

United States Secretary of Defense Louis Johnson, a big, restless American with enough vitality and endurance for a dozen men, has finally landed the job he sought for years. The job is to make sure you and I are not destroyed in a sudden attack by an enemy equipped with the hideous weapons that modern science has produced.

As a result, Johnson is the second most powerful man in Washington, a top architect of Allied policy, and an administrator described by Herbert Hoover as the best in the Truman administration.

However, the Gridiron Club, famed group of newspapermen in Washington, recently described Johnson's work in a parody of the popular song, A Wonderful Guy: "All by by myself I am the whole Army; I'm the Navy and Air Force, too. I nod my head and the Congress plays dead, and now I have the White House in view."

The Secretary, who is called Louie or Colonel Johnson by friends, is tall and well-built, has eyes that look out shrewdly and directly, and a voice which is surprisingly soft. Like an old-time Army top sergeant, he sums up men and events swiftly, and makes blunt decisions.

Such traits are not recently acquired; all his life Johnson has led the fight himself, rather than give orders from the side lines. As corporation lawyer, American Legion politician, Assistant Secretary of War, and Democratic Party fund raiser, the present chief of United States defenses has thrived on hard work and conflict.

Today in Washington, the world capital where sneak plays and hidden-ball tricks are accepted strategy, Johnson is the rare exception. He prefers the old-fashioned, head-down, line buck. An intimate summed it up good-naturedly when he said, "Louis would rather try to kick his way through a brick wall than climb over it."

Most of Washington's bureaucratic generals never enter a battle without elaborate feeling-out tactics. These might include a planted story in a Washington column, a remark dropped at a cocktail party, or an attempt to gain a rival's confidence by profuse friendship. But not Johnson. He has no cultivated friends among the press; he does not go to cocktail parties.

Another significant clue to his personality is a casual remark he made during the recent bitter attack on him by Navy admirals and their adherents. A friend asked, "How can you be so calm? Congress is after your hide. Newspapers and radio commentators are demanding your resignation."

The Secretary said quietly, "You forget. I was vaccinated in Washington before."

This is an understatement. Johnson went through a cruel ordeal as Assistant Secretary of War from 1937 until the summer of 1940. During that period, President Roosevelt felt he needed in the Little Cabinet a figure to represent the growing clamor among veterans' groups for rearmament and to balance the isolationist tenor of some leading New Dealers.

So Roosevelt selected Johnson, ex-national commander of the Legion and a minor figure in Democratic politics. Johnson was supposed to sit quietly, take orders, and keep the Legion off the administration's back. In this job Johnson failed gloriously, as witness this story, never told before:

Early in 1940, a memo was submitted to Assistant Secretary Johnson by Col. James H. Burns, today a major general and Johnson's geopolitician. The report said war with Germany and Japan was inevitable, and that the United States would need a million-man Army and some $9,000,000,000 for arms.

Johnson read the report carefully, turned to Burns, and said, "This is good. Take it down to the General Staff and tell them I want it approved in half an hour."

The program was initialed within half an hour and Johnson bore it triumphantly to The White House for a historic meeting. He outlined the plan while Roosevelt puffed thoughtfully on a cigarette. Harry Hopkins sat in a corner. Gen. George C. Marshall, Chief of Staff listened intently. William S. Knudsen, the automobile production wizard and later codirector of the Office of Production Management, nodded at each recommendation.

When Johnson finished speaking, the President said: "I think in big terms, but this is too big. The American people will say I am leading them to war."

Knudsen, who had been primed by Johnson, spoke up in a voice heavy with the accent of his native Denmark: "Mr. President, do you want planes?"

"Yes, Bill, but not $9,000,000,000 worth."

Knudsen kept on stubbornly: "You want planes. I need money."

Sighing, Roosevelt said, "All right. I'll accept the plan as far as planes are concerned."

The industrialist plunged on: "Mr. President, do you want tanks?"

Roosevelt looked quizzically at Johnson. Then he said, "I approve your program in toto. But let me start with a smaller figure. You make this less than five billion, and I can sell that to the public * * *."

All during the prewar era, Johnson was persuaded by Roosevelt to play an unhappy

game of deception. The President feared the vigorous intervention policies of Johnson would injure him politically if he openly supported the Assistant Secretary. Also, Roosevelt was loath to fire Secretary of War Harry Woodring. So the President told Johnson to report directly to him, but to come in the side door. Meanwhile, key administration officials concerned with preparedness were told to cooperate with Johnson.

A sample of Johnson's technique was the way he got American arms to the British, after the bitter defeat at Dunkirk. The Assistant Secretary insisted that a large quantity of Amercan Army rifles be declared surplus and sold to Britain. Woodring refused to approve the deal.

The Assistant Secretary waited until Woodring was out of town. Then he declared the rifles surplus and ordered them sold to Britain. With this off his chest, he went to the White House, reported what he had done, and said in jest, "Mr. President, if I have violated the law, I would like your promise of a pardon—in writing."

Roosevelt wrote a chit. "Louis, if you go to jail, I'll go with you."

The President, however, did not always back up his hard-driving Assistant Secretary of War so solidly. This was due to a curious combination of Johnson's own ambitions and the President's faculty for appearing to promise the moon with green cheese. The moon, to Johnson, was to get the title of Secretary of War. Roosevelt later added the green cheese by suggesting in an impulsive moment that Johnson would make an ideal Vice President for the 1940 ticket.

Johnson took both these promises seriously. His first jolt was at the Democratic National Convention in July. Cheerful and expectant, he strode into the hotel room where Hopkins and the city bosses were picking a Vice President. The men looked up with glazed, weary eyes, and one is reported to have said, "Oh, my God, another hopeful."

The left wing of the New Deal feared Johnson, whom they glibly labeled an "American Legion conservative." They cut his throat politically, and Henry A. Wallace was nominated for Vice President.

But this was only a warm-up for the big disillusionment, the one which so toughened Johnson that he can now say calmly, "I've been vaccinated in Washington before."

A few days after the convention, Johnson was called to the White House, presumably to be appointed Secretary of War. It was a tense gathering. Steve Early, the White House press secretary and Johnson's one steady friend in the inner circle, looked glum. Roosevelt was too friendly.

Felix Frankfurter, a New Deal idea man before he became a Supreme Court Justice, had sold a great thought to the President. If Roosevelt, he argued, appointed Republicans as Secretaries of War and Navy, the GOP would be seriously weakened in the campaign.

The news was broken to Johnson at this White House meeting. Anger flashed in his eyes; his fists knotted. Bernard Baruch went to him and said gently, "Son, don't do anything you will regret later. Keep your temper."

On July 25, Johnson handed in his resignation. Then, bitter and lonely, he left Washington on a train for the West. He was followed by his friend Early, who said soothingly that no one would blame Johnson if he rocked Washington by revealing the indignities he had suffered. But he would be a bigger man if he took his disappointment in silence.

Johnson accepted the wise counsel. But from that day, he worked to be, ultimately, boss of the American defense establishment.

Actually, the tough job of Secretary of Defense is almost tailor-made for Johnson. As a heavyweight boxer at the University of Virginia, he could outfight any man, and did. At 26 and a young lawyer, he was a hustling Democratic floor leader and committee chairman in the West Virginia Legislature. A year later, he was fighting through the Meuse-Argonne offensive of World War I.

Returning home as a colonel, he helped organize the Legion and rose to be commander in 1932. Off and on, Roosevelt brought him to Washington for public and political chores. His longest stretch was as Assistant Secretary of War from 1937 to 1940. His last mission for Roosevelt was to India as the President's personal representative. Johnson brought home the friendship of India's Gandhi and Nehru.

In the 1948 political campaign, Johnson pitched in and raised money for what many thought was a hopeless cause, the re-election of Harry Truman. He was rewarded by nomination for Secretary of Defense on March 3, 1949.

Johnson has done a remarkable job in two fields—military strategy and administration. He has also acquired more enemies than all the rest of the Cabinet combined.

When Johnson came to the Pentagon Building last year, the Joint Chiefs of Staff were deadlocked on strategy. The Air Force was preaching that an armoda of B–36 bombers, capable of striking any target in the world, could win a war. The Navy retorted that giant aircraft carriers, surrounded by protective warships, were the secret to victory. Meanwhile, the Army insisted that foot troops were needed to win objectives and hold them.

Bluntly Johnson told the Joint Chiefs: "We are not going to dissipate our strength by having two or three different strategies. That will eat up money we can't afford to waste." Then he laid down the law.

The B–36, or any later model of long-range bomber, would be the global striking force to retaliate against surprise Soviet blows. (The hydrogen bomb, which Johnson argued for in the recent wrangle within the administration, could burn Moscow to the ground.)

Ground troops of our European allies should be equipped and trained to hold against Russian tanks, infantry, and bombers. We should be willing to accept as allies any nation without aggressive aims, regardless of its politics. This would include both Communist Yugoslavia and Fascist Spain.

The American Army should be kept alerted, so that it could be enlarged, equipped, and sent to vital points in the shortest possible time. The role of the Navy was to convoy troops and supplies and keep the seas free of enemy submarines.

To make sure there was no backsliding Johnson halted construction of the Navy's superaircraft carrier. He stood stonily and calmly while being excoriated by the admirals and their friends. He defied the wily chairman of the House Armed Services Committee, CARL VINSON. The only concession Johnson made was to allow the marines to remain as a separate élite force.

The other side of his shield, the administrative side, has earned Johnson both applause and epithets. The Secretary cut $1,200,000,000 from the defense budget and lopped 141,300 civilian employees from the payroll. The mere thought of such mayhem would make most politicians shudder, since each of the 141,300 has a Congressman or relatives who are loyal party workers.

Characteristically, the Secretary announced his reforms at an open meeting, to which he had invited all Senators and Congressmen whose districts would be affected by economies. They came with fire in their eyes. He outlined the cuts and said firmly, "I personally will tolerate no WPA in Defense."

Johnson could not have carried his economy program through without a well-knit team of assistants. His chief advisers include Under Secretary Early, the master diplomat who has saved the blunt Secretary from many a blunder, and Louis Renfrow, a jovial Reserve officer and friend of President Truman for more than 30 years.

But even with Renfrow browsing around the White House, the palace guard slyly plants stories that Johnson is on the President's black list. The reason for these rumors is the suspicion, which Truman takes with a grain of salt, that the Secretary of Defense is running all-out for the Presidency. To a friend who recently asked him point-blank whether he was a candidate, Johnson replied candidly: "When I am through with this job, I couldn't run for dog catcher."

Johnson is a realist. He would like, of course, to sit in the White House. But in his heart the Secretary knows the chances are dim. He has enemies in every hotel lobby, every cocktail salon, every politicians' stag party in Washington. He is a conservative in an administration that proudly invites the label of "welfare state."

Although Johnson's name appears daily in the newspapers, the door is firmly closed on his private life. He does not drink with "the boys," and he avoids Washington society. Every week end, weather permitting, he flies into a different life at his home in Clarksburg, W. Va.

His first act at home is to walk alone beneath the trees. The gardens are full of wild flowers, and orchids flourish in the greenhouse.

An acquaintance, seeing the blooms for the first time, asked Johnson curiously, "How long have you gardened?"

The aloof mood left him, replaced by a boyish grin. "From childhood. The first money I ever made was from selling beans I'd grown."

A photograph in Johnson's office gives another glimpse beneath the surface. It is the sensitive face of a philosopher, Pandit Nehru, Prime Minister of India. The inscription is "To Louis in friendship."

At the end of a day, in the early evening, Johnson will walk to his office window. There he will stand quietly, looking at the Jefferson Memorial across the Potomac River. Then, cheerfully, he will stride into the outer office where secretaries are locking up their desks and say heartily, "Can I give anyone a lift over the bridge to Washington?"

A Thought for Memorial Day

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 7, 1950

Mr. THYE. Mr. President, we, in Minnesota, have been unusually fortunate in the many communities throughout the State which have been served by alert and outstanding country weekly newspapers. There are nearly 500 of them and they rank among the best in the Nation on the basis of all standards.

There are those who believe that big-time activity in journalism is concentrated exclusively in large metropolitan daily papers or in the activities of nationally known columnists. I do not wish to make any invidious comparisons, Mr. President, but I do want to make the statement that in the field of journalism, a really authentic voice, typical of our American life, is that of the country editor.

I recently read in the Montevideo News, published in a small city in Minne-

sota by Mr. Ludwig I. Roe, a former president of the Minnesota Editorial Association, an editorial which I believe indicates the thoughtfulness and insight of these leaders in journalism. It is entitled "A Thought for Memorial Day" and it relates to the danger of too great dependence upon government. I ask unanimous consent that this editorial from the Montevideo News be printed in the RECORD as a part of my remarks at this point.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A THOUGHT FOR MEMORIAL DAY

"The history of liberty is the history of the limitation of government power, not the increase of it."—WOODROW WILSON.

What makes this statement of present interest is not who said it first—but who is saying it, and thinking about it, in 1950.

It would be expected that Woodrow Wilson, student and historian, philosopher and politician, would see that liberty lives when powers of government are limited. He was restating what Jefferson and Madison, Washington, Franklin, and Hamilton put into the first set of ground rules for the great American game.

But a statement with a famous man's name pinned on it becomes a "quotation." It comes to life when taken as a guide by somebody in your town. Early in May we heard a young fellow put this up to a group of men and women. "The history of liberty is the history of the limitation of government power, not the increase of it." He said it with a lot of seriousness.

He was no big shot. Instead he was a young fellow working hard to make his way. He had been in the war, he had taught school, now he is a salesman. He had the right answer figured out—the way to keep liberty is to limit government power, not increase it. We hope he was talking for his generation.

Wars have been fought to protect liberty. Lives have been paid in those wars. On Memorial Day a million American families will be the more sharply reminded of the personal investment made for liberty. Millions more will recall they put something into the defense too.

Liberty can be threatened during times of peace—by the spread of government power—just as surely as it was threatened during war.

Mr. Truman's Political Morals

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 7, 1950

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Times-Herald for May 26, 1950:

MR. TRUMAN'S POLITICAL MORALS

Mr. Truman was asked at a recent press conference whether he had any comment on Senator TAFT's statement that his administration was "politically immoral." No, he had none, the President responded. We shall therefore offer ours.

ELECTION IN KANSAS CITY

We shall first note that the statute of limitations will run out Sunday on a matter in which Mr. Truman has some interest. On the night of May 27–28, 1947, the safe was blown in the office of Kansas City election commissioners and the ballots comprising the evidence of wholesale vote frauds in the Democratic Party primary of 1946 were stolen. Mr. Truman at the time was in a Kansas City hotel just a few blocks away.

That was the primary in which Mr. Truman had decreed that Representative ROGER SLAUGHTER, a Democrat, be purged. For 25 years Mr. Truman had enjoyed the support of the Kansas City machine built by the late Tom Pendergast and now run by Pendergast's nephew, Jim.

Slaughter had had the support of the machine in winning two terms in Congress. As a member of the Rules Committee, he failed to follow Truman's orders.

In July 1946 Truman summoned Jim Pendergast to Washington and personally demanded Slaughter's defeat. The President on July 18 informed his press conference that he had done so.

On primary day he flew to Kansas City to throw the weight of a personal appearance into the campaign to unseat Slaughter. Mr. Truman's hand-picked candidate, Enos Axtell, was nominated by 2,300 votes.

Axtell failed to carry his own township. He lost every ward until he came to the four key wards under Pendergast's control. In two precincts in these wards Slaughter was not credited with a single vote.

According to Maurice Milligan, former Democratic United States attorney for western Missouri, Axtell's victory "smelled to high heaven of fraud."

Milligan's successor, Sam M. Wear, and the Department of Justice, then under Tom Clark, now elevated to the United States Supreme Court, went through some perfunctory motions of investigating, but decided there was no case.

Then the Jackson County grand jury stepped in. It indicted 71 Pendergast henchmen, reporting that there "had been a deliberate and calculated plan to miscount votes and otherwise steal the election" from Slaughter.

The report of the grand jury was received on May 27, 1947. That night the courthouse safe was blown and the ballots stolen. The next day Attorney General Clark was trying to explain to a senatorial committee in Washington why he had shown so little interest in the Kansas City vote frauds.

News of the safe blowing arrived just as he was about to depart to receive an honorary degree in Texas as a champion of civic virtue.

The Senators called some more witnesses. Mr. Truman's United States attorney for western Missouri, the dawdling Mr. Wear, appeared and admitted that, in the light of the safe blowing, things "looked suspicious."

But, added Mr. Wear, "I have an awfully good alibi." Mr. Wear had been absent from Kansas City that night. He had an alibi. It is not usual for United States attorneys to offer alibis.

PRESIDENT KEEPS QUIET

Maurice Milligan takes up this story in his memoirs of his fight against the Pendergast machine, originally published under the title of "Missouri Waltz." He had broken the Pendergast machine once. He had sent 259 of the Pendergast mob to the penitentiary for fraud in the elections of 10 years before, when Tom Pendergast customarily counted 60,000 ghost votes.

In 1939 Milligan caught up with the boss himself. Tom Pendergast pleaded guilty to evasion of $551,000 in income tax on unreported income of more than $1,000,000.

Of this sum, $305,000 represented bribes Pendergast had received for the settlement of a case involving the release to insurance companies of millions of dollars in overcharges on fire insurance premiums paid by Missouri policyholders.

Pendergast got 15 months and was ordered to take no part in politics after his release from prison. He turned over the remnants of his machine to Jim Pendergast.

President Truman for 25 years had been the friend and political creature of the Pendergasts. He was Tom's third choice for the Senate in what looked like a losing year.

The Truman luck—and the Pendergast methods of delivering an election—worked, and Harry was on his way to the White House. When Tom died in 1945, Truman, then Vice President, said, "He was my friend, and I was his," and flew to the funeral.

After Milligan's work, Kansas City had honest elections for awhile, but upon Truman's election as Vice President, Milligan was ousted as district attorney. Then in 1946, as President, Truman, in the words of Milligan, "breathed new life into an organization that for all practical purposes was dead as a doornail."

He brought the Pendergast machine back to life and, with it, its vote frauds, corruption, and gunplay, which recently resulted in the murder of Charles Binaggio and Charles Gargotta, underworld characters and Democratic politicians. The killing took place under a huge photograph of the President himself.

We quite understand why Mr. Truman has no comment.

Trinity Evangelical and Reformed Church, Buffalo, N. Y.

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 7, 1950

Mr. TAURIELLO. Mr. Speaker, I want to call to the attention of the Members of Congress the splendid record of the Trinity Evangelical and Reformed Church of Buffalo, N. Y.

This thriving parish has a fine history of over 40 years of service to its community and its parishioners. It occupies a respected place in the community of churches and has done much to bring about mutual understanding and cooperation among churches of the various denominations in western New York.

Because of the diligent and fruitful labors of its ministers, whose efforts have have been productive of an abundant harvest, Trinity Church finds it necessary to embark upon a fund-raising campaign to enlarge its facilities in order to take care of its needs.

Under leave to extend my remarks, I am herewith enclosing a brochure which tells the story of the rapid growth of this parish and the present necessity for its expansion:

TRINITY IN RETROSPECT

Forty-one years ago Trinity Evangelical and Reformed Church had its beginning. It had its origin as a reformed church. The site selected for this embryo church was at the corner of Suffolk and what is now Berkshire Avenue. It was only a small house of worship, but apparently it was large enough to meet the needs of the small group of worshippers in those days when Kensington was largely woods, brush, and corn fields.

This small chapel immediately became the meeting place for the community. It was the pioneer church of the Kensington area

and, as such, opened its doors willingly to every progressive Christian movement, and still continues to identify itself with every genuine effort to promote civic and community growth.

In 1920 the church was incorporated and the site of the present church building on Kensington Avenue was selected for a new and larger church. The cornerstone of the church was laid in 1922 and in the spring of 1923 the present church was dedicated to the worship of God.

The present basement was added in 1932 in order to accommodate the church school. Adequate as it doubtless was for the religious education of youth in those early days, it has long since outlived its usefulness. Visit the church school any Sunday morning and you will readily comprehend the woeful inadequacy of this phase of our church life, and the reason for this inadequacy is because of the limitations of space and a church school lay-out that is antiquated for present-day religious instruction.

KENSINGTON, A COMMUNITY WITH AN AMAZING GROWTH

The Kensington community has been included within the city limits since 1870; it was very sparsely populated to 1920. It consisted largely of farm land and wooded areas traversed by a few dirt roads. Even Bailey Avenue, the principal thoroughfare, was a poorly kept dirt road used chiefly by travelers whose destination was either the country club or the poorhouse, the two main points of interest on the avenue.

After the First World War, however, a period of phenomenal growth took place. During the decade from 1920 to 1930 the population of the area nearly tripled, rising from 18,000 to 49,000. The census of 1940 gave a population figure of 54,297. The new settlers were, for the most part, the sons and daughters of Buffalonians who resided in the neighboring areas of the city, especially the so-called Fruit Belt and the Cold Spring section. German and Irish-Americans were the chief nationality groups represented.

COMMUNITY GROWTH INCREASES THE CHURCH'S RESPONSIBILITY

The church should be the most alert and vital institution in the community. It is to the church that the community naturally turns for spiritual guidance and the strengthening of its moral fiber. The church can never be indifferent to the fundamental needs of the community. The church that is alert to its program of service must keep pace with neighborhood growth.

Trinity Church, located at the strategic center of Kensington, dare not evade this God-given opportunity and obligation to expand its physical facilities. Large numbers in this growing neighborhood are seeking religious guidance for themselves and for their children. Trinity Church has always been concerned about the vital needs of the community and at this time of crisis it will not fail to meet its full obligation.

The average attendance for each church service at Trinity since January 1, 1950, has been in the neighborhood of 350. The church auditorium seats 270 worshippers. Consequently, at every service the ushers have been obliged to put chairs in the aisles and crowd the overflow worshippers into other available spaces.

On special occasions when more people attend worship services, such as Palm Sunday and Easter Sunday, the basement area has to be utilized and loud speakers are installed in these basement rooms to take care of the overflow crowds. It is unfortunate, but nevertheless true, that this overcrowding which increasingly is becoming a problem at Trinity, gives even well-meaning members an excuse—even though a lame one—to become careless in their church-going habits. More than once a member has said, "I won't go to church today. I don't enjoy my worship under crowded conditions."

Then, too, Trinity Church School for years has faced a serious problem. Because of the limited accommodations available for the sessions of the church school, Trinity cannot offer space for a program of religious education for the older 'teen-age group—a group which definitely needs all the help Trinity can give them in these decisive days. They are the men and women who should fill places of leadership in our church of tomorrow. They should now be in training for this leadership in our present-day church school.

The church school has an approximate enrollment of 250 children. These children are in the four church-school departments—i. e., beginners, primary, junior, and senior. Each department meets in its own rooms, but, inasmuch as the rooms are not soundproof, it is impossible to shut out from any one department whatever is transpiring in the adjoining department. Imagine the confusion and the unspiritual effect of four separate departments in adjacent rooms, each singing its own hymn of worship. This is not an imaginary experience but one that takes place with embarrassing frequency Sunday after Sunday at Trinity, and always with disconcerting results.

Furthermore, in the evening it is impracticable for more than two groups to meet at the same hour. There is an immediate need for adequate facilities where the young people of Trinity can hold their group meetings and socials, but lack of space and the present inadequate layout of meeting rooms in the basement compel Trinity, with much regret, to see our young people go elsewhere for their entertainment. In such days as these when all sorts of allurements entice our youth away from the church, Trinity should provide an adequate place where its young people can have their own club meetings in an environment that builds rather than destroys character.

A FORWARD LOOK

The church consistory has not been unmindful of the handicaps which Trinity has faced in recent years. As a matter of fact, it has on many occasions discussed the problem and sought to find the best solution. Realizing that the overcrowding was becoming daily more acute it has been decided that the only satisfactory solution could be found in a direct appeal to every member and friend of Trinity. It was voted that an intensive campaign for funds get under way this spring to provide the capital with which Trinity might expand its physical facilities and meet the challenge of a growing community.

Mr. Speaker, I want to take this opportunity to congratulate the pastor and his parishioners on their fine record in religious educational and civic matters and to express the hope that their drive for funds will be overwhelmingly successful in order that they can continue to contribute to the well-being of the community in the fullest measure.

Why Not a Brotherhood Lobby?

EXTENSION OF REMARKS

OF

HON. FRANK BUCHANAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 7, 1950

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me before the National Conference of Christians and Jews, June 7, 1950, Waldorf-Astoria, New York, N. Y.:

WHY NOT A BROTHERHOOD LOBBY?

Mr. Chairman, reverend clergy, distinguished guests, furriers, wives, and friends, brotherhood connotes an ideal sense of human relations. It is synonymous with all the inherent decencies that exist in the soul of mankind. But like a lot of good words, it is often used without the force of sincerity back of it.

I believe, and I think you will agree with me, that brotherhood means an association of people who truly believe in the Golden Rule—"Do unto others as you would have them do unto you." Brotherhood is a condition of tolerance. It connotes a spirit of righteousness which shows itself in everyday acts of kindness and ordinary human decency. The opposite of brotherhood is intolerance, bigotry, and hatred.

You people gathered here this evening are zealots in the brotherhood army. I am a buck private in your ranks. If the things that you and I believe in, the thoughts that fill our minds in our endeavors concerning brotherhood, were to take hold of the great majority of men everywhere, then I do not believe there would be a Ku Klux Klan, a Gerald K. Smith, or his ilk, nor an existing cold war or possible hot war in the offing.

Our problem ladies and gentlemen, is both simple and yet colossal. Our task is clearly to continue to work toward a brotherhood of man in our everyday life—in every word—in our every act. But this is not enough. The task is to swell the ranks of these zealots of brotherhood. In other words, we have got to sell others on the idea.

Now how might this be accomplished? It so happens that I am chairman of the Special Committee Investigating Lobbying Activities. For months past, representatives of various pressure groups have come before our committee and we have been investigating their means and methods of operation. Some of these lobbies are good lobbies—that is, they represent the people's interests. Others work equally as hard and are exceedingly effective. But they represent not the people's interests, but special interests out to exploit the ordinary citizen.

In observing their modes of operation, the thought occurred to me—Why is there no really effective brotherhood lobby? There are scattered efforts here and scattered efforts there which are made to put the idea of brotherhood across, but there is no overwhelming pressure of great numbers of people who believe as you and I do to see to it that the principles of brotherhood that we stand for become the common practice, not alone of this Nation, but of all the nations of the world.

A lobby consists of one person, a small number of persons or a large organized group. We have found in our investigation of lobbies that those groups which are extensively organized—and often teamed up with other existing groups with kindred ideas—are far more effective in presenting their ideas and promoting their particular causes than smaller groups.

But each individual must do his job or there will be no collective effort. From personal experience, let me try to explain how this works. I hope you will not consider me an egotist for speaking in the first person on this matter.

As a youngster in the world of sports, I played with Poles, Slavs, Italians; I played with Negroes; I played with Christians, with Jews, boys on the baseball diamond, the football gridiron and the basketball court. No one asked, "What is your religion, your creed, your nationality?" As athletes we knew each other as contestants in fair play. We played to win but always with fair play.

When my playing days were over, I became an educator and coach. I carried into the schoolroom and into the gym, the gridiron and diamond, what I learned and

believed in when I played the game. I taught fair play.

These boys were the sons of hard working and brawny coal miners, steel workers, little pack peddlers and storekeepers; the sons of the Kelly's, Cohen's, DeAngelo's, the Swede Swanson's and the colored Johnson's.

When these kids walked out on the field, or on the court, there were no signs on their backs labeling them as to their religion or their nationality.

Does not the New Testament teach Christians, "All things whatsoever you would that men should do to you, do ye even so to them: for this is the law of the prophets." Is this not the same precept that was given to the Jews long before Christ? The Old Testament puts it this way, "What is hurtful to yourself do not to your fellow man. That is the whole of the Torah and the remainder is but commentary." Therefore, the lesson to the Jews and the Christians is the same, it is the Golden Rule and the Golden Rule is the brotherhood of man.

I have guided my life so by this rule that I have never known the difference between the Jews and the Christians in my appraisal of them. I appraise the Jew and the Christian by how he thinks, how he lives, and what he does in this life.

I must confess that before my entry into politics on the national scene, I did not realize that hate, prejudice, and discrimination was so wide, so deep-seated and rooted in the hearts and minds of men. I learned that this terrible hate had seized millions of people throughout the world and that these millions were teaching millions more hate and discrimination, provoking brother against brother, son of man against son of man. I say that millions were teaching millions to learn to hate. I say again "earning," because we are born without hate and prejudice in our heart and mind and soul. No, hate is not part of our birthright.

Somebody, somewhere, is spreading this hate doctrine, tonight. Yes, there is a lobby spreading this hate doctrine.

Men of great wealth and influence have been meeting and propagandizing by deceit, trick and fraud, hate and prejudice against our Government, hate and prejudice and discrimination against Jews and hate and prejudice against God-fearing Christians because these Christians dare to espouse the cause of the underdog, the underprivileged, the well-being of all peoples. Yes, today and every day the leaders of the hate lobby are regimenting the cranks, the lunatic fringe, the uncivilized Midas to march on Congress. In this hate lobby, we have discovered that these professional haters want no brotherhood of man—they want to exchange in our era of culture and social advancement, hate for love, mob rule for the benefit of the few select and favored against a brotherhood of man for the benefit of all.

Tonight, I am asking the Gentile and the Jew, the black man and the white man, the merchant, the banker, the worker to mobilize a brotherhood lobby to fight these forces of hate. The Secretary of State said not long ago, "Discrimination against minority groups is a handicap in dealing with other countries." To show the world we in America must lead the way against religious prejudice and discrimination. The brotherhood lobby must fight the hate lobby, pamphlet against pamphlet, dollar against dollar, until the last vestige of hate is crushed in the schools, the colleges, the factories, the stores, the churches, the streets and even the Halls of Congress; and every man and woman who lends his name, his influence and his money to the hate lobby must be exposed. As far as I am concerned, no hate lobby will operate in secret in this great country of ours. The light of publicity will be shed on these haters. The present Federal Lobby Act provides that sponsors and contributors should be named, and I shall do my utmost to see to it that they are named.

Now a word of caution to the clergy and you men and women who are interested in the social and religious problems of our daily life. We have found that the very lobby organizations of which I have spoken—I mean the hate lobbies—are studiedly seeking, through their subtle propaganda, to enlist you in their unholy crusade. Their methods are so clever, their catch phrases and words so neatly turned that it is, I must confess, sometimes difficult to determine that one is being propagandized.

Christians and Jews speak the same language. We speak in the Lord's Prayer, "Our Father, who art in Heaven." He is not the Christian Father, He is not the Jewish Father, but He is the Father of all. He is the Father that brings and binds us together with all humanities in a brotherhood for this noble work of the National Conference of Christians and Jews.

Pledge yourselves to work unceasingly, to give to the cause unstintingly, so that this great lobby of brotherhood will destroy the forces of ignorance, hate, discriminations, and prejudice.

Address by Gen. Omar N. Bradley at the Agricultural and Mechanical College of Texas

---

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 31, 1950

Mr. TEAGUE. Mr. Speaker, there is no living person for whom I have a higher regard than I do for Gen. Omar Bradley, and I feel sure that many of you here today share this opinion. The tremendous responsibility that he now has as Chairman of the Joint Chiefs of Staff would probably prove too great a task for most men, but the General seems to thrive on such difficult tasks.

We were very proud to have General Bradley come to Texas last week for the commencement exercises at the Agricultural and Mechanical College of Texas, and under leave to extend my remarks in the RECORD, I wish to include the General's address on that occasion.

ADDRESS BY GEN. OMAR N. BRADLEY, CHAIRMAN, JOINT CHIEFS OF STAFF, AT THE COMMENCEMENT EXERCISES OF THE AGRICULTURAL AND MECHANICAL COLLEGE OF TEXAS, COLLEGE STATION, TEX.

President Bolton, distinguished guests, men of the graduating class, ladies and gentlemen, it is an honor to be invited to participate in the commencement exercises of the Agricultural and Mechanical College of Texas this year. All my grown life, I have worked side by side with the graduates and former students of Texas A. and M. in the Armed Forces of the United States. Your school, and the men who have represented it, have elicited sincere admiration wherever they have served.

For many years, I have wanted to visit College Station and, in a sense, become more closely associated with the Aggies. Tomorrow, en route to West Point to join my classmates of the Military Academy at our thirty-fifth reunion, I shall feel that these exercises today have rounded out the association with the Texas Aggies that I have always cherished and respected.

More than 70,000 former students of Texas A. and M. have served in the Armed Forces, 20,000 of them in World War II. Of this number, 14,000 were commissioned officers and helped furnish the invaluable leadership that gave this Nation a victory for freedom, and the free world.

Among the men who have served with distinction in the Armed Forces, the Aggies have furnished 29 generals and 1 admiral. Six of your former students have won the Nation's highest award, the Medal of Honor.

But the close association with the military forces of our Nation is not all past history. More than 700 members of this graduating class have served their country in uniform. The important contribution of your college to our military strength continues to make itself realized—among other ways, by one of the country's outstanding ROTC units.

Every American citizen realizes that under our form of government, we do not try to maintain standing forces capable of winning a major war. Traditionally, and practically, we depend on Reserve forces, which include the National Guard and the Organized Reserve. For these forces, and for the expansion of our Regular forces in time of war, we depend upon the mobilization of the trained leaders from the Reserve programs. The continued emphasis on Reserve officer training in the colleges of our Nation in peacetime is essential to American security.

The privileges of American citizenship carry with them obligations of leadership in all walks of life. Not the least of these obligations is the duty to perform as leaders in the Armed Forces of your country in time of emergency. The excellent training that members of this graduating class have been afforded in one of the country's outstanding ROTC units will serve you and your Nation well if we are ever called upon to defend America.

The presence of so many veterans here, the glorious record of Texas A. and M. participation in our defense, and evidence of your continued readiness if called upon again, make me feel right at home here in College Station on this commencement day.

I have mentioned all of these associations to the military life of our country for a special purpose. For 70 years Texas A. and M. has furnished leaders to the Armed Forces of our country, and to many other fields. They have contributed, through their leadership, to the strength and spirit that marks the United States role in world affairs today. There is a continuing need for leadership in this Nation, and for this Nation in world affairs. We look to the graduates of 1950 to help furnish the renewed strength and purpose that will guide us in the twentieth century.

Your commencement exercises here mark a turning point in the lives of the young graduates. This year of the midcentury, 1950, may well be the year of the turning-point in the relationship of our country to the rest of the world. The events that have taken place in the past decade have brought us face to face with decisions which will affect your lives, the lives of your children in the years to come, and the future of this country. It is an obvious fact that the future of freedom, and the well-being of the rest of the world, depends upon the success or failure of the young men and women of this Nation.

Therefore, the young men who graduate here today have a double responsibility: To themselves, that their future lives are constructive and productive; and to the Nation, that the United States will contribute competent and forceful leadership to the free world.

It is all well and good for us to speak of leadership, and the need for leadership in national affairs. Unless we decide, however, the objective we Americans seek, the leadership we provide could be badly misdirected. Like any course that is planned for college

students, the end result which the student hopes to achieve must be determined before he begins.

In 1937, 1938, and 1939 we watched the growing menace in Europe. We saw Czechoslovakia, Poland, France, and the Low Countries fall victim to the German Army. In 1940 and 1941 we supplied lend-lease, while the citizens of Great Britain fought their terrible battle for survival. Finally, we were attacked and we joined in an armed conflict.

The American people have always had a strong distaste for war. We believe in peace—and we want peace and security, in a world that is livable for men of all creeds and all nations. But twice in my adult lifetime we have been forced to resort to war in search of peace. Despite our efforts, the peace we have today is a shaky one.

If peace and security combine to form our primary objective, then our leadership must guide us in a course that will eventually lead to fulfillment of this objective without further recourse to arms. The great problem of 1950 is the determination of the proper course in world affairs and domestic affairs that we must follow. That is the problem each of you, as a responsible citizen-leader, must solve for your own generation, and for generations to come.

At first this may seem an awesome task. If you look backward through history, you can see a record of many centuries of failure—failure on the part of men to follow Christian principles and provide peace and happiness.

If you look at the present, you find yourselves surrounded by a quagmire of unsolved problems in an uneasy world.

If you look to the future, you find a great need for faith, strong spirit, and generosity.

Faith in yourselves and your fellowmen: Without such confidence the negotiations made by our leadship will not be valid.

Strong spirit: An ever-strengthening spiritual fiber in every action we take. The greatness of this Nation and the blessings bestowed upon us are, in large measure, due to the moral and spiritual leadership that our forefathers have always carried forward in their daily lives.

Generosity: In this I see no apparent shortcoming. Internationally our Marshall plan and our other programs have exceeded any humanitarian demand. Our domestic programs have shared the advantages of this great economic and political system with more of the people than ever before in history. But when we speak of generosity in relation to our leadership we must continue, rather than limit, any programs which will contribute to peace and reconstruction.

In all these things—faith, strong spirit, and generosity—my generation has found them to be rewarding so long as they have been properly placed. This has meant faith in the right, not in selfish gain. This has meant a strong spirit for freedom and its highest principles. It must mean generosity to those people willing to help themselves, so that our efforts are not wasted.

I believe all of these principles apply today in the exercise of leadership which you graduates must provide.

No man would dare to stand before the class of 1950 and demand adherence to such principles or faith in the American idea if he were not sure that you had been provided the necessary means to meet such demands. This Nation, however, has provided the young men and women of 1950 with many worthwhile advantages.

First and foremost, you have been given an opportunity to get for yourselves a fundamental education in many important fields. At Texas A. and M., there has been almost unlimited opportunity for you in science, in agriculture and veterinary medicine, engineering and arts. In the true Texas tradition, you have been provided with outstanding training in military science, in aeronautical science, and in physical education. The men of Texas A. and M. can stand up to any men in the world, and compare favorably their education and training for leadership—leadership in the pursuits of peace, and if it comes to war, leadership in battle.

This combination is significant. The capability for a productive peace, coupled with the ability to defend your beliefs as well as your resources, is essential to survival. For in the world today, the nations which most need assistance are those which have regained economic opportunity, and some worldly goods, but which lack the strength to defend themselves in case of aggression.

This is a new experience for some of the nations which we befriend, and it is one with which we must sympathize. It is a condition in those nations which we want to help them correct. Our great opportunity lies before us in western Europe, and I feel sure that Americans will give full consideration to continuing the project we have underwritten so far, provided that those nations do everything they can to help themselves.

Again I say, you men of Texas A. and M. are fortunate because you have been provided the educational and economic opportunities, and you have been given the training with which to protect those opportunities if any unfriendly nation attempts to transgress upon them.

There is another heritage which is especially close to the citizens of Texas. It is not singularly yours, for other generations, from the early Greeks all the way to modern America, have had such encouragement. But there is a spirit of Texas—a spirit of independent action and forthright courage—that is yours today. This heritage is marked by an historic incident, the defense of the Alamo by those brave Texans who were declaring their independence as a republic.

Many times I have drawn inspiration from the message sent from the Alamo on February 24, 1836, by Col. William Barrett Travis, who was in command of that besieged garrison. Because that inspiration is such a vital part of your background and your preparation for leadership in the world you are entering, I would like to repeat it here:

"To the People of Texas and All Americans in the World—Fellow Citizens and Compatriots:

"I am besieged by a thousand or more of the Mexicans and Santa Anna. I have sustained a continual bombardment and cannonade for 24 hours and have not lost a man. The enemy has demanded a surrender at discretion; otherwise the garrison are to be put to the sword if the fort is taken. I have answered the demand with a cannon shot, and our flag still waves proudly from the walls. I shall never surrender or retreat then. I call on you, in the name of liberty, of patriotism, and everything dear to the American character, to come to our aid with all dispatch. The enemy is receiving reinforcements daily and will no doubt increase to three or four thousand in 4 or 5 days.

"If this call is neglected, I am determined to sustain myself as long as possible and die like a soldier who never forgets what is due to his own honor and that of his country—victory or death.

"WILLIAM BARRETT TRAVIS,
"Lieutenant Colonel, Commandant."

This message from Colonel Travis has all the elements about which we have talked—faith, good spirit, and generosity—for Travis and his command pledged themselves to give their lives for Texas, and for the principles upon which they stood. With the training and education you have received, and the inspiration of your Texas heritage, you give promise of renewed vigor and strength for this Nation.

Each man of this class can be proud of his achievement, and can well afford to be grateful to those people who have helped him toward this milestone in his career. The faculty members, and your parents are certainly proud of you this day, and you in turn can be grateful for the opportunity they have provided.

I see among the audience many of the wives of the graduates. They have also made sacrifices in order that you might complete your education, and your preparation for the vital role you must play. These young women deserve your thanks, and the gratitude of my generation. In the years to come, if you men are to fulfill our expectations, they will have an ever-increasing share in your success and advancement.

That some unfulfilled promises of man's destiny still remains is challenging, rather than disheartening. For so long as there is a need in this world, there shall be a source. And in America, your generation must be the wellspring of inspiration, ideas, accomplishment, and leadership for this needful world. It is my privilege to congratulate you and your college on the work you have done, and the capabilities you have demonstrated for the difficult tasks that lie ahead.

An Example of Interfaith Understanding

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 7, 1950

Mr. MULTER. Mr. Speaker, in these troublesome times when it often seems that humanity has lost its humane traits, it is a great relief to know that there are still many among us who are not carried away by helplessness and despair. One of the most notable examples that has come to my attention in these postwar years is the work being done by Mrs. Martha Sharp, the wife of a Unitarian minister in Chicago. She is one of the founders and leaders of an organization to help in the rehabilitation of former refugee and DP children now in Israel. The work she and her associates are doing is truly one of the finest examples of interfaith understanding and promotion of international good will.

Instead of forever criticizing and condemning one another, instead of arousing ill-feeling and inciting hatred against each other, let us try to emulate what Mrs. Sharp and others are trying to do these days in a world drifting gradually toward ruthlessness and evil. The following news item from the New York Times, June 7, 1950, is commended to the attention of my colleagues:

WOMAN OFF TO SEE HER 20,000 CHARGES—UNITARIAN MINISTER'S WIFE TO VISIT CHILDREN'S VILLAGES ESTABLISHED IN ISRAEL

Mrs. Martha Sharp left New York last night by plane to visit her 20,000 children. In the next month she will help some of them move into the only real homes they have ever known and watch others learn to play children's games for the first time.

These thousands of Israeli boys and girls are Mrs. Sharp's charges by long-range adoption, for she is a founder and national vice chairman of Children to Palestine, Inc., an American organization that is bringing them out of starved and fear-ridden backgrounds to a new life in a new land.

Although this will be Mrs. Sharp's fourth yearly visit to Israel it will have a special

meaning for her. Soon after her arrival in Lydda tomorrow morning she will visit the children's village of Ben Shemen in Kfar Vitkin, 30 miles north of Tel Aviv.

CHILDREN FROM DP CAMPS

Here, with a $25,000 assist from Children to Palestine, are rising 10 houses for children who hitherto have known only barracks and displaced persons' camps. This settlement will be named the Rev. Samuel A. Eliot Village, after the organizer of this interfaith rescue movement.

A second village, for 2,000 young refugees who formerly had only tents, will be dedicated to Eddie Cantor, Mrs. Sharp said. The comedian has given $35,000 toward construction of the settlement and will arrive in Israel by ship shortly after Mrs. Sharp, who plans to take him on a tour of the work being accomplished by her organization through Youth Aliyah.

One of the happiest tasks of Mrs. Sharp's trip will be helping to distribute thousands of games and pieces of athletic equipment. A ton of gear for table tennis, basketball, soccer, baseball, boxing, marbles, and checkers has already been shipped to the play-hungry youngsters and two more tons will arrive during her stay.

MEL ALLEN HEADS CAMPAIGN

Eventually, Children to Palestine hopes to send $300 worth of sporting goods to each of 220 Israeli settlements where orphaned children live. This project, called operations sports for Israel, has Mel Allen, the radio broadcaster, as chairman.

Mrs. Sharp, who is the wife of a Unitarian minister in Chicago, said she also plans to reassess the needs of the youth communities. Schools, recreation centers, and playgrounds, she said, must be added to give the young people a well-rounded life.

The vice chairman of Children to Palestine summed up the group's philosophy like this: "We can't bring up a child like an orchid and then transplant him into a bramble patch. All of the ills of the world today are caused by people who were children a generation ago.

"If we can give today's children some understanding of each other's needs, some feeling for sharing, perhaps we can help to change their world tomorrow."

War and the Seaway—Vital Need for Labrador Iron May Finally Win O. K. for Long-Sought St. Lawrence Waterway

---

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 7, 1950

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article by James C. Munn that appeared in the Sunday magazine of the Detroit Free Press of June 4, 1950, as follows:

WAR AND THE SEAWAY—VITAL NEED FOR LABRADOR IRON MAY FINALLY WIN O. K. FOR LONG-SOUGHT ST. LAWRENCE WATERWAY

(By James C. Munn)

WASHINGTON.—The rich iron ores of Canada's bleak Labrador may eventually be the means of winning congressional approval for the long-sought $800,000,000 St. Lawrence seaway and power projects.

The proposed seaway, which is held to be of prime importance to Detroit's future, would enable deep-draft ships to travel all the way from the mouth of the St. Lawrence River to Duluth, Minn., 2,350 miles away at the westernmost point of the Great Lakes.

For decades construction of the seaway has been blocked by power companies, railroad management, and port cities of the Atlantic and Gulf coasts.

These interests have always contended that the seaway, and its related power development, would work an unfair economic hardship on them. Senator LEHMAN, Democrat-Liberal, New York, and other advocates say such claims are without foundation.

Valid or not, recent testimony before the House Public Works Committee left the impression that the opposition arguments may crumble before the growing need of this Nation for new supplies of iron ore.

Domestic reserves of high-grade iron ores in the Great Lakes area are nearing exhaustion. The steel industry realizes this and in recent years has spent millions seeking new deposits.

In addition to the Labrador deposits, estimated to contain 350 to 400 million tons of rich ores, new sources have been found in Venezuela and Africa.

But these discoveries raise a transportation problem.

The South American and African ores can be shipped to eastern coastal ports at reasonable cost. But freight charges for the railroad haul to the midwestern steel centers might make it economically unfeasible to use them.

Even should the freight-rate problem be solved, a further difficulty arises:

Could steelmakers expect adequate ore supplies—from abroad—in time of war?

Secretary of the Interior Chapman and Secretary of the Army Pace, to mention only two, think not. What is the alternative?

Labrador ores, they say, could be brought through the protected inland route that the St. Lawrence seaway would make possible.

But why can't Labrador ores be shipped over the existing St. Lawrence-Great Lakes waterway? They can, but not enough to maintain the present level of steel prices.

The existing 14-foot St. Lawrence channel isn't deep enough for the ore ships now in use between the Lake Superior ore district and the steel cities of the Great Lakes.

A channel at least 28 feet deep would have to be dredged through the international rapids section of the St. Lawrence. The rapids are near Massena, N. Y., only about 600 miles from the sea.

What would happen if the steel industry, eventually, has to depend wholly upon foreign ores?

Almost unanimously the answer—from seaway proponents—has been that steel makers would be forced to move from the Midwest to the East coast unless the deeper channel were dredged.

One witness told the House committee that if that should happen, Detroit, world center of automobile production, would become a ghost town.

Senator LEHMAN summed up the case for the seaway this way:

"To decline to take advantage of the opportunity (that the seaway affords) is sheer wastefulness and extravagance.

"To refuse (it) for sectional or narrow economic reasons is to display disrespect for the ultimate interests of our country."

LEHMAN said he was speaking as much of the power development of the river as of the seaway.

President Truman, too, has expressed concern about possible failure to make the best use of St. Lawrence power potentialities.

In a message to Congress May 22, criticizing the 1950 Rivers and Harbors Act, he pointed out that Congress had placed responsibility on the Army to survey the Merrimack, Connecticut, and other New England rivers to determine their power possibilities.

"It may well be," he said, "that some of the power sites to be developed in New England should be interconnected with the St. Lawrence or other northeastern power sites in the interest of more power at lower cost for the whole region. But the present act does not even require that this possibility be investigated."

The President approved the act, however, despite the objections he found in it.

Engineers estimate that proposed power facilities near Massena would generate more than 13,000,000,000 kilowatt-hours of energy a year. The production would be shared equally between this Nation and Canada.

The power facilities would be built by the Federal Government and then sold to New York State. The State would administer distribution of the power not only within the State but to adjoining States.

New York witnesses have testified that the adjoining States would get a fair share of the energy. Such a provision is contained in the pending bill.

Advocates of the project thus argue that the power development would cost the Federal Government nothing. And that the same would be true of the seaway, because of tolls that would be levied on shipping.

Canada, which is eager for the seaway, has agreed in principle to the tolls of proposition.

The Department of Commerce has estimated that tolls would pay off the seaway cost in about 53 years.

There is no chance that Congress will authorize the project, first discussed more than 50 years ago, in this session. The bill must be reintroduced in the next Congress.

Then it will again be subjected to a searching examination, adding new words to a record that already runs into the millions.

Address of Hon. W. Sterling Cole, of New York, at Dedication of Indian Monument, Painted Post, N. Y., May 30, 1950

EXTENSION OF REMARKS
OF
HON. W. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 6, 1950

Mr. COLE of New York. Mr. Speaker, there is only one Painted Post. Of all the towns and cities and communities in this great country, only one bears the distinctive name and has the unique historical background as that of Painted Post, Steuben County, N. Y.

Even before the Revolutionary War this locality was a trading center where the English traders exchanged their wares for the Indian furs, located at the confluence of the Tioga, Canisteo, and Conhocton Rivers, in the upper watershed of the Susquehanna River. According to legend, the place where the trading occurred was marked by a large oak post, painted brilliant red. This area figured largely in the French and Indian Wars and the early conflicts between the English settlers and the Indians.

During the colonial period the valleys of the Chemung River tributaries comprised the domain of the Senecas. This

unit of the Iroquois confederacy was called a door of the six nations through which passed communications with West and South.

The border wars brought the white man into this region. Visitors to this area during the American Revolution found on this site an oak post which was square to a height of 4 feet and then octagonal to the top. The surface was painted red and decorated with 28 black figures without any heads and 30 black figures with heads on. Numerous allusions to the painted post regarded it as a memorial to a fallen chieftain, a marker for assemblies, and a war post around which dances were held.

The original post endowed this place with a name which will endure as long as recorded history. By 1808 the first namesake had disintegrated and a fitting substitute was deemed necessary. In 1824 Capt. Samuel Erwin commissioned John Wygant to fashion a symbol for the site of the painted post. This memorial was carved from sheet iron and depicted an Indian tribesman attired in head dress, jacket, and leggins. For half a century this quaint figure swung on a pole near the place where the first post stood.

In 1880 a second sheet iron Indian was erected at the southeast corner of Water and Hamilton Streets. This life-size figure represented a chief dressed in a red jacket and buckskin trousers equipped with a bow and tomahawk. The warrior was attached to the top of a tapered octagonal post which was 18 feet high and painted red. This symbol served as a landmark for four decades. A later memorial supplanted this figure which was removed after World War I.

In the summer of 1893 a subscription was circulated for the construction of a stone monument surmounted by the metal replica of an Indian chief. This memorial was dedicated June 21, 1894. The purposes for which it was erected were inscribed on its face:

To perpetuate the name of Painted Post, preserve its traditions, and honor the memory of its early settlers.

On November 20, 1948, a violent wind toppled the chief from his pedestal and shattered the figure. At a town meeting held April 7, 1949, citizens of the village of Painted Post and town of Erwin approved a proposal to replace the damaged monument. This memorial was moulded by Norman B. Phelps and erected in 1950 by popular subscription to commemorate the founding of Painted Post and to preserve for posterity the traditions of its heritage.

Under leave to extend my remarks, I include the address delivered by me on the occasion of the dedication of the new monument to the Indian Chief Montour on May 30, 1950:

There is no season of the entire year, each with its distinctive coloration and temperature, which could be more appropriate for a great home-coming celebration such as this has been, than that season of the year when it is lilac time in old Steuben. I dare say that without exception each one of the sons and daughters of this historic community who have moved into the outer world for his life's activity, yearns to return to the land of his fathers, to the soil where his roots are sprouted, to the scenes of his boyhood, to his friends of yesterday and there to relive the comforting caress of a devoted mother, to sense the echoes of a father's wise counsel or to catch the smile or cordial greeting of a long-lost friend. Nowhere in all the world is the landscape more beautiful, are the people more stable in their attitudes of life nor more genuine in their hospitality than these valleys of the Conhocton, the Canisteo, and the Tioga when they are flooded with the beauty and fragrance of blooming lilacs.

Such an impulse it was which prompted me to accept with considerable readiness the invitation extended to me to return and to participate in this celebration. But there was something more than lilacs which beckoned to me, something beside the beauty of these valleys and the richness of their people—Painted Post has a very unique spot within my treasure of memories and has filled an unconscious influence upon my life. Not only do I have the distinction of having been born in this unusual community but it was in the company of the graduating class of the Painted Post High School that I, some years later, made my first visit to the Capital city of our Nation, where in still later years I was called to spend a considerable portion of my mature lifetime in the public service through years that have been fraught with distress, dismay, trials, and tribulations, bloodshed, and war in our national life. During those intervening years as I have driven from my home on the Conhocton to my office on the Potomac the route has taken me under the shadows of the Indian warrior whose statue was the pride of the residents here and the symbol of America's origin and growing greatness—a statue which is being replaced today by this marvelous successor. Most often these trips have been made alone and I was given to meditate upon the quality of the people who first came to deal with the Indians, to clear these forests, to build the log cabins, and to give us the rich heritage of independence, of thrift and industry, of self-denial and self-reliance, of courage and adventure, of faith and perseverance, fearless of nothing save God alone. The lessons gained from those meditations have been of great value in the performance of my public duties.

Moreover, the knowledge which I have that there is a considerable number of people now living here who through the public-school system years ago were exposed to the very discipline, philosophy, and education which was my own privilege and heritage in the home, gives me a feeling of closeness and kinship with the people of Painted Post.

So it is that I am delighted to join you in this great occasion—the lilacs, tender memories, reflective influences and inspirations, consecrated devotion to the memory of a noble soul—all these have united to make me feel highly honored in the opportunity afforded me to participate in this sober though gala celebration.

Coming as does the conclusion of this 3-day celebration of homecoming at Painted Post on the eve of the 1 day honored throughout our land as Memorial Day, it is entirely appropriate that we give some thought to the significance of the sacrifices of our military heroes, our own sons and daughters whose lives have been offered upon the altar of national independence and national security and endeavor, if possible, to find some lesson through which we can strive to be worthy of their sacrifice. But, to me, Memorial Day is something more than tender reflection upon the exploits of our military men and women—it is a day for solemn tribute to the memory of all those who have passed along the way of life a bit ahead of the rest of us and who have already entered into the haven of eternal life for they quite as much as the military people are the ones whose influences and endeavors in mortal life have contributed to the greatness of our Nation.

The shepherd or parent who watches over and cares for his little flock, nursing their wants and pains, guiding them along the paths of richness and honor, warning them of the dangers of pitfalls and temptations, giving strength to their bodies and to their character, even though unknown and unsung beyond the borders of his own little vale, is as much responsible for the greatness of our national life as is he whose life is prematurely snuffed on the field of battle. The glory and glamor of war does not surround him but instead his patriotic shroud is the silent mist of godliness.

To the everlasting glory of those who sacrificed on the field of battle and to those whose sacrifices were in the home or the factory would I choose to set apart and dedicate this Memorial Day.

How, then, can we best perpetuate their name and memory? Is it enough that we mark his final spot with a graven stone, to be decorated on this day each year with some choice floral beauty warmed with our kisses and our tears? Is it enough that we attach his name to some great structure or institution in the hope that through it his virtues will be perpetuated? Is it enough that we reproduce his image in stone or pigment? Is it enough that we consecrate our wealth to the purposes for which he lived? To be sure, all these are proper but there must be something more than these materialistic manifestations of our love and affection. With the passing of time these symbols, too, will pass and be gone and lose their real significance.

In doing honor to the memory of those men and women, who, by their sacrifices, call to our attention that true liberty is beyond price, let us recognize that to such Americans as they the flowers and the flags will be but empty tribute if we fail to rededicate our hearts and minds to those sublime truths which they held so dear. Only by our steadfast attachment to the immortal principles of human behavior and human relationships which guided their heroic deeds or their humble service to mankind can we hope to perpetuate their memory and fulfill our indebtedness to them.

More and more, it seems, the people of the world are moving into the realm of materialism and away from the realm of idealism; more and more are we captivated by the material values of life rather than the spiritual. Ever increasing emphasis is placed upon the physical comforts rather than the moral principles of human conduct. Our leaders of political thought and social progress constantly endeavor to provide greater programs for gratifying needs of the body rather than nourishment for the soul. Students of science are daily unlocking doors to the secrets of the universe and with each disclosure something is added to the long list of things which, it is felt, we as a people should have in order to give us greater happiness. Stockpiling of strategic materials and atomic weapons is the watchword of the day with no corresponding emphasis upon the stockpiling of moral resources. The philosophy of freedom from physical want is gradually replacing the older philosophy of fear of God and freedom from spiritual need. Personal security is becoming the goal of human existence in place of and at the inevitable price of personal liberty; security of the body supplants security of the soul.

Security, personal security, those things which are needed to fill the temporal wants of our bodies, is the byproduct of liberty, personal liberty. Security without liberty is bondage; liberty is the mother of security and there can be no true happiness without both.

The great patriot Patrick Henry, whose clarion cry has rung through the centuries, called for liberty or death—not security or

death. His forebears had the security of vassalage in the mother country but that was not enough, that was not the sort of thing that Patrick Henry wanted for himself and his children. Security was to be had to the colonists, provided they continue to pay homage and tribute to the royal provider—but they chose to cast it aside in order to obtain the personal freedom necessary that each one might be able to provide for his own security in the manner and to the extent which his own talents would permit.

Out of the Bible comes the admonition that man cannot live by bread alone but by the word of God. Deep down in that dumb region of the heart in which we dwell alone there must be something of substance in order to have true happiness and which collectively creates a massive power of moral force more compelling than any physical power yet constructed by the hand of man. There is a certain tranquillity of the heart, born of a good life rich in moral virtues, which no amount of physical comforts can provide or replace.

Here we stand today trembling in awe of the fearsome force of the atomic age in which mankind has the capacity of self-destruction. Even the horrific power of the atomic blast will give way to the greater force generated by moral armament and it can be made the tool for good instead of evil. Most assuredly civilization is on the brink of disaster unless there is kindled into life the dying embers of a moral force built of the fabric of lofty ideals, steadfast courage, vision, faith, and a passionate sense of justice to all men and all races.

No less dangerous in the field of international relationships as in our domestic affairs is the current tendency to place undue, if not complete, reliance upon the effectiveness of material things in the preservation of our national security and happiness. More and more we look to our armies and navies and air forces, together with those of our friendly nations, to maintain the peace of the world and defend our own independence. To the same extent as undue reliance upon crass materialism as the provider of the general welfare will be our undoing in the personal field at home, so will a complete reliance upon military force, in the end, cause us to lose the very things we seek to maintain abroad. We cannot allow ourselves to be lulled into a sense of security through the mistaken notion that the power of the sword, the use of brutality and violence, is the only way by which the problems of nations can be solved. Surely, we have learned in the last two experiences with war, if we never knew it before, that a nation which resorts to force as its sole instrument of national policy suffers immeasurably even though that nation may be victorious in battle.

Too many of our people have come to regard war as the only way out of our present international difficulties. Certainly military preparedness is essential to our national survival, but it is not the only way; it is not the exclusive way. The great power of moral force is just as persuasive in the affairs of nations as it is in the daily affairs of people. To be sure the current philosophy of the Russian tyrants is wholly at variance with our own and some day the two may clash, but it is not inevitable that they clash on the field of battle; not if we are prepared to do the things which are necessary to prove to the Russian people and to the world that their way of life is wrong.

In order to find that way and to develop that force which is necessary to be effective, we must devote much time and thought to searching our own souls in quest of the formula. Are we ready to make the sacrifices necessary to bring about an understanding with the Russian people and are we prepared to make the adjustments in our own daily lives in order to make those understandings a reality? Can we be sure that righteousness is entirely on our side and that theirs has no element of justification? Have we the proper humility of spirit which is so essential to establish a common ground of understanding with other people? Is ours the only formula for control of the hydrogen and atomic bombs which will effectively remove the specter which constantly threatens our existence? Can we endure the austerity which a surrender of some of our materialism will produce in our search for fair dealing and justice?

All this is the part of that idealism for which our patriots and forebears lived during their lifetimes. It may not bring immediate results—it may never produce the degree of mutual understanding and trust which is so essential to a peaceful world. But certainly it is worth the try. The goal of this kind of victory is worthy of our most concientious thought and endeavor.

At home and abroad, our leaders must have a vision fashioned from the warp of Christian principles, fired with the courage of these patriots, sacrificial to the extent of their example, steadfast in their attachment to the immutable laws of God.

There are two ways ahead for America—one leading to brilliance and happiness, the other to darkness and despair. The former is lined with fortitude, forbearance, and faith, the latter paved with sensual delights and physical comforts. Which road shall we take—the one we have been following in recent years, strewn with false promises spoken by false prophets or the way of our fathers, the road set by those we honor today?

For my part the choice has been made. Chief Montour, Col. Arthur Erwin, Patrick Henry, those nameless fathers and mothers whose guidance we must pass on to our own children, made that choice for me. I join with you in the prayer of the poet:

"Wake in our breasts the living fires,
The holy faith that warmed our sires;
Thy hand hath made our Nation free;
To die for her is serving Thee."

Labor-Management Relations Act

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 7, 1950

Mr. HARRIS. Mr. Speaker, during the consideration of the Labor-Management Relations Act before the House in May of last year determined efforts were made by some to repeal the act outright, returning to the original Wagner Act. Others felt the dire need of an appropriate revision of the Taft-Hartley Act.

The proposed substitute known as the Wood bill, and which became the minority compromise proposal, indicated that even the original sponsors of the Taft-Hartley Act felt there were some revisions needed.

There were some who believed that the proposed Wood bill would be even more restrictive toward labor organizations than the present act.

The Wood bill was in fact in most instances similar to the present Taft-Hartley Act. There were many who believed the proposed revisions of the Wood bill were not sufficient to properly adjust the present law.

Several of us met in conference with the leadership of the House and members of the committee in an effort to work out a reasonable compromise resolving certain differences in a manner that would provide what many of us believed to be a more appropriate revision of the act.

As a result of this conference a proposed compromise was worked out. It was offered as a substitute on the floor of the House the next day by a member of the committee, Mr. SIMS, of South Carolina, but beat by a few votes.

This proposed compromise, which I helped formulate, provided retention of a number of basic provisions that was felt should be retained in any revision of the National Labor Relations Act. In fact all but about two of the basic provisions at difference were agreed to since several had already been included in the proposed bill. It was decided the two remaining differences would be left to determination by amendment on the floor.

When Mr. SIMS proposed the substitute he gave a complete explanation of the provisions, and I extend his statement herein with my remarks:

SIMS SUBSTITUTE

Mr. SIMS. The substitute bill I have introduced is simply the Lesinski bill with seven changes.

The first change in effect adopts the Taft-Hartley provisions for dealing with a national emergency.

The second change adopts in effect the Wood bill provision requiring labor organization officers and employers to sign anti-Communist affidavits.

The third change guaranties free speech to employers.

The fourth change requires labor organizations to bargain in good faith.

The fifth change requires labor and employee organizations to file organizational and financial statements.

The sixth change creates a temporary labor relations commission to study and make recommendations concerning labor relations.

The seventh change makes it entirely clear that railroad employers, employees, and their representatives, as well as subject matter to the Railway Labor Act are exempt from titles I, II, and III, of this bill.

Personally, I am not wedded to all the provisions of this measure. There are a number of changes which I would make if I were writing a labor-management bill to suit my own taste. But a bill that would suit my taste would not pass this House of Representatives.

I mention this because I realize that this bill will not meet with the complete approval of anyone here today. I believe that each of us here today is faced with a compromise. I believe that each of us here must weigh the good and the bad and then determine whether the good outweighs the bad.

Legislating would be a simple job indeed if we could vote our sincere convictions on each individual provision without taking into consideration the ultimate goal and the overall strategy involved.

Let us face facts. Those of us interested in repealing the Taft-Hartley Act and enacting the Lesinski bill know, or should know, that if the Lesinski bill is voted on without any amendments, it will be defeated. It becomes our duty then, if we are genuinely interested in repealing Taft-Hartley, to amend the Lesinski bill in such a way that it will pass this body.

From talking with some of the members of my committee, from talking with a number of southern liberals, from talking with key

Members of the House from all sections of the country, I am convinced that there are at least two amendments to the Lesinski bill which are necessary if a sufficient number of votes are to be gained to repeal Taft-Hartley. There are many Members in Congress who would like to vote for the repeal of the Taft-Hartley Act who feel, and feel very deeply, that a new labor law should include, first, a strong provision dealing with a national emergency, and, second, a requirement for union and company officers to sign non-Communist affidavits.

Let us examine the substitute bill which I have introduced and see how it deals with a national emergency. On pages 23, 24, 25, and 26 of the substitute print you will note that the national emergency provision of the proposed substitute is exactly the same as the Taft-Hartley provision dealing with national emergencies, with two exceptions: First, the emergency boards of inquiry are required to make recommendations for settlement of the dispute which the President is directed to make public; and, second, the statement of and secret ballot on the employer's last offer of settlement are omitted. As under the Taft-Hartley Act, injunctions against a strike or a lock-out may be obtained by the Attorney General for a period of not more than 80 days.

Now, let's look at pages 15, 16, and 17 of the substitute print. This is the section requiring a non-Communist affidavit. This provision is exactly the same as the Wood bill, with three exceptions:

First. Investigations or proceedings may be undertaken by the Board so long as no certification is made in a representation case and no complaint issued in an unfair-labor-practice case where the required affidavits have not been filed.

Second. Affidavits are required of employers, including owners, partners, receivers, trustees, and any officers of employers, or of any national or international employer organization of which the employer is a member or affiliate.

Third. The term "officer" is broadened to include any person performing a policy-making, governing, or executive function or who is a member of any policy-forming, governing, or executive body of an employer or labor organization or of any national or international employer or labor organization, as the case may be.

Section 110 of the substitute print on page 11 protects the freedom of speech of both employers and employees. The amendment provides that the National Labor Relations Board shall not base any finding of an unfair labor practice upon any statement of views or arguments, either written or oral, if such statement contains under all of the relevant circumstances no threat, express or implied, of reprisal or force, or offer, express or implied, of benefit. Under these provisions the statement, if relevant, may be admitted in evidence for what it is worth, and the statement may constitute an unfair labor practice, but only if other relevant circumstances show that the statement actually represents a threat of force or reprisal or an offer of benefit.

Section 109 of the committee print, on page 11, is a new section which would make it an unfair labor practice for a labor organization to refuse to bargain collectively with an employer, subject to the provisions of section 9 (a). It is recognized that the provision will be applied only infrequently, since unions exist for the primary purpose of collective bargaining on behalf of employees. It is also recognized that under modern economic conditions the procedures, scope, and subject of collective bargaining are constantly changing and developing. Accordingly it is provided that the provision contained in section 109 shall not be construed to require a labor organization to bargain separately with respect to any particular unit or units, or to agree to any particular procedures or conditions with respect to collective bargaining. Thus, the section safeguards industry-wide and area agreements such as those which have been reached through collective bargaining in many industries. It also leaves to the parties the development of procedures and conditions of collective bargaining as seems best to them, for example, in accordance with their constitution or charter or bylaws. Situations of the type presented *In re American Radio Association* (82 N. L. R. B. No. 151, April 19, 1949) and *In re National Maritime Union* (82 N. L. R. B. No. 152, April 19, 1949) are not intended to be unfair labor practices under the bill.

Section 111 of the substitute print on page 12 contains provisions similar to those contained in the Taft-Hartley Act with respect to the filing of organizational and financial data by labor organizations. In addition, certain organizational and financial data must be filed by employers bringing charges of unfair labor practices against a labor organization. It is provided that the Board is not to certify a labor organization as bargaining representative nor issue any complaint of unfair labor practice based on a charge filed by a union or by an employer unless the union or the employer, as the case may be, has filed with the Secretary of Labor the required organizational and financial information.

Section 405 of the committee print on page 29 makes it clear that those subject to the Railway Labor Act do not come under the provisions of title I, II, and III of this bill.

Title V of the committee print on page 30 creates a Temporary Labor Relations Commission composed of 20 members—5 representing management and 5 representing labor to be appointed by the President, 5 Members of the House to be appointed by the Speaker, and 5 Members of the Senate to be appointed by the President of the Senate. The Commission is to make a thorough study and investigation into the underlying causes of disputes between labor and management.

In summing up let me say, ladies and gentlemen, that the substitute which I have introduced is the Lesinski bill with seven amendments.

First. The Taft-Hartley provisions for a national emergency.

Second. An anti-Communist affidavit.

Third. Free speech.

Fourth. Labor organizations required to bargain in good faith.

Fifth. Labor organizations to file organizational and financial statements.

Sixth. Creating a Temporary Labor Relations Commission.

Seventh. And a clarifying amendment.

I urge the Members of this body who are genuinely interested in the trade-union movement and who are interested in discarding the restrictive provisions of the Taft-Hartley Act to join together on this compromise measure.

This substitute protects the American public from the whims of a labor gangster and at the same time protects and encourages the right to bargain collectively. I urge its adoption without crippling amendments.

Buchanan, the Dictator

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 19, 1950

Mr. SHAFER. Mr. Speaker, it looks to me like the so-called Buchanan Select Committee on Lobbying Activities has gotten out of hand. In fact, it has gone so far afield as to warrant its abolishment.

Happenings before the Buchanan committee the past 2 weeks or more, indicate that the chairman, and his supporters are hell-bent on getting just one side of the lobbying story and are using their offices to drag in the mud anyone who has the courage to oppose the Truman-Pendergast regime.

Yesterday, Tuesday, June 6, Chairman BUCHANAN and his majority, bent on discrediting anyone believing in constitutional government, denied Dr. Edward A. Rumely, executive secretary for the Committee on Constitutional Government, the right to make a statement before the committee, regardless of the fact that Dr. Rumely had been summoned under committee subpena. However, Mr. BUCHANAN did permit Dr. Rumley to file his statement.

Under permission to extend my remarks, I include Dr. Rumely's filed statement so that it may be made available to all Members of Congress and to those who may be interested. The statement follows:

STATEMENT FILED BY DR. EDWARD A. RUMELY BEFORE THE BUCHANAN SELECT COMMITTEE ON LOBBYING ACTIVITIES, JUNE 6, 1950

I ask the opportunity to make a statement while I am under oath and subject to cross-examination rather than to be compelled to release it to the press without such scrutiny by you and your committee.

This statement, I believe, may be helpful to you, your committee and to the Congress in presenting the matters at issue, in their proper perspective. First, let me say that nothing in this statement is intended as a personal criticism of Mr. Louis Little or his assistants. During the 2 weeks while they were in our offices, they acted with courtesy and consideration.

Our complaint goes to part of the job that they were sent to do, and to what we believe is a wholly misguided and unconstitutional conception on your part of your powers.

When Mr. Louis Little first called, he said, "Chairman BUCHANAN thinks that a new form of lobbying has developed. Lobbyists no longer primarily buttonhole Congressmen but instead reach out to the public back home and build public opinion that causes constituents to speak up to their Congressmen, and thus legislation is influenced. Your organization, we regard as the most efficient operation on the right or conservative side, and we want to see just how you project your viewpoint to the country."

I was horrified at the thought that a branch of Congress could enter the field of dissemination of ideas among citizens in an area where, under the Bill of Rights, they are guaranteed privacy and complete freedom from government interference.

When I was a young man, a student of medicine in Europe, almost 50 years ago, an incident occurred that left a lifelong impression. One fall, one of our friends, a fellow intern, in medicine, did not return as we had expected he would for his studies. About a month later, a middle-aged Russian woman, a fellow student of medicine, came and asked, "Please give me 10 francs. The reason our friend and fellow student did not return is that he has been exiled into the coldest part of Siberia where he is shivering without adequate clothing and we are collecting money to buy sheepskin coats and blankets with the wool on them to keep him warm."

This student, leaving for home in July, had left a little money to have his mail for-

warded, but he had subscribed to a magazine published in Switzerland, to come to this hospital and it was also forwarded. It was on the prohibited list of the Czar's secret police, and the arrival of a single number, showing a year's subscription, caused the police to put this student away for 1 year in exile in Siberia.

In history that is the kind of thing that happens when government invades the area of molding people's thinking—in Russia under Stalin, in Italy under Mussolini, in Germany under Hitler. American correspondents who observed the rise of Hitler report that it was not so much the excellence of his own propaganda as the ability to knock down and shut off the expression of any opposing viewpoint. That, Mr. BUCHANAN, is exactly what you are doing.

The CIO News in an editorial directed to your committee, entitled "Lobby Probe," said on May 8: "We would like to see a full explanation of such outfits as the Committee for Constitutional Government." In the June 5 number, reporting on your meeting with the press, this same publication says, "At a press conference BUCHANAN made no bones of his personal distaste for these three organizations." We were one of the three. You are further quoted, "Congress is entitled to know which financial interests are back of attempts to influence public opinion and legislation."

Do not clergymen and educators influence public opinion? Are you going to suppress them?

This statement quoted by the CIO News—also on page 1 of the New York Times—confirms the viewpoint outlined by your representative, Louis Little, as the objective of your investigation. We challenge your power to meddle in the processes by which the American people have facts and educational material in books and other publications, presented to them, from which, ultimately, public opinion results.

Of the thousand or more opinion-molding organizations at work, the most gigantic machine ever built is that of the labor monopolies. They report collection of $425,000,000 annually of regular dues, with an estimated $200,000,000 additional in assessments and the services of 100,000 shop stewards, paid by stockholders but misused for political purposes, often against the long-range interests of the workers themselves, as well as the stockholders.

Next in power is the bureaucracy of the Federal Government itself, with 45,000 on the payroll engaged primarily in press agentry, and costing $70,000,000 annually, plus tens of millions in free postal service to promote their loaded propaganda for bigger and bigger government. The CIO News reports: "The name of the CCG first came up in the lobby probe several weeks ago when Leo Goodman, directer of the housing committee, charged that it financed some of the activities of the real-estate lobby. Goodman said the CCG sent out mail, paid for print material attacking rent control and Federal housing legislation." The CIO has spent probably hundreds of times as much as we, using its gigantic machine to pressure for rent control, urging confiscation of part of the home owner's income by rent control.

Now, at CIO behest, you and your agents are digging into how we distribute our educational material to citizens back home, on these rent-control and housing issues.

We are carrying on, in the area of public opinion, a nonpartisan, nonprofit, educational effort, influencing public opinion, as do newspapers, magazines, periodicals, churches, service clubs, colleges, and innumerable other forces.

It was Jefferson's concept and that of the men who wrote our Bill of Rights that with the free play of such forces, all sides, uncurbed and uninfluenced by government, even the unpopular side of a question, could be presented and heard. The citizens, with the information before them, could come to sound conclusions and, by their votes, wisely guide the course of their government.

Your agents showed little interest in the tens of thousands of individual purchases of books and literature. For example, on the day after Lincoln's birthday, we received 2,171 units, aggregating $9,452; 30 of these were contributions, averaging $12 each; more than 2,000 purchases of books and literature and the Bill of Rights, with an over-all average of $4.50 each.

Your agents took back to Washington, for your information, copy of our auditor's annual financial reports for the years 1949, 1948, and 1947. For example, the 1949 report shows that we had received no contributions in excess of $490 and only 158 contributions ranging from $101 to $490; 5,526 contributions of less than $10; 1,707 ranging from $11 to $25 and 1,051 ranging from $26 to $100. The average amount received in contributions during 1949 was $22.20, just about the amount the average union member pays in dues. In that same year, we sold books and literature in 22,000 separate orders, averaging $15 each.

You had these facts before you, yet you put out a totally false statement that went through the press of the whole United States, saying that you were seeking to find out Rumely's "financial angels." It is true that a few who bought more than 100 books or whose support amounted to more than $100 are public-spirited citizens with means or in prominent position. If you now demand their names and present them as typical of the support of the committee, as you have done, you ignore the evidence before you and misuse the confidence of the press in a congressional committee to project to the Nation a totally false picture. If any private individual or institution put out such a biased and unfounded press interview, it would be looked upon as downright dishonesty.

We have sold about 600,000 copies of Flynn's book, The Road Ahead, during the past 5 months, in tens of thousands of individual orders, ranging from 1 to 10 copies each; a small percentage of the total sales were purchased in quantities, by individuals and institutions, for redistribution. Demanding and releasing the names of these buyers, you would again create a false picture in the public mind. The CIO reports: "BUCHANAN believes that the Committee for Constitutional Government is the parent of a network lobbying against labor and the Fair Deal," and he believes that "the investigation of the financial backing of three organizations will reveal the ties."

That statement of yours, based on your surmise, is false, for our committee has no ties with other organizations. With 80,000 who have given financial support, it, of course, is probable that a small percentage also have given support to other organizations. But you have projected to the whole country an unfounded surmise, before your committee has had a chance to see the facts. That's biased propaganda on your part and not objective investigation.

See attached hereto a statement released by Sumner Gerard, one of our trustees, setting forth how your demand for the names of the purchasers of our books and literature violates our rights—the rights of all citizens—under the first and fourth amendments to the Constitution.

Four of your agents went to work in our office during 2 weeks, going through books of accounts, our files, correspondence, and inspecting every piece of literature and the books that we have printed and distributed. We gave your representatives more than 98 percent of what they asked for—responding to 24 out of 25 demands, although much of it was irrelevant to the purposes of this investigation. For example, your agents went through our correspondence with Members of Congress. They picked out correspondence with Republicans or with Jeffersonian Democrats like Senator BYRD, but when they saw comment from men like Senator PEPPER on our releases, they left that to one side.

It is for the reasons set forth in the Gerard statement and these reasons that we are declining to give you the names of the quantity purchasers of our books and literature. Also, the names of a few who made loans for the purpose of enabling us to advertise and promote the Fighters for Freedom movement, which has no relation to lobbying activities before Congress; also to pay for the printing and promotion of early editions of The Road Ahead.

I am taking this stand after consultation and on the advice of my counsel, Neil Burkinshaw, and after consultation with the trustees of the Committee for Constitutional Government, Inc.

EDWARD A. RUMELY.

Requests for Veto of Basing Point Bill

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, June 7, 1950

Mr. LEHMAN. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a memorial to the President by representatives of small business asking for a veto of Senate bill 1008. I also ask unanimous consent to have inserted in the Appendix of the RECORD, a similar request to the President from Mr. C. Wilson Harder, president of the National Federation of Independent Business.

There being no objection, the memorials were ordered to be printed in the RECORD, as follows:

WASHINGTON, D. C.,
June 6, 1950.

TO PRESIDENT HARRY S. TRUMAN:

This memorial was written in the hope that we would see you personally. We have, however, requested the Honorable WRIGHT PATMAN as our spokesman, to present this memorial to you.

Mr. President, on the 5th of March 1936 representatives of independent businesses were designated to confer with the President of the United States, the late Honorable Franklin D. Roosevelt—the designation coming from a meeting held a day before at Constitution Hall, in which over 2,000 or more independent businessmen from all over the Nation were present. In that visit with the President on March 5, 1936, was Mr. John Dargavel, Mr. R. H. Rowe, and Mr. George J. Burger, and others. These representatives were from industries in the retail distribution field, such as druggists, grocers, independent tire dealers, etc.

Three of that former delegation are among the petitioners in this memorial. At the meeting on March 4, 1936, at Constitution Hall, this meeting was addressed by the late Honorable Joe Robinson, Member of the United States Senate and Hon. WRIGHT PATMAN, Member of the House of Representatives, co-authors of the Robinson-Patman Act then pending before Congress for action. The spokesmen for independent businesses on the 5th of March 1936, requested the President to give his earnest consideration to the pending Robinson-Patman Act and what it meant to the future of the free enterprise system, and more important, independent business of this Nation if and when the bill was finally voted by the Congress

that he would give his support by signing the bill. To his everlasting credit a few months later the bill reached the President's desk and he signed the Robinson-Patman Act. This law has stood the test of the courts during the past 14 years and it can be said without fear of contradiction that it has been the lifeblood in maintaining the free enterprise system and fair competition. This bill has helped to preserve all independent establishments in our economy.

Mr. President, now we face a critical situation. A bill has now been passed by the Congress which is known as Senate bill 1008. It is our opinion that we representatives speak for independent business of this Nation when we urge you to veto this bill for the following reasons:

1. It is a very bad bill. It will destroy the antiprice discrimination provisions of the Robinson-Patman Act. It will weaken the very antitrust laws which both major political parties swore solemnly, during their 1948 election year campaigns, to enforce and strengthen.

2. It will sacrifice small and independent businessmen to the demands of monopoly business. It will mortally injure small and independent businessmen whose interests both major political parties swore solemnly, during their 1948 election year campaigns, to protect and advance.

3. It will increase monopoly domination of American business, something which both major political parties swore solemnly, during their 1948 election year campaigns, they would oppose firmly.

4. The bill will not, as its sponsors claim, benefit small and independent businessmen—rather it will injure them. S. 1008 has not been given the thorough airing all legislation should receive. Senate and House sponsors of the bill have refused to hear, in committees charged with considering the bill, the objections of small and independent businessmen to the measure.

5. Finally, it is our considered view that if S. 1008 should become law it will impose on small business a calamity of the first magnitude, and will eventually result in nullifying the entire antitrust laws.

Solely in the interest of independent business and its further welfare we respectfully urge you to veto this bill.

Fourteen years ago we pleaded with your predecessor to sign the bill to protect independent business of this Nation, and today, 14 years later, we respectfully ask you to save this needed and necessary legislation.

GEORGE J. BURGER,
Vice President, National Federation of Independent Business.
JOHN W. DARGAVEL,
Executive Secretary, National Association of Retail Druggists.
R. H. ROWE,
Vice President and Secretary, United States Wholesale Grocers Association.

Mr. C. Wilson Harder, president of the National Federation of Independent Business, Inc., today called on President Truman to veto the basing-point bill, S. 1008.

Mr. Harder stated: "This legislation is contradictory of everything that you personally and your party have pledged to independent business." Mr. Harder further stated that "instead of safeguarding our free way of life, this bill will place our Nation on a sure road to either socialism or industrial fascism."

Following is the complete text of Mr. Harder's message:

"For our Nation-wide membership we call on you as a court of last resort to veto S. 1008, the basing-point bill that is now on your desk. This legislation is contradictory of everything that you personally and your party have pledged to independent business. Instead of strengthening the antitrust laws, this bill weakens them by ripping the guts from the Robinson-Patman Act. Instead of preserving and extending small-business welfare, this bill lays small and independent business firms wide open to the rapacious price discriminations of their giant competitors. Instead of combating and checking the growth of monopoly, this bill will promote the growth of industrial concentration in our land. Instead of safeguarding our free way of life, this bill will place our Nation on a sure road to either socialism or industrial fascism. Mr. President, we can tell you that our Nation-wide membership, which is the largest of any business organization in the land has been apprised of this legislation and that our members have voted overwhelmingly against it. We are looking to you to breathe life once more into your party's pledges to small business by an immediate, forthright veto of S. 1008. Will you kindly advise your decision and reasons for same?

"C. WILSON HARDER,
"President, National Federation of Independent Business."

Walter Report Praised

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 7, 1950

Mr. BIEMILLER. Mr. Speaker, with permission to extend my remarks in the RECORD, I attach the following excerpt from a page 1 article in the May 11 issue of Der Zeit, an independent German paper published in Hamburg. The article titled "The Gates Are Opening," was written by Robert Strobel, the paper's Bonn correspondent:

THE GATES ARE OPENING

The German refugee problem cannot be solved by the Federal Republic alone. Simple as it is to recognize this, until now Germany was the only one of all countries in the world to do so. Now, for the first time, matters appear to be taking shape. A proposal has been made for an internationally organized mass emigration of a million Germans, and President Truman is said to have approved already on principle this proposal of the so-called Walter report. Even though its practical effect may not be expected for some time yet, one thing is certain at present: It is a pearl among the reports of our time, which are so numerous, so voluminous and so poor as to contents.

What is particularly agreeable to note is that American observers have examined the emigration problem not from a single point of view but from all those which come into question in the matter, including the results to German national economy of mass emigration. There are certainly many problems still to be solved before such large-scale emigration can start, but a beginning has been made. The world is not only recognizing the international bearings of the evacuees problem but is also accepting the consequences. This is good news. The gate is not yet open through which the despairing people desire to emigrate to a new home and which could serve as a safety-valve to remove a dangerously high pressure from the Federal Republic; but it seems to be about to open. Francis E. Walter has turned the key in the lock.

Stop the Curtailment of the Postal Service

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 7, 1950

Mr. MULTER. Mr. Speaker, the following is my statement to the House Committee on Post Office and Civil Service, expressing my opposition to the curtailment of postal service:

Mr. Chairman, I wish to thank you and the members of this committee for giving me this opportunity to express my views on the curtailment of the postal service.

We have always prided ourselves on the efficient manner in which our Post Office Department is administered and the speedy and excellent postal service it has rendered to the American people. No country in the world can point to such matchless service to its people. It is one of the things which are a part of our democratic system and which only a democracy such as ours can produce. Communication—and speedy, efficient communication at that—is not characteristic of totalitarian regimes where it is discouraged or banned entirely.

There is no necessity for postal curtailment at this time. The American people have a justifiable right to expect better postal service and not less. They are paying for it at their local post offices, and they are paying for it in their taxes to the Government. Our Government owes to the people a Government-financed efficient postal service. We must maintain this service for the sake of our business and commercial relations which must continue uninterruptedly.

Above all, it should be remembered that this is a service to our people and is not intended to earn any profit. In fact, we should not even expect to break even on this service and should be ready to subsidize it as the need arises.

Curtailing it to a one-delivery-per-day system, with half of the delivery carried over to the late afternoon or to the next day where the mail is heavy, constitutes a tremendous injustice to many people.

Let me cite only one or two instances of hardship. Many of our professionals, such as physicians, dentists, writers, and others operate out of offices at home. Living in residential areas, they are restricted to receiving mail only once a day, and since collections from mail boxes in those areas have also been curtailed, they are being severely discriminated against.

Incidentally, let me remind the members of this committee that Members of Congress are also getting mail only once a day at their homes, and you know well that much of the mail from our constituents is directed to us at our residences. I for one strenuously object to this curtailment of the prompt delivery of my constituents' mail to me and mine to them.

In addition to the handicap which this curtailment causes to business establishments and to professionals and the inconvenience which it is causing the public, let us not overlook two other factors. One is the loss of employment to many thousands of postal workers; the other is the undermining of the morale in the Post Office Department and its numerous branches throughout the country. These employees have been hard-working, loyal personnel, who have given many years of their life to the service. In New York City, for example,

we are told that about 5,000 to 6,000 such postal employees have lost their jobs or are on the verge of losing them because of this curtailment.

I am convinced that this is false and dangerous economy which may result in irreparable damage to American business enterprise and to our whole economic system. Let us find the means to cover the deficit of the postal service and let us reestablish that service so that it may continue to function and to serve the needs of the American people as in the past.

FEPC

EXTENSION OF REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 7, 1950

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Times-Herald for June 6, 1950:

LUCAS CAN'T DO IT

Ever since May 19, when the Democrats in the Senate ran out on their pledge to put FEPC over, Majority Leader LUCAS has been promising to bring the matter up for another vote.

Do not be taken in by such talk. The Democrats have killed FEPC for this session of Congress.

And, even though LUCAS has shown a complete lack of political know-how in his job, we think that even he realizes that FEPC is dead for this session. If that is so why does he persist in playing along with the idea of another vote? Here's the answer:

JUST TALK

There are three reasons why his boss Harry Truman apparently thinks another vote is necessary. One is that it still gives the administration a feeble peg on which to hang its claims that the Democrats are the true friends of the Negroes. LUCAS can keep on shouting that he tried and tried. Second, it will satisfy a demand from the FEPC supporters that the Members who are absent on the first vote stand and be counted.

Third, it will give Truman another chance to demand election of a rubber-stamp Congress in November. He can promise all over again to get FEPC through if the voters will give him his kind of a Congress.

Of course, such claims are the worst of political hooey.

The real truth is that the Democratic Party is split down the middle, platform promise or no platform promise, on FEPC. On the other hand, the majority of Republicans in the Senate are ready and willing to live up to their promises.

And so, after LUCAS had fumbled around until it was too late to beat the southern filibuster against the bill, a phony attempt was made to clamp down on the debate. It takes 64 votes to put cloture in force in the Senate.

DEMOCRATS KILLED IT

On the cloture vote May 19, 52 Senators voted for it and 32 against it. It would have taken 12 more votes to enforce cloture. A breakdown shows that while only 19 Democrats voted for the cloture rule, 26 voted against it. On the other hand, 33 Republicans voted for it and only 6 against it.

The figures show absolutely that FEPC was killed because the Senate Democrats refused to follow their leader. And what good is a leader without followers?

Now, there were 12 Members of the Senate absent when that vote was taken, 9 Democrats and 3 Republicans. LUCAS must be able to add all 12 of these votes to the 52 who voted with him on the first vote to win when he calls it up again. He can't get them.

And the supporters of FEPC should not be fooled any longer by his stalling tactics.

Nor should they be fooled when the bill is finally sidetracked and Truman goes on another political tour and tries to pull the wool over the eyes of the voters by posing as the great champion of civil rights.

Biggest Story

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 7, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the forty-fourth article by Mr. Frank C. Waldrop on the infiltration of communism in our country:

BIGGEST STORY

(By Frank C. Waldrop)

This piece may be an embarrassment to the Honorable Louis Johnson, now Secretary of Defense, for it recalls a time when he was right about something and Mr. Roosevelt, whom he so venerates today, was wrong.

Mr. Johnson was then national commander of the American Legion. The Roosevelt administration was warming up the propaganda drums for Soviet recognition. The American Legion was against it.

So on April 19, 1933, a mass meeting was held at the old Washington Auditorium, here, with some 5,000 persons in attendance, representing a national variety of patriotic, fraternal, religious, labor, and civic organizations.

On the platform with Mr. Johnson that evening were the Rev. Edmund A. Walsh, S. J., of Georgetown University; William Green, head of the American Federation of Labor; and Hamilton Fish, Mr. Roosevelt's own Congressman and then still his good friend.

Father Walsh is the vice regent of Georgetown and renowned authority on Russia.

Mr. Fish at that time had just wound up a congressional investigation into Communist activity in the United States started in 1930, and an excellent source today of indisputable fact.

William Green was most honorably and firmly on the public record as repudiating on behalf of United States organized labor any interest in Soviet recognition. He had really declared the idea of Soviet trade a fake and had clearly defined the issue as one of giving or withholding support to a bloody tyrant who meant the United States only ill.

Mr. Johnson read to the assemblage a letter from Bainbridge Colby, whom I mentioned earlier in this series as the first United States Secretary of State to give out a definitive official view on the Soviets.

Mr. Colby, in the last days of the Wilson regime, had written a letter to the Italian Ambassador opposing recognition until the Soviets had proved, not just promised, abandonment of world revolution, had proved, not just promised, an enlightened and a generally peaceful outlook.

His letter to the patriotic meeting in Washington on April 19, 1933, was a redefinition and careful delineation of the importance to the whole world of dissolving the Soviet barriers against civilization.

Can you imagine, for instance, the benefits that would have come if Russia after 1918 had allowed her citizens the one simple freedom to travel the world, read the world's literature, know the world's ways, and allow the world the same privilege in Russia?

The hatreds, suspicions, and ignorant fears that are essential to the Soviet discipline could not have withstood such a barrage of reality.

That is why the Soviet leaders have never dared to this day, to allow a free meeting between Russia and the civilized world.

Russians understanding another side to life would never have submitted to the demands put upon them by the Communists. The very contrast between civilized life and the barbarous oppressions at home would have been enough to crush the Soviet system without the world having had to face its present prospects of war.

But civilization and the Russian people were barricaded away from one another by communism. And Mr. Roosevelt foolishly saved Stalin in his critical hour of 1933 when the Russians were revolting against him.

That meeting here in Washington on April 19, 1933, was an effort to withstand the propaganda for recognition with a summation of facts.

The reality of the Soviet regime, as contrasted with the propaganda, was thoroughly expounded with full, factual evidence in support.

As a matter of fact, it was expounded not only in Washington but from Europe as well. Guglielmo Ferrero, the most famous philosopher-historian of the day, issued explicit warnings against the foolish notion that anybody could do business with Stalin.

From the Vatican came the voice of experience. The Pope asked what guaranties Stalin would make against further suppressions of civilization at home and abroad.

Nobody can say that Mr. Roosevelt was not warned, or that wise men, both at home and from all over the world, neglected to caution him.

He was told to be careful, to watch his step, to realize that he was lightly juggling dynamite. But it did no good.

He had his mind fixed on making sensation. He had his eye fixed on the headlines. And Prof. Felix Frankfurter, as testified earlier in this series by one who had a part in the whole dirty business, had Mr. Roosevelt "in his vest pocket." The tragedy was happening.

Taxpayers Charged for Political Junkets of Administration Officials

EXTENSION OF REMARKS

OF

HON. THOR C. TOLLEFSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 9, 1950

Mr. TOLLEFSON. Mr. Speaker, under leave to extend my remarks, I include an article by Mr. Louis Bromfield which appeared in the Tacoma News Tribune on May 14, 1950. The article is

an excellent one, dealing with political junkets by administration officials. It follows:

TAXPAYERS CHARGED FOR POLITICAL JUNKETS OF ADMINISTRATION OFFICIALS

(By Louis Bromfield)

At last Congress has shown signs of moving in on the leaders of Mr. Truman's administration and the Democratic National Committee. For months and years now every taxpayer, regardless of his feeling toward Mr. Truman and his socialistic platform, has been paying his share of the expenses to promote Mr. Truman, his friends and his ideas. How? Through the old Pendergast ward politics system of charging up expenses of political campaigning to the government itself.

Let's look at the record. For months now Mr. Brannan, Secretary of Agriculture, has been touring the country, making speeches attempting to sell Mr. Truman and his welfare state to hundreds of thousands of citizens. There has been and there can be no pretense as to what he is doing. The attitude is wholly partisan both as to ideas and as to politics. The Democratic National Committee rather than the taxpayer should be paying the bill which runs in a year or so into hundreds of thousands.

Mr. Tobin, Secretary of Labor, has been following the same pattern, rarely making anything but partisan political speeches which sound as if he were a paid propagandist for the big officials of organized labor whom the Democratic National Committee woo so passionately. Who paid for it all? You and I.

Mr. Ewing, Federal Security Administrator, tours not only this country but Europe with special attention to the socialist government of Great Britain. On his return he did quite a bit of traveling and talking in praise of British socialism and in particular of socialized medicine, which is simply a backhanded way of making hay for Mr. Truman and his program. Who paid for it? You and I.

BILL COMES TO MILLIONS

And so, on and on it goes, throughout most of the Democratic office holders in cabinet and administrative posts. Virtually every one of them is guilty and when we add up the total, including Government planes which are freely commandeered in the interests of the Democratic Party, the bill comes to many millions of dollars. Who pays it? Not the Democratic Party campaign fund but you and I every time we pay our income tax, or go to a movie or send a telegram or ride on a train or buy a cigarette.

Under law and constitution, all the posts represented in this spending of taxpayers' money for the benefit of Mr. Truman and his friends were set up as administrative posts clearly established as nonpolitical. Under the long 17 years of Democratic rule, they have turned more and more simply into debased political sounding boards in which the administrators spend more and more time away from their inefficient, expensive and confused departments in making political speeches.

The Department of Agriculture, for example, was clearly established by law and for many generations by honest precedent, as an agency for research and education, beneficial to American agriculture. The present Secretary is a New Deal Denver lawyer without direct contact or experience with agriculture or any of the farmer's problems. How much time does he spend trying to straighten out the administrative mess into which his Department has been made by successive political appointees? How much time does he spend pressing research and education? And how much time does he spend on the road selling Mr. Truman, the welfare state and socialist ideas which would completely regiment the farmer in return for an inadequate check paid out of taxpayers' money?

EXPENSES PAID

Only recently at a Minnesota meeting, farmer members of the Production and Marketing Organization—incidentally the worst political set-up in our Government—were given per diem pay and expenses by car, train, and in hotels, to travel considerable distances in order to hear Mr. Brannan make a political speech in favor of the welfare state, the Brannan plan, and Mr. Truman. Who pays for this skulldruggery? Guess. It is not the Democratic National Committee.

The President himself is no better. Recently it was recorded that he winked at reporters when he mentioned his forthcoming nonpolitical trip to the Northwest and back again with speeches at every whistle stop. The trip will cost well in excess of a hundred thousand dollars. Who pays for it? Guess who. You and I. When clearly it should be charged to the Democratic Party campaign fund.

This is the kind of thing we get when we place in office men who are essentially professional and sometimes cheap ward politicians.

Fortunately Congress has begun to take notice of these practices which honest citizens can regard only as an outrage, not only against themselves but against decent democratic government. Mr. Stalin and his friends operate on the same system but more frankly and honestly. It might just be that this situation is a good subject for a letter to your Representatives in Washington. That's the only way we shall stop what is one of the cheapest and most shameful practices in American history, as subversive to good government and good democracy as anything the Communists have ever attempted to pull off in our midst.

The High Crime of Inflation

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, May 19, 1950

Mr. SHAFER. Mr. Speaker, the Treasury statement for May 31, 1950, shows our Nation has run in the red $3,230,012,100 so far this year. It shows that the high crime of inflation is being aided and abetted by our Congress, which every year votes more and more for the spending which is depreciating the purchasing power of the dollar.

In 1939 the dollar was worth a fraction more than 100 cents in the markets of the Nation. By 1949 the purchasing power was down to 59.1 cents. Today it is even lower, and reports of events which happened yesterday convince me that unless the trend is halted we are on the road to the biggest bust of all time.

Steel scrap which sold for $15.75 a ton in January 1939, advanced to $26.32 in August 1949. Yesterday steel scrap was quoted at $46 a ton. Steel is one of our basic commodities, and this advance in price since last August will be reflected in prices of almost everything in the durable goods industries.

Food costs also have risen too fast for the good of the Nation.

A basket of 18 food items which cost $4.92 at the grocers in 1939, advanced to $11.44 by August 1949. Today that same basket will cost $12.52. This is an advance of 9 percent in 9 months.

Food costs have risen 254.47 points from the 1939 level. The dollar is worth only 39.3 cents in the grocery store today. The following table illustrates the trend, which must be stopped if we are to save America from disaster.

INFLATION HITS THE FAMILY MARKET BASKET HARDER IN 1950

The cost of 18 items making up the family market basket advanced substantially above the August 1949 price according to our latest survey of advertised prices by Washington, D. C., chain stores.

In 1939, the items could have been bought for $4.92. By August, 1949 the price advanced to $11.44. The latest survey, by Paul O. Peters, well-known economist, shows the prices as of June 5, 1950.

Item	March 1939	August 1949	June 5, 1950
Beef, chuck roast, 5 pounds	$0.85	$2.15	$2.75
Vegetable shortening, 3 pounds	.47	.85	.90
Butter, 92 score, creamery, 1 pound	.26	.70	.71
Flour, 12 pounds	.39	.98	1.12
Sugar, 5 pounds	.22	[1].42	.46
Coffee, 1 pound	.14	[1].42	.74
Potatoes, 10 pounds	.19	.43	.50
Bread, 2 pounds	.15	.27	.28
Milk, 2 quarts	.28	.40	[1].38
Pork and beans, 2 cans	.13	.23	.29
Corn, niblets or equal, 2 12-ounce	.20	.35	.33
Picnic ham, 3 pounds	.45	1.17	1.29
Lettuce, head, 12 ounces	.05	.12	.15
Salad dressing, 1 pint	.17	.35	.33
Pears, 2½ size can, 2 cans	.30	.78	.74
Peanut butter, 1 pound	.17	.37	.37
Sirup, Vermont Maid, 12 ounces	.15	.27	.26
Eggs, standard, cartons, 2 dozen	.35	[1].18	.96
Total	4.92	11.44	12.52

[1] These items were on special sale.

In March 1939, the public debt stood at approximately $40,000,000,000.

On May 31, 1950, the Treasury reported the public debt at $256,350,132,734.

The deficit for the fiscal year 1950 to May 31 was $3,230,012,100.

Every dollar of deficit spending contributes to the inflationary pressures now forcing the prices of foods and other commodities upward.

It is the old story of money competing for goods in the market place.

Memorial Day Means Keeping Faith With Those Beyond

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 7, 1950

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Forest Republican, Tionesta, Pa., for June 1, 1950:

MEMORIAL DAY MEANS KEEPING FAITH WITH THOSE BEYOND

Memorial Day is our most revered public secular day in America. It's meaning is joined in sacred ritual.

This is logically and rightfully so. Its roots lie deep in the lives of our people.

It is an occasion that brings to the surface strong emotional ties with the past.

For all, it is a time of communion with loved ones who have voyaged beyond these earthly shores. A time when we do honor to their memories. In this, there is something akin to the worship of their ancestors by the Chinese.

Both here in America and there in Asia, we venerate the greatness and the virtue of those who have gone on before us in our several family strains.

In so doing we derive inspiration and good. We pass on to our posterity the essence of our collective heritage, the parts that make up a stimulating and noble tradition. A tradition that charts the advance of our own strong civilization marching on toward its final destiny. A destiny of enduring vitality, it is our hope and prayer.

As we think of our civilization, our lofty culture, the beneficiary of the great thinkers and philosophers of Greece and Rome and of western Europe, we can and should rightfully give pause to consider how this historic trend toward truth and righteousness continues to gather momentum.

This 2,000 year old sweep toward bringing mankind into line with the Golden Rule of the Man from Galilee, into the faith of the Sermon on the Mount.

As one of the millions who have seen military naval service, may I suggest that perhaps the most decisive element which has driven our Christian way of life ahead is one that in recent generations is often taken for granted, or underrated, or even overlooked altogether.

I refer to the resolute courage of the individual to face death in defense of his country, and of his ideals.

Is not the grim necessity for such courage in this day a supreme challenge? Is this not the kind of challenge that British historian Arthur Toynbee means, when he lays down his rule that civilizations only survive if confronted with overwhelming hazards which are overcome?

In these dangerous times more than one European nation capitulated with little or no resistance to the harsh, pagan Nazi invader of 1940.

Briefly, these surrenders came about because too many individuals were unwilling to face the possibility of making the supreme sacrifice while fighting for freedom, albeit in extenuation of their civic defalcations, it should be noted that they had suffered severely and too much during World War I.

I cite this particular bit of modern history that here today in this beautiful resting place of the dead, within the very shadows of their tombstones, we may more fully, more clearly, and more reverently evaluate the true greatness of those who gave their lives in conflict that this Nation might carry on.

Further, that we may grasp the real and far-reaching world significance of their supreme sacrifices, let us not forget that the wars of the United States have ever been just ones and don't let any recent history textbooks tell you otherwise. Such historians are warped in their views. These wars were all waged to the ultimate end that the great weight of our Federal Union shall be maintained in being as a mighty force in the defense of liberal, constitutional principles and of western, Christian culture.

At this hour, I would dwell a moment longer upon our debt to this brave and noble band of patriots who have so gallantly marched on into the west.

Ours is a debt which transcends the power of words to define and of numbers to give substance. It is infinite and incalculable. It can never be paid.

However, we who have survived can do this. We can keep faith with America's war dead that they shall not have died in vain. This, then, would seem to be the challenge for citizens of today if our Republic is to continue.

Through the strange workings of fate this solemn obligation has never before confronted citizens of America at a more sinisterly threatening period in our short but stirring history.

The wake of each world war seems to find us a Nation facing more baffling and more ominous problems than before. Neither conflict has made the world safe for democracy, nor for decency.

Perversely, out of these same struggles mankind has spawned the age-old destroyer of democracy. I refer to tyranny, the archscourge of free institutions, set up under a purely authoritarian concept of conscienceless communism, propagated by a band of fanatically and dangerously efficient gangsters, befowling the fair countrysides of the earth with their brands of godless materialism and venomous hate of class against class, spewed from the walls of their Kremlin.

This unclean and vengeful movement of world-wide proportion, this vendetta of mad dogs in human shape against the decencies of men and aimed at the very fiber of our Christian civilization, poses probably the hardest problem that men of good will have ever had to contend with.

The problem is predominantly one that must be solved on this side of the Atlantic. If America fails, truly the forces of darkness will envelop the earth, and the eclipse of truth and righteousness may last for ages to come.

We can visualize hardly one single question that confronts America in this approaching Armageddon which is capable of easy and clear-cut solution.

For instance, we must be armed so adequately that we cannot be struck down in the North American region by a dynamically delivered, Pearl Harbor style, sneak attack. However, at the same time we must not seriously distort and weaken the vitality of our national economy by an all-guns-and-no-butter pattern of industrial output. Who is wise enough to say where the dividing line should come?

Another poser is the question of foreign aid. It is clear that Europe must be helped economically and by direct transfers of military supplies if the west is to establish in Europe enough power, and in time, to discourage Stalin from starting world war III, or if conflict is unavoidable, to stop the Slavic hordes dead in their tracks east of the Rhine.

If we give too much to Europe, we will bankrupt ourselves, thereby bringing on a rigid, planned economy and socialism in our own land. In this dilemma, where should we cease our overseas expenditures in order to retain our own fiscal solvency and industrial strength?

So many other decisions of equal complexity now confront the citizens of the United States, not the least of which is the job of countering fifth columnists, not only in the midst of many communities, but, according to many indications, within the walls of Government offices, disloyal persons influencing policies and exercising authority.

How are we going to root out, remove and justly penalize such sinister borers from within, and still preserve the great constitutional guaranties of our personal liberties? These two objectives are almost incompatible.

It is clear that here in America, at the midpoint of the century, we all as citizens must give the study of public questions our utmost attention. These problems must be solved. Our Government officials, charged with the specific tasks of meeting these responsibilities are only human and but too fallible. They need the response of a strong and informed public opinion.

We are often prone to find fault with our Congressmen, to berate their actions, and to belittle their collective judgment. It is an easy habit to fall into, and manifestly a very unfair one. I made progress in curing myself of this tendency by substituting the words "American people" for the word "Congress" whenever I angrily made some such loose statement as, "Only a stupid and short-sighted Congress would do such a thing."

Congress is in fact the American people. It is a mirror of our citizenry. It responds quickly and accurately to the wishes of the people. They will get just as sound and effective action from Congress as they demand, and no more.

When they deride and express doubts as to the effectiveness of Congress, when they speak of it in terms of futility they are in effect indicating themselves as unfit for self government; they are denying the integrity and effectiveness of representative government. An institution which is making its last stand in America. Even England has gone Socialist.

Representative government must survive and return to the misguided people of other lands. It is facing the supreme test in this generation. As I have said before, our Christian civilization now hangs in the balance. It can only survive if Americans can muster the interest in their own problems, and exercise the straight thinking, the wisdom, and the restraint necessary to influence their government officials toward coming to sound and honest decisions.

This is our present, immediate, and compelling obligation to our heroic war dead that they may sleep in peace, in the knowledge that we will not let them down, that we are keeping faith with them, and that their untimely passing shall have been definitely instrumental in bringing about a better world for their children, their children's children and their posterity.

In closing, we salute our heroes buried here who have left us in the springtime of their lives, who sacrificed so much that religion, decency, freedom and the concept of the dignity of man might survive on earth.

We who carry on shall not forget them, nor shall we fail them in the great battles for what is just and right.

NOTE.—The foregoing Memorial Day address was given by Admiral Davis at Marienville and at Pleasantville and is published here for its editorial content.

The Disabled American Speaks

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 7, 1950

Mr. RODINO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an editorial which appeared in the May 25, 1950, issue of the paper Disabled American Veterans, pointing out very vividly and with sincere apprehension the effects of the Taber-Jensen amendments to the omnibus appropriation bill which recently passed the House. It should be revealing reading for those who supported these amendments, which will undoubtedly injure our most deserving veterans, the disabled veterans:

SENATE HOLDS VETERANS' FUTURE

Shortly before the omnibus appropriation bill passed the House this month, a burst of

strength on the part of an economy bloc resulted in an amendment which calls for a drastic 10-percent personnel cut in all nonmilitary agencies of the Government.

Another amendment which was included in the bill as passed by the House provides that nonmilitary Federal agencies be prohibited from filling more than 10 percent of their job vacancies during the fiscal year 1951. Luckily, the amendments excluded VA medical personnel.

Although it is too early to determine the exact results which such a measure would have on the Veterans' Administration, it requires little imagination to realize what a tremendous potential threat this legislation is to the successful administration of veteran benefits.

For example, a quick mathematical computation reveals that a 10-percent slash in the total VA staff, excluding medical personnel, would result in the firing of nearly 20,000 VA workers. A reduction-in-force program of this size would make the recent firing of some 4,000 VA employees look like child's play.

Although considerable economies could be effected in the VA without jeopardizing veterans' benefits, economy to the extent proposed by the House would drastically curtail services to veterans which are due them under laws enacted by Congress.

In view of the haphazard methods used by the VA in past reduction-in-force programs, it is alarming, to say the least, to contemplate a straight 10-percent personnel slash. In all probability, the most deserving veterans—that is the disabled—would suffer first if this measure becomes law.

Within the next few weeks the Senate will decide whether to approve these controversial provisions. Upon the decision of these legislators and the President of the United States rests, to a large extent, the continued success of the entire veterans' program.

Our Position in Japan

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 7, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD a highly informative article by that great far eastern expert, Mr. George Sokolsky, on our position in Japan and the magnificent work being done there by Gen. Douglas MacArthur for the good name and prestige of the United States of America:

THESE DAYS

(By George Sokolsky)

It is not necessary at this time to have a peace treaty with Japan. A conference for that purpose can only complicate the Asiatic situation, weaken the position of General MacArthur, and imperil Japan, which happens at this moment in history to be the only important outpost of American defense in the western Pacific.

Were Japan in the possession of an enemy of this country, Alaska's position would be untenable from a military standpoint.

There are two ways of establishing a peace treaty.

1. To call a peace conference of all the nations in the Far East which would impose their will on a fallen foe. Such a conference would include Soviet Russia and either Nationalist or Soviet China. It it is desirable for Soviet Russia to attend, the conference would have to include Soviet China.

That would mean the end of a free Japan, allied to the United States. For both Soviet Russia and Soviet China would have to demand terms that would aid them in their planned purpose of Sovietizing Korea and ultimately turning Japan into a satellite of the Cominform—the federation of Soviet countries.

Also, it is to be noted that Great Britain has become involved precipitately in the recognition of Soviet China, which is now an embarrassment to both the United States and the United Nations. The Socialist government of Great Britain has been pursuing, in both Asia and Europe, a policy without conscience with the sole object of strengthening British trade, come what may.

It was in pursuance of this policy that the British prematurely recognized Soviet China and embarrassed the position of the United States in the United Nations.

Similarly, Great Britain is sabotaging the Franco-German coal and steel pool—the first hopeful sign for the reconstruction of western European economic life.

Dean Acheson, in his address to Congress, recognized the tremendous significance of the Schuman proposal for this pool, which he acknowledged as acceptable under American policy.

In the Pacific, the British represent not only themselves, but the eight nations of the Commonwealth, whose policies and purposes fluctuate widely. Before the war, the Japanese gave evidence of extraordinary ability to compete not only with Great Britain but with the other countries of the Commonwealth. The Japanese did an enormous business in the British colonies and in India.

The British, in their present socialistic attitude, are likely to wish to impose such harsh terms upon the Japanese as to vitiate the amazingly constructive work of Gen. Douglas MacArthur. This is one reason why the Japanese fear a peace conference.

Every Japanese who comes to this country pleads against such a treaty. Yukio Ozaki, the 91-year-old Japanese statesman, made this clear in an address at the dinner of the American Council on Japan recently.

The other way is for the United States, which won the far eastern war, practically alone, with only such aid as Nationalist China could provide, to make a separate treaty with Japan. Parenthetically it may be pointed out that Japan was able to take Hong Kong and Singapore with surprising ease; yet China managed to stand.

The Japanese and General MacArthur would prefer a treaty between the United States and Japan abolishing the state of war which still exists.

The State Department is sending John Foster Dulles to Japan to discuss the matter with General MacArthur. It is generally assumed that John Foster Dulles represents the Republican Party in the State Department as part of a bipartisan policy.

This is an error because no bipartisan policy over far-eastern matters exists or ever has.

This is one of the reasons for the Republican attacks on the far eastern policy of the State Department. Mr. Dulles is not a far-eastern expert, which may or may not be an advantage. Perhaps he may bring to the problem a wholly new point of view.

At any rate, General MacArthur will have no illusions on what can be done. There have been vast differences of view between the State Department and General MacArthur on the far eastern policy of this country, as there have been between the State and Defense Departments.

There is, however, this:

When MacArthur speaks on Japan, the American people will listen.

Problems Relating to the Postal Service

EXTENSION OF REMARKS
OF
HON. GERALD R. FORD, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 7, 1950

Mr. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address made by me in Grand Rapids, Mich., on May 27, 1950, at the joint Michigan convention of postal supervisors and post-office clerks:

Mr. Toastmaster, honored and distinguished guests, members of the Michigan branch of postal supervisors, and members of the Michigan Federation of Post Office Clerks, it is a very real privilege and pleasure for me to meet with you at this thirty-second annual convention in my home city of Grand Rapids. We in the furniture capital of the world welcome you and urge your return, individually and collectively, to this community.

I am particularly pleased to have the opportunity to discuss with you some of the perplexing and controversial problems relating to the postal service. The problems to be discussed are not limited in scope to the welfare of postal employees, but rather directly concern our citizens as a whole. Even though some of the technical problems may be of prime importance to those assembled here this evening, because the Post Office Department literally touches the home of every citizen of this country, the legislation and administrative decisions in reference to the Department are of universal interest. I only ask that we all examine the issues, not only as Government officials and employees, but as citizens of the greatest Nation in the world today. This is the Nation which the rest of the world is depending on as the champion of freedom and the bulwark against the insidious forces of totalitarianism. Under no circumstances in this time of crisis should the United States as a whole or any group of its citizens take any action that would weaken us internally or otherwise. Because of the long record of patriotism and unselfishness of those here tonight I know your future activities will be in the best interest of our Republic.

The deficit in the Post Office Department, totaling $550,000,000 annually, has become a major concern in our Federal budget problems. This bugaboo has been highlighted of late by the fact that the Federal Government has an increasing deficit in prospect for the next fiscal year. As you probably know, since this deficit has mounted to its present-day proportions, the Post Office Department has consistently recommended against the enactment of all proposed legislation directly benefiting postal employees which involved additional costs to the Department. A good example of this is the vigorous protest by the Department in opposition to the $450 annual wage increase granted by the Eightieth Congress.

Our discussion tonight might well begin with a review of the legislation enacted during the present Congress which directly benefits you as employees of the Department.

POSTAL EMPLOYEES LEGISLATION

In 1949, during the first session of this Congress, Public Law 428 was approved. Under this law postal employees received a flat salary increase of $120 a year. Those employees in certain categories which did not have at least three longevity grades were given these grades. For the first time postmasters and supervisors were given longevity grades. These grades amounted to $100

each, except in the case of fourth-class postmasters, who received instead increases of 5 percent of their base salary. For most postal supervisors, since practically all have 25 years of service, this meant an increase of $420 a year, in other words, $300 for their longevity grades and $120 as the result of the flat increase. Also under Public Law 428 the entrance salary for regular employees was increased by $200. This was accomplished by elimination of the first two grades for regular employees. Hereafter substitute employees will still enter the postal service in grade 1, but after they have served a year, will be promoted to grade 3. This is a logical step, although I believe it probably did not go far enough. For example, when Public Law 134, Seventy-ninth Congress, was approved, all employees who were on the rolls of the Post Office Department received an increase of $400 a year. However, the annual entrance salary for postal employees remained at $1,700. For all other Federal employees the basic entrance salary was increased.

There were additional beneficial sections of the original bill (H. R. 4495) as it passed the House which were eliminated in conference with the Senate. I am referring to the increased annual leave for postal employees of 5 days a year and a uniform allowance. In my opinion, the annual-leave situation today is one of the most controversial issues in Congress. Presently it is the subject of study by congressional committees and the Bureau of the Budget, and probably one of these days in the near future firm recommendations will be made with respect to this problem. Whatever these recommendations may be, in my judgment they will inevitably be more favorable for postal employees inasmuch as at the present time postal employees receive 11 days less annual leave and 5 days less sick leave than other Federal employees.

I am sure all of you are familiar with the Comptroller General's decision which voided many increases which the Department proposed to make under Public Law 428 and which were obviously the intent of Congress when that law was passed. To correct these interpretations of the law the House during this session considered a number of remedial bills. The first was H. R. 6553, to permit rural carriers to count all of their time in postal service toward longevity grades. The second was H. R. 6603, to permit custodial employees to count certain service toward their longevity grades. When these bills reached the Senate, it was suggested by the Post Office Department and the Comptroller General that there be a general review by Congress of the decision of the Comptroller General and that the language of Public Law 428 be clarified in one legislative proposal. Accordingly, H. R. 6553 was amended in the Senate. This bill is now Public Law 500, Eighty-first Congress, and under it the following is established:

Three longevity grades to which all employees will be entitled after 13, 18, and 25 years of service. These longevity increases are of $100 per annum for regular employees, except that fourth-class postmasters will be paid 5 percent of their base pay rather than the $100. In qualifying for these grades, employees may count all years of postal service and custodial employees may count their years of service both with the Treasury Department and the Post Office Department. Special-delivery messengers may count their time when they were paid on a fee basis. Clerks in third-class post offices may count the time they were working in the post offices as employees of the postmasters prior to their classification under Public Law 134, Seventy-ninth Congress. Temporary employment may be counted where it is for a period of more than 1 year or where it is continuous to the date of appointment as a classified employee.

Some employees may find it advantageous to remain under the present system of longevity promotions. This law will permit them to select either the present system or the new longevity grades. However, gradually there will be a conversion to the new longevity-grades system of 13, 18, and 25 years for all employees. This will simplify the law with respect to longevity promotions and is a definite improvement.

The Senate amendment further provides that longevity increases granted supervisors will not be counted in deetrmining whether such a supervisor's salary exceeds $4,170. This is the top limit permitted supervisors who are granted overtime compensation on Sundays, holidays, or during the month of December.

Another piece of legislation of interest to postal employees is H. R. 87. This bill, as you know, will give veterans who entered the postal service after World War II credit for their military service toward their promotions in the postal service on a pro rata basis. The basic logic for this particular legislation is based upon the fact that the time a man spent in the military service should be given the same consideration as that time spent in the postal service toward promotion. In other Government positions outside of the postal service many veterans entered civil service for the first time and qualified for higher classifications based upon their military experience and skill. For example, the prospective employee might have been an adjutant in the Army and by virtue of that experience qualified for a high grade position as a personnel officer under the Federal civil service. Many veterans used their experience as radio technicians, electricians, and other capacities in the military service as a basis for qualifying for certain civil-service examinations and the records show that the policy of the Civil Service Commission was liberal in this regard. Furthermore, veterans who entered private industry, in many cases, were also able to use military experience as a basis for obtaining positions at a higher rate of pay. In the postal service however, regardless of the qualifications of the individual, educational background, business experience or military assignment, a prospective employee must still enter at the lowest pay grade.

The Senate Post Office and Civil Service Committee has already recommended favorably H. R. 87 as it passed the House, including the July 1, 1950, cut-off date, and it is expected that the bill will come up for Senate consideration at the next call of the Senate Calendars. Because of the Department's objection to the proposal there is some likelihood that the President may veto the bill but that obstacle will have to be overcome once the Senate acts favorably.

The House Post Office and Civil Service Committee has presently under consideration a number of bills which are designed to reclassify the salaries of postmasters and supervisors. Unquestionably most of the supervisors here tonight are familiar with the terms of H. R. 4757, which is under active consideration by the committee. Hearings have already started on this bill in both the House and Senate committees. Generally speaking, there seems to be agreement on the point that the classification of postmasters and supervisors should be reexamined, particularly in the light of the successive flat increases which have occurred beginning in 1945. It is fair to say that the consensus among the committee members seems to be that if inequities and inequalities can be identified, they should be corrected and, furthermore, there is a similar feeling in the House favoring such an approach, and those of us not on the committee simply await the initial action by that group.

There has been, however, a modifying factor with respect to flat increases as they affect postmasters and supervisors. I refer specifically to the over-all increase in the gross receipts in almost every area. In 1936, for example, the gross receipts of the postal service were $665,000,000. Today, for fiscal year 1949, they are $1,571,800,000. In Grand Rapids, during the period from 1936 the gross receipts have grown from $1,303,965 to $3,567,042 in 1949. If the postal rate increase bill passed by the House is approved by the Senate, potal revenues will be increased by another $150,000,000 which in effect will represent an increased salary for postmasters and supervisors.

There is other legislation of interest to supervisors and clerks which is presently under active consideration by committees of Congress. First, a bill sponsored by Representative REES, of Kansas, H. R. 2586, which would make it possible to relieve clerks who have made payments on money orders where the signature has been forged and where the clerk has taken satisfactory precautions. The other is aimed at reducing the cost on bonds to department employees. Several of the proposals relate only to postal employees and would set up a fidelity bond trust by the employees themselves. Other cover all Federal employees. One which is receiving favorable comment in the discussions of the Committee on Expenditures in the Executive Department is a bill which would have the Government pay the bond premium but provide for coverage on a blanket bond basis rather than have thousands of individual bonds. The adoption of this proposal would result in considerable savings to the employee and a much lower cost to the Government and seems superior to handling the problem on an individual basis.

The members of the House and Senate committee having jurisdiction of Post Office Department problems have no easy job. They are harassed from all sides. The general public wants more and cheaper service. Business, religious, educational, and many other groups fight doggedly against rate increases. Employee organizations are naturally interested in legislation favorable to them. The committee's problems are further complicated by the attitude of the Department which is reluctant to make any favorable recommendations that will increase costs. Frankly the committee members are not to be envied.

THE POSTMASTER GENERAL'S CURTAILMENT ORDER

Probably no order of the Postmaster General in history has been as widely publicized or as warmly debated as the Postmaster General's order directing that only one delivery a day will be given in residential areas and two in business areas. Probably no other single decision by the Postmaster General as it now stands will have as great an impact on employees in the Department as this particular order because more than 10,000 employees are allegedly scheduled to be released as a direct result.

I think the Postmaster General might have helped the situation to some degree for all concerned if he had given some prior notice that he expected to curtail the delivery of mail as outlined in his order. I direct your attention to the fact that if the Postmaster General wishes to save money there are a number of other places where such savings could be made in the postal service. It is my view that the whole service curtailment issue should be examined by a responsible congressional committee, and I was informed on Thursday that the House Committee on Post Office and Civil Service is scheduled to begin exhaustive hearings on the matter on June 1. I respectfully suggest that if the Postmaster General is making this move in order to save taxpayers money, he should say so. He should not use the excuse that there

is a shortage of funds appropriated by the Congress. I am informed, and the records indicate, the Post Office Department was allocated practically all funds requested from the Congress for this fiscal year.

This order, which was sprung upon the public totally without any preliminary preparation, has created a great deal of consternation among the users of the mails. It has the appearance of turning back the clock from the standpoint of service and, if carried out, will disrupt delivery service in all first-class and most of the second-class post offices. In addition the tone of the order, together with directions of the Deputy Postmaster General with respect to the threatened discharge of employees, has had a drastic effect on the morale of our postal workers.

It is inconceivable that if reductions in force are carried on in a proper and orderly manner that this curtailment order should necessarily affect any regular or substitute employees since there are many more than 10,000 temporary employees at the present time. Also, if the program were properly planned, normal attrition could be utilized for reduction in force procedures and with few exceptions no present postal employee including temporaries needs to lose his job. This order unfortunately, like so many others in the postal service, was made on a mass basis without preliminary experimental work. It was made before other economies with a lesser impact on the public or the postal employees had been instituted. These other economics have previously been brought to the attention of the Postmaster General as a result of studies made by the Congress and the Hoover Commission.

Let me give you several specific examples of what I mean. In the Eightieth Congress, the Post Office and Civil Service Committee suggested that the elimination of the individual recording of special delivery mail be eliminated at a saving, which was estimated to be $1,000,000 a year. This particular recommendation was taken up by the Senate Appropriations Committee and the Department was requested to run a sample test in two cities. These sample tests worked out very well and then the policy was extended throughout the postal system. There was no disturbance to the public. Service was actually improved during the test period by the lessons that were learned in the experimental period. Good sense would seem to dictate that this should have been the procedure if a general curtailment of service was to be ordered. In other words, the Department should know beforehand what the result would be in each area from the standpoint of service to the public and the effect on postal employees. The public and the postal employees should have been properly prepared for such a move and given an opportunity to express their views.

Another example of where economies might be effectuated and service improved is in the adoption of mechanical sorting equipment in the larger post offices. The Postmaster General has stated such a policy is a success at the Chicago post office where a machine was rebuilt and improved after such a recommendation was made by the House Post Office and Civil Service Committee during the Eightieth Congress. Wherever practicable such machinery should be placed in other larger post offices in order to effect needed economies.

Public Law 231, Eighty-first Congress, established for the first time in the postal service a research and development program. In the establishment of such a program the Post Office Department, in its official reports, merely left this idea entirely up to Congress without making any specific recommendations. However, now that the law has been enacted, the Department has listed a whole succession of developments which they expect to make and improve under this program.

THE HOOVER COMMISSION REPORT

Many people are asking questions about the Hoover Commission report and its effect on the postal service. You, as employees in the postal service, are probably asked these questions more than anybody else and, for that reason, you may be interested in a short summary as to what action has been taken to date with respect to the Hoover Commission proposals as they affect the postal service.

Reorganization Plan No. 3, which has already been approved and is in operation, places into effect the following recommendations of the Hoover Commission:

1. Establishment of a Deputy Postmaster General (sec. 3).

2. Establishment of a board of seven advisers to the Postmaster General (sec. 6).

3. Abolishment of the Bureau of Accounts, including the offices of the controller and purchasing agent (sec. 5).

4. Abolishment of the First, Second, Third and Fourth Assistant Postmasters General and provides for the appointment of four Assistant Postmasters General (sec. 4).

5. Transfers to the Postmaster General the functions of all subordinate offices and agencies of the Post Office Department (sec. 4).

Recommendations of the Hoover Commission Task Force with respect to a research and development program have been placed into effect by Public Law 231 (Eighty-first Congress). By an amendment to the rate bill the House approved the Hoover Commission recommendation that the Postmaster General be empowered to set the rates on special services. The 1951 budget incorporates the Hoover Commission suggestion of a performance budget. Recommendations with respect to the accounting and fiscal control of the postal service are incorporated in two House bills, H. R. 5775 and H. R. 6395. These bills are under consideration by the House Post Office and Civil Service Committee. Hearings on companion bills have been held in the Senate. The differences in views with respect to both of these bills concern the extent of control over expenditures which will remain with the Comptroller General. When these differences are resolved, legislation will probably be approved. I hope we will have an opportunity to vote on the legislation during this Congress.

The recommendations of the Hoover Commission with respect to regionalization of the postal service have met with stiff opposition from Postmaster General Donaldson, who has said:

"I would not want to be Postmaster General if this particular recommendation were put into effect, and I would have the responsibility of providing present postal service."

As you know, of course, the postal service has already been regionalized in many respects, such as the Railway Mail Service, which now has 15 divisions. There is a similar regional set-up for the airmail service. The Central Accounting Office is another regional set-up. The pay for rural carriers is handled on a State-wide basis. The apparent tendency within the postal service itself appears to favor a gradual development toward the regionalization of the postal service. Unfortunately, however, there has not been a corresponding delegation of authority by the Department.

With respect to the Hoover Commission recommendation that the airmail subsidy be separated from airmail payments, the House Committee on Interstate and Foreign Commerce, which handles this legislation, is currently considering bills which would effect this separation. This is another complex problem involving the proper amount which should be designated as outright subsidy. In my opinion, we should arrive at a means of separating this subsidy and thereafter, under the formula, the subsidy should not be charged to our postal service. I firmly believe that our domestic aviation system should be kept strong, not only as a means of transportation but as an asset in our national defense set-up, but at the same time such subsidies should not be charged against the Post Office Department.

The final recommendation of the Hoover Commission pertains to senatorial approval of postmasters throughout the country. The alleged objective is to eliminate politics from the postal service. Frankly, I do not think politics as such are likely to be entirely eliminated by such a change. Most of the politics takes place long before the names are ever submitted to the United States Senate. Personally I favor career men for such jobs. It has worked extremely well in Grand Rapids under our able postmaster, Art Hamilton. If the Hoover Commission recommendations will result in career appointments, I favor the proposal wholeheartedly. However, the question of senatorial approval of certain Presidential appointments, including postmasters, is a Senate prerogative and is a matter which in my judgment should be solved first in the Senate before the House takes any action.

I have tried to outline in my remarks what I believe are the three major fields of interest to postal employees at the present time, namely, legislation concerning postal employees; secondly, the order of the Postmaster General curtailing service; and third and finally, the Hoover Commission recommendations for the postal service. It is my sincere hope that my comments have been helpful. Thank you.

False Economy

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 7, 1950

Mr. JAVITS. Mr. Speaker, appended is an article on the cut in postal service by Mark Sullivan in the New York Herald Tribune of May 25, 1950. He calls the economy resulting from this cut an odd little anachronism. Every Member should consider this most carefully and compare this small saving at great inconvenience, a saving which I am convinced that the people do not want, with the enormous outlays in farm-price supports and other programs as suggested by Mr. Sullivan:

SAVING IN MAIL SERVICE CUT HELD UNLIKELY TO EQUAL BUSINESS LOSS—MARK SULLIVAN SAYS PUBLIC MIGHT ACCEPT IT IF IT WERE PART OF A BROAD ECONOMY PROGRAM

(By Mark Sullivan)

During some days past the public has begun to suffer inconvenience about mail. It is caused by a series of curtailments of postal service announced by the Post Office Department on April 18, with direction to postmasters to give the public 30 days' notice in advance of putting the curtailments in effect. The announced curtailments include:

Reduction of deliveries in city residential districts to one a day. Reduction of Saturday deliveries in business districts, in some cases from three a day to two, in other cases

from two to one. Reduction of parcel-post deliveries to one a day in both residential and business districts. Reduction of collections from street mail boxes. Reduction in hours during which post-office windows are kept open.

These reductions are felt by every person who receives a letter or posts one, and even more by persons who send or receive packages. The sum of the effects is a slowing down of mail service, affecting literally everybody. The jibe of Senator WILEY, of Wisconsin, that 50,000,000 American families have been hit in the mail box is accurate.

TO REDUCE EXPENDITURES

The purpose of these curtailments is to reduce expenditures of the Post Office Department. During the present fiscal year ending June 30 the estimated expenditures of the Department in excess of postal receipts are some $500,000,000. An estimate of the savings by the present curtailments of service during some 6 weeks remaining in the fiscal year is some $30,000,000 or a little more.

The people as taxpayers are to be saved some $30,000,000. The people as users of the postal service are to be subjected to inconvenience, including some loss. It may be doubted whether the $30,000,000 saved is equal to the loss in the carrying on of business. The aggregate of delays to letters and packages, affecting every individual and ramifying cumulatively into every line of business, can be seriously large.

Yet the people might accept inconvenience and loss without complaint, or even with some glow of cheerfulness in sacrificing for the national interest—if they supposed that this $30,000,000 of reduction in expenditures of one Government department was part of a broad program of reduction generally, part of a determined purpose of the administration to keep Government expenditures below Government income, to balance the Government's budget.

In such case the people might accept inconvenience in the spirit in which the people of Britain accepted the "austerity program" of that country's government.

INDEFINITE DECLARATION

But Mr. Truman's attitude about balancing the budget is an indefinite declaration for an indefinite future time. His statement at Pendleton, Oreg., on May 10 was: "I want to balance the budget of the Federal Government just as much as anybody else does. * * * We will do (this) just as soon as we safely can." And the people know that spending programs initiated by the administration and now in effect have made it impossible to balance the budget this year; there will be a deficit of some $6,000,000,000. Because some of these spending programs increase automatically year by year, the budget cannot be balanced next year; the time of balance, if ever, is in the indefinite future.

The $30,000,000 reduction in Post Office Department expenditure is an odd little anachronism, in an immense trend going in the opposite direction. The tininess and the contradictoriness of it can be grasped by comparing it with a single example of Government expenditure, that which is done through the Department of Agriculture.

In the case of the Post Office Department, the administration saves $30,000,000 for the taxpayers and makes all the people pay for the savings by enduring inconvenience and loss. The case of the Department of Agriculture is complexly opposite. That Department takes many hundreds of millions of dollars from the taxpayers and then uses the money for a purpose which is officially called price support of farm crops, but which in fact, of course, is equally support of the prices the people must pay for food. At this moment there is before Congress a request by the Department of Agriculture for authority to lay out $2,000,000,000 more, additional to what has already been laid out for price support.

Register and Vote

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 7, 1950

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks, I attach hereto a copy of a radio speech I recently delivered in my district:

My friends, the time is again approaching when it will be your privilege and duty to elect someone to represent you in Congress. In addition to electing your Congressmen, you will elect a United States Senator, your Governor, the members of your county delegation and other State and county officials.

At first glance, this year's election may not seem to be any more important than those in the past. A few moments' consideration, however, reveals that the election this summer will be one of the most important in our history. Because of its importance, because statistics show that in recent decades we have neglected this privilege and duty and because some of you are confused as to the new voting procedure, I should like to talk with you briefly about the coming election and the manner in which you must qualify in order to vote.

One of our great Revolutionary patriots, Thomas Payne, described the years during which we fought for our independence as "times that try men's souls." Since our war for independence, this Nation has faced and successfully overcome numerous apparently insurmountable obstacles or threats to our freedom. Those obstacles or threats have, for the most part, been in the form of totalitarian armies. In our own generation we have been forced to engage in two great conflicts to protect our democratic way of life. When faced by such dangers, the people of this Nation have followed the example of their Revolutionary forefathers and have overcome them.

Today we are again faced by problems which make these times "times that try men's souls." Unfortunately, the problems that we face today are different from those which we have faced in the past. We are not presently confronted with the possibility of losing our freedom by armed might but by the infiltration of ideologies which plot the destruction of our way of life by revolution. Because of the nature of today's threats to our freedom, we cannot confidently rely on past experiences but must employ new plans for defense.

That which threatens our existence today is the spread of communism—that deadly philosophy which is more dangerous than armed conflict.

The communistic campaign against us is as skillfully planned as any military maneuver. Instead of guns, the forces of communism use words and ideas. Instead of attempting to amass armies along our borders they are attempting to gain positions of influence in governmental departments, in labor unions and other organizations. We are now as actively engaged in a war with communism as we were with the Fascist forces during the recent armed conflict.

Your Government is, of course, cognizant of the war that is being waged against us and is doing everything possible to combat these tactics. It cannot, however, successfully defend this Nation without your help. Just as during the shooting war it was necessary for each citizen to work toward its successful conclusion, so are such efforts necessary today.

There are many ways in which you must act in this regard. It is no longer a matter of choice. Right now, at this time of the year, there is one thing in particular that you must do. You must qualify yourself to vote by registering and then by casting your ballot in the coming elections.

Our form of government is based on the concept that it is a Government of the people, for the people and by the people. To insure the preservation of that idea, we have elections in which every qualified citizen is eligible to express his opinions. During the past half century when we should have exercised this right to the fullest, we have neglected to do so. Because of our neglect, our Government is not in truth of, for, and by the people. Especially those of us who live in the South know this to be true. There are those who have gained positions in our Government who, consciously or unconsciously, are assisting those who would destroy our democratic way of life.

Most of us realize, of course, that we are at present engaged in a so-called cold war with the communistic countries and that possibly the inaction of some citizens may be weakening us in combating the spread of communism. Nevertheless, many of us feel that our one vote is not important enough and do not bother to go to the polls to vote. In 1948, for example, only 51 percent of tne eligible voters of this country took part in the election.

Random facts from the past, however, reveal that your one vote may change the course of our destinty. For example, the father of our Democratic Party, Thomas Jefferson, was elected President of our country by 1 vote in the electoral college.

Rutherford B. Hayes was elected President by one vote of a special electorial commission. The member of the commission whose vote elected Hayes was a Congressman who had been elected to Congress by one vote. That vote was cast by a citizen who, though ill, insisted on exercising his privilege of voting.

The States of California, Idaho, Oregon, Texas, and Washington became States by the margin of one vote.

And, more recently, the act of Congress which provided for the drafting of men for service in World War II passed the House of Representatives by just one vote.

Thus it is that your one vote might be responsible for the success or failure of our present battle with communism.

You may be sure that the communistic interests in this country will be actively engaged in the coming campaign. Not only will they see to it that those who follow their line of thought are qualified to vote, they also will attempt to discourage you who are opposed to their views from voting. Thus, by failing to vote, you will, in effect, be voting for those who would destroy our form of government. Remember, if you fail to vote, you will, in effect, be voting for those who would destroy our form of government.

As you realize, there is hardly any sphere of activity which is not now controlled or affected in some way by government. Unless you participate in electing those who formulate the policies of our Government, you will be leaving in the hands of others the future of your jobs, your homes, your children—every aspect of your freedom.

If America is to remain strong and free, we must protect ourselves from the enemy within our gates. You can do so by registering and subsequently voting in the coming elections.

The process of voting this year, as you know, has been changed. In order to vote in the Democratic primary this year you do not enroll as in the past, but you must obtain a registration certificate or possess a certificate which has been issued since 1948. It is not necessary that you have any tax receipts to obtain this certificate. It is only necessary that you be 21 years of age before November 7, 1950; that you be a resident of the State 2 years, of the county 1 year, and of the precinct 4 months. You must also be able to read and write any section of the Constitution or have paid taxes on property assessed at $300 or more in 1949. You must secure this certificate on or before June 10 in order to vote in the primary to be held on July 11.

America stands today as the sole sentinel of freedom of the individual; the sole champion of freedom of speech and the press; the sole land of individual opportunity. Your failure to vote in the coming election may result in the loss of our American freedom.

Register today or before June 10; then vote in the primary on July 11. The peoples of Europe neglected their right to vote and lost it. With it they lost their freedom. We must not let that happen here.

Clear, Courageous Call—Senator Smith Points Way To Remedy for the National Feeling of Fear

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 7, 1950

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article by Thomas L. Stokes that appeared in the Washington Evening Star of June 6, 1950, as follows:

CLEAR, COURAGEOUS CALL—SENATOR SMITH POINTS WAY TO REMEDY FOR THE NATIONAL FEELING OF FEAR

(By Thomas L. Stokes)

One clear, courageous call from a woman, Senator MARGARET CHASE SMITH, Republican of Maine, has served to diagnose what she called "a national feeling of fear and frustration" and to clarify the atmosphere and point the way to a remedy.

Her condemnation, within her own party, of McCarthyism and its exploitation for campaign purposes and her criticism of the lack of leadership in the Democratic administration and its simultaneous grave and Pollyanish size-up of the world situation explain some things that have been happening in recent weeks.

The resulting confusion plainly has had its part in the attitude of both parties and the type of campaigns that have developed for the congressional elections this fall.

DEPLORES FEAR CAMPAIGN

Some Republicans, on the one hand, have been bent upon a campaign of "fear, bigotry, ignorance, and selfishness," as it was described and deplored by Mrs. SMITH and a number of her Republican colleagues who joined in a statement, combined with old-fashioned isolationism that would blind itself to the needs of the rest of the world and to our responsibility in helping to meet them.

Lately, on the other hand, a tendency has been noted in the administration to whip up a sort of saber-rattling jingoism, which does not become us, with less emphasis upon the leadership for peace to which we are obligated by our traditions and our World War II aims.

This might be analyzed as a defensive reaction within the administration to the reckless campaign by Senator JOE MCCARTHY (Republican of Wisconsin) along with the Alger Hiss conviction and the atomic spy revelations. This manifests itself in increasingly bitter excoriations of Russia, with no longer any differentiation between her people and the rampant crew in the Kremlin, in increasing emphasis on arms as the only resort to achieve peace, and by a cynicism about peaceful overtures of another sort and about the United Nations despite continued lip service to peace and the United Nations.

BOTH PARTIES OFF BALANCE

Both political parties obviously are off balance and intemperate, as Mrs. SMITH'S statement pointed up.

Her reference to the administration's "daily contradictory grave warnings and optimistic assurances" was graphically illustrated the same day she spoke in the Senate, for example, by the ominous tone of President Truman's message to Congress requesting additional arms appropriations for western Europe and other areas and by his statement at a press conference a few hours later that the world is closer to real, permanent peace than at any time for the last 5 years.

The American people are capable of undergoing any sacrifices necessary for our national security. They will support a strong national defense and the combined national defense plan with western Europe. Congress, despite some controversy which is natural, has demonstrated that, and will continue to demonstrate it.

But the American people also are a people of hope. While they are doing these necessary things, they would like at the same time to see at least a beginning in other directions, to see us in some visible ways move toward strengthening the United Nations, toward eventual disarmament.

Tariffs on Cotton Textiles

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 7, 1950

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I attach hereto a statement I gave this morning before the Committee for Reciprocity Information, Tariff Commission, in opposition to a possible cut in the present tariffs on cotton textiles:

Mr. Chairman and members of the Commission, not only am I grateful for the privilege and honor of appearing before you this morning but especially would I thank you for the privilege of speaking first. You will understand that Members of Congress are crowded these days and it is necessary for us to get back on the Hill.

Before my formal statement, I beg to make reference to my own experience with textiles. While I own no stock in any textile industry, I feel that I can truthfully say I am one of textiles' products. Before I reached the age of 10, I became a regular employee in the textile mills of my district. For 12 hours of arduous work, I received 25 cents a day, less than 2 cents an hour. Now, as you know, under a recent act of Congress, the minimum hourly wage in our mills is 75 cents per hour. The average wage is in excess of $1 an hour. For nearly 30 years I have represented the textile people of my home county in one capacity or another. I am reliably informed that more cotton is spun and woven in my congressional district than in any other district in the United States. With this background, Mr. Chairman, I believe I am qualified to speak for the chief industry of our State and the Southland.

I am appearing at these hearings because I am vitally interested in the matter of cotton textiles. In the very near future our United States of America representatives will depart for Torquay, England, to negotiate on a very large number of items for reciprocal tariff cuts. Textile men in this country are interested in over 2,000 items manufactured by more than 1,000 mills from Texas to Maine.

I am vitally concerned as to the possible effects that might result when our negotiators come home from England with all kinds of tariff cuts granted to foreign nations. At this moment our tariffs on textiles are 30 percent lower than the tariffs in the 1930 Tariff Act. If a further cut is to be made, the deleterious effects of such a cut will have wide repercussions in our domestic economy.

During the war years our textile industry was asked to increase its production manyfold so as to supply the war and civilian needs of not only this country but of our allies too. Due to our high production ability and technical ingenuity we were able to fulfill these increased demands, however, since 1945 we began to recede from our wartime peak and presently we are operating at only 75 percent of our war maximum. In fact, since 1947 our export market has been cut down by 1,000,000,000 yards per year, or the total volume of $535,000,000 annually. It is this type of cutback which is proving most injurious to our textile industry.

Mr. Chairman, the basic trend in world trade of textiles in the postwar period may be briefly summarized as follows: The volume of cloth and yarn competing for markets has steadily risen and this rise is being accelerated. Markets for exports of United States textiles, however, are steadily shrinking and in the course of events we may expect this shrinkage to continue as other areas begin to produce their own domestic textiles. The reason for the decline in exports has been listed variously as currency exchange difficulties. I would say that this certainly has contributed to the cut in the volume of our trade. A further reduction in our trade followed upon the recent devaluation of currencies.

War-ravaged countries are being rapidly rehabilitated and from some of them large quantities of textiles are being sent out in world markets to compete freely with our own. I might say that many of these war countries are now attempting to sell their textiles in our own country for the dollars which they need. The difficulty in this competition is the fact that competition is very often in those lines which we are peculiarly able to produce ourselves. I take the case of Osnaburgs where large quantities are being dumped on our markets at 1 cent per yard below current wholesale prices.

Mr. Chairman, not only are world markets being diminished insofar as our textile exports are concerned, but a new and competing industry is entering the field, namely, plastic film sheetings and coated fabrics. Cotton men all over the United States are

beginning to be concerned about the competition offered by this new industry whose production is averaging an estimated 14,000,000 pounds per month. This industry is being pushed by many large companies with experienced methods of selling, and therefore, will have an appreciable effect on cotton consumption in this country. The volume of sales by the plastics group is now large enough to merit serious attention from every member of the textile trade since these plastic products are moving into fields previously held by cotton, linen, rayon, and other established fibers. In the end use these plastic fibers become tablecloths, aprons, upholstery, shoe bags, food and storage bags, slip covers, etc., and these are almost all uses formerly supplied by the various fibers. Large yardages have already been lost to the fibers in this manner and further losses are inevitable.

Mr. Chairman, I wish to stress another fact, namely, the textile position in Japan, from whom we are getting an increased competition by the month. Within the last few months the military government in Japan has allowed local management to come back again under a sporadic occupational supervision. Japan certainly will attempt to recapture its prewar markets. Many governmental officials in this country may discount the fact that presently only small quantities of Japanese goods, as compared to our billion yards of consumption, are coming into the United States of America. The point to be stressed is that the Japanese textile industry has been rehabilitated, the only curbs extant being the number of bales of cotton which Japan is allowed to import. For example, in 1949 Japan was allowed 850,000 bales. During 1950 this total will rise to 1,300,000 bales. During 1949 Japan exported 720,000,000 square yards of cotton piece goods. During 1950 cotton spinners in Japan estimate a range of from 850,000,000 to 1,000,000,000 square yards as being available for export.

One might easily say that there is such a large backlog of requirements unsatisfied during the war that it will take Japanese spinners some time to supply this backlog. The point is, they are attempting to supply the need. Many of the areas in the Japanese prewar orbit of trade are no longer available to them, and so the Japanese automatically will attempt to push their products in other areas. Certainly the dollar area looks very profitable when you know that labor costs in Japan are one-tenth of those obtaining in the United States.

In this connection I should also draw attention to the fact that in November 1949 the sterling area—Japan trade agreement was signed by which shipments from Japan during 1950 to British-controlled areas will exceed 300,000,000 square yards.

Japan is rapidly making strides in recapturing her prewar trade volume. A further fact merits our attention since it affects the total volume of trade available to United States textile exporters, namely, the exportation of textile machinery by Japan. In the new dominion of Pakistan a series of mills have been or are being built with the aid of Japanese technicians and Japanese-made textile machinery. One such mill now operating has 10,000 Toyoda and 10,000 Howa spindles and is serviced by Japanese technicians under contract. Another plant has purchased 600 Toyoda automatic looms. Another plant will soon receive 10,000 Howa spindles and 400 Howa looms.

Mr. Chairman, it is significant that when India was partitioned the Pakistan area had only 14 mills and 165,684 spindles. Plans have now been completed for 80 mills and 2,000,000 spindles. All of these mills will be new, modern, and superefficient, and Japan is supplying most of the machinery.

For world textile manufacturers these plans spell only one thing, namely, the potential loss of a huge and vital market. Thus England which did supply a very large portion of the textile trade in India will suffer serious cutbacks. It is well to assume that she will attempt to find other outlets and the United States of American certainly will offer one of the most profitable ones.

Mr. Chairman, I reiterate, if our export markets are being cut down it means that our domestic manufacturers will have to push their goods on the local markets. However, at the same time our tariff gates are being lowered and increasing competition is resulting from textiles originating in countries who have a long tradition of being textile exporters, notably England, France, Belgium, and Japan. Even Switzerland is stepping up its exports to the United States.

It is an undeniable fact that the world will depend on United States raw cotton for many years to come. In fact under ECA we are exporting approximately 5,000,000 bales a year. Assuredly this is of great help to our cotton growers, but at the same time one must recognize that many other areas of the world, especially underdeveloped, underindustrialized nations will begin to produce cotton on a larger scale. At present the prices of our raw cotton in our big Southern markets average around 33 cents a pound. This is three times the prewar price of the Dixie staple. One might say that the prices are affected by the demands for cotton from our own cotton mills, by overseas demands for our raw cotton, by the Government-supported price program, and now by the 20-percent acreage reduction in 1950 plantings. Of this large amount of raw cotton being exported overseas, I am just wondering how much of this same cotton is returning to these self-same shores as imported textiles. In this country we buy the cotton at the same price, process it with our well-paid labor, whereas the same cotton is being sent overseas and processed by labor at the very most one-third as high as ours, so that no matter what the tariff margin these foreign textiles can always compete successfully on our own markets. I submit to you that nobody can compete on such terms. The result is the closing of processing mills in this country and resultant unemployment.

Mr. Chairman, I have thus far mentioned existing tariff cuts, diminishing world markets, the effect of cotton substitutes, the drive for American dollars, the competitive situation from Japan, the loss of world export markets due to the export of textile machinery from Japan, the world need of cotton subsidized by our gift programs, and the competition by cheap labor.

I omit the point 4 program under which under-industralized nations may be assisted in erecting their own textile mills, and semi-tropical agricultural nations may be assisted in growing cotton.

The competition is here with us. We are concerned about it. In fact this competition is such that we cannot possibly compete successfully. I have facts concerning the sale of children's dresses, made in Japan, in my own home State at three for $1 retail. The wholesale price of an equivalent dress made in the United States of America is about $1 each. How can we in this country compete against such prices?

I, therefore, wish to protest against a possible cut in tariffs in the negotiations soon to take place in England. In fact I wish to stress the importance of the escape clause in our existing agreements, namely, importations of textiles on which we have granted tariff concessions are already proving injurious to our domestic producers and hence these concessions should be drastically revised or eliminated. I thank you.

Action Needed on Imports From Iron-Curtain Nations

EXTENSION OF REMARKS
OF
HON. J. CALEB BOGGS
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 7, 1950

Mr. BOGGS of Delaware. Mr. Speaker, about 2 weeks ago in a public statement I called upon the administration to take appropriate action immediately to protect American workers in industries which are being seriously crippled by imports from Communist-controlled nations.

At the time I directed attention to the fact that each day brings new evidence of growing unemployment in this country by reason of increasing quantities of tariff-free or preferential imports.

I also said at that time, Mr. Speaker, that it is a startling fact that a large part of these very imports which are handicapping American industries and causing increasing unemployment among American workers are coming from Russia, Czechoslovakia, and other forced-labor nations which continually make it clear that they are our enemies in the present cold war.

In view of the foregoing, I was extremely interested and pleased to read in the Philadelphia Inquirer of June 4, 1950, a fine editorial on this subject, as well as a splendid and factual article by the well-known Washington correspondent, Mr. Herman A. Lowe.

Again I say, Mr. Speaker, that remedial action by our Federal administration at the earliest possible date is imperative to protect and preserve American workers, American industries, and American dignity in the eyes of the world.

I wish to include as a part of my remarks the following editorial and the article by Mr. Lowe to which I have just referred:

AMERICAN DOLLARS FOR CZECH INSULTS

Communist Czechoslovakia's deliberate campaign of hectoring and insult against the United States appears now to be part of a scheme to break off diplomatic relations with this country and perhaps with other western powers.

That is the opinion of Dana Adams Schmidt, New York Times correspondent in Czechoslovakia until last Wednesday when he and his wife fled under imminent threat of arrest on the usual espionage charges.

Whether Mr. Schmidt's view is correct or not—and that will be demonstrated by events—it seems to us for many reasons that the time is at hand for the United States to take vigorous action in relation to the outragious activities of the Czechoslovak Reds against us.

On another part of this page Herman A. Lowe, writing to the Inquirer from Washington, points to the fact that while the Commie stooges of Russia at Prague are going the limit to smear the United States, they are also flooding goods, manufactured by slave labor, or little better, into this country.

Worse than that, the Czechs are getting these goods into American markets under specially favorable tariff rates, to compete

and undersell similar goods made by American workmen.

Now why are we standing for that, and how long do we intend to stand for it; that is, how long does the State Department intend to ignore facts that have become plainer week by week for months?

It is one thing to accept some goods made in friendly countries of western Europe which we are trying to help through the Marshall plan, even if these imports do create problems in our own industries. But it is a very much different matter, and entirely indefensible, when we permit and even encourage competing imports from behind the iron curtain.

It's small wonder that we are not winning the cold war. Here is a situation that demands a show-down. The joke on us, according to Mr. Lowe, is that the theory that we must traffic with the Czechs and other iron-curtain countries because we need strategic materials from them has fallen down. We are getting very little in the way of strategic materials, if any.

How large is this practically one-way trade with Czechoslovakia? How much more trade of the same sort is coming, with similar tariff preferences, from other Russian-controlled areas where the same pattern of insult and harassment is being followed?

We have been friends, and still are, to the Czech people. Their once-free republic was actually formed after the First World War in Independence Hall in this city. Our quarrel, a righteous one, is with the choice assortment of Red servants of Moscow who now constitute the Government of Czechoslovakia.

They have moved step by step against America, eventually fabricating the usual spy trials to set up charges of espionage against American diplomatic personnel and those of other nations as well. Our diplomatic mission has been reduced to 12 persons.

The State Department, it is true, has shut down the Czech consulate general at New York, a slap on the wrist that was promptly followed at Prague by a new propaganda blast at present and former American diplomats and others, including Mr. Schmidt.

Meanwhile, the Czech Commies are getting good American dollars through the free-and-easy preferential tariff flow of their manufactures, covering a wide range, into the United States. The Czech Commies are no doubt laughing among themselves at our stupidity.

We are not called upon to tolerate Communist Czechoslovakia's spit-in-the-face tactics. Certainly we are not called upon to finance them by fostering a lucrative and actually privileged trade that is all to their advantage and to our disadvantage. If the State Department can't or won't do anything about this, Congress should, and very quickly.

United States Neglects the Economic Front in the Cold War Against Czechs

(By Herman A. Lowe)

WASHINGTON, June 3.—Newspaper headlines in recent days have featured our vest-pocket cold war with Czechoslovakia. The Czechs claimed our embassy staff in Prague was much too large and was undoubtedly loaded with spies and other suspicious characters.

They brusquely ordered us to get about 40 of our diplomats out of their country. We countered by notifying the Czechs to shut down consulates and reduce their embassy staff in Washington. Then they got even tougher, and we got tougher.

This private cold war began to smoke and sizzle. People were impressed with how the State Department took no nonsense from these Russian satellites. It was a hopeful indication that maybe our striped-pants corps was not going to let itself be pushed around too much.

Sounds very good, huh?

Well, here's the other half of the story.

All the time the Czechs are kicking our people out of their country and while we appear to be talking back real fearless, we are allowing them to dump a flood of their goods into the United States under the most favorable tariff terms we extend to anybody.

What is more, when we lower our tariffs still further at Annecy, England, next fall, the Czechs will get the benefit of those reductions.

There are some interesting angles of this to be pointed out.

First, operating under iron curtain wage scales, Czechoslovakia is now beginning to land some items—such as bone china—so cheaply on our shores that they are taking the American market away from Britain, our ally and friend.

Second, not only Czech china and glassware, but also such things as shoes and hats are beginning to cut into American production of the items and to result in layoffs in this country.

Third, our manufacturers do sell to Czechoslovakia. However, while the Czechs may pour almost any commodity they wish into the United States, we do not have the same freedom of export. In all the iron-curtain countries foreign trade is nationalized.

Of course, the story has been told that we trade with the Russians and their satellites because we must obtain strategic raw materials for our national defense stockpile. That was partly true a few years ago. But today they are giving us almost no strategic materials.

Here are some of the strategic goods the Czechs are sending us:

Motion-picture films, dental burrs, metallic cartridges, motorcycles and parts, machinery parts, sewing machines, light fixtures, jewelry, brooches, rosaries, gold-plated brass items, table knives with shell handles, upholstery nails, china dishes and ornaments, blown glass, glass chandeliers, glass bottles, plain glass, glass jars, baskets, wood furniture, artificial flowers, rayon fabrics and laces, woolen rugs, woolen apparel, hats, caps, woven worsteds, cotton fabrics, damask tablecloths, napkins, towels, rags, burlap, handkerchiefs, gloves, cordials, brandies, rubber balls, etc.

And although it may put American workers on the relief rolls, our State Department has no intention of getting mad enough to end this good thing for Czechoslovakia or any other Russian satellite.
